The M.Eng. (Materials Science and Engineering) program is primarily designed to prepare students for professional work in materials science, but graduates have continued with further studies in a doctoral program. The 30-credit program includes course work and a master's design project and is generally completed in two semesters. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Six to 12 credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

The program serves two groups of students: those who have completed an undergraduate degree in materials science or materials engineering and who wish to extend their knowledge, and well qualified graduates of other fields of engineering or other physical sciences who wish to complement that background with knowledge of materials. These other fields have included chemistry, physics, chemical engineering, and mechanical engineering. Because of this, the courses that make up the remaining 18 to 24 credits may vary widely depending on the background of the student and their interests. One uniform requirement of the program is a 3-credit elective concerned with management or a related topic.

MASTER OF ENGINEERING (MECHANICAL ENGINEERING)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Mechanical Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, energy systems, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the academic year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering program. An individual student's curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in mechanical engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design/research focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the Director of the Master of Engineering program.

The technical electives may be courses of appropriate level in engineering, math, physics, chemistry, or biology; a maximum of two courses may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Students enrolled in the M.Eng. (Mechanical Engineering) degree program may take

courses that also satisfy the requirements of the bioengineering, engineering management, systems engineering, or manufacturing minors.

MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INFORMATION ENGINEERING)

Offered by the School of Operations Research and Information Engineering

Contact: 201 Rhodes Hall, 255-9128, www.orie.cornell.edu/orie/academics/meng

This professional degree program stresses applications of operations research. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on the design or improvement of systems and processes in manufacturing, information, finance, and service organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The ORIE M.Eng. program is designed to serve two groups of students: graduates of the undergraduate major in ORE who wish to deepen their practical knowledge of the field, and qualified undergraduates from other fields who want to complement their engineering or technical backgrounds with a solid foundation in operations research and information engineering.

For admission, the entering student should have completed an introductory course in probability and statistics, an intermediate-level course in computer science, as well as four semesters of mathematics, including differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration, the entering student must also have completed an intermediate-level probability course and a basic finance course. In addition, a working knowledge of C++ is strongly recommended.

Program requirements include a core of ORIE courses plus technical electives chosen from a broad array of offerings. There are several concentrations, each requiring a particular set of electives plus a specific project course. The concentrations include Applied Operations Research, Financial Engineering, Information Technology, Strategic Operations (which incorporates the Strategic Operations Immersion at the Johnson Graduate School of Management), Data Analytics, and Manufacturing and Industrial Engineering. Students may also minor in Systems Engineering. Several of these options are offered jointly with other Cornell departments and schools and provide the opportunity to interact with students and specialists in business and other engineering fields. For information about the manufacturing and industrial engineering concentration, contact the Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; about the Strategic Operations Immersion, 304 Sage Hall, 255-4691; about Systems Engineering, 202 Rhodes Hall, 254-8998, and for all others, 201 Rhodes Hall, 255-9128.

The applied operations research concentration is designed to be completed in two semesters. For scheduling reasons, and depending on the student's preparation, the other concentrations may entail an additional summer or semester.

In particular, the financial engineering concentration is highly specialized and typically requires three semesters to complete. This permits an industry internship in the summer between semesters as well as a third semester of study in New York City.

The manner in which the M.Eng. project requirement is met depends on the chosen concentration. Common elements in all project experiences include working as part of a team of three to five students on an engineering design problem, meeting with a faculty advisor on a regular basis, and presenting the final results to the project sponsor. Most projects have industrial client sponsors and address relevant, practical problems.

Additional program requirements are described in the *Master of Engineering Handbook* and on the web. For further details, see the contact information at the beginning of this section.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a four-digit number.

Engineering Communications	ENGR
Engineering Distribution	ENGRD
Engineering General Interest	ENGRG
Engineering Introductions	ENGR
Applied and Engineering Physics	AEP
Biological and Environmental Engineering	BEE
Chemical and Biomolecular Engineering	CHEME
Civil and Environmental Engineering	CEE
Computer Science	CS
Computing and Information Science	CIS
Earth and Atmospheric Sciences	EAS
Electrical and Computer Engineering	ECE
Information Science	INFO
Materials Science and Engineering	MSE
Mechanical and Aerospace Engineering	MAE
Nuclear Science and Engineering	NSE
Operations Research and Information Engineering	ORIE
Systems Engineering	SYSEN
Theoretical and Applied Mechanics	TAM

ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGR 3020 Writing-Intensive Opportunity: Practicum in Technical Writing

Fall, spring, 1 credit.

One-credit attachment to an existing engineering course that is not one of the officially designated W-I courses. It may be taken more than once, with different courses by permission of a particular engineering faculty member.

ENGR 3340 Independent Study in Engineering Communications

1-3 credits, variable. Letter grades. TBA with instructor.

Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

ENGR 3350 Communications for Engineering Managers (LA)

Fall, spring, 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.

This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

ENGR 3500 Engineering Communications (LA)

Fall and spring, 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec.

Prerequisite: two first-year writing seminars and affiliation with a major.

Prepares students for important communication activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, progress reports), give oral presentations, and incorporate graphics in their oral and written work. Students learn how to communicate

specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student's work. (Note: Absences are limited to three, after which sharp penalties occur.)

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGRD 2020 Mechanics of Solids (also TAM 2020)

Fall, spring, 4 credits. Prerequisite: PHYS 1112, co-registration in MATH 1920, or permission of instructor. All students must take a lab section. Staff.

Covers principles of statics, force systems, and equilibrium; frames; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, thermal stress, stretching; bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

ENGRD 2030 Dynamics (also TAM 2030)

Fall, spring, 3 credits. Prerequisite: ENGRD/TAM 2020, co-registration in MATH 2930, or permission of instructor. All students must take a lab and a section.

Newtonian dynamics of a particle, systems of particles and of a rigid body. Force, torque, impulse, momentum, angular momentum, energy, and vibrations. Two-dimensional rigid-body Kinematics including motion relative to a moving frame. Three dimensional rigid-body dynamics are briefly introduced at the instructor's option. Laboratory experiments demonstrate some basic principles.

ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers (also ECE 2100)

Fall, spring, 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must take a lab and a section.

First course in electrical circuits and electronics. Establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

ENGRD 2110 Object-Oriented Programming and Data Structures (also CS 2110)

Fall, spring, summer, 3 credits. Prerequisite: CS 1110 or CS 1130 or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple

graph algorithms. Java is the principal programming language.

ENGRD 2190 Mass and Energy Balances (also CHEM 2190)

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

ENGRD 2210 Thermodynamics (also MAE 2210)

Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 1920 Calculus for Engineers, and PHYS 1112 Physics I, Mechanics.

Presents the definitions, concepts, and laws of thermodynamics. Topics include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and to broader environmental issues.

ENGRD 2300 Introduction to Digital Logic Design (also ECE 2300)

Fall, spring. 4 credits. Prerequisite: CS 1110 or CS 1112.

Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGRD 2510 Engineering for a Sustainable Society (also BEE 2510)

Fall. 3 credits. Pre- or corequisite: MATH 2930. B. A. Ahner.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

ENGRD 2520 The Physics of Life (also AEP 2520/5520)

Spring. 3 credits. Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213. L. Pollack.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of

these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGRD 2600 Principles of Biological Engineering (also BEE 2600)

Fall. 3 credits. Pre- or corequisite: MATH 2930, two semesters of core biology major classes and the investigative lab or BIOG 1105/1106. A. J. Baeumner.

Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also MSE 2610)

Fall. 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. P. Baker.

Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. Topics include the relationship of elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature on materials properties, and considerations for design and optimal performance of materials in engineered objects and biological tissues.

ENGRD 2620 Electronic Materials for the Information Age (also MSE 2620)

Spring. 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. M. Thompson.

Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators; tuning of electrical properties in semiconductors, charge transport across metal/semiconductor and semiconductor/semiconductor junctions, and the interaction of materials with light; semiconductor electronic devices; and the materials science of device fabrication. Applications in microelectronics, solar cells, electronics, and display technologies are discussed.

ENGRD 2640 Computer-Instrumentation Design (also AEP 2640)

Fall, spring. 3 credits. Prerequisite: CS 1112; permission of instructor for seniors. 1 lec, 1 lab. T. Cool.

Covers the use of a small computer in an engineering or scientific research lab. The experiments and devices investigated include analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. Students develop effective written communication skills in the context of science

and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 2700 Basic Engineering Probability and Statistics

Fall, spring, summer. 3 credits.

Prerequisites: MATH 1910 and 1920. MATH 2940 should be completed before or concurrently with ENGRD 2700.

Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

ENGRD 3100 Introduction to Probability and Inference for Random Signals and Systems (also ECE 3100)

Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents.

For description, see ECE 3100.

ENGRD 3200 Engineering Computation

Spring. 3 credits. Prerequisites: CS 1112 and MATH 2930. Corequisite: MATH 2940. Recommended: completion of MATH 2940. P. J. Diamessis.

Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.

ENGRD 3220 Introduction to Scientific Computation (also CS 3220)

Spring. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. Uses the MATLAB computing environment. Stresses sectorization, efficiency, reliability, and stability. Special lectures cover computational statistics.

Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 1009 Cooperative Workshop for CHEM 2090

Fall, spring. 1 credit. Corequisite: CHEM 2090. S-U grades only.

Academic Excellence Workshop for CHEM 2090. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CHEM 2090.

ENGRG 1011 Cooperative Workshop for CS 2110

Fall, spring, 1 credit. Corequisite: CS 2110. S-U grades only.

Academic Excellence Workshop for CS 2110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 2110.

ENGRG 1050 Engineering Seminar

Fall, 1 credit. Prerequisite: freshman standing. S-U grades only.

First-year engineering students meet in groups of 18 to 20 students weekly with their faculty advisors. Discussions may include the engineering curriculum and student programs, what engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 1060 Exploration in Engineering Seminar

Summer, 1 credit. Designed for junior and senior high-school students.

Introduction to several engineering fields, such as bioengineering, chemical engineering, civil engineering, computer science, earth sciences, electrical and computer engineering, engineering physics, materials science, mechanical engineering, and operations research. Hands-on experience in weekly labs, as well as design projects to introduce concepts of the engineering design process.

ENGRG 1091 Cooperative Workshop for MATH 1910

Fall, 1 credit. Corequisite: MATH 1910. S-U grades only.

Academic Excellence Workshop for MATH 1910. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1910.

ENGRG 1092 Cooperative Workshop for MATH 1920

Fall, spring, 1 credit. Corequisite: MATH 1920. S-U grades only.

Academic Excellence Workshop for MATH 1920. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1920.

ENGRG 1093 Cooperative Workshop for MATH 2930

Fall, spring, 1 credit. Corequisite: MATH 2930. S-U grades only.

Academic Excellence Workshop for MATH 2930. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2930.

ENGRG 1094 Cooperative Workshop for MATH 2940

Fall, spring, 1 credit. Corequisite: MATH 2940. S-U grades only.

Academic Excellence Workshop for MATH 2940. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2940.

ENGRG 1010 Cooperative Workshop for CS 1110

Fall, spring, 1 credit. Corequisite: CS 1110. S-U grades only.

Academic Excellence Workshop for CS 1110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1110.

ENGRG 1012 Cooperative Workshop for CS 1112

Fall, spring, 1 credit. Corequisite: CS 1112. S-U grades only.

Academic Excellence Workshop for CS 1112. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1112.

ENGRG 2500 Technology in Society (also ECE/HIST 2500, STS 2501)

Fall, 3 credits. Approved for humanities distribution.

Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors such as Morse, Edison, and Ford; the government's regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 2980 Inventing an Information Society (also ECE/AMST 2980, HIST 2920, STS/INFO 2921)

Spring, 3 credits. Approved for humanities distribution.

Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 3230 Engineering Economics and Management (also CEE 3230)

Spring, sometimes offered in summer for Engineering Co-op Program. 3 credits.

Primarily for juniors and seniors. Students must register under CEE 3230.

D. P. Loucks.

Introduction to engineering and business economics investment alternatives and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

[ENGRG 3570 Engineering in American Culture (also AMST/HIST 3570, STS 3571)]**ENGRG 3600 Ethical Issues in Engineering Practice (also ECE 3600, STS 3601) (KCM)**

Spring, 3 credits. Open to sophomores.

Studies major ethical and social issues involved in engineering practice. The issues

include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle blowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 4610 Entrepreneurship for Engineers (also MAE 4610, ORIE 4152)

Fall, 3 credits. Prerequisite: upper-level engineers or permission of instructor. For description, see MAE 4610.

ENGRG 6780 Teaching Seminar

Fall, spring, 1 credit. S-U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. Designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses

Courses in this category are first-year level courses intended to introduce students to various aspects of engineering. They have no prerequisites and most are cross-listed with a department.

ENGRG 1100 Lasers and Photonics (also AEP 1100)

Fall, 3 credits.

Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRG 1101 Engineering Applications of Operations Research

Fall, spring, 3 credits. Not open to ORIE upper-level majors.

Introduction to the problems and methods of operations research and information engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGR 1110 Nanotechnology (also MSE 1110)

Fall. 3 credits. C. Umbach.

Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGR 1120 Introduction to Chemical Engineering (also CHEM 1120)

Fall. 3 credits. Prerequisite: first-year standing. T. M. Duncan.

Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

[ENGR 1130 Sustainable Design for Appledore Island (also CEE 1130)]

Spring. 3 credits. Next offered 2011–2012. Staff.

Utilizes a unique environment, Appledore island, as an example of how sustainability is addressed in the design of basic components of the built environment; energy, water supply, and waste treatment.]

ENGR 1131 Water Treatment Design (also CEE 1131)

Spring. 3 credits. M. L. Weber-Shirk.

Students learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. The course includes field trips, building a computer-controlled miniature water treatment plant, and exploring new technologies for making safe drinking water.

ENGR 1140 Materials: The Future of Energy (also MSE 1140)

Spring. 3 credits. R. B. van Dover.

New technologies are urgently needed to fulfill projected global energy requirements. Materials properties typically limit the performance that can be achieved in generation, transport, and utilization of energy. This experiential learning course explores how new materials can increase our energy supply and decrease consumption. Materials issues in photovoltaic, fuel cell, battery, wind, transportation, lighting, and building technologies are studied. Through integrated lab-based activities students develop a broad understanding of materials issues in order to successfully design and build an energy generation system.

ENGR 1160 Modern Structures (also CEE 1160)

Fall. 3 credits. A. Ingraffea.

Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. The historical, economic,

social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGR 1170 Introduction to Mechanical Engineering (also MAE 1170)

Fall. 3 credits.

Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGR 1190 Biomaterials for the Skeletal System (also MSE 1190)

Fall. 3 credits. D. Gourdon.

Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and biocompatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 1200 Introduction to Nanoscience and Nanoengineering (also AEP 1200)

Spring. 3 credits.

Lecture/laboratory course designed to introduce first-year students to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., “top-down” and “bottom-up” approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with real behavior, construct a simple STM and learn through hands on experience the basic workings of the device.

ENGR 1220 Earthquake! (also EAS 1220)

Spring. 3 credits. L. Brown.

Explores the science of natural hazards, their societal impacts and means of mitigation. The focus is on earthquakes, volcanoes, and tsunami, but hurricanes, severe weather, climate change, landslides, wildfires, and the

threat of extinction from a future impact by an extraterrestrial body are also considered.

ENGR 1260 Introduction to Signals and Telecommunications (also ECE 1260)

Spring. 3 credits.

Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation for the historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGR 1270 Introduction to Entrepreneurship and Enterprise Engineering (also MAE 1270)

Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisite: none.

A solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGR 1310 Introduction to Biomedical Engineering (also BME 1310)

Spring. 3 credits. Prerequisite: freshman or sophomore standing. D. A. Putnam and S. D. Archer.

Modern biology and medicine are undergoing a revolution as quantitative principles of measurement, analysis, and design are introduced to help solve a variety of scientific and medical problems. This course provides an introduction to the study of biological systems with a quantitative perspective from the molecular to the cellular to the organism scale, as well as to the design of practical devices for studying biological systems and treating disease. Collaborative work is a key element in all aspects of the course, from the lectures and labs, to the assignments and term project.

ENGR 1610 Computing in the Arts (also CIS/CS 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall. 3 credits. Complements ART 1701+ and MUSIC 1421+. S–U or letter grades. For description, see CS 1610 in the CIS section.

ENGR 1620 Visual Imaging in the Electronic Age (also ART 1700, CIS/CS 1620)

Fall. 3 credits. S–U or letter grades. Staff. For description, see ART 1700.

APPLIED AND ENGINEERING PHYSICS

F. W. Wise, director; L. Pollack, director of undergraduate studies; C. Xu, director of graduate studies; D. Muller, M.Eng. coordinator; M. Lindau, Co-op coordinator; J. D. Brock, R. A. Buhrman, T. A. Cool, H. G. Craighead, C. J. Fennie, A. L. Gaeta, M. Lindau, R. V. E. Lovelace, D. Muller, L. Pollack, W. W. Webb, F. W. Wise, C. Xu. Adjunct faculty: D. H. Bilderback, Q. Hao, S. Heinekamp. Senior research associate: E. J. Kirkland. Lecturer: L. Wickham

AEP 1100 Lasers and Photonics (also ENGR 1100)

Spring, 3 credits.

Course in Introduction to Engineering series. For description, see ENGR 1100.

AEP 1200 Introduction to Nanoscience and Nanoengineering (also ENGR 1200)

Fall, 3 credits.

Course in Introduction to Engineering series. For description, see ENGR 1200.

AEP 2170 Electricity and Magnetism (also PHYS 2217)

Fall, spring, 4 credits. Prerequisites: permission of advisor and instructor; co-registration in PHYS 2216 or knowledge of special relativity at level of PHYS 1116; MATH 1920 or equivalent and co-registration in MATH 2930 or equivalent. Staff.

Intended for students who have done well in PHYS 1112 or 1116 (or equivalent) and mathematics and who desire a more analytic treatment than that of PHYS 2213. At the level of *Electricity and Magnetism* by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester, permitting students who find material too abstract or analytical to transfer into PHYS 2213 without difficulty.

AEP 2520 The Physics of Life (also AEP 5520, ENGRD 2520)

Spring. Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213. L. Pollack.

For description, see ENGRD 2520.

AEP 2640 Computer-Instrumentation Design (also ENGRD 2640)

Fall, spring, 3 credits. Prerequisites: seniors by permission of instructor; CS 1112. 1 lec, 1 lab.

For description, see ENGRD 2640.

AEP 3240 Maple Supplement to Mathematical Physics 321 and 322

Spring, 1 credit. R. V. E. Lovelace.

A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in AEP 4210 and 4220. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.

AEP 3300 Modern Experimental Optics (also PHYS 3300)

Fall, 4 credits. Limited enrollment.

Prerequisite: PHYS 2214 or equivalent.

E. Bodenschatz.

Practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each

experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

AEP 3330 Mechanics of Particles and Solid Bodies

Fall, summer, 4 credits. Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 4210 or equivalent or permission of instructor. Staff.

Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of *Classical Dynamics* by Marion and Thornton.)

AEP 3550 Intermediate Electromagnetism

Fall, beginning third week of Oct.; summer; second half of semester. 2 credits. Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 4210, or permission of instructor.

Intermediate-level course on electromagnetic theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace's equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

AEP 3560 Intermediate Electrodynamics

Spring, 4 credits. Prerequisite: AEP 3550 and co-registration with AEP 4220, or permission of instructor.

Second course in theory of electromagnetism. Magnetic materials, Faraday's law, Maxwell equations, electromagnetic waves, reflection and transmission, guided waves, and radiation.

AEP 3610 Introductory Quantum Mechanics

Fall, through second week of Oct.; summer, first half of semester. 2 credits.

Prerequisites: PHYS 2213 or 2217 and co-registration with AEP 4210, or permission of instructor.

Introductory course on the theory of quantum mechanics. Topics include waves, Schrödinger's equation and the concept of the wavefunction, simple potentials, and the harmonic oscillator model. Emphasis is on developing an intuitive understanding of quantum mechanics.

AEP 3620 Intermediate Quantum Mechanics

Spring, 4 credits. Prerequisite: AEP 3610 or PHYS 3316 and co-registration with AEP 4220 or permission of instructor.

Continuation of AEP 3610 covering more advanced material in quantum mechanics. Topics include operator formalism and matrix representation, angular momentum and spin, the hydrogen atom, techniques for solving Schrödinger's equation including perturbation theory, two- and three-level systems, interaction with radiation, and identical particles.

AEP 3630 Electronic Circuits (also PHYS 3360)

Fall, spring, 4 credits. Prerequisites: PHYS 2208 or 2213 or permission of instructor. No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded. 1 lec, 2 labs. Fall, E. Kirkland; spring, staff.

Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

AEP 4210 Mathematical Physics I

Fall, summer, 4 credits. Prerequisite: MATH 2930. Intended for upper-level undergraduates in physical sciences.

Strongly recommended: prior completion of common course curriculum mathematics and physics courses. B. Kusse.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

AEP 4220 Mathematical Physics II

Spring, 4 credits. Prerequisite: AEP 4210.

Second of two-course sequence in mathematical physics intended for upper-level undergraduates in physical sciences. B. Kusse.

Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

AEP 4230 Statistical Thermodynamics

Fall, 4 credits. Prerequisite: introductory three-semester physics sequence, familiarity with quantum mechanics (AEP 3620), and one year junior-level mathematics. Staff.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of *Introductory Statistical Mechanics* by Bowley and Sanchez.

AEP 4340 Continuum Physics

Spring. 4 credits. Prerequisites: AEP 3330 and 3560 or equivalent. Staff.

Topics: Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, equations of motion, general beam equations, waves; fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on sphere, boundary layers, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with AEP 4380 possible. At the level of *Continuum Mechanics* by Lai, Rubin, and Krempl and *Introduction to Fluid Mechanics* by Tritton.

AEP 4380 Computational Engineering Physics

Spring. 3 credits. Prerequisites: CS 1100 or 1112, AEP 4210, 3330, 3550, 3610, or equivalent, or permission of instructor; co-registration in 3620 permitted. Staff.

Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

AEP 4400 Quantum and Nonlinear Optics

Spring. 4 credits. Prerequisites: AEP 3560, 3620, or equivalent. Staff.

Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

AEP 4500 Introductory Solid State Physics (also PHYS 4454)

Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 4443, AEP 3620, or CHEM 7930. Staff.

Introduction the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of *Introduction to Solid State Physics* by Kittel or *Solid State Physics* by Ashcroft and Mermin.

[AEP 4700 Biophysical Methods (also BIONB 4700)]

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. Next offered 2011–2012.

Overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level.]

AEP 4840 Introduction to Controlled Fusion: Principles and Technology (also ECE/NSE 4840, MAE 4590)

Spring. 3 credits. On demand. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

For description, see NSE 4840.

AEP 4900–4910 Independent Study in Engineering Physics

Fall, spring. Credit TBA.

Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

AEP 5500 Applied Solid State Physics

Spring. 3 credits. Prerequisites: AEP 3560, 3620, 4230, 4500 or equivalent.

Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of *Introduction to Applied Solid State Physics* by Dalven.

AEP 5520 Physics of Life

Spring. 3 credits.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research are discussed. Additional requirements for AEP M.Eng. students: Research current topic provided by the instructor and give an oral presentation in class.

AEP 5570 Applied Electrodynamics

Fall. 4 credits. At the level of Jackson's *Classical Electrodynamics*.

Topics include wave propagation in dielectrics, conductors, and plasmas; pulse propagation in dispersive media; reflection and transmission at interfaces; diffraction from apertures and

periodic media; radiation from charged particles, dipoles, and antennae; scattering of radiation; waveguides and transmission lines; cavities and resonators.

AEP 5710 Biophysical Methods Advanced Laboratory

Spring, first three weeks of Jan. or TBA during spring semester. 3 credits.

Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S–U grades. M. Lindau.

Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)

Spring. On demand. 4 credits.

Prerequisites: ECE 5810 and AEP 6060. For description, see ECE 5820.

AEP 6330 Nuclear Reactor Engineering (also NSE 6330)

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

For description, see NSE 6330.

[AEP 6610 Nanocharacterization

3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry.

Undergraduates should consult with instructor before enrolling. Next offered 2011–2012.

Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below.]

AEP 6620 Micro/Nano-fabrication and Processing

Spring. 3 credits.

Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

AEP 6630 Nanobiotechnology (also BIOG 6630, MSE 5630)

Fall. 3 credits. Letter grades only.

Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.

AEP 7110 Principles of Diffraction (also MSE 6710)

Fall. 3 credits. Letter grades only.
J. D. Brock.

Graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics include elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

AEP 7510 M.Eng. Project

Fall, spring, 6-12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

AEP 7530 Special Topics Seminar in Applied Physics

Fall, spring, 1 credit. Requirement for M.Eng. and M.S. Recommended for first-year Ph.D. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

[AEP 7810 Advanced Plasma Physics I: Cosmic Plasma Physics]**AEP 7820 Advanced Plasma Physics (also ECE 6820)**

Spring, 3 credits. Prerequisite: ECE 5810.
C. E. Seyler.
For description, see ECE 6820.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

D. J. Aneshansley, chair; B. A. Ahner, assoc. chair; L. D. Albright, L. T. Angenent, A. J. Baeumner, J. A. Bartsch, A. K. Datta, K. G. Gebremedhin, D. A. Haith, P. G. Hess, J. B. Hunter, L. H. Irwin, D. Luo, J. C. March, J.-Y. Parlange, G. E. Rehkugler, N. R. Scott, R. M. Spanswick, T. S. Steenhuis, M. B. Timmons, L. P. Walker, M. F. Walter, M. T. Walter. Lecturers: C. L. Anderson, L. D. Geohring, M. Wu

For complete course descriptions, see "Biological and Environmental Engineering" under "College of Agriculture and Life Sciences" or visit the department web site, www.bee.cornell.edu.

BEE 1200 The BEE Experience

Spring, 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050. Prerequisite: BEE majors or permission of instructor.

BEE 1510 Introduction to Computer Programming

Fall, 4 credits. Limited to 18 students per lab and rec. Pre- or corequisite: MATH 1910 or equivalent. No previous programming experience assumed.

BEE 2220 Bioengineering Thermodynamics and Kinetics

Spring, 3 credits. Prerequisites: MATH 1920, PHYS 2213, and chemistry course completed or concurrent.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)

Fall, 3 credits. Pre- or corequisite: MATH 2930.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)

Fall, 3 credits. Pre- or corequisite: MATH 2930, two semesters of core biology major classes and the investigative lab or BIOG 1105-1106.

BEE 3299 Sustainable Development

Spring, summer, 3 credits. Prerequisite: at least sophomore standing. S-U or letter grades.

BEE 3310 Bio-Fluid Mechanics

Fall, summer, 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence.

BEE 3500 Biological and Environmental Transport Processes

Spring, summer (offered spring 2011 only; taught again in fall 2011 and every fall thereafter). 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course.

BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)

Spring, 3 credits. Prerequisites: BEE 2600, biochemistry, linear algebra, ordinary differential equations, or permission of instructor.

BEE 3650 Properties of Biological Materials

Spring, 3 credits. Satisfies BE laboratory experience requirement. Pre- or corequisite: ENGRD 2020.

[BEE 3680 Biotechnology Applications: Animal Bioreactors

Fall, 3 credits. Prerequisite: biochemistry course or permission of instructor. Offered alternate years; next offered 2011-2012.]

BEE 3710 Physical Hydrology for Ecosystems

Spring, 3 credits. Prerequisite: MATH 1920 or permission of instructor. Offered alternate years.

BEE 4010 Renewable Energy Systems

Spring, 4 credits. Prerequisite: college physics.

BEE 4270 Water Measurement and Analysis Methods

Fall, 3 credits. Satisfies BE and EnvE laboratory experience requirement. Prerequisites: CEE 3310 or hydrology course.

BEE 4350 Principles of Aquaculture

Spring, 3 credits. Satisfies BE capstone design requirement. Prerequisite: at least junior standing.

BEE 4500 Bioinstrumentation

Spring, 4 credits. Satisfies both BE laboratory experience and capstone design requirement. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor.

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes

Fall, 3 credits (offered fall 2010 only; offered in spring 2012 and every spring thereafter). Satisfies College of Engineering technical writing requirement. Prerequisite: heat and mass transfer course (BEE 3500 or equivalent).

BEE 4550 Biologically Inspired Microsystems Engineering

Fall, 2-3 credits. Prerequisites: one year of biology, BEE 2220, co-registration in BEE 3500 and BEE 3310.

BEE 4590 Biosensors and Bioanalytical Techniques

Fall, 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering

Fall, 3 credits. Satisfies BE capstone design requirement. Prerequisites: MATH 2930, MATH 2940, BEE 3500 or equivalent, Mass and Energy Balances, or permission of instructor. S-U or letter grades.

BEE 4640 Bioseparation Processes

Fall, 3 credits. Prerequisites: introductory biochemistry and physics, MATH 1920, BEE 2600 or equivalent, or permission of instructor. S-U or letter grades. Offered alternate years.

BEE 4710 Introduction to Groundwater (also EAS 4710)

Spring, 3 credits. Prerequisites: MATH 2930, fluid mechanics or hydrology course. S-U or letter grades. Offered alternate years.

BEE 4730 Watershed Engineering

Fall, 4 credits. Satisfies BE and EnvE capstone design requirement. Satisfies College of Engineering technical writing requirement. Prerequisite: CEE 3310 or hydrology course.

BEE 4740 Water and Landscape Engineering Applications
Spring. 3 credits. Satisfies BE and EnvE capstone design requirement. Prerequisite: CEE 3310 or hydrology course or permission of instructor.

BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.

BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S-U or letter grades.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Satisfies BE capstone design requirement when co-registered in BEE 4960. Prerequisite: ENGRD 2020.

BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 4860 Industrial Ecology of Agriculturally Based Bioindustries
Spring. 3 credits. Prerequisites: one year calculus, some knowledge of MATLAB.

BEE 4870 Sustainable Bioenergy Systems
Fall. 3 credits. Satisfies BE and EnvE capstone design requirement. Prerequisites: BEE 2220 or equivalent thermodynamics course. Intended for upper-level undergraduates or graduate students.

BEE 4890 Entrepreneurial Management for Engineers
Fall. 4 credits. Prerequisite: junior standing.

BEE 4900 Biofuels: The Economic and Environmental Interactions
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S-U or letter grades.

[BEE 4930 Technical Writing for Engineers]

BEE 4960 Capstone Design in Biological and Environmental Engineering
Spring. 1 credit. Corequisite: BEE 4810.

BEE 4970 Individual Study in Biological and Environmental Engineering
Fall, spring. 1-4 credits. Prerequisites: written permission of instructor and adequate ability and training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4980 Undergraduate Teaching
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4990 Undergraduate Research
Fall, spring. 1-4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4991-4992 Honors Research
Fall, spring. 1-6 credits. Prerequisite: enrollment in BEE Honors Research Program.

BEE 5010 Bioengineering Seminar (also BME 5010)
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only.

BEE 5330 Engineering Professionalism
Spring. 1-2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with an accredited engineering degree. Students enrolling in 1-credit option **must** register to take Fundamentals of Engineering Exam. Lec only for first 10 weeks of semester. S-U or letter grades.

BEE 5901-5902 M.P.S. Project
Fall, spring. 1-6 credits. Requirement for all M.P.S. candidates in field.

BEE 5951-5952 Master of Engineering Design Project
Fall, spring. 3-6 credits. Prerequisite: admission to M.Eng. degree program.

BEE 6200 Approaches to Analytical Characterization of Biological Macromolecules
Spring. 1 credit. Prerequisites: CHEM 1570 or 3570, BIOMG 3330 or 3310 and MATH 1920.

BEE 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 6430)
Spring, eight weeks. 2 credits. Prerequisites: limited to third- and fourth-year veterinary students, graduate students, and advanced undergraduate students interested in agricultural engineering as related to animal manure management.

[BEE 6470 Water Transport in Plants (also BIOPL 6510)]
Fall. 2 credits. Offered alternate years; next offered 2011-2012.]

BEE 6490 Solute Transport in Plants (also BIOPL 6490)
Fall. 3 credits. Offered alternate years.

BEE 6570 Mixed-Culture Engineered Systems: Bioenergy and Microbial Ecology
Spring. 3 credits. Prerequisite: graduate standing only. Letter grades only.

BEE 6590 Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor.

[BEE 6720 Drainage]
Spring. 4 credits. Prerequisite: BEE 4710 or 4730. Offered alternate years; next offered 2011-2012.]

[BEE 6740 Ecohydrology]
Spring. 3 credits. Prerequisite: ecohydrology or hydrology course. Offered alternate years; next offered 2011-2012.]

BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only.

BEE 6940 Water in a Changing Climate: Interdisciplinary Discussions on Today's Human-Natural Water Systems (also NTRES 6940)
Fall. 1 credit. S-U grades only.

BEE 6970 Graduate Individual Study in Biological and Environmental Engineering
Fall, spring. 1-6 credits. Prerequisite: permission of instructor. S-U or letter grades.

BEE 7000 Orientation to Graduate Study
Fall. 1 credit. Prerequisite: newly joining graduate students in BEE. S-U grades only.

BEE 7540 The Right to Water (also NES 7540)
Fall. 2 credits. Prerequisite: graduate standing or permission of instructor. S-U or letter grades.

BEE 7600 Nucleic Acid Engineering (also BME 7600)
Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S-U or letter grades.

BEE 7710 Soil and Water Engineering Seminar
Fall, spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U or letter grades.

BEE 8900 Master's-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

BEE 9900 Doctoral-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

BIOMEDICAL ENGINEERING

M. L. Shuler, James M. and Marsha McCormick chair; L. J. Bonassar, associate chair; J. T. Butcher, P. C. Doerschuk, director of graduate studies, C. Fischbach-Teschl, M. Jin, M. R. King, W. L. Olbricht, D. A. Putnam, C. Reinhart-King, C. B. Schaffer, D. J. Skorton, Y. Wang, W. R. Zipfel. Senior lecturers: S. D. Archer, D. Lipson, R. W. Newman

BME 1310 Introduction to Biomedical Engineering (also ENGRI 1310)
Spring. 3 credits. Prerequisite: freshman or sophomore standing. D. A. Putnam and S. D. Archer.

For description, see ENGRI 1310.

BME 3010 Molecular Principles of Biomedical Engineering (also CHEME 4010)
Fall. 3 credits. Prerequisite: basic biology such as BIOG 1110, BIOMG 3300, or BIOMI 2900. Lec and lab. M. Jin and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging

technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 3020 Cellular Principles of Biomedical Engineering (also CHEME 4020)

Spring. 3 credits. Prerequisite: BME 3010 or course work in basic biology such as BIOG 1110, BIOMG 3300, or BIOMI 2900 plus mathematics through differential equations (e.g., MATH 2210 or 2940), or permission of instructor. Lec and lab. C. Fischbach-Teschl, W. Zipfel, and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

BME 3300 Introduction to Computational Neuroscience (also BIONB/PSYCH/COGST 3300)

Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades. Offered alternate years. C. Linster.

For description, see BIONB 3300.

BME 3600 Molecular and Cellular Bioengineering (also BEE 3600)

Spring. 3 credits. Prerequisite: BEE 2600, biochemistry course, linear algebra, ordinary differential equations, or permission of instructor.

For description, see BEE 3600.

BME 4010 Biomedical Engineering Analysis of Metabolic and Structural Systems (also MAE 4660)

Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. J. Bonassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 4020 Electrical and Chemical Physiology

Spring. 3 credits. Prerequisite: BME 3010, 3020, or 4010 or biology background or permission of instructor. Lec and lab. C. Reinhart-King and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter-organ and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 4110 Science and Technology Approaches to Problems in Human Health

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and M. G. Kaplitt.

Presents an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the Weill Cornell Medical College discuss health

problems they are unable to treat as well as they would like, then Cornell University and Weill faculty discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

BME 4520 Inside-Out Ergonomics II (also DEA 4520)

Fall. 3 credits. D Feathers. For description, see DEA 4520.

BME 4640 Orthopaedic Tissue Mechanics (also MAE 4640)

Spring. 3 credits. Prerequisites: ENGRD 2020 and MAE 3250 or permission of instructor. Offered alternate years.

For description, see MAE 4640.

BME 4810 Biomedical Engineering (also CHEME 4810)

Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEME 4810.

BME 4900 Independent Undergraduate Project in Biomedical Engineering

Fall, spring. Variable credit. Staff. Research or projects by an individual or a small group of undergraduates.

BME 4910 Principles of Neurophysiology (also BIONB 4910)

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 2220 or written permission of instructor. S-U or letter grades for graduate students by permission of instructor. B. R. Johnson.

For description, see BIONB 4910.

BME 4980 Special Topic: Introduction to Systems and Synthetic Biology

Spring. 4 credits. X. Shen. For description, see ECE 4980.

BME 5010 Bioengineering Seminar (also BEE 5010)

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff. Students attend seminars in the field of engineering. Eligible seminars include the Biomedical Engineering Seminar, listings in the "Biophysics Colloquia" or those with biological engineering or biological sciences content. A written summary and log of 10 seminars attended is required.

BME 5020 Biomedical System Design (also ECE 5020)

Spring. 1-4 credits. Pre- or corequisites: at least one of ECE 4250, 4760, 4530. J. C. Belina.

For description, see ECE 5020.

BME 5030 Electronic Bioinstrumentation (also ECE 5030)

Fall. 4 credits. Prerequisites: introductory biology, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250, respectively; M.Eng. students only; permission of instructor. B. R. Land.

For description, see ECE 5030.

BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)

Spring. 2-3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). C. C. Chu.

For description, see FSAD 4390.

BME 5400 Biomedical Computation

Fall. 3 credits. Prerequisites: MATH 2930 and 2940 (or equivalent), and introductory computer programming course. M. R. King. The application of numerical and statistical methods to model biological systems and interpret biological data, using the MATLAB programming language.

BME 5500 Product Engineering and Design in Biomedical Engineering

Fall. 3 credits. Prerequisite: graduate standing; requirement for M.Eng. students majoring in BME. D. Lipson and R. W. Newman.

A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

BME 5600 Biotransport and Drug Delivery

Spring. 3 credits. Prerequisites: CHEME 3240 and MATH 2930, or equivalent. M. R. King.

Focuses on engineering analysis of drug delivery applications and basic transport processes in physiological systems. Specific topics include targeted drug delivery, controlled drug release, biorheology, capillary mass transport, and pharmacokinetic compartmental models.

BME 5620 Biomineralization (also MSE 5620)

Spring. 3 credits. L. Estroff. For description, see MSE 5620.

BME 5690 Clinical Biomechanics of Musculoskeletal Tissues (also MAE 5690)

Fall. 3 credits. Offered alternate years. Y. Gao.

For description, see MAE 5690.

BME 5700 Biophysical Methods (also BIONB/AEP 4700)

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. M. Lindau.

For description, see AEP 4700.

BME 5710 Analytical Techniques for Material Science (also MSE 5710)

Spring. 3 credits. D. Grubb. For description, see MSE 5710.

BME 5780 Computer Analysis of Biomed Images (also ECE 5780)

Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves. For description, see ECE 5780.

BME 5810 Soft Tissue Biomechanics (also MAE 5680)

Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. J. T. Butcher.

Introduces concepts of biomechanics applied to understanding the material behavior of soft tissues. Topics include finite strain, nonlinearities, constitutive frameworks, and experimental methodologies. Tissues to be modeled include tendons, blood vessels, heart valves, cartilage, and engineered tissues.

BME 5830 Cell-Biomaterials Interactions

Spring. 3 credits. Corequisites: BME 3010, concurrent with 3020, or permission of instructor. C. Reinhart-King.

Biological principles underlying biomaterial design and cell adhesive behavior, incorporating biomechanical analysis across the molecular, cellular, and tissue length scales.

[BME 5850 Current Practice in Tissue Engineering

Fall. 3 credits. Corequisites: BME 3010 or 4010 (or BME 3020 as corequisite). Next offered 2011–2012. C. Fischbach-Teschl.

Covers fundamental biological principles and engineering concepts underlying the field of tissue engineering and describes specific strategies to engineer tissues for clinical use along with examples.]

BME 5910 Design Project

Fall, spring. 3–6 credits. Requirement for M.Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course. D. Lipson and staff.

Design and economic evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 5930 Independent Design Project

Fall and spring. Variable credit.

Prerequisite: graduate standing. D. Lipson and staff.

Graduate-level nonthesis research or studies on special projects in biomedical engineering.

BME 6180 Principles of Medical Imaging (also VTMED 6180)

Fall. 1–3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics. Y. Wang and N. Dykes.

One-credit version requires attendance the first five weeks of lectures on nonmathematical description of imaging principles and field trips to Cornell University Hospital for Animals (CUHA) to see imaging in clinical practice. Three-credit version requires attendance for the entire semester. The later part of the lectures focus on mathematical description of imaging principles. The formulations of spatial encoding and image contrasts are presented for all major medical imaging modalities: x-ray, CT, MR, SPECT/PET, US. The inverse problem between detected signal and image source is discussed and the concepts of image resolution, SNR, and scan time is illustrated analytically and quantitatively for all modalities.

BME 6260 Biomedical Optics, Imaging, and Spectroscopy

Spring. 3 credits. Prerequisites: introductory physics, calculus, and biology. W. R. Zipfel.

Fundamentals of optical systems design, application, and analysis of concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors, and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, deconvolution and interference, all in relation to biomedical microscopy, spectroscopy, and bioanalytical techniques.

BME 6310 Engineering Principles for Drug Delivery (also CHEME 6310)

Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam.

Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability. Stimuli-sensitive systems, controlled-release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 6410 Biomedical Engineering Analysis of Proteins for Medicine

Spring. 3 credits. Prerequisites: graduate standing and background in biology and chemistry. M. Jin.

Protein engineering principles applied to developing molecules for biotherapeutics and biophysical studies. Course topics include general overview on biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentations for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 6501 Natural Engineering: Developmental Biology Paradigms for Regenerative Medicine

Spring. 1–3 credits. Prerequisite: graduate standing. J. T. Butcher.

This course is in two modules. The first module (1 credit) covers the embryonic development and fetal maturation of several major organ systems, including lung, heart, vascular, and bone from an engineer's perspective (evolutionary conservation, major signaling pathways involved, etc). The second module (2 credits) builds upon the first module by highlighting engineering approaches to study developmental biology (e.g., systems biology, mechanical testing, micro-environmental control, genetic manipulation, tissue engineering). The module also identifies relationships between developmental biology and postnatal disease, as well as explore developmental biology-based approaches for regenerative medicine (directed stem cell differentiation, mechanical conditioning, matrix based differentiation, etc.). Material is drawn largely from primary literature. Students have regular manuscript reviews, two midterms, and a final project analyzing the natural engineering of a different organ system.

[BME 6640 Mechanics of Bone (also MAE 6640)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2011–2012.

For description, see MAE 6640.]

BME 6650 Principles of Tissue Engineering (also MAE/MSE 6650)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. L. Bonassar.

Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body

systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BME 6670 Nanobiotechnology (also AEP/ BIOG 6630, MSE 5630)

Fall. 3 credits. Letter grades only. C. Reinhart-King.

Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. Course lectures are largely from guest faculty with expertise in the presented topic areas. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures may be teleconferenced to Weill Cornell Medical College and other cooperating institutions.

BME 7030 Graduate Student Teaching Experience

Fall, spring. Variable credit. S–U or letter grades. Staff.

Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

BME 7110 Fundamentals of Biomedical Engineering Research I

Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipfel and staff.

First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BME 7130 Core Concepts in Disease

Spring. 3 credits. Prerequisites: introductory biology; Ph.D. students; for all others, permission of instructor. C. B. Schaffer.

Most diseases emerge due to a relative small number of biological effects, including mechanisms like infection, inflammation, neoplasia, genetic mutation, protein misfolding, and metabolic dysregulation. Students learn about disease-state biology by focusing on these broad disease pathways. The course consists of several modules, each focused on one broad class of disease mechanism, and includes both a discussion of the underlying biology of the disease pathway as well as examples of specific diseases that involve those mechanisms. This course complements the training in fundamental normal-state biology students are already receiving by providing a mechanism-centered view of disease development.

BME 7160 Immersion Experience in Medical Research and Clinical Practice

Fall. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang.

Seven-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

BME 7310 Advanced Biomedical Engineering Analysis of Biological Systems

Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk.

Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

BME 7600 Nucleic Acid Engineering (also BEE 7600)

Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. D. Luo.

For description, see BEE 7600.

BME 7900 Biomedical Engineering Seminar

Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler.

Research-based seminars. May meet with other seminar series as appropriate.

BME 8600 Doctoral Research Rotations in Biomedical Engineering

Fall. 1 credit. Restricted to first-year Ph.D. students. Staff.

Provides a mechanism for granting course credit for optional research rotations of four to eight weeks in duration self-arranged by first-year Ph.D. students.

BME 8999 M.S. Thesis Research

Fall, spring. Variable credit. Staff. Thesis research for the M.S. degree in BME.

BME 9999 Ph.D. Thesis Research

Fall, spring. Variable credit. Staff. Thesis research for the Ph.D. degree in BME.

CHEMICAL AND BIOMOLECULAR ENGINEERING

L. A. Archer, director; T. M. Duncan, associate director; A. B. Anton, A. M. Center, P. Clancy, C. Cohen, S. Daniel, M. P. DeLisa, J. R. Engstrom, F. A. Escobedo, T. Hanrath, A. J. Hunter, Y. L. Joo, D. L. Koch, W. L. Olbricht, D. A. Putnam, M. L. Shuler, P. H. Steen, A. D. Stroock, J. W. Tester, J. D. Varner

CHEME 1120 Introduction to Chemical Engineering (also ENGR1 1120)

Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan.

Course in the Introduction to Engineering series. For description, see ENGR1 1120.

CHEME 2190 Mass and Energy Balances (also ENGRD 2190)

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.

For description, see ENGRD 2190.

CHEME 2880 Biomolecular Engineering: Fundamentals and Applications

Fall. 3 credits. Corequisite: ENGRD 2190. J. D. Varner.

An introduction to modern biology including aspects of biochemistry and molecular and cellular biology intended for students with no significant background in this area. An emphasis on practical applications of this knowledge in a variety of settings including the production of industrial enzymes, pharmaceuticals, and biologics.

CHEME 3010 Career Perspectives

Spring. 1 credit. Prerequisite: juniors affiliated with chemical and biomolecular engineering. Staff.

Weekly presentations by visiting chemical and biomolecular engineers to describe career paths and current professions. Job overviews and day-to-day details. Lessons learned from experiences.

CHEME 3130 Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanrath.

Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEME 3230 Fluid Mechanics

Spring. 3 credits. Prerequisites: CHEME 2190 and MATH 2930. L. A. Archer.

Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEME 3240 Heat and Mass Transfer

Fall. 3 credits. Prerequisite: CHEME 3230. Staff.

Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEME 3320 Analysis of Separation Processes

Spring. 3 credits. Prerequisites: CHEME 3130 and 3240. A. B. Anton.

Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

CHEME 3720 Introduction to Process Dynamics and Control

Spring. 2 credits. Prerequisites: CHEME 3130 and 3230. J. R. Engstrom.

Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEME 3900 Chemical Kinetics and Reactor Design

Spring. 3 credits. Prerequisites: CHEME 3130 and 3230. T. M. Duncan.

Study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEME 4010 Molecular Principles of Biomedical Engineering (also BME 3010)

Fall. 3 credits. Prerequisite: BIOG 1110 or BIOMG 3300. M. Jin.

For description, see BME 3010.

CHEME 4020 Cellular Principles of Biomedical Engineering (also BME 3020)

Spring. 3 credits. Staff.

For description, see BME 3020.

CHEME 4130 Introduction to Nuclear Science and Engineering (also AEP/ECE/MAE/NSE/TAM 4130)

Fall. 3 credits. B. Cady.

For description, see TAM 4130

CHEME 4320 Chemical Engineering Laboratory

Fall. 4 credits. Prerequisites: CHEME 3230, 3240, 3320, and 3900. A. B. Anton and staff.

Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 4620 Chemical Process Design

Spring. 4 credits. Prerequisite: CHEME 4320. A. M. Center and staff.

Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

CHEME 4700 Process Control Strategies

Spring. 3 credits. A. M. Center.

Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)

Fall. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor. M. Campbell.

For description, see MAE 4780.

[CHEME 4800 Chemical Processing of Electronic Materials]

CHEME 4810 Biomedical Engineering (also BME 4810)

Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor. W. L. Olbricht.

Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHEME 4840 Microchemical and Microfluidic Systems

Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. J. R. Engstrom.

Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport

phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 4900 Undergraduate Projects in Chemical Engineering

Fall, spring. Variable credit.
Research or studies on special problems in chemical engineering.

CHEME 4980 Design and Testing of the Chemical Engineering Car

Fall, spring. 3–4 variable credits; 3 credits for team members or 4 for officers.
Prerequisites: ENGRD 2190 and CHEM 2090. J. D. Varner.
Research, design, and construct a small chemical-powered model car. Participate in team-oriented hands-on construction of a car powered with a chemical energy source that will carry a specified load a given distance and stop. The AIChE Student Chapter enters it in the AIChE Regional Conference to qualify and compete in the organization's national conference competition.

CHEME 4990 Senior Seminar

Fall, spring. 1 credit. Prerequisite: CHEME seniors. Staff.
Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquia and Seminars in Physics and Related Fields," which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 5201 Introduction to Biomedical Engineering (module)

Spring, first third of semester. 1 credit.
W. L. Olbricht.
Co-meets with CHEME 4810.

[CHEME 5202 Introduction to Electronic Materials Processing (module)]

[CHEME 5203 Introduction to Polymer Processing (module)]

Spring, second third of semester. 1 credit.
L. A. Archer.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.]

CHEME 5204 Turbomachinery Applications (module)

Fall, last third of semester. 1 credit.
A. M. Center.
Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

CHEME 5205 Applications of Fluid Dynamics (module)

Fall, first third of semester. 1 credit.
A. M. Center.

CHEME 5207 Hydrocarbon Resources and Petroleum Refining (module)

Spring, second third of semester. 2 credits.
A. M. Center.
Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

CHEME 5208 Renewable Resources from Agriculture—Sugarcane as a Feedstock (module)

Spring, last third of semester. 1 credit.
Maximizing the value of a renewable resource by control of inputs and final product use.

CHEME 5209 Applied Heat Transfer

Fall, last third of semester. 1 credit.
A. M. Center.

[CHEME 5430 Biomolecular Engineering of Bioprocesses

Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. No prior background in biological sciences required. Next offered 2011–2012. M. P. DeLisa.
Discusses principles involved in using biomolecules (e.g., antibodies, enzymes, DNA) and living organisms (e.g., bacteria, yeast, tissue cultures) for engineering biological processes.]

CHEME 5440 Systems Biology in Biotechnology and Medicine

Spring. 3 credits. J. D. Varner.
Principles and application of experimental and computational systems biology tools to problems in human health, biopharmaceutical production, and bioenergy systems. Primary emphasis is understanding the structure and properties of signal transduction and metabolic networks in these applications. Also presents basic tools and strategies used in the emerging field of synthetic biology.

CHEME 5640 Design of Chemical Reactors

Spring. 3 credits. Prerequisite: CHEME 3900 or equivalent. D. L. Koch.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 5650 Design Project

Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students. Staff.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

[CHEME 5720 Managing New Business Development

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Staff.
Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.]

CHEME 5870 Energy Seminar I (also MAE 5450, ECE 5870)

Fall. 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5870.

CHEME 5880 Energy Seminar II (also MAE 5460, ECE 5880)

Fall. 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5880.

CHEME 5990 Medical and Industrial Biotechnology Seminar

Fall, spring. 1 credit. Prerequisite: medical and industrial biotechnology trainees. M. DeLisa.
Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings that are related to medical and industrial biotechnology.

CHEME 5999 Special Projects in Chemical Engineering

Fall, spring. Variable credit. Prerequisite: graduate standing. Staff.
Nonthesis research or studies on special problems in chemical engineering.

CHEME 6240 Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer

Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230, CHEME 3230, AEP 4340) or permission of instructor. B. L. Kirby.
For description, see MAE 5240.

CHEME 6310 Engineering Principles for Drug Delivery (also BME 6310)

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. D. A. Putnam.
For description, see BME 6310.

CHEME 6400 Polymeric Materials

Fall. 3 credits. C. Cohen.
Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEME 6440 Aerosols and Colloids

Fall. 3 credits. D. L. Koch.
Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, theological and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials and air pollution control.

CHEME 6610 Air Pollution Control

Spring. 3 credits. P. H. Steen.
Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

CHEME 6640 Energy Economics

Fall. 3 credits. A. J. Hunter.
Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEME 6650 Energy Engineering

Spring. 3 credits. A. J. Hunter.
Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

CHEME 7110 Advanced Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: CHEM 3890–3900 and CHEME 3130 or equivalent. F. A. Escobedo.
Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEME 7130 Chemical Kinetics and Transport

Spring, 5 credits. Prerequisite: CHEME 3900 or equivalent. S. Daniel and staff.

Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEME 7310 Advanced Fluid Mechanics and Heat Transfer

Fall, 3 credits. Prerequisites: CHEME 3230-3240 or equivalent. D. L. Koch.

Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEME 7410 Selected Topics in Biochemical Engineering

Fall, spring, 1 credit; may be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLisa.

Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 7450 Physical Polymer Science I

Fall, 3 credits. Corequisite: CHEME 7110 or equivalent. Offered alternate years.

L. A. Archer.

Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels; polymer melts.

CHEME 7510 Mathematical Methods of Chemical Engineering Analysis

Fall, 4 credits. Y. L. Joo.

Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation

Fall, 3 credits. Prerequisite: CHEME 7510 or equivalent. Offered alternate years.

P. H. Steen.

Topics include elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems (AUTO).

CHEME 7900 Seminar

Fall, spring, 1 credit each semester.

Requirement for all graduate students in field of chemical and biomolecular engineering. L. A. Archer.

General chemical engineering seminar.

CHEME 7920 Principles and Practices of Graduate Research

Fall, 1 credit. S. Daniel, T. Hanrath, and R. Robinson.

A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files) and reporting research (writing a technical paper and oral presentations).

CHEME 8999 Thesis Research

Fall, spring, Variable credit. Staff.

Thesis research for the M.S. degree in chemical engineering.

CHEME 9999 Thesis Research

Fall, spring, Variable credit. Staff.

Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

P. L-F. Liu, director; W. D. Philpot, associate director; J. F. Abel, W. Aquino, L. Banks-Sills, J. J. Bisogni, Jr., W. H. Brutsaert, P. G. Carr, E. A. Cowen, P. J. Diamessis, R. I. Dick, C. Earls, H. O. Gao, K. Gebremedhin, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Ingrassia, J. Jenkins, P. Koutsourelakis, F. H. Kulhawy, L. W. Lion, D. P. Loucks, J. R. Mbwana, W. McGuire, A. H. Meyburg, L. K. Nozick, T. D. O'Rourke, T. Peköz, P. Petrina, R. E. Richardson, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, C. H. Trautmann, M. A. Turnquist, D. Warner, F. Wayno, M. Weber-Shirk

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Each area has several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General

CEE 1130 Sustainable Design for Appledore Island (also ENGRI 1130) (s,3)

CEE 1160 Modern Structures (also ENGRI 1160) (f,3)

CEE 3040 Uncertainty Analysis in Engineering (f,4)

CEE 3080 Introduction to CADD (f,s,1)

CEE 3090 Special Topics in Civil and Environmental Engineering (f,s,var.)

CEE 3200 Engineering Computation (also ENGRD 3200) (s,3)

CEE 3230 Engineering Economics and Management (also ENGRG 3230) (s,su,3)

CEE 4000 Senior Honors Thesis (f,s,var.)

CEE 4010 Undergraduate Engineering Teaching in CEE (f,s,var.)

Civil Infrastructure

See also: CEE 1160, 3040, 3080, 3200, and 5950

Geotechnical Engineering

CEE 3410 Introduction to Geotechnical Engineering (f,4)

CEE 4400 Foundation Engineering (f,3)

CEE 4410 Retaining Structures and Slopes (s,3)

CEE 4440 Environmental Site and Remediation Engineering (s,3)

CEE 5041/5042 Design Project in Geotech/Structures (f,s,3)

CEE 6045 Special Topics in Geotechnical Engineering (f,s,var.)

CEE 6070 Seminar—Civil Infrastructure (f,s,1)

CEE 6400 Foundation Engineering (f,3)

CEE 6410 Retaining Structures and Slopes (s,3)

CEE 6440 Environmental Site and Remediation Engineering (f,3)

CEE 7040 Research in Geotechnical Engineering (f,s,var.)

CEE 7400 Engineering Behavior of Soils (f,3)

CEE 7410 Rock Engineering (f,3)

CEE 7440 Advanced Foundation Engineering (s,2)

CEE 7450 Soil Dynamics (s,3)

CEE 7460 Embankment Dam Engineering (s,2)

CEE 8400 Thesis—Geotechnical Engineering (f,s,var.)

Structural Engineering

CEE 1160 Modern Structures (f,3)

CEE 3710 Structural Modeling and Behavior (s,4)

CEE 3720 Intermediate Solid Mechanics (f,4)

CEE 4710 Fundamentals of Structural Mechanics (f,su,4)

CEE 4720 Introduction to the Finite Element Method (f,3)

CEE 4730 Design of Concrete Structures (f,4)

CEE 4740 Introduction to the Behavior of Metal Structures (s,4)

CEE 4750 Concrete Materials and Construction (s,3)

CEE 4770 Introduction to Composite Materials (f,3)

CEE 4780 Structural Dynamics and Earthquake Engineering (s,3)

CEE 4810 LRFD-Based Engineering of Wood Structures (s,3)

CEE 5071/5072 Design Project in Structural Engineering (f,s,3)

CEE 6070 Seminar—Civil Infrastructure (f,s,1)

CEE 6075 Special Topics in Structural Engineering (f,s,var.)

CEE 6710 Fundamentals of Structural Mechanics (f,3)

CEE 6720 Introduction to the Finite Element Method (f,3)

CEE 6730 Design of Concrete Structures (f,4)

- CEE 6750 Concrete Materials and Construction (s,3)
 CEE 6760 Advanced Composite Materials (s,4)
 CEE 6770 Engineering Analysis (f,3)
 CEE 6780 Structural Dynamics and Earthquake Engineering (s,3)
 CEE 6790 Evaluation and Failure of Structures (s,3)
 CEE 7070 Research in Structural Engineering (f,s,var.)
 CEE 7073 Civil and Environmental Engineering Materials Project (f,s,var.)
 CEE 7700 Engineering Fracture Mechanics (f,3)
 CEE 7710 Stochastic Mechanics in Science and Engineering (f,3)
 CEE 7720 Random Vibration (f,3)
 CEE 7730 Structural Reliability (f,3)
 CEE 7740 Advanced Structural Concrete (f,3)
 CEE 7750 Nonlinear Finite Element Analysis (s,3)
 CEE 7760 Advanced Topics in Stability (s,3)
 CEE 7770 Advanced Concepts in Finite Element Methods (s,4)
 CEE 7790 Nonlinear Finite Element Analysis II (f,4)
 CEE 8700 Thesis—Structural Engineering (f,s,var.)

Environment

See also CEE 1130, 3200, 3040, and 4920

Environmental Engineering

- CEE 1130 Sustainable Design for Appledore Island (s,3)
 CEE 2550 AguaClara: Sustainable Water Supply Project (f,s,var.)
 CEE 3510 Environmental Quality Engineering (s,3)
 CEE 4510 Microbiology for Environmental Engineering (f,3)
 CEE 4530 Laboratory Research in Environmental Engineering (s,3)
 CEE 4540 Sustainable Municipal Drinking Water Treatment (f,3)
 CEE 4550 AguaClara: Sustainable Water Supply Project (f,s,3)
 CEE 5051/5052 Design Project in Environmental Engineering (f,s,3)
 CEE 6020 Seminar—Water Resources and Environmental Engineering (f,1)
 CEE 6051 Seminar—Environmental Quality Engineering (s,1)
 CEE 6055 Special Topics in Environmental Engineering (f,s,var.)
 CEE 6530 Water Chemistry for Environmental Engineering (f,3)
 CEE 6540 Aquatic Chemistry (s,3)
 CEE 6550 Transport, Mixing, and Transformation in the Environment (f,3)
 CEE 6560 Physical/Chemical Process (f,3)
 CEE 6570 Biological Processes (s,3)
 CEE 6580 Biodegradation and Biocatalysis (s,3)

- CEE 7050 Research in Environmental Engineering (f,s,var.)
 CEE 7360 Turbulences and Turbulent Mixing in Environmental Stratified Flows (s,3)
 CEE 8500 Thesis—Environmental Engineering (f,s,var.)

Environmental Systems

See Engineering Systems and Management mission areas for a listing of courses in Environmental and Public Systems.

Environmental Fluid Mechanics and Hydrology

- CEE 3310 Fluid Mechanics (f,su,4)
 CEE 3320 Hydraulic Engineering (s,4)
 CEE 4320 Hydrology (s,3)
 CEE 4350 Coastal Engineering (s,3)
 CEE 4360 Case Studies in Environmental Fluid Mechanics (s,4)
 CEE 4370 Experimental Methods in Fluid Dynamics (s,3)
 CEE 6000 Advanced Numerical Methods for Engineers (f,3)
 CEE 6020 Seminar—Water Resources and Environmental Engineering (f,1)
 CEE 6030 Seminar—Environmental Fluid Mechanics/Hydrology (s,1)
 CEE 6035 Special Topics in Hydraulics (f,s,var.)
 CEE 6300 Spectral Methods for Incompressible Environmental Fluids (f,4)
 CEE 6310 Computational Simulation of Flow and Transport in the Environment (s,3)
 CEE 6320 Hydrology (s,3)
 CEE 6330 Flow in Porous Media and Groundwater (s,3)
 CEE 6340 Boundary Layer Meteorology (f,3)
 CEE 6350 Small and Finite Amplitude Water Waves (s,3)
 CEE 6360 Environmental Fluid Mechanics (s,3)
 CEE 6370 Experimental Methods in Fluid Dynamics (s,4)
 CEE 6550 Transport, Mixing, and Transformation in the Environment (f,3)
 CEE 7030 Research in Hydraulics (f,s,var.)
 CEE 8300 Thesis—Fluid Mechanics and Hydrology (f,s,var.)

Engineering Systems and Management

See also CEE 3040.

Engineering Management

- CEE 4920 Engineers for a Sustainable World (f,3)
 CEE 5900 Project Management (f,s,4)
 CEE 5910/5920 Engineering Management Project (f,s,3)
 CEE 5930 Engineering Management Methods (f,3)
 CEE 5940 Economic Methods for Engineering and Management (f,4)
 CEE 5950 Construction Planning and Operations (f,3)
 CEE 5960 Management Issues in Forensic Engineering (f,3)

- CEE 5970 Risk Analysis and Management (s,3)
 CEE 6095 Special Topics in Engineering Management (f,s,var.)
 CEE 6900 Creativity, Innovation, and Leadership (s,3)

Environmental and Public Systems

- CEE 3230 Engineering Economics and Management (also ENGRG 3230) (s,su,3)
 CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development (s,3)
 CEE 5021/5022 Design Project in Environmental or Water Resource Systems (f,s,3)
 CEE 5970 Risk Analysis and Management (s,3)
 CEE 6021 Seminar—Environmental and Water Resources Systems Analysis (s,1)
 CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis (f,s,var.)
 CEE 6200 Water Resources Systems Engineering (s,3)
 CEE 6210 Stochastic Hydrology (s,3)
 CEE 6230 Environmental Quality Systems Engineering (f,3)
 CEE 6360 Environmental Fluid Mechanics (s,4)
 CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development (s,3)
 CEE 6930 Public Systems Modeling (f,4)
 CEE 7020 Environmental and Water Resources Systems Analysis Research (f,s,var.)
 CEE 8200 Thesis—Environmental and Water Resources Systems (f,s,var.)

Remote Sensing

- CEE 4110 Environmental Information Science (also CSS 4110) (s,3)
 CEE 6015 Special Topics—Remote Sensing (f,s,var.)
 CEE 6100 Remote Sensing Fundamentals (also CSS 6100) (f,3)
 CEE 6150 Digital Image Processing (s,3)
 CEE 7010 Research—Remote Sensing (f,s,var.)
 CEE 8100 Thesis—Remote Sensing (f,s,var.)

Systems Engineering

- CEE 4060 Civil Infrastructure Systems (s,3)
 CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100) (f,3)
 CEE 5252 Systems Architecture, Behavior, and Optimization (also CIS 5050, ECE/ORIE 5130, MAE 5920, SYSEN 5200) (s,3)
 CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340) (f,3–4)
 CEE 6090 Seminar—Engineering Systems and Management (f,s,1)
 CEE 6860 Civil Infrastructure Systems (s,3)
 CEE 6930 Public Systems Modeling (f,4)

Transportation

- CEE 3610 Introduction to Transportation Engineering (s,su,3)
 CEE 4610 Urban Transportation Planning and Modeling (s,3)

CEE 4630 Future Transportation Technologies and Systems (s,3)

CEE 4640 Transportation Systems Design (f,3)

CEE 4650 Transportation, Energy, and the Environment System for Sustainable Development (s,3)

CEE 5061/5062 Design Project in Transportation Engineering (f,s,3)

CEE 6060 Seminar—Transportation (f,s,1)

CEE 6065 Special Topics in Transportation (f,s,var.)

CEE 6610 Urban Transportation Planning and Modeling (s,3)

CEE 6620 Urban Transportation Network and Design and Analysis (f,3)

CEE 6630 Network Flows and Algorithms (s,3)

CEE 6650 Transportation, Energy, and the Environment System for Sustainable Development (s,3)

CEE 7620 Practicum in Modeling Transportation Systems (f,3)

CEE 8600 Thesis—Transportation Engineering (f,s,var.)

[CEE 1130 Sustainable Design for Appledore Island (also ENGR 1130)]

Spring. 3 credits. Students must register under ENGR 1130. Next offered 2011–2012. Staff.

Course in Introduction to Engineering series. For description, see ENGR 1130.]

CEE 1131 Water Treatment Design (also ENGR 1131)

Spring. 3 credits. Students must register under ENGR 1131. M. L. Weber-Shirk

For description, see ENGR 1131.

CEE 1160 Modern Structures (also ENGR 1160)

Fall. 3 credits. Students must register under ENGR 1160. A. Ingrassia.

Course in Introduction to Engineering series. For description, see ENGR 1160.

CEE 2550 AguaClara: Sustainable Water Supply Project

Fall, spring. 1–3 credits. Meets with CEE 4550. M. L. Weber-Shirk.

Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. Students in CEE 2550 learn in an apprenticeship role on teams led by students in CEE 4550 or CEE 5051/5052. For more information, see aguaclara.cee.cornell.edu.

CEE 3040 Uncertainty Analysis in Engineering

Fall. 4 credits. Prerequisite: first-year calculus. F. Vanek.

Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CEE 3080 Introduction to CADD

Fall, spring. 1 credit. Prerequisites: pre-enrollment limited to Engineering students. Priority given to CEE and BEE students; other students by permission of instructor and only after first meeting of the sec. Students must attend first meeting of one of the sections. Course begins first M of each semester. Staff.

Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD techniques. VIZ, an alternative software tool for 3D modeling and 3D visualization, is also introduced. Course meets in ACCEL (second floor of the Engineering Library in Carpenter Hall) so that each student can participate on an individual computer. Grades are based on attendance, weekly exercises completed in class, and a semester project due the last week of classes.

CEE 3090 Special Topics in Civil and Environmental Engineering

Fall, spring. 1–6 credits. Staff.

Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 3200 Engineering Computation (also ENGRD 3200)

Spring. 3 credits. Students must register under ENGRD 3200. P. Diamessis.

For description, see ENGRD 3200.

CEE 3230 Engineering Economics and Management (also ENGRG 3230)

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

Introduction to engineering and business economics investment alternatives and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

CEE 3310 Fluid Mechanics

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Pre- or corequisite: ENGRD 2020. E. A. Cowen.

Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

[CEE 3320 Hydraulic Engineering

Spring. 4 credits. Prerequisite: CEE 3310. Next offered 2011–2012. P. L.-F. Liu.

Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.]

CEE 3410 Introduction to Geotechnical Engineering

Fall. 4 credits. Prerequisites: ENGRD 2020 or permission of instructor. Letter grades only. H. E. Stewart.

Fundamentals of geotechnical engineering. Topics include origins and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements from surface loads, steady-state and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CEE 3510 Environmental Quality Engineering

Spring. 3 credits. Prerequisite: MATH 2930. L. W. Lion.

Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for wastewater treatment.

CEE 3610 Introduction to Transportation Engineering

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. M. A. Turnquist.

Introduces technological, economic, and social aspects of transportation. Emphasizes design and functioning of transportation systems and their components. Covers supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CEE 3710 Structural Modeling and Behavior

Spring. 4 credits. Prerequisite: ENGRD 2020. Corequisite: MATH 2940. P. Koutsourelakis.

Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 3720 Intermediate Solid Mechanics

Fall. 4 credits. Prerequisites: MATH 2940, CEE 3710. D. Warner.

Presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course is a synergy of mathematical modeling, computer simulations, and physical experimentation.

CEE 4000 Senior Honors Thesis

Fall, spring. 1–6 credits. For students admitted to CEE Honors Program.

D. Warner.

Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 4010 Undergraduate Engineering Teaching in CEE

Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 4060 Civil Infrastructure Systems

Spring. 3 credits. Prerequisites: probability and statistics (CEE 3040 or equivalent) or permission of instructor. Recommended: engineering economics (CEE 3230 or equivalent) course. S–U or letter grades. Staff.

Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

CEE 4110 Environmental Information Science (also CSS 4110)

Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria and S. B. Hoskins.

For description, see CSS 4110.

CEE 4320 Hydrology

Spring. 3 credits. Prerequisite: CEE 3310. Intended for undergraduates. Lec concurrent with CEE 6320. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 6320.

[CEE 4350 Coastal Engineering]

Spring. 4 credits. Prerequisite: CEE 3310. Taught based on demand; contact professor if interested in course. Next offered 2011–2012. P. L-F. Liu.

Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.]

[CEE 4360 Case Studies in Environmental Fluid Mechanics]

Spring. 4 credits. Prerequisite: CEE 3310 or equivalent. Next offered 2012–2013. E. A. Cowen.

An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory—and field—based studies and case studies.]

CEE 4370 Experimental Methods in Fluid Dynamics

Spring. 3 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen.

Same as CEE 6370 but no project required. For description, see CEE 6370.

CEE 4400 Foundation Engineering

Fall. 3 credits. Prerequisite: CEE 3410. T. D. O'Rourke.

Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 4410 Retaining Structures and Slopes

Spring. 3 credits. Prerequisite: CEE 3410. Staff.

Covers earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and

design problems stressing application of course material under field conditions of engineering practice.

[CEE 4440 Environmental Site and Remediation Engineering]

Spring. 3 credits. Prerequisite: CEE 3410. Next offered 2011–2012. T. D. O'Rourke.

Covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering.]

CEE 4510 Microbiology for Environmental Engineering

Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson.

Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of Bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; bioremediation, bioenergy, molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 2900 or equivalent.

[CEE 4530 Laboratory Research in Environmental Engineering]

Spring. 3 credits. Prerequisite: CEE 3510 or permission of instructor. Offered alternate years; next offered 2011–2012. R. E. Richardson.

Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment.]

CEE 4540 Sustainable Municipal Drinking Water Treatment

Fall. 3 credits. Pre- or corequisite CEE 3310. M. L. Weber-Shirk.

Covers the theory and design of municipal drinking water treatment processes used for removing turbidity and pathogens with a focus on the resilient technologies used by AguaClara. The course explores the technical, economic, and social constraints that determine the set of viable technologies that could be adopted to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

CEE 4550 AguaClara: Sustainable Water Supply Project

Fall, spring. 3 credits. Pre- or corequisite: CEE 4540 or CEE 3310 or permission of instructor. Meets with CEE 2550. M. L. Weber-Shirk.

Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. For more information see aguaclara.cee.cornell.edu.

[CEE 4610 Urban Transportation Planning and Modeling]

CEE 4630 Future Transportation Technologies and Systems

Spring. 3 credits. F. Vanek.

Improving the use of existing facilities transportation infrastructure has become an important objective in transportation engineering and planning. Examines the role of information technologies for effective infrastructure utilization and planning. Focuses specific attention on analyses paradigms to evaluate the benefits of information technologies in transportation systems.

CEE 4640 Transportation Systems Design

Fall. 3 credits. Prerequisites: CEE 3610 and CEE 4060 or permission of instructor. Staff.

Analysis of capacity and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including congestion pricing. Facility location decisions, networks, and investment strategies.

CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development

Spring. 3 credits. Prerequisite: CEE 3610 or permission of instructor. H. O. Gao.

For description, see CEE 6650.

CEE 4710 Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.

Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 4720 Introduction to the Finite Element Method

Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis.

Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 4730 Design of Concrete Structures

Fall. 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover.

Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 4740 Introduction to the Behavior of Metal Structures

Spring. 4 credits. Prerequisite: ENGRD 2020 or permission of instructor. C. Earls.

Introductory course focused on the use of solid and structural mechanics to quantify

elementary behavior of metal structures in order to enable design. The course is project focused; with the students preparing a complete and detailed design deliverable. The course considers applications from civil structures, naval architecture, and aerospace engineering.

CEE 4750 Concrete Materials and Construction

Spring, 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

[CEE 4760 Evaluation and Failure of Structures

Spring, 3 credits. Prerequisites: ENGRD 2020, 2610, and 2030; CEE 3710 and 4730. Next offered 2011-2012. Staff.

Teaches material and structural evaluation through the lens of failure. Builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design.]

CEE 4770 Introduction to Composite Materials (also MAE/TAM 4550, MSE 5550)

Fall, 3 credits. Prerequisite: ENGRD 2020 or equivalent. P. Petrina.
For description, see TAM 4550.

CEE 4780 Structural Dynamics and Earthquake Engineering

Spring, 3 credits. Prerequisite: junior or senior standing. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 4810 LRFD-Based Engineering of Wood Structures (also BEE 4810)

Spring, 3 credits. Prerequisite: ENGRD 2020. K. Gebremedhin.
For description, see BEE 4810 under "College of Agriculture and Life Sciences."

CEE 4920 Engineers for a Sustainable World: Engineering in International Development

Fall, 3 credits. Prerequisite: senior or graduate standing; juniors need permission of instructor. R. E. Richardson and P. Doing.

Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 5001-5002 Design Project

Fall, spring, 3 credits each semester.
Requirement for students in M.Eng. (civil and environmental) program. Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect

the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 5021-5022 Project in Environmental and Water Resources Systems

CEE 5031-5032 Project in Environmental Fluid Mechanics and Hydrology
Staff.

CEE 5041-5042 Project in Geotechnical Engineering
Staff.

Design of major geotechnical engineering project. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 5051-5052 AguaClara: Sustainable Water Supply Project

Fall, 3 credits. Pre- or corequisite of CEE 4540. Meets with CEE 2550/4550.
M. L. Weber-Shirk.

Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. Satisfies the Master of Engineering project requirement. For more information, see aguaclara.cee.cornell.edu.

CEE 5061-5062 Project in Transportation Engineering

Systems analysis of a substantial transportation service.

CEE 5071-5072 Project in Structural Engineering

C. Earls.
A project-centered course focusing on the design of a major engineering structure. Planning and a preliminary design are completed during the fall semester; the comprehensive final design is completed in the January intersession.

CEE 5073-5074 Project in Civil Engineering Materials

Staff.

CEE 5081-5082 Project in Civil Infrastructure Systems

Staff.
Analysis of a problem in civil infrastructure.

CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100)

Fall, 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and B. Hency.
For description, see SYSEN 5100.

CEE 5252 System Architecture, Behavior, and Optimization (also CIS 5050, ECE 5130, ORIE 5142, MAE 5920, SYSEN 5200)

Spring, 3 credits. Prerequisite: CEE 5240/CS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5200. P. Jackson.
For description, see SYSEN 5200.

CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340)

Fall, 3 or 4 credits. Prerequisites: graduate standing or CS, ENGRD 2110 or 3510; ENGRD 3200 or permission of instructor.
C. A. Shoemaker.
Teaches heuristic search methods including simulated annealing, tabu search, genetic

algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 5900 Project Management

Fall, spring, 4 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 5910 Engineering Management Project

Fall, 4 credits. Prerequisite: permission of instructor. Staff.
Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 5920 Engineering Management Project

Spring, 4 credits. Prerequisite: permission of instructor. Staff.
Continuation of CEE 5910.

CEE 5930 Engineering Management Methods

Fall, 4 credits. Prerequisites: CEE 3230 and 3040 or equivalent. M. A. Turnquist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in operations, forecasting, and resource allocation.

[CEE 5940 Economic Methods for Engineering and Management (also ECON 4940)]

CEE 5950 Construction Planning and Operations

Fall, 3 credits. P. G. Carr.
Prepares students for responsibilities in overseeing the engineering and management of construction; on time—on budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction programs. Students study the contracts for engineering, architecture, and construction; focusing on cost estimation and schedule control, responsibilities and risks, and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.

[CEE 5960 Management Issues in Forensic Engineering]

Fall. 3 credits. Next offered 2011–2012.
P. G. Carr.

Introduction to management issues in forensic engineering, contract administration, and dispute resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the client, the contractors, and the public are examined.]

CEE 5970 Risk Analysis and Management (also TOX 5970)

Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 3040, ENGRD 2700, ILRST 2100, BTRY 3010, or AEM 2100); two semesters of calculus; senior or graduate standing or permission of instructor. J. R. Stedinger.

Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze safety, environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

[CEE 5980 Intro to Decision Analysis]

Fall. 3 credits. Prerequisite: introduction to probability and statistics course such as CEE 3040, ENGRD 2700, ILRST 2100, BTRY 3010, or AEM 2100; seniors and graduate students or permission of instructor. Next offered 2012–2013. Staff.]

CEE 6000 Numerical Methods for Engineers

Fall. 3 credits. P. J. Diamesis.

The primary focus is algorithm implementation within the context of engineering applications (spanning fluid and solid/fracture mechanics and beyond). Student projects include parallel implementation using resources at the Theory Center. Topics include sources of error and error propagation, eigenvalue/eigenvector computation, solution of linear systems via direct or iterative methods and issues of parallel implementation, least squares approximation of lab/simulation data, solution of non-linear equations, interpolation in one and two dimensions, fast Fourier transforms (serial vs. parallel) and wavelets.

CEE 6015 Special Topics—Remote Sensing

On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 6020 Environmental Seminar

Fall. 1 credit. Staff.
Presents topics of current interest.

CEE 6021 Seminar—Environmental and Water Resources Systems Analysis

Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker and J. R. Stedinger.

Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis

Offered on demand. 1–6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 6030 Seminar—Environmental Fluid Mechanics/Hydrology

Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates.
P. J. Diamesis.

Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 6035 Special Topics in Hydraulics

On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 6045 Special Topics in Geotechnical Engineering

On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 6051 Seminar—Environmental Quality Engineering

Spring. 1 credit. Prerequisite: graduate students in environmental engineering.
J. M. Gossett.

Presentation and discussion of current research in environmental engineering.

CEE 6055 Special Topics in Environmental Engineering

On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

CEE 6060 Seminar—Transportation System Engineering

Fall, spring. 1 credit. Staff.
Presents topics of current interest.

CEE 6065 Special Topics in Transportation

On demand. 1–6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CEE 6070 Seminar—Civil Infrastructure

Fall, spring. 1 credit. Requirement for first-year graduate students. P. Koutsourelakis. Presents topics of current interest.

CEE 6075 Special Topics in Structural Engineering

On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 6090 Seminar—Engineering Systems and Management

Fall, spring. 1 credit. Staff.
Presents topics of current interest.

CEE 6095 Special Topics in Engineering Management

On demand. 1–6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 6100 Remote Sensing Fundamentals (also CSS 6100)

Fall. 3 credits. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about

earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CEE 6150 Digital Image Processing

Spring. 3 credits. W. D. Philpot. An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 6200 Water-Resources Systems Engineering

Spring. 3 credits. Prerequisites: CEE 3230 and 5930 or BEE 4750. D. P. Loucks. Development and application of deterministic and stochastic optimization and simulation models for aiding in water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, ecological habitat restoration, and water-quality prediction and control.

CEE 6210 Stochastic Hydrology

Spring. 3 credits. Prerequisite: CEE 3040 or permission of instructor. Offered on demand. J. R. Stedinger.

Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

[CEE 6230 Environmental Quality Systems Engineering]

Fall. 3 credits. Prerequisites: MATH 2940, optimization, and graduate standing or permission of instructor. Next offered 2012–2013. C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution.]

[CEE 6300 Spectral Methods for Incompressible Fluid Flows]

Fall. 4 credits. Next offered 2011–2012.
P. J. Diamesis. An introduction to the fundamental building blocks of flow solvers for the simulation of incompressible flow processes in the natural environment.]

CEE 6310 Computational Simulation of Flow and Transport in the Environment

Spring. 3 credits. Prerequisites: MATH 2940 or equivalent, ENGRD 3200 or experience in numerical methods and programming, and elementary fluid mechanics. P. L-F Liu. Covers fundamental equations of saturated and unsaturated flow in porous media; flow in

fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 6320 Hydrology

Spring. 3 credits. Prerequisite: CEE 3310. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

CEE 6330 Flow in Porous Media and Groundwater

Fall. 3 credits. Prerequisite: CEE 3310.

Offered on demand; please contact professor if interested. W. H. Brutsaert. Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

CEE 6340 Boundary Layer Meteorology

Fall. 3 credits. Prerequisite: CEE 3310 or permission of instructor. Offered on demand; please contact professor if interested. W. H. Brutsaert.

Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 6350 Small and Finite Amplitude Water Waves

Spring. 3 credits. Offered on demand; please contact professor if interested. P. L.-F. Liu.

Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 6360 Environmental Fluid Mechanics

Spring. 3 credits. Offered on demand; please contact professor if interested. E. A. Cowen.

Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 6370 Experimental Methods in Fluid Dynamics (also MAE 6270)

Spring. 4 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen.

Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 6400 Foundation Engineering

Spring. 3 credits. Prerequisite: CEE 3410. Staff.

Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 6410 Retaining Structures and Slopes

Fall. 3 credits. Prerequisite: CEE 3410. T. D. O'Rourke.

Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

[CEE 6440 Environmental Site and Remediation Engineering

Spring. 3 credits. Prerequisite: CEE 3410 or equivalent or permission of instructor. Next offered 2011-2012. T. D. O'Rourke.

Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering.]

CEE 6530 Water Chemistry for Environmental Engineering

Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.

Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

[CEE 6540 Aquatic Chemistry

Spring. 3 credits. Prerequisite: CEE 6530 or CHEM 2870-2880. Next offered 2011-2012. J. J. Bisogni.

Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques.]

CEE 6550 Transport, Mixing, and Transformation in the Environment

Fall. 3 credits. Prerequisite: CEE 3310. Staff.

Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffuse, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation

processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 6560 Physical/Chemical Process

Fall. 3 credits. Pre- or corequisite: CEE 6530 or permission of instructor. J. J. Bisogni.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 6570 Biological Processes

Spring. 3 credits. Prerequisites: introductory microbiology and CEE 6560, or permission of instructor. J. M. Gossett.

Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment process.

CEE 6580 Biodegradation and Biocatalysis

Spring. 3 credits. Prerequisites: CEE 4510 or BIOMI 2900 or equivalent; CEE 3510 or CHEME 3900 or permission of instructor. R. E. Richardson.

Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.

[CEE 6610 Urban Transportation Planning and Modeling]

CEE 6620 Urban Transportation Network Design and Analysis

Fall. 3 credits. Prerequisite: CEE 3610 or permission of instructor. L. K. Nozick.

Covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures for deterministic user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study and estimation of origin-destination tables.

CEE 6630 Network Flows and Algorithms

Spring. 3 credits. Prerequisite: CEE 6620 or permission of instructor. Offered alternate years. L. K. Nozick.

Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows, and generalized flows. Applications to vehicle routing, dynamic vehicle allocation, and network design.

CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development

Spring. 3 credits. Prerequisite: CEE 3610 or permission of instructor. H. O. Gao.
Focuses on the nexus of transportation and environment, energy, and climate-change concerns. It is interdisciplinary, drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory estimation, renewable fuels, air quality impact and life cycle benefit assessment of alternative fuels/vehicles, Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ). Students apply course materials to real-world cases and projects.

CEE 6710 Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.
Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 6720 Introduction to the Finite Element Method

Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis.
Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 6730 Design of Concrete Structures

Fall. 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover.
Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 6750 Concrete Materials and Construction

Spring. 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 6760 Advanced Composite Materials (also TAM 6550, MAE/MSE 6550)

Spring. 4 credits. CEE 4770/MAE 4550/MSE 5550/TAM 4550 not a prerequisite but excellent background. S. L. Phoenix.
For description, see TAM 6550.

[CEE 6770 Engineering Analysis]**CEE 6780 Structural Dynamics and Earthquake Engineering**

Spring. 3 credits. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

[CEE 6790 Evaluation and Failure of Structures]**CEE 6860 Civil Infrastructure Systems**

Spring. 3 credits. Prerequisites: probability and statistics course (CEE 3040 or equivalent), or permission of instructor. Recommended: engineering economics course (CEE 3230 or equivalent). S-U or letter grades. T. D. O'Rourke.
Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 6900 Creativity, Innovation, and Leadership

Spring. 3 credits. Pre- or corequisite: CEE 5800 or permission of instructor. F. J. Wayno.
Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in fostering both. Not incidentally, the course also helps students to become more creative themselves. The course is highly participative and has a flow that moves from the individual—to the group—to the organization, with theory, research results, and practical skills-development woven seamlessly together.

CEE 6910 Principles of Project Leadership (also SYSEN 6910)

Spring. 3 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter. Offered as a distance learning course only.

CEE 6930 Public Systems Modeling

Fall. 4 credits. D. P. Loucks.
An introduction to the art of model building and use, especially related to public sector planning and management issues. The course focuses on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this "modeling technology" is to help us generate and communicate information that can assist and better inform public decision-making.

CEE 6940 Research in Engineering Management

On demand. 1-6 credits. Staff.
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7010 Research—Remote Sensing

On demand. 1-6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 7020 Environmental and Water Resources Systems Analysis Research

On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Staff.
Investigations of particular environmental or water resources systems problems.

CEE 7030 Research in Environmental Fluid Mechanics and Hydrology

On demand. 1-6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7040 Research in Geotechnical Engineering

On demand. 1-6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 7050 Research in Environmental Engineering

On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 7070 Research in Structural Engineering

On demand. 1-6 credits. Staff.
Pursues a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 7073 Civil and Environmental Engineering Materials Project

On demand. 1-3 credits. Staff.
Individual projects or reading and study assignments involving engineering materials.

CEE 7360 Turbulence and Turbulent Mixing in Environmental Stratified Flows

Spring. 3 credits. Prerequisite: CEE 6550 or second course in fluid mechanics or with instructor's permission. Offered on demand; please contact professor if interested. P. J. Diamessis.
Fundamentals of stably stratified flows, stratified homogeneous turbulence (spectra, lengthscales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.

CEE 7400 Engineering Behavior of Soils

Fall. 3 credits. Prerequisite: CEE 3410. H. E. Stewart.

Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils.

CEE 7410 Rock Engineering

Fall. 3 credits. Prerequisite: CEE 3410 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke. Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

[CEE 7440 Advanced Foundation Engineering]**CEE 7450 Soil Dynamics**

Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart. Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

[CEE 7460 Embankment Dam Engineering]**CEE 7620 Practicum in Modeling Transportation Systems**

Fall. 3 credits. Prerequisites: CEE 6610, 6620, and 6630. L. K. Nozick.

CEE 7700 Engineering Fracture Mechanics

Spring. 3 credits. Prerequisite: CEE 6720 or equivalent and TAM 7530, or permission of instructor. A. Ingraffea. Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

[CEE 7710 Stochastic Mechanics in Science and Engineering]

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011-2012. M. D. Grigoriu.

Review of probability theory, stochastic processes, and Ito formula with illustrations by Monte Carlo Simulation.]

CEE 7711 Stochastic Simulation Methods in Engineering and Bayesian Computation

Spring. 3 credits. Prerequisites: undergraduate-level course in probability and statistics and multivariate calculus. Computer programming skills (in any language) also required for homework and term project. P. Koutsourelakis. Discusses Monte Carlo methods used for the stochastic simulation of complex physical systems and machine learning problems. The course examines a small subset of the possible

applications such as uncertainty quantification, optimization, dimensionality-reduction, atomistic simulation, static and dynamic data assimilation. A central component of the course is the use of Monte Carlo techniques in the context of Bayesian models. The ultimate goal is to acquaint students with a set of powerful tools and theories that can be directly transitioned to their research independently of their field.

[CEE 7720 Random Vibration]

Fall. 3 credits. Prerequisites: MAE 3260 and ENGRD 2700, or equivalent, and permission of instructor. Next offered 2011-2012. M. D. Grigoriu.

Reviews random-process theory, simulation, and first-passage time.]

[CEE 7730 Structural Reliability]**[CEE 7740 Advanced Structural Concrete]**

Fall. 3 credits. Next offered 2012-2013. K. C. Hover.

Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling.]

CEE 7750 Nonlinear Finite Element Analysis

Spring. 3 credits. W. Aquino. Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated Lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

[CEE 7760 Advanced Topics in Stability]

Spring. 3 credits. Prerequisite: CEE 3740 or equivalent. Next offered 2011-2012. C. Earls.]

CEE 7770 Advanced Concepts in Finite Element Methods

Spring. 3 credits. W. Aquino. The main objective of this course is to introduce the student to modern techniques used for solving partial differential equations using finite element methods. In addition, half of the course is devoted to advanced programming techniques to produce fast and robust finite element computer codes. The course covers formal mathematical formulations of the finite element method using function spaces, extensions of the finite element method, optimization of continuous systems, object-oriented implementations, and an introduction to multilevel techniques such as multigrid and domain decomposition.

CEE 7780 Continuum Mechanics and Thermodynamics (also TAM 7510)

Spring. 3 credits. Prerequisites: TAM 6100 and 6110; and 6630 and 6640 or equivalents. J. Jenkins.

Topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

CEE 7790 Nonlinear Finite Element Analysis II

Fall. 4 credits. Prerequisite: CEE 6720 (or equivalent). C. Earls.

An advanced course in finite element analysis emphasizing the nonlinear solution of problems involving solids and structures (with a special emphasis on the latter). The

formulation of nonlinear structural elements, the development of efficient and robust means for treating material nonlinearity, and the nonlinear solution of finite element systems are fundamentals topics treated in this course. Topics from structural stability, problems involving coupled physics, and those involving transient dynamical response, are also treated. The primary out-of-class effort centers on a significant project, and all students are required to write their own nonlinear finite element code in support of this. As a result, some experience with programming is required.

CEE 8100 Thesis—Remote Sensing

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8200 Thesis—Environmental and Water Resource Systems

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8300 Thesis—Environmental Fluid Mechanics and Hydrology

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8400 Thesis—Geotechnical Engineering

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8500 Thesis—Environmental Engineering

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8600 Thesis—Transportation Systems Engineering

Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff. The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8700 Thesis—Structural Engineering

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8800 Thesis—Civil Infrastructure Systems

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE

J. Halpern, chair; G. Bailey, K. Bala, D. Bindel, K. Birman, C. Cardie, R. L. Constable, D. Fan, N. Foster, J. Gehrke, C. Gomes, D. Greenberg, D. Gries, J. E. Hopcroft, D. Huttenlocher, D. James, T. Joachims, J. Kleinberg, R. Kleinberg, C. Koch, D. Kozen, L. Lee, S. Marschner, A. Myers, R. Pass, A. Saxena, F. B. Schneider, B. Selman, D. Shmoys, E. G. Sire, N. Snavely, E. Tardos, R. Teitelbaum, C. Van Loan, H. Weatherspoon, R. Zabih

The Department of Computer Science is part of the College of Arts and Sciences, Computing and Information Science (CIS), and the College of Engineering. For complete course descriptions, see the Computer Science listing in the CIS section.

CS 1109 Fundamental Programming Concepts

Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

CS 1110 Introduction to Computing Using Java

Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

CS 1112 Introduction to Computing Using MATLAB

Fall, spring. 4 credits. Corequisite: MATH 1110, 1910, or equivalent. Assumes student is comfortable with mathematics (at the level of one semester of calculus) but has no prior programming experience.

CS 1114 Introduction to Computing Using MATLAB and Robotics

Spring. 4 credits. Prerequisite: some programming experience.

CS 1130 Transition to Object-Oriented Programming

Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1132 Transition to MATLAB

Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)

Fall. 4 credits.

For description, see INFO 1300 in CIS section.

[CS 1305 Computation and Culture (also INFO 1305)]

Summer. 3 credits. Prerequisites: none at university level; must be high school junior or rising senior. Offered alternate years; next offered 2011.]

CS 1610 Computing in the Arts (also CIS/ENGR 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS 1620, ENGR 1620)

Fall. 3 credits.

For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)

Fall, summer. 3 credits.

For description, see COGST 1101.

CS 2022 Introduction to C

Spring, usually weeks 1–4. 1 credit.

Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 is taken first. S–U grades only.

CS 2024 C++ Programming

Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

CS 2042 Unix Tools

Fall, usually weeks 1–4. 1 credit.

Prerequisite: one programming course or equivalent programming experience. S–U grades only.

CS 2044 Advanced UNIX Programming and Tools

Spring, usually weeks 5–8. 1 credit.

Prerequisite: CS 2042 or equivalent. S–U grades only.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)

Fall, spring, summer. 3 credits. Prerequisite: CS 1110, or CS 1130 or equivalent course in Java or C++.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)

Spring. 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300.

For description, see INFO 2300 in CIS section.

CS 2800 Discrete Structures

Fall, spring. 3 credits. Pre- or corequisite: one course in programming or permission of instructor.

CS 2850 Networks (also ECON/INFO 2040, SOC 2090)

Fall. 4 credits. Prerequisite: none.

For description, see ECON 2040.

CS 3110 Data Structures and Functional Programming

Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)

Spring. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

[CS 3300 Data-Driven Web Applications (also INFO 3300)]

Spring. 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321. Next offered 2011–2012.

For description, see INFO 3300 in CIS section.]

CS 3410 Computer System Organization and Programming

Spring. 4 credits. Prerequisites: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

CS 3420 Computer Organization (also ECE 3140)

Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110.

For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)

Fall. 4 credits. Recommended: CS 2042.

For description, see LING 4424.

CS 3758 Autonomous Mobile Robots (also MAE 4180)

Spring. 4 credits. Prerequisites: MAE 3260 or permission of instructor.

For description, see MAE 4180.

CS 3810 Introduction to Theory of Computing

Fall. 3 credits. Prerequisite: CS 2800 or permission of instructor.

CS 4110 Programming Languages and Logics

Fall. 4 credits. Prerequisite: CS 3110 or permission of instructor.

[CS 4120 Introduction to Compilers

Fall or spring. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3420 or 3410. Corequisite: CS 4121. Next offered 2011–2012.]

[CS 4121 Practicum in Compilers

Fall or spring. 2 credits. Corequisite: CS 4120. Next offered 2011–2012.]

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)

Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Equations (also MATH 4260)

Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

CS 4300 Information Retrieval (also INFO 4300)

Fall. 3 credits. Prerequisite: CS 2110 or equivalent.

For description, see INFO 4300 in CIS section.

CS 4302 Web Information Systems (also INFO 4302)

Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.

For description, see INFO 4302 in CIS section.

CS 4320 Introduction to Database Systems

Fall. 3 credits. Prerequisites: CS 3110 (or CS 2110, 2111 and permission of instructor).

CS 4321 Practicum in Database Systems

Fall. 2 credits. Pre- or corequisite: CS 4320. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.

CS 4410 Operating Systems

Fall. 3 credits. Prerequisite: CS 3410 or 3420.

CS 4411 Practicum in Operating Systems

Fall. 2 credits. Corequisite: CS 4410.

CS 4420 Computer Architecture (also ECE 4750)

Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.

For description, see ECE 4750.

CS 4620 Introduction to Computer Graphics (also ARCH 3704)

Fall. 3 credits. Prerequisite: CS/ENGRD 2110.

CS 4621 Computer Graphics Practicum

Fall. 2 credits. Pre- or corequisite: CS 4620.

CS 4670 Introduction to Computer Vision

Fall or spring. 4 credits. Prerequisites: CS 2110, CS 2800. Offered fall 2010.

CS 4700 Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 or equivalent.

CS 4701 Practicum in Artificial Intelligence

Fall. 2 credits. Pre- or corequisite: CS 4700.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)

Spring. 4 credits. Prerequisite: CS 2110.

CS 4758 Robot Learning (also ECE/MAE 4758)

Spring. 4 credits. Prerequisites: Knowledge of basic computer science principles and skills at a level sufficient to write a reasonably non-trivial computer program (e.g., CS 1114 or CS 2110 or CS 3110 or equivalent). Any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent).

[CS 4780 Machine Learning

Spring. 4 credits. Prerequisites: CS 2111, CS 2800, or basic probability theory, and basic knowledge of linear algebra. Next offered 2011-2012.]

CS 4812 Quantum Information Processing (also PHYS 4481/7681)

Spring. 3 credits. Prerequisite: familiarity with theory of finite-dimensional vector spaces over complex numbers.

For description, see PHYS 4481.

CS 4820 Introduction to Analysis of Algorithms

Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110.

CS 4830 Introduction to Cryptography

Fall. 4 credits. Prerequisite: CS 2800 (or equivalent) or permission of instructor.

[CS 4850 Mathematical Foundations for the Information Age

Spring. 4 credits. Prerequisite: mathematical maturity. Next offered 2011-2012.]

CS 4860 Applied Logic (also MATH 4860)

Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3320, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science.

CS 4999 Independent Reading and Research

Fall, spring. 1-4 credits.

CS 5150 Software Engineering

Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++.

[CS 5220 Applications of Parallel Computers

Fall or spring. 4 credits. Prerequisite: course in numerical methods at level of CS 3220 or higher. Next offered 2011-2012.]

CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)

Spring. 4 credits. Prerequisite: CS/INFO 3300 or 4320.

For description, see INFO 5300 in CIS section.

[CS 5412 Cloud Computing

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered 2011-2012.]

CS 5414 Distributed Computing Principles

Fall. 4 credits. Prerequisite: CS 4410 or permission of instructor.

CS 5420 Parallel Computer Architecture (also ECE 5720)

Fall. 4 credits. Prerequisite: ECE 4750.

For description, see ECE 5720.

CS 5430 System Security

Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with Java, C, or C# programming languages. Offered spring 2011.

[CS 5540 Computational Techniques for Analyzing Clinical Data

Fall or spring. 3 credits. Prerequisite: some programming experience, exposure to introductory statistics and algorithms; or permission of instructor. Next offered 2011-2012.]

[CS 5620 Interactive Computer Graphics

Fall or spring. 4 credits. Prerequisite: CS 4620. Next offered 2011-2012.]

[CS 5643 Physically Based Animation for Computer Graphics

Fall or spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor. Next offered 2011-2012.]

CS 5722 Heuristic Methods for Optimization (also CEE 5090, ORIE 5340)

Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRD 3200, or graduate standing, or permission of instructor.

For description, see CEE 5290.

CS 5846 Decision Theory I (also ECON 4760/6760)

Fall. 4 credits.

For description see ECON 4760.

CS 6110 Advanced Programming Languages

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

CS 6210 Matrix Computations

Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years.

[CS 6320 Database Systems

Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor. Next offered 2011-2012.]

CS 6410 Advanced Systems

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2010.

CS 6460 Peer-to-Peer Systems

Spring. 4 credits. Recommended: CS 6410.

[CS 6620 Advanced Interactive Graphics

Fall or spring. 4 credits. Prerequisite: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2011-2012.]

[CS 6630 Realistic Image Synthesis

Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus. Next offered 2011-2012.]

CS 6650 Computational Motion

Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered spring 2011.

CS 6670 Computer Vision

Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent.

[CS 6700 Advanced Artificial Intelligence

Fall or spring. 4 credits. Prerequisite: CS 4700 or permission of instructor. Next offered 2011-2012.]

CS 6740 Advanced Language Technologies (also INFO 6300)

Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites. Offered fall 2010.

CS 6742 Natural Language Processing and Social Interaction

Spring. 3 credits. Prerequisites: CS 2110 or equivalent programming experience; course in artificial intelligence or any relevant subfield (e.g., NLP, information retrieval, machine learning); graduate standing; or permission of instructor.

CS 6758 Robot Learning

Spring. 4 credits. Prerequisites: knowledge of basic computer science principles and skills at a level sufficient to write a reasonably non-trivial computer program (e.g., CS 1114 or CS 2110 or CS 3110 or equivalent); any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent).

CS 6780 Machine Learning and Pattern Recognition

Fall. 4 credits. Prerequisites: programming skills (e.g., CS 2110 or CS 3110) and basic knowledge of linear algebra and probability theory (e.g. CS 2800).

CS 6782 Probabilistic Graphical Models (also BTRY 6790)

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent).

For description, see BTRY 6790.

[CS 6784 Advanced Topics in Machine Learning]

Fall or spring. 4 credits. Prerequisites: CS 4780 or CS 6780 or equivalent machine learning course. Next offered 2011–2012.]

[CS 6810 Theory of Computing]

Fall or spring. 4 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2011–2012.]

CS 6820 Analysis of Algorithms

Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

[CS 6825 The Science Base for the Information Age]

Fall or spring. 4 credits. Prerequisite: none. Next offered 2011–2012.]

[CS 6830 Cryptography]

Fall or spring. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs). Next offered 2011–2012.]

[CS 6840 Algorithmic Game Theory]

Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered 2011–2012.]

CS 6850 The Structure of Information Networks (also INFO 6850)

Spring. 4 credits. Prerequisite: CS 4820.

CS 6860 Logics of Programs

Fall. 4 credits. Prerequisites: CS 4810, 6810, and (CS/MATH 4860 or MATH 4810).

CS 6862 Automated Reasoning and Formal Methods

Spring. 4 credits. Prerequisites: CS 6110 and graduate standing or permission of instructor.

CS 7090 Computer Science Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

[CS 7190 Seminar in Programming Languages]

Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only. Next offered 2011–2012.]

CS 7192 Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

CS 7290 Seminar on Scientific Computing and Numerics (also MATH 7290)

Fall, spring. 1 credit. Prerequisites: none.

CS 7390 Database Seminar

Fall, spring. 1 credit. Prerequisite: permission of instructor. S–U grades only.

CS 7412 Scalable Distributed Consistency: Models and Applications

Spring. 4 credits. Prerequisites: none.

CS 7490 Systems Research Seminar

Fall, spring. 1 credit. S–U grades only.

CS 7594 Seminar on Computational Issues in Medicine

Fall. 1 credit. Prerequisites: none.

CS 7670 Computer Vision Seminar

Fall, spring. 1 credit. Prerequisites: none.

CS 7690 Computer Graphics Seminar

Fall, spring. 3 credits.

CS 7790 Seminar in Artificial Intelligence

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7794 Seminar in Natural Language Understanding

Fall, spring. 2 credits.

CS 7890 Seminar in Theory of Algorithms and Computing

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7893 Cryptography Seminar

Fall, spring. 1 credit.

CS 7999 Independent Research

Fall, spring. Prerequisite: permission of computer science advisor. Independent research or master of engineering project.

CS 9999 Thesis Research

Fall, spring. Prerequisite: permission of computer science advisor. S–U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

L. D. Brown, chair; A. T. DeGaetano, associate chair (CALIS); N. Mahowald, director of undergraduate studies (Science of Earth Systems); R. W. Allmendinger, W. D. Allmon, C. Andronicos, L. M. Cathles, G. Chen, J. L. Cisne S. J. Colucci, L. A. Derry, M. Goman, C. H. Greene, D. L. Hysell, T. E. Jordan, R. W. Kay, S. Mahlborg Kay, R. Lohman, B. Monger, A. Moore, J. Phipps Morgan, M. Pritchard, S. J. Riha, W. M. White, D. S. Wilks, M. W. Wysocki

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or College of Agriculture and Life Sciences section.

EAS 1101 Earth Science in the 21st Century

Fall. 3 credits. R. Allmendinger.

EAS 1108 Earth in the News

Summer. 3 credits. R. Ross.

EAS 1109 Dinosaurs!

Fall. 1 credit. J. L. Cisne.

EAS 1150 Severe Weather Phenomena

Summer. 3 credits. M. W. Wysocki.

EAS 1190 Fossil Preparation

Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Cisne.

EAS 1220 Earthquake! (also ENGRI 1220)

Spring. 3 credits. L. Brown. Course in Introduction to Engineering series. For description, see ENGRI 1220.

EAS 1310 Basic Principles of Meteorology

Fall. 3 credits. Optional 1-credit lab is EAS 1330. M. W. Wysocki.

EAS 1330 Basic Meteorology Lab

Fall. 1 credit. Corequisite: EAS 1310. M. W. Wysocki.

EAS 1340 Introductory Weather Analysis and Forecasting

Spring. Prerequisites: EAS 1310 and EAS 1330. S–U grades only. M. W. Wysocki and staff.

EAS 1400 Freshman Writing Seminar "Writing in the Sciences: Environmental Perspectives"

Spring. 3 credits. S. Jessup.

EAS 1420 Freshman Writing Seminar "Sustainable Earth, Energy, and Environmental Systems"

Fall. 3 credits. L. McGarry and A. Baker.

EAS 1540 Introductory Oceanography (also BIOEE 1540)

Fall, summer. 3 credits. Fall: C. H. Greene and B. C. Monger; summer: B. C. Monger.

EAS 1551 Introduction to Oceanography Lab (also BIOSM 1551)

Summer. 1 credit. Prerequisites: college-level science course, or EAS 1540, or marine science course or permission of instructor. B. C. Monger and C. H. Greene.

EAS 1560 Introductory Oceanography with Laboratory (also BIOEE 1560)

Fall. 4 credits. C. H. Greene and B. C. Monger.

EAS 1700 Evolution of the Earth and Life

Spring. 3 credits. J. L. Cisne.

EAS 2130 Marine and Coastal Geology

Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 2200 The Earth System

Fall, spring. 4 credits. Prerequisites: MATH 1110/1910. Letter grades only. A. W. Moore and W. M. White.

EAS 2220 Seminar—Hawaii's Environment

Fall. 1 credit. S–U grades only. A. Moore.

EAS 2500 Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.

EAS 2680 Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.

EAS 2900 Computer Programming and Meteorology Software

Spring. 3 credits. Prerequisites: EAS 1310; MATH 1110 or equivalent. N. Mahowald and B. Belcher.

EAS 2960 Forecast Competition

Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded for second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

EAS 3010 Evolution of the Earth System

Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1910, and one chemistry course (college or high school). Two field trips, either Sat or Sun. T. Jordan, S. Riha, and W. D. Allmon.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030)

Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, and a course in biology and/or geology. L. A. Derry and J. Yavitt.

EAS 3040 Interior of the Earth

Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.

EAS 3050 Climate Dynamics

Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. N. Mahowald.

EAS 3060 Evolution of Ancient and Modern Oceans (also BIOSM 3060)

Summer. 6 credits. Prerequisites: introductory biology (two semesters) and college-level course in Earth science, or permission of instructor. W. Allmon.

EAS 3220 Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Prerequisite: enrollment in EES semester in Hawaii, EAS 2200, EAS 3030, or permission of instructor. L. A. Derry.

[EAS 3340 Microclimatology

Spring. 3 credits. Prerequisite: physics course. Offered alternate years; next offered 2011-2012. D. S. Wilks.]

EAS 3400 Field Study of the Earth System

Spring. 6 credits. Prerequisites: enrollment in EES Semester in Hawaii; one semester of calculus (MATH 1910/1920 or 1110/1120) and two semesters of any of the following: PHYS 2207/2208 or 1112/2213; CHEM 2070/2080 or 2090/2080; BIOG 1101/1103-1102/1104 or 1105/1106 or 1109/1100; or equivalent course work. A. Moore.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. A. T. DeGaetano.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)

Spring. 3 credits. Prerequisites: familiarity with multivariate calculus (e.g., MATH 2930, 2130, or 2200 or equivalent); one semester of university physics. G. Chen.

[EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)

Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (e.g., EAS 1540), or permission of instructor. Offered alternate years; next offered 2011-2012. C. H. Greene and R. W. Howarth.]

EAS 3510 Conservation Oceanography (also BIOEE 3510)

Spring. 4 credits. Prerequisites: enrollment in EES Semester in Hawaii; one semester of calculus and two majors-level biology courses or permission of instructor. Recommended: oceanography course. C. H. Greene and C. D. Harvell.

EAS 3520 Synoptic Meteorology I

Spring. 3 credits. Prerequisite: EAS 3410. Corequisite: EAS 3420. M. W. Wysocki.

EAS 3530 Physical Oceanography

Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years. B. C. Monger.

EAS 4010 Fundamentals of Energy and Mineral Resources

Fall. 3 credits. Recommended: previous course in geology. L. Cathles.

EAS 4040 Geodynamics

Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years. J. Phipps Morgan.

EAS 4050 Active Tectonics

Fall. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. Offered alternate years. M. Pritchard.

[EAS 4060 Marine Geology and Geophysics

Spring. 4 credits. Prerequisites: EAS 2200 or comparable course; completion of some EAS classes helpful, but not required. Offered alternate years; next offered 2011-2012. J. Phipps-Morgan.]

EAS 4170 Field Mapping in Argentina

Summer. 4 credits. Prerequisites: introductory geology course and EAS 4260 or permission of instructor. Recommended: EAS 3040. Offered alternate years. S. Mahlburg Kay.

[EAS 4240 The Rio Grande Rift: A Window into the Geological Evolution of North America

Spring. 2 credits. Prerequisite: permission of instructor. Field trip over spring break. Offered alternate years; next offered 2011-2012. C. Andronicos.]

EAS 4250 European Discovery of Impacts and Explosive Volcanism

Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Meets one day per week plus field trip during spring break. Fee probably charged for required weeklong field trip. Offered alternate years. J. Phipps Morgan.

EAS 4260 Structural Geology

Spring. 4 credits. Prerequisite: one semester of calculus, plus an introductory geology course or permission of instructor. One weekend field trip. C. Andronicos.

EAS 4340 Exploration Geophysics

Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years. L. D. Brown.

EAS 4350 Statistical Methods in Meteorology and Climatology

Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.

[EAS 4370 Geophysical Field Methods (also ARKEO 4370)

Fall. 3 credits. Prerequisite: PHYS 2208 or 2213, or permission of instructor. Offered alternate years; next offered 2011-2012. L. D. Brown.]

[EAS 4400 Seminar: Climate Science, Impacts and Mitigation

Fall. 3 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2011-2012. N. Mahowald.]

[EAS 4470 Physical Meteorology

Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years; next offered 2011-2012. A. T. DeGaetano.]

EAS 4510 Synoptic Meteorology II

Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

EAS 4530 Mineralogy

Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.

EAS 4540 Petrology and Geochemistry

Spring. 4 credits. Prerequisite: EAS 4530 or permission of instructor. R. W. Kay.

[EAS 4550 Geochemistry

Fall. 4 credits. Prerequisites: CHEM 2070 or CHEM 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years; next offered 2011-2012. W. M. White.]

[EAS 4560 Mesoscale Meteorology

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. Offered alternate years; next offered 2011-2012. S. J. Colucci.]

EAS 4570 Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. M. W. Wysocki.

EAS 4580 Volcanology

Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years. R. W. Kay.

[EAS 4600 Late Quaternary Paleoecology

Fall. 4 credits. Offered alternate years; next offered 2011-2012. M. Goman.]

[EAS 4610 Paleoclimate: Since the Last Ice Age

Fall. 3 credits. Prerequisite: EAS 2200 or permission of instructor. Offered alternate years; next offered 2011-2012. M. Goman.]

EAS 4620 Marine Ecology (also BIOEE 4620)

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE/BIOG 1610. Offered alternate years. C. D. Harvell and C. H. Greene.

For description, see BIOEE 4620.

EAS 4700 Advanced Weather Forecasting and Analysis

Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

EAS 4710 Introduction to Groundwater (also BEE 4710)

Spring. 3 credits. Prerequisites: MATH 2930 and fluid mechanics or hydrology course. Offered alternate years. L. M. Cathles and T. S. Steenhuis.

EAS 4750 Special Topics in Oceanography

Fall, spring, summer. 2-6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

[EAS 4760 Sedimentary Basins

Spring, 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2011–2012. T. E. Jordan.]

EAS 4780 Stratigraphy

Fall, 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.

EAS 4790 Paleobiology (also BIOEE 4790)

Spring, 4 credits. Prerequisites: two majors-level biology courses and BIOEE 2740 or 3730 or EAS 3010, or permission of instructor. W. D. Allmon.

EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)

Fall, 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112, or equivalent, or permission of instructor. S–U or letter grade. P. G. Hess.

[EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)

Fall, 3 credits. Offered alternate years; next offered 2011–2012. H. van Es and S. J. Riha.]

EAS 4840 Inverse Methods in the Natural Sciences

Fall, 3 credits. Prerequisite: MATH 2940. D. L. Hysell.

EAS 4850 Climate Information and Management

Spring, 3 credits. Prerequisites: statistics and at least one physical science or calculus course. S. Riha and M. W. Wysocki.

EAS 4870 Introduction to Radar and Remote Sensing (also ECE 4870)

Spring, 3 credits. Prerequisites: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

EAS 4880 Global Geophysics

Fall, 3 credits. Prerequisites: MATH 1920 (or 1120) and PHYS 2208 or 2213; EAS 3040 recommended. M. Pritchard and R. Lohman.

EAS 4910–4920 Undergraduate Research

Fall, spring, 1–4 credits. Students must complete form at 2124 Snee Hall. Staff (N. Mahowald, coordinator).

EAS 4940 Special Topics in Atmospheric Science (undergraduate level)

Fall or spring, 8 credits max. S–U or letter grades. Staff.

EAS 4960 Internship Experience

Fall, spring, 1–2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S–U grades only. See department for more information. A. Moore.

EAS 4970 Individual Study in Atmospheric Science

Fall or spring, 1–6 credits. Students must register using independent study form. S–U grades only. Staff.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences

Fall or spring, 1–4 credits. S–U grades only. Staff.

EAS 4990 Undergraduate Research in Atmospheric Science

Fall, spring, Credit TBA. Students must register using independent study form. S–U grades only. Staff.

EAS 5000 Design Project in Geohydrology

Fall, spring, 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5010 Fundamentals of Energy and Mineral Resources

Fall, 3 credits. Prerequisites: introductory college-level geology and basic physics and chemistry, or permission of instructor. Co-meets with EAS 4010. L. Cathles.

Students enrolled in the graduate-level version of this course are expected to complete and present a substantial class project to be negotiated with the instructor.

EAS 5011 Evolution of the Earth System

Fall, 4 credits. Prerequisites: EAS 2200, one calculus course (either MATH 1110 or 1910), one course in chemistry (college or high school), or permission of instructor. Two field trips, either Sat or Sun. Co-meets with EAS 3010. T. Jordan, S. Riha, and W. Allmon.

Students enrolled in the graduate-level version of this course are required to complete an additional project.

EAS 5020 Case Histories in Groundwater Analysis

Spring, 4 credits. L. M. Cathles.

EAS 5041 Geodynamics

Spring, 3 credits. Prerequisites: calculus and calculus-based physics courses or permission of instructor. Co-meets with EAS 4040. Offered alternate years. J. Phipps Morgan.

Students enrolled in the graduate-level version of this course are required to complete a computational lab.

[EAS 5050 Fluid Dynamics in the Earth Sciences

Spring, 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years; next offered 2011–2012. L. Cathles and M. Wysocki.]

EAS 5051 Climate Dynamics

Fall, 3 credits. Prerequisites: two semesters of calculus and one semester of physics. Co-meets with EAS 3050. N. Mahowald.

Students enrolled in the graduate-level version of this course are required to complete an additional project.

EAS 5110 Earth System Interactions

Fall, 1 credit (S–U) or 2 credits (with paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne.

[EAS 5220 Advanced Structural Geology I

Fall, 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger and C. Andronicos.]

[EAS 5240 Advanced Structural Geology II

Fall, 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces.]

EAS 5350 Statistical Methods in Meteorology and Climatology

Fall, 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. Co-meets with EAS 4350. D. S. Wilks.

[EAS 5500 Dynamics of Marine Ecosystems

Fall, 3 credits. Prerequisites: one year of calculus and one semester of oceanography (e.g., BIOEE/EAS 1540) or permission of instructor. Co-meets with BIOEE/EAS 3500. Offered alternate years; next offered 2011–2012. C. H. Greene and R. W. Howarth.

Students enrolled in the graduate-level version of this course are required to complete an additional project.]

[EAS 5530 Advanced Petrology

Fall, 3 credits. Prerequisite: EAS 4540 or permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Kay.]

[EAS 5540 Advanced Mineralogy

Spring, 3 credits. Prerequisite: EAS 4530 or permission of instructor. Offered alternate years; next offered 2011–2012. S. Mahlburg Kay.]

EAS 5620 Marine Ecology

Fall, 3 credits. Limited to 75 students. Prerequisite: BIOEE/BIOG 1610. Co-meets with BIOEE/EAS 4620. Offered alternate years. C. D. Harvell and C. H. Greene.

Students enrolled in the graduate-level version of this course are required to complete an additional project.

EAS 5750 Planetary Atmospheres (also ASTRO 6575)

Fall, 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years. P. Gierasch.

EAS 5770 Planetary Surface Processes (also ASTRO 6577)

Spring, 3 or 4 credits. Offered alternate years. J. Bell.

[EAS 5780 Planet Formation and Evolution (also ASTRO 6578)

Fall, 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2011–2012. M. Pritchard.]

EAS 5840 Inverse Methods in the Natural Sciences

Fall, 3 credits. Prerequisite: MATH 2940. Co-meets with EAS 4840. D. L. Hysell.

[EAS 5880 Advanced Methods in Radar (also ECE 5890)

Fall, 3 credits. Prerequisite: EAS 4870 or permission of instructor. Next offered 2011–2012. L. Hysell.]

EAS 6280 Geology of Orogenic Belts

Spring, 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay.

EAS 6410 Analysis of Biogeochemical Systems

Spring, 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years. L. A. Derry.

EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)

Fall. 3 credits. Prerequisites: freshman chemistry, fluid mechanics or equivalent, and thermodynamics. S-U or letter grades. K. M. Zhang.

EAS 6520 Advanced Atmospheric Dynamics

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalent. Offered alternate years. S. J. Colucci.

EAS 6560 Isotope Geochemistry

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years. W. M. White.

EAS 6660 Applied Multivariate Statistics

Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years. D. S. Wilks.

EAS 6750 Modeling the Soil-Plant-Atmosphere System (also CSS 6750)

Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha.

EAS 6920 Special Topics in Atmospheric Science

Fall, spring. 1-6 credits. S-U or letter grades. Staff.

EAS 6930 Special Topics in Geological Sciences

Fall or spring. 1-3 credits, variable. S-U or letter grades. Staff.

EAS 7000-7990 Seminars and Special Work

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

EAS 7010-7020 Thesis Research

7010, fall; 7020, spring. 1-15 credits, variable. S-U or letter grades. Staff.

EAS 7110 Upper Atmospheric and Space Physics

Fall or spring. 1-6 credits. Seminar course. D. L. Hysell.

EAS 7220 Advanced Topics in Structural Geology

R. W. Allmendinger.

EAS 7310 Advanced Topics in Geodetic Monitoring and Modeling

M. Pritchard.

EAS 7330 Advanced Topics in Geodynamics

Spring. J. Phipps Morgan.

EAS 7500 Satellite Remote Sensing in Biological Oceanography

Summer. 3 credits. B. C. Monger.

EAS 7510 Petrology and Geochemistry

R. W. Kay.

EAS 7550 Advanced Topics in Tectonics and Geochemistry

Fall. 3 credits. J. Phipps Morgan.

EAS 7570 Current Research in Petrology and Geochemistry

S. Mahlburg Kay.

EAS 7620 Advanced Topics in Paleobiology

W. D. Allmon.

EAS 7650 Topics in Paleoecology

Fall. 1 credit. S-U grades only. G. Dietl.

EAS 7710 Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

EAS 7730 Paleobiology

J. L. Cisne.

EAS 7750 Advanced Topics in Oceanography

C. H. Greene.

EAS 7800 Earthquake Record Reading

Fall. R. Lohman.

EAS 7810 Advanced Topics in Seismic Imaging

L. D. Brown.

EAS 7930 Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger, M. Pritchard, and T. E. Jordan.

EAS 7950 Low-Temperature Geochemistry

1-3 credits. S-U grades only. L. A. Derry.

EAS 7960 Geochemistry of the Solid Earth

W. M. White.

EAS 7970 Multiphase Subsurface Fluid Flow: Modeling and Tracers

Spring. L. M. Cathles.

EAS 7990 Soil, Water, and Geology Seminar

Spring. L. M. Cathles and T. S. Steenhuis.

EAS 8500 Master's-Level Thesis Research in Atmospheric Science

Fall, spring. Credit TBA. S-U grades only. Graduate faculty.

Thesis research for atmospheric science master's students.

EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S-U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. students only before "A" exam has been passed.

EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S-U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been passed.

ELECTRICAL AND COMPUTER ENGINEERING

T. Chen, director; D. F. Delchamps, advising coordinator; E. Afshari, D. H. Albonese, A. B. Apsel, A. S. Avestimehr, C. Batten, S. Bhave, A. W. Bojanczyk, H.-D. Chiang, P. C. Doerschuk, L. F. Eastman, W. K. Fuchs, Z. J. Haas, D. A. Hammer, S. S. Hemami, C. R. Johnson, Jr., E. Kan, M. C. Kelley, P. M. Kintner, R. R. Kline, A. Lal, M. Lipson, R. Manohar, J. F. Martínez, A. Molnar, C. R. Pollock, F. Rana, A. P. Reeves, C. E. Seyler, J. R. Shealy, X. Shen, E. G. Siler, M. G. Spencer, G. E. Suh, A. Tang, S. Tiwari, L. Tong, A. B. Wagner, S. B. Wicker

ECE 1260 Introduction to Signals and Telecommunications (also ENGRI 1260)

Spring. 3 credits.

For description, see ENGRI 1260.

ECE 2100 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 2100)

Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must enroll in a lab and a sec.

For description, see ENGRD 2100.

ECE 2200 Signals and Systems

Fall, spring. 4 credits. Prerequisites: MATH 2930 and CS 1112 or 1132. Corequisite: MATH 2940.

Introduction to signal processing. Topics include frequency-based representations: Fourier analysis and synthesis; discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

ECE 2300 Introduction to Digital Logic Design (also ENGRD 2300)

Fall, spring. 4 credits. Prerequisite: CS 1110 or 1112.

For description, see ENGRD 2300.

ECE 2400 Electrical and Computer Engineering Practice and Design

Spring. 4 credits. Prerequisite: PHYS 2213.

A brief history of electrical and computer engineering, the core subjects that define the field today, the ethical standards of its practice, and instruction in the elements of the process of designing electrical devices and systems. Students engage in experiential-learning design projects in which they will use the design process strategies to function well on a team and to design a system that meets customer needs and electrical engineering constraints.

ECE 2500 Technology in Society (also ENGRG/HIST 2500, STS 2501)

Fall. 3 credits. Humanities elective for engineering students.

For description, see ENGRG 2500.

ECE 2910-2920 Sophomore Electrical and Computer Engineering Independent Project

2910, fall; 2920, spring. 1-4 credits.

Individual study or directed reading in connection with a special engineering problem chosen by the student, after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2930-2939; 2940-2949 Sophomore Electrical and Computer Engineering Group Projects

2930-2939, fall; 2940-2949, spring. 1-4 credits.

Group study, analysis, and, usually, experimental tests in connection with a special engineering project chosen by the students after consultation with the faculty member directing the project. New projects are added upon faculty request. Written progress reports are required. Students must submit a Group Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2980 Inventing an Information Society (also AMST/ENGRG 2980, HIST 2920, INFO/STS 2921)

Spring. 3 credits. Approved for humanities distribution.

For description, see ENGRG 2980.

ECE 3030 Electromagnetic Fields and Waves

Fall, summer. 4 credits. Prerequisites: grade of C or better in PHYS 2213, PHYS 2214, MATH 2930, MATH 2940, and ECE/ENGRD 2100.

Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell's equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, method of images, material polarization and dielectrics; energy, work, and power in electromagnetic systems; wave propagation and polarization, waves in media (dielectrics, conductors, and anisotropic materials); reflection, transmission, and refraction at media interfaces; guided waves in transmission lines, Smith charts, transients; metallic and dielectric waveguides; radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

ECE 3100 Introduction to Probability and Inference for Random Signals and Systems (also ENGRD 3100)

Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents.

Introduction to probabilistic techniques for modeling random phenomena and making estimates, inferences, predictions, and engineering decisions in the presence of chance and uncertainty. Probability measures, classical probability and combinatorics, countable and uncountable sample spaces, random variables, probability mass functions, probability density functions, cumulative distribution functions, important discrete and continuous distributions, functions of random variables including moments, independence and correlation, conditional probability, Total Probability and Bayes' rule with application to random system response to random signals, characteristic functions and sums of random variables, the multivariate Normal distribution, maximum likelihood and maximum a posteriori estimation, Neyman-Pearson and Bayesian statistical hypothesis testing, Monte Carlo simulation. Applications in communications, networking, circuit design, device modeling, and computer engineering.

ECE 3140 Computer Organization (also CS 3420)

Spring. 4 credits. Prerequisite: CS/ENGRD 2110 or ENGRD 2300.

Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

ECE 3150 Introduction to Microelectronics

Spring. 4 credits. Prerequisite: ECE/ENGRD 2100.

Introduces the basic devices and circuits in modern microelectronics. Students learn not only basic structures and operations of semiconductor devices through simple models (diodes, CMOS, and BJT) but also how to analyze and design basic transistor modules in digital and analog circuits including biasing, amplifiers, filters, logic gates, and memory. The course introduces intuitive design methods to map circuit specifications to transistor topology, as well as first-order time-

constant estimation. SPICE and measurement labs accompany the progress in lectures for hands-on experiences.

ECE 3200 Networks and Systems

Spring. 4 credits. Prerequisites: ECE 2200 and MATH 2940.

Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 3250 Mathematics of Signal and System Analysis

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 2200 or permission of instructor.

Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions; linear algebra; inner products and orthogonal representations; basic ideas from multivariable calculus; and elementary convex analysis.

ECE 3600 Ethical Issues in Engineering Practice (also ENGRG 3600, STS 3601)

Spring. 3 credits. Open to sophomores.

For description, see ENGRG 3600.

ECE 3910–3920 Junior Electrical and Computer Engineering Independent Project

3910, fall; 3920, spring. 1–4 credits.

For description, see ECE 2910–2920.

ECE 3930–3939; 3940–3949 Junior Electrical and Computer Engineering Group Project

3930–3939, fall; 3940–3949, spring. 1–4 credits.

For description, see ECE 2930–2939; 2940–2949.

ECE 4060 Introduction to Quantum and Statistical Physics

Fall. 4 credits. Prerequisites: PHYS 2214, MATH 2940, and ECE 3150 or co-registration.

Introductory quantum, statistical, and solid-state physics concepts necessary for understanding modern solid-state electronic and optical devices. Topics include the formalism and methods of quantum mechanics, structures of atoms, molecules, and solids and their interactions with electromagnetic waves, statistical physics, and the basic physics of semiconductor.

ECE 4070 Physics of Semiconductors and Nanostructures

Spring. 4 credits. Prerequisites: ECE 3060 or AEP 3610 and AEP 4230.

Covers basic solid state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equation, semiconductor homo- and hetero-junctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and

dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high-frequency response of electrons in solids and plasmons.

ECE 4110 Random Signals in Communications and Signal Processing

Fall. 4 credits. Prerequisite: ECE 2200 and ECE 3100 or equivalent.

Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 4130 Introduction to Nuclear Science and Engineering (also MAE 4580, TAM 4130)

Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.

For description, see TAM 4130.

ECE 4150 GPS: Theory and Design (also MAE 4150)

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260).

Analysis of GPS operating principles and engineering practice with a culminating design exercise. Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS.

ECE 4210 Signal Processing Algorithms in Support of Painting Analysis

Fall. 3 credits. Prerequisites: ECE 2200 and MATH 2940. Recommended: ECE 3250.

The analysis of fine art paintings by art historians and conservation specialists involves the close examination of various images (e.g., visible light, x-ray) of the painting. This course focuses on the paintings of Vincent Van Gogh and highlight case studies of recent technical examinations. The signal processing tasks encountered are extracted and rudimentary solutions proposed based on fundamental signal processing techniques. Students assess and improve these "starter" schemes, performing (a) periodicity extraction (e.g., for canvas thread counting), (b) set membership discrimination (e.g., for artist identification), and (c) multiple image alignment (e.g., for x-ray stitching). In this emerging application for signal processing, several of these tasks have no widely adopted computer-assisted schemes. MATLAB is used for implementation of the algorithms on high-resolution image data provided by the Van Gogh Museum (Amsterdam, the Netherlands).

ECE 4250 Digital Signal Processing

Spring. 4 credits. Prerequisites: ECE 2200 and 3250. ECE 3100 recommended.

Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are then covered, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

[ECE 4271 Evolutionary Processes. Evolutionary Algorithms, Evolutionary Games

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 3100 or instructor's permission. Offered alternate years; next offered 2011-2012.

Covers a collection of topics relevant to the modeling, analysis, simulation, and optimization of large complex multi-agent systems.]

ECE 4300 Lasers and Optoelectronics

Fall. 4 credits. Prerequisite: ECE 3030 or equivalent.

Introduction to the operation and application of lasers. Cover diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

ECE 4320 MicroElectro Mechanical Systems (MEMS) (also MAE 4320)

Fall. 4 credits. Prerequisite: ECE 3150 or permission of instructor.

Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/nm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ECE 4330 Microwave Theory, Devices, and Applications

Fall. 4 credits. Prerequisite: ECE 3030.

Introduction to the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course covers the considerations that must be appreciated when the operating frequency approaches or exceeds 1GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 4370 Fiber and Integrated Optics

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3030 or equivalent.

Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

ECE 4450 Computer Networks and Telecommunications

Fall. 4 credits. Prerequisites: ECE 3140/CS 3420 and ECE 3100.

Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer

Mode, local area network technology, network interconnections, protocol design (OSF and IP), network security, and multimedia. Emphasis is placed on performance evaluation.

ECE 4510 Electric Power Systems I

Fall. 4 credits. Prerequisite: ECE 3200 or equivalent.

Acquaints students with modern electric power system analysis and control. Stresses analysis techniques appropriate for the restructured industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

ECE 4520 Electric Power Systems II

Spring. 4 credits. Prerequisite: ECE 3200 or permission of instructor.

Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation objectives and methods. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

ECE 4530 Analog Integrated Circuit Design

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3150 or equivalent.

Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

ECE 4570 Silicon Device Fundamentals

Spring. 4 credits. Prerequisites: ECE 3150 and 3060 or MSE 2620 or AEP 4500.

Teaches fundamental principles on semiconductor carrier statistics, band diagrams, pn-junction diodes, heterojunctions, Schottky diodes, BJT, MOS capacitor and MOSFET. Emphasis is put on the MOSFET designs for advanced VLSI technology from its physical structure, accurate modeling, manufacturability and applications. Device designs include short channel effects, gate-stack alternatives, band engineering, and strain engineering. By using computer simulation and experimental data, the course culminates in a design project dealing with technical concerns in current VLSI industry. The goal for this course is to train circuit, device, and process engineers for semiconductor technology research and development.

ECE 4720 Feedback Control Systems (also CHEME 4720, MAE 4780)

Fall. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor.

For description, see MAE 4780.

[ECE 4740 Digital VLSI Design

Spring. 4 credits. Prerequisite: ECE 3150. Next offered 2011-2012.

Introduction to digital VLSI design.]

ECE 4750 Computer Architecture (also CS 4420)

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisites: ENGRD 2300 and ECE 3140/CS 3420.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 4758 Robot Learning (also CS 4758)

Spring. 4 credits. Prerequisites: knowledge of basic computer science principles and skills, at a level sufficient to write a reasonably nontrivial computer program (e.g., CS 1114 or CS 2110 or CS 3110 or equivalent); any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent).

For description, see CS 4758.

ECE 4760 Digital Systems Design Using Microcontrollers

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3140/CS 3420 and ECE 3150.

Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

[ECE 4820 Plasma Processing of Electronic Materials (also MSE 4820)

Spring. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Next offered 2011-2012.

Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials.]

ECE 4840 Introduction to Controlled Fusion: Principles and Technology (also MAE 4590, AEP/NSE 4840)

Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and physical sciences.

Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and conditions required for fusion power and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

ECE 4870 Introduction to Radar Remote Sensing (also EAS 4870)

Spring, 3 credits. Prerequisites: ECE 2200 and 4860 (or grade of B or better in ECE 3030).

For description, see EAS 4870 in the College of Arts and Sciences.

ECE 4880 Radio Frequency (RF) Circuits and Systems

Spring, 4 credits. Prerequisite: ECE 3150 or equivalent.

Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Six laboratory sessions.

ECE 4910–4920 Senior Electrical and Computer Independent Engineering Project

4910, fall; 4920, spring, 1–4 credits.

For description, see ECE 2910–2920.

ECE 4930–4939; 4940–4949 Senior Electrical and Computer Engineering Group Project

4930–4939, fall; 4940–4949, spring, 1–4 credits.

For description, see ECE 2930–2939; 2940–2949.

ECE 4950–4990 Special Topics in Electrical and Computer Engineering

4950, fall; 4990, spring, 1–4 credits.

Seminar, special interest, or temporary course.

ECE 5010 Professional Seminar for M.Eng. Students

Fall, 2 credits. Prerequisites: M.Eng. students.

This seminar introduces students to professional issues that are important as they begin their professional career. Topics include M.Eng. ECE project options; professional expectations; project planning and management; effective teamwork; technical writing and communications; impact of environmental, economic, and societal constraints in design; entrepreneurship possibilities; and career planning issues.

ECE 5030 Electronic Bioinstrumentation

Fall, 4 credits. Prerequisites: intro biology, analog design, signal processing, at level of BIOG 1010, ECE 3150, and ECE 4250 respectively. For M.Eng. students only. Instructor permission required.

Covers the theory and practical aspects of recording and analyzing electronic data collected from biological systems. Topics may include electrode and amplifier design, tissue impedance and effects on waveforms, sensors, statistical and signal processing algorithms, noise reduction, and safety considerations.

ECE 5040 Neural and Bioelectronic Interfaces

Fall, 3 credits. Prerequisites: one of ECE 4110, 4250, or 4260, and one of ECE 4530, 4570, 5020, or permission of instructor.

An overview of the electrophysiology and biophysics of neurons and other electrogenic cells informs a subsequent discussion of the theoretical and practical aspects of electrical stimulation and recording, as well as discussion of emerging topics.

ECE 5120 Applied Systems Engineering (also CEE 5240, CIS 5040, MAE 5910, ORIE 5120, SYSEN 5100)

Fall, 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.

For description, see SYSEN 5100.

ECE 5130 System Architecture, Behavior, and Optimization (also CEE 5252, CIS 5050, MAE 5920, ORIE 5130, SYSEN 5200)

Spring, 3 credits. Prerequisite: CEE 5240/CIS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5100.

For description, see SYSEN 5200.

ECE 5180 Principles of Medical Imaging (also BME/VTCS 6180)

Fall, 1–3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics.

For description, see BME 6180.

ECE 5210 Theory of Linear Systems (also MAE 5210)

Fall, 3 credits. Prerequisite: MAE 3260, ECE 3200, or permission of instructor.

Recommended: good background in linear algebra and linear differential equations.

For description, see MAE 5210.

ECE 5310 Quantum Optics for Photonics and Optoelectronics

Fall, 4 credits. Prerequisites: ECE 3060 and 4070, or PHYS 4443.

Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

ECE 5340 Power Semiconductor Devices

Spring, 3 credits. Prerequisite: ECE 4570.

It is estimated that at least 50 percent of the electricity used in the world is controlled by power electronics. The efficiency of power electronics circuits has a direct connection with energy conservation. This course seeks to introduce the student to basic power electronic devices, basic power electronic circuits, and their suitability for power applications spanning a large range of currents and voltages. Device operation, design, fabrication, and power electronic circuit issues are discussed. Emphasis is on the device aspects. Examples are drawn from current Si device technology as well as emerging power devices technologies developed from wide bandgap semiconductors.

[ECE 5350 Semiconductor Physics

Fall, 4 credits. Prerequisites: ECE 4070 and 4570, or permission of instructor. Offered alternate years from ECE 5370; next offered 2011–2012.

Physics of semiconductors. Topics include crystal structure, perturbation theory, energy

bands, effective mass, phonons, scattering, transport, optical processes, deep levels and surface and interface effects.]

ECE 5360 Nanofabrication of Semiconductor Devices (also MSE 5410)

Fall, 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.

Introduction to modern nanofabrication technologies used to produce integrated circuits. Students perform a series of fabrication steps including lithography, metallization, plasma etching and annealing to realize working semiconductor devices (Schottky diodes, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each is tested to verify the success (or failure) of the fabrication process.

[ECE 5370 Nanoscale Devices, Circuits, and Physics

Fall, 4 credits. Prerequisite: ECE 4570 or permission of instructor. Offered alternate years from ECE 5350; next offered 2012–2013.

An integrated study connecting semiconductor physics with properties of electronic and optic devices at the nanoscale and the use of electronic devices in circuits.]

ECE 5470 Computer Vision

Fall, 4 credits. Prerequisite: ECE 2200 (or CS 2800 and 3420) or permission of instructor.

Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 5540 Advanced Analog VLSI Circuit Design

Spring, 4 credits. Prerequisite: ECE 4530.

Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

[ECE 5610 Error Control Codes

Fall, 4 credits. Prerequisite: ECE 3200 or 5210 or equivalent; strong familiarity with linear algebra. Next offered 2011–2012.

Introduction to the theory and practice of error control codes. Topics include algebraic codes, convolutional codes, concatenated codes, and codes on graphs.]

ECE 5620 Fundamental Information Theory

Spring, 4 credits. Prerequisite: ECE 4110 or equivalent.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ECE 5640 Detection and Estimation

Fall. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor.

Graduate-level introduction to fundamentals of signal detection and estimation with applications in communications. Elements of decision theory. Sufficient statistics. Signal detection in discrete and continuous time. Multiuser detection. Parameter estimations. Applications in wireless communications.

ECE 5660 Fundamentals of Networks

Fall. 4 credits. Prerequisite: ECE 3100 or equivalent course in probability.

Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols' operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov Chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and wired networks are illustrated by examples from numerous practical systems. Discussions of some classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

ECE 5670 Digital Communications

Spring. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor.

Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

ECE 5680 Mobile Communication Systems

Spring. 4 credits. Prerequisites: ECE 4110 and 4670.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

ECE 5710 Arithmetic Circuits

Fall. 3 or 4 credits. Prerequisites: ECE 4740, CS 2110. Offered alternate years from ECE 5740.

Designing arithmetic circuits. Topics include number representation, high-performance arithmetic including addition, multiplication, division, and other common operations found in modern computer systems.

ECE 5715 Computer Hardware Design Practicum

Fall. 4 credits. Prerequisite: ECE 4750 or permission of instructor.

Examines the hardware, and to some degree the software, necessary to build a complete computer system, including the CPU, memory, mass storage, input and output devices, and

basic operating system functions. In a series of labs over the course of the semester, students design and implement a working computer system using an FPGA development board.

ECE 5720 Parallel Computer Architecture (also CS 5420)

Fall. 4 credits. Prerequisite: ECE 4750.

Principles and trade-offs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

[ECE 5730 Memory Systems

Fall. 4 credits. Prerequisite: ECE 4750. Corequisite: ECE 5720. Next offered 2011-2012.

Principles and current practices of memory system design.]

[ECE 5740 Advanced Digital VLSI

Fall. 4 credits. Prerequisites: ECE 3140 and ECE 4740. Next offered 2011-2012.

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design.]

[ECE 5750 Advanced Microprocessor Architecture

Spring. 4 credits. Prerequisite: ECE 4750 or CS 4420. Next offered 2011-2012.

Revised version of the former ECE 575 High-Performance Microprocessor Architecture.]

ECE 5760 Advanced Microcontroller Design

Fall. 4 credits. Prerequisites: ECE 4750 and ECE 4760 or equivalent.

Design of system-on-chip applications. Students working in pairs design, debug, and construct several systems that illustrate the design of embedded processors with custom peripherals running a real-time operating system. The content focuses on laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

[ECE 5770 Resilient Computer Systems

Spring. 4 credits. Prerequisite: ECE 4750. Next offered 2011-2012.

Principles in designing resilient computer architectures.]

ECE 5780 Computer Analysis of Biomed Images (also BME 5780)

Spring. 4 credits. Prerequisite: permission of instructor; engineering, biomedical, or biology background.

Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

ECE 5790 Advanced High-Speed and RF Integrated Circuits

Spring, 4 credits. Prerequisites: ECE 4330 and ECE 4530.

Principles of analog integrated circuit design in the Giga-Hertz frequency range. This

course covers the fundamental understanding of high-frequency circuit building blocks such as low noise amplifiers, mixers, oscillators, phase locked loops, frequency synthesizers, clock and data recoveries, and power amplifiers. Additionally, because some of the traditional microwave building blocks such as transmission lines and distributed circuit elements are essential parts of today's high speed integrated circuits, the course briefly covers them. Throughout the course, a systematic review of advanced wireless and wireline applications is covered. The course emphasizes physical understanding and intuitive design methods as well as qualitative techniques and computer simulations. The course has collaborative class projects, based on real-world problems.

ECE 5800 Control and Optimization of Information Networks

Spring. 4 credits. Prerequisites: ECE 4110 and ECE 4450. Focus may vary from year to year.

Introduction to current research directions in networking featuring the Internet. Assumes basic knowledge of signals and systems as well as random processes. Necessary tools from optimization, dynamical systems, and related economic theory are introduced. Research topics may include layering, routing, medium access control, flow control, and peer-to-peer networks. Students are expected to hand in homework assignments, discuss one set of papers in class, and participate in a course project.

ECE 5810 Introduction to Plasma Physics (also AEP 6060)

Fall. 4 credits. Prerequisite: ECE 3030 or equivalent. First-year graduate-level course; open to exceptional seniors.

Topics include plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

ECE 5820 Advanced Plasma Physics

Fall. 4 credits. Prerequisite: ECE 5810.

Boltzmann and Vlasov equations; waves in hot magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; nonlinear phenomena: solitons, nonlinear waves, tearing, and reconnection.

ECE 5830 Introduction to Technical Management

Fall. 3 credits. Prerequisite: industrial experience or equivalent (summer work or schoolwork).

This course is taught from the perspective of a chief technology officer and is targeted at M. Eng. and management students interested in "real world" problems. It provides an introduction via case examples to the technical, management, and organizational issues of developing and marketing products in high-tech businesses. The focus is on the unique nature of this type of business, including managing with high risk/uncertainty levels, learning to manage very diverse project teams, and recognizing technical versus market success in order to make good business decisions.

[ECE 5840 Advanced GPS Receiver Design]

Spring, 4 credits. Prerequisite: ECE 4150 or MAE 4150. Next offered 2011–2012. GPS receiver design from the RF section to the observables is investigated and implemented in MATLAB software.]

[ECE 5850 Upper Atmospheric and Ionospheric Physics I]

Fall, 4 credits. Prerequisites: PHYS through 2214 or equivalent, introductory chemistry, ECE 4860 or equivalent. Next offered 2011–2012. The structure and dynamics of the ionosphere and upper atmosphere.]

[ECE 5860 Upper Atmospheric and Ionospheric Physics II]

Spring, 4 credits. Prerequisites: ECE 5810 and ECE 5850. Next offered 2011–2012. Topics include solar phenomena, solar wind, and space weather; magnetospheric structure and physical processes; plasma instabilities in the ionosphere and magnetosphere; and magnetic reconnection and the relation to high-latitude phenomena.]

ECE 5870 Energy Seminar I (also CHEME 5870, MAE 5459)

Fall, 1 credit. Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Topics include energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

ECE 5880 Energy Seminar II (also CHEME 5880, MAE 5469)

Spring, 1 credit. For description, see ECE 5870; however, different speakers and/or topics are discussed in ECE 5880.

ECE 5890 Advanced Methods in Radar (also EAS 5880)

Fall, spring, 3 credits. Prerequisites: EAS/ECE 4870 or permission of instructor. For description, see EAS 5880.

ECE 5950–5990 Special Topics in Electrical and Computer Engineering

Fall, spring, 1–4 credits. Seminar, special interest, or temporary course.

ECE 6830 Seminar in GPS and GNSS

Fall, spring, 1–3 credits. Prerequisite: ECE/MAE 4150 or equivalent. Seminar in GPS (Global Positioning System) and GNSS (Global Navigation Satellite Systems) science and engineering. Current topics in receiver design such as low signal acquisition, ambiguity resolution, and software receivers and topics in GPS science such as space weather effects on GPS and the use of GPS for remote sensing. Students typically make one presentation during the semester.

ECE 6930–6931 Master of Engineering Design Project I & II

6930, fall; 6931, spring, 1–8 credits. Two-semester Design Project: must enroll in both semesters; receive R grade for first semester. For students enrolled in M.Eng. (Electrical and Computer Engineering) degree program.

Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section for the fall and spring. Students who do not complete the Design Project in the spring receive a grade only for the work completed up to the point of the required submission date, which is the last day of Finals Week. Students must then enroll for the summer with the ECE M.Eng. director to complete the work remaining for the design project.

ECE 6950–6960 Special Topics in Electrical and Computer Engineering

6950, fall; 6960, spring, 1–4 credits. Seminar, special interest, or temporary course.

ECE 6970–6980 Master of Engineering Research

6970, fall; 6980, spring, 7 credits. Prerequisite: students enrolled in M.Eng. (Electrical) degree Research Track program. Must enroll both semesters. Project designed for the M.Eng. student in the Research Track program and more resembles a research thesis. Students work closely with an ECE Graduate Field Faculty member on a common area of interest. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 7910–7920 Thesis Research

7910, fall; 7920, spring, 1–15 credits. For students enrolled in master's or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

For complete descriptions, see the INFO listing in the CIS section.

INFO 1300 Introductory Design and Programming for the Web (also CS 1300)

Fall, 3 credits. For description, see INFO 1300 in CIS section.

INFO 2040 Networks (also CS 2850, ECON 2040, SOC 2090) (SBA)

Fall, 4 credits. For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140) (KCM)

Spring, 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students, see INFO 6140. For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)

Spring, 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3300. For description, see INFO 2300 in CIS section.

[INFO 2310 Topics in Web Programming and Design]

INFO 2450 Communication and Technology (also COMM 2450) (SBA)

Fall, summer, 3 credits. For description, see COMM 2450.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGRG 2980, HIST 2920, STS 2921)

Spring, 3 credits. For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science

Spring, 4 credits. Corequisite: MATH 2310 or equivalent. For description, see INFO 2950 in CIS section.

INFO 3200 New Media and Society (also COMM 3200)

Spring, 3 credits. For description, see COMM 3200.

[INFO 3300 Data-Driven Web Applications (also CS 3300)]

Spring, 3 credits. Prerequisite: CS 2110 and (INFO 2300 or permission of instructor). Next offered 2011–2012. For description, see INFO 3300 in CIS section.]

INFO 3400 Psychology of Online Relationships (also COMM 3400)

Fall, 3 credits. Prerequisite: INFO 2450. For description, see COMM 3400.

INFO 3450 Human-Computer Interaction Design (also COMM 3450) (SBA)

Fall, 3 credits. Prerequisite: INFO 2450 or permission of instructor. May be taken simultaneously with INFO 2450. For description, see COMM 3450.

INFO 3460 Online Communities

Fall, 3 credits. For description, see COMM 3460.

INFO 3490 Media Technologies (also COMM 3490, STS 3491) (CA)

Spring, 3 credits. Offered odd-numbered years. For description, see COMM 3491.

INFO 3561 Computing Cultures (also STS 3561)

Spring, 4 credits. No technical knowledge of computer use presumed or required. For description, see STS 3561.

INFO 3650 Technology and Collaboration (also COMM 3650)

Spring, 3 credits. Prerequisite: INFO 2450. For description, see COMM 3650.

[INFO 3660 History and Theory of Digital Art (also ARTH 3660) (CA)]

Fall, 4 credits. Next offered 2011–2012. For description, see ARTH 3660.]

INFO 4144 Responsive Environments

Spring, 4 credits. For description, see ARTH 4144.

[INFO 4290 Copyright in the Digital Age (also COMM 4290)]

Fall, 3 credits. Offered odd-numbered years; next offered 2011–2012. For description, see COMM 4290.]

INFO 4300 Information Retrieval (also CS 4300)

Fall, 3 credits. Prerequisite: CS/ENGRD 2110 or equivalent. For description, see INFO 4300 in CIS section.

INFO 4302 Web Information Systems (also CS 4302)

Spring, 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology. For description, see INFO 4302 in CIS section.

INFO 4307 Learning From Web Data

Fall. 3 credits. Prerequisites: CS 2110 and INFO 2950, or graduate standing.
For description, see INFO 4307 in CIS section.

INFO 4320 Introduction to Rapid Prototyping and Physical Computing

Spring. 3 credits. Prerequisite: INFO 1300 or equivalent or permission of instructor. Materials fee: \$250.
For description, see INFO 4320 in CIS section.

INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400) (SBA)

Spring. 3 credits. Prerequisite: INFO 3450.
For description, see COMM 4400.

INFO 4450 Computer-Mediated Communication (also COMM 4450)

Spring. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4450.

INFO 4470 Social and Economic Data (also ILRLE 4470)

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, one upper-level social science course, or permission of instructor.
For description, see INFO 4470 in CIS section.

INFO 4500 Language and Technology (also COMM 4500) (SBA)

Spring. 3 credits. Prerequisite: INFO 2450 or permission of instructor.
For description, see COMM 4500.

Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2011-2012.
For description, see LING 6648.]

INFO 6850 The Structure of Information Networks (also CS 6850)

Spring. 4 credits. Prerequisite: CS 4820.
For description, see INFO 6850 in CIS section.

INFO 7050 Graduate Seminar

Fall, spring. 1 credit.
For description, see INFO 7050 in CIS section.

INFO 7090 IS Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

MATERIALS SCIENCE AND ENGINEERING

E. P. Giannelis, director; D. G. Ast, S. P. Baker, R. Dieckmann, L. Estroff, D. Gourdon, D. T. Grubb, R. Hennig, C. Liddell, G. G. Malliaras, C. K. Ober, R. Robinson, D. G. Schlom, M. O. Thompson, C. C. Umbach, R. B. van Dover, U. B. Wiesner

Undergraduate Courses**MSE 1110 Nanotechnology (also ENGRI 1110)**

Fall. 3 credits. C. Umbach.
Course in Introduction to Engineering series.
For description, see ENGRI 1110.

MSE 1140 Materials: The Future of Energy

Spring. 3 credits. R. B. van Dover.
This experiential learning course explores how new materials can increase our energy supply and decrease consumption. Materials issues in photovoltaic, fuel cell, battery, wind, transportation, lighting, and building technologies are studied. Through integrated lab-based activities students develop a broad understanding of materials issues to successfully design and build an energy generation system.

MSE 1180 Design Integration: DVDs and iPods (also ENGRI/TAM 1180)

Spring. 3 credits. Course in Introduction to Engineering series.
For description see ENGRI 1180.

MSE 1190 Biomaterials for the Skeletal Systems (also ENGRI 1190)

Fall. 3 credits. D. Gourdon.
Course in Introduction to Engineering series.
For description, see ENGRI 1190.

MSE 1810 MSE at Cornell: An Introduction for Freshmen

Spring. 1 credit. S-U or letter grades; grade based on class participation and course project. C. Umbach.

Introduces materials science and engineering to students considering MSE as their major. Lectures by MSE professors, alumni, and industrial researchers. Topics include MSE major requirements as preparation for real-world engineering. Cutting-edge MSE research involving undergraduates. Industrial R&D. Tours of Cornell centers and MSE facilities.

MSE 1910-1920 Research Involvement Ia and Ib

1910, fall; 1920, spring. 3 credits each semester. Prerequisite: approval of department. Staff.

For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 2060 Atomic and Molecular Structure of Matter (also MAE 3130)

Spring. 4 credits. R. Robinson.
Discusses the basic elements of structure; order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MSE 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 2610)

Fall. 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. P. Baker.

For description, see ENGRD 2610.

MSE 2620 Electronic Materials for the Information Age (also ENGRD 2620)

Spring. 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. M. Thompson.

For description, see ENGRD 2620.

MSE 2910-2920 Research Involvement IIa and IIb

2910, fall; 2920, spring. 3 credits each semester. Prerequisite: approval of department. Staff.

Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

MSE 3010 Materials Chemistry (also MSE 5810)

Fall. 3 credits. L. Estroff.
Provides a molecular understanding of materials properties: quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

MSE 3030 Thermodynamics of Condensed Systems (also MSE 5830)

Fall. 4 credits. Prerequisites: PHYS 2214 and MATH 2940. M. O. Thompson.
Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical

mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduces electrochemistry and fuel/power cells.

MSE 3040 Kinetics, Diffusion, and Phase Transformations (also MSE 5840)

Spring. 4 credits. Prerequisite: MSE 3030 or permission of instructor. R. Hennig.

Course covers kinetic effects in solidification and solid state transformations that determine structure and ultimately properties of materials. Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, ionic compounds, semiconductors, and polymers; introduction to general transport theory and non-equilibrium thermodynamics; interfaces and microstructure; nucleation, growth, and coarsening; solidification of alloys; diffusional and diffusionless transformations in solids.

MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 5850)

Spring. 3 credits. Prerequisite: MSE 2060 and MSE 2620 or permission of instructor. D. Schlom.

Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons. Valence electron behavior in crystals, density of states, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

MSE 3070 Materials Design Concepts I

Fall. 2 credits. Staff.

For description, see MSE 4070.

MSE 3110 Junior Laboratory I

Fall. 1 credit. Staff.

Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in chemistry of materials and thermodynamics of condensed systems.

MSE 3120 Junior Laboratory II

Spring. 1 credit. Staff.

Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and electronic, magnetic, and dielectric properties of materials.

MSE 3910-3920 Research Involvement IIIa and IIIb

3910, fall; 3920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.

For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4020 Mechanical Properties of Materials, Processing, and Design (also MAE 3120, MSE 5820)

Fall. 3 credits. Prerequisite: MSE 2060.

Corequisite: MSE 3040 or permission of instructor. D. Ast.

Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials, how mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep deformation, fracture, and fatigue.

MSE 4030-4040 Senior Materials Laboratory I and II

4030, fall; 4040, spring. 3 credits each semester. Staff.

Two-semester sequence laboratory course with some lectures. Topics include the acquisition, analysis, and presentation of data; errors; experimental design; and technical writing. Emphasis is on practical laboratory skills, proper error analysis, and well-written reports. Students work in groups to plan and perform experiments and test procedures that evaluate material properties, performance and microstructure.

MSE 4050-4060 Senior Thesis I and II

4050, fall; 4060, spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. M. Thompson.

Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

MSE 4070 Materials Design Concepts II

Fall. 2 credits. Staff.

Introduces materials design in the context of real-world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

[MSE 4100 Physical Metallurgy and Applications (also MSE 6100)]

Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor.

Next offered 2011-2012. S. Baker.

Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties.]

[MSE 4330 Materials for Energy Production, Storage, and Conversion (also MSE 5330)]

Fall. 3 credits. Next offered 2011-2012.

R. Dieckmann.

Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants.]

MSE 4610 Biomedical Materials and Their Applications

Spring. 3 credits. L. Estroff.

Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, case studies involving physiological systems are considered, and design of artificial parts and materials is investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation about a case study.

[MSE 4810 Technology Management (also MSE 5870)]

Spring. 3 credits. E. P. Giannelis. Next offered 2011-2012.

Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage.]

MSE 4820 Plasma Processing of Electronic Materials (also ECE 4820)

Spring. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Offered if sufficient demand.

For description, see ECE 4820.

[MSE 4870 Ethics and Technology]

Spring. 1 credit. Next offered 2011-2012. Staff.

Ethics influences all decisions made by a technologist. This course discusses factors that must be considered in reaching a decision involving technology, ranging from legal impact to community expectations.]

MSE 4890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 5890)

Spring. 3 credits. C. Liddell.

Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneous structure, layered, hollow, porous, and heterojunction structures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and miniemulsions. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.

MSE 4910-4920 Research Involvement IVa and IVb

4910, fall; 4920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.

For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4950 Undergraduate Teaching Involvement

Fall, spring. Variable credit. Staff.

Gives credit to students who help in the laboratory portions of select MSE courses. The

number of credits earned is determined by the teaching load and is typically 1-3.

MSE 5010-5020 Special Project

Fall, spring, 6 credits. Staff.
Master of Engineering research project.

MSE 5120 Mechanical Properties of Thin Films (also MAE 5130)

Spring, 3 credits. Prerequisite: course similar to ENGRD 2610 or permission of instructor. S. P. Baker.

Stresses, elastic and plastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.

MSE 5210 Properties of Solid Polymers

Fall, 3 credits. Prerequisite: ENGRD 2610. Corequisite: MSE 3030 or permission of instructor. U. Wiesner.

Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Thermodynamics of polymer mixtures. Polymer molecular weight. Gelation and networks, rubber elasticity, elastomers, and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Glass transition and secondary relaxations. Plastic deformation and molecular orientation.

MSE 5230 Physics of Soft Materials

Spring, 3 credits. U. Wiesner.

Covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.

MSE 5310 Introduction to Ceramics

Spring, 3 credits. Prerequisites: all MSE 2000- and 3000-level core courses. R. Dieckmann.

Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomistic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Emphasizes physicochemical aspects of the different topics.

[MSE 5330 Materials for Energy Production, Storage, and Conversion (also MSE 4330)]

Fall, 3 credits. Next offered 2011-2012. R. Dieckmann.

For description, see MSE 4330.]

MSE 5410 Nanofabrication of Semiconductor Devices (also ECE 5360)

Fall, 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.

For description, see ECE 5360.

[MSE 5420 Flexible Electronics]

Spring, 3 credits. Next offered 2011-2012. C. Ober.

Flexible electronics holds the promise of transformative developments in: (1) flat panel lighting (low cost, low energy), (2) energy production systems (solar), and (3) infrastructure control and monitoring (sensing, energy control, hazard monitoring.)

[MSE 5430 Thin-Film Materials Science]

Fall, 3 credits. Next offered 2011-2012. D. Schlom.

Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films.]

MSE 5450 Magnetic and Ferroelectric Materials

Fall, 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalent. R. B. van Dover.

Topics include magnetic fields, the microscopic origins of magnetism, ferromagnetic materials and properties, and applications of magnetic materials. The properties of ferroelectric materials are also covered, and applications of ferroelectrics in electronics technology are explored.

[MSE 5490 Nanofabrication: Making It Small]

Spring, 3 credits. Prerequisites: CHEM 2090, MATH 1920. Next offered 2011-2012.

M. Thompson.

Introduces principles and practice of nanofabrication techniques, combining lectures with hands-on laboratory fabrication.]

MSE 5550 Introduction to Composite Materials (also CEE/MAE/TAM 4550)

Fall, 3 credits. P. Petrina.

For description, see TAM 4550.

MSE 5620 Biomineralization: The Formation and Properties of Inorganic Biomaterials

Spring 3 credits. Prerequisites: MSE 3010 or CHEM 1570 or CHEM 3570-3580 or equivalent or permission of instructor. L. Estroff.

Examines the wide variety of mineralized materials made by biological organisms including mollusk shells, mammalian bone and teeth, silica bodies in plants, and magnetotactic bacteria. The focus is on the molecular and biological mechanisms that lead to the formation of these materials as well as their unique materials properties (mechanical, optical, magnetic).

MSE 5630 Nanobiotechnology (also AEP/ BIOG 6630)

Fall, 3 credits.

For description, see BME 6670.

[MSE 5710 Analytical Techniques for Material Science]

Spring, 3 credits. Next offered 2011-2012. D. Grubb.

Covers techniques used to determine the composition and structure of materials, both synthetic and biological.]

[MSE 5720 Computational Materials Science]

Fall, 3 credits. Prerequisite: MSE 3030/6010 or equivalent. Next offered 2011-2012. R. Hennig.

An introduction to state-of-the-art computational methods in materials research with emphasis on the atomic and nano scales and hands-on modeling using PCs and supercomputers.]

MSE 5810 Materials Chemistry (also MSE 3010, MAE 3120)

Fall, 3 credits. L. Estroff.

For description, see MSE 3010.

MSE 5820 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, MAE 3120)

Fall, 3 credits. Corequisite: MSE 5840 or permission of instructor. D. Ast.

For description, see MSE 4020.

MSE 5830 Thermodynamics of Condensed Systems (also MSE 3030)

Fall, 4 credits. M. O. Thompson.

For description, see MSE 3030.

MSE 5840 Kinetics, Diffusion, and Phase Transformation (also MSE 3040)

Spring, 4 credits. Prerequisite: MSE 5830 or permission of instructor. R. Hennig.

For description, see MSE 3040.

MSE 5850 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 3050)

Spring, 3 credits. D. Schlom.

For description, see MSE 3050.

[MSE 5870 Technology Management (also MSE 4810)]

Spring, 3 credits. Next offered 2011-2012. E. P. Giannelis.

For description, see MSE 4810.]

MSE 5890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 4890)

Spring, 3 credits. C. Liddell.

For description, see MSE 4890.

Graduate Core Courses

[MSE 6010 Chemistry of Materials]

Spring, 3 credits. Prerequisite: thermodynamics course at level of MSE 3030. Next offered 2011-2012. U. Wiesner.

Modern developments in materials chemistry, including symmetry aspects of chemical bonding, self-assembly, sol-gel chemistry, mesostructured and mesoporous solids, low-dimensional nanomaterials, and bioorganic chemistry.]

[MSE 6020 Elasticity, Plasticity, and Fracture]

Spring, 3 credits. Next offered 2011-2012. Staff.

An advanced overview of mechanical properties of materials combining concepts from continuum mechanics, atomic structure, thermodynamics, and kinetics.]

[MSE 6030 Thermodynamics of Materials]

Fall, 3 credits. Next offered 2011-2012. Staff.

Basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of

equilibrium, chemical reactions, statistics of electrons in crystals.]

[MSE 6040 Kinetics of Reactions in Condensed Matter

Spring, 3 credits. Next offered 2011–2012.
R. Dieckmann.

Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids.]

MSE 6050 Electronic Properties of Materials

Spring, 3 credits. D. Schlom.

Develops concepts of band structure in crystalline and non-crystalline materials from a real-space as well as reciprocal space perspective, and reconciles the two approaches. Mathematical complexity is kept to a minimum. Specific topics include electronic properties of low-dimensionality materials (surfaces, quantum wires, quantum dots), optical properties of metals and insulators, and electronic properties of exotic materials such as oxide and organic semiconductors. Technological applications to be addressed include switching devices, magnetism, superconductivity, and photonics, depending on student interests.

[MSE 6060 Condensed Matter Structure

Fall, 3 credits. Prerequisite: course at level of MSE 2060. Next offered 2011–2012.
R. Robinson.

Focuses on ways to characterize structure in a wide range of materials at length scales ranging from sub-nanometer to millimeter.]

Related Course in Another Department

Introductory Solid-State Physics (PHYS 4454, AEP 4500)

Further Graduate Courses

[MSE 6100 Physical Metallurgy and Applications (also MSE 4100)

Spring, 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor.
Next offered 2011–2012. S. Baker.

For description, see MSE 4100.]

MSE 6210 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 6070)

Spring, 4 credits. Prerequisite: CHEM 6050 or permission of instructor. S. Lee.

For description, see CHEM 6070.

MSE 6550 Composite Materials (also MAE/TAM 6550)

Spring, 4 credits. Staff.

For description, see TAM 6550.

MSE 6650 Principles of Tissue Engineering (also MAE/BME 6650)

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see BME 6650.

MSE 6710 Principles of Diffraction (also AEP 7110)

Spring, 3 credits. Letter grades only.

Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock.

For description, see AEP 7110.

Specialty Courses

MSE 8000 Research in Materials Science

Fall, spring. Credit TBA. Staff.
Independent research in materials science under the guidance of a member of the staff.

MSE 8010 Materials Science and Engineering Colloquium

Fall and spring. 1 credit each semester.
Enrollment limited to MSE Ph.D. students.
Staff.

Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MSE 8020 Materials Science Research Seminars

Fall, spring, 2 credits each semester.
Prerequisite: graduate students involved in research projects. Staff.

Short presentations on research in progress by students and staff.

MECHANICAL AND AEROSPACE ENGINEERING

P. L. Auer, C. T. Avedisian, D. L. Bartel, L. J. Bonassar, J. F. Booker, J. Burns, K. B. Cady, J. R. Callister, M. E. Campbell, D. A. Caughey, L. R. Collins, P. R. Dawson, P. C. T. deBoer, D. C. Erickson, E. M. Fisher, Y. Gao, E. Garcia, A. R. George, F. C. Gouldin, T. Healey, B. Hency, C. Hernandez, C. Hui, B. J. Kirby, H. Kress Gazit, S. Leibovich, H. Lipson, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, S. Mukherjee, M. A. Peck, R. M. Phelan, S. L. Phoenix, S. B. Pope, M. L. Psiaki, R. Rand, E. L. Resler, Jr., A. Ruina, W. Sachse, S. Strogatz, M. C. H. van der Meulen, H. B. Voelcker, K. K. Wang, Z. Warhaft, C. H. K. Williamson, N. Zabarar, A. Zehnder, K. M. Zhang

MAE 1110 Naval Ship Systems (also NAVS 2202)

Fall, 3 credits.

For description, see NAVS 2202.

MAE 1130 Introduction to Computer-Aided Manufacture (CAM)

Fall, approx. 8 weeks of lec and 6 weeks of lab. 1 credit. Limited enrollment.

Prerequisites: Emerson Manufacturing Teaching Lab Green Apron Status or permission of instructor.

Introduction to the fundamentals of computer-aided manufacture (CAM) and computer numerical control (CNC) programming. The course is a hands-on series on CAM. Provides practical applications of the use of G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Manufacturing Teaching Lab for team or research projects. It is also required for advanced CAM/CNC work offered on an individual basis in the spring. May not be used to fulfill any ME requirement.

MAE 1170 Introduction to Mechanical Engineering (also ENGRI 1170)

Fall, 3 credits. 2 lec and 1 lab per week.

Course in Introduction to Engineering series. For description, see ENGRI 1170.

MAE 1270 Introduction to Entrepreneurship and Enterprise Engineering (also ENGRI 1270)

Spring, 3 credits. Open to all Cornell students regardless of major. Prerequisites: none.

For description, see ENGRI 1270.

MAE 1900 Freshman and Nontechnical Projects in Mechanical Engineering

Fall, spring, 1–3 credits. Prerequisite: permission of instructor.

Individual or group study or project for students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses. An engineering report on the project is required of each student. Students must make individual arrangements with a faculty sponsor and submit an Undergraduate Research Project Approval Form to the Student Services Office, 108 Upson Hall. Students are expected to spend 3–4 hours per week per credit hour working on the project. May not be used as a technical elective in the ME major. Intended for freshman on project teams and for project team members performing non-technical tasks.

MAE 2120 Mechanical Properties and Selection of Engineering Materials

Spring; may be offered in summer. 3 credits. Prerequisites: ENGRD/TAM 2020 (Statics) with minimum of C– (strictly enforced); MATLAB programming at level of CS 1112 or CS 1132.

Mechanics of deformable bodies and a reinforcement of the concept of “simple engineering elements” for mechanical analysis associated with design. Introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue, and environmental effects are developed. A general introduction to the function/constraints/objectives approach to material selection associated with mechanical design is provided with candidate material systems coming from metals, polymers, ceramics, and/or composites. A general overview of material structure and processing is presented within this context of material selection.

MAE 2210 Thermodynamics (also ENGRD 2210)

Fall, spring, may be offered in summer. 3 credits. Prerequisites: MATH 1920 Calculus for Engineers and PHYS 1112 Physics I, Mechanics, or permission of instructor.

For description, see ENGRD 2210.

MAE 2250 Mechanical Synthesis

Spring, 4 credits. Prerequisite: ENGRD 2020. Pre- or corequisites: ENGRD 2030 and 2210. Lab fee.

Hands-on introduction on the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical dissection used to demonstrate successful product design and function. Basic instruction in CAD and technical sketching.

MAE 3050 Introduction to Aeronautics

Fall. 3 credits. Prerequisite: TAM/ENGRD 2030. Pre- or corequisites: one of the following thermodynamics classes: ENGRD 2210 or BEE 2220 and one of the following fluid mechanics classes: MAE 3230 or CHEME 3230 or BEE 3310 or CEE 3310; upper-level engineers or permission of instructor.

Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft. Analysis of aerodynamic performance. Introduction to stability and control.

[MAE 3060 Spacecraft Engineering

Spring. 3 credits. Prerequisite: ENGRD 2030 or junior or senior MAE or ECE students or permission of instructor.

Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.]

MAE 3120 Mechanical Properties of Materials, Processing, and Design (also MSE 4020/5820)

Fall. 4 credits.

For description, see MSE 4020.

MAE 3130 Atomic and Molecular Structure of Matter (also MSE 2060/5810)

Spring. 4 credits.

For description, see MSE 2060.

MAE 3230 Introductory Fluid Mechanics

Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Limited to ME majors and those officially registered for AE or ME minor. Prerequisites: ENGRD 2020 and ENGRD 2030 and pre- or co-registration in ENGRD 2210, or permission of instructor.

Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

MAE 3240 Heat Transfer

Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: MAE 3230 or permission of instructor.

Topics include discussion of steady and unsteady heat conduction; forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boiling.

MAE 3250 Analysis of Mechanical and Aerospace Structures

Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 2020 and MAE 2120.

Topics in mechanics of materials applied to analysis and design of structural components encountered in mechanical and aerospace systems, including multiaxial stress states,

statically indeterminate structures, torsion and bending of nonsymmetric or curved members, stability, and stress concentrations. Solution strategies include both analytical and finite element methods.

MAE 3260 System Dynamics

Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 2930, MATH 2940, ENGRD 2030; junior standing.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

MAE 3272 Mechanical Property and Performance Laboratory

Spring. 2 credits. Prerequisites: MAE 2120, 3250.

Introduces the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.

MAE 3780 Mechatronics

Fall. 4 credits. Prerequisite: MATH 2930, PHYS 2213, or permission of instructor.

At the intersection of mechanical and electrical engineering, Mechatronics involves technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; diodes; transistors, MOSFETs and power amplification; pulse width modulation; transduction; mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming. Lab experiments culminate in the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

[MAE 4000 Components and Systems: Engineering in a Social Context (also STS 4001)

Fall. 3 credits. Prerequisites: upper-class standing, two years of college physics. Counts as "Senior Design Elective" if students sign up for corresponding section of MAE 4291. Co-meets with MAE 5000. Offered alternate years; next offered 2011-2012.

Addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum.]

MAE 4020 Wind Power

Fall. 3 credits. Prerequisite(s): MAE 3230 (or equivalent) or MAE 3050, MAE 3250. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Main features of energy conversion by wind turbines. Emphasis on characterization of the atmospheric boundary layer, aerodynamics of horizontal axis wind turbines, and performance prediction. Structural effects, power train considerations, siting, and wind farm planning.

[MAE 4040 Materials Selection for Clean Mechanical Designs

Spring. 3 credits. Prerequisites: MAE 2120, MAE 3250. Pre- or corequisite MAE 3272. Counts as "Senior Design Elective" for M.E. students who enroll in corresponding section of MAE 4291. Offered alternate years; next offered 2011-2012.

Advanced material selection concepts, which build off of the fundamentals of materials index developed in MAE 2120 and 3250, including process and shape selection, hybrid materials, and industrial design.]

MAE 4140 Mechanics of Lightweight Vehicles

Fall. 3 credits. Prerequisites: MAE 2120, 3250, and 3272 or equivalent; senior standing in MAE. "Senior Design Elective" for M.E. students who enroll in corresponding section of MAE 4291.

Covers fundamentals of vehicle mechanics for several classes of vehicles (bicycles, light cars, airframes). Topics include types of vehicle structures; pertinent aspects of mechanical behavior including elastic and inelastic responses; static and dynamic behavior of vehicles under elastic loading; and mechanics of crashworthiness. Lectures cover essential background material for understanding of vehicle mechanics. Labs provide hands-on experiences in the major components of the course.

MAE 4150 GPS: Theory and Design (also ECE 4150)

Fall. 4 credits. Prerequisite: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260).

For description, see ECE 4150.

MAE 4170 Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Prerequisites: engineering math at level of MATH 2930 and MATH 2940 (Engineering Mathematics); some course in dynamics at level of TAM/ENGRD 2030 (Dynamics); familiarity with control concepts typical of MAE 3260 (System Dynamics). Co-meets with MAE 5170.

Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics. Design of end effectors, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators. Design of PD controllers, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used. Applications to medical robots, manufacturing, and space robotics.

MAE 4180 Autonomous Mobile Robots (also CS 3758)

Spring. 4 credits. Prerequisite: MAE 3260 or permission of instructor. Co-meets with MAE 5180.

Creating robots capable of performing complex tasks autonomously requires one to address a variety of different challenges such as sensing, perception, control, planning, mechanical design, and interaction with humans. In recent years many advances have been made toward creating such systems, both in the research community (different robot challenges and competitions) and in industry (industrial, military, and domestic robots). This course gives an overview of the challenges and techniques used for creating

autonomous mobile robots. Topics include sensing, localization, mapping, path planning, motion planning, obstacle and collision avoidance, and multi-robot control.

MAE 4230 Intermediate Fluid Dynamics

Spring. 3 credits. Prerequisite: MAE 3230 (Introductory Fluid Mechanics) or CEE 3310/BEE 3310, CHEME 3230 or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291.

Co-meets with MAE 5230.

Builds on the foundation of MAE 3230. Emphasis is placed on both the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics include compressible flow, exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, fluid instabilities, and turbulence.

MAE 4250 FSAE Automotive Design Project

Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders.

Prerequisite: engineering juniors and seniors or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

MAE 4272 Fluids/Heat Transfer Laboratory

Fall. 3 credits. Fulfills technical-writing requirement. Prerequisites: MAE 3230, 3240.

Laboratory exercises in fluid mechanics and the thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, airfoil stall, flow visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

MAE 4291 Supervised Senior Design Experience

Fall, spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing or permission of instructor; taken concurrently or after MAE 4280. Letter grades only.

Substantial design experience based on the knowledge and skills acquired in earlier course work and incorporating engineering standards and realistic constraints. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as "Senior Design Elective" (MAE 4000, 4020, 4040, 4140, 4230, 4700, 4860) or are directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

MAE 4300 Professional Practice in Mechanical Engineering

Fall. 2 credits. Prerequisite: senior standing in MAE or permission of instructor. Required for M.E. seniors, replacing MAE 4280.

Professional practice and broader impacts of the mechanical engineering profession are

presented through a series of lectures and invited talks, supplemented by assignments and projects. Topics include professional ethics, product liability, intellectual property, career/educational paths, contemporary issues facing mechanical engineers, and engineering successes and failures, along with the global, societal, environmental and/or economic aspects and impact of engineering.

MAE 4320 MicroElectro Mechanical Systems (MEMS) (also ECE 4320)

Fall. 4 credits. Prerequisite: ECE 3150, AEP 3630, or MAE 3780 or permission of instructor.

For description, see ECE 4320

[MAE 4490 Combustion Engines and Fuel Cells

Spring. 3 credits. Prerequisites: ENGRD 2210 and MAE 3230. Offered alternate years; next offered 2011–2012.

Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance.]

[MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 4530)

Fall. 3 credits. Fulfills technical elective requirement for MAE students. Prerequisite: Heat and Mass Transfer (BEE 3500 Biological and Environmental Transport Processes, or CHEME 3240 Heat and Mass Transfer, or MAE 3240 Heat Transfer) or equivalent. Next offered 2011–2012.

For description, see BEE 4530.]

MAE 4550 Introduction to Composite Materials (also CEE 4770, MSE 5550, TAM 4550)

Fall. 4 credits.

For description, see TAM 4550.

[MAE 4570 Space Systems and National Security

Fall. 3 credits. Prerequisite: upper-level standing and MATH 2930 and ENGRD 2030 or permission of instructor. Next offered 2011–2012.

Provides an overview of the implications of space for national security and vice versa.]

MAE 4580 Introduction to Nuclear Science and Engineering (also ECE/TAM/NSE/CHEME/AEP 4130)

Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.

For description, see TAM 4130.

MAE 4590 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE/NSE 4840)

Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years.

For description, see ECE 4840.

MAE 4610 Entrepreneurship for Engineers (also ENGRG 4610, ORIE 4152)

Fall. 3 credits. Limited enrollment. Prerequisite: upper-level engineers or permission of instructor.

Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and

sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

MAE 4640 Orthopaedic Tissue Mechanics (also BME 4640)

Spring. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and MAE 3250 Mechanical Design and Analysis or permission of instructor. Co-meets with MAE 5640.

Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and how these properties relate to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

MAE 4660 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 4010)

Fall. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and previous course work in biology or permission of instructor.

For description, see BME 4010.

MAE 4700 Finite Element Analysis for Mechanical and Aerospace Design

Fall. 3 credits. Fulfills senior design requirement for MAE students. Limited enrollment. Prerequisite: senior standing or permission of instructor. Evening exams. Term project. Counts as Senior Design Elective if M.E. seniors enroll in corresponding section of MAE 4291. Co-meets with MAE 5700.

Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications in the areas of trusses, beams, frames, heat transfer (steady state and transient), and elasticity (static and dynamic).

MAE 4758 Robot Learning (also CS/ECE 4758)

Spring. 4 credits Prerequisites: knowledge of basic computer science principles and skills, at a level sufficient to write a reasonably non-trivial computer program (e.g., CS 1114 or CS 2110 or CS 3110 or equivalent); any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent).

For description, see CS 4758.

MAE 4770 Engineering Vibrations

Spring. 3 credits. Pre- or corequisite: MAE 3260 or permission of instructor. Co-meets with MAE 5770.

Lumped element, distributed parameter, and mixed structural vibratory systems are

examined. Equations of motion are derived from Newton's law and Lagrange's equations. Eigenanalysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated.

MAE 4780 Feedback Control Systems (also CHEME/ECE 4720)

Fall. 4 credits. Prerequisite: CHEME 3720 or MAE 3260 or permission of instructor. Co-meets with MAE 5780.

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes.

MAE 4860 Automotive Engineering

Spring. 3 credits. Prerequisite: ENGRD 2020 or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics are discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches.

MAE 4900 Individual and Group Projects in Mechanical and Aerospace Engineering

Fall, spring. 1-4 variable credits. Prerequisites: sophomore, junior, or senior standing and permission of instructor.

Individual or group study or project for students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses. An engineering report on the project is required of each student. Students must make individual arrangements with a faculty sponsor and submit an Undergraduate Research Project Approval Form to the Student Services Office, 108 Upson Hall. Students are expected to spend 3-4 hours per week per credit hour working on the project.

MAE 4980 Teaching Experience in Mechanical Engineering

Fall, spring. 3 variable credits. Prerequisite: permission of instructor. Cannot be used to fulfill M.E. technical elective or M.E. major-approved elective requirements but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor. Students serving as TAs must also enroll in ENGRG 6780 Teaching Seminar, 1 credit, and participate in TA training offered by the College of Engineering at the beginning of the semester.

Students serve as teaching assistants in Cornell mechanical engineering classes or in local middle school technology classes.

[MAE 5000 Components and Systems: Engineering in a Social Context

Fall. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Co-meets with MAE 4000. Offered alternate years; next offered 2011-2012.

For description, see MAE 4000.]

MAE 5010 Future Energy Systems

Spring. 3 credits. Prerequisites: ENGRD 2210 Thermodynamics or equivalent. Recommended: MAE 3230 Introductory Fluid Mechanics, MAE 3240 Heat Transfer, or equivalents; graduate or senior standing or permission of instructor.

Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lowered-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

[MAE 5060 Aerospace Propulsion Systems

Spring. 3 credits. Prerequisite: MAE 3050 Introduction to Aeronautics or permission of instructor. Offered alternate years; next offered 2011-2012.

Application of thermodynamic and fluid-mechanical principles to design and performance analysis of aerospace propulsion systems. Jet propulsion principles, including gas turbine engines and rockets. Electric propulsion. Future possibilities for improved performance of aerospace propulsion systems.]

MAE 5070 Dynamics of Flight Vehicles

Spring. 3 credits. Prerequisite: MAE 3050 Introduction to Aeronautics. Pre- or co-requisite: MAE 3260 System Dynamics or permission of instructor. Offered alternate years.

Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient response. At the level of *Flight: Stability and Automatic Control* by Nelson.

MAE 5130 Mechanical Properties of Thin Films (also MSE 5120)

Spring. 3 credits. Offered alternate years. For description, see MSE 5120.

MAE 5170 Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Graduate version of MAE 4170. Co-meets with MAE 4170. For description, see MAE 4170.

MAE 5180 Autonomous Mobile Robots (also CS 4759/5759)

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of MAE 4180. Co-meets with MAE 4180.

For description, see MAE 4180.

MAE 5200 Dimensional Tolerancing in Mechanical Design

Fall, seven-week half term. 2 credits. Prerequisites: MAE 2250 or equivalent CAD-based design course, plus 2.5 years of engineering mathematics through probability and statistics.

Designers use dimensional tolerances to limit spatial variations in mechanical parts and assemblies; the primary goals are interchangeability in assembly, performance, and cost. This course covers traditional limit tolerances briefly but focuses mainly on modern geometric tolerances and their role in assembly control. Students learn how to represent assemblies in terms of mating and relational constraints, and how to design tolerances and inspection procedures from part and assembly specifications.

MAE 5210 Theory of Linear Systems (also ECE 5210)

Fall. 3 credits. Prerequisite: MATH 2930, MATH 2940, MAE 3260 for non-ECE majors, or permission of instructor.

Recommended: good background in linear algebra and linear differential equations.

State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of *Linear Systems* by Kailath.

MAE 5230 Intermediate Fluid Dynamics

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Co-meets with MAE 4230.

Intended for M.Eng. students who wish to take a fluid dynamics course including implementation of commercial computational fluid dynamics packages. Complements material in MAE 6010 and 6020. For description of topics covered, see MAE 4230. Includes a 1-credit CFD design project due at the end of the semester.

MAE 5240 Physics of Micro- and Nanoscale Fluid Mechanics (also CHEME 6240)

Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Co-meets with MAE 6240.

Introduction to fluid mechanics in micro- and nanofabricated devices. Physicochemical hydrodynamics, electrokinetic effects, capillarity, continuum breakdown, micro- and nanofluidic applications in chemistry and life sciences.

MAE 5430 Combustion Processes

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex combustion systems, turbulent flames, fuel cells, or combustion of solids.

MAE 5459 Energy Seminar I (also ECE 5870)

Fall. 1 credit.

For description, see ECE 5870.

MAE 5469 Energy Seminar II (also ECE 5880)

Spring. 1 credit.

For description, see ECE 5880.

[MAE 5640 Orthopaedic Tissue Mechanics]

Spring, 3 credits. Graduate version of MAE 4640. Offered alternate years; next offered 2011–2012.

For description see MAE 4640.]

MAE 5680 Soft Tissue Biomechanics

Fall, 3 credits.

For description, see BME 5810.

MAE 5690 Clinical Biomechanics of Musculoskeletal Tissues (also BME 5690)

Fall or spring, 3 credits. Prerequisites: ENGRD 2020, MAE 2120, and MAE 3250, or permission of instructor.

Review physiology and biomechanics of musculoskeletal tissues, focusing on skeletal muscle, ligament, and tendon and the relationship between the structure and mechanical function. Apply mechanics of materials to evaluate and solve clinical problems of musculoskeletal tissue. Determine how the tissues adapt to injury and degenerative changes.

MAE 5700 Finite Element Analysis for Mechanical and Aerospace Design

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor. Evening exams. Term project. Graduate version of MAE 4700 requires additional programming assignment. Co-meets with MAE 4700.

For description, see MAE 4700.

MAE 5770 Engineering Vibrations

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of MAE 4770. Co-meets with MAE 4770.

For description, see MAE 4770.

MAE 5780 Feedback Control Systems

Fall, 4 credits. Graduate version of MAE 4780. Co-meets with MAE 4780.

For description, see MAE 4780.

MAE 5910 Applied Systems Engineering (also CEE 5240, CIS 5040, ECE 5120, ORIE 5140, SYSEN 5100)

Fall, 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by course instructor.

For description, see SYSEN 5100.

MAE 5920 System Architecture, Behavior, and Optimization (also CEE/CS 5050, ECE 5130, ORIE 5142, SYSEN 5200)

Spring, 3 credits. Prerequisites: senior or graduate standing and completion of Applied Systems Engineering 1 (CEE 5240, CS 5040, ECE 5120, ORIE 5140, MAE 5910, or SYSEN 5100) or permission of instructor.

For description, see SYSEN 5200.

MAE 5930 Systems Engineering for the Design and Operation of Reliable Systems (also SYSEN 5300)

Fall, 3 credits. Prerequisites: MAE 5910 and either ENGRD 2700 or CEE 3040.

For description, see SYSEN 5300.

MAE 5949 Enterprise Engineering Colloquium (also ORIE 9100–9101)

Fall, spring, 1 credit each semester. Usually S–U grades.

For description, see ORIE 9100–9101.

MAE 6010 Foundations of Fluid Mechanics I

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor.

Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

MAE 6020 Foundations of Fluid Mechanics II

Spring, 4 credits. Prerequisite: MAE 6010 or permission of instructor

This course, which follows on from MAE 6010, Foundations of Fluid Mechanics I, examines fluid flows in a broad range of applications, in terms of the underlying theory. Topics include the molecular viewpoint; stability; turbulence; bio-fluid mechanics micro- and nano-fluid mechanics; multiphase flows; geophysical flows; aerodynamics. Other topics may also be addressed.

[MAE 6080 Physics of Fluids]

Spring, 4 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2011–2012.

Behavior of an ideal gas is considered at the microscopic level.]

MAE 6110 Foundations of Solid Mechanics (also TAM 6630)

Fall, 4 credits. Prerequisite: graduate standing.

An in-depth introduction to the fundamentals of kinematics of deformation, traction and stress, and balance of momentum. Constitutive theory for linear elastic bodies, including isotropic and orthotropic behaviors, restrictions from symmetry and strain energy, and length scale limitations stemming from the material's physical structure. Boundary conditions, requirements for well-posed problems, and uniqueness. Basic theorems and principles for elastostatics, including minimum and complementary strain energy, virtual work, and superposition.

[MAE 6130 Finite Element Methods for Inelastic Design and Process Modeling]

Spring, 4 credits. Prerequisites: introductory finite element course, equivalent experience or permission of instructor. Offered alternate years; next offered 2011–2012.

Covers several aspects of inelastic finite element analyses, including: yield criteria and strain hardening laws for plasticity and creep, large deformation kinematics, strategies for solving nonlinear systems, and time integration methods.]

MAE 6150 Experiments in Materials Processing

Fall, 4 credits. Prerequisite: graduate standing.

In this lab-centered course, a general introduction to engineering instrumentation fundamentals is presented focusing primarily on experimental solid mechanics. Transducer design for the measurement of force, displacement, strain, and temperature is introduced along with the fundamentals of calibration, sensitivity, resolution, and error estimation. Techniques for determination of the mechanical response of engineering

materials are developed. Applications include elastic plastic deformation, fracture, and fatigue.

MAE 6240 Physics of Micro- and Nanoscale Fluid Mechanics

Fall, 4 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Co-meets with MAE 5240; includes additional 1-credit design project.

For description, see MAE 5240.

MAE 6270 Experimental Methods in Fluid Dynamics (also CEE 6370)

Spring, 4 credits. E. A. Cowen.

For description, see CEE 6370.

MAE 6310 Turbulence and Turbulent Flows

Fall, 4 credits. Prerequisite: MAE 6010.

Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

MAE 6430 Computational Combustion

Spring, 4 credits. Prerequisite: graduate standing or permission of instructor

Examines laminar and turbulent flames and fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of MAE 5430, Combustion Processes, is useful but not required.

[MAE 6450 Turbulent Reactive Flow]**MAE 6480 Air Quality and Atmospheric Chemistry (also EAS 6480)**

Fall, 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent); graduate standing or permission of instructor.

Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change. Students examine the source-to-receptor relationship of major air pollutants with an emphasis on the physical and chemical fundamentals of atmospheric transport and transformation. Topics include photochemical smog, atmospheric aerosols, atmospheric transport and deposition, emissions from energy systems, introduction to air quality monitoring and modeling, and air quality management.

MAE 6510 Advanced Heat Transfer

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor.

An advanced treatment of conduction, convection, and radiation heat transfer from a theoretical perspective. Topics include: conservation of linear momentum in integral and differential forms; the transport theorem; steady state and transient conduction; moving boundary effects associated with melting and evaporation; boundary layer flows with emphasis on laminar conditions (including an introduction to turbulence); scale analysis; forced and free convection; internal and external flows; radiation, including black body and gray body radiation; and radiative

transport equation. Taught at the level of *Conduction Heat Transfer*, by Arpacı; *Convective Heat and Mass Transfer*, by Kays et al.; and *Radiation Heat Transfer*, by Sparrow and Cess.

MAE 6550 Composite Materials (also TAM/MSE 6550)

Spring, 4 credits.
For description, see TAM 6550.

MAE 6560 Nanoscale Energy Transport and Conversion

Spring, 4 credits. Prerequisites: undergraduate heat transfer recommended (e.g., MAE 3240) or permission of instructor.

As electronic, optoelectronic, photonic, and fluidic devices shrink from the microscale down to the nanoscale, the mechanisms for transmitting heat, light, and energy become dramatically different. This course aims to provide a detailed look at thermal, electrical, and optical energy transport and conversion mechanisms at the nanoscale. Topics include a brief review of macroscopic heat transfer with emphasis on limits of macroscopic models, microscopic picture of energy carriers, material waves, energy quantization and energy states in solids, statistical thermodynamics and probability distribution functions as related to thermal energy storage, energy transport by waves and classical particle descriptions of transport processes and energy conversion and exchange processes between carriers. Application sections cover topical areas such as nanobiotechnology, nanosensors, nanoelectronics, and enhanced energy storage.

MAE 6640 Mechanics of Bone (also BME 6640)

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. Covers current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.

MAE 6650 Principles of Tissue Engineering (also BME/MSE 6650)

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor.
L. Bonassar.
For description, see BME 6650.

[MAE 6740 Hybrid Systems

Fall, 4 credits. Prerequisite: MAE 5210 Linear Systems or permission of instructor. Offered alternate years; next offered 2011–2012.

Introduction to the theory and application of hybrid systems, systems that have both discrete and continuous dynamics.]

[MAE 6750 System Identification and Control]

[MAE 6760 Model-Based Estimation

Fall, 4 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming; M.S./Ph.D. students or permission of instructor. Offered alternate years; next offered 2011–2012. Covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured.]

[MAE 6770 Robust Control

Spring, 4 credits. Prerequisites: ECE/MAE 5210, or equivalent or permission of instructor. Offered alternate years; next offered 2011–2012.

An introduction to the analysis and control of uncertain systems.]

[MAE 6780 Multivariable Control Theory

Spring, 4 credits. Prerequisites: MAE 4780 or 5780 or ECE 4720 Feedback Control Systems and MAE 5210 Theory of Linear Systems, or permission of instructor; strong background in classical control, linear algebra, and state space models. Next offered 2011–2012.

Introduction to multivariable feedback control theory in both time and frequency domain.]

MAE 6900 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Variable credit. Prerequisite: candidacy for M.Eng. degree in mechanical or aerospace engineering or approval of faculty member offering project.

Project-based course in the area of mechanical or aerospace engineering under the guidance of a faculty member.

MAE 6949 Seminar for First-Year MAE Ph.D. Students

Fall, 2 credits.
Mandatory course for all first-year Ph.D. students in the Sibley School of Mechanical and Aerospace Engineering. An ongoing orientation for first-year Ph.D. students that includes research presentations by faculty as well as discussions of such topics as ethics, writing technical papers, and publishing.

MAE 6950 Special Topics in Mechanical and Aerospace Engineering

Fall, spring. Credit TBA. Prerequisites: graduate standing and permission of instructor.
Special lectures by faculty members on topics of current research.

[MAE 7110 X-Ray Diffraction Methods for Engineering Materials

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2011–2012.
Students develop a general understanding of diffraction methods employed for understanding the state of crystalline materials.]

[MAE 7120 Mechanics of Materials with Oriented Microstructures

Spring, 4 credits. Prerequisite: MAE 6110 or equivalents. Offered alternate years; next offered 2011–2012.
Focuses on evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors.]

[MAE 7140 Computational Sensorics: Information Technologies for Complex Continuum Systems]

[MAE 7150 Atomistic Modeling of Materials

Spring, 4 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2011–2012.
Intended for graduate students in engineering, physics, and chemistry interested in the simulation of materials at the atomic scale using academic and commercial software. Emphasizes models of interatomic forces.]

[MAE 7340 Analysis of Turbulent Flows

Spring, 4 credits. Prerequisite: MAE 6010 Foundations of Fluid Dynamics and Aerodynamics or permission of instructor. Offered alternate years; next offered 2011–2012.

Study of methods for calculating the properties of turbulent flows.]

[MAE 7370 Computational Fluid Mechanics and Heat Transfer

Fall, 4 credits. Prerequisites: graduate standing; advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience. Next offered 2011–2012.

Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present.]

MAE 7910 Mechanical and Aerospace Research Conference

Fall, spring, 1 credit each semester. For graduate students involved in research projects. S–U grades only.
Presentations on research in progress by faculty and students.

MAE 7999 Mechanical and Aerospace Engineering Colloquium

Fall, spring, 1 credit each semester; credit limited to graduate students. All students and staff are invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

MAE 8900 Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

MAE 9900 Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NSE 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEME/ECE/TAM 4130, MAE 4580)

Fall, 3 credits. Prerequisites: PHYS 2214 and MATH 2940.
For description, see TAM 4130.

[NSE 4140 Nuclear Reactor Physics (also TAM 4140)]

Next offered 2011–2012.
For description, see TAM 4140.]

NSE 4840 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE 4840, MAE 4590)

Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. D. A. Hammer.

For description, see ECE 4840.

NSE 5450 Energy Seminar (also ECE 5870, MAE 5450)

Fall, spring. 1 credit; may be taken for credit both semesters. D. A. Hammer.

For description, see ECE 5870.

NSE 5900 Independent Study

Fall, spring. 1–4 credits. S–U or letter grades. Staff.

Independent study or project under guidance of a faculty member.

NSE 5910 Project

Fall, spring. 1–6 credits. Staff.

Master of engineering or other project under guidance of a faculty member.

NSE 6330 Nuclear Reactor Engineering (also AEP 6330)

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

OPERATIONS RESEARCH AND INFORMATION ENGINEERING

L. J. Billera, R. G. Bland, K. Caggiano, J. R. Callister, P. Frazier, E. Friedman, S. Henderson, P. L. Jackson, R. A. Jarrow, A. Lewis, M. Lewis, W. L. Maxwell, J. A. Muckstadt, N. Prabhu, P. Protter, J. Renegar, S. I. Resnick, D. Ruppert, P. Rusmevichientong, G. Samorodnitsky, D. Shmoys, É. Tardos, M. J. Todd, H. Topaloglu, L. E. Trotter, Jr., B. W. Turnbull, D. P. Williamson, D. B. Woodard

ORIE 3120 Industrial Data and Systems Analysis

Spring. 4 credits. Prerequisite: ENGRD 2700.

Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural event-based programming (Visual Basic), and geographical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factory scheduling and simulation, materials planning, cost estimation, inventory planning, and quality engineering.

ORIE 3150 Financial and Managerial Accounting

Fall, winter, and summer 4 credits.

Covers principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

ORIE 3300 Optimization I

Fall and summer. 4 credits. Prerequisite: grade of C– or better in MATH 2210 or 2940.

Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

ORIE 3310 Optimization II

Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3300 or permission of instructor.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

ORIE 3500 Engineering Probability and Statistics II

Fall and summer. 4 credits. Prerequisite: grade of C– or better in ENGRD 2700 or equivalent.

A rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

ORIE 3510 Introductory Engineering Stochastic Processes I

Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3500 or equivalent.

Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

ORIE 3800 Information Systems and Analysis

Spring. 4 credits.

Covers the foundations of information systems and analysis. The main focus is on understanding the value of information and its use in large-scale systems. The course covers economics, valuation, decision making, and strategic aspects of information as well as methods for storing, retrieving, and analyzing information.

ORIE 4150 Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: ORIE 3300 and 3150.

Topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

ORIE 4152 Entrepreneurship for Engineers (also MAE/ENGRG 4610)

Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor.

For description see MAE 4610.

[ORIE 4154 Revenue Management

Fall. 3 credits. Prerequisites: ORIE 3300 and 3500, or permission of instructor. Next offered 2011–2012.

Covers pricing, capacity control, and assortment offering problems. Emphasizes static approximations and dynamic programming formulations.]

ORIE 4300 Optimization Modeling

Spring. 3 credits. Prerequisite: at least B– in ORIE 3310/5310.

Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

[ORIE 4320 Nonlinear Optimization

Fall. 4 credits. Prerequisite: ORIE 3300. Next offered 2011–2012.

Introduction to the practical and theoretical aspects of nonlinear optimization. Gives attention to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming.]

ORIE 4330 Discrete Models

Fall. 4 credits. Prerequisites: ORIE 3300 and CS 2110 or permission of instructor.

Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

ORIE 4350 Introduction to Game Theory

Spring. 4 credits. Prerequisite: ORIE 3300.

Broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

[ORIE 4360 A Mathematical Examination of Fair Representation

Spring. 3 credits. Prerequisite: MATH 2210 or 2940 or permission of instructor. Next offered 2011–2012.

Covers the mathematical aspects of the political problem of fair apportionment.]

[ORIE 4520 Introductory Engineering Stochastic Processes II

Spring. 4 credits. Prerequisite: ORIE 3510 or equivalent. Next offered 2012–2013.

Topics chosen from martingales, random walks, Levy processes, Brownian motion, branching processes, Markov-renewal processes, Markov processes, optimal stopping, dynamic programming.]

ORIE 4580 Simulation Modeling and Analysis

Fall. 4 credits. Prerequisite: ORIE 3500 (may be taken concurrently) and CS/ENGRD 2110.

Introduction to Monte Carlo simulation and discrete-event simulation. Emphasizes tools and techniques needed in practice. Random variate, vector, and process generation

modeling using a discrete-event simulation language, input and output analysis, modeling.

ORIE 4600 Introduction to Financial Engineering

Fall. 3 credits. Prerequisites: ORIE 3500 and 3510.

This is an introduction to the most important notions and ideas in modern financial engineering, such as arbitrage, pricing, derivatives, options, interest rate models, risk measures, equivalent martingale measures, complete and incomplete markets, etc. Most of the time the course deals with discrete time models. This course can serve as a preparation for a course on continuous time financial models such as ORIE 5600.

ORIE 4630 Operations Research Tools for Financial Engineering

Fall. 3 credits. Prerequisites: engineering math through MATH 2940, ENGRD 2700 and ORIE 3500, and knowledge of R and multiple linear regression equivalent to ORIE 3120. No previous knowledge of finance required.

Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINTAB, and SAS for computation.

[ORIE 4710 Applied Linear Statistical Models

Spring, weeks 1-7. 2 credits. Prerequisite: ENGRD 2700. Next offered 2011-2012.

Topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINTAB stressed.]

[ORIE 4711 Experimental Design

Spring, weeks 8-14 (alternates with 4712). 2 credits. Prerequisite: ORIE 4710. Next offered 2011-2012.

Covers randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINTAB or SAS.]

[ORIE 4712 Regression

Spring, weeks 8-14 (alternates with 4711). 2 credits. Prerequisite: ORIE 4710. Next offered 2012-2013.

Covers nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINTAB or SAS.]

ORIE 4740 Statistical Data Mining I

Spring. 4 credits. Prerequisites: ORIE 3500 and MATH 2940 or equivalent; programming experience. Exposure to multiple linear regression and logistic regression strongly recommended.

Examines the statistical aspects of data mining, the effective analysis of large datasets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being

developed to handle the large datasets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

[ORIE 4800 Information Technology

Fall. 4 credits. Pre- or corequisites: CS/ENGRD 2110, plus either ORIE 3800 or 3120. Next offered 2011-2012.

Covers a variety of fundamental aspects of information technology.]

[ORIE 4810 Delivering OR Solutions with Information Technology

Spring. 3 credits. Prerequisite: ORIE 4800. Next offered 2012-2013.

Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques.]

ORIE 4820 Spreadsheet-Based Modeling and Data Analysis

Spring. 3 credits. Prerequisites: ENGRD 2700, ORIE 3300 or equivalent.

Students develop and implement practical spreadsheet models to analyze data and evaluate decision problems in a hands-on learning environment. Microsoft Excel is heavily used. A wide variety of application areas are covered that incorporate concepts from probability, statistics, and constrained optimization.

[ORIE 4850 Applications of Operations Research and Game Theory to Information Technology

Fall. 3 credits. Prerequisites: ORIE 3310, 3510, or permission of instructor. Next offered 2012-2013.

Covers operations research and game theoretic problems arising in information technology, e.g., web searching, network routing and congestion control, online auctions, and trust and reputations in electronic interactions.]

ORIE 4990 Teaching in ORIE

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Involves working as a TA in an ORIE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

ORIE 4999 ORIE Project

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

ORIE 5100 Design of Manufacturing Systems

Fall. 4 credits. Prerequisite: ORIE seniors and graduate students in engineering and business school; permission of instructor.

Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisors are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

ORIE 5110 Case Studies

Fall. 1 credit. Prerequisite: M.Eng. students in ORIE.

Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

[ORIE 5120 Production Planning and Scheduling Theory and Practice

Fall. 4 credits. Corequisites: ORIE 3300, 3500. Next offered 2012-2013.

Topics include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems.]

ORIE 5122 Inventory Management

Fall. 3 credits. Prerequisite: ORIE 3310, 3510, or permission of instructor.

The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

ORIE 5126 Principles of Supply Chain Management

Spring, weeks 1-7. 2 credits. Prerequisites: ORIE 3310, 3510, or MBA courses in operations management.

Supply chain management focuses on the flow of products, information, and money through organizations that constitute the supply chain. The course provides an overview of the key principles on which an effective supply chain should be constructed. These principles are presented and illustrated through a collection of cases. These cases are taught using an experiential learning model. Additionally, applications of analytic and simulation tools to the design and operation of supply chains are given.

ORIE 5127 Operations Research Applications in Supply Chain Management

Spring, weeks 8-14. 2 credits. Prerequisites: ORIE 5126 and 5122 desirable (or should be taken subsequently).

Focuses on applying mathematical and simulation models to the design and operation of supply chains. The majority of the course focuses on online retailing supply chains. Through several cases, students learn how to design such systems. Covers additional applications of supply chain principles and operations research techniques. Application areas include oil company, service parts, and public health supply chains.

[ORIE 5130 Service System Modeling and Design

Spring. 3 credits. Corequisites: ORIE 3310 or 5311 and ORIE 3510; ability to program simple algorithms in some appropriate environment (e.g., VisualBasic or MATLAB). Next offered 2011-2012.

Covers various techniques useful in the analysis and design of service systems. The course is structured around several cases that drive the need for the theory.]

ORIE 5140 Applied Systems Engineering (also CEE/CIS 5040, ECE 5120, MAE 5910)

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see SYSEN 5100.

ORIE 5142 Systems Analysis Architecture, Behavior, and Optimization (also CEE/CIS 5050, ECE 5130, MAE 5920)

Spring, 3 credits. Prerequisite: CEE/CIS 5040, ECE 5120, ORIE 5140, or MAE 5910. For description, see SYSEN 5200.

ORIE 5150 Economic Analysis of Engineering Systems

Spring, 4 credits. Prerequisites: ORIE 3300 and 3150. Lectures concurrent with ORIE 4150.

For description, see ORIE 4150.

ORIE 5190-5191 Selected Topics in Applied Operations Research

Fall, spring, Variable credit. Prerequisite: permission of instructor.

Current topics dealing with applications of operations research.

ORIE 5300 Operations Research I: Optimization I

For description, see ORIE 3300.

ORIE 5310 Optimization II

For description, see ORIE 3310.

ORIE 5311 Operations Research I: Topics in Linear Optimization

Spring, 2 credits. Pre- or corequisite: M.Eng. students in ORIE; ORIE 5300. Not open to students who have already taken ORIE 3310 or 5310.

Extension of ORIE 5300 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

ORIE 5340 Heuristic Methods for Optimization (also CEE 5290, CIS 5720)

Fall, 3 or 4 credits. Prerequisite: graduate standing or CS/ENGRD 2110, 3510 or CEE/ENGRD 3200 or permission of instructors. For description, see CEE 5290.

ORIE 5500 Engineering Probability and Statistics II

For description, see ORIE 3500.

ORIE 5510 Operations Research II: Introduction to Stochastic Processes I

For description, see ORIE 3510.

[ORIE 5520 Introductory Engineering Stochastic Processes II]

For description, see ORIE 4520.]

[ORIE 5550 Applied Time-Series Analysis]

Fall, 3 credits. Prerequisites: ORIE 3510 and ENGRD 2700 or permission of instructor. Next offered 2012–2013.

Treats regression methods to model seasonal and nonseasonal data, then covers Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series.]

ORIE 5580 Simulation Modeling and Analysis

Fall, 4 credits. Prerequisite: ORIE 3500 (may be taken concurrently) and CS/ENGRD 2110. Lectures concurrent with ORIE 4580.

For description, see ORIE 4580.

ORIE 5581 Monte Carlo Simulation

Fall, weeks 1–7. 2 credits. Co-meets with ORIE 4580.

Introduction to Monte Carlo simulation. Emphasis on tools and techniques needed in practice. Random variate, vector and process

generation, input and output analysis, modeling.

ORIE 5582 Monte Carlo Methods in Financial Engineering

Spring, weeks 8–14. 2 credits. Prerequisite: ORIE 4580.

An overview of Monte Carlo methods as they apply in financial engineering. Generating sample paths. Variance reduction (including quasi random number), discretization, and sensitivities. Applications to derivative pricing and risk management.

ORIE 5600 Financial Engineering with Stochastic Calculus I

Fall, 4 credits. Prerequisite: knowledge of probability at level of ORIE 3500.

Introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

ORIE 5610 Financial Engineering with Stochastic Calculus II

Spring, 4 credits. Prerequisite: ORIE 5600. Building on the foundation established in ORIE 5600, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

[ORIE 5620 Credit Risk: Modeling, Valuation, and Management]

Spring, 4 credits. Prerequisite: ORIE 3510 and 5600. Next offered 2011–2012.

Introduces the modeling and valuation of credit risks. Emphasizes credit derivative instruments used for hedging credit risks, including credit swaps, spread options, and collateralized debt obligations.]

ORIE 5630 Computational Methods in Finance

Fall, 3 credits. Prerequisite: financial engineering M.Eng. students in Manhattan.

Covers computational techniques such as binomial trees, solution of PDEs, and Monte Carlo simulation for pricing financial instruments such as European and American options, path-dependent options, and bonds. Other computational topics such as delta and gamma hedging, Value at Risk, and portfolio problems are also covered. The emphasis is on implementation.

ORIE 5640 Statistics for Financial Engineering

Spring, 4 credits. Prerequisites: ORIE 3500/5500 and at least one of ORIE 4600, 4630, or 5600.

Regression, ARIMA, GARCH, stochastic volatility, and factor models. Calibration of financial engineering models. Estimation of diffusion models. Estimation of risk measures. Multivariate models and copulas. Bayesian statistics. Students are instructed in the use of R software; prior knowledge of R is helpful but not required. This course is intended for M.Eng. students in financial engineering and assumes some familiarity with finance and

financial engineering. Students not in the financial engineering program are welcome if they have a suitable background. Students with no background in finance should consider taking ORIE 4630 instead.

ORIE 5650 Quantitative Methods of Financial Risk Management

Spring, 3 credits. Prerequisite: ORIE 3500. A historical perspective of market risk measurement including the Markowitz, CAPM and APT models, a description of the value-at-risk approach and an overview of VaR variants and extensions such as delta-VaR, CVaR etc. The course surveys other methods for evaluating risk and consider multivariate methods for evaluating portfolios requiring copula tools which have become popular. Topics in credit risk: methods for determining default probabilities and company ratings based on financial ratios (logit, probit and discriminant analysis, decision trees, etc.), and approaches to measuring credit risk which can be roughly divided into structural models and reduced-form models.

ORIE 5660 Bond Mathematics and Mortgage-Backed Securities

Fall, 3 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. A transaction-oriented course covering U.S. Bond markets. The course covers valuation, trading strategies, and risk profiles of bonds, with a special emphasis on mortgage-backed securities.

[ORIE 5770 Quality Control]

Fall, 3 credits. Prerequisite: ENGRD 2700. Next offered 2012–2013.

Covers concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.]

ORIE 5910 Master of Engineering Manufacturing Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students enrolled in manufacturing option. Project course coordinated by Center for Manufacturing Enterprise.

ORIE 5912-5913-5914 Special Topics in Financial Engineering

Fall, 1–8 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. Module-based courses focusing on topics relevant to current financial markets. Practitioner-led segments cover a wide range of quantitative and qualitative topics in the securities industry.

ORIE 5940 Systems Engineering Project

Fall; R grade only; spring, 8 credits. Prerequisite: M.Eng. students enrolled in systems engineering option. Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

ORIE 5960 Applied Financial Engineering

Spring, 5 credits. Prerequisite: ORIE and M.Eng. students concentrating in financial engineering.

Project course satisfying the engineering design project requirement for financial engineering M.Eng. students.

ORIE 5961 Applied Financial Engineering

Fall. 5 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. Project course in Manhattan satisfying the engineering design project requirement for the M.Eng. degree.

ORIE 5980 Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the ORIE field. A formal report and oral defense of the approach and solution are required.

[ORIE 6122 Advanced Production and Inventory Planning

Spring. 3 credits. Next offered 2011–2012. Introduces a variety of production and inventory control planning problems, develops mathematical models corresponding to these problems, and studies approaches for finding solutions.]

[ORIE 6127 Computational Issues in Large Scale Data-Driven Models

Fall. 3 credits. Pre- or corequisites: ORIE 6300, 6500 and 6700. Next offered 2012–2013. Introduces this emerging research area. Topics include data-driven models in operation management, asymptotic statistics, uniform convergence of empirical process, and efficient computational methods.]

[ORIE 6140 Mathematical Modeling of Operational Systems

Fall. 2 credits. Prerequisites: ORIE 6300, 6500, or equivalent. Next offered 2011–2012. The art and science of developing, using and explicating mathematical models, presented in a studio/workshop environment.]

ORIE 6300 Mathematical Programming I

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; and exploiting special structure in the simplex method and computational implementation.

ORIE 6310 Mathematical Programming II

Spring. 4 credits. Prerequisite: ORIE 6300. Continuation of ORIE 6300. Introduces nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

[ORIE 6320 Nonlinear Programming

Spring. 3 credits. Prerequisite: ORIE 6300. Next offered 2012–2013. Necessary and sufficient conditions for unconstrained and constrained optima. Topics include duality theory, computational methods for unconstrained problems, linearly constrained problems, and nonlinearly constrained problems.]

[ORIE 6325 Interior-Point Methods for Mathematical Programming

Fall. 3 credits. Prerequisites: MATH 4110 and ORIE 6300, or permission of instructor. Next offered 2011–2012.

Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming.]

[ORIE 6327 Semidefinite Programming

Spring. 3 credits. Pre- or corequisite: ORIE 6325. Next offered 2012–2013. Covers linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods.]

[ORIE 6328 Convex Analysis

Spring. 3 credits. Prerequisite: ORIE 6300 or permission of instructor. Next offered 2011–2012. Convex sets, functions and optimization. Subgradients, continuity, Fenchel, conic, and Lagrangian duality. Nonsmooth analysis and generalized gradients. Self-concordance. Nonsmooth bundle methods.]

[ORIE 6330 Graph Theory and Network Flows

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012. Topics include directed and undirected graphs; bipartite graphs; Hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; maximum flow and minimum cost flow problems.]

[ORIE 6334 Combinatorial Optimization

Fall. 3 credits. Next offered 2012–2013. Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.]

[ORIE 6335 Scheduling Theory

Spring. 3 credits. Next offered 2011–2012. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling.]

[ORIE 6350 Foundations of Game Theory and Mechanism Design for Engineering Applications

Fall. 3 credits. Prerequisite: basic knowledge of operations research at level of ORIE 6300 and 6500. No prior knowledge of game theory or computer networks assumed. Next offered 2012–2013. Provides a rigorous foundation for the applications of game theory and mechanism design to problems in operations research and computer science.]

ORIE 6500 Applied Stochastic Processes

Fall. 4 credits. Prerequisite: one-semester calculus-based probability course. Introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

ORIE 6510 Probability

Spring. 4 credits. Prerequisite: real analysis at level of MATH 4130; one-semester calculus-based probability course. Covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation,

review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

ORIE 6540 Advanced Stochastic Processes

Fall. 3 credits. Prerequisite: ORIE 6510 or equivalent. Topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.

[ORIE 6570 Queues and Control of Queues: The Dynamic Programming Approach

Fall. 3 credits. Next offered 2011–2012. Covers basic queueing theory, introduces Markov decision processes (MDPs), then covers the use of MDPs to develop control policies in a variety of queueing settings.]

ORIE 6580 Simulation

Fall. 3 credits. Prerequisite: computing experience and ORIE 6500 or equivalent, or permission of instructor. Introduction to Monte Carlo and discrete-event simulation. Emphasizes underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.

[ORIE 6600 Mathematical Finance I

Spring. 3 credits. Prerequisite: ORIE 6500. Next offered 2011–2012. Introduces mathematical finance in discrete time for Ph.D. students. Covers arbitrage theory, pricing and hedging of derivative securities.]

[ORIE 6610 Mathematical Finance II

Spring. 3 credits. Prerequisites: ORIE 6500, ORIE 6510, and ORIE 6600. Next offered 2011–2012. Introduction to stochastic calculus, stochastic differential equations, and applications to continuous-time finance.]

ORIE 6700 Statistical Principles

Fall. 4 credits. Corequisite: ORIE 6500 or equivalent. Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

ORIE 6710 Intermediate Applied Statistics

Spring. 3 credits. Prerequisite: ORIE 6700 or equivalent. Topics include statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

ORIE 6720 Sequential Methods in Statistics

Spring, 3 credits. S–U grades only. Next offered 2012–2013.

Covers classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.]

ORIE 6750 Optimal Learning

Fall, 3 credits. Prerequisite: ORIE 6500. Next offered 2011–2012.

Bayes optimal methods for collection of information, covering topics in decision theory, sequential design of experiments, Bayesian statistics, and dynamic programming.]

ORIE 6780 Bayesian Statistics and Data Analysis

Spring, 3 credits. Prerequisites: ORIE 6700 or an equivalent course in mathematical statistics. Next offered 2012–2013.

Priors, posteriors, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness.]

ORIE 7190-7191 Selected Topics in Applied Operations Research

Fall, spring. Credit TBA.

Current research topics dealing with applications of operations research.

ORIE 7390-7391 Selected Topics in Mathematical Programming

Fall, spring. Credit TBA.

Current research topics in mathematical programming.

ORIE 7590-7591 Selected Topics in Applied Probability

Fall, spring. Credit TBA.

Topics are chosen from current literature and research areas of the staff.

ORIE 7790-7791 Selected Topics in Applied Statistics

Fall, spring. Credit TBA.

Topics are chosen from current literature and research of the staff.

ORIE 7900 Special Investigations

Fall, spring. Credit TBA.

For individuals or small groups. Study of special topics or problems.

ORIE 9000 Operations Research Graduate Colloquium

Fall, spring. 1 credit.

Weekly one and one-half hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

ORIE 9100-9101 Enterprise Engineering Colloquium (also MAE 5940)

9100, fall; 9101, spring. 1 credit each semester. S–U grades.

Weekly meeting for master of engineering students. Discussion with industry speakers and faculty members on the uses of engineering in the economic design, manufacturing, marketing, and distribution and goods and services.

ORIE 9110 M.Eng. Professional Review

Fall, 1 credit. Limited to ORIE M.Eng. students in their second or third semester. S–U grades only.

An interactive course in which students present findings and share lessons from their summer internship experiences.

ORIE 9160 Seminar in Financial Engineering

Fall, 1 credit. Prerequisites: Financial Engineering M.Eng. students in Manhattan.

Weekly roundtable meeting for students concentrating in financial engineering. Current market events, practices, and research are discussed with faculty and financial industry partners.

ORIE 9999 Thesis Research

Fall, spring. Credit TBA.

For individuals doing thesis research for master's or doctoral degrees.

SYSTEMS ENGINEERING

L. K. Nozick, director; A. R. George, assoc. director; P. L. Jackson, director of graduate studies; M. Campbell, E. Garcia, H. O. Gao, A. S. Lewis, J. A. Muckstadt, A. F. Myers, M. Peck, F. B. Schneider, B. Selman, C. A. Shoemaker, J. R. Stedinger, R. J. Thomas, H. Topaloglu, M. A. Turnquist, F. J. Wayno, Jr.

SYSEN 1100 Getting Design Right: A Systems Approach

Summer, six-week session. 3 credits. Web-delivered. Prerequisites: high school mathematics and science and familiarity with spreadsheet modeling (e.g., Microsoft Excel). P. L. Jackson.

Freshman-level exposure to the product design process. The process of getting design right is sometimes called systems engineering. We explain the process using the acronym DMEODVEI (Define, Measure, Explore, Optimize, Develop, Validate, Execute, and Iterate). The process begins with understanding customer requirements and ends with executing the design to satisfy those requirements. It can then be iterated to greater levels of design detail. The focus is not on detailed engineering design but rather on the process of ensuring that the detailed design will meet the needs of the customer. Students work through the steps of the process with reference to a particular product design challenge. The course is web-delivered using the Blackboard learning instruction system.

SYSEN 5100 Applied Systems Engineering (also CEE/CS 5240, ECE/ ORIE 5120, MAE 5910)

Fall, 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. M. Peck, A. R. George, and P. Jackson.

Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle. Students majoring in Systems Engineering enroll in SYSEN 5100. Students taking the minor in Systems Engineering enroll in CEE/CIS 5040, ECE/ORIE

5120, or MAE 5910. Students in distance-learning programs enroll in SYSEN 5110. Course is identical for all versions.

SYSEN 5110 Applied Systems Engineering

Fall, 3 credits. Intended for off-campus students. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. Staff.

For description, see SYSEN 5100.

SYSEN 5200 Systems Architecture, Behavior, and Optimization (also MAE 5920, CEE/CIS 5252, ECE 5130, ORIE 5142)

Spring, 3 credits. Prerequisite: Applied System Engineering MAE 5910, CEE/CIS 5040, ECE/ORIE 5120, SYSEN 5100 or 5110, or permission of instructor. Students majoring in Systems Engineering enroll in SYSEN 5200. Students taking the minor in Systems Engineering enroll in MAE 5920, CEE 5252, CIS 5050, ECE 5130, or ORIE 5142. Students in distance learning programs enroll in SYSEN 5210. Course is identical for all versions. H. Topaloglu.

This is an advanced course in the application of the systems engineering process to the architecture design and operation of complex systems. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas provide context for the application of these techniques.

SYSEN 5210 Systems Architecture, Behavior, and Optimization

Spring, 3 credits. Intended for off-campus students. Prerequisites: Applied Systems Engineering or permission of instructor. Staff.

For description, see SYSEN 5200.

SYSEN 5300 Systems Engineering and Six Sigma for the Design and Operation of Reliable Systems (also MAE 5930)

Fall, 3 credits. Prerequisites: SYSEN 5100 and either ENGRD 2700 or CEE 3040 or permission of instructors. H. O. Gao.

Develops skills in the design, operation and control of systems for reliable performance. Focuses on four key themes; risk analysis (with a particular emphasis on risk assessment and risk characterization), modeling system reliability (including the development of statistical models based on accelerated life testing), quality control techniques and the optimization of system design for reliability. Six Sigma Green or Blackbelt can be earned through activities associated with course. Students in distance-learning programs enroll in SYSEN 5310. Lectures are identical for all versions.

SYSEN 5310 Systems Engineering and Six Sigma for the Design and Operation of Reliable Systems

Fall, 3 credits. Prerequisites: SYSEN 5100 and either ENGRD 2700 or CEE 3040 or permission of instructor. H. O. Gao.

Intended for off-campus students. For description, see SYSEN 5300.

SYSEN 5320 Six Sigma Blackbelt Project

Fall, 1 credit. To be taken in addition to SYSEN 5300/5310 and by any student wishing to obtain a Six Sigma Blackbelt Certificate.

SYSEN 5700 Special Topics in Systems Engineering

Offered on demand. 1-4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5710 Practicum in Systems Engineering

Offered on demand. 1-4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5750 Independent Study in Systems Engineering

Offered on demand. 1.5-6 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5760 Systems Engineering Project—Track I

Offered on demand. 1.5-6 credits.

Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5770 Systems Engineering Project—Track II

Offered on demand. 1.5-6 credits.

Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5900 Systems Engineering Design Project

1-8 credits. Prerequisite: permission of instructor. Staff.

A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5920 Systems Engineering Management for Virtual Teams

Summer. 1 credit. Prerequisites: matriculation in Systems Engineering Master of Engineering distance learning degree program. P. L. Jackson and F. J. Wayno.

First of two one-week intensive experiential courses (35 hours) in systems engineering management, with emphasis on laying the social groundwork for students to conduct projects in geographically dispersed teams. Course involves a significant design challenge that must be completed within the week. A leadership laboratory is run simultaneously with the design experience to encourage students to self-assess their leadership style and practices in systems engineering projects.

SYSEN 5940 Creativity and Innovation Within Systems Engineering

Summer. 1 credit. Prerequisites: matriculation in M.Eng. (Systems Engineering) distance learning degree program; CEE 6910 Principles of Project Leadership; SYSEN 5920. P. L. Jackson and F. J. Wayno.

Second of two one-week intensive courses (35 hours) in systems engineering management with emphasis on understanding individual creativity and organizational innovation and on developing the required systems engineering leadership skills to foster both.

SYSEN 5960 Systems Engineering Design Project for Virtual Teams

Fall, spring, summer. Variable credit.

Prerequisites: matriculation in Systems Engineering M.Eng. distance learning degree program; SYSEN 5100, SYSEN 5920, SYSEN 5940, and SYSEN 6910, or permission of instructor. Staff.

Systems engineering project for geographically dispersed teams. Fulfills M.Eng. degree requirement for project, subject to credit hour minimum.

SYSEN 6800 Topics in Systems Engineering Research

Spring. 1.5 credits. Staff.

Advanced topics in systems engineering research.

THEORETICAL AND APPLIED MECHANICS**TAM 2020 Mechanics of Solids (also ENGRD 2020)**

Fall, spring. 4 credits Prerequisite: PHYS 1112, co-registration in MATH 1920, or permission of instructor.

For description, see ENGRD 2020.

TAM 2030 Dynamics (also ENGRD 2030)

Fall, spring. 3 credits. Prerequisite: ENGRD/TAM 2020, co-registration in MATH 2930, or permission of instructor.

For description, see ENGRD 2030.

TAM 3100 Introduction to Applied Mathematics I

Fall. 3 credits. Prerequisites: MATH 2930 and 2940.

Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

TAM 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEM/ECE/NSE 4130, MAE 4580)

Fall. 3 credits. K. B. Cady.

For seniors and M.Eng. students interested in nuclear energy. Topics are presented at the level of the course text: Lamarsh and Baratta, *Introduction to Nuclear Engineering*, 3rd ed. and includes the fundamentals of nuclear science and engineering: nuclear structure, radioactivity, and reactions; interaction of radiation with matter; radiation protection and shielding; the neutron chain reaction and its control; light water reactors, isotope separation, fuel reprocessing, and waste disposal; heat transfer, accidents, atmospheric dispersion, and reactor licensing and safety.

[TAM 4140 Nuclear Reactor Physics (also AEP/CHEM/ECE/NSE 4140)

Spring. 3 credits. Next offered 2011-2012.

The physics of the neutron chain reaction for seniors, M.Eng., and graduate students interested in nuclear energy.]

TAM 4550 Introduction to Composite Materials (also CEE 4770, MAE 4550, MSE 5550)

Fall. 3 credits. Prerequisite: ENGRD 2020.

Topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic

elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

TAM 5700 Intermediate Dynamics

Fall. 3 credits.

Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes. As time allows, introduction to orbital mechanics and chaos may be offered.

TAM 5780 Nonlinear Dynamics and Chaos

Spring. 3 credits. Prerequisite: MATH 2930 or equivalent.

Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

TAM 6100 Methods of Applied Mathematics I

Fall. 3 credits. Intended for beginning graduate students in engineering and science. Intensive course requiring more time than normally available to undergraduates (see TAM 3100-3110) but open to exceptional undergraduates by permission of instructor.

Emphasis is on applications. Course covers linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

TAM 6110 Methods of Applied Mathematics II

Spring. 3 credits. Prerequisite: TAM 6100 or equivalent.

Emphasis is on applications. Course covers partial differential equations, tensor analysis, and calculus of variations.

[TAM 6120 Methods of Applied Mathematics III

Spring. 3 credits. Prerequisite: TAM 6100 and 6110 or equivalent. Next offered 2011-2012.

Topics include integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations.]

[TAM 6130 Asymptotics and Perturbation Methods

Fall. 3 credits. Prerequisites: TAM 6100 and 6110 or equivalent. Next offered 2011-2012.

Topics include asymptotic behavior of solutions of linear and nonlinear ODE and asymptotic expansion of integrals.]

TAM 6170 Advanced Mathematical Modeling—Biological and Fluid Dynamics

Fall. 3 credits.

Covers the fundamentals of fluid dynamics that rises in biological fluid dynamics such as the motion of the microscope cells in low Reynolds number flows and unsteady

aerodynamics of flapping flight and free falling objects. The topics in fluid dynamics include Stokes flow, propulsion of a beating flagellum and swimming sheets, potential flow, unsteady airfoil theory, reduced model of unsteady forces on a fluttering and tumbling object, and computational methods. The current research in biofluids is discussed in some depth.

TAM 6550 Advanced Composite Materials (also CEE 6760, MAE/MSE 6550)

Spring, 4 credits. TAM 4550/5550 not a prerequisite but excellent background.

Topics center around micromechanical and statistical (reliability) aspects of the strength and fatigue of fibrous composites. Topics include Hedgepeth shear-lag models of stress transfer around arrays of fiber breaks; statistical theories of composite failure to forecast reliability; stress distributions around holes and cuts in composite laminates; and compressive strength of composites.

TAM 6630 Foundations of Solid Mechanics (also MAE 6110)

Fall, 4 credits.

For description, see MAE 6110.

[TAM 6640 Solid Mechanics II]

Spring, 4 credits. Prerequisites: MATH 6110 and MAE 6110/TAM 6630 or equivalent. Next offered 2011–2012.

Preparation for advanced courses in solid mechanics.]

[TAM 6680 Elastic Waves in Solids with Applications]

Fall, 3 credits. Next offered 2011–2012.

Waves in one-dimensional elastic solids; two-dimensional systems; waves in infinite media, plates and rods; significant emphasis on measurements and applications.]

[TAM 6710 Hamiltonian Dynamics]

Spring, 3 credits. Prerequisite: TAM 5700 or equivalent. Next offered 2011–2012.

Review of Lagrangian mechanics, Kanes equations, Hamiltons principle, Hamiltons, canonical equations, Lie transforms, Hamilton-Jacobi theory; KAM theory; and Melnikovs method.]

TAM 6720 Celestial Mechanics (also ASTRO 6579)

Spring, 3 credits. Prerequisite: advanced undergraduate course in dynamics or permission of instructor.

Course topics include description of orbits; 2-body and 3-body problems; Hill curves, libration points; osculating orbital elements, perturbation equations; effects of various forces; applications to spacecraft orbits and the solar system.

[TAM 6750 Nonlinear Vibrations]

Spring, 3 credits. Prerequisite: TAM 5780 or equivalent. Next offered 2011–2012.

Dynamics of nonlinear oscillators, including free and forced vibrations of both conservative and limit cycle oscillators, parametric excitation, systems of two, and N-coupled oscillators.]

[TAM 7180 Topics in Bifurcation Theory]

Spring, 3 credits. Offered every third year; next offered 2011–2012.

Provides a basic, rigorous introduction to certain aspects of nonlinear analysis, with an emphasis on techniques based on differential calculus.]

TAM 7510 Continuum Mechanics and Thermodynamics (also CEE 7780)

Spring, 3 credits. Prerequisites: TAM 6100 and 6110; and 6630 and 6640 or equivalents.

For description, see CEE 7780.

[TAM 7520 Nonlinear Elasticity]

Spring, 3 credits. Prerequisites: TAM 6110, TAM 6630, and TAM 7510 or equivalents. Next offered 2011–2012.

Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems.]

TAM 7530 Fracture Mechanics]

Fall, 3 credits. Prerequisites: TAM 6100 or 6110; and TAM 6630 and TAM 6640 or equivalents.

Mechanics of fracture, including linear elastic fracture theory and applications, energy release rate, J integral, experimental methods and a primer on computational fracture mechanics. Also covers nonlinear, rate-independent, small deformation elastic-plastic fracture mechanics, its applications and test methods for determining a material's fracture toughness.

[TAM 7590 Boundary Element Methods]

Spring, 4 credits. Next offered 2011–2012.

A variety of applications of the boundary element method (e.g., potential theory, linear elasticity, elasto-plasticity, micro and nano-electro-mechanical systems, meshfree boundary methods).]

TAM 7760 Applied Dynamical Systems (also MATH 7170)

Spring, 4 credits.

For description, see MATH 7170.

[TAM 7960 Mechanics of Terrestrial Locomotion]

Spring, 3 credits. Prerequisite: TAM 5700 or equivalent, or A+ level understanding of any sophomore (or above) mechanics course. Next offered 2011–2012.

Studies the energetics and stability of people, other legged animals, and robots using mechanical analysis of simple mechanics-based models.]

TAM 8900 Master's Degree Research in Theoretical and Applied Mechanics]

Fall, spring, 1–15 credits TBA. S–U grades.

Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

TAM 9900 Doctoral Research in Theoretical and Applied Mechanics]

Fall, spring, 1–15 credits TBA. S–U grades.

Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California, Berkeley. Prof. (Emeritus), Civil and Environmental Engineering
 Afshari, Ehsan, Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
 Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Prof., Biological and Environmental Engineering

Albonesi, David H., Ph.D., U. of Massachusetts. Assoc. Prof., Electrical and Computer Engineering
 Albright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
 Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
 Allmon, Warren D., Ph.D., Harvard U. Hunter R. Rawlings III Professor of Paleontology, Earth and Atmospheric Sciences
 Andronicos, Christopher L., Ph.D., Princeton U. Assoc. Prof., Earth and Atmospheric Sciences
 Aneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
 Angenent, Largus T., Ph.D., Iowa State U. Assoc. Prof., Biological and Environmental Engineering
 Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
 Apsel, Alyssa B., Ph.D., Johns Hopkins U. Clare Boothe Luce Assoc. Professor of Electrical and Computer Engineering
 Aquino, Wilkens, Ph.D., U. of Illinois. Assoc. Prof., Civil and Environmental Engineering
 Archer, Lynden A., Ph.D., Stanford U. Marjorie L. Hart '50 Professor of Engineering, Chemical and Biomolecular Engineering
 Arms, William, Ph.D., U. of Sussex (U.K.). Prof., Information Science
 Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
 Avedisian, C. Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
 Avestimehr, A. Salman, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
 Baeumner, Antje J., Ph.D., U. of Stuttgart (Germany). Prof., Biological and Environmental Engineering
 Bailey, Graeme, Ph.D., U. of Birmingham (U.K.). Prof., Computer Science
 Baker, Shefford P., Ph.D., Stanford U. Assoc. Prof., Materials Science and Engineering
 Bala, Kavita, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
 Barazangi, Muawia, Ph.D., Columbia U. Prof. (Emeritus), Earth and Atmospheric Sciences
 Bartel, Donald L., Ph.D., U. of Iowa. Graduate School Prof. (Emeritus), Willis H. Carrier Professor of Engineering, Mechanical and Aerospace Engineering and Biomedical Engineering
 Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
 Bassett, William A., Ph.D., Columbia U. Prof. (Emeritus), Earth and Atmospheric Sciences
 Batten, Christopher, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
 Bhawe, Sunil, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
 Bindel, David, Ph.D., U. of California, Berkeley. Asst. Prof., Computer Science
 Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof. (Emeritus), Earth and Atmospheric Sciences
 Birman, Kenneth P., Ph.D., U. of California, Berkeley. N. Rama Rao Professor of Computer Science
 Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
 Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Information Engineering
 Bloom, Arthur L., Ph.D., Yale U. Prof. (Emeritus), Earth and Atmospheric Sciences

- Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
- Bonassar, Lawrence J., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biomedical Engineering and Mechanical and Aerospace Engineering
- Booker, John F., Ph.D., Cornell U. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
- Brock, Joel D., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
- Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
- Brutsaert, Wilfried H., Ph.D., U. of California, Davis. William L. Lewis Prof. of Engineering, Civil and Environmental Engineering
- Buhrman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
- Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Mechanical and Aerospace Engineering; Astronomy
- Butcher, Jonathan, T., Ph.D., Georgia Inst. of Technology. Asst. Prof., Biomedical Engineering
- Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Mechanical and Aerospace Engineering; Nuclear Science and Engineering
- Callister, John R., Ph.D., Cornell U. Harvey Kinzelberg Director of Entrepreneurship in Engineering, Mechanical and Aerospace Engineering
- Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
- Cardie, Claire T., Ph.D. U. of Massachusetts, Amherst. Prof., Computer Science
- Carr, Paul G., Ph.D., Virginia Polytechnical Inst. Adj. Assoc. Prof., Civil and Environmental Engineering
- Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
- Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
- Chen, Gang, Ph.D., Princeton U. Asst. Prof., Earth and Atmospheric Sciences
- Chen, Tsuhan, Ph.D., California Inst. of Technology. Prof., Electrical and Computer Engineering
- Chiang, Hsiao-Dong, Ph.D., U. of California, Berkeley. Prof., Electrical and Computer Engineering
- Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
- Clancy, Paulette, Ph.D., Oxford U. (U.K.). Prof., Chemical and Biomolecular Engineering
- Cohen, Claude, Ph.D., Princeton U. Prof., Chemical and Biomolecular Engineering
- Collins, Lance R., Ph.D., U. of Pennsylvania. Prof., S.C. Thomas Sze Director of Mechanical and Aerospace Engineering
- Colucci, Stephen J., Ph.D., SUNY Albany. Prof., Earth and Atmospheric Sciences
- Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
- Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
- Cowen, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
- Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr., Prof. of Engineering, Applied and Engineering Physics
- Cranch, Edmund T., Ph.D., Cornell U. Prof. (Emeritus), Theoretical and Applied Mechanics
- Daniel, Susan, Ph.D., Lehigh U. Asst. Prof., Chemical and Biomolecular Engineering
- Datta, Ashim K., Ph.D., U. of Florida. Prof., Biological and Environmental Engineering
- Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
- deBoer, P. C. Tobias, Ph.D., U. of Maryland. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
- DeGaetano, Arthur T., Ph.D., Rutgers U. Prof., Earth and Atmospheric Sciences
- Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
- DeLisa, Matthew, P., Ph.D., U. of Maryland. Assoc. Prof., Chemical and Biomolecular Engineering
- Derry, Louis, Ph.D., Harvard U. Assoc. Prof., Earth and Atmospheric Sciences
- Diamessis, Peter, Ph.D., U. of California, San Diego. Asst. Prof., Civil and Environmental Engineering
- Dick, Richard I., Ph.D., U. of Illinois. Prof. (Emeritus), Civil and Environmental Engineering
- Dieckmann, Rüdiger, Ph.D., U. of Hannover (Germany). Prof., Materials Science and Engineering
- Dietl, Gregory, Ph.D., North Carolina State U. Adjunct Asst. Prof., Earth and Atmospheric Sciences
- Doerschuk, Peter C., Ph.D., Massachusetts Inst. of Technology/M.D., Harvard U. Prof., Biomedical Engineering and Electrical and Computer Engineering
- Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
- Earls, Christopher J., Ph.D., U. of Minnesota. Assoc. Prof., Civil and Environmental Engineering
- Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering
- Engstrom, James R., Ph.D., California Inst. of Technology. Prof., Chemical and Biomolecular Engineering
- Erickson, David C., Ph.D., U. of Toronto (Canada). Asst. Prof., Mechanical and Aerospace Engineering
- Escobedo, Fernando A., Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Chemical and Biomolecular Engineering
- Estroff, Lara A., Ph.D., Yale U. Asst. Prof., Materials Science and Engineering
- Fan, K-Y Daisy, Ph.D., Cornell U. Sr. Lec., Computer Science
- Fischback-Teschl, Claudia, Ph.D., U. of Regensburg (Germany). Asst. Prof., Biomedical Engineering
- Fisher, Elizabeth M., Ph.D., U. of California, Berkeley. Assoc. Prof., Mechanical and Aerospace Engineering
- Foster, Nate, Ph.D., U. of Pennsylvania. Asst. Prof., Computer Science
- Frazier, Peter, Ph.D., Princeton U. Asst. Prof., Operations Research and Information Engineering
- Friedman, Eric, Ph.D., U. of California, Berkeley. Assoc. Prof., Operations Research and Information Engineering
- Fuchs, W. Kent, Ph.D., U. of Illinois, Urbana-Champaign. Prof., Electrical and Computer Engineering
- Gaeta, Alexander L., Ph.D., U. of Rochester. Prof., Applied and Engineering Physics
- Gao, H. Oliver, Ph.D., U. of California, Davis. Asst. Prof., Civil and Environmental Engineering
- Gao, Yingxin, Ph.D., U. of Michigan. Asst. Prof., Mechanical and Aerospace Engineering
- Garcia, Ephraim, Ph.D., SUNY Buffalo. Assoc. Prof., Mechanical and Aerospace Engineering
- Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering, Civil and Environmental Engineering
- Gehrke, Johannes, Ph.D., U. of Wisconsin, Madison. Prof., Computer Science
- George, Albert R., Ph.D., Princeton U. John F. Carr Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering
- Giannelis, Emmanuel, Ph.D., Michigan State U. Walter R. Read Professor of Engineering, and Director Materials Science and Engineering
- Gomes, Carla P., Ph.D., U. of Edinburgh (U.K.). Assoc. Prof., Computer Science
- Gossett, James M., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
- Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
- Gourdon, Delphine, Ph.D., Swiss Federal Inst. of Technology (Switzerland). Asst. Prof., Materials Science and Engineering
- Greenberg, Donald P., Ph.D., Cornell U. Prof., Computer Science
- Greene, Charles, Ph.D., U. of Washington. Prof., Earth and Atmospheric Sciences
- Gries, David, Dr rer. nat. Munich Inst. of Technology (Germany). Prof., Computer Science
- Grigoriu, Mircea D., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
- Grubb, David T., Ph.D., Oxford U. (U.K.). Assoc. Prof., Materials Science and Engineering
- Guckenheimer, John, Ph.D., U. of California, Berkeley. Prof., Mathematics and Theoretical and Applied Mechanics
- Haas, Zygmunt J., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
- Haith, Douglas A., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
- Halpern, Joseph, Ph.D., Harvard U. Prof., Computer Science
- Hammer, David A., Ph.D., Cornell U. J. Carlton Ward Prof. of Nuclear Energy Engineering; Electrical and Computer Engineering
- Hanrath, Tobias, Ph.D., U. of Texas, Austin. Asst. Prof., Chemical and Biomolecular Engineering
- Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor Emeritus of Computer Science
- Healey, Timothy J., Ph.D., U. of Illinois. Prof., Mechanical and Aerospace Engineering
- Hemami, Sheila S., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
- Hencey, Brandon, Ph.D., U. of Illinois. Asst. Prof., Mechanical and Aerospace Engineering
- Henderson, Shane, Ph.D., U. of Michigan. Prof., Operations Research and Information Engineering
- Hennig, Richard, Ph.D., Washington U. Asst. Prof., Materials Science and Engineering
- Hernandez, Christopher, Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering

- Hess, Peter G., Ph.D., U. of Washington. Assoc. Prof., Biological and Environmental Engineering
- Hogg, Nelson, Ph.D., Massachusetts Inst. of Technology. Adjunct Prof., Earth and Atmospheric Sciences
- Hopcroft, John E., Ph.D., Stanford U. IBM Professor of Engineering and Applied Mathematics, Computer Science
- Hover, Kenneth C., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Hui, Chung Y., Ph.D., Harvard U. Prof., Mechanical and Aerospace Engineering
- Hunter, Jean B., Ph.D., Columbia U. Assoc. Prof., Biological and Environmental Engineering
- Huttenlocher, Daniel, Ph.D., Massachusetts Inst. of Technology. Prof., Computer Science/Johnson Graduate School of Management
- Hysell, David L., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
- Ingraffea, Anthony R., Ph.D., U. of Colorado. Dwight C. Baum Prof. in Engineering, Civil and Environmental Engineering
- Irwin, Lynne H., Ph.D., Texas A&M U. Assoc. Prof., Biological and Environmental Engineering
- Isacks, Bryan L., Ph.D., Columbia U. William and Katherine Sneer Prof. (Emeritus) of Earth and Atmospheric Sciences
- Jackson, Peter L., Ph.D., Stanford U. Prof., Operations Research and Information Engineering
- James, Doug L., Ph.D., U. of British Columbia (Canada). Assoc. Prof., Computer Science
- Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Information Engineering
- Jenkins, James T., Ph.D., Johns Hopkins U. Walter S. Carpenter, Jr., Professor of Engineering, Civil and Environmental Engineering
- Jin, Monsoo, Sc.D., Massachusetts Inst. of Technology. Asst. Prof., Biomedical Engineering
- Joachims, Thorsten, Ph.D., U. of Dortmund (Germany). Assoc. Prof., Computer Science
- Johnson, C. Richard, Jr., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
- Joo, Yong Lak, Ph.D., Stanford U. Assoc. Prof., Chemical and Biomolecular Engineering
- Jordan, Teresa, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
- Kan, Edwin C., Ph.D., U. of Illinois, Champaign-Urbana. Prof., Electrical and Computer Engineering
- Karig, Daniel E., Ph.D., D. U. of California (S.I.O.). Prof. (Emeritus), Earth and Atmospheric Sciences
- Kay, Robert W., Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
- Kay, Suzanne M., Ph.D., Brown U. Prof., Earth and Atmospheric Sciences
- Kelley, Michael C., Ph.D., U. of California, Berkeley. James A. Friend family Distinguished Prof., Electrical and Computer Engineering
- King, Michael R., Ph.D., U. of Notre Dame. Assoc. Prof., Biomedical Engineering
- Kintner, Paul M., Ph.D., U. of Minnesota. Prof., Electrical and Computer Engineering
- Kirby, Brian L., Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
- Kleinberg, Jon M., Ph.D., Massachusetts Inst. of Technology. Tisch University Professor of Computer Science
- Kleinberg, Robert, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
- Kline, Ronald R., Ph.D., U. of Wisconsin. Prof., Electrical and Computer Engineering (History of Technology)
- Knapp, Warren W., Ph.D., U. of Wisconsin. Prof. (Emeritus), Earth and Atmospheric Sciences
- Koch, Christoph, Ph.D., T. U. Vienna (Austria). Assoc. Prof., Computer Science
- Koch, Donald L., Ph.D., Massachusetts Inst. of Technology. Prof., Chemical and Biomolecular Engineering
- Koutsourelakis, Phaedon-Stelias, Ph.D., Princeton U. Asst. Prof., Civil and Environmental Engineering
- Kozen, Dexter, Ph.D., Cornell U. Joseph Newton Pew, Jr. Professor in Engineering, Computer Science
- Kress-Gazit, Hadas, Ph.D., U. of Pennsylvania. Asst. Prof., Mechanical and Aerospace Engineering
- Kulhawy, Fred H., Ph.D., U. of California, Berkeley. Prof. (Emeritus), Civil and Environmental Engineering
- Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
- Lal, Amit, Ph.D., U. of California, Berkeley. Assoc. Prof., Electrical and Computer Engineering
- Lance, R. H., Ph.D., Brown U. Prof. (Emeritus), Theoretical and Applied Mechanics
- Lee, Lillian, Ph.D., Harvard U. Prof., Computer Science
- Leibovich, Sidney, Ph.D., Cornell U. Samuel B. Eckert Prof. of Mechanical and Aerospace Engineering
- Levine, Gil, Ph.D., Cornell U. Prof. (Emeritus), Biological and Environmental Engineering
- Lewis, Adrian, Ph.D., Cambridge U. (U.K.). Prof., Operations Research and Information Engineering
- Lewis, Mark, Ph.D., Georgia Inst. of Technology. Assoc. Prof., Operations Research and Information Engineering
- Liddell, Chekesha, Ph.D., Georgia Inst. of Technology. Asst. Prof., Materials Science and Engineering
- Lindau, Manfred, Ph.D., Technical U. Berlin (Germany). Assoc. Prof., Applied and Engineering Physics
- Lion, Leonard W., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
- Lipson, Hod, Ph.D., Technion Israel Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
- Lipson, Michal, Ph.D., Technion Israel Inst. of Technology. Assoc. Prof., Electrical and Computer Engineering
- Liu, Philip L.-F., Sc.D., Massachusetts Inst. of Technology. Class of 1912 Professor, Civil and Environmental Engineering
- Lohman, Rowena B., Ph.D., California Inst. of Technology. Asst. Prof., Earth and Atmospheric Sciences
- Loucks, Daniel P., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
- Louge, Michel Y., Ph.D., Stanford U. Prof., Mechanical and Aerospace Engineering
- Lovelace, Richard V. E., Ph.D., Cornell U. Prof., Applied and Engineering Physics
- Lumley, John L., Ph.D., Johns Hopkins U. Willis H. Carrier Professor (Emeritus) of Engineering, Graduate School Prof., Mechanical and Aerospace Engineering
- Luo, Dan, Ph.D., Ohio State U. Assoc. Prof., Biological and Environmental Engineering
- Lynn, Walter R., Ph.D., Northwestern U. Prof. (Emeritus), Civil and Environmental Engineering
- Mahowald, Natalie, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Earth and Atmospheric Sciences
- Malliaras, George G., Ph.D., Rijksuniversiteit Groningen (Greece). Assoc. Prof., Materials Science and Engineering
- Manohar, Rajit, Ph.D., California Inst. of Technology. Assoc. Prof., Electrical and Computer Engineering
- March, John C., Ph.D., U. of Maryland. Asst. Prof., Biological and Environmental Engineering
- Marschner, Steve, Ph.D., Cornell U. Assoc. Prof., Computer Science
- Martínez, José F., Ph.D., U. of Illinois, Urbana-Champaign. Assoc. Prof., Electrical and Computer Engineering
- Mbwana, John, Ph.D., Cornell U. Sr. Research Assoc., Civil and Environmental Engineering
- McGuire, Stephen C., Ph.D., Cornell U. Assoc. Prof., Engineering
- Meyburg, Arnim H., Ph.D., Northwestern U. Prof. (Emeritus), Civil and Environmental Engineering
- Miller, Matthew, Ph.D., Georgia Inst. of Technology. Prof., Mechanical and Aerospace Engineering
- Molnar, Al, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
- Moon, Francis C., Ph.D., Cornell U. Joseph C. Ford Professor, Mechanical and Aerospace Engineering
- Moore, Franklin, Ph.D., Cornell U. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Muckstadt, John A., Ph.D., U. of Michigan. Acheson-Laibe Prof., Operations Research and Information Engineering
- Mukherjee, Subrata, Ph.D., Stanford U. Prof., Mechanical and Aerospace Engineering
- Muller, David, Ph.D., Cornell U. Assoc. Prof., Applied and Engineering Physics
- Myers, Andrew, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
- Nozick, Linda K., Ph.D., U. of Pennsylvania. Prof., Civil and Environmental Engineering
- Ober, Christopher K., Ph.D., U. of Massachusetts. Francis Norwood Bard Professor, Materials Science and Engineering
- Olbricht, William L., Ph.D., California Inst. of Technology. Prof., Chemical and Biomolecular Engineering and Biomedical Engineering
- Oliver, Jack, Ph.D., Columbia U. Prof. (Emeritus), Earth and Atmospheric Sciences
- O'Rourke, Thomas D., Ph.D., U. of Illinois. Thomas R. Briggs Professor of Engineering, Civil and Environmental Engineering
- Parlange, Jean-Yves, Ph.D., Brown U. Prof., Biological and Environmental Engineering
- Pass, Rafael, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
- Peck, Mason, A., Ph.D., U. of California, Los Angeles. Asst. Prof., Mechanical and Aerospace Engineering
- Peköz, Teoman, Ph.D., Cornell U. Prof. (Emeritus), Civil and Environmental Engineering
- Petrina, Petru, Ph.D., Cornell U. Visiting Lec., Mechanical and Aerospace Engineering
- Phelan, Richard, M.M.E., Cornell U. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Philpot, William D., Ph.D., U. of Delaware. Prof., Civil and Environmental Engineering
- Phipps Morgan, J., Ph.D., Brown U. Prof., Earth and Atmospheric Sciences
- Phoenix, S. Leigh, Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering

- Pollack, Lois, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Applied and Engineering Physics
- Pollock, Clifford R., Ph.D., Rice U. Ilda and Charles Lee Prof. of Engineering, Electrical and Computer Engineering
- Pope, Stephen B., Ph.D., Imperial Coll. of Science and Technology (U.K.). Sibley College Professor of Mechanical Engineering, Mechanical and Aerospace Engineering
- Pritchard, Matthew E., Ph.D., California Inst. of Technology. Asst. Prof., Earth and Atmospheric Sciences
- Protter, Philip, Ph.D., U. of California, San Diego. Prof., Operations Research and Information Engineering
- Psiaki, Mark L., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
- Putnam, David A., Ph.D., U. of Utah. Assoc. Prof., Biomedical Engineering and Chemical and Biomolecular Engineering
- Ralph, Daniel, Ph.D., Cornell U. Assoc. Prof., Physics
- Rana, Farhan, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Electrical and Computer Engineering
- Rand, Richard H., Sc.D., Columbia U. Prof., Mechanical and Aerospace Engineering
- Reeves, Anthony P., Ph.D., U. of Kent, Canterbury (U.K.). Prof., Electrical and Computer Engineering
- Rehkugler, Gerald E., Ph.D., Cornell U. Prof. (Emeritus), Biological and Environmental Engineering
- Reinhart-King, Cynthia, Ph.D., U. of Pennsylvania. Asst. Prof., Biomedical Engineering
- Renegar, James, Ph.D., U. of California, Berkeley. Prof., Operations Research and Information Engineering
- Resler, Edwin, Ph.D., Cornell U. Prof. (Emeritus), Joseph H. Pew, Jr., Professor of Engineering, Mechanical and Aerospace Engineering
- Resnick, Sidney, Ph.D., Purdue U. Lee Teng Hui Professor, Operations Research and Information Engineering
- Rhodes, Frank H. T., Ph.D., U. of Birmingham (U.K.). Prof. (Emeritus)/President Emeritus, Earth and Atmospheric Sciences
- Richardson, Ruth E., Ph.D., U. of California, Berkeley. Assoc. Prof., Civil and Environmental Engineering
- Riha, Susan, Ph.D., Washington State U. Prof., Earth and Atmospheric Sciences
- Robinson, Richard D., Ph.D., Columbia U. Asst. Prof., Materials Science and Engineering
- Ruina, Andy L., Ph.D., Brown U. Prof., Mechanical and Aerospace Engineering
- Ruppert, David, Ph.D., Michigan State U. Andrew Schultz Jr. Prof. of Operations Research and Information Engineering
- Rusmevichengtong, Paat, Ph.D., Stanford U. Asst. Prof., Operations Research and Information Engineering
- Sachse, Wolfgang H., Ph.D., Johns Hopkins U. Meinig Family Prof. of Engineering, Mechanical and Aerospace Engineering
- Samorodnitsky, Gennady, D.S., Technion Israel Inst. of Technology. Prof., Operations Research and Information Engineering
- Saxena, Ashutosh, Ph.D., Stanford U. Asst. Prof., Computer Science
- Schaffer, Christopher B., Ph.D., Harvard U. Asst. Prof., Biomedical Engineering
- Schlom, Darrell G., Ph.D., Stanford U. Prof., Materials Science and Engineering
- Schneider, Fred B., Ph.D., SUNY Stonybrook. Samuel B. Eckert Professor of Computer Science
- Schuler, Richard E., Ph.D., Brown U. Prof. (Emeritus), Civil and Environmental Engineering/Economics
- Scott, Norman R., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
- Selman, Bart, Ph.D., U. of Toronto (Canada). Prof., Computer Science
- Sengers, Phoebe, Ph.D., Carnegie-Mellon U. Assoc. Prof., Science and Technology Studies/Computing and Information Science
- Seyler, Charles E., Jr., Ph.D., U. of Iowa. Prof., Electrical and Computer Engineering
- Shealy, J. Richard, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Shen, Xiling, Ph.D., Stanford U. Asst. Prof., Electrical and Computer Engineering
- Shmoys, David B., Ph.D., U. of California, Berkeley. Computer Science and Operations Research and Information Engineering
- Shoemaker, Christine A., Ph.D., U. of Southern California. Joseph P. Ripley Prof. of Engineering, Civil and Environmental Engineering
- Shuler, Michael L., Ph.D., U. of Minnesota. Samuel B. Eckert Prof. of Chemical and Biomolecular Engineering and Biomedical Engineering
- Sirer, Emin Gun, Ph.D., U. of Washington. Assoc. Prof., Computer Science and Electrical and Computer Engineering
- Skorton, David J., M.D., Northwestern U. Prof., Biomedical Engineering and Weill Medical College
- Slate, Floyd O., Ph.D., Purdue U. Assoc. Prof. (Emeritus), Civil and Environmental Engineering
- Snaveley, Noah, Ph.D., U. of Washington. Asst. Prof., Computer Science
- Spanswick, Roger M., U. of Edinburgh (U.K.). Prof., Biological and Environmental Engineering
- Spencer, Michael G., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Stedinger, Jerry R., Ph.D., Harvard U. Prof., Civil and Environmental Engineering
- Steen, Paul H., Ph.D., Johns Hopkins U. Prof., Chemical and Biomolecular Engineering
- Steenhuis, Tammo S., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering
- Stewart, Harry E., Ph.D., U. of Massachusetts, Amherst. Assoc. Prof., Civil and Environmental Engineering
- Strogatz, Steven H., Ph.D., Harvard U. Jacob Gould Schurman Professor, Mechanical and Aerospace Engineering
- Stroock, Abraham D., Ph.D., Harvard U. Assoc. Prof., Chemical and Biomolecular Engineering
- Suh, Gookwon E., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
- Tang, A. (Kevin), Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
- Tardos, Éva, Ph.D., Eötvös U. (Hungary). Prof., Computer Science and Operations Research and Information Engineering
- Teitelbaum, R. Tim., Ph.D., Carnegie-Mellon U. Assoc. Prof., Computer Science
- Tester, Jefferson W., Ph.D., Massachusetts Inst. of Technology, David Call Professor of Sustainable Energy Systems, Chemical and Biomolecular Engineering, Assoc. Director, Cornell Center for a Sustainable Future
- Thompson, Michael O., Ph.D., Cornell U. Assoc. Prof., Materials Science and Engineering
- Timmons, Michael B., Ph.D., Cornell U. Lester B. Knight Director of the Knight Laboratory, Prof., Biological and Environmental Engineering
- Tiwari, Sandip, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
- Todd, Michael J., Ph.D., Yale U. Leon C. Welch Prof., Operations Research and Information Engineering
- Tong, Lang, Ph.D., U. of Notre Dame. Prof., Electrical and Computer Engineering
- Topaloglu, Huseyin, Ph.D., Princeton U. Assoc. Prof., Operations Research and Information Engineering
- Trotter, Leslie E., Ph.D., Cornell U. Prof., Operations Research and Information Engineering
- Turcotte, Donald L., Ph.D., California Inst. of Technology. Prof. (Emeritus), Earth and Atmospheric Sciences
- Turnbull, Bruce W., Ph.D., Cornell U. Prof., Operations Research and Information Engineering
- Turnquist, Mark A., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
- Umbach, Christopher, Ph.D., Cornell U. Asst. Prof., Materials Science and Engineering
- Unsworth, Martyn J., Ph.D., Cambridge U. Adjunct Prof., Earth and Atmospheric Sciences
- van der Meulen, Marjolein C. H., Ph.D., Stanford U. Swanson Professor of Biomedical Engineering, Prof., Mechanical and Aerospace Engineering
- van Dover, R. Bruce, Ph.D., Stanford U. Prof., Materials Science and Engineering
- Van Loan, Charles F., Ph.D., U. of Michigan. Joseph C. Ford Professor of Engineering, Computer Science
- Varner, Jeffrey D., Ph.D., Purdue U. Asst. Prof., Chemical and Biomolecular Engineering
- Voelcker, Herbert B., Ph.D., Imperial Coll. of Science and Technology (U.K.). Charles W. Lake Jr. Professor of Engineering, Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
- Wagner, Aaron B., Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
- Walker, Larry P., Ph.D., Michigan State U. Prof., Biological and Environmental Engineering
- Walter, Michael F., Ph.D., U. of Wisconsin. Prof., Biological and Environmental Engineering
- Walter, Michael T., Ph.D., Washington State U. Asst. Prof., Biological and Environmental Engineering
- Wang, Kuo, Ph.D., U. of Wisconsin. Prof. (Emeritus), Mechanical and Aerospace Engineering
- Wang, Yi, Ph.D., U. of Wisconsin. Prof., Biomedical Engineering and Weill Medical College
- Wang, Z. Jane, Ph.D., U. of Chicago. Assoc. Prof., Theoretical and Applied Mechanics
- Warhaft, Zellman, Ph.D., U. of London (U.K.). Prof., Mechanical and Aerospace Engineering
- Warner, Derek, Ph.D., Johns Hopkins U. Asst. Prof., Civil and Environmental Engineering
- Wayno, Frank J., Ph.D., Princeton U. Sr. Lec., Civil and Environmental Engineering
- Weatherspoon, Hakim, Ph.D., U. of Washington. Asst. Prof., Computer Science
- Webb, Watt W., Sc.D., Massachusetts Inst. of Technology. Samuel B. Eckert Professor of

Engineering, Applied and Engineering
Physics
Weber-Shirk, Monroe, Ph.D., Cornell U. Sr.
Lec., Civil and Environmental Engineering
White, William M., Ph.D., U. of Rhode Island.
Prof., Earth and Atmospheric Sciences
Wickham, Lisa, Ph.D., Cornell U. Instr., Applied
and Engineering Physics
Wicker, Stephen B., Ph.D., U. of Southern
California. Prof., Electrical and Computer
Engineering
Wiesner, Ulrich B., Ph.D., U. of Mainz
(Germany). Prof., Materials Science and
Engineering

GRADUATE SCHOOL

ADMINISTRATION

Alison G. Power, dean

J. Ellen Gainor, associate dean

Terry D. Plater, associate dean

Sarah S. Hale, associate dean

Brenda Wickes, assistant dean

Students interested in professional and research master's and doctoral degrees at Cornell pursue their graduate studies through the Graduate School, which administers 96 graduate fields, ranging from aerospace engineering to zoology. Programs leading to degrees in law (J.D. and LL.M.) are administered by the Cornell Law School; the doctor of medicine (M.D.) is administered by Cornell's Weill Medical College in New York City; the doctor of veterinary medicine (D.V.M.) is administered by the College of Veterinary Medicine; and the master of business administration (M.B.A.) is earned through the Johnson Graduate School of Management.

THE GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of master of arts, master of science, and doctor of philosophy but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered. All students must have course enrollment each semester. Students not enrolling in specific courses must enroll for thesis or dissertation research using either Graduate School or, if available, departmental course numbers assigned for that purpose.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system, the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee, who usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

A successful applicant to the Graduate School must:

1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;
2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be:

1. the following minimum scores on the Test of English as a Foreign Language (TOEFL): writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.

or

2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

DEADLINES

Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available online at catalog.gradschool.cornell.edu.

INQUIRIES

Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available online at catalog.gradschool.cornell.edu.

General questions about graduate study can be directed to Graduate School Student Services, 255-5820, or gradschool@cornell.edu or www.gradschool.cornell.edu or by writing to Graduate School, 143 Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

FOR MORE INFORMATION

Detailed information about the admissions process, academic programs, financial aid, and student services is available at the Graduate School web site, www.gradschool.cornell.edu. The site features links to the Graduate School's online application (apply.gradschool.cornell.edu), printable forms, and links to sites of interest to graduate applicants.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

Michael D. Johnson, dean, E. M. Statler Professor

Steven A. Carvell, associate dean for academic affairs

David Strong, associate dean for business affairs

Jon Denison, associate dean for external affairs

Judi Brownell, dean of students

Joe Strodel, director of corporate and foundation affairs

Tom Ward, director of the Leland C. and Mary M. Pillsbury Institute for Hospitality Entrepreneurship

Rohit Verma, executive director of center for hospitality research

Jan A. de Roos, director of center for real estate finance

Timothy Hinkin, Richard J. and Monene P. Bradley Director of Graduate Studies

Lisa M. Shaffer, director of student services

Brad Walp, director of enrollment management and international programs

Molly deRoos, associate director of career management

Sheri Mahaney, assistant director of graduate programs

Curtis Ferguson II, assistant director of multicultural programs

Meg Keilbach, director of development

Christine Natsios, director of alumni affairs

Dina Kristof, registrar

DEGREE PROGRAMS

	<i>Degree</i>
Hotel Administration	B.S. M.M.H. M.S. Ph.D.

FACILITIES

Statler Hall. Statler Hall is a unique building designed explicitly to meet the needs of the faculty and students of the School of Hotel Administration. The building, which serves both practical and theoretical instruction, includes classrooms, lecture rooms, laboratories, a library, computer center, beverage management center, newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were

designed exclusively for the school's academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jan M. Beck Center, a 35,000-square-foot addition to Statler Hall. This \$16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration's Nestlé Library. The Nestlé Library has one of the most extensive collections of hospitality-related materials in the world. The collection contains approximately 37,000 books and more than 500 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library's collections. Among the library's special features are numerous electronic information resources, including *Business Source Complete*, *Hotel Horizons*, *Technomic*, *Mintel Marketing Intelligence*, and *Hospitality and Tourism Complete*, a unique index of hospitality articles. For industry professionals, information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. More detailed information about the Nestlé Library can be found at www.nestlelib.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the School of Hotel Administration library provides instruction and research support to every member of the school's community.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 153 guest rooms; an executive education center; a signature restaurant, Taverna Banfi; two quick-service food outlets; and a lounge. The Statler Hotel is an independent, self-sustaining teaching unit that provides quality food and beverage, meeting, and lodging services to the local community and to campus visitors, such as parents and those who visit Cornell as part of the application process. The Statler Hotel provides a unique brand of hospitality that integrates the management theory taught at the Cornell School of Hotel Administration with practical expertise of the hotel's professional and student staff. The hotel offers part-time jobs to approximately 200 students each semester with priority given to students in the school. A select group of students participate in the hotel's Leadership Development program and earn supervisory and management positions in the hotel.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the

global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses among the humanities, social sciences, and natural sciences as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's *Student Handbook* (available at www.hotelschool.cornell.edu/students/ugrad/handbook).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits (note: 120 credits does not include PE courses), as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 1210 and 1220 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (d) passing language course level 1230 or the equivalent;
4. completion of two units of practice credit; and
5. completion of the university requirement in physical education (including the swim test).

Suggested course programs appear on the following pages. The core courses account for 66 of the 120 credits needed for graduation, hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 24 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned

will be counted toward the Cornell degree in hotel administration, must obtain the approval from the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 24-credit group of free electives.

Transfer Credit Policy

1. Transfer students are required to complete all degree requirements with at least 60 credits from Cornell University. Thus, a maximum of 60 hours in transfer credit, for courses with a grade of "C" or above, may be allowed from other accredited colleges or universities:
 - Transfer credit is not awarded toward SHA electives.
 - Up to 18 credits may transfer toward SHA core required courses.
 - Up to 18 credits may transfer toward Cornell distributive electives.
 - Up to 24 credits may transfer toward Cornell free electives.
2. Cornell University does not accept credit for courses sponsored by colleges but taught in high school to high school students, even if the college provides a transcript of such work.
3. The school does not accept online course credit for courses taken outside of Cornell University.
4. Students who are currently accepted and enrolled may transfer in credit, but only from four-year accredited colleges or universities.
5. AP Credit is accepted as free elective credit only.

Transfer Credit Process

The registrar of the school manages the transfer credit process in coordination with the faculty.

1. For 1100 and 2200 level SHA core courses and distributive or free elective courses:
 - a. Syllabus must cover 80 percent of the material covered in the Cornell/SHA course.
 - b. Syllabus uses a standard textbook equivalent to that used in the Cornell/SHA course.
 - c. Syllabus includes examinations, writing, projects, or other submitted work, produced individually or collectively, that is roughly as extensive as that required in the equivalent Cornell/SHA course.
 - d. Syllabus indicates roughly equivalent meeting hours as are required in the equivalent Cornell/SHA course.
2. Freshmen Writing Seminar is reviewed by the Knight Institute.
3. 3300 and 4400 (upper) level SHA courses are not typically accepted, but may be reviewed upon request.

Minor in Real Estate

The minor in Real Estate is designed to prepare students for careers in the commercial real estate industry. Both the U.S. and international capital markets are undergoing fundamental changes, as is the nature of real estate ownership. This minor focuses on careers as a real estate investor, in real estate finance, in real estate consulting, in structured finance, and in real estate transaction support. Cornell University's School of Hotel Administration is at the forefront of knowledge in this field and will help students prepare for a rewarding career. The minor is fulfilled with a minimum of six courses. Four courses are required and two or more electives complete the minor. A minimum of 18 credit hours is required to complete the minor. Any undergraduate student in the university may enroll in the minor in Real Estate; the minor is designed to integrate with the requirements of several majors including AEM in CALS, ORIE in Engineering, Industrial and Labor Relations, and Economics in Arts and Sciences. Requirements for students in the School of Hotel Administration are different from requirements for students in other undergraduate units. Students who wish to pursue a minor in Real Estate must complete and submit an application. Applications are available in the home of the minor in Real Estate, 465 Statler Hall, on the school's web site, or by e-mail at realestate@cornell.edu.

Minors

Students in the School of Hotel Administration may pursue minors offered by units in any college or division. A unit that offers a minor may place restrictions on who can pursue that minor (usually because of limited resources), and a major may place restrictions on the minors that its students can take (usually because the major and minor areas are too similar).

Completion of a minor will be audited by the unit that offers it. The minor will be recorded on students' official transcripts by their home colleges after receiving verification by the unit offering the minor, usually during the summer after graduation. Students should inquire with the offering units for application procedures and requirements.

Concentration

While completing the hotel elective courses, undergraduates in the school may select a concentration. Before selecting a field of concentration, students should consult the coordinator of instruction in that area during their sophomore year to plan the sequence of courses that will best fit their program. Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, there is a second-language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under "Modern Languages, Literature, and Linguistics" and under "Advanced Placement for Freshmen" in the College of Arts and Sciences section of this catalog.

Independent Study and Research

Students may conduct independent studies or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See HADM 4498, 4499, 6698, or 6699 for more details.

Practice Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the *Student Handbook for Undergraduates in the School of Hotel Administration* (available at www.hotelschool.cornell.edu/students/ugrad/handbook).

Management-Intern Program

Juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Application should be completed one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See HADM 4493, 4494, and the student handbook for more details about MIP (available at www.hotelschool.cornell.edu/students/ugrad/handbook).

Study Abroad

All students planning to study abroad must apply through the Cornell Abroad program; please see the description in the introductory section of this catalog or view the web site at www.cuabroad.cornell.edu.

The school represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters of their junior year (or, in some cases, both). While abroad, students have the opportunity to learn about other cultures, to become more proficient in a second (or perhaps third) language and, in those programs where internships are offered, to work in an international environment.

Students should start the investigation process early, including a consultation with the SHA study abroad advisor, 180 Statler Hall, as well as with the staff in the Cornell Abroad office, 300 Caldwell Hall. Requirements for college approval include a GPA of 3.0 or higher, good academic standing, registered full-time student status, and not being in one's final semester. Credits earned abroad are considered transfer credits, and, as such, they count against the maximum of 60 transfer credits allowed. A maximum of 15 credits may be transferred from study abroad programs, and students should plan on taking no less than 15 credits while abroad. Courses typically transfer into distributive and free electives. Credit for study

abroad programs will be awarded only after successful completion (marks equivalent to a Cornell grade of C or higher) of the semester abroad and receipt of the official transcript by the college.

Culinary Institute of America Alliance

The School of Hotel Administration has an alliance with the Culinary Institute of America (CIA), which is located in Hyde Park, N.Y. SHA juniors and seniors can both earn their B.S. from Cornell and complete the requirements for an Associates in Occupational Studies (A.O.S.) degree in Culinary Arts from the CIA during the course of their four-year program at Cornell. Most students apply to the program during their sophomore year, so planning should start early to be sure all program requirements are met.

Students study approximately nine months onsite at the CIA, working and learning daily in the finest training kitchens in the world. Students are required to have completed HADM 2236 Culinary Theory and Practice and HADM 3305 Restaurant Management from the core curriculum before attending the full program at the CIA. In addition to the core curriculum, SHA students are required to take four specific courses to complete the degree requirement:

- HADM 4404 Catering and Special Events Management (offered fall only)
- HADM 4430 Introduction to Wines
- HADM 4432 Contemporary Healthy Foods (offered fall only)

And one of the following:

- HADM 4401 Restaurant Entrepreneurship (offered fall only)
- HADM 4403 Specialty Food and Beverage Operations: Guest Chefs (offered spring only)
- HADM 4451 Restaurant Development (fall only)

More information about the CIA is available at www.ciachef.edu. Frequently asked questions are available at www.hotelschool.cornell.edu/academics/special/cia/ciasha.html. For additional collaborative degree program questions or to obtain applications, contact CIA_Alliance@cornell.edu.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the school's student handbook (available at www.hotelschool.cornell.edu/students/ugrad/handbook).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; and F to 0. For good standing, a student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade is equivalent to a C- or

above and an unsatisfactory grade is equivalent to a D+ or lower.

Those students in the top 25 percent of all students whose semester averages are at least 3.3 and who have taken at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for the Bachelor of Science Degree

<i>Required courses</i>	<i>Credits</i>
Operations: HADM 1105, 1106, 2201, 3301, 3305	14
Management and Organizational Behavior: HADM 1115	3
Human Resource Management: HADM 2211	3
Finance/Accounting: HADM 1121, 2221, 2222, 3321	12
Food and Beverage Management: HADM 2236	4
Marketing, Tourism, and Strategy: HADM 2243, 4441	6
Facilities Management, Planning, and Design: HADM 2255, 3355	6
Management Communication: HADM 1165, 3365	6
Information Systems: HADM 1174, 2275	6
Law: HADM 3387	3
Economics: HADM 1141	3
<i>Specifically required credits</i>	66
<i>Hotel electives</i>	12
<i>Distributive electives</i>	18*
<i>Free electives</i>	24
Total credits required for graduation	120

*Students must take a first-year writing class during their first or second semester.

Typical Course Sequences

The following arrangements of courses tend to be more fixed during freshman and sophomore years, with a greater degree of flexibility characterizing the upper-class years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each semester, to include the following:

<i>Required courses</i>	<i>Credits</i>
HADM 1105 Introduction to Hotel Operations	2
HADM 1106 Introduction to Food Service Operations	2
HADM 1115 Organizational Behavior and Interpersonal Skills	3
HADM 1121 Financial Accounting	3
HADM 1141 Microeconomics for the Service Industries	3
HADM 1165 Management Communication I	3
HADM 1174 Microcomputing	3
Electives	6
First-year writing seminar	3
	<hr/> 28

Sophomore Year

<i>Required courses</i>	<i>Credits</i>
HADM 2201 Hospitality Quantitative Analysis	3
HADM 2211 Human Resource Management	3
HADM 2221 Managerial Accounting	3
HADM 2222 Finance	3
HADM 2236 Culinary Theory and Practice	4
HADM 2243 Principles of Marketing	3
HADM 2255 Hotel Development and Planning	3
HADM 2275 Introduction to Information Systems Management	3
Electives	6
	<hr/> 31

Junior Year

<i>Required courses</i>	<i>Credits</i>
HADM 3301 Service Operations Management	3
HADM 3305 Restaurant Management	4
HADM 3321 Hospitality Financial Management	3
HADM 3355 Hospitality Facilities Operations	3
HADM 3365 Management Communication II	3
HADM 3387 Business and Hospitality Law	3
Electives	12
	<hr/> 31

Senior Year

<i>Required courses</i>	<i>Credits</i>
HADM 4441 Strategic Management	3
Electives	27
	<hr/> 30

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Office of Student Services, 180 Statler Hall, 255-6376.

Required Program for Master of Management in Hospitality Degree

<i>Required courses</i>	<i>Credits</i>
HADM 6610 Dean's Distinguished Lecture Series	1
HADM 7703 Operations Management	3
HADM 7711 Organizational Behavior	3
HADM 7712 Human Resources Management	3
HADM 7723 Corporate Finance	3
HADM 7724 Managerial Accounting	3
HADM 7743 Hospitality Marketing	3
HADM 7744 Competitive Strategies for the Hospitality Industry	3

HADM 7751 Property Development and Planning	3
HADM 7761 Management Communication	3
HADM 7797 Hospitality Industry Leadership Development Program	1
Balance of courses are electives.	

Total credits required for the master of management in hospitality program 48

Course Schedule Information

For up-to-date information about course scheduling, contact the Office of Student Services, 180 Statler Hall, 255-6376.

ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW

Management and Organizational Behavior

HADM 1110 Distinguished Lectures in Hospitality Management

Fall. 1 credit. Elective. Those wishing to enroll have until Friday, Sept. 3, 2010, to add it. Dean M. Johnson.

The Dean's Distinguished Lecture Series is a long-standing Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 45-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

HADM 1115 Organizational Behavior and Interpersonal Skills

Fall and spring. 3 credits. Required. K. Walsh, J. Brownell, J. Katz, and T. Simons.

This course focuses on how to manage people in the workplace. Students develop theoretic lenses for understanding people and organizations, as well as practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through the use of case studies, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

HADM 2217 Hotel Leadership Development Program

Fall. 2 credits. Elective. Prerequisite: one semester (200 hours) of employment at the Statler Hotel. T. Hinkin.

The HLDLP is a partnership among Hotel School faculty and Statler Hotel management, who together guide students and teach them how to become tomorrow's leaders. The program enables students to progress through five different paid employment phases at the Statler Hotel, from entry level to student manager. Students who progress to the level

of student manager become Statler Fellows and will travel to a major city for an all-expense-paid trip that includes forums with industry leaders, site visits of leading industry facilities, and cultural activities. Each phase requires approximately 200 hours of paid employment at the Statler Hotel and is completed through a certification process.

HADM 4410 Hospitality Management Seminar

Fall. 1 credit. Elective. Limited to 30 Hotel seniors. Corequisite: HADM 1110. Preregistered students or students wishing to add the course who do not attend the first class will be automatically moved to instructor's waiting list. Students permitted to take course will have until F, Sept. 3, 2010, to add it. Failure to do so will result in their being dropped from course. Dean M. Johnson.

HADM 4410 complements HADM 1110 by giving students the opportunity to interact with guest speakers and to participate in roundtable discussions on issues relating to the hospitality industry. Students will have the opportunity to gain a better understanding of industry trends, challenges, and opportunities.

HADM 4411 Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisites: undergraduate standing; HADM 1115 or equivalent. Grad students enroll in HADM 6611. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-play exercises, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

HADM 4415 Managerial Leadership in the 21st Century

Spring. 1 credit. Elective. Due to popularity of class, priority is given in following order: seniors/second-semester grads, juniors/first-semester grads, nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up until first day, **but absolute deadline for dropping course is 12 noon F, Apr. 8**, F, Apr. 15 (1-6 P.M.), S, Apr. 16 (10 A.M.-6 P.M.), Sun, Apr. 17 (10 A.M.-4:30 P.M.), 2011, in Statler Auditorium. Attendance mandatory for credit. Fee for required notebook (charged to student's bursar bill; notebook distributed on first day of class): \$45. K. Blanchard.

Overwhelming empirical research indicates that the strongest predictor of career success is the capacity to work effectively with and through others. Yet most courses on management and leadership overemphasize the strategic aspects of leadership and ignore the most important aspect of leadership: how to use yourself and your personal presence to lead and influence others. This course is a practical seminar designed to teach students how to understand and use themselves well, cultivate and leverage a network of relationships, to lead others effectively, and navigate the politics of an organization.

This immersive weekend experience is divided into two parts: developing a sound understanding of self and building a foundation for leadership. Each of the areas of instruction creates clear and powerful insight into cultivating an individual "leadership point of view" or personal philosophy for leadership. The concept of "leadership point of view" has been taught by instructors in some of the most prestigious organizations in the United States and beyond.

HADM 4416 Survey of International Management

Fall. 3 credits. Elective. Graduate students should enroll in HADM 6616. J. Katz. Designed to help students become effective international executives. The course begins with an introduction to the factors that make management differ across countries: culture, politics, economics, and more. It then goes on to discuss how to recognize and deal with those differences. Specific topics covered include global leadership, multinational teamwork, motivation in the international context, and international negotiations. A very wide range of countries is discussed.

HADM 4417 Hospitality Leadership

Spring, second seven weeks of semester. 2 credits. Limited to Hotel seniors; Hotel juniors by permission. Prerequisite: HADM 1115 or similar course.

Being an effective leader is one of the fundamental responsibilities of almost all hospitality managers and also plays a critical role in managing organizational change. In this course, students learn about their leadership styles, explore a range of effective and ineffective leader behaviors, understand the importance of both formal and informal leadership, and develop leadership skills. Instructional techniques will include self-assessment, lecture and discussion, case analyses, and experiential exercises. Course is strongly recommended for SLDP seniors.

HADM 5517 Career Planning in the Hospitality Industry

Fall, first seven weeks. 2 credits. Elective. Prerequisites: HADM 1115 and HADM 2211. K. Walsh.

This course examines students' own planned career in the hospitality industry. An important goal is for students to rigorously assess—or reassess—their career interests and to map a detailed career plan for the first 10 years of their professional lives. The course draws from theories of career development to help students meaningfully prepare for their entry into the workforce, as well as determine ways they can make meaningful contributions as future hospitality leaders and innovators. It integrates with our other course offerings in the Organizational Behavior/Human Resource area; it specifically builds from topics introduced in both HADM 1115 and HADM 2211 and complements the topics taught in the Leadership in the Hospitality Industry elective.

HADM 5518 Career Management and Succession Planning for the Hospitality Industry

Fall. Second seven weeks. 2 credits. Elective. Prerequisites: HADM 1115 and HADM 2211. K. Walsh.

Focuses on the value of career management and succession planning for hospitality organizations. The course explores the profound changes that have occurred in the hospitality industry and examines the

implications of these changes for ways the hospitality industry hires, develops, and retains employees. It is for any student interested in a critical aspect of hospitality human resources: managing the organization's human capital and retaining its professional employees. A goal of the course is to provide students with tools that will enable them to assist any hospitality organization with its leadership-planning efforts. It integrates with other course offerings in the Organizational Behavior/Human Resource area; it specifically builds from topics introduced in both HADM 1115 and HADM 2211 and complements the topics taught in the Leadership in the Hospitality Industry elective.

HADM 6610 M.M.H. Discussion Forums in Hospitality Management

Fall. 1 credit. Required. M.M.H. students only. Students are required to attend 4 of the 12 scheduled sessions. M. Johnson. HADM 6610 is a required master's-level course that provides a unique opportunity for successful industry leaders to share their experiences with M.M.H. students in a small group setting. Speakers will share their views about the successful skill sets, temperaments, and leadership styles needed to be an effective and valuable executive. They will also focus on critical industry-related issues. The speakers are chosen for their knowledge, experience, and proven success in the hospitality industry. Students in HADM 6610 have an unparalleled opportunity to learn how hospitality executives view the current and future status of the industry.

HADM 6611 Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisite: graduate standing. Undergraduates to enroll in HADM 4411. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-plays, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' personalities and negotiation tactics.

HADM 6616 Survey of International Management

Fall. 3 credits. Elective. Undergraduate students should enroll in HADM 4416. J. Katz.

Designed to help students become effective international executives. The course begins with an introduction to the factors that make management differ across countries: culture, politics, economics, and more. It then goes on to discuss how to recognize and deal with those differences. Specific topics covered include global leadership, multinational teamwork, motivation in the international context, and international negotiations. A very wide range of countries is discussed.

HADM 7711 Organizational Behavior

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. T. Hinkin. Organizational Behavior teaches how individuals, groups, and organizations interact

within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal styles influence leadership and decision making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resource Management

HADM 2211 Human Resource Management

Fall, spring. 3 credits. Required. Limited to 70 students per lec. Not open to freshmen or graduate students. Prerequisite: HADM 1115. B. Tracey, S. Way, and M. Sturman. Facilitates an understanding of the policies, procedures, and systems required to attract, select, develop, and retain quality employees. Students learn about the major environmental factors that affect the HR function, including legislation, economics, and demographics. The course emphasizes HR issues in the hospitality industry. Instruction is based on lecture and discussion as well as case analysis and project work.

HADM 4412 Compensation in Service Firms (also ILRHR 4612)

Spring. 3 credits. Elective. Prerequisite: introductory human resource course (HADM 2211, HADM 7712, ILR 2600, ILRHR 5600, or equivalent). Graduate students should enroll in HADM 6612. M. Sturman.

Designed to give students a practical understanding of the methods and implications of compensation, including hands-on experience designing compensation systems for firms in the service industry. (It provides material that is distinct from that provided in ILRHR 6690 Managing Compensation.) Students will learn how to design a pay plan, including base pay and pay-for-performance plans. By the completion of the course, participants will know how to design pay ranges and grades for organizations where most jobs can be benchmarked with market data. The course will also devote considerable time to the design of incentive plans, including merit pay, bonuses, gainsharing, profit sharing, piece-rate, tipping, and commission systems. It is useful for those desiring employment as an entry-level compensation specialist, a HR generalist, those starting and running their own business, or those who want a better understanding of how HR practices are actually managed. For students with a particular interest in compensation, the course can be taken in addition to ILRHR 6690 (or other compensation courses available at Cornell); for those interested in compensation in the services industry, this course can be taken as a standalone course.

HADM 4418 Training and Development

Fall. 3 credits. Elective. Not open to freshmen. B. Tracey. Training is one of the fundamental responsibilities of almost all hospitality managers, and this HR function plays an instrumental role in managing organizational change. In this course, students learn how to design, implement, and evaluate both formal and informal training programs. In addition, students examine factors beyond design and implementation that may influence training effectiveness. A variety of instructional techniques will be used throughout the course, including experiential activities that will enliven the learning process. The course

also includes the opportunity to conduct a "live case study" of one or more training problems with a real hospitality firm.

HADM 5513 Strategic Human-Resource Management in Hospitality

Spring. 3 credits. Elective. Prerequisite: HADM 2211 or equivalent. B. Tracey. Over the past several years, the HR function has taken on a broader role in helping organizations to create and sustain a competitive advantage. The primary focus of this course is to examine the ways in which HR policies, practices, and systems can enhance the competitive capabilities of hospitality organizations. This seminar-style course will be conducted using hospitality case studies and current business problems as a basis for learning. The course will also include the opportunity to conduct a "live case study" of one or more strategic HRM problems with a real hospitality firm.

HADM 6612 Compensation in Service Firms (also ILRHR 6622)

Spring. 3 credits. Elective. Prerequisite: introductory human resource course (HADM 2211, HADM 7712, ILR 260, ILRHR 5600, or equivalent). Undergraduate students should enroll in HADM 4412. M. Sturman.

For description, see HADM 4412.

HADM 7712 Human-Resource Management

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. M. Sturman. This graduate-level course covers the strategies that enable companies to attract, develop, and retain high-quality employees, which include selection, compensation, performance appraisal, and career management. In each of these areas, the focus is on the return on the human-resource investment.

Managerial Communication

HADM 1165 Management Communication I

Fall, spring. 3 credits. Required. Limited to 18 students per lec. (Students who are required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in the Hotel School, including any semesters in Internal Transfer Division (ITD). Add/drop and section exchange must be approved by chairperson.) Priority given to Hotel students. D. Jameson, D. Lennox, A. Newman, C. Snow, and M. Wolfe.

Introduces the role and importance of effective communication in managerial work, especially in the hospitality industry. Students develop abilities in analytical thinking and clear expression. With an emphasis on business writing, this course builds foundational skills for creating professional-level communications. Students plan, develop, and produce increasingly complex written communications and deliver oral presentations.

HADM 3364 Corporate Communication

Spring, 3 credits. Elective. Limited to 30 students per lec; priority given to Hotel students. Prerequisites: junior, senior, or graduate standing or written permission of instructor; for Hotel undergraduates, HADM 1165 or waiver; for non-Hotel undergraduates, completion of their college's writing requirement. A. Newman.

How you communicate as a leader will determine your ability to convey ideas, manage teams, win support—and get promoted within an organization. This course analyzes how companies handle crisis communication, work with the media, manage change, and inspire employees. With an emphasis on current events, students study both traditional communication methods and new communication technologies, such as blogging, intranets, e-mail, web meetings, and instant messaging. Expect written assignments and highly interactive presentations to build your communication skills.

HADM 3365 Management Communication II

Fall, spring, 3 credits. Required. Limited to 24 students per lec; priority given to Hotel students. Prerequisites: junior or senior standing; for Hotel undergraduates, HADM 1165 and 1115. D. Jameson, D. Lennox, A. Newman, and M. Wolfe.

Develops the knowledge and skills hospitality managers need to face an array of persuasive communication challenges. HADM 3365 builds on the principles of effective managerial communication presented in HADM 1165 as well as the concepts of organizational behavior and interpersonal skills covered in HADM 1115. The course introduces the theory and principles of persuasion and focuses on their application in a range of management and leadership contexts.

HADM 4462 Intercultural Communication in the Hospitality Industry

Spring, 3 credits. Elective. Priority given to Hotel students. D. Lennox.

Designed to help managers develop proficiency when communicating among and between people who do not share similar cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures and the ethics of communication in international business. Students learn through the use of a blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with an emphasis on the service industry.

HADM 7761 M.M.H. Managerial Communication

Fall, 3 credits. Required. Limited to 40 M.M.H. students per sec. D. Lennox. Managers use communication strategies that involve written and oral messages to solve problems and to accomplish professional goals within the workplace. The chief goal of this course is to help students become more competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law**HADM 3385 Business Law I**

Fall, spring, 3 credits. Elective. Open to Hotel School juniors, seniors, and graduate students and non-Hotel students. P. Wagner.

Provides students with a presentation of three substantive areas of business law: employment law, franchising, and business organizations. Students read judicial opinions, learn to identify issues, and analyze the issues by applying legal principles.

HADM 3387 Business and Hospitality Law

Fall, 3 credits. Required. Prerequisite: junior, senior, or graduate standing. D. Sherwyn.

Provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Students examine relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

HADM 4481 Labor Relations in the Hospitality Industry (also ILR 4060)

Spring, 4 credits. Elective. Prerequisite: HADM 3387 or ILRCB 2010. R. Hurd and D. Sherwyn.

Focuses on the critical labor relations issues facing the hospitality industry. All students participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary developments.

HADM 4485 Employment Discrimination Law and Union-Management Relations

Spring, 3 credits. Elective. Prerequisites: junior, senior, or graduate standing; HADM 3387 or permission of instructor. D. Sherwyn.

Provides students with an understanding of discrimination laws, a framework for complying with laws, and a method for using the laws to maintain positive employment relations.

HADM 4487 Real Estate Law

Fall, spring, 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Recommended: completion of HADM 3387. A. Klausner.

This course provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students will learn to recognize and evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

HADM 4489 The Law of the Internet and e-Commerce

Fall, 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. A. Klausner. The computer industry and the Internet have fundamentally changed the world in swift, dramatic fashion. The emergence of global digital networks and digital technologies offer to nearly anyone the ability to access, store, mine, manipulate, and transmit vast amounts of information. At the same time, this revolution in the use of information raises new and often complex legal disputes in areas such as copyright, trademark, privacy, speech, contract formation, jurisdiction, information

security, etc. Moreover, the rapidly growing maze of laws directed at the Internet is another thorny obstacle for persons and companies doing business on the web. The purpose of this course is to acquaint students with the legal topics and principles applicable to the Internet, and to help students identify and understand the rapid developments of the law of the Internet by exploring specific problems.

HOSPITALITY FACILITIES AND OPERATIONS**Food and Beverage Management****HADM 2236 Culinary Theory and Practice**

Fall, spring, 4 credits. Required. Prerequisite: HADM 1106. Because this course is laboratory-based, students may not drop after first full week of classes; during first week of class, students may drop only with permission of instructor and/or academic dean. Failure to attend first lab may result in administrative drop. R. Spies.

This course introduces the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also are involved in a project in which they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience in the Statler Hotel back-of-the-house is a required course activity.

HADM 4430 Introduction to Wines

Fall, spring, 2 credits. Elective. Prerequisite: Hotel juniors, seniors, M.M.H. students; seniors and graduate students in all other colleges. Hotel students strongly encouraged to enroll in fall semester. All students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and who fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor's records. Because of high demand for this course and consumption of a product, the absolute drop deadline in fall for all students is F, Sept. 10, 2010, and drop deadline in spring is F, Feb. 4, 2011. Fee (includes cost of wine glasses and tasting kit): \$30. No auditors. S. Mutkoski.

Students will be introduced to the major wine-producing regions of the world and what consumers need to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine; pairing wine and food; responsible drinking; selecting quality and value wine; and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

HADM 4431 Wine and Food Pairing Principles and Promotion

Fall, 3 credits. Elective. Limited to 20 Hotel seniors and Hotel graduate students only. Prerequisite: HADM 4430. G. Pezzotti.

Focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine

styles, how food flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine-list development. Students design and present wine and food tastings to industry guests.

HADM 4432 Contemporary Healthy Foods

Fall. 3 credits. Elective. Priority given to 20 seniors and graduate students; others may enroll, space permitting. Prerequisite: HADM 3305 or equivalent. Cost of required field trip: \$75. M. Tabacchi.

This course is designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today's health-conscious and educated foodservice patron. Students gain an understanding of the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

HADM 4435 Selection, Procurement, and Supply Management

Spring, first seven weeks of semester. 2 credits. Elective. Limited to 20 Hotel juniors, seniors, and graduate students or permission of instructor. R. Spies.

This course deals with contemporary management issues related to procurement activities within the hospitality industry. Focus is on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator and how the creation of distribution partnerships serves to improve efficiency and reduce costs. Topics include distribution channels and intermediaries in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, development of buying strategies, influence of economic and environmental factors on supply, purchase timing and inventory management, the emerging role of the Internet, and e-procurement service providers.

HADM 4436 Beverage Management

Spring. 3 credits. Elective. Prerequisite: Hotel junior, senior, or graduate standing; HADM 4430 (co-registration not allowed). S. Mutkoski.

Designed for students who intend to pursue a career in food and beverage management. Course work deals specifically with the management of beverage operations. Topics for discussion include tracking beverage trends; risk-liability management; staff training and responsible customer service; wine and spirits list development; beverage pricing; food and wine pairings; the beverage industry structure and beverage alcohol regulations; purchasing, storage, and service; major beverage categories; cost controls and loss prevention; and creative beverage merchandising.

HADM 4437 Anheuser Busch Seminar in Quality Brewing and Fine Beer

Fall, spring, first seven weeks of semester. 2 credits. Elective. Limited to 20 Hotel seniors and Hotel graduate students only. Prerequisite: HADM 4430. One required local field trip (no fee). G. Pezzotti.

This course is designed for upper-level students who intend to pursue a career in the food and beverage industry. Students will advance their knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues.

HADM 4438 Seminar in Culture and Cuisine

Spring. 3 credits. Elective. Limited to 20 students. Prerequisite: HADM 2236 or permission of instructor. R. Spies.

Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through the use of readings, research, and meal preparation, students explore various cuisines in depth. The goal of this course is for students to develop an awareness of several international cuisines and to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Students write research reports, make oral presentations, and design and orchestrate the preparation of menus.

HADM 4495 Implementing Strategies for Tying Wellness Practices to Company Profit

Spring. 3 credits. Elective. M. Tabacchi.

There is increasing evidence linking job-induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of a diverse and changing population. These stresses affect the financial health of the corporation as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity, which should increase the corporation's competitive edge. The emerging fields of complementary and alternative medicines are explored as preventive and cost-effective methods of improving workers' health. Business models for encouraging workplace wellness, systems for implementation, reward, and accountability of managers and corporate officers will be introduced in this course. Only a few corporations overtly reward managers and corporate officers for the well-being and concomitant enhanced performance and productivity of their employees.

HADM 6631 Seminar in Multiunit-Restaurant Management

Spring, first seven weeks of semester. 2 credits. Elective. Deadline to drop is midpoint of course. Prerequisite: graduate standing; seniors only by permission of instructor. Staff.

Through a series of directed readings, case studies, and roundtable discussions with industry leaders, this course focuses on strategic issues in the food and beverage industry that affect the growth and development of multi-unit restaurant

companies. In addition to the weekly scheduled seminar time, students are required to attend two receptions to honor the roundtable speakers. In class, students critically evaluate selected research papers related to multi-unit business management to serve as the basis for class discussion and the fostering of a broader understanding of leadership and growth strategies in the multi-unit restaurant business.

Operations

HADM 1101 Hotel Operations Management: Tactics for Profitability

Summer. 3 credits. R. McCarthy and M. McCarthy.

In this Summer College program, students develop their business, management, and leadership skills while refining their computer, communication, and analytical skills. Students have the opportunity to explore the hospitality industry at the world-renowned School of Hotel Administration.

This course is designed to provide not only an elemental understanding of the hospitality industry, but a realistic exposure to the work, decisions, and competitive forces that have an impact on all of those who take a professional stake, either directly in the industry or within one of its supporting industries. Students are responsible for coming up with a business plan and operating a 250-room simulated CHESS Hotel. Through careful analysis of the hotel's financial information, students see the multiple impacts of the decisions they make and the issues that need to be taken into consideration and balanced in order to operate a profitable business. Students' interpretations of their analyses will be presented in a concise, professional, and well-organized fashion in the form of a business report. Students learn how to use the Microsoft Office 2007 suite of products to support their analyses and to effectively communicate their findings. The business report will serve as a cumulative demonstration of the knowledge that students have gained during the program.

HADM 1105 Introduction to Hotel Operations

Fall, spring, seven weeks. 2 credits. Required. Prerequisite: Hotel or ITD students. **Corequisite:** HADM 1106. Students enrolled in Lec 1 of HADM 1105 take Lec 2 of HADM 1106 in same semester, and vice versa. R. McCarthy.

This course is designed to introduce students to the scope of the hotel industry and the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within the rooms division and among other hotel departments. Completion of a rooms division practicum that exposes students to the housekeeping and front desk operations at the Statler Hotel is a required course activity.

HADM 1106 Introduction to Foodservice Operations

Fall, spring, seven weeks. 2 credits. Required. Prerequisite: Hotel or ITD students. Corequisite: HADM 1105. Students enrolled in Lec 1 of HADM 1106 take Lec 2 of HADM 1105 in same semester, and vice versa. S. Lipinski.

Students are introduced to the principles of foodservice operations, beginning with an overview of the foodservice industry at large. Attention is initially focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout the course. Completion of a work experience in the Statler Hotel is a required course activity.

HADM 2201 Hospitality Quantitative Analysis

Fall, spring, 3 credits. Required.

Prerequisite: high school algebra. R. Lloyd. This introductory statistics course is taught from the perspective of solving problems and making decisions within the hospitality industry. Students learn introductory probability, as well as how to gather data, evaluate the quality of data, graphically represent data, and apply some fundamental statistical methodology. Statistical methods covered include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one-way ANOVA) are covered as a special case of multiple regression, time allowing. Excel is used as the statistical computing software.

HADM 3301 Service Operations Management

Fall, spring, 3 credits. Required. Limited to 70 Hotel students per lecture. C. Anderson, G. Thompson, and R. Verma.

Students are introduced to statistical and operations research methods that are appropriate for the hospitality industry. The goal of the course is to provide students with the skills and understanding necessary for making decisions using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of analyses in a clear manner. Topics include probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, and project management.

HADM 3303 Club Management

Spring, first seven weeks. 2 credits. Elective. Deadline to drop course is midpoint of course. No freshmen; open to Hotel students seeking Hotel elective credit only. Must complete a term paper. R. James.

Students study private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed, and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics include tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

HADM 3304 Club Management

Spring, first seven weeks. 2 credits. Elective. Open to non-SHA students and SHA students toward free elective credit only. Those SHA students who wish to receive Hotel elective credit must take HADM 3303. Deadline to drop course is midpoint of course. R. James.

Students study private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed, and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics include the history and governance of private clubs, tournament, facility, and recreation management; legal, financial, and legislative issues; human resource considerations; and marketing, food and beverage and special events management.

HADM 3305 Restaurant Management

Fall, spring, 4 credits. Required. Limited to 27 Hotel students per lab. Prerequisite: HADM 2236 and Bar Code and Serv-Safe certified. Cost of lab manual, certification for alcohol service, utensils for front- and back-of-house: approx. \$85. **Because of group work for this course, absolute deadline to drop course in fall is Sept. 3, 2010, and in spring is Feb. 4, 2011.** Staff.

This course offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and apply them practically in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then are incorporated as a class into actions that occur in the student-run operation.

HADM 4401 Restaurant Entrepreneurship

Fall, spring, 3 credits. Elective. Limited to 20 Hotel seniors and Hotel graduate students. Prerequisite: written permission of instructor. Max. cost of five required field trips: \$400. G. Pezzotti.

This course is designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor and using student-developed case studies, students visit and analyze various independently owned and corporate restaurant operations. Analysis covers, but is not limited to, the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings about current topics in the restaurant industry are required. Classes alternate weekly between field trips (2:30 P.M. through dinner hour) and seminars/case presentations.

HADM 4403 Specialty Food and Beverage Operations: Guest Chefs

Spring, 3 credits. Elective. Limited to 20 students. Prerequisite: Hotel juniors, seniors, and graduate students; HADM 3305; permission of instructor. G. Pezzotti.

Designed for students having a strong food and beverage orientation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends find the course especially beneficial. Over the course of the semester, the class, working in groups, will be responsible for the marketing, organization, planning, production, service,

financial analysis, and accounting relative to three guest-chef specialty production nights. The chef will be asked to recommend the evening's menu reflecting his or her culinary background and work with the class in producing the meal for the Cornell community using the Hotel School's facilities. A required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reactions as well as proper application of food and beverage management principles.

HADM 4404 Catering and Special Events Management

Fall, 3 credits. Elective. Limited to 30 students. Prerequisites: HADM 2236 or permission of instructor. Cost of required field trip to New York City: approx. \$250. Attendance during a two-day, weekend event-design charette is mandatory. A charity auction, open to the public, will be planned, executed, and analyzed by students. R. Spies.

The catering and special events industries are among the fastest-growing segments within the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include organizational structure, legal aspects of catering and special events management, product and service development, marketing and sales, catered function and special event planning and execution, staff recruitment and training, post-event analysis, financial success of catering, and special events businesses.

HADM 4408 Introduction to Casino Operations

Fall, 2 credits. Elective. Limited to Hotel students, others by permission of instructor. Drop deadline for course is end of week three. Cost of required field trip to Atlantic City: approximately \$300. R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to the internal and external casino environment. It looks at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

HADM 5502 Advanced Hospitality Quantitative Analysis

Spring, 3 credits. Elective. Prerequisite: HADM 2201 or permission of instructor. R. Lloyd.

Introduces students to topics in statistics that can be utilized by corporate or business leaders to aid in decision making. It builds upon the statistical knowledge gained from

HADM 2201, including in-depth statistical techniques that may not be mainstream within the hospitality industry today, but which are growing in importance. Topics include more multiple regression; simple and multiple logistic regression; one- and two-factor ANOVA, with multiple comparison procedures; chi-squared tests of independence of categorical factors; tests of proportions; and predicting and forecasting with artificial neural networks. Computational programs include Minitab (used in HADM 2201) and Alyuda NeuroIntelligence.

HADM 5503 Operations and Planning of Senior Living and Related Facilities (also PAM 5500)

Fall. 2 credits. Elective. Weekend class scheduled for September 17–18 and October 1–2, 2010. J. Parke.

This two-weekend, 2-credit course is designed to provide hospitality or other interested students with introductory knowledge and terminology regarding the rapidly growing fields of senior housing, CCRCs, and assisted living. While similar in a number of ways to other hospitality facilities, the course will expose students to some of the unique aspects involved in assessing feasibility, development, marketing, and operations of these senior-housing and related types of properties. Through lectures, case studies and in-class question/answer/discussion sessions, students will gain background on decision making, management, and regulatory issues. A field trip may be taken to a local facility as feasible with the size of the group.

HADM 6600 Advanced Revenue Management

Spring, second seven weeks. 2 credits. Elective. Prerequisite: Hotel graduate students only, others by permission of instructor. This course is taught via video-conference with CNI–Singapore. Staff.

In this course, students work in virtual teams and learn how to apply revenue management solutions to nontraditional applications such as golf, spa, function space, and retail.

HADM 6602 Spa and Spa Hotel and Resort Development and Management

Fall, spring. 3 credits. Elective. Limited to 33 Hotel School seniors and graduate students; others may enroll, space permitting. Cost of two required field trips: approx. \$150. M. Tabacchi.

Emphasizes the development, management, and marketing of free-standing spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and the marketing research necessary to establish new spas are discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments, and other spa programs are all considered. Required personnel, safety, legal, and ethical issues regarding spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

HADM 6603 Quality and Process Improvement

Spring. 3 credits. Elective. Prerequisite: graduate students only. R. Verma.

The foundation of this course is on the emergence of quality management as a strategic focus in firms seeking excellence and a competitive edge. Topics include defining quality in service industries; techniques for designing high-quality services; process analysis, problem identification techniques, statistical process control techniques, process capability analysis, and robust design of service processes.

HADM 6605 Yield Management

Fall, spring. 3 credits. Elective. Limited to 30 students. Prerequisites: senior or graduate standing; HADM 3301 or 7703 or equivalent. C. Anderson.

This course helps students learn how to apply the principles of yield management effectively. Focus is placed on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

HADM 6606 Restaurant Revenue Management

Fall, first seven weeks. 2 credits. Elective. Limited to 40 students. Prerequisites: HADM 7703; graduate standing or permission of instructor. G. Thompson.

Revenue management is a method for managing capacity profitably. The objective of this course is to help students learn how to apply the principles of revenue management to maximize profitability in the restaurant industry. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

HADM 6609 Airline Service Management

Spring. 3 credits. Elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. \$75. M. Tabacchi.

This course is a must for those interested in a career in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in the service economy. The strategies of developing competitive advantages and superior service in today's erratic economic climate are a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service strategies both on the ground and in the air, students study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives are examined. Case studies based on national and international airline business are an integral part of the course. A field trip to an airline's hub city enables students to observe first-hand the industry and its personnel in action.

HADM 7703 Operations Management

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. R. Verma.

Based on principles of scientific management, this course gives students the skills and understanding necessary for decision making using quantitative and qualitative data. Students use computer spreadsheet software extensively for "number-crunching" analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a "tool kit" of sophisticated Excel models for solving service-operations problems.

Facilities Management, Planning, and Design

HADM 2255 Hospitality Development and Planning

Fall, spring. 3 credits. Required. Not open to freshmen. S. Robson.

Students are introduced to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. There is an emphasis on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

HADM 3351 Hospitality Facilities Design

Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: HADM 2255 or permission of instructor. R. Penner.

This intensive studio course provides the graphic skills important for design and experience in applying these skills in hospitality planning and design situations. Students prepare design projects using both hand drafting and computer-aided design software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guest room suite, lobby and lobby bar, and full-service restaurant or specialty coffee retail outlet.

HADM 3355 Hospitality Facilities Management

Fall, spring. 3 credits. Required. Prerequisite: HADM 2255. C. A. Fisher.

This course provides an overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance department. The renovation needs of hospitality facilities are examined, and key managerial aspects of renovations are considered.

HADM 4451 Restaurant Development

Fall. 3 credits. Prerequisites: Hotel seniors or graduate students; juniors and non-Hotel students by permission of instructor. Non-Hotel students must have significant foodservice operations experience. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in HADM 4453 in the following spring. S. Robson.

Students are exposed to the process, challenges, and rewards of developing a restaurant concept from the idea to the

construction of the first unit. The course includes readings, discussions with industry leaders, and cases. It culminates with students formulating a detailed restaurant concept and development plan.

HADM 4453 Foodservice Facilities Design

Spring. 3 credits. Elective. Limited to 12 students per sec. Pre- or corequisites: HADM 3351, 3305, and 4451 or permission of instructor; Hotel seniors; juniors by permission of instructor. Grads should have commercial food production experience. S. Robson.

This course provides an introduction to the basic concepts of foodservice facilities design and planning with an emphasis on restaurants. All documentation is produced on computer-aided design software, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

HADM 4457 Hotel Development

Fall. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip: approx. \$150. Staff.

This multidimensional course introduces the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings will be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course. An overnight field trip may be a required course activity.

HADM 7751 Properties Development and Planning

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. S. Robson.

This course serves as an overview of hospitality project development and planning from the perspective of an owner and manager. Students learn about the role of the development team, feasibility studies, space programming, construction and renovation management, and functional and design criteria for hotels and restaurants. Teams will prepare program documentation for a new lodging property or concept.

MARKETING, TOURISM, STRATEGY, AND INFORMATION SYSTEMS

Marketing, Tourism, and Strategy

HADM 1141 Microeconomics for the Service Industry

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lec. B. Carroll.

Introduces students to microeconomic principles and theories in the context of applications and solutions associated with the service industry with a focus on hospitality and travel. Topics include principles of production, supply and demand, firm behavior, costs, pricing, and topics specifically associated with the travel and hospitality industry. Course work

includes readings, lectures, discussions, problem sets, and guest speakers.

HADM 2241 Marketing Principles

Fall, spring. 3 credits. Elective. Prerequisite: non-Hotel students. Not open to graduate students. H. Chun and M. D. Giebelhausen.

This is a foundational marketing course that includes the study of concepts, activities, and decisions related to the exchange process, managing the marketing mix, and development of marketing strategy in for-profit and not-for-profit organizations. Students learn about basic principles of marketing management, with a special focus on the service industry. Emphasis is placed upon how the concepts and ideas might be applied to various marketing decision-making situations.

HADM 2243 Marketing Management for Services

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lec; no freshmen. H. Chun, M. D. Giebelhausen, and R. Kwortnik.

Students develop an understanding of marketing management: the process through which organizations analyze, plan, implement, and control programs to develop and maintain beneficial exchanges with target buyers. Students learn about marketing management through a mix of readings, lectures, class discussions, individual and group exercises, industry guest speakers, and exams. A key element of the course involves students working to create a marketing plan.

HADM 3340 Franchising in the Hospitality Industry

Fall. 3 credits. Elective. Not open to freshmen or sophomores. Grad students should enroll in HADM 6640. A. Kalnins.

The course deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, and structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed.

HADM 3343 Marketing Research for Decision Makers

Fall. 3 credits. Elective. Prerequisite: HADM 2243 and a statistics course. M. D. Giebelhausen.

This course helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and choice models. Special emphasis is placed on what each method should and should not be used for and why.

HADM 3347 Consumer Behavior

Fall, spring. 3 credits. Elective. Limited to 200 students. Prerequisites: junior or senior standing; HADM 2243 or equivalent introductory marketing course. Grad students should enroll in HADM 6647. H. Chun and M. Lynn.

Helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design,

promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

HADM 4440 Understanding and Managing Hospitality Sales

Spring. 1 credit. Elective. Weekend class, dates to be announced. J. Parke.

This course will provide instruction in, and comprehension of, basic sales concepts and principles related to hospitality sales management. Objectives include understanding the role and organization of sales in hospitality, learning fundamental sales skills and processes necessary in hospitality sales, learning sales management concepts and processes, and developing the ability to design and develop a sales program and organization.

HADM 4441 Strategic Management

Fall, spring. 3 credits. Required. Prerequisites: senior standing; at least one course in accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class. C. Enz, A. Kalnins, and R. Kosova.

Strategic management integrates all of student's previous courses, including marketing, finance, accounting, operations, etc., and introduces them to new strategic management concepts. The course examines the total enterprise, the industry, and the competitive environment in which it operates. The goal is to develop a mastery of the analytical tools to perform analyses of the industry and competitors. The course focuses on how firms formulate, implement, and evaluate strategies. Using a case-based approach, the course emphasizes critical thinking and decision making to maintain competitive advantage in a hypercompetitive and maturing industry.

HADM 4444 Introductory Hospitality Entrepreneurship

Fall, spring, first seven weeks of semester. 3 credits. Elective. Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4445 concurrently. J. Quest.

An introductory course for the study of the discipline of entrepreneurship. Introduces students to the process of starting a business from the ground up and to the qualities that are associated with successful entrepreneurs. Students will learn to recognize a good/great business idea and how to evaluate it in terms of market opportunity, superiority of product or service, target audience, competitive landscape, and application of market research. Focuses on (a) identifying the business opportunity, (b) developing the concept, and (c) defining and constructing a business model. This course can be described as a business startup feasibility exercise that uses the construction of a business plan prototype as the format for the class learning experience. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

HADM 4445 Developing the Hospitality Entrepreneurship Business Plan

Fall, spring, 3 credits. Elective. Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4444 concurrently. J. Quest.

For students who wish to learn the disciplines involved in developing a business plan for a startup concept in the hospitality industry. The course will concentrate on the construction of business plans for new business concepts, focusing on all elements of the entrepreneurship discipline: identifying and validating a new business opportunity; organizing, constructing, and writing a sound, clear, concise business plan that includes feasibility phases, and determining the required resources, acquiring the necessary resources, creating the structure for implementation and management, and developing a strategy for harvesting the venture. Students will be introduced to actual business plans associated with successful capital raising, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. During the course, attention will be given to the disciplines of setting priorities, establishing operational budgets, and developing financial projections resulting from these budgets. This will include a projection for capital needed for startup. Upon completion of the construction of the business plans, the teams will present them to a panel of successful entrepreneurs and professional investors at the close of the course.

HADM 4446 Hospitality Pricing and Analysis

Spring, first seven weeks. 2 credits. Prerequisites: HADM 1141 and HADM 2243, others by permission of instructor. W. Carroll.

The development and application of pricing strategies in the hospitality industry are presented. Marketing, economic, and financial-pricing principles are applied in the context of the hospitality industry. Students are exposed to both theory and the practical application of pricing tools and analytical processes. Major trends and issues in hospitality pricing are examined and discussed, including the emerging role of channel management and dynamic travel packaging. Readings, lectures, discussions, cases, exercises, and presentations by industry experts are used to acquaint the student with the complexity and the methods of executing tactical and strategic hospitality pricing actions.

HADM 4447 Managing Hospitality Distribution Strategies

Fall. 3 credits. Elective. Prerequisites: HADM 1141 and 2243. B. Carroll.

Provides a framework for managing marketing distribution strategies. Emphasis is placed on presenting and analyzing the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include dimensions of hospitality marketing distribution; economics of the major hospitality distribution segments; managing hospitality distribution strategies; and the role of convention and visitors bureaus, national tourist organizations, and associations in distribution management.

HADM 4449 Integrated Marketing Communications

Spring. 3 credits. Elective. L. Klein Pearo.

Designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communications programs. The course will focus on exploring these tools within the hospitality industry, but the lessons learned can be applied broadly to any service or service-oriented industry. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

[HADM 5540 Brand Management

Fall. 3 credits. Elective. Next offered 2011–2012. C. Dev.

This course explores the impact of brands on consumer behavior, product management, and value creation. Through presentations, cases, exercises, and projects, we will examine the theories behind branding, the challenges of implementation, and current trends in branding. The traditional brand management system was created in the consumer packaged goods industry. In this course, we will evaluate its applicability to the service industry, in general, and the hospitality industry more specifically. We will discuss the evolving responsibilities of brand managers in these organizations—from brand introduction to brand extension to brand repositioning. Our ultimate goal is to for students to understand the opportunities and challenges faced by today's service organizations in creating, growing, managing, and evaluating brand equity.]

HADM 5541 International Marketing

Spring. 3 credits. Elective. Prerequisite: core marketing class or permission of instructor. J. Katz.

Teaches students how to create an international expansion plan for products and services. The course progression follows the creation of such a plan; students submit four papers that reflect the components of this plan, and the final submission should look like a real international business plan. To that end, students learn how to identify internationally transferable competitive advantages and define their product/service based on that; perform quantitative analyses of all potential markets; complete more detailed qualitative and quantitative analyses of two target markets (of their choice); and develop a marketing entry strategy.

HADM 6640 Franchising in the Hospitality Industry

Fall. 3 credits. Elective. Undergrad students should enroll in HADM 3340. A. Kalnins. For description, see HADM 3340.

HADM 6641 Firm and Global Business Strategy

Spring. Elective. 3 credits. Limited to advanced undergraduates and graduate students. R. Kosova.

Provides theoretical and analytical framework for understanding various aspects of international business environment and its implications for firm strategy. It will also derive some implications for the global operations in the hospitality industry. After reviewing the basic concepts of international business strategy and current globalization trends, the course focuses on the detailed analysis of the global business environment, including assessment of economic and political risks, impacts of cultural differences, international trade and commercial policy, exchange rates exposure, regional integration, and role of global institutions, as well as issues related to protection of property and intellectual property rights. Afterwards, the course analyzes how firms decide about market entry, pros and cons of various modes of entry including foreign direct investment (FDI), and debates political economy issues of FDI. At the end, the students have the opportunity to practice the learnt topics in an in-class game, which simulates the negotiations between multinationals, local companies, and governments during firm global expansion.

HADM 6645 Services Marketing and Customer Experience Management

Fall. 3 credits. Elective. Prerequisites: graduate standing; marketing course or permission of instructor. R. Kwornik.

Students will develop critical analytic skills and knowledge for implementing service strategies to create and manage the customer experience. Topics include services consumer behavior and decision processes; services research methods; service quality analysis; customer-relationship management and service recovery; service experience design (analysis of "service as theater," service "blueprinting," and the "servicescape"); and integrated marketing communication strategies for services. Students learn through discussion of current services theories and research, experiential exercises, case analyses, and industry guest speakers. A main focus of the course is a team consulting project involving a services-marketing audit of a "live" organization.

HADM 6647 Consumer Behavior

Fall. 3 credits. Elective. Limited to 25 graduate students. Undergrad students should enroll in HADM 3347. M. Lynn. For description, see HADM 3347.

HADM 6649 Integrated Marketing Communications (also NBA 6210)

Fall. 3 credits. Prerequisite: for non-Hotel students permission of instructor. L. Pearo. Provides students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. The course focuses on exploring these tools within the hospitality industry, but the lessons learned can be applied broadly to any service or service-oriented industry. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students

will master the skills necessary for marketing campaign management.

HADM 7743 Marketing Management for Services

Summer. 3 credits. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. M. Lynn.

Covers the fundamental concepts of marketing management and the techniques, analyses, and frameworks for solving marketing-management problems. Students explore theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotions, and distribution policies. The capstone of the course is team development of a marketing plan for a new hospitality business.

HADM 7744 Competitive Strategies for the Hospitality Industry

Spring. 3 credits. M.M.H. requirement.
Prerequisite: M.M.H. students or permission of instructor. A. Kalnins.

Examines competitive strategies, cooperative strategies, and growth strategies within the hospitality industries and beyond. The goal is to develop a mastery of the strategic issues facing hospitality as well as important new qualitative tools to perform analyses. Using a case-based approach, the course focuses not only on hospitality but on other industries as well, allowing for thinking "outside the box" and development of novel solutions not possible by studying only hospitality. The course integrates knowledge from all previous M.M.H. courses including marketing, finance, organizational behavior, and human resources.

Information Systems

HADM 1174 Business Computing

Fall, spring. 3 credits. Required. Limited to 40 students per sec: fall, Hotel freshmen and transfer students only; spring, co-listed with HADM 2274, open enrollment. M. Talbert.

Provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures, and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

HADM 2274 Business Computing

Spring. 3 credits. Elective. Limited to 30 non-Hotel students per lec. Co-meets with HADM 1174. M. Talbert.

Provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures, and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

HADM 2275 Introduction to Information Systems Management

Fall, spring. 3 credits. Required.
Prerequisites: Hotel students; HADM 1174. P. Clark.

Goals for the course are to learn about information systems; understand and be able to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information-systems fundamentals needed throughout hospitality careers. The course is designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a course for technologists but rather for the general-management student. Students are provided with the essential information that all hospitality management professionals should know about information systems.

HADM 3374 Fundamentals of Database Management and Data Analysis

Spring. 3 credits. Elective. Limited to 30 students. M. McCarthy.

Prepares students to create and manage information in a knowledge-based organization. The design and use of database and spreadsheet functionality are used to perform analyses and to make decisions. Students gain a conceptual foundation and then practice applying these ideas through project activities and course readings. Topics include information and information management in organizations; fundamentals of relational database design and implementation; SQL queries; how to work in a database design team and as an individual research analyst; database design and management using Microsoft Access; how to normalize a database design to ensure effective use of the technology; analysis of the managerial decision-making process functionality within Microsoft Access; the conversion of data into information and knowledge that can be leveraged for particular business goals; the role of data and information management in contemporary society; and data management opportunities in the hospitality industry.

HADM 4476 Visual Basic for Applications: End-User Programming

Fall, spring 3 credits. Elective. Limited to 40 students per lec. Due to capacity restraints in Binenkorb lab, attendance at first class is mandatory; no-show students are dropped to make room for stand-by students; students may not drop course after second week of class. M. Talbert.

This is an introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab-based.

HADM 4477 Advanced Business Modeling

Fall, spring. Lec 1 is first seven weeks of semester, Lec 2 is second seven weeks. 2 credits. Limited to 21 seniors and graduate students; priority given to M.M.H. students. Prerequisite: HADM 1174. Note: Deadline to drop course is end of first week. M. Talbert and M. McCarthy.

Focuses on organizational systems, planning, and the decision process and how information is used for decision support in organizations. Students are provided with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

HADM 6677 Advanced Business Modeling

Spring, first seven weeks. 2 credits. Undergraduates must enroll in HADM 4477. Note: Deadline to drop is midpoint of course. M. Talbert.

For description, see HADM 4477.

FINANCE, ACCOUNTING, AND REAL ESTATE

Finance/Accounting

HADM 1121 Financial Accounting

Fall, spring. 3 credits. Required.
Prerequisite: Hotel undergraduates. D. Dittman.

An introduction to financial accounting that studies transaction analysis, the balance sheet, income statement, statement of cash flows, and the statement of stockholder's equity. Accounting for investments, bonds, receivables, inventories, tangible and intangible assets, capital stock transactions, as well as the direct and indirect methods for cash flow are analyzed. Basic financial ratios are introduced and interpreted.

HADM 2221 Managerial Accounting

Fall, spring. 3 credits. Required.
Prerequisites: Hotel undergraduates; HADM 1121 or equivalent. G. Potter and J. Hesford.

This course focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There will be one common final exam at the end of the semester.

HADM 2222 Finance

Fall and spring. 3 credits. Required.
Prerequisite: Hotel students or permission of instructors. L. Canina and Q. Ma.

Provides students with a broad understanding of managerial finance. The overall objective is to develop skills in using accounting and cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and long-term financial decision making. Topics will include valuation of investments, capital budgeting decisions, risk analysis for capital budgeting, capital structure, long-term financing, cost of capital, debt capacity, and raising capital in the public markets. When appropriate, specific examples relating to important issues in the hospitality industry will be discussed.

HADM 2223 Financial Accounting Principles

Fall, spring, 3 credits. Elective. Prerequisite: non-Hotel undergraduates. Staff.

Serves as an in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

HADM 2225 Finance

Fall, spring, 3 credits. Elective. Limited to non-Hotel undergraduates. J. Wellman.

Students are exposed to a wide variety of corporate finance topics, including time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and an introduction to options.

HADM 3320 Personal Financial Management (formerly HADM 1120)

Fall, spring, 3 credits. Elective. L. Hensley and P. Strebel.

Students are provided with an overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement planning, and estate planning.

HADM 3321 Hospitality Financial Management

Fall, spring, 3 credits. Required.

Prerequisites: HADM 1121, 2221, and 2222, or permission of instructor. J. de Roos and P. Liu.

Focuses on owners of hospitality assets and on equity investors in these assets. The course develops an appreciation of the strategic role of real estate in the hotel and restaurant industries and the role of unit-level financial analysis in making investment decisions. That appreciation forms the essence of financial management in hospitality real estate. The course builds competence in using the quantitative tools of financial economics. Topics include property rights, hotel and restaurant investment analysis, valuation of the assets and the owner's equity, the drives of unit level revenues and value, an introduction to the fundamentals of hotel and restaurant financing, and an overview of the management contracts and franchise agreements used in hotels and restaurants.

HADM 3325 Financial Planning and Wealth Management

Fall, spring, 3 credits. Elective. Prerequisite: junior or senior standing. P. Strebel.

Students are exposed to the many facets of wealth management: creating a coordinated financial plan, the dynamics of working with clients, the challenges of running a financial planning practice, and the attributes and skills required to be a successful financial advisor. This course is geared toward students interested in working in an advisory capacity with clients in fields such as investment banking, brokerage, insurance industry, accounting and tax, consulting, law, social work, banking, credit unions, lending institutions, securities, and investments.

HADM 4421 Control in Hospitality Operations

Spring, 3 credits. Elective. Limited to 30 students. Prerequisites: HADM 3321 or equivalent. Staff.

This course focuses on measurement and evaluation of financial and nonfinancial performance. It explores the key decisions made in using results controls, such as choices

of performance measures, standards, targets, and incentives. Limitations of traditional performance measures are discussed and approaches to deal with these shortcomings are analyzed.

HADM 4422 Taxation and Management Decisions

Fall, 3 credits. Elective. Limited to 75 students. Prerequisite: junior, senior, or graduate standing. L. Hensley.

This course covers U.S. federal taxation of businesses and estate/gift taxation. Keys concepts include the advantages and disadvantages of the various organizational structures including corporations, partnerships, subchapter "S" corporations, sole-proprietorships, and LLCs; options available for income tax planning including depreciation, retirement plans, compensation, fringe benefits, and net operating losses; passive activity rules, including special rules pertaining to investment real estate; tax compliance and research; and the relationship of US taxation to state and foreign taxation.

HADM 4425 Securitization and Structured Financial Products

Fall, 3 credits. Elective. Limited to 30 students. Prerequisite: HADM 2222 or equivalent. Graduate students should enroll in HADM 6625. D. Lebret.

Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge of the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loans, and credit card-backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

HADM 4426 Advanced Corporate Finance

Spring, 3 credits. Elective. Prerequisites: junior or senior standing; HADM 3321. Graduate students should enroll in HADM 6626. L. Canina.

Building on the finance class sequence (HADM 2222 Finance and HADM 3321 Hospitality Finance Management), this course helps students develop a framework that is useful for understanding a broad range of major corporate financial policies. While the course materials are relevant to businesses in general, special emphasis will be placed on applying the framework in the hospitality industries. The framework and applications will be useful to those who will work for corporations, those who will serve as outside consultants to corporations on appropriate financial policies, and those who will work as external financial analysts, whose primary focus is on understanding and evaluating the financial decisions made by corporate management.

HADM 4429 Investment Analysis and Portfolio Management

Fall, 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor. Graduate students should enroll in HADM 6629. Staff.

The course is an exploration of the three major investment vehicles: bonds, equity, and derivatives. In each case, students discuss what they are, how they are valued, and what risks they entail. The intimate relationship between return/value and risk is explored. At the focus of these discussions lies the idea that optimal investing is chiefly about balancing risk with returns; extracting maximum gains with minimum exposure; and creating portfolios with "good trade-offs." A study of theories develops a toolkit of skills, and a detailed look at practical application, including pricing anomalies, trading "programs," and a hands-on portfolio simulation, illuminate this investigation.

HADM 6624 Reporting and Analysis of Financial Statements

Fall, 3 credits. Elective. Limited to 40 students. Prerequisite: junior, senior, or graduate standing. G. Potter.

This course is designed to provide an understanding of the basic accounting model and the accounting rules for the measurement of assets, liabilities, and owners' equity. Emphasis is placed on understanding the economic substance of the transactions and the implications of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality" of hospitality firms. Focus is from an outsider's view of the company, and students should be able to evaluate and interpret published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

HADM 6625 Securitization and Structured Financial Products

Fall, spring, 3 credits. Elective. Limited to 40 seniors or graduate students; others by permission of instructor. Prerequisite: HADM 2222 or 7723. Undergraduate students should enroll in HADM 4425. D. Lebret.

For description, see HADM 4425.

HADM 6626 Advanced Corporate Finance

Spring, 3 credits. Elective. Prerequisites: HADM 3321; graduate standing. Undergraduates should enroll in HADM 4426. L. Canina.

For description, see HADM 4426.

HADM 6629 Investment Analysis and Portfolio Management

Fall, 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor. Undergraduates should enroll in HADM 4429. Staff.

For description, see HADM 4429.

HADM 7723 Corporate Finance

Summer, 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Q. Ma.

Builds on the prerequisite courses of financial accounting and financial reporting. Topics include applications of discounting techniques, evaluation of capital expenditures, estimation of cost of capital, bond and stock valuation, portfolio theory, asset-pricing models, and capital-structure decisions. The course emphasizes valuation skills as a means to bring together the cost of capital, financing, and operating issues faced by a firm. Students come to understand the financial impact of managerial decisions, know how to differentiate decisions that increase the value

of a firm, and know how to properly evaluate investment, financing, and payout decisions. They also learn standard techniques of financial analysis, such as discounted cash-flow valuation, capital budgeting, risk analysis, and estimation of the cost of debt and equity.

HADM 7724 Managerial Accounting

Summer. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. J. Hesford.

This introduction to managerial accounting, which is the use of accounting information for decision making and control, covers cost behavior, cost classification, cost-volume-profit analysis, product costing, budgeting, variance analysis, cost estimation, cost allocations, customer-profitability analysis, managerial control systems, and performance measurement.

Real Estate Development

HADM 4420 Principles of Real Estate

Fall, spring. 3 credits. Elective. Limited to 50 students. Prerequisites: HADM 2222, HADM 2225, or AEM 3240, or permission of instructor; junior or senior standing. C. Liu and P. Liu.

This introduction to real estate finance and investment emphasizes developing valuation and decision-making skills. It introduces students to the business of real estate, both residential and commercial real estate, including roles, activities and players, terminology, and how the tools, concepts, and models in real estate are used in decision making. The objectives of this course are twofold: (1) to help students develop an understanding of real estate fundamentals, and (2) to introduce students to the quantitative aspects of real estate—investment decision making, valuation under uncertainty, and mortgage financing.

HADM 4423 Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisites: HADM 3321 or equivalent; junior or senior standing. Graduate students must enroll in HADM 6621. D. Quan.

Focuses on real estate financing for hospitality-oriented projects. Lectures address the following topics: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, and participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners tie course material to current industry practices.

HADM 4428 Real Estate Finance and Investments

Fall, spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel undergrad students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. Graduate students should enroll in HADM 6628. D. Lebret.

This course promotes sound real estate investment and finance decision making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through application of an extended version of the after-tax discounted cash flow model and other valuation models,

including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

HADM 5523 Cornell Real Estate Case Competition Course

Fall. 2 credits. Prerequisite: HADM 4423;

can be taken concurrently. Prerequisites:

Must pass a written exam and interview with the Real Estate Minor faculty.

Enrollment typically limited to seven: six team members and one alternate. Students MUST participate in the Cornell Real Estate Case Competition held in New York City the second Thursday prior to Thanksgiving break. The Cornell team is a Center for Real Estate Finance (CREF) sponsored team; however, students may incur additional personal costs during their travel to NYC. D. Quan.

Designed to prepare selected students for the Cornell Real Estate Case Competition, held each fall. Team members will be expected to prepare, on a weekly basis, their analysis of sample real estate case studies within a limited time period throughout the semester. The presentations will be in front of mock competition judges and the supervising faculty. Their analysis and presentation will be critiqued by the real estate and communications faculty as well as the panel of judges. Substantial feedback on all aspect of the presentations will be provided. Students will develop extensive skills in the analysis of complex real estate decisions and will become proficient in presenting and communicating complex real estate issues within a tight time frame.

HADM 6620 Principles of Real Estate

Fall, spring. 3 credits. Elective.

Prerequisites: Hotel M.M.H. and Program in Real Estate students or permission of instructor. C. Liu.

The course is designed to facilitate student learning of real estate fundamentals, including residential and commercial real estate. Students develop a thorough understanding of residential mortgage finance and commercial real estate investments. The major objectives of this course are twofold: (1) to help students develop an understanding of real estate; its practice, its institutions, and its players; and (2) to introduce them to the quantitative aspects of real estate; investment decision making, valuation, and debt financing.

HADM 6621 Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisite: graduate standing. D. Quan.

Focuses on real estate financing for hospitality-oriented projects. The following topics are addressed: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentation of hospitality industry real estate practitioners will tie course material to current industry practices.

HADM 6622 Hospitality Asset Management

Spring. 3 credits. Elective. Prerequisite: for undergraduates, HADM 3321 or HADM 4420; for graduate students, HADM 6620. J. de Roos.

Hotel asset managers act on behalf of the owners of hospitality investments to meet the specific objectives of ownership. The asset manager's role in building value is analyzed at both the portfolio and property levels. Lectures, assignments, cases, and guest speakers introduce the latest techniques in asset management and provide insights into the current lodging-market and operational challenges. Topics include hotel management contracts, sell vs. hold decisions, benchmarking property performance, and the capital investment decision.

HADM 6628 Real Estate Finance and Investments

Spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel grad students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. Software fee: approx. \$50. J. Corgel and D. Lebret.

This course promotes sound real estate investment and finance decision-making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through application of an extended version of the after-tax discounted cash flow model and other valuation models, including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

HADM 6667 Advanced Revenue Management

Fall, spring. 3 credits. Elective.

Prerequisites: HADM 6628 (which can be taken concurrently) or equivalent course work and securities investment experience. Students are selected by application, with closing dates well in advance of registration. J. Corgel.

Students manage a real-world portfolio of publicly traded real estate securities and unlisted real estate fund unit interests. Investment management of the portfolio involves fundamental research in property and securities markets, making initial investments in real estate companies and funds, executing trades in positions held in the portfolio, developing/testing trading strategies, and managing risk. The objective of the course is to promote sound real estate investment decision making. Students will be exposed to a broad literature on real estate securities, fund investing, trading strategies, and hedging. They will be provided opportunities to practice advanced methods of investment management and securities trading with special applications to real estate, such as taking simultaneous long/short positions to hedge systematic risk, using newly created derivative real estate securities to directly hedge long positions, and running portfolio optimizers to manage unsystematic risk. All types of residential and commercial real estate securities are analyzed, including those of hospitality firms.

OTHER

HADM 4491 Hotel Ezra Cornell (H.E.C.)

Fall and spring. Variable credit: 2–3 in fall and 3–4 in spring. Elective. Prerequisite: Hotel juniors and seniors; others by permission of instructor. Cost of required field trip to November hotel show in NYC: approx. \$200. R. McCarthy.

The HEC Board of Directors are responsible for planning, organizing, staffing, directing, and controlling the weekend-long HEC conference to be held April 8–11, 2010. HEC's mission is to "Showcase Hospitality Education Through Student Leadership." For 80-plus years, HEC has been an essential part of the Cornell Hotel School, allowing students the opportunity to put theory into practice while taking on the leadership responsibility for this student-run hospitality showcase. Board members receive credit for their participation in HEC: 3 Hotel Elective credits in the fall and 3 Free Elective credits in the spring.

Students interested in running for board positions in the spring must be in good academic standing with a minimum GPA of 2.5. Eligibility requirements for specific board positions can be obtained from the HEC Office (G72 Statler Hall) and will be distributed to the student body. Students interested in a board position are encouraged to discuss their intentions with the HEC course instructor.

HADM 4493 Management Intern Program I—Operations

Fall, spring. 6 credits. Elective. Prerequisites: Hotel freshman and sophomore core courses. Highly recommended: HADM 3321, 3305, 3355, and 3365. Additional course work may be required for applicants considering specialized internships. Students must submit detailed plan for completion of all remaining academic requirements before acceptance into course. Faculty.

Limited to juniors and seniors in the Hotel School with approval of the Management Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted to MIP enroll in both HADM 4493 and 4494. Students enrolled in HADM 4493 receive academic credit in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.5 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.

HADM 4494 Management Intern Program II—Academic

Fall, spring. 6 credits. Elective. Prerequisites: junior or senior standing in Hotel School; permission of Management Intern Program (MIP) faculty committee. Faculty.

The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted into MIP enroll in both HADM 4493 and 4494. Students enrolled in HADM 4494 receive academic credit in free electives for submission of a goals and objectives statement, four management reports, six journal entries that focus on insights gained through analysis of events occurring in the workplace, and four

Hospitality Management Checklist summaries. Upon return to campus, each intern completes a debriefing and an oral presentation to fulfill the academic requirements. Students must be in good academic standing and have a GPA of at least 2.5 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.

HADM 4496 Hospitality Industry Practicum

Fall. 3 credits. Elective. Prerequisite: permission of instructor; selection is highly competitive, with the instructor's decision heavily based upon the student's past performance in the classroom and group projects. Weekend class, dates to be announced. R. Kwornik.

This experiential learning course offers upperclassmen the opportunity to apply their academic knowledge to tackle real-world business problems and questions. Under the guidance of Hotel School faculty, teams of four to six students assume the role of researchers/advisors to organizations that seek guidance on business strategy. Projects might include market-feasibility studies, service-process improvements, service innovation, business planning, and others. Students work closely with sponsoring organizations and supervising faculty to scope the projects, conduct analysis, and report findings/recommendations. Major outcomes include an oral presentation to and written report for management. The HIP course presents students with a practical, multidisciplinary approach to learning and fosters development of personal and professional skills for entrepreneurship, innovation, and project management.

HADM 4497 Latin Honors Course

Fall, spring. 3 credits. Elective. Prerequisite: Enrollment by approved application only. Staff.

Outstanding students may conduct independent research under faculty supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report. Students make two presentations coordinated by the Center for Hospitality Research (CHR): one at a preliminary stage and one at project completion. Students submit the completed report to the CHR, which will be available online through the CHR web site.

HADM 4498 Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

This course can be taken only by students conducting two independent studies in one semester. For more details, see HADM 4499.

HADM 4499 Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register are arranged on an individual basis. Note: Students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the semester for which the student is enrolled in the independent study. The usual add/drop policy applies, and

retroactive credit for work commenced after an academic semester has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultations are mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the hotel school elective requirement, but, rather, toward free electives. Students cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project. Enrollment forms are available in the Office of Student Services, 180 Statler Hall.

HADM 5592 Information Survival Skills

Fall, first seven weeks. 2 credits. Elective. K. Bolton.

Introduces students to the information literacy skills needed to thrive at Cornell and beyond. An emphasis on specific material related to the core foundations of the Hotel School (i.e., information skills related to real estate, foodservice, finance, etc.) will be featured. A variety of teaching approaches will be implemented, including lectures, hands-on practice, classroom polling, student blogs, and more. Students will become familiar with current information technologies and social media tools, such as blogs, Twitter, citation management software, current awareness tools, etc. as they apply to information management in the 21st century.

HADM 6690 Sustainable Global Enterprise in Hospitality (also NBA 6900)

Fall, spring (yearlong); second seven weeks in fall, first seven weeks in spring. 2 credits. Elective. Final grade assigned upon completion of the spring semester. M. Milstein.

An advanced, experiential learning course in which students are primarily tasked to work directly with hospitality companies to solve real sustainability-related issues in the marketplace. Projects are related to the greening of current operations (operational), the refurbishment of existing assets and properties (brownfield), and the establishment of new businesses (Greenfield). The goal is to help students develop and refine critical analysis and decision-making skills related to hospitality management and sustainability through hands-on learning experiences.

HADM 6698 Graduate Independent Research

Fall, spring. Elective. Staff.

Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 6699 Graduate Independent Research

Spring. 2 credits. Elective. Staff.

Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 7797 Hospitality Industry Leadership Development Program

Summer. 1 credit. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. Faculty.

A dozen or more senior executives from the hospitality industry visit the campus to evaluate students as individuals and as part of a team. They assess how well the students are able to lead, take direction, work with others, present ideas, and listen to other ideas. At the end of the class, one or more of the industry "coaches" meet with students individually, and in teams, to evaluate performance. This centerpiece of the orientation process is designed to outline some of the personal and career goals students will want to work toward in the coming year.

HADM 8890 M.S. Thesis Research

Fall, spring. Required. Faculty.

HADM 9990 Ph.D. Thesis Research

Fall, spring. Required.

COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Alan Mathios, dean

S. Kay Obendorf, senior associate dean for research and graduate education

Carole Bisogni, associate dean for academic affairs

Karl Pillemer, associate dean for extension and outreach

Darryl Scott, director, admission, student, and career development

Tracey Thompson, college registrar

COLLEGE FOCUS

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, and human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multi-disciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES

The college is housed in Martha Van Rensselaer (MVR), Savage, and Kinzelberg Halls; Mann Library; as well as the Biotechnology Building and Weill Hall. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories; design studios and computer-aided design laboratories; woodworking shops; human factors and infant research facilities; and classrooms for distance learning. Also included are learning resource centers for career planning, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, and a constant temperature and humidity laboratory.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS

Human Ecology programs lead to the degrees of bachelor of science (B.S.), master of arts (M.A.), master of science (M.S.), master of professional studies in human ecology (M.P.S.), master of health administration (M.H.A.), and doctor of philosophy (Ph.D.).

General academic information concerning the bachelor of science degree is given here under "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutritional Sciences, Policy Analysis and Management, and Fiber Science & Apparel Design). For information regarding the Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES

Bachelor of science (B.S.) degrees are offered in the following areas:

- Biology and society
- Design and environmental analysis
- Fiber science & apparel design
- Human biology, health, and society
- Human development
- Nutritional sciences
- Policy analysis and management

UNDERGRADUATE AFFAIRS

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 MVR (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty members are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Development (170-172 MVR) can help prospective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar (146 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body

The College of Human Ecology undergraduate enrollment is 1,250. Roughly 400 students

graduate each year; last year 275 freshmen and 115 transfer students matriculated. Ninety faculty members serve as advisors to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately half of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. Approximately 30 percent identified as members of minority groups. Members of the college faculty chair the special committees of approximately 200 graduate students.

Mature Students

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Student and Career Development (172 MVR) can provide information of interest to mature students. Mature students may be permitted to enroll for as few as 6 credits and also are permitted to extend their residency beyond the normal eight semesters. To find out about qualifying for prorated tuition, mature students must see the college registrar during the course enrollment period in the preceding semester.

Transfer Students

Students may be considered transfer students once they complete 12 college credits after high school graduation. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Liberal arts credits from other institutions transfer readily, but students must earn a minimum of 60 Cornell credits to graduate. Internal transfer students are admitted to Human Ecology from one of Cornell's other six undergraduate units. Students transferring internally should take special care to learn the policies of Human Ecology, because rules at the various Cornell colleges often differ. Before admission, both internal and external transfer candidates should contact the Office of Admission (170 MVR, 255-5471) to discuss credit transfer. Upon matriculation, admitted transfer students should attend the orientation and contact the Human Ecology registrar's office (146 MVR, 255-2235) to discuss how transfer credits will apply to their specific degree program.

Special Student Status

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are

considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255-5471).

Empire State Students

Occasionally, a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255-4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College's notification of cross-registration (form number SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

MAJORS

The college requires students to fulfill requirements for a major to graduate. Students must declare a major by the end of the sophomore year. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Student and Career Development (172 MVR), academic advisors, and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the change of major form and are processed through the college registrar's office, 146 MVR. Change of major will trigger re-evaluation of all academic credit and assignment of a new faculty advisor.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing the built environment and its effects on human behavior, experience, and the environment itself. The processes for creating, managing, and maintaining the built environment, and the implications for how we live our lives face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing graduates

who can help individuals, groups, and organizations meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Students explore innovative concepts for the design and management of interior environments through laboratory, shop, studio, and computer facilities. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA resource center includes books, journals, newsletters, and material samples for student use.

DEA Honors Program

The honors program, which leads to a B.S. degree with honors in Design and Environmental Analysis, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent research. In addition to fulfilling the requirements for their major, students in the honors program prepare and orally defend an honors thesis. Honors students work with a research mentor in preparing for their thesis. Interested students should obtain a DEA Honors Program application form online. For more information, students should visit the DEA website: www.human.cornell.edu/che/DEA/Academics/Undergraduate/ughp.cfm or contact the DEA Honors Representative, Alan Hedge.

Options

The department offers undergraduate education in three areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is nationally accredited by the Council for Interior Design Accreditation. The Facility Planning and Management Program at Cornell is an IFMA recognized program. This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option should plan on a minimum of six semesters at Cornell to complete the program.

Option I: Interior Design

This option prepares students for professional careers in interior design. The program emphasizes a design process in which innovative solutions are based on research-derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials and finishes, and professional practice. Students may use their elective courses to develop a specialization in areas such as design history, historic preservation, theory and criticism, design leadership, interactive multimedia,

design sustainability, and behavior-based design.

This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and industrial design.

Option II: Facility Planning and Management

This option prepares students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

This option focuses on the interaction between people, technology, and their physical surroundings. The program seeks to expand understanding of how technology and the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. This knowledge is also applied to human-computer interaction usability issues. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in software firms, high-technology companies, design firms, and in urban planning and other public agencies, as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

During their first semester, all DEA majors are matched with a faculty advisor by the director of undergraduate studies.

Consultation with faculty advisors about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisors can make recommendations on what to include. Students are free to change advisors. Although advisors should be consulted about students' schedules during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

FIBER SCIENCE & APPAREL DESIGN

The Fiber Science & Apparel Design (FSAD) major is unique in the Ivy League, combining a strong liberal arts foundation with excellent training in apparel and fibers. FSAD offers a broad range of courses, from the art of designing apparel and accessories, to the business of manufacturing and marketing them internationally, to the science of textiles and fibers.

All FSAD students receive an introductory exposure to the basics of textiles and design. Students then choose one of three options that emphasize the application of design principles, management and marketing, or the physical and material sciences. Students may combine courses from more than one option if they choose.

Academic course work is further enhanced by field and international experiences and significant opportunities to do independent projects for credit with individual faculty members. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All FSAD majors are matched with a faculty advisor by the director of undergraduate studies, Professor Charlotte Jirousek. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty advisor. Students in apparel design must begin working with their advisors early to develop a professional portfolio of their work. Students are free to change advisors; changes must be recorded with the director of undergraduate studies. Although advisors oversee course selection for the following semester, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his or her major and college.

Student Work

All apparel design work done as part of the academic program will be held by the department until it has been released by the instructor. Certain exceptional work may be used by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. Most transfer students will need at least one extra semester to fulfill the requirements of the major. Transfers in the design option should plan on two additional semesters.

Option I: Apparel Design

The Apparel Design option relates the human need for fashionable and functional clothing and accessories to design principles and to the physical properties of textiles. Students take a sequence of studio courses, focusing on the manipulation by hand, eye, and computer of form, color, and fabric, as well as courses in the social, economic, historical, and cultural aspects of design. Many students participate in design competitions sponsored by the fashion industry.

Option II: Fashion Design

The Fashion Design Management option applies management and marketing principles to industry and consumer issues in this sector of the economy. Courses focus on the processes used to develop, manufacture, and distribute apparel and textile products and examine topics such as business organizational structures, globalization, product development, communication, advertising and marketing, and entrepreneurship. Students combine theory with case studies to find solutions to everyday problems.

Option III: Fiber Science

The Fiber Science option teaches the physical, chemical, and engineering properties of fibrous materials, advanced engineering composites, geotextiles, and protective clothing, as well as the more traditional applications found in apparel interiors. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Fiber Science & Apparel Design have found challenging employment within the apparel and textile sector, in independent and government-sponsored research, and in community organizations. In addition, the program prepares students for graduate or professional study in apparel design, apparel or textile marketing, business and management, or fiber/polymer science. Some students continue professional study in business, law, or medical school.

Apparel students design for influential fashion houses and under their own labels. Graduates also do specialized design in fields such as military, athletics, and public safety; create innovative clothing for special populations such as children, senior citizens, and the physically challenged; and use their creativity in public-relations firms, theater, publishing, and promotion.

Graduates of the Apparel and Textile Management program are attractive candidates for leadership positions in fashion and other industries. Students who go on to graduate work are well prepared for advanced programs in fields such as business administration, marketing, economics, law, textiles, communication arts, and education.

Recent graduates of the Fiber Science program have begun careers in the fiber and textile industries as well as with government agencies developing and evaluating new products, conducting research, providing technical services, helping to ensure product safety, and coordinating consumer information programs.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The human biology, health, and society (HBHS) program permits students to combine their interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Issues that can be explored include biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

The field of human development covers the entire life span and has benefited from the contributions of many disciplines. Human development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. An important emphasis is the role that social institutions such as schools, workplaces, and neighborhoods play in human development, as well as the influence that developing people have on their environments. The human development major provides an excellent foundation for many professional careers, such as law, medicine (pediatrics, geriatrics, and psychiatry), clinical psychology and other mental health professions, education, social work, other health-related professions, business, nonprofit management, and advocacy. Many human development graduates attend graduate school in the fields of human development, psychology, and sociology.

Classes in human development cover a wide range of issues and approaches, and are organized into six different areas: social and personality development, cognitive development, human developmental behavioral neuroscience, aging and health, law, and psychology and human development. The faculty in the Department of Human Development come from multiple disciplines, including developmental psychology, neuroscience, clinical psychology, education, and sociology. The research of the department's faculty is extensive and world renowned and includes issues such as the neurobiological basis of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, the effects of environmental stressors on children's cognitive development, interventions to prevent and mitigate the impacts of child maltreatment, risk-taking during adolescence, risk and resilience factors affecting reactivity to stress across the life course, the epidemiology of elder mistreatment, memory and the legal system, health care decision making among older people, and strategies to prevent social isolation and promote social integration among older people.

Curriculum

Human development is one of the most diverse majors in the College of Human Ecology. While all students learn the fundamentals of human development, students also focus on one or more areas of particular interest (e.g., social and personality development, aging and health; law, psychology, and human development). The major is flexible enough to give students ample opportunity to meet the requirements for admission to professional degree programs, including medical, dental, law, public health, social work, and business schools. Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, and writing. To fulfill department and college requirements, Human Development majors must take a biology course with lab.

Special Opportunities

Beyond the required formal course work, students in human development have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them, up to the limit specified by the college (with some restrictions noted below).

Laboratory courses. Human development students may earn credit toward the major by taking formal courses designed to teach laboratory and other research techniques, including study design, data collection, and data analysis. Students may count one of these courses toward the credits required for the Human Development major. Additional elective credits can be earned toward graduation by enrolling in individual faculty research programs, as described below.

Faculty research. Many human development students work for several semesters as research assistants on faculty projects. On these projects, students get further training in research techniques such as laboratory experiments, surveys, and scientific behavioral

observation. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects involving students have included (1) language acquisition among infants in bilingual households or settings, (2) experimental studies of risky decision making among teens, and (3) the impact of poverty on stress responses in children and teens. Participation in faculty research for credit counts as elective credit toward graduation in the College of Human Ecology (up to the limit specified by the college).

Independent research. Under faculty supervision, some advanced students complete an honors thesis. Applications to enter the honors program are due in the first semester of the junior year. Honors theses typically involve a topic related to faculty research, and all applicants must have experience working on research projects and must meet other program requirements. Seniors in the honors program register for an honors seminar and for honors thesis credits. The seminar and honors thesis credits count as elective credits toward graduation in the college (up to the limit specified by the college).

Field Placements. Human development majors can arrange internships with Urban Semester in New York City, Cornell in Washington, and Cornell Abroad programs. Students may also arrange internships during the fall and spring semesters in the Ithaca area. All such field placements are required to be under the supervision of a human development faculty member. In recent years, human development students have participated in projects with the Tompkins County Office on Aging, the Tompkins County Human Service Coalition, Kendal of Ithaca, local schools, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County. Summer internship credit is not allowed in Human Development unless the student is enrolled for Cornell University credit over the summer. Field Placement credits count as elective credits toward graduation (up to the limit specified by the college).

Undergraduate Teaching Assistantships.

Advanced students can serve as undergraduate teaching assistants. The teaching assistantship requires work with the professor teaching the course as well as contact with students. Undergraduate teaching assistantships are for credit only. Teaching assistantship credits count as elective credits toward graduation (up to the limit specified by the college).

Teaching Certification. A cooperative education program exists between the Department of Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell bachelor's degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take a minimum of four courses at Wells College and student teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell

during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives but are not included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the city of Ithaca.

This program is open to HD majors only. Students must have at least a 3.0 Cornell cumulative GPA upon application and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Elaine Wethington in G96 MVR at 255-2918.

NUTRITIONAL SCIENCES

A major in nutritional sciences focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for didactic training in dietetics toward becoming a Registered Dietitian, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the "Nutritional Sciences" section of this catalog.

Special Opportunities

Dietetics and Clinical Nutrition

Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetics Education and provides students with the coursework necessary for application to accredited, supervised practice programs (e.g., dietetic internships). Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one-time fee is charged for program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing Verification Statements can be found at nutrition.cornell.edu/che/DNS/academic/dietetics.cfm. Upon completion of an accredited supervised practice, students are eligible to take the Registered Examination of the Commission on Dietetic Registration, and become a Registered Dietitian.

Courses in foods, nutrition and disease, microbiology, food service management, and nutritional care are added to the courses required for the nutrition programs. For additional information about meeting ADA requirements, contact the DNS academic affairs office, B19 Savage Hall, 255-2628.

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS academic affairs office, B21 Savage Hall, 255-4410.

POLICY ANALYSIS AND MANAGEMENT

In the Policy Analysis and Management major, students and faculty study the effects of government policies on individuals and families, public health, education, crime, product markets, financial markets, and a wide variety of other social impacts. The research tools learned and used—robust theory, rigorous empirical quantitative skills, practical applications to real-world policy issues—are highly sought after by the best in both industry and government.

Federal, state, and local governments have a central impact on all aspects of American life. The federal government alone taxes and spends in excess of 25 percent of gross domestic product. Public policy is ubiquitous, covering almost all aspects of societal and market interaction, from the environment to immigration, banks to farming, and social security to crime. Among current major government legislative initiatives are national health care, financial market regulation, education policy, immigration, and tax policy. Getting legislation right is crucially important to individuals, families, and society at large. Studying, understanding, and learning from the impacts and externalities of government policy are at the heart of Policy Analysis and Management.

Making full use of the theories and methods from economics, sociology, psychology, and demography, Policy Analysis and Management majors first seek to understand the theoretical effect of government policy. Using robust data analysis techniques, PAM majors learn how to measure the magnitude of policy effects. Through published findings, Policy Analysis and Management faculty members help to inform the public debate.

Current Policy Analysis and Management faculty members have expertise in health care, family/social welfare, financial markets, transportation, social security, FDA regulation of pharmaceutical advertising, education, crime, law, and the economics of obesity, among others. Undergraduate and graduate students take courses from, and conduct research with, experts in the field.

In addition to students entering the labor market into management, government, and research positions, PAM attracts large numbers of pre-law and pre-MBA students, and students intending to pursue graduate studies in economics, sociology, and public policy. There is the potential to complete a five-year program resulting in either a B.S. and M.S. in Policy Analysis and Management, or a Master of Health Administration through the department's Sloan Program.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills within particular areas of policy focus. Upper-level family/social welfare courses cover a panoply of governmental and private-sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Upper-level health policy courses cover programs and issues such as health care access, the Medicare and Medicaid programs, long-term care, managed care, public health issues such as obesity, and substance abuse policies. Upper-level market regulation courses cover programs and policies governing the regulation of advertising, the regulations of financial institutions, risk and insurance markets, food and drug safety, and public utility markets. They also deal with issues such as privacy, the Internet, and television.

In addition to meeting college requirements, all PAM majors are expected to take the following core courses: Introductory and Intermediate Policy Analysis, Demography and Family Policy, Statistics, Multivariate Statistics, Intermediate Microeconomics, and Public Sector Economics. Multivariate Statistics and Intermediate Microeconomics must be completed by the second semester of the sophomore year.

PAM Honors Program

The honors program, which leads to a B.S. degree with honors in Policy Analysis and Management, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent research. In addition to fulfilling the requirements for the major, students in the honors program will participate in an honors seminar and prepare an honors thesis. Honors students work with a research mentor in preparing for their thesis. Interested students should obtain a PAM Honors Program application form from the PAM Undergraduate Office (122 MVR). For more information, students should contact the PAM director of undergraduate studies.

PAM Minor Program

Students from outside of PAM can complete a 15-credit official minor in Policy Analysis and Management. For further information, see the PAM website or pick up information at the PAM Undergraduate Office (MVR 122).

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several

disciplines it comprises, by including courses in the fields of biology, humanities, social sciences, and mathematics. In addition, majors take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty advisor to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see Kay Obendorf, director of undergraduate studies, in 182 MVR.

SPECIAL OPPORTUNITIES

Study Abroad

Each year over 75 Human Ecology students spend a semester or more off campus in places spanning the globe, from Australia to Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study-abroad opportunities are available through Cornell-sponsored programs and other U.S. college-sponsored programs as well as by direct enrollment at foreign universities.

Exchange Programs

New exchange agreements with leading international universities allow Human Ecology students to gain a global outlook and advantages for their future career development. Students coming to Cornell as part of the exchange programs enrich the experiences of Cornell students in Ithaca. The Hong Kong Polytechnic University exchange program provides specialized study for students interested in fiber science, apparel design, and interior design. The exchange agreement with the University of New South Wales, Sydney, Australia, provides a study abroad opportunity for all Human Ecology students and specialization opportunities for students interested in facilities management and interior design. For more information, see the Human Ecology Exchange Program website.

Residency Requirements

All study-abroad students must meet college study-abroad requirements and remain registered at Cornell during the overseas study. Credits earned count toward the 60 Cornell credits required for graduation (in unusual circumstances some credits earned abroad may be considered as transfer credit).

Requirements for College Approval

1. GPA of 3.0 or higher, good academic standing, and well-articulated goals for students' study abroad semester.
2. Completion of the Cornell application; applications from individual programs also must be submitted to Cornell.
3. Completion of the equivalent of 15 semester credits per semester while abroad.

4. Courses taken for a letter grade (unless course is offered with only an S-U option).
5. Submission of a petition by second-semester seniors going abroad.

Application Process

Typically, students considering study abroad begin their planning at least a year before the semester abroad. Students should carefully consider what they hope to get out of a study-abroad experience (academically and culturally) when investigating program options. Resources can be found in the Cornell Abroad office (300 Caldwell Hall), through the Human Ecology study-abroad advisor (170 MVR), or in the Human Ecology Career Exploration Center (162 MVR). Completed applications must be submitted to the Human Ecology registrar's office by the following dates:

Fall and year deadlines: February 1

Spring deadline: September 15

Some programs will be filled by these dates. Use of the early deadlines is strongly recommended. These are:

Fall and year deadlines: December 15

Spring deadline: May 1

Approved applications will be signed and forwarded to the respective programs through the Cornell Abroad office.

Credits Abroad and Transfer of Credit

Most study abroad courses are transferred to the Cornell degree program as electives or liberal arts distribution credit. Study abroad credit awarded toward one's major is much less common and must be approved via signature of the student's department advising coordinator on the Cornell application. Credit for study abroad will be awarded only after successful completion of the semester abroad (marks equivalent to a Cornell grade of C or higher) and receipt of the official transcript by the college. Official transcripts should be sent to the Cornell Abroad office, which will process and forward them to the Human Ecology registrar.

Courses must be pre-approved before the student's departure. Any variances must be cleared with Human Ecology. Students must include a foreign language course in the country's native language if studying in a country where English is not the native language. All courses taken abroad and grades received will appear on the Cornell transcript. Grades earned do not, however, become part of the Cornell GPA. Students should save all written work from all classes until courses are officially transferred.

Independent Research

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, students should contact individual faculty members or the director of undergraduate studies in their department.

Honors Programs

Students interested in college honors programs that lead to the degree "bachelor of science with honors" usually apply to the appropriate honors committee no later than the end of the first semester of their junior year. A minimum GPA of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination. Students who are interested in the honors program should contact the director of undergraduate studies in their department or division for information and guidelines.

Field Study and Internships

Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the director of undergraduate studies for major-specific information. The Career Exploration Center (162 MVR) and career counselors in 172 MVR also can provide resources and assistance in finding internships and other experiential opportunities.

Concentrations

The College of Human Ecology formally recognizes as concentrations computer information sciences and international relations (both administered by the College of Arts and Sciences). Students interested in pursuing these concentrations should inquire with the college department offering them. If successfully completed before graduation, these concentrations will be posted as part of the student's official transcript.

Students may develop an unofficial concentration in additional fields taught at Cornell by taking 12 credits in an approved area. Africana studies, communications, and business are just a few examples of concentrations that are possible. While these unofficial concentrations are not part of a student's transcript, students may choose to publicize these concentrations on their personal résumés.

Minors

A student may pursue a minor in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor. The following

minors are offered by Human Ecology departments/divisions: fiber science, gerontology, global health, nutrition, and policy analysis and management.

Minor in Gerontology

For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfenbrenner Life Course Center, offers the option of completing an undergraduate minor in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell to shape a curriculum suited to each student's professional goals and interests. Courses at Ithaca College's Gerontology Institute may also be taken toward the gerontology minor.

The gerontology minor is available in combination with any undergraduate major offered by the university. Twelve credit hours of course work must be completed. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. Students may join the "Cornell Elderly Partnership" through the Cornell Public Service Center to participate in local visits to elders. There also are opportunities for undergraduates to become involved in research projects examining topics such as residential changes and adjustments in the later years, nutrition and elders, social security, and design for people with dementia. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisors for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology minor. Because many gerontology courses have prerequisites, early and careful planning is essential.

Program requirements may be obtained online at www.blcc.cornell.edu/education_gerontology.html; from the Human Ecology registrar's office (146 MVR, 255-2235); or from the program coordinator Nancy Wells, Design and Environmental Analysis (E220 MVR, 254-6330).

Minor in Fiber Science (FS)

Starting in fall 2010, the Department of Fiber Science & Apparel Design (FSAD) will offer a minor open to all Cornell undergraduate students.

The minor requires 12 or 13 credit hours of work with FSAD. No substitution for the required courses for the minor will be permitted.

Course Requirements

To minor in FS, a student must complete the following requirement:

1. Complete one of the following courses
 - a. FSAD 1350 Fibers, Fabrics, and Finishes 3
 - AND
 - FSAD 1360 Fiber and Yarn Analysis Laboratory 1
 - OR
 - b. FSAD 2370 Structural Fabric Design 3
 - OR
 - c. FSAD 4320 Product Quality Assessment 3
2. Complete the following courses
 - a. FSAD 3350 Fiber Science 3
 - AND
 - b. FSAD 4360 Fiber Chemistry 3
3. Complete one of the following courses
 - FSAD 4660 Textiles, Apparel, and Innovation 3
 - FSAD 6160 Rheology of Solids: Dynamic Mechanical Analysis of Fibers and Polymers 3
 - FSAD 6200 Physical Properties of Fiber-Forming Polymers and Fibers 3
 - FSAD 6260 The Chemistry of Textile Finishes and Dyeing 3
 - FSAD 6390 Mechanics of Fibrous Structures 3
 - FSAD 6660 Fiber Formation: Theory and Practice 3

Admission Requirements

1. Complete the Intention to Minor in Fiber Science (MiFS) form to get preference for the above-mentioned FSAD courses, if they are oversubscribed. Forms will be available from the undergraduate coordinator in 207 MVR Hall.
2. Keep a copy of the MiFS form for your reference. To receive consideration or priority in FSAD course enrollment, a form must be submitted before the semester in which enrollment is desired.
3. Plan a course of study to complete minor requirements. Keeping track of courses required and completed toward the FS minor is the student's responsibility; students will not be assigned a FSAD advisor.
4. Earn a grade of B- or better in each course required by the minor. S-U is not accepted.
5. During the semester in which you are planning to graduate, submit a copy of the Application to Graduate with a Minor in Fiber Science form, and an unofficial transcript to the undergraduate coordinator in 207 MVR Hall. After proper verification your college registrar will be notified, and your final transcript will indicate that you have earned a minor in Fiber Science.

Questions should be addressed to Valorie Adams, undergraduate coordinator, or Prof. Charlotte Jirousek, director of undergraduate studies.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either fall or spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service. One day each week, students participate in site visits. Seminars are incorporated into these activities.

In the eight-week summer semester (1 to 3 credits), students carry out internships in various settings. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff in 162 MVR, 255-1846, or the Urban Semester Program in New York City at 212-746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and medicine—New York Presbyterian Hospital/New York Weill Cornell Medical Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montefiore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and public law—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher & Flom, Lawyers for Children, DA's Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACP/DEF, Dorsey & Whitney

Government and community agencies—Cornell University Cooperative Extension, Senator Charles Schumer's office, NYC Housing Authority, Dept. of Aging, Women's Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President's office, Central Park Wildlife Center, Attorney General's office, The Parks Dept., Health Dept.

Wall Street firms and other private businesses—Bloomingdales, Prudential Securities, Merrill Lynch, PricewaterhouseCoopers, Cairns & Associates, Burson Marsteller, Cushman & Wakefield, AIG-AI Underwriters, Salomon Smith Barney, Jane Clark Chermayeff Associates, DDB Needham, KCSA, William M. Mercer Consulting Co., MGM, Madison Square Garden, Gensler Architecture, Niedeffer-Henkel Century Group, American Management Association

Private not-for-profit organizations—City Lights Youth, Council on Economic Priorities, Planned Parenthood, Talbot Perkins, FECS, National Resources Defense Council, Urban Youth Alliance Inc., Phipps Housing, The Door, Covenant House, Global Policy and

International Law, UN International Assoc. of Religious Freedom, Mothers and Others for a Livable Planet, UN Child Care Center, WHEDCO, YAI, Families and Work Institute

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Niños, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RFK Center, River East School, MS 118, Mott Haven Village

Design and arts organizations—Harlem Textiles Works, TADA!, NY Theater Workshop, Cynthia Rowley, Inc., Perry Ellis International, Museum of African Art, SOHO20 Gallery, Lower East Side Tenement Museum, Tommy Hilfiger, Polo, The Gap, Liz Claiborne

Communications and media—Nickelodeon, *Do Something* magazine, NBC *Dateline*, CNN, CBS *News-48 Hours*, NBC News, ABC *One Life to Live*, MSNBC *The News w/Brian Williams*, *The Village Voice*, *Good Housekeeping*, *The New Yorker*, *Essence*, Children's Television Workshop, *Good Morning America*, MTV, HarperCollins Publishing, *Maxim Magazine*, MTV Online International

OTHER OFF-CAMPUS PROGRAMS

Capital Semester

Richard Canfield, Ph.D., director

Combine a full semester of 15 Cornell credits with a paid internship and a reduction in tuition. Students intern directly for a New York State legislator (Senate or Assembly) in Albany to explore their policy interests in greater depth. Interns attend hearings and legislative sessions, meet with lobbyists and constituents, write reports for legislation and possible publication, and generally help conduct the work of their legislator. All Cornell students, regardless of major, are encouraged to apply. The program is available during the spring semester only, and it is open to sophomores, juniors, and seniors. Interns benefit greatly when subsequently applying for future employment, law school, graduate school, or business school. Information is available from the Career Development Center (162 MVR), and applications and further information can be obtained from Richard Canfield (B09 Savage Hall, RLC5@cornell.edu).

Cornell in Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information, visit the program office (M101 McGraw Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells Colleges. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per semester and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (146 MVR, 255-2235).

DOUBLE-REGISTRATION PROGRAMS

Cornell undergraduates from PAM and other fields across the college and campus are eligible to apply to the Sloan Program in their junior year for a five-year accelerated B.S./M.H.A. degree in health administration. In their senior year, these students will take the first-year Sloan courses, which will be counted twice to satisfy both undergraduate as well as graduate requirements. At the end of their senior year, students will graduate with a B.S. degree. Students whose grades are competitive will be notified during the spring semester of their senior year that they are invited to continue for the final year of Sloan as a graduate student. Those students accepted for the five-year program will participate in a health-care administrative internship during the summer after earning their B.S. degree and following the first year of Sloan academic course work. The following graduate year they will complete the second year of required Sloan courses and electives and will earn a master in professional studies, with Cornell certifying completion of the requirements for a graduate degree in health administration.

Students applying to the accelerated B.S./M.H.A. program need to complete the initial application to the Sloan five-year program through PAM in their junior year. In general, at the time of application, most of their undergraduate requirements will have been met. This application must include the GRE general test score, along with recommendations from the faculty advisor and at least one other source, as well as transcripts and the statement of purpose. During their final senior undergraduate year they also will have to submit a formal application to the graduate school. A sample schedule of the two-year curriculum for Sloan can be viewed at www.human.cornell.edu/pam/sloan/current_students/Academics.cfm.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year

away from Human Ecology, they need to plan ahead to ensure that distribution and major requirements for the B.S. degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisors

Students are assigned a faculty advisor in the department of their major. Students may change advisors by working with the director of undergraduate studies in their major.

Faculty advisors are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. It is the student's responsibility to make sure that his or her course selections meet graduation requirements for the major, the college, and the university. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors in the Office of Admission, Student, and Career Development.

Office of Admission, Student, and Career Development

The Office of Admission, Student, and Career Development (ASCD) (170-172 MVR) is a center for undergraduate freshman and transfer admission activities; student orientation activities; academic, personal, and career advising; study abroad; and multicultural student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCD counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer advice, support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCD or by calling 255-2532.

In addition, ASCD provides advising support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association toward Careers in Health, the Pre-law Undergraduate Society, and the Orientation Committee. Primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major work closely with counselors in the Office of Student and Career Development, 172 MVR. We encourage students to explore interests by taking courses in several Human Ecology departments.

If you have general ideas about what you would like to study, or what you would like to

do after college, then you have probably already narrowed your choice of majors. If you have, then choosing one of those majors as a tentative first home in the college makes a lot of sense.

- You will be assigned a faculty advisor by your department.
- You will receive departmental invitations and communications.
- You may change your major at any time.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, developing networking skills, suggesting course work appropriate to various career goals, and assisting students in their general internship and job searches.

Post-graduate advisement. Material and advice pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The College of Human Ecology is committed to assisting students with disabilities; accommodations are available to students who have registered with the Office of Student Disability Services (420 CCC). You are encouraged to contact SDS before your arrival on campus in order to arrange services in time for your first semester. Support within the college is available through the Office of Student and Career Development, 172 MVR.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

The Human Ecology Alumni Association Student Grants. Students in the college can apply for these competitive grants to further their academic interests through independent research, community outreach, conference travel, and limited summer study related to career preparation/professional development. Applications are available on the college web site.

Office of the Registrar

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: <http://registrar.sas.cornell.edu>. The college registrar (146 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping courses, correcting student records, and approving the transfer of credit from other institutions. Additional information is available on the HE registrar's web site: www.human.cornell.edu/che/Academics/undergraduate/Student_Services/Registrar.

Multicultural Programs

The College of Human Ecology believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses

particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure that Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Development includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All accepted EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

Human Ecology Peer Partnership

Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upper-class students. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdene Lee in the Office of Student and Career Development (172 MVR, 255-2532) or Gary Evans (E306 MVR, 255-4775) or Lorraine Maxwell (E310 MVR, 255-1958) in the Department of Design and Environmental Analysis.

ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color. The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors. ASC's two committees are recruitment/retention and career development. For more information, contact Verdene Lee (172 MVR, 255-2532).

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program that provides enrichment activities for pre-med and pre-law New York State residents. Services are targeted at populations that are historically underrepresented in scientific, technical, health-related, or licensed professions and/or that are economically disadvantaged and that demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdene Lee in the Office of Student and Career Development (172 MVR, 255-2532).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center
American Indian Program
Asian American Studies Program
East Asia Program
Feminist, Gender, and Sexuality Studies Program
Gender and Global Change
Institute for European Studies
Languages and Linguistics
Latin American Studies Program
Latino Studies Program
Peace Studies Program
Program for Contemporary Near Eastern Studies
Program in Jewish Studies
Religious Studies
South Asia Program
Southeast Asia Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCD are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services

Counseling. The Office of Student and Career Development (172 MVR, 255-2532) provides career counseling and resources to help students explore career options through employment and internship opportunities and professional and graduate school advising. Individual assistance is available as well as group programming, workshops, and panels. Career development is strongly encouraged and supported, including skill development in résumé writing, networking, and interviewing. Students also are instructed in the use and protocol of online résumé submissions and on-campus recruiting. The office works in conjunction with Cornell Career Services (103 Barnes Hall, 255-5221) to facilitate access to university-wide programs.

The Career Exploration Center (CEC, 162 MVR) is a starting point for students looking for career information. Selected resources about careers, career development planning, as well as job search techniques, general directories to begin job or graduate school

searches, and information for alumni networking are housed there. Also available are Cornell Career Services handouts, internship search guidelines, graduate and professional school testing booklets and registration packets, study abroad, and Urban and Capital Semester program materials. Computers provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CEC is open weekdays during the academic semester. Student career assistants are available to provide résumé and cover letter critiques, conduct videotaped mock interviews, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

To provide assistance to interested students, career assistants work closely with Urban Semester director Sam Beck and are available daily to answer questions about the program and its application process.

Selected services are listed below. Exploring such services will help students investigate their interests, skills, and values as they relate to career options, provide useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career development web site: www.human.cornell.edu/che/Academics/Career-Services/index.cfm.

Pre-law or Pre-med. Students who consider themselves pre-law or pre-med are encouraged to join a student group affiliated with ASCD. Those interested in pursuing a legal education can join PLUS (PreLaw Undergraduate Society), which provides information on applying to law school, preparing for the LSAT, and examining career opportunities in law. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Toward Careers in Health), which provides opportunities for students to explore various careers in medicine and health care. PATCH provides guidance as students prepare for the graduate or medical school application process, and it offers a mentor program for incoming students.

Extern Program. Students can spend one day to one week over winter break shadowing an alum in a career field of their choice. They observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors and is a valuable networking tool.

FRESH Program. This service is similar to the Extern Program but is available to freshmen only. Students can spend one day to one week over spring break shadowing an alum in a career field of their choice. In addition to career explorations, the Fresh Program provides excellent networking opportunities.

Internship Search and Career Guides. The CEC has handouts, organized by major, that provide a starting point for students to begin their internship search. Also available in the CEC are career guides targeting career exploration, public health, psychology, and social work.

Alumni Career Presentations. Alumni from the college come back to campus throughout

the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers. AlumNet is also an excellent networking tool.

Career Development Workshops. The college hosts several workshops every semester. These workshops develop a strong understanding of the value of a Human Ecology education and are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to know themselves through reflection of skills, interests, abilities, and to conduct effective job searches, write résumés and cover letters, and interview successfully.

CornellCareerNet. Exclusively for Cornell students, CornellCareerNet provides access to many important services offered by Cornell Career Services. These services include a listing of job opportunities, summer opportunities, alumni networking databases, access to on-campus recruiting, employer showcases, and more.

CornellCareerNet On-Campus Recruiting (OCR) This service provides access to on-campus interviews with employers interested specifically in Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, facilities planning and management, and consulting. Please note that on-campus recruiting is only one component of a successful job search. Approximately 70 percent of Cornellians get their jobs through other resources.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium is held in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, health care, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C., not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (held only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, N.Y., to meet with students for individual appointments. During the spring semester, a job fair is held the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Official transcripts may be obtained at the Office of the University

Registrar (B07 Day Hall). Curriculum sheets are available in the Human Ecology registrar's office (146 MVR). Students are responsible for planning course selections to ensure that graduation requirements are fulfilled in eight semesters. Transfer students are allowed fewer semesters based on the number of transferable credits granted at admission. Students requiring additional semesters to fulfill their graduation requirements must meet with a Human Ecology counselor (172 MVR) and request to petition for an extension.

Grade Point Average (GPA) Requirement for Graduation

- Students must earn a minimum cumulative GPA of 2.0 (C) or better to graduate.

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. Physical education credits and "1000" courses do not count toward the 120 required credits.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University (applicable to transfer students).
- Students who matriculate as freshmen may apply a maximum of 15 non-Cornell credits earned toward the 120 credits required for graduation. These credits include AP, IB, and college credits earned elsewhere. Refer to "Advanced Placement Credit" for full details.
- No college credit earned before matriculation and used to meet Cornell's minimum admission requirements may be counted in the 120 credits required for graduation. This policy does not apply to transfer students.
- *Courses taught by a college in the high school setting or counted toward high school graduation are not allowed to count for either credits or fulfillment of requirements (i.e., Syracuse Project Advance).*
- Cornell extramural credit (defined below) is limited to 15 credits toward the 120 required.
- Strict limitations exist on the number of credits that can be applied toward the 120-credit minimum for special studies courses (4000, 4010, 4020), for 4030 courses, and for courses taken with an optional S-U grade. Details follow.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (*Students should refer to curriculum sheets for their major for specific details on course selections. These sheets are available in the Office of the Registrar [146 MVR] and in the Office of Admission, Student, and Career Development [172 MVR] as well as on the college web site at www.human.cornell.edu.)*
 - a. Category I—College distribution requirements
 - Natural sciences
 - Social sciences
 - First-year writing seminars

Humanities

Quantitative and analytical courses (math and statistics)

- b. Category II—Requirements for a major
- c. Category III—Elective credits
- d. Category IV—Physical education

These categories are detailed below.

- **Students must complete 43 Human Ecology (HE) credits from Categories I, II, and III.** *Additional course-specific rules are listed below.*

S-U grading rules for this requirement are as follows:

1. If a course is a requirement in Category I or II, the course may *not* be taken for an S-U grade (unless it is the only grade option offered for the course).
2. Courses used to count toward Category III (electives) that are taken for an S-U grade *may* also count toward the 43-credit requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

- **Students must complete 9 Human Ecology (HE) credits from outside their major department from Categories I, II, or III.** Note: Biology and society majors are exempt from this requirement. A maximum of 3 credits from the 4000-4020 special-studies series may be applied to this requirement. *Other course-specific rules for this requirement are listed below.*

S-U grading rules for this requirement are as follows:

1. If a course counting toward the 9-credit outside-the-major requirement is also a requirement in Category I or II, the course may *not* be taken for an S-U grade unless it is the only grade option offered for the course.
2. Courses used to count toward Category III (electives) that are taken for an S-U grade may also count toward the 9-credit outside-the-major requirement.
3. Students should refer to the section on S-U grading rules for full S-U grading details.

Course-specific rules that apply to both the 43 Human Ecology credit requirement and the 9 Human Ecology credit outside-the-major requirement:

1. Human Ecology (prefix "HE") courses below the 3000 level (e.g., HE 1100 and 1200) do not count toward either the 43-credit requirement or the 9-credit outside-the-major requirement. These HE-prefix courses that are below 3000 level may be used as elective credit.
2. ECON 1110 and 1120 are considered Human Ecology credit courses and may be used to fulfill Human Ecology's 43- and 9-credit outside-the-major requirements. If either or both courses are taken to fulfill a Category I or II requirement, they must be taken for a letter grade.
3. BSOC courses do not count as Human Ecology credit.

4. Experiential credit is applied to Human Ecology's 43- and 9-credit outside-the-major requirements as follows:
 - a. Urban Semester (HE 4700, 4800, 4900/4950). Students in all Human Ecology majors earn:
 - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
 - b. Capital Semester (HE 3920). All students earn:
 - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
 - c. Cornell in Washington (PAM 4060). For this entire semester, PAM majors earn:
 - 8 credits toward the 43-credit requirement, which also count as 8 PAM credits.

Non-PAM majors earn:

 - 8 credits toward the 43-credit requirement, which also count as 8 credits toward the 9-credit outside-the-major requirement. The remainder of the credits counts as elective credit.

Elective Credits

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; and the fields of study almost unlimited. Counselors and faculty advisors are available to discuss which courses may interest students and best round out their education.

Students should consult the index in this catalog to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and contract colleges of Cornell.

Physical Education Requirements for Graduation

1. Students must earn 2 credits of physical education within their first two semesters. These 2 credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or toward full-time status. Students who matriculate at Cornell with 12 or more credits must complete only 1 credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.
2. Students must pass the university's swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to "University Requirements for Graduation—Physical Education—Swim Test" in this catalog for specifics.

Minimum Semester Requirements

1. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in the freshman and 7 credits in

the sophomore years (ECON 1110 and 1120 may be used to fulfill this requirement).

2. Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students. Mature students must carry a minimum of 6 credits each semester (see "Mature Student Guidelines" for details).
3. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning this exception and advice on how to proceed are available in the Office of Admission, Student, and Career Development (172 MVR).

Special Studies

- Students may use only 12 credits of 4000, 4010, 4020, or 4030 courses toward graduation.
- Additional credits of 4000, 4010, 4020, or 4030 courses can be taken but will not be applied toward graduation.

"00" Courses

- "1000" courses do not count toward graduation requirements but do count toward full-time semester status.

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter. The requirements are detailed in curriculum sheets that are maintained for each academic year.

S-U Grade Options

- The S-U grading option may *not* be used for courses in category I or required courses in category II unless it is the only grade option offered for those courses. S-U grades *may* be used for the 9 credits of Human Ecology course work outside of one's major and for electives in category III.
- Students may apply no more than 12 credits of S-U toward the 120 credits required for graduation. If a required course is offered only S-U, it will not count toward this limit. Also, Honors Research 4990 taken S-U does not count against the 12 maximum limit. Students may take more S-U courses if they choose, but the additional credit may not be applied toward graduation.

First-Year Writing Seminars

In each of their first two semesters of matriculation at the College of Human Ecology, students are required to take a Knight Program First-Year Writing Seminar. This policy also applies to transfer students. One or more of the seminars may be waived for transfer students if the college registrar grants credit for equivalent course work taken before matriculation at Cornell.

Those who do not fulfill this requirement on time will be referred to the Committee on Academic Status. Refer to "Criteria for Good Standing" for specifics on warning statuses that the committee applies to students who do not complete this requirement.

First-year writing seminars must be taken at Cornell and **may not be taken in absentia**. Students who receive a score of 5 on either the English Literature and Composition or English Language and Composition Advanced Placement (AP) exams can be exempt from *one semester* of their first-year writing seminar requirements. No other AP scores will allow a student this exemption (even if a lower score allows the student to use the course as elective credit toward graduation.) Students should be aware that the add/drop period for first-year writing seminars may be shorter in duration than the add/drop period for most Cornell classes.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They may not be used for Human Ecology credit. Study abroad courses may also count as Cornell credit (but not for Human Ecology credit). Refer to "Cornell Credit Requirements" for details on how many advanced placement (AP) credits can be applied toward the 120 credits needed for graduation.

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this catalog. College-specific rules apply toward many AP courses such as biology, English literature, English composition, and statistics.
2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
3. Credit from the International Baccalaureates (IB) is evaluated individually.
4. Refer to "Cornell Credit Requirements" for details on how many Advanced Placement (AP) credits can be applied toward the 120 credits needed for graduation.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students, at colleges if enrollment is targeted at high school students, or if the course was used toward high school credit. This is true even if the college provides a transcript of such work. These courses also may not be used to fulfill college requirements. Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For further information and limitations on Advanced Placement credit, see the front pages of this catalog.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a Cornell departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange programs. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I, Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

- Africana Studies (literature and history)
- Archaeology
- Asian American Studies
- Asian and Near Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- Development Sociology 1750, 3180
- English (literature only)
- Fiber Science & Apparel Design 1250
- History
- History of Art/History of Architecture
- Landscape Architecture 2820
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 3320

Philosophy

Policy Analysis and Management 5310, 5340, 5520

Religious Studies

Science and Technology Studies 2050, 2060, 2330, 2500, 2810, 2820, 2860, 2920, 3580, 3600, 3890, 4330, 4440, 4470, 4720, 4810, 4900

Math Requirement

Students may meet the college level requirement in *one* of the following ways.

Any CORNELL math course except MATH 1000 (BTRY 1150 may be used)

OR

Any CORNELL statistics course

OR

Score of 3 or higher on the AP Calculus BC exam. (Other AP math credit could be used toward graduation credit but may not be used to meet the math requirement)

Notes:

- Departments may impose additional requirements for majors or specify courses within this requirement.
- Students entering as transfers may apply to have their statistics or math courses approved, but pre-calculus courses will no longer meet this requirement or receive graduation credit.

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety.

Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements, settle all financial accounts including current semester tuition, satisfy New York State health requirements, and have no

holds from the college, the Office of the Judicial Administrator, Gannett Health Center, or the Bursar's office.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, they should use the official university verification service at <http://certification.cornell.edu> or request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology registrar's office (146 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through *Student Center*. Any questions regarding the bursar bill can be directed to the bursar's office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the bursar's office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.** According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's office will charge a late fee. **Students who fail to register by the third week of the semester may be withdrawn from the university. Human Ecology students who do not arrange payment agreements satisfactory to the university bursar by the last day of classes for a semester will be withdrawn from the university. Furthermore, credit for any classes attended for the semester will not be awarded regardless of the letter grade received for a class. Should withdrawn students wish to return, they must reapply through the college admissions office.**

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. See the college registrar (146 MVR) for more information. Students of mature status may carry 6 to 11 credits but must request that their tuition be prorated. Prorated tuition will be considered only for requests of between 3 and 10 credits. All requests should be made to the college registrar (146 MVR) by the end of the pre-enrollment period in the semester before the term in which proration is requested.

Course Enrollment

Initiating the Process

"CoursEnroll" selections are only "requests" for seats in classes. Between the end of the course enrollment period and the beginning of the next semester, course requests are evaluated by the offering college department. Students can determine if their requests have been successful when final schedules are published before the add/drop period. Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and are available on the university registrar's web site (<http://registrar.sas.cornell.edu>). "CoursEnroll" takes place electronically, using software available through *Student Center*. During this time, each student must meet with his or her faculty advisor to discuss academic plans.

Information on courses is readily available in this catalog and in the *Course and Time Roster* for each semester. Both of these publications can be accessed on the web through CUInfo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisors during the orientation period.

Course Loads

Full-time matriculated students must carry at least 12 credits (exclusive of physical education courses) to maintain full-time status. Refer to the preceding section, "Minimum Semester Requirements," for details. The normal course load in the college ranges from 12 to 18 credits. Students who wish to enroll in more than 18 credits per semester must petition. They must have completed at least six semesters at Cornell with a GPA of 3.30. A maximum of 22 credits are allowed by petition. Students may not withdraw from courses after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Late Course Enrollment

Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 146 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using *Student Center*. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described in the following section.

Course Enrollment Changes

It is to the student's advantage to make any necessary course enrollment changes as early

in the semester as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping a course early makes room for other students who may need it for their academic programs.

Ideally, students evaluate their course load carefully at the beginning of the semester. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Deadlines for Add/Drop and Grade Option Changes

Note: Brief add/drop periods exist for first-year writing seminars and half-semester courses.

1. During the first three weeks of the semester, courses may be added, dropped, or the grade option changed. Special status courses (4000, 4010, 4020) may be added through the seventh week of classes. 4030 Teaching Apprentice courses must be added during the first three weeks of the semester.
2. From the fourth through the seventh week of the semester, courses may be dropped. **Grade option changes may not be made at this point regardless of instructor's permission.**
3. After the seventh week of the semester, any requests for course changes must be made through the petition process. Students should request an appointment with an Admission, Career, and Student Development counselor in 172 MVR to initiate the process.
4. After the seventh week of the semester, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course and grade will remain on the official transcript even if repeated in a later semester. The deadline to petition to drop a course with a "W" is the end of the 12th week.

Deadlines for Half-Semester Courses

Students may drop half-semester courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. **To make course changes after the seventh week of the semester, a student must file a general petition form** (see "Petition Process"). Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this catalog or on the official course description on the web. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the course enrollment period

by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjaden Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty advisor before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access *Courses of Study* and the *Course and Time Roster* for the coming semester. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty advisor for approval; the faculty advisor can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the *Course and Time Roster* to arrive via airmail from the Cornell Abroad office. The student can then e-mail, fax, or mail the course requests to their faculty advisor and ask the faculty advisor to submit the course requests to the college registrar. The *Course and Time Roster* becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests. Requests must be submitted within the published deadlines.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list maintained by the professor or the department offering the course. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited-Enrollment Classes

Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Cross-Listed Courses

To apply a cross-listed course to graduation requirements, students must enroll in the department for which they need the credits. If changes in department designations need to be made, this must be done during the official course add period for the semester. To do so, students must complete a special form, which can be obtained in the registrar's office in 146 MVR.

Courses with Duplicate Content

Students should scrutinize course descriptions for details about other Cornell courses with duplicate content that would preclude a student from receiving full credit for duplicate courses. For example, students may not receive 6 credits toward graduation requirements if they take DSOC 1010 and SOC 1101. Because both are introduction to sociology courses, only 3 credits would be allowed. To aid students in this evaluation, the college maintains a partial list (those that are commonly required in Human Ecology curricula) of Cornell courses that have duplicate content.

Special Studies Courses

Each department in the College of Human Ecology (DEA, FSAD, HD, NS, and PAM) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 3000 Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 4000 Directed Readings; 4010 Empirical Research; and 4020 Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (3000, 4000, 4010, or 4020) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where he or she plans to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, faculty advisor, and department chair before submitting the form to the college registrar's office (146 MVR). Special studies forms are available in 146 MVR or in departmental offices.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn 1 credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. **Strict limitations exist on the number of special studies credits that can apply toward graduation and how these credits may be applied toward Category II requirements in the major. Refer to "Human Ecology Credit Requirements" for details.** To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in Status

General Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing

the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These are situations beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See "Course Enrollment Changes" above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Student and Career Development (172 MVR) or with the staff in the college registrar's office (146 MVR).

A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh-week deadline, add a course after the third-week deadline, change a grade option after the third-week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the registrar's office (146 MVR) and in the Office of Student and Career Development (172 MVR) or on the web at www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. After completing the form, meeting with a counselor in 172 MVR, and obtaining the required signatures, the student must turn the form in to the registrar. Once a decision is made, a letter is placed in the student's college mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any semester: fall, winter, spring, or summer. First-year writing seminars may not be taken in absentia.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. A student not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned the student to good standing. Students not in good academic standing who wish to finish their degree in absentia must seek pre-approval from the college's Committee on Academic Status via the general petition process. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such

credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology registrar's office (146 MVR) or on the web at www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. The student submits the form to the Human Ecology registrar's office (146 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursar's office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. The combined number of AP credits and in absentia credits applied to graduation requirements may not exceed 15 credits. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. **Students studying while on a leave of absence during the spring or fall semesters may not receive credit for non-domestic campus programs.**

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the appropriate language department (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is done send transcripts of grades directly to the Human Ecology registrar's office (146 MVR). Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted *only* for those courses with grades of C- or better. Courses may not be taken for S-U grades unless it is the only grade option offered. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student's GPA.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York

State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 43 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 43 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Student and Career Development (172 MVR). Note: In absentia study status and leave of absence status are not the same; however, students may petition to earn credits with either status. Students on leave must notify the college registrar (146 MVR), in writing, of their intention to return to campus at least one month before the beginning of the semester.

Those whose leave period has expired will be withdrawn from the college after the third week of the semester they were due back.

Students considering a leave of absence should discuss their plans with a counselor in the Office of Student and Career Development. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology registrar's office (146 MVR). Leaves initiated after instruction begins will be charged a percentage of the semester tuition. (Refer to "Bursar Information" in this catalog for a billing schedule.)

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions to the leave as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved, the student's courses will remain on the transcript with W grades.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Under certain documented medical circumstances a student may be granted a **health leave of absence**. Health leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends

a health leave for the student, the college registrar may grant the leave. A health leave is for an indeterminate period of time not to exceed five years. Students who are granted a health leave of absence should maintain contact with a counselor in the Office of Student and Career Development (172 MVR, 255-2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student's return. Students should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal

A withdrawal is a termination of student status at the university. Students may withdraw voluntarily at any time by notifying a counselor in the Office of Admission, Student, and Career Development and filing a written notice of withdrawal in the Human Ecology registrar's office. A student considering such an action is urged to first discuss plans with a counselor in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

In some instances, a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired, will be given a withdrawal after the seventh week of the semester in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admission for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status (CAS) for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents

The official university grading system uses a system of letter grades ranging from A+ to D-, with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester course. If a student is given permission to withdraw from a course after the seventh week of the semester a "W" is automatically assigned. Students can view their grades on *Student Center* after the semester has ended. See "Grading Guidelines" for more information on the official university grading policies.

To compute a semester grade point average (GPA), first add up the products (credit hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted, thereby lowering the average. A cumulative GPA is simply the sum of all semester products divided by all credits taken. Refer to "Repeating Courses" for details on how GPA is affected if a student repeats a course. For

further help on calculating a GPA ask at the college registrar's office (146 MVR).

These are the quality point equivalents:

A+ = 4.3	C+ = 2.3
A = 4.0	C = 2.0
A- = 3.7	C- = 1.7
B+ = 3.3	D+ = 1.3
B = 3.0	D = 1.0
B- = 2.7	D- = 0.7
	F = 0.0

Repeating Courses

Students are allowed to register a second time for a course they have already passed or in which they received an F. If a student has previously passed a course he or she is taking a second time, the second registration will not count toward the degree requirements, and the grade received will not be included in the cumulative GPA.

If a student enrolls in a course in which he or she previously received an F, the credits from the second registration will count toward the graduation requirements and the grade will be included in the cumulative GPA. The F will also remain on the record and will be included in the GPA.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis (see course descriptions in this book and on the Cornell web site). Courses listed as SX-UX are available only on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. **No grade point assignment is given to a grade of S, and S or U grades are not included in the computation of semester or cumulative averages.** A course in which a student receives a grade of S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the semester's Dean's List must take at least 12 credits of course work graded non-S-U. See "Awards and Honors" for more details about the Dean's List.

No more than 12 S-U credits will count toward a student's 120-credit graduation requirement. However, a student may take more than one S-U course in any one semester. **S-U courses may be taken only as electives or in the 9 credits required in the college outside the major** unless the requirements for a specific major indicate otherwise. Freshmen enrolled in ENGL 1370 and 1380 (offered for S-U grades only) are permitted to apply those courses to the first-year writing seminar requirement. If a **required** course is offered only S-U, it will not count toward the 12-credit limit.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or obtain and file an add/drop form in the Human Ecology registrar's office before the end of the third week of the semester. After the third week of the semester, students cannot change grade options.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to "Minimum Semester Requirements."

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. **If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.**

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called Explanation for Reporting a Final Grade of F or Incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology registrar's office to fill out and sign the remainder of the form.

If the work is completed satisfactorily within the required time, the course appears on the student's official transcript with an asterisk adjacent to the final grade received for the semester in which the student was registered for the course. A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Human Ecology registrar's office (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

Grade Disputes

Students who find themselves in disagreement with an instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has his or her appointment.
3. Meet with the associate dean for undergraduate studies of the college in which the course was taught.
4. Meet with the university ombudsman (118 Stimson Hall, 255-4321).

A student may also seek advice from his or her faculty advisor or with a counselor in the Office of Student and Career Development (172 MVR).

Examinations

Both the preliminary and final examination schedules are available on the university registrar's web page at <http://registrar.sas.cornell.edu>.

Final Examinations

The following is quoted from the *Cornell University Faculty Handbook*, 1990, pages 66-67:

"The University Faculty long ago established, and has never reversed, the policy that each course should require a final examination or some equivalent exercise (e.g., a term paper, project report, final critique, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, e.g., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that students do not have to spend a significant segment of the study period completing them.
6. Faculty members can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following semester, to afford students such right of review."

Preliminary Examinations

The following is quoted from the *Cornell University Faculty Handbook* (1990), pages 65-66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a semester to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.

- a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time before 7:30 P.M. will be granted only on the following conditions:
 - a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
 - b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.
4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.
5. Courses using evening examinations are strongly urged to indicate this in the course description listed in *Courses* and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of **minimum academic standards** that all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 2.0 or higher.
2. A student must successfully complete at least 12 credits per semester, excluding physical education courses. Mature students must carry at least 6 credits each semester, also excluding physical education.
3. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the

end of the fourth semester such that at least 5 credits must be taken by the end of the second semester (ECON 1110 and 1120 may be used to fulfill this requirement). Transfer students must complete 12 Human Ecology credits by the end of their second semester at Cornell.

4. A student must be making "satisfactory progress" toward a Human Ecology bachelor's degree.
5. All students must complete their requirements for first-year writing seminars (FWS) during their first two semesters at Cornell. Students who do not take a required first-year writing seminar in the first semester that they matriculate at the College of Human Ecology will be placed on a warning status.

Students who have completed the second or subsequent semesters of matriculation at the college who have not taken both of the required writing seminars will be placed on a severe warning with danger of being withdrawn status. In these cases, if the student has not pre-enrolled for an FWS for the upcoming semester, a hold will be placed on the student's semester registration status until he or she is actually enrolled in an FWS. **If this requirement is not completed by the end of that semester, the student will be withdrawn from the college.**

At the end of each semester, the Committee on Academic Status (CAS) reviews each student's academic record to ensure that the **minimum academic standards** listed above are met. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by these criteria. CAS considers each case individually before deciding on a course of action. In an effort to support every student's success, the committee may take any of the following actions:

1. Place a hold on a student's university registration status or course enrollment for the current or upcoming semester.
2. Withdraw the student permanently from the college and Cornell University.
3. Require the student to take a leave of absence for one or more semesters.
4. Issue a warning to the student at one of the following levels:
 - a. Severe warning with danger of being withdrawn
 - b. Severe warning
 - c. Warning

These imply that if the student does not show considerable improvement during the semester, the committee may withdraw the student.
5. Add the student's name to a review list; students with this status are monitored by the committee throughout the semester.
6. Return the student to good standing.

Students placed on a required leave must appeal to CAS to return. This appeal occurs at the end of the required leave period. Students who have been withdrawn may appeal the decision before the committee during the pre-semester appeals meeting. Students who have been placed on a warning status owing to incomplete or missing grades may request that

their status be reviewed for possible updating to good standing once the grade records reflect the updates or corrections. These requests should be made using the general petition process and submitted to the college registrar.

All students with an academic warning status automatically will be reviewed for specific criteria at the end of the subsequent semester. In most cases, students put on warning, severe warning, or severe warning with danger of being withdrawn status will be informed of conditions that they are expected to fulfill to return to good standing. In general, these conditions are that a student must earn a minimum semester GPA of 2.0, complete 12 credits (exclusive of physical education), and not have any incomplete, missing, F, or U grades on his or her most recent semester record.

If a student who has been previously placed on a required leave wishes to return to the college, he or she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn from the college by CAS may request that they be readmitted. Such students have three years from the date they were withdrawn to make this appeal with assistance from a counselor in the Office of Student and Career Development (172 MVR). After three years, a former student must apply for readmission through the college's Office of Admission. A student applying for readmission should discuss his or her situation with a counselor in the Office of Admission, Student, and Career Development. The student also should talk with others who may be able to help—faculty advisors, instructors, or a member of the university medical staff. Any information given to the committee is held in the strictest confidence.

Academic Integrity

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports, and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

- a. Knowingly represents the work of others as his or her own.
- b. Uses or obtains unauthorized assistance in any academic work.
- c. Gives fraudulent assistance to another student.
- d. Fabricates data in support of laboratory or field work.
- e. Forges a signature to certify completion or approval of a course assignment.
- f. Uses an assignment for more than one course without the permission of the instructor involved.
- g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.
- h. In any manner violates the principle of absolute integrity.

The college's Academic Integrity Hearing Board, which consists of a chairperson, three

faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The **Cornell transcript**, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall) or online at <http://transcript.cornell.edu>. For more information, call 255-4232. Students may also access their grades and course schedules electronically using *Student Center*. **Students should be in the habit of checking Student Center by the second week of every semester to confirm that their schedule and grade options are correct.** Adjustments must be made before published enrollment deadlines.

The college also maintains a **graduation progress worksheet** for each student showing progress toward the degree. At the beginning of fall semester continuing students should check their updated worksheet on the registrar tab at www.human.cornell.edu. It is important to check this document and bring any errors to the attention of the staff in the college registrar's office (146 MVR). Disclaimer: These worksheets are unofficial tally tools used by the college registrar and in no way substitute for a student's responsibility for tracking the progress toward completing degree requirements as outlined in the curriculum sheet for each major.

Access to Records

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected; grades earned; class rank; academic and disciplinary actions by appropriate faculty, student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (146 MVR) or the Office of the University Registrar (B7 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officers are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy "Access to Student Information" at www.univco.cornell.edu/policy/ASI.html, or talk with the college registrar.

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester GPA of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of B or higher. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. No more than 10 percent of the junior class may be elected to membership and no more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of science with honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of science with distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for bachelor of science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Awards

The Elsie Van Buren Rice Public Speaking Contest awards prizes totaling \$2,500 for speeches related to published research by

Human Ecology faculty members. The contest is held each year in March.

The Flora Rose Prize is given to a Cornell Human Ecology junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations." Students apply in the spring semester. The recipient receives a cash prize of \$750.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which betters the quality of life." In that spirit the award is presented to an undergraduate in the College of Human Ecology who has demonstrated, through supervised fieldwork or community service, creativity in the search for solutions to human problems. Students apply in the spring semester. The award carries a \$750 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations

Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The **Cornell Design League** was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with all aspects of a professional presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Fiber Science & Apparel Design, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. They volunteer in day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the **Public Service Center** (200 Barnes Hall). Call 255-1148 for information about volunteer work or 255-1107 for information about work-study arrangements.

The **Human Ecology Ambassadors** is a group of Human Ecology undergraduates who assist the Office of Admission in the area of new student recruitment and yield. Ambassadors participate in group conferences with prospective students to provide information from a student's perspective, assist with on-campus programs for high school students and potential transfer students, and help with prospective student phonathons and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Student and Career Development (172 MVR, 255-5471).

The **Human Ecology Mature Students Association** is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Development (172 MVR).

Students interested in the relationship between the physical environment and human behavior may join the **Human-Environment Relations Students Association**. For more information, contact the Department of Design and Environmental Analysis.

The **International Facility Managers Association (IFMA)** also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The **Association for Students of Color (ASC)** unites Human Ecology students of color to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals in the following ways:

1. participating in admissions hosting programs and conducting high school visitations
2. sponsoring presentations on career and graduate school outcomes of a Human Ecology education
3. providing volunteer services to the Cornell and Ithaca communities
4. attending regular meetings and hosting annual fall and spring forums

For more information, contact Verdene Lee in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **PreLaw Undergraduate Society (PLUS)** is sponsored by Human Ecology and welcomes members from the Cornell community. Meetings provide information and support for students considering careers in law. Programs include information on the law school admission process, law school applications, and LSAT preparations. Additionally, PLUS offers tours of the Cornell Law School and information panels with current law students. Guest speakers include practicing attorneys, law faculty, and current law school students. For more information, contact Deanne Maxwell in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **Preprofessional Association Toward Careers in Health (PATCH)** provides support, advising, and up-to-date information to students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on medical school admissions, exposure to complementary health-care career options, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical

school. This student-run organization is sponsored by Human Ecology and is open to the Cornell community. For more information, contact Paula Jacobs in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **Orientation Committee** consists of students and advisors interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

Membership in the **Sloan Student Association** is open to students interested in health care and related fields. For more information, contact the president of the association (122 MVR, 255-7772).

The **Students for Gerontology (SFG)** is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SFG meets monthly. For more information, contact Nancy Wells, faculty advisor, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

The **Health and Nutritional Undergraduate Society (Health NUTS)** promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, and host on-campus speakers in nutrition and health-related fields. The student chapter is open to all students interested in nutrition education. For more information, contact Cha-Sook You (B21 Savage Hall).

Committees and Councils

Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The **Educational Policies Committee (EPC)** has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the **Admissions Policy Subcommittee** and the **Academic Integrity Hearing Board**.

The **Selection Committee for the Chancellor's Award for Excellence in Teaching or Professional Service** handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The **Human Ecology Alumni Association Board of Directors** includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The

two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The **Dean's Undergraduate Advisory Council** is a student group whose members promote communication between undergraduates and the Human Ecology administration. Interested students apply each spring to join the council for the following academic year.

INTERDEPARTMENTAL COURSES

HE 1100 Critical Reading and Thinking

Fall, spring, or summer. 2 credits (credit toward graduation depends on individual college). Limited enrollment. Prerequisite: freshman or sophomore standing; juniors and seniors by permission of instructor. S–U or letter grades. Staff.

Enables students to increase critical reading and thinking abilities. Examines theory and research associated with a wide range of reading, thinking, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills.

HE 1110 College Achievement Seminar

Summer, six-week session. 2 credits (credit toward graduation depends on individual college). Prerequisite: Pre-freshman Summer Program students. S–U or letter grades. Staff.

Improves the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on learning.

HE 4070 Leadership in the Nonprofit Environment

Fall. 3 credits. Limited to 30 students. Letter grades only. B. Bricker.

The nonprofit sector contributes nearly 10 percent of U.S. GNP and employs 11 to 12 percent of citizens. This economic sector touches all our lives—as volunteers, donors, receivers of service, employees, or board members. This course provides an opportunity to explore the challenges and opportunities of the nonprofit sector. After becoming familiar with the issues and complications of strategic charitable giving, students consider actual grant applications from community organizations and make decisions to award \$10,000 in grant aid. HE 4070 is made possible by a generous gift of \$10,000 from the Sunshine Lady Foundation. Students learn to read, evaluate, and write effective grant proposals. They create a Request for Proposal (RFP) to invite community nonprofits to apply for funding. They study organizational missions, the strengths and challenges of private not-for-profit organizations, the motivation for giving time and money, and many related themes.

HE 4991/4992 Biology & Society Honors Project I and II

Fall and spring (yearlong). Credit TBA. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the Biology and Society faculty. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisors, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Student must enroll concurrently in the three courses HE 4800, 4900, and 4950. Students learn through reflection and action/ Program options are possible throughout the academic year, and summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, practice leadership, and be agents of change.

HE 4060 Fieldwork in Diversity and Professional Practice: The Culture of Medicine and Public Health

Summer, eight-week session. 3 credits. S. Beck.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4080 Fieldwork in Diversity and Professional Practice: Community and Public Service

Summer, eight-week session. 3 credits. M. A. Cocchini.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4090 Fieldwork in Diversity and Professional Practice: Finance, Business, and Other Settings

Summer, eight-week session. Variable credit. M. Cocchini.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4800 Participatory Action Research

Fall and spring. 5 credits. Students must take course during semester they participate in Urban Semester Program. S. Beck.

Community service-learning curriculum that introduces the history and development of North Brooklyn, community organizing, and the nature of service in contradistinction to charity and citizenship development. Students are actively engaged in two different projects with two different community-based partners. Students are expected to put into practice the service theory they learn from our partners that emphasizes their role as members of the communities in which they participate.

HE 4900 Reflexivity and Reflective Practice in Ethnography

Fall and spring. 5 credits. Students must take course during semester they participate in Urban Semester Program. S. Beck.

Students use ethnographic methods to write their own ethnographies based on their experiences in their internships.

HE 4950 Ethnographic Methods and Research

Fall and spring. 5 credits. Students must take course during semester they participate in Urban Semester Program. S. Beck.

Provides students with the fundamentals of ethnographic methods, including historical and philosophical developments, and the

advantages of using ethnography in qualitative research.

DESIGN AND ENVIRONMENTAL ANALYSIS

S. Danko, chair (MVR, 255-3165); K. Gibson, director of undergraduate studies; N. Wells, director of graduate studies; F. Becker, S. Curtis, J. Elliott, P. Eshelman, G. Evans, D. Feathers, R. Gilmore, A. Hedge, Y. Hua, J. Jennings, J. Laquatra, L. Maxwell, L. Scolere

Note: A minimal charge for photocopied course handouts may be required.

DEA 4+1 Master's Degree Program

Outstanding students who complete their four-year undergraduate degree in DEA may apply for a master of arts/M.A. (interior design) or a master of science/M.S. (human environment relations) degree that typically requires one additional year of graduate study.

Through careful planning by the beginning of their junior year, many of the courses required in the M.A. or M.S. programs can be taken during the undergraduate years, creating an opportunity to focus the fifth year of study on completing graduate courses and thesis requirements. Typically, students will take four to five courses in their fall semester as a graduate student, and two to three courses plus their thesis research in the spring semester. Students should expect to complete their thesis by the end of the summer term of their fifth year.

Admission to the 4+1 Master's program is not automatic. Students must meet with their advisors early in their undergraduate programs to plan carefully for this possibility. In the fall of the senior year, interested students must submit an online application to the Graduate School. The GRE exam and a portfolio are not required for 4+1 applicants. In addition to the online application, 4+1 applicants must submit a 4+1 study proposal to the department. Students who have compiled a strong undergraduate record in the department are usually good candidates for admission into the graduate program in Design and Environmental Analysis.

DEA 1101 Interior Design Studio I (also VISST 1101)

Fall. 3 credits. Limited to 20 students per sec. Prerequisite: DEA majors; permission of instructor for nonmajors. Option I majors must take DEA 1101 in fall of first year. B- or higher in DEA 1101 required to take DEA 1102 and 1150. Must complete incomplete grade in DEA 1101 before taking 1102 and 1150. Cost of materials: approx. \$200. J. Elliott.

Introduces the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of image and form through problem-solving activities. Visit <http://courses.cit.cornell.edu/dea1101>.

DEA 1102 Interior Design Studio II

Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 1101. Option I majors must take DEA 1102 and 1150 concurrently. B- or higher in DEA 1102 required to take DEA 2201. Must complete incomplete grade in this course before taking DEA 2201. Cost of materials: approx. \$200; shop fee: \$10. P. Eshelman. Studio course in three-dimensional design with an interior design emphasis. Explores problems in spatial organization through drawings and models.

DEA 1110 Making a Difference by Design

Fall. 3 credits. Limited to 130 students. Lab fee: \$15 (charged to bursar bill). S. Danko. Focuses on issues of leadership, creative problem-solving, and risk-taking through case-study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Using a micro to macro framework, students examine how design affects their daily lives and future professions from the person to the planet. Additional topics include nurturing creativity, visual communications, socially responsible design and business, culture, and ecological issues.

DEA 1150 Design Graphics and Visualization

Spring. 3 credits. Limited to 18 students. Prerequisite: Option I DEA majors only; DEA 1101 with grade of B- or higher. Corequisite: DEA 1102. B- or higher in DEA 1150 required to take DEA 2201. Must complete incomplete grade in this course before taking DEA 2201. Minimum cost of materials: \$200; technology fee: \$10. K. Gibson.

Introductory graphics course for interior designers. Emphasizes orthographic and perspective drawing, formal and conceptual presentation methods. Reinforces concepts through projects, readings, and field trips.

DEA 1500 Introduction to Human-Environment Relations (also COGST 1500)

Spring. 3 credits. Limited to 15 students per sec (20 sec). Lec, disc. G. Evans. Human-Environment Relations is an interdisciplinary field concerned with how the physical environment and human behavior interrelate. Most of the course focuses on how residential environments and urban and natural settings affect human health and well-being. Students also examine how human attitudes and behaviors affect environmental quality. Issues of environmental justice and culture are included throughout. Hands-on projects plus exams. Lecture and discussion sections Writing in major (DEA 1501) option also is available.

DEA 2030 Digital Communications

Spring. 2 credits. Limited to 25 students. Priority given to DEA majors. Lab fee: \$10. DEA faculty. Digital information technologies for designers of the built environment. Students explore issues in relation to text and image through analysis and composition of form and content. Through a series of projects the students work toward the development of a professional web-based portfolio of self-promotional materials. The primary objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software.

DEA 2040 Introduction to Building Technology

Spring. 2 credits. Y. Hua. Introduction to a wide range of building technology. The goal is to develop basic understanding of building systems and components, their performance criteria, and the implications of different technology for building occupants, building energy consumption, and other environmental impacts. Topics include site and climate, structural systems, building envelope, passive strategies for building conditioning, HVAC systems, interior systems, lighting systems, acoustics, electrical systems, building control, construction process and building maintenance, and principles of building systems integration for occupant health, comfort, emissions reduction, and environmental sustainability.

DEA 2150 Digital Graphics

Fall, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. S. Curtis.

Investigates the use of computer-graphic software programs for the purpose of design, visualization, and presentation. The course investigates the inherent differences between raster and vector graphics and how to use a variety of computer graphics programs such as Adobe Photoshop, Illustrator, Sketch Up, and Acrobat to achieve a desired end result. Lab-based course providing technical illustration in Adobe Illustrator, Photoshop, and Sketch Up. Students may be interested in DEA 4540 (Computer-Aided Facilities Management) as well.

DEA 2201 Interior Design Studio III

Fall. 4 credits. Limited to 18 students. Prerequisites: Option I DEA students; DEA 1101, 1102, 1110, 1150, and 1500 (minimum grades of B-); B- or higher required to take DEA 2202. Must complete incomplete in 2201 before taking 2202. Corequisites: DEA 2510, DEA 2150, DEA 4600. Minimum cost of materials: \$150; lab fee: \$40; required field trip: approx. \$130. J. Jennings.

Third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 2510, the course applies historical theory to contemporary design projects. Also includes a collaborative project with a professor and students from another design discipline.

DEA 2202 Interior Design Studio IV

Spring. 4 credits. Prerequisites: Option I DEA students; DEA 2201 and 2030. Pre- or corequisite: DEA 2040. Must complete incomplete grade in this course before registering for DEA 3301. Minimum cost of materials: \$120; field trip fee. R. Gilmore. Based on programmatic criteria from real clients, students learn how to design several types of interior environments, from health care facilities to local nonprofit agencies. Emphasis is on space planning, lighting design, construction of custom light fixtures, and service learning, where students use design to transform the facilities of social service agencies in the community.

DEA 2410 Introduction to Computer-Aided Design (CAD)

Spring, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials: \$50. S. Curtis.

Provides an understanding of, and experience with, electronic drafting on the microcomputer. The course includes a basic understanding of the features, limitations, and considerations associated with the operation of the latest release of AutoCAD. By the end of the course, the student will be proficient enough with the AutoCAD software to draw and plot most projects required by their course of study as they relate to architecture and interior design. Students may be interested in DEA 2420 (Advanced Computer-Aided Design) as well.

DEA 2420 Advanced Computer-Aided Design (CAD)

Spring, second seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials \$50. S. Curtis.

Provides a thorough understanding of the 2-D features, limitations, and considerations associated with the operation of the latest release of AutoCAD. This course builds on knowledge gained in DEA 2410 and requires DEA 2410 as a prerequisite. Commands and concepts such as multi-sheet plotting, xreference drawings, blocks and attributes, raster images, user coordinate systems, and customization of AutoCAD are covered. This course will give the student a high level of proficiency with AutoCAD software as it relates to architecture and interior design.

DEA 2500 The Environment and Social Behavior

Fall. 3 credits. Limited to 16 students. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisites: DEA 1500 and written permission of instructor. G. Evans.

This course is about architecture and human behavior and it centers on two key principles: (1) the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being; (2) aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relationships, and performance along with preference. Involves two major projects: one in collaboration with a design studio and the other with a real community client.

DEA 2510 History and Theory of the Interior

Fall. 3 credits. Limited to 35 students. Priority given to DEA majors. J. Jennings. A historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the 20th century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, and a field trip are included. Visit <http://courses.cit.cornell.edu/dea2510>.

DEA 2550 Introduction to Facility Planning and Management

Fall. 2 credits. Letter grades only. F. Becker. Introduction to the field of facility planning and management. Course examines how the planning, design, and management of an

organization's physical facilities can help it meet its business objectives. Through readings, lectures, and discussions, students become familiar with basic characteristics and issues of strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems. Different approaches to sustainable facility design and issues in effectively managing and operating green facilities are explored in a term project working with organizations that have implemented sustainable designs, policies, and practices.

DEA 3000 Special Studies for Undergraduates

Fall or spring. Credit TBA. DEA faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 3030 Interior Materials and Sustainable Elements

Fall. 3 credits. Limited to 45 students. Prerequisite: interior design, hospitality, or architectural studio or permission of instructor. Approx. cost of materials: \$10. R. Gilmore.

A sustainable approach to the evaluation and selection of materials, finishes, and furnishings for the built environment has the potential to protect our planet. This course provides an introduction to sustainable sources and asks students to manipulate materials, understand performance testing, use building codes, create a life-cycle cost analysis, and complete interior specifications. Field trips provide an overview of the manufacturing process, and group projects culminate in the presentation of research on current "green" products and resources.

DEA 3040 Introduction to Professional Practice of Interior Design

Spring. 1 credit. Limited to 15 students. Prerequisite: Option I DEA students. DEA faculty.

Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 3050 Construction Documents and Detailing

Spring. 2 credits. Prerequisites: DEA 3301 and 3030 or permission of instructor. Corequisite: DEA 3302. Minimum cost of materials: \$50; required field trips: \$10. R. Gilmore.

A continuous dialogue between the idea for an interior space and the reality of its final built form is contained within construction documents, also known as working drawings and specifications. Students study the history of architectural documentation, the organization of construction drawings, schedules, and specifications, and the detailing of interior elements and construction methods by touring

a local millwork shop. Each student completes a comprehensive set of construction documents.

DEA 3250 Human Factors: Ergonomics-Anthropometrics

Fall. 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6510; shares lec but meets for an additional hour. DEA 6510 has additional readings and projects. A. Hedge.

Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Includes practical exercises and field project work. Visit <http://ergo.human.cornell.edu>.

DEA 3301 Interior Design Studio V

Fall. 5 credits. Prerequisites: DEA 1110, 1500, 2201, 2202, 2030, and 2040. Corequisites: DEA 3030 and 4590. Must complete incomplete grade in this course before registering for DEA 3302. Minimum cost of materials: \$150; shop fee: \$10; optional field trip: approx. \$10. P. Eshelman.

This intermediate-level interior design studio focuses on design for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease. The course is organized around a semester-long project broken into four phases: pre-design, design, full-scale model construction, and design documentation and presentation. Collaboration with students in DEA 2500/6600 provides experience in the application of evidence-based information in the design process.

DEA 3302 Interior Design Studio VI

Spring. 5 credits. Limited to 18 students. Prerequisites: DEA 3301 and 3030 or permission of instructor. Corequisite: DEA 3050. Must complete incomplete grade in this course before registering for DEA 4401. Minimum cost of materials: \$200; shop fee: \$10; field trip fee: \$20. K. Gibson.

Sixth semester in the studio sequence of eight semesters. Emphasizes use of the microcomputer as a creative tool in the design process. Explores social, cultural, and physical factors related to the interior environment through assignments, readings, and a field trip. Design and problem-solving skills are reinforced according to project type.

DEA 3500 Human Factors: The Ambient Environment

Spring. 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6520; shares lec but meets for an additional hour. DEA 6520 has additional readings and projects. A. Hedge.

Introduces human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. Views the ambient environment as a support system that should promote human efficiency, productivity, health, and safety. Emphasizes the implications for planning, design, and management of settings and facilities. Visit <http://ergo.human.cornell.edu>.

DEA 3520 Inside-Out Ergonomics I: Anatomy for Design

Spring. 3 credits. Prerequisite: DEA 1500, 3250, or 6510, or permission of instructor. S-U or letter grades. D. Feathers.

This course serves as an introduction to human anatomy as it relates to design. Students learn musculoskeletal anatomy and human body

measurement for ergonomic design. Musculoskeletal function is related to human performance in support of creative design decisions.

DEA 3540 Facility Planning and Management Studio

Spring. 4 credits. Prerequisite: DEA 4590 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. Y. Hua.

For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Considers sociopsychological, organizational, financial, architectural, and legal factors.

DEA 4000-4010-4020-4030 Special Studies for Undergraduates

Fall or spring. Credit TBA. S-U or letter grades. DEA faculty.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the director of undergraduate studies and filed at course registration or within the change-of-registration period in the college registrar's office, 146 MVR, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisors and the instructor, should register for one of the following subdivisions of independent study.

DEA 4000 Directed Readings

For study that predominantly involves library research and independent reading.

DEA 4010 Empirical Research

For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 4020 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 4030 Teaching Apprenticeship

For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 4100 Facility Planning and Design in a Diverse Society

Spring. 3 credits. Prerequisites: DEA 1500, 1110, 2500, 6530, or permission of instructor. Letter grades only. L. Maxwell.

Upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, human-

environment relations, and interior design, as well as students outside of DEA who are interested in how the built environment should respond to a diverse society. The course examines facility planning and design issues in a diverse society. Specifically, the role of culture, gender, stage in the life cycle, and disability in planning facilities of various types is studied. This course examines the issues of diversity from two perspectives: (1) how are the implicit and explicit assumptions about the user expressed in various aspects of the built environment in our society; and (2) how do we purposely plan facilities in a diverse society.

DEA 4150 Strategic Facility Planning for Social Institutions

Spring. 3 credits. Prerequisites: DEA 1500, 2500, 4590, or permission of instructor.

Letter grades only. L. Maxwell.

Upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, the Biology and Society program, the Sloan program, and design students interested in facility planning and design issues for health care and educational institutions. The course examines the facility planning and management issues that affect (1) the long-term care industry, including assisted living, continuous care, and skilled nursing facilities; and (2) the K-12 educational industry. The course examines how facilities respond to changes in (1) the needs of their target population, (2) technology and communications, (3) sustainability, (4) health care delivery practices, (5) changes in educational policy and practice, (6) regulatory and policy issues related to the health care and educational industries, and (7) daily operational and maintenance issues. Health care and educational facilities must be flexible in responding to the changing marketplace. The goal of the course is to give students the skills and tools necessary to handle the facility planning and management issues of complex social institutions. The emphasis in the course is on long- and short-range planning issues and how facility issues intersect with management issues.

DEA 4220 Ecological Literacy and Design (also ARCH 4601)

Spring. 3 credits. Prerequisite: junior or senior standing. Letter grades only. Cost of field trips: approx. \$25. J. Elliott.

Lecture/seminar course for advanced undergraduates interested in learning about the effects of designing the built environment on the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through researching the use of the LEED building certification process for real-world clients and stakeholders. Visit <http://courses.cit.cornell.edu/dea4220>.

DEA 4230 Restaurant Design Charrette

Spring. 1 credit. Limited to 18 students.

Prerequisite: permission of instructor. Letter grades only. Minimum cost of materials: \$50. Next offered 2011-2012. R. Gilmore and S. Robson.

This intensive weekend-long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a nontraditional setting. Students work in teams to develop design solutions

and prepare design presentations for review by course instructors and visiting design professionals.]

DEA 4300 Furniture as a Social Art

Spring. 3 credits. Limited to 15 students.

Prerequisite: permission of instructor. Cost of building materials: \$150. (Additional shop hours are made available.)

P. Eshelman.

Focuses on how innovation in furniture design is inspired. The four sources of inspiration explored are user needs, aesthetic interpretation, material and manufacturing technologies, and environmental impact. The interplay among these four sources of inspiration is examined with emphasis on the first, user needs. Assignments involve both analyzing furniture products currently on the market and designing and constructing a furniture piece for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease.

DEA 4401 Interior Design Studio VII

Fall. 5 credits. Prerequisites: DEA 3302,

3030, 3040, and 3050. Must complete incomplete grade in this course before registering for DEA 4402. Minimum cost of materials: \$150; field trip: \$50. R. Gilmore.

Comprehensive historic preservation design studio in which students complete each phase of the adaptive reuse of a historic structure. After site visit and historic survey work, students conduct demographic research, complete a building assessment, and design a new use for a viable, yet older structure. Lecture topics range from professional practice strategies, to the history of preservation, to the Secretary of the Interior's Standards for Rehabilitation. Components of the work include program documents, code compliance, concept development, schematic and design development presentations, and construction documents.

DEA 4402 Interior Design Studio VIII

Spring. 5 credits. Prerequisites: DEA 3301, 3302, 3030, and 3040. Minimum cost of materials: \$150. L. Scolere and J. Elliott.

Completion of advanced interior design problems broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 4520 Inside-Out Ergonomics II: Biomechanics and the Built Environment (also BME 4520)

Fall. 3 credits. Prerequisite: DEA 3520 or permission of instructor. S-U or letter grades. D. Feathers.

The built environment places physical demands on the human body. Students learn what forces are being placed on the body and how to create biomechanical models of these physical demands. The class then assembles these skills to support design opportunities for healthy, productive occupational environments. This course is appropriate for advanced undergraduate students interested in the concepts of biomechanics in ergonomics.

DEA 4530 Planning and Managing the Workplace

Fall. 3 credits. Prerequisite: junior or senior standing. F. Becker.

Through lectures, readings, and projects, this course explores how the planning, design, and management of health care facilities affects patients, care providers, and health care quality. Course emphasizes the role of evidence-based design and examines issues and challenges in generating, interpreting, and applying different forms of evidence to improve health care quality and patient and staff experience. The final project involves students using different forms of evidence to develop their own innovative solutions to design dilemmas typically faced in planning and designing a hospital.

DEA 4540 Computer-Aided Facilities Management

Fall, second seven weeks of semester. 1 credit. Prerequisites: none. Letter grades only. S. Curtis.

Investigates the use of computer-aided facilities management software in facilities management. Emphasis is placed initially on understanding how FM CAD systems work. Topics such as Building a Space Inventory Database, Adding Occupancy Data, AutoCAD commands, Reports, Asset Management, and Strategic Planning and Stacking are learned and discussed.

DEA 4550 Research Methods in Human-Environment Relations

Fall. 3 credits. N. Wells.

Develops students' understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasizes evaluation of internal and external validity as well as measurement reliability and validity. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of data, and effective communication of empirical research findings. Students will need to see instructor for section assignments.

DEA 4590 Programming Methods in Design

Fall. 3 credits. Letter grades only. Minimum cost of materials: \$100. L. Maxwell.

Introduction to facility programming. Emphasizes formulation of building requirements based on user characteristics and potential constraints. The course presents diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users. The course emphasizes selection of appropriate methods to suit the specific user/client needs. Students work with an actual client to prepare a program document.

DEA 4600 Design City

Fall. 1 credit; may be repeated for credit.

Prerequisite: DEA majors; permission of instructors. Not open to freshmen for credit. Students are required to take this course in order to participate in field study trip to a major city. Field trip fee covers cost of hotel and chartered bus; trip fee billed to student's bursar account. S-U grades only. Course fee: \$120 (charged to bursar bill). K. Gibson and J. Jennings.

Field study of historic and contemporary interiors with guided tours to architectural and interior design firms, installations, exhibits, and showrooms in New York City, Toronto, or other major cities. Topics and themes change yearly.

DEA 4700 Applied Ergonomic Methods

Spring, 3 credits. Prerequisite: DEA 3250. Undergraduate sec of DEA 6700; shares lec but meets for an additional hour. DEA 6700 has additional readings and projects. A. Hedge.

Covers physical and cognitive ergonomic methods and techniques and their application to the design of modern work environments. Emphasizes understanding key concepts. Covers conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods, and techniques for the analysis of work activities and work systems.

DEA 4720 Environments for Elders: Housing and Design for an Aging Population

Spring, 3 credits. Field trip fee: \$20. N. Wells.

Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics to the well-being of older people; an appreciation of late-life social, cognitive, and physiological changes; as well as familiarity with a variety of housing options for late life. Visit <http://courses.cit.cornell.edu/dea4720>.

DEA 4990 Senior Honors Thesis

Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only. DEA faculty.

Opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 6000-6030 Special Problems for Graduate Students

Fall or spring. Credit TBA. S-U or letter grades. DEA faculty.

Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

6000: Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

6010: Directed Readings. For study that predominantly involves library research and independent study.

6020: Graduate Empirical Research. For study that predominantly involves collection and analysis of research data.

6030: Graduate Practicum. For study that predominantly involves field experiences in community settings.

DEA 6250 Collaborative Sustainable Building Practice

Fall, 3 credits. Limited to 30 students. Recommended: DEA 2040. Letter grades only. Minimum cost of materials other than books: \$50. Y. Hua.

Recognized by the USGBC Excellence in Green Building Curriculum Incentive, this course is designed to respond to the significant nontechnological barriers to the transformation of the building sector toward sustainable practice. Students are introduced to a series of forces and key players in the building delivery process that have different

magnitudes of impact on the adoption of sustainable practice and the complex stakeholder network in the building life cycle. This course is intended for graduate students and senior undergraduate students from a wide range of majors related to the planning, design, construction, and management of buildings. Students in this course work with a professional producer to create a short movie to explore video as an engaging means of communicating.

[DEA 6450 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice

Spring, 3 credits. Limited to 24 students. Prerequisite: graduate or advanced undergraduate standing; undergraduates must have permission of instructor. Next offered 2011-2012. S. Danko.

Focuses on thinking processes and techniques that support creative problem solving. Examines theories of creative behavior and critical thinking. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.]

DEA 6480 Virtual Design, Analysis, and Representation

Fall. Variable credit; max. 4. Limited to 15 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, DEA 3302 or permission of instructor. Minimum cost of materials: \$150; lab fee: \$35. K. Gibson.

Advanced use of computer technology to create and analyze interior environments. Emphasizes the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

DEA 6500 Programming Methods in Design

Fall, 4 credits. L. Maxwell.

Intended for graduate students in cooperation with DEA 4590. Each student is required to attend DEA 4590 lectures, complete all required readings and assignments, and meet with the instructor and with other graduate students. An additional programming project is required for all graduate students.

DEA 6510 Human Factors: Ergonomics-Anthropometrics

Fall, 4 credits. Recommended: DEA 1500 and 3-credit statistics course. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 3250. Each student is required to attend DEA 3250 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 3250.

DEA 6520 Human Factors: The Ambient Environment

Spring, 4 credits. Recommended: DEA 1500. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors

considerations than is provided by DEA 3500. Each student is required to attend DEA 3500 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 3500.

DEA 6530 Planning and Managing the Workplace

Fall, 4 credits. Prerequisite: graduate standing. Letter grades only. F. Becker. Through lectures, readings, and projects, this course explores how the planning, design, and management of health care facilities affects patients, care providers, and health care quality. Course emphasizes the role of evidence-based design and examines issues and challenges in generating, interpreting, and applying different forms of evidence to improve health care quality and patient and staff experience. The final project involves students using different forms of evidence to develop their own innovative solutions to design dilemmas typically faced in planning and designing a hospital.

DEA 6540 Facility Planning and Management Studio

Spring, 4 credits. Prerequisite: DEA 4590/6500 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. Y. Hua.

For graduate students interested in facility planning and management. For description, see DEA 3540.

DEA 6560 Research Methods in Social Sciences

Fall, 4 credits. N. Wells.

Intended for graduate students who want a more thorough understanding of the use of research in the social sciences. Course begins with fundamentals of research design and covers internal and external validity, measurement reliability and validity, and a variety of tools and techniques. Recommended for graduate students undertaking thesis or dissertation projects. Students will need to see instructor for section assignments.

DEA 6590 Introduction to Facility Planning and Management

Fall, 2 credits. For graduate students interested in careers in facility planning and management. Letter grades only. F. Becker.

Introduction to the field of facility planning and management. Course examines how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Through readings, lectures, and discussions, students become familiar with basic characteristics and issues of strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems. Different approaches to sustainable facility design and issues in effectively managing and operating green facilities are explored in a term project working with organizations that have implemented sustainable designs, policies, and practices.

DEA 6610 Environments and Health

Spring, 3 credits. N. Wells.

Examines the impact of the physical environment on human health and well-being through the life course. Environmental factors examined include characteristics of the built and natural environment, housing, and

neighborhood, as well as sprawl, the dominance of the automobile, and patterns of American landscape development. Health outcomes include physical health, obesity, mental health, and cognitive functioning. Working within the life-course perspective, the course focuses particularly on environmental factors that may act as either protective mechanisms fostering the long-term resilience of individuals or risk factors contributing to long-term vulnerability.

DEA 6680 Design Theory and Criticism Seminar

Spring. 4 credits. Limited to 15 students. Letter grades only. J. Jennings.

For advanced undergraduate and graduate students. The seminar explores two methods of design thinking: theoretical and critical. One method stems from a desire to understand historical theory and to assess the relevance of theory as an intellectual basis for contemporary design. The other approach involves learning to write critically. Within this construct is the notion that every design is an argument a designer makes.

DEA 6700 Applied Ergonomics Methods

Spring. 4 credits. Limited to 20 students. Prerequisite: DEA 6510. A. Hedge.

Intended for graduate students who want a more thorough understanding of applied ergonomic methods than is provided by DEA 4700. Each student is required to attend DEA 4700 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 4700.

DEA 6760 Universal Design: Ergonomics and Accessibility

Spring. 3 credits. Recommended prerequisite: DEA 1500, 3250, or 6510, or permission of instructor. S-U or letter grades (DEA Option III students must do letter grade). D. Feathers.

Universal design accommodates and fosters human function, preferences, choice, and identity through the design of the built environment. This course introduces the concepts of universal design from a human factors/ergonomics perspective and outlines precepts and regulations to support human-centered design decisions. Student projects emphasize evaluating the built environment from a universal design perspective.

DEA 7100 Graduate Pro Seminar

Fall or spring. 1 credit. S-U. DEA graduate faculty.

This pro seminar meets once per week, and consists of bi-weekly guest lectures from DEA, Cornell, and guest faculty members, as well as professionals from outside the university. The goal is to build research and professional practice skills in the context of real world applications.

DEA 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades. DEA graduate faculty.

DEA 9990 Ph.D. Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of doctoral thesis committee chair and instructor. S-U or letter grades. DEA Ph.D. graduate faculty.

FIBER SCIENCE & APPAREL DESIGN

A. Lemley, chair (209 MVR, 255-3151); M. Frey, director of graduate studies; C. Jirousek, director of undergraduate studies; S. Ashdown, C. C. Chu, C. Coffman, J. Hinestroza, V. D. Lewis, F. Mete, A. Netravali, S. K. Obendorf, A. Racine

FSAD 1140 Introduction to Computer-Aided Design

Spring. 3 credits. Limited to 14 students per sec. Priority given to FSAD students and those in transfer process to FSAD. S-U or letter grades. Minimum cost of materials: \$100. A. Racine.

Explores the creative potential of microcomputers for fashion design. Uses AutoCAD software program as a design tool for drawing 2-D images. Introduces basic Photoshop software functions to enhance original drawings. Projects include creating full-scale engineered designs on fabric for digital printing in the studio, and a team-based fashion magazine.

FSAD 1170 Fashion Graphics

Fall. 3 credits. Limited to 21 students. Priority given to FSAD majors and transfer students. Prerequisite: basic drawing course. Letter grades only. Minimum cost of supplies: \$200; lab fee: \$30. V. D. Lewis.

Students develop both familiar and unfamiliar methods that enable them to visualize the fashioned body and ancillary expressions of fashion. Fashion graphics is explored as a communicative strategy essential in most aspects of fashion development.

FSAD 1250 Art, Design, and Visual Thinking

Fall. 3 credits. S-U or letter grades. C. Jirousek.

Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

FSAD 1350 Fibers, Fabrics, and Finishes

Fall. 3 credits. FSAD majors must also enroll in FSAD 1360. S-U or letter grades. M. Frey.

Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

FSAD 1360 Fiber and Yarn Analysis Laboratory

Fall. 1 credit. Corequisite: FSAD 1350. Letter grades only. M. Frey.

Consists of 14 laboratory sessions in which students learn techniques to identify and test fibers and yarns. A midterm and final exam are based on using the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

FSAD 1450 Introduction to Fashion Design

Fall. 3 credits. Limited to 30 students; 15 per lab. Priority given to FSAD students and students transferring into FSAD. Prerequisite: FSAD 1140. Corequisites: FSAD 1350 and 1360. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: \$200. A. Racine.

Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in upscale children's fashions. Through studio projects, students develop an understanding of the techniques needed to produce apparel from technical sketches, flat pattern design processes, and garment assembly.

FSAD 2370 Structural Fabric Design

Spring. 3 credits. Prerequisite: FSAD 1350. Recommended: college algebra. S-U or letter grades. M. Frey.

Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

FSAD 2640 Draping

Spring. 3 credits. Limited to 30 students; 15 per lab. Prerequisites: FSAD 1250 and 1450. Recommended: drawing course. Letter grades only. Minimum cost of materials: \$250; lab fee: \$50. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. The principles and processes of draping, advanced flat-pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

FSAD 2650 Patternmaking for Fashion Design

Fall. 3 credits. Limited to 30 students. Prerequisites: FSAD 1140, 1170, 1250, 1450, 1350, and 1360. Corequisite: FSAD 2370. Letter grades only. Minimum cost for fabrics, studio, and portfolio supplies: \$250. A. Racine.

The goal of this apparel studio course is to expand student competencies in flat-pattern design, technical sketching, and fitting. Students generate original design concepts using fashion sources from historic to contemporary times. Advanced garment assembly and detailing techniques for fashion apparel with Sonobond Technology are introduced.

FSAD 2660 Apparel Design: Product Development

Fall. 3 credits. Prerequisites: FSAD 1140 and 1450. Recommended: drawing course. Letter grades only. Minimum cost of materials: \$150; lab fee: \$10. S. Ashdown.

Project-based course in which students explore the relationship between technology and design, and the impact of production issues on manufactured clothing. Students learn computer-aided patternmaking, grading, manufacturing technologies, communication of technical details, flats, specifications, and costing of garments. Designs are developed to various stages from conceptual work to full specification of the product and its production details, with a concentration on the iterative design process.

FSAD 3000 Special Studies for Undergraduates

Fall or spring. Credit TBA. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

FSAD 3250 Color and Surface Design of Textiles

Fall. 3 credits. Limited to 18 students. Priority given to FSAD apparel design majors. Recommended: FSAD 1140 and 1350. Letter grades only. Minimum cost of materials: \$100; lab fee: \$100. C. Jirousek. Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects use techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work is augmented by lectures on pattern and color theory illustrated by slides and textile examples.

FSAD 3310 Apparel Production and Management

Fall. 3 credits. Limited to 40 students. Prerequisites: ECON 1110 and 1120 and upper-division course in either apparel or textiles. S-U or letter grades. Course fee: \$10. F. Mete. Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production and strategic management. Includes analysis of specific apparel manufacturing and management issues such as international sourcing strategies, Fast Fashion, Quick Response, mass customization, production and information technology, labor, and logistics. Students analyze and discuss case studies of creative individuals and organizations from a variety of fields that apply to the textile and apparel industry.

FSAD 3320 Product Quality Assessment

Fall. 3 credits. Limited to 36 students in lec, 18 per lab. Prerequisites: FSAD 1350 and statistics course. S-U or letter grades. Lab fee: \$15. Staff. Covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Discusses day-to-day tests done in the textile and apparel industry. Laboratory sections introduce students to various test methods, data generation for analysis, and evaluation.

FSAD 3350 Fiber Science

Fall. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. S-U or letter grades. A. Netravali. Covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

FSAD 3460 Design Process

Spring. 4 credits. Limited to 30 students. Priority given to FSAD majors and transfer students. Prerequisites: FSAD 1350, 1450, 2640, and 2650. Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. V. D. Lewis.

Exposes students to dilemmas and methods used by creative fashion designers. Course ambitions are to develop personal design handwriting; unite a provocative design issue with the requirement of the market and functionality while emphasizing quality and creativity in realizing design ideas.

FSAD 3690 Style, Fashion, and the Apparel Industry

Spring. 2 credits. Limited to 30 students. Not open to freshmen. Prerequisites: FSAD 1250, 1350, and 2370. Students should not take FSAD 3690 and FSAD 3460 in same semester. Letter grades only. A. Racine. Illustrated lectures focus on changes in the U.S. apparel industry and fashion cycles from the 19th century to the present day resulting from social forces, technological developments, and shifting demographics. The Cornell Costume Collection is used for discussion. Students write an original research paper on topics relating to changes in fashion over time.

FSAD 4000-4010-4020-4030 Special Independent Studies for Undergraduates

Fall, summer, or spring. Credit TBA. S-U or letter grades. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of FSAD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in the college registrar's office (146 MVR). To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

FSAD 4000: Directed Reading. For study that predominantly involves library research and independent reading.

FSAD 4010: Empirical Research. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

FSAD 4020: Supervised Fieldwork. S-U grades only. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

FSAD 4030: Teaching Apprenticeships. Fall or spring. 2-4 credits. Prerequisites: upper-class standing, demonstrated high level of performance in subject to be taught and in overall academic program, and permission of instructor and department chair. S-U or letter grades. Staff. Apprenticeship includes both a

study of teaching methods in the field and assisting the faculty with instruction.

FSAD 4200 History of Color and Design in Textiles

Spring. 3 credits. Prerequisite: FSAD 1250 or permission of instructor. S-U or letter grades. Offered alternate years. C. Jirousek. Explores color theory principles, color trends, science and technology of color measurement, color and design in textile construction and embellishment, design use of pigments and dyes, and history of textile design as a designer resource. Students complete hands-on exercises, two exams, and a paper.

[FSAD 4360 Fiber Chemistry

Spring. 3 credits. Prerequisite: senior or first-year graduate standing. S-U or letter grades. Offered alternate years; next offered 2011-2012. C. C. Chu.

Focuses on the chemical and physical structure of several commercially important fibers and their polymerization process. Discusses color chemistry and relationship to fiber dyeing.]

FSAD 4390 Biomedical Materials and Devices for Human Body Repair (also BME 5390)

Spring. 2-3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). S-U grades only for 2 credits, letter grades only for 3 credits. C. C. Chu.

Surveys materials and devices for repair of injured, diseased, or aged human tissues/organs. Includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

FSAD 4440 Global Fashion Management

Fall. 3 credits. Prerequisites: junior or senior standing; FSAD 1350 and marketing course. S-U or letter grades. F. Mete. Overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. Includes the organization and structure of both domestic and international retailers along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies are emphasized throughout.

FSAD 4660 Textiles, Apparel, and Innovation

Fall. 3 credits. Prerequisite: FSAD 2370. Recommended: FSAD 4320. S-U or letter grades. Cost of field trip: \$100. J. Hinestroza.

Designed for students in all FSAD options. Explores the relationship between materials and design with a concentration on the use of innovative textile materials in apparel. Both aesthetic and functional issues are addressed. The course consists of a combination of lecture, discussion of readings, oral reports, a research paper, and project work. There is a one-day field trip to New York City.

FSAD 4700 Fashion Presentation: Portfolio Development

Spring. 3 credits. Limited to 25 students. Priority given to FSAD majors and transfer students. Prerequisites: FSAD 1170, 2640, 2650, and 3460. Minimum cost of materials: \$250. V. D. Lewis.

Students are expected to discover their personal philosophy of fashion and to discover and adopt current presentation techniques. Students gain an understanding of presentation methods currently used in fashion design, forecasting, and editorial illustration. Skills covered include fashion illustration, image manipulation, and photographic image, layout, and presentation.

FSAD 4990 Honors Thesis Research

Fall and spring. 4 credits each in fall and spring semesters of senior year.
Prerequisites: minimum GPA of 3.3 and submission of application in junior year. S-U or letter grades. Staff.

The student prepares a thesis, based on independent research, including a research statement, background, approach, results (which could be a description of a creative work), and discussion. The student may also produce creative work. Students make an open presentation of work, either a seminar or an exhibition, and an oral defense with the committee. Interested students should obtain a FSAD Honors Program application form from the FSAD undergraduate office (207 MVR) and submit the application to the department before the end of the fall semester of junior year. For more information students should contact the director of undergraduate studies.

FSAD 6000 Special Problems for Graduate Students

Fall or spring. Credit TBA. S-U or letter grades. Staff.

Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

[FSAD 6160 Rheology of Solids: Dynamic Mechanical Analysis of Fibers and Polymers

Fall. 3 credits. S-U or letter grades. Offered alternate years; next offered 2011–2012. J. Hinestroza.

Introduction to dynamic mechanical analysis and its relevance in the characterization of polymer fibers and films.]

FSAD 6200 Physical Properties of Fiber-Forming Polymers and Fibers

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. A. Netravali.

Covers formation and properties of fiber-forming polymers; rubbery, glassy, and crystalline states; and their interconnection. Discusses fiber structure; relationship between chemical structure and physical properties of manufactured and natural fibers; mechanical, thermal, and viscoelastic properties of fibers; and testing methods.

FSAD 6260 The Chemistry of Textile Finishes and Dyeing

Spring. 3 credits. Prerequisites: organic chemistry course or permission of instructor. S-U or letter grades. Offered alternate years. C. C. Chu.

Discusses chemical aspects of textiles with emphasis on finishes and dyeing. Examines industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, and water repellency. Emphasizes the correlation of the observed effect with chemical structure, end-user influences, interaction with fabric and fibers, sources, and synthetic routes. Briefly discusses the environmental effect of these textile chemicals and current federal regulation.

FSAD 6370 Research Seminars in Apparel Design

Fall and spring. 1 credit; repeat of course each semester encouraged for all apparel design graduate students. Prerequisites: permission of individual instructor for advanced undergraduates. S-U grades only. Apparel Design faculty.

FSAD 6390 Properties of Fibrous Systems

Fall. 3 credits. Prerequisite: solid mechanics course or permission of instructor. S-U or letter grades. Offered alternate years. J. Hinestroza.

Through lectures, readings, discussion, presentations, and project work this course explores the relationships among fiber structures and their mechanical, chemical, electric and frictional properties. Intensive reading and criticism of peer-reviewed articles is required as well as a weekly presentations. Every week students are assigned two papers for thorough review. The students are divided into two groups randomly chosen. Each group makes a detailed presentation of a paper and the second group criticizes the paper.

FSAD 6640 Human Factors: Anthropometrics and Apparel

Fall. 3 credits. Open to advanced undergraduates. Prerequisites: statistics course and permission of instructor. S-U or letter grades. Offered alternate years. S. Ashdown.

Seminar that focuses on the human form and its relationship to clothing. Includes readings and discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; national and international sizing systems and standards; and the impact of new technologies such as body scanning on sizing and fit issues. Students use the 3-D body scanner to investigate an issue related to these topics.

[FSAD 6660 Fiber Formation: Theory and Practice

Spring. 3 credits. Prerequisites: polymer chemistry, college physics, FSAD 4360, 6200, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2011–2012. M. Frey.

Covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber.]

[FSAD 6700 Fashion Theory

Spring. 3 credits. Limited to 25 students. Priority given to FSAD majors and transfer students. Prerequisite: FSAD 3460 for undergraduates or similar course for graduates. Letter grades only. Offered alternate years; next offered 2011–2012. Minimum cost of materials: \$250. V. D. Lewis.

Provides students with the theoretical tools to enable them to conduct debates and create strategy about the design of fashion.]

FSAD 6720 Creative Problem-Solving in Apparel Design

Spring. 3 credits. Prerequisites: graduate or advanced undergraduate standing; for undergraduates, permission of instructor. Recommended: upper-level courses in apparel design. Offered alternate years. F. Mete.

Focuses on concept-based problem-solving processes in creative apparel design. Approaches apparel design problems as a change process in design variables and

concepts. Students learn by observing, recording, and analyzing their own design activity while they are applying a process of inquiry, experimentation, and research. Students present their end products and documented creative processes to a jury.

[FSAD 6750 Aesthetics and Meaning in World Dress

Spring. 3 credits. Prerequisite: FSAD 1250 or course in history of art, costume history, or other history. S-U or letter grades. Offered alternate years; next offered 2011–2012. C. Jirousek.

Examines the aesthetic and social/psychological relationship between body and clothing in the context of various cultures.]

FSAD 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades. Staff.

FSAD 9990 Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades. Staff.

HUMAN DEVELOPMENT

R. Savin-Williams, chair; B. Koslowski, director of graduate studies; E. Wethington, director of undergraduate studies; C. Brainerd, M. Casasola, S. Ceci, R. Depue, J. Eckenrode, G. Evans, S. Hamilton, C. Hazan, T. Kushnir, C. Loeckenhoff, B. Lust, A. Ong, K. Pillemer, V. Reyna, S. Robertson, C. Schelhas-Miller, Q. Wang, W. Williams. Emeritus: J. Brumberg, M. Cochran, H. Ricciuti

HD 1150 Human Development: Infancy and Childhood

Fall or summer. 3 credits. S-U or letter grades. C. Schelhas-Miller.

Introduces students to the basic concepts, theories, and research in human development as they explain prenatal development and development in infancy and childhood. The focus is on individual development from an interdisciplinary perspective with an emphasis on psychological development, but also drawing from the fields of sociology, history, biology, anthropology, and education.

HD 1160 Section for Infancy and Childhood

Fall or summer. 1 credit. Enrollment in fall limited to HD majors. Enrollment in fall and summer limited to students enrolled in HD 1150. Letter grades only. C. Schelhas-Miller.

Provides an opportunity to discuss material in more depth in a small group. Students learn to read and critique empirical research articles and discuss the application and policy implications of course topics.

HD 1170 Human Development: Adolescence and Emerging Adulthood

Spring. 3 credits. S-U or letter grades. C. Schelhas-Miller.

Broad overview of theories, research, and issues in the study of human development during adolescence and emerging adulthood. Focuses on the major biological, cognitive, and social changes during adolescence; the psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs,

particularly families, peer groups, schools, work, and popular culture. Discusses empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies.

HD 1710 The Black Family and the Socialization of Black Children (also ASRC 1600)

Fall. 3 credits. Letter grades only. T. Gosa. For description, see ASRC 1160.

HD 2180 Human Development: Adulthood and Aging

Spring. 3 credits. Prerequisite: HD 1150 or HD 1170. S-U or letter grades. C. Loeckenhoff.

General introduction to theories and research in adult development and aging. Discusses psychological, social, and biological changes from youth through late adulthood. Emphasizes both individual development within generations and differences among generations.

HD 2200 The Human Brain and Mind: Biological Issues in Human Development (also COGST 2200)

Spring. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. S-U or letter grades. B. Ganzel.

HD 2300 Cognitive Development (also COGST 2300)

Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. T. Kushnir.

Surveys current theory and research on various aspects of cognitive development across the life span, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to critically assess developmental research. The course is a combination of lecture, seminar, and fieldwork.

[HD 2380 Thinking and Reasoning (also COGST 2380)

Fall. 3 credits. Prerequisite: HD 1150, HD 1170, or PSYCH 1101. Next offered 2011-2012. B. Koslowski.

Examines problem solving, transfer, and creativity; pre-causal and causal reasoning; models of good thinking based on formal logic, pragmatic syllogisms, and probability theory; expert-novice differences; cognition and attitudes; extra-rational and magical beliefs; and putative racial and social class differences in intelligence.]

HD 2510 Social Gerontology: Aging and the Life Course (also SOC 2510)

Spring. 3 credits. Prerequisites: one of the following: HD 1150, HD 1170, SOC 1101, DSOC 1101, or PSYCH 1101. S-U or letter grades. E. Wethington.

Analyzes the social aspects of aging in contemporary American society from a life-course perspective. Topics include (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (e.g., family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; and (4) the influences of society on the aging individual.

HD 2600 Introduction to Personality (also PSYCH 2750)

Fall. 3 credits. Recommended: introductory psychology or human development course. V. Zayas.

For description, see PSYCH 2750.

HD 2610 The Development of Social Behavior (also PSYCH 2610)

Fall. 3 credits. Highly recommended: introductory psychology or human development course. Staff.

Examines issues in the development of social behavior from the perspective of theory and research. Likely topics include bases of social behavior across the life span, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, moral development, emotional development, and the function and limits of experimental research in the study of social development.

HD 2820 Community Outreach (also PSYCH 2820)

Fall. 2 credits. Prerequisites: HD 1150 or PSYCH 1101. Students may not register concurrently with HD 3270 or PSYCH 3270 or 3280. Letter grades only. H. Segal.

For description, see PSYCH 2820.

HD 3110 Educational Psychology (also EDUC 3110)

Fall. 4 credits. S-U or letter grades. D. Schrader.

For description, see EDUC 3110.

[HD 3190 Memory and the Law

Fall. 3 credits. Prerequisites: HD 1150, HD 1170, PSYCH 1101, HD 2330, or PSYCH 2650. S-U or letter grades. Next offered 2011-2012. C. Brainerd.

Focuses on how the scientific study of human memory interfaces with the theory and practice of law.]

HD 3200 Human Developmental Neuropsychology

Spring. 3 credits. Prerequisite: HD 2200 or PSYCH 2230 or BIONB 2220. S-U or letter grades. B. Ganzel.

HD 3270 Field Practicum I (also PSYCH 3270)

Fall. 3 credits. Limited to 30 students. Students must commit to taking HD 3280 in spring semester. Prerequisites: HD 3700 or PSYCH 3250 and permission of instructor. Letter grades only. H. Segal.

For description, see PSYCH 3270.

HD 3280 Field Practicum II (also PSYCH 3280)

Spring. 3 credits. Limited to 30 students. Prerequisites: HD 3270/PSYCH 3270 taken previous semester, PSYCH 3250 or HD 3700, and permission of instructor. Letter grades only. H. Segal.

For description, see PSYCH 3280.

[HD 3330 Children and the Law

Fall. 3 credits. Prerequisite: HD 1150. Next offered 2011-2012. S. Ceci.

Examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena.]

[HD 3340 The Growth of the Mind (also COGST 3340)

Spring. 4 credits. Recommended: course in human experimental psychology, statistics, or HD 1150 or equivalent, or permission of instructor. S-U or letter grades. Next offered 2011-2012. B. Lust.

Introduces the fundamental issues of cognition. Basic debates within the study of cognition are introduced and discussed throughout.]

HD 3370 Language Development (also COGST 3370, PSYCH 4360, LING 4436)

Spring. 4 credits. Open to undergraduate and graduate students. Supplemental lab course available (HD 4370, PSYCH 4370, COGST/LING 4500). Graduate students also should enroll in HD 6370, LING 7000, supplemental graduate seminar.

Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neurobiology, biology, or linguistics. S-U grades optional. B. Lust.

Surveys basic issues, methods, and research in the study of first-language acquisition. Considers major theoretical positions in the field in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of "Universal Grammar" and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HD 3380 Social Cognition and Development

Fall. 3 credits. Prerequisite: HD 1150.

Recommended: HD 2300 and a statistics course. Letter grades only. Offered alternate years. Q. Wang.

Offered to students interested in children's thinking pertaining to themselves and their social world. The course encompasses cutting-edge developmental research on social cognition in social neuropsychology, experimental social-cognitive psychology, and cultural psychology. The course examines major theories and empirical findings on a wide range of topics, including the self, theory of mind, autobiographical memory, emotion cognition, moral reasoning, concept of learning, intergroup bias, peer perception, and more. These social-cognitive faculties represent universal human capacity with neurological underpinnings as well as culture-specific competence that enables children to effectively navigate in their social world.

[HD 3420 Participation with Groups of Young Children

Fall. 4 credits. Limited to 25 students.

Prerequisites: HD 1150 and contact with instructor to arrange placement hours. S-U or letter grades. Next offered 2011-2012. Staff.

Designed to integrate developmental theories with supervised experience in local care and educational contexts for young children.]

[HD 3430 Social Worlds of Childhood

Spring. 4 credits. Limited to 25 students.

Prerequisite: HD 1150. S-U or letter grades. Next offered 2011-2012. Staff.

Explores the nature, quality, and impact of relationships of school-age children (ages 5-11) in multiple contexts (e.g. school, home, community).]

HD 3440 Infant Behavior and Development

Fall. 3 credits. Limited to 60 students. Not open to freshmen. Prerequisites: HD 1150, biology course, and statistics course. S. Robertson.

Examines behavior and development from conception through the first two years of life in traditional areas (e.g., perception, cognition, socioemotional theory, language, motor function). Strongly emphasizes the fundamental interconnectedness of these aspects of development as well as their relation to the biology of fetal and infant development. Emphasizes topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Also describes conditions that put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights). Research methodology in the study of early behavior and development is emphasized throughout the course.

HD 3460 The Role and Meaning of Play

Spring. 3 credits. Limited to 45 students. Prerequisite: junior or senior standing; HD 1150. E. Stilwell.

Examines the play of children ages three through seven. Through seminar discussions, workshops, videos, and individualized research students explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

HD 3470 Human Growth and Development: Biological and Behavioral Interactions (also BSOC 3471, NS 3470)

Spring. 3 credits. Limited to 150 students. Prerequisites: BIOG 1101 or 1109 or equivalent, and HD 1150 or PSYCH 1101. Offered alternate years. S. Robertson and J. Haas.

Concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Considers intrinsic and extrinsic causes of variations in growth, including various forms of stimulation. Also examines the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

HD 3490 Positive Psychology

Fall and spring. 3 credits. Limited to 120 students. Prerequisites: HD 1150 or HD 1170 or PSYCH 1101 and HD 2600/PSYCH 2750 or HD 2610 or PSYCH 2800. S–U or letter grades. A. Ong.

Takes a comprehensive look at current research and theory in the emerging field of Positive Psychology. Students become familiar with theories, methods, and empirical research pertaining to the psychology of human strengths, virtues, abilities, and talents.

HD 3530 Risk and Opportunity Factors in Childhood and Adolescence

Fall. 3 credits. Limited to 100 students. Prerequisites: HD 1150 or HD 1170. S–U or letter grades. J. Whitlock.

Explores the meaning of risk and opportunity in the lives of children and youth. Begins with a brief history of the social construction of childhood and adolescence and moves into identification of the core concepts associated with risk accumulation and resilience. Uses

case studies, large and small group discussion, and policy debates to explore central concepts as they relate to social policy, professional practice, and community development. Assignments include integrative reflection papers on course material, quizzes, and participation in a simulated public-policy debate.

[HD 3570 Social Inequalities in Physical and Mental Health (also SOC 3670)]

Fall. 3 credits. Limited to 120 students. Prerequisites: HD 1150, or HD 1170, PSYCH 1101, HD/SOC 2510, DSOC 1101, or SOC 1010. S–U or letter grades. Next offered 2011–2012. E. Wethington.

Introduction to physical and mental health inequalities in the United States, the causes of these inequalities, and their impact on individual development across the life course.]

HD 3620 Human Bonding

Spring. 3 credits. Limited to 600 students. Recommended: introductory psychology or human development course. S–U or letter grades. C. Hazan.

Covers the science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HD 3660 Affective and Social Neuroscience

Spring. 3 credits. Prerequisites: HD 2200 or PSYCH 2230/4600 or BIONB 2220. Letter grades only. R. Depue.

Focuses on networks of brain regions that are organized around the integration of processes related to emotion and motivation. The course first explores brain pathways for processing visual, auditory, body and face movements, and tactile stimuli that comprise the raw material used to judge the emotional significance of external events. Next, brain regions involved in the (1) emotional evaluation of that sensory input, and (2) emotional expression once a significant event is identified are described. Then, brain processes underlying the special nature of human emotional experience (subjective feelings) are explored. All of these basic emotional processes are extended by placing them within widespread brain networks that modulate emotional behavior. There is an emphasis on social contexts and the development of social emotions, including social bonding and social rejection. The manner in which emotional stress influences learning and memory, with implications for PTSD, concludes the course.

HD 3700 Adult Psychopathology (also PSYCH 3250)

Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any course in psychology or human development. H. Segal.

For description see PSYCH 3250.

HD 3820 Research Methods in Human Development

Spring. 3 credits. Prerequisite: HD 1150 or HD 1170. Highly recommended: background in statistics. Letter grades only. M. Casasola.

Students learn about a variety of research methodologies and gain firsthand experience in conducting all aspects of a research project. Students design and conduct one descriptive and one experimental study. They also gain experience in using statistical software to analyze data.

HD 3840 Gender and Sexual Minorities (also FGSS 3850)

Fall. 3 credits. Prerequisite: social science course. S–U or letter grades. K. Cohen. Introduces students to theories, empirical scholarship, and current controversies regarding lesbian, gay, bisexual, transgender, sexually questioning, and other gender and sexual minority populations. The major focus is on sexual development, lifestyles, and communities with additional coverage of ethnic, racial, and gender issues. Videos supplement readings and lectures.

HD 4000–4010–4020–4030 Special Studies for Undergraduates

Fall or spring. Credit TBA; 1–4. Prerequisite: permission of instructor. S–U or letter grades.

For advanced independent study by an individual student or for study with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the department office in G77 MVR. This form must be signed by the instructor directing the study and the student's faculty advisor and submitted to G77 MVR, the Office of Undergraduate Education. After the form is approved, the student takes it to the college registrar's office, 146 MVR. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

4000: Directed Readings. Prerequisite: permission of instructor. For study that predominantly involves library research and independent study.

4010: Empirical Research. Prerequisite: permission of instructor. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

4020: Supervised Fieldwork. Prerequisite: permission of instructor. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

4030: Teaching Assistantship. Prerequisites: permission of instructor; juniors and seniors with minimum 3.0 GPA; either HD 1150, or PSYCH 1101, and two intermediate-level HD courses, or equivalent courses in psychology or sociology. Students must have taken course and received B+ or higher. For study that includes assisting faculty with instruction.

[HD 4140 Social and Psychological Aspects of the Death Penalty]

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing and HD 1150 or HD 1170 and HD 3330 or PSYCH 2650. S–U or letter grades. Next offered 2011–2012. C. Brainerd.

Focuses on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants.]

[HD 4180 Aging: Contemporary Issues

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 2180 or HD 2510 or permission of instructor. Letter grades only. Next offered 2011–2012. Staff.

Seminar addressing major issues and controversies in the field of aging. Designed for upper-level students who wish to pursue an in-depth analysis of concepts such as “successful” aging and wisdom.]

[HD 4190 Midlife Development

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 2180 or HD 2510 or permission of instructor. Letter grades only. Offered alternate years; next offered 2011–2012. A. Ong.

Examines the burgeoning research literature on adult development during midlife. Focuses on research and theory examining psychological changes during middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control.]

[HD 4200 Risk and Rational Decision Making

Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing and HD 1150 or HD 1170 and HD 3330 or PSYCH 2650 or PSYCH 2800. S–U or letter grades. Next offered 2011–2012. V. Reyna.

Offers a hands-on introduction to research and laboratory techniques that address topics in risk and rational decision making in human development from multiple disciplinary perspectives.]

[HD 4220 Research in Emotion and Cognition

Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or HD 1170 or PSYCH 1101 AND HD 2610 or HD 2600; permission of instructor. Next offered 2011–2012. Staff.

Focuses on age-related changes in emotion and cognition.]

[HD 4230 Research in Children's Testimony: Exploring Social and Cognitive Mechanisms

Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or PSYCH 1101 AND an introductory course in statistics, and permission of instructor. Next offered 2011–2012. S. Ceci.

Laboratory-based research that exposes students to the research process in the area of children's testimonial competence.]

HD 4240 Stress, Emotions, and Health (also COGST 4340)

Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or HD 1170 or PSYCH 1101 AND HD 2610 or HD 2600 and permission of instructor. A. Ong.

Reviews theory and research on stress, emotions, and health. This course offers opportunities for students to develop new ways to integrate theory and research on stress and health with the advances in the science of affect and emotion. In this course, undergraduate students attend a weekly lab meeting for 1.25 hours per week, read pertinent papers, write reaction responses, and work 10.75 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

HD 4250 Translational Research on Decision Making

Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or HD 1170 or PSYCH 1101 AND HD 2610 or HD 2600. V. Reyna.

Introductory laboratory-based course focusing on basic foundations in translational research on decision making across the lifespan. The course introduces students to hands-on applications of research skills in the context of research on decision making, spanning basic and applied research in law, medicine, behavioral economics, and policy. It focuses on such topics as human subjects protection, working with populations across the life span (e.g., children, seniors), database development, working with external partners and stakeholders (e.g., schools, hospitals), and basic concepts and techniques in decision research. Students participate in weekly laboratory meetings in small teams focused on specific projects as well as monthly meetings in which all teams participate. During laboratory meetings, students discuss ongoing research, plans for new studies, and interpretations of empirical findings from studies that are in progress or have been recently completed. New students work closely with experienced students and eventually work more independently. In order to fully grasp how the research projects fit into the broader field, students read relevant papers weekly and write reaction responses. Because several projects are ongoing at all times, students have the opportunity to be involved in more than one study and are assigned multiple tasks such as piloting research paradigms, subject recruitment, data collection, data analysis, and data entry. Students attend a weekly lab meeting for 1.5 hours per week, read pertinent papers, write reaction responses, and work 10.5 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

[HD 4260 Translational Research on Memory and Neuroscience

Spring. 4 credits. Limited to 20 students. Prerequisite: HD 1150 or HD 1170 or PSYCH 1101 AND HD 2610 or HD 2600. Next offered 2011–2012. C. Brainerd.

Laboratory-based course focusing on basic foundations in translational research on the neuroscience of human memory and memory development.]

HD 4270 Entering a Virtual Linguistic Lab: New Cybertools for the Scientific Study of Language Acquisition (also COGST 4275, LING 4270)

Spring. 4 credits. Prerequisite: instructor permission required. S–U or letter grades. B. Lust.

Students learn principles and procedures for the scientific and collaborative study of language acquisition, empowered by new possibilities offered by current cyberinfrastructure. Several new cybertools to aid the study of language acquisition are introduced, as well as principles and best practices for research through their use. A series of web conferences link Cornell language acquisition labs with other labs across the country. A hands-on component involves students in development of their role in collaborative research, including research design, analyses, and data management.

HD 4280 Research on Healthy Aging

Fall. 4 credits. Prerequisites: HD 1150 or PSYCH 1101 AND one of the following: HD 2180, HD 2510, HD 2610, or HD 2600. Recommended: statistics course. S–U or letter grades. C. Loeckenhoff.

This laboratory-based class focuses on age differences in personality traits, emotional experiences, and social relations, and their effect on health-related behaviors and outcomes. It allows students to gather hands-on experience with various research skills. Students attend weekly lab meetings (1.25 hours), write reaction responses to assigned readings, and contribute 10.75 hours/week to laboratory-related tasks.

HD 4310 Mind, Self, and Emotion: Research Seminar (also AAS 4310, COGST 4350)

Spring. 3 credits. Limited to 20 students. Prerequisites: upper-class undergraduate or graduate standing; HD 1150 or HD 1170 or PSYCH 1010; and permission of instructor. Letter grades only. Offered alternate years. Q. Wang.

Offered to students who are currently conducting research or planning to do research in the near future on one of the three topics—memory, self, or emotion. The course examines current data and theories concerning the topics from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. The “scale of observation” is viewed as occurring within the person (brain mechanisms, including genetics), at the level of the person (content-goals, beliefs, desires, etc.), and between persons (relationships and group interaction—including culture).

[HD 4320 Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also COGST 4320)

Spring. 3 credits. Limited to 20 students (14 HD 4320, 6 COGST 4320). Prerequisites: junior or senior standing; HD 1150 or HD 1170 or PSYCH 1101 or permission of instructor. S–U or letter grades. Next offered 2011–2012. B. Koslowski.

The basic premise of this course is that scientific reasoning is not restricted to scientists but is continuous with good reasoning in general. It examines not only how people reason, but also the extent to which their reasoning is either flawed or appropriate.]

HD 4330 Developmental Cognitive Neuroscience (also COGST 4330)

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; HD 2200 or PSYCH 2230, BIONB 2220. S–U or letter grades. B. Ganzel.

What are the brain mechanisms underlying human behavior and cognition? How do those underlying brain mechanisms develop? These are the questions that developmental cognitive neuroscience tries to address and those explored in this course. The course explores methods used in the field (including brain imaging techniques), recent findings on the development of brain mechanisms underlying human behaviors such as language, attention, and memory, as well as the brain mechanisms that may underlie various developmental disorders such as developmental dyslexia, autism, and attention deficit (hyperactive) disorder (AD[H]D). Emphasis is on reading primary research literature and acquiring the skills to understand, critique, discuss, and

write about primary research. The format includes lecture and discussion.

[HD 4340 Current Topics in Cognitive Development (also COGST 4340)]

Spring. 3 credits. Limited to 20 students. Prerequisite: HD/COGST 3340 or permission of instructor. S–U or letter grades. Next offered 2011–2012. B. Lust. Supplements survey course HD/COGST 3340 with additional discussion of current research in the area of cognitive development.]

HD 4370 Lab Course: Language Development (also COGST 4500, LING 4450, PSYCH 4370)

Fall. 4 credits. Limited to 20 students. Prerequisite: HD/COGST/PSYCH/LING 3370 or equivalent. B. Lust. Optional supplement to the survey course Language Development (COGST/HD/LING/PSYCH 3370). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition.

[HD 4440 Internship in Educational Settings for Children]

Fall or spring. 8–12 credits. Prerequisites: HD 1150, 3420 or 3430, and 3480; permission of instructor. Recommended: HD 3460. S–U or letter grades. Next offered 2011–2012. Staff.

Offers an opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families.]

[HD 4480 Advanced Participation with Children]

Spring. 4–8 credits. Limited to 20 students (depending on availability of placements and supervision). Prerequisites: HD 1150 and 3420 or 3430 and permission of instructor. Recommended: HD 3460. S–U or letter grades. Next offered 2011–2012. Staff.

Supervised field-based course designed to help students deepen and consolidate their understanding of children.]

HD 4490 Children's Learning in Social Context

Spring. 3 credits. Prerequisites: HD 2300 or course in early childhood (e.g., HD 1150 or PSYCH 2090) PLUS course in cognitive development (e.g., HD 2380). S–U or letter grades. T. Kushnir.

Focuses on the role of social knowledge and social context in early cognitive and language development. Topics include learning and social cognition, parent-child conversations, collaborative learning, formal instruction, individual and cultural differences, and implications for education. Observations of young children are part of the course.

[HD 4520 Culture and Human Development (also AAS/COGST 4520)]

Spring. 3 credits. Limited to 20 students. Prerequisite: HD 1150 or HD 1170 or PSYCH 1101. Open to undergraduate and graduate students. Letter grades only. Offered alternate years; next offered 2011–2012. Q. Wang.

Takes an interdisciplinary approach to address the central role of culture in human development. Draws on diverse theoretical perspectives.]

[HD 4570 Health and Social Behavior (also SOC 4570)]

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; statistics course and *one* of the following: HD 2500, SOC/DSOC 1101, or HD/SOC 2510. Letter grades only. Offered alternate years. Next offered 2011–2012. E. Wethington.

Critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health.]

[HD 4590 Transitions Across the Life Span]

Fall. 3 credits. Prerequisites: junior or senior standing, HD 2180, HD 2510, or permission of instructor. Enrollment limited to 20 students. Next offered 2011–2012. C. Loeckenhoff.

Seminar-style course focusing on major normative and non-normative transitions that people encounter from late adolescence to advanced old age.]

[HD 4640 Adolescent Sexuality (also FGSS 4670)]

HD 4660 Psychobiology of Temperament and Personality

Fall. 3 credits. Limited to 20 students. Prerequisite: HD 3660 and permission of instructor. Letter grades only. R. Depue.

Seminar oriented to students planning to enter either a Ph.D. program in biological aspects of psychology or an M.D. program. It relies on basic research literature that requires detailed studying. The development of neurobehavioral systems as a means of adapting to critical stimuli has formed the basis of emotional systems in humans, and individual differences in these systems form the basis of temperament and personality. The nature of temperament and personality is explored from psychometric, experiential, genetic, and neurobiological points of view. There is a focus on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin), neuropeptides (corticotrophin releasing hormone, opiates, oxytocin), genetic polymorphisms in these neuromodulators, and early experience in determining individual differences in temperament and personality. The manner in which these biological factors influence the encoding of experience is explored as the basis of stability in personality traits.

HD 4680 Stress in Childhood and Adolescence

Spring. 3 credits. Limited to 20 students. Prerequisite: junior or senior standing. Recommended: HD 1150 or HD 1170 and a statistics course. Letter grades only. J. Eckenrode.

Advanced seminar that reviews research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics represent common stressors in the lives of children (e.g., divorce of parents) that have potentially damaging consequences for development. Also covers topics in which Cornell faculty members have conducted significant research (e.g., child abuse and neglect). In addition to considering the negative effect of stress on development, also considers issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.

[HD 4740 Autism and the Development of Social Cognition]

Fall. 3 credits. Limited to 20 seniors and juniors. Prerequisites: one statistics course AND either BIONB 2220 OR one course in neuroscience numbered 3000 or above (e.g., HD 3660 or PSYCH 3320 or 4250). S–U or letter grades. Next offered 2011–2012. Staff.

Seminar covering current psychological and neurobiological theories of autism, emphasizing written analysis and critical review of the primary research literature.]

HD 4780 Attention Deficit/Hyperactivity Disorder in Children

Spring. 3 credits. Limited to 15 students. Prerequisites: HD 1150 or equivalent, introductory biology, statistics course. S–U or letter grades. S. Robertson.

This seminar examines in detail the nature, diagnosis, epidemiology, causes, and treatment of ADHD through a critical evaluation of the recent scientific and medical literature. Also considers implications for families, schools, and society.

HD 4980 Senior Honors Seminar

Fall and spring. 1 credit. Requirement for and limited to seniors in HD honors program. S–U grades only. M. Casasola.

In this weekly seminar, students are guided through the process of completing an honors thesis in human development. The course focuses on developing students' writing abilities, reviewing statistics and how to present research findings in a manuscript, and receiving feedback on drafts of their thesis, as well as practice presenting the results of their thesis in poster and oral presentations.

HD 4990 Senior Honors Thesis

Fall or spring. Credit TBA. Prerequisite: permission of thesis advisor and coordinator of honors program. S–U or letter grades. HD faculty.

The Graduate Program

HD graduate courses are open to undergraduates only by permission of instructor.

General Courses

HD 6020 Research in Risk and Rational Decision Making

Spring. 3 credits. Limited to 5 students. Corequisite: HD 4200. S–U or letter grades. V. Reyna.

This hands-on laboratory course develops research skills in the context of risk and rational decision making in human development from multiple disciplinary perspectives and with respect to different kinds of decision-making under risk and uncertainty. Topics depend on student interests but may include decisions about war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon), and legal decision making (e.g., jury deliberations). Students read the research literature, discuss the latest empirical findings and scientific theories of risk and rationality, and engage in group work and peer review to hone their skills. Students then design research projects and engage in research activities as well as read additional references tailored to their interests.

[HD 6100 Cognitive Sex Differences

Fall. 3 credits. Limited to 20 students. S-U grades only. Next offered 2011-2012. S. Ceci.

Examines cognitive theories and empirical data that pertain to sex differences in cognition and achievement.]

[HD 6110 Psychology of Emotion

Spring. 3 credits. Next offered 2011-2012. A. Ong.

Takes a comprehensive look at current research and theory in the field of emotion. Students become familiar with theories, methods, and empirical research pertaining to the psychology of emotions. Topics include—but are not limited to—theoretical models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications.]

[HD 6120 Foundations in Developmental Science: Issues and Methods

Spring. 3 credits. Next offered 2011-2012. A. Ong.

Designed to expose graduate students to current theory and research on individual development across the lifespan. The emphasis is on issues and questions that have dominated the field over time and that continue to provide impetus for research.]

[HD 6140 Social and Psychological Aspects of the Death Penalty

Spring. 3 credits. Limited to 5 students. Prerequisite: Cornell doctoral students. S-U or letter grades. Next offered 2011-2012. C. Brainerd.

Focuses on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and provides training in how to prepare such reports.]

[HD 6190 Memory and the Law (also LAW 7582)

Fall. 3 credits. Limited to 5 doctoral students. S-U or letter grades. Next offered 2011-2012. C. Brainerd.

Focuses on how the scientific study of human memory interfaces with the theory and practice of law. Students study relevant areas of memory research and memory theory.]

HD 6200 First-Year Proseminar in Human Development

Yearlong. 1 credit. Prerequisite: first-year HD graduate students. S-U grades only. B. Koslowski.

Designed as an orientation to the department and the university. Activities include attendance at research presentations, visits to departmental research laboratories, relevant informational sessions (e.g., University Committee on Human Subjects, College Grants), and guidance in preparing a public research presentation to be made at the end of spring semester.

HD 6210 Seminar on Autobiographical Memory

Spring. 3 credits. Prerequisite: graduate standing; seniors by permission of instructor. Letter grades only. Q. Wang.

This graduate seminar is designed to give an overview as well as in-depth analysis of topics related to autobiographical memory and its development. Readings focus heavily on current theories and empirical research on a wide range of topics including childhood

amnesia, reminiscence bump, emotion and memory, memory accuracy, development and disruption, neurological perspectives, memory functions, and memory across cultures.

HD 6310 Proseminar on Cognitive Development

Fall. 3 credits. S-U or letter grades. M. Casasola.

Designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to do critical, in-depth analyses of developmental research. Discusses how children's thinking changes over the course of development and evaluates psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills.

[HD 6320 Cognitive Neuroscience Seminar: Applications of Brain Science to Behavioral Research]**[HD 6330 Language Acquisition Seminar (also COGST 6330, LING 6630)**

Fall. 1-4 credits. Prerequisite: 3370 or equivalent or permission of instructor. S-U or letter grades. Next offered 2011-2012. B. Lust.

Reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area.]

[HD 6340 Judgment, Decision Making, and Scientific Reasoning]**[HD 6350 Cultural Psychology**

Spring. 3 credits. Letter grades only. Next taught 2011-2012. Q. Wang.

Focuses on cutting-edge research from the recently emerged, exciting field of cultural psychology.]

[HD 6360 Connecting Social, Cognitive, and Emotional Development

Fall. 3 credits. S-U or letter grades. Next offered 2011-2012. M. Casasola.

Opportunity for graduate students to explore several current areas of research from both a cognitive and a social-emotional perspective.]

[HD 6370 First-Language Acquisition]**[HD 6400 Infancy**

Spring. 3 credits. Next offered 2011-2012. S. Robertson.

Examines development in infancy through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships.]

HD 6510 Interdisciplinary Community-Based Scientific Research in Health Disparities

Spring. 2 credits. Prerequisites: for Cornell graduate students only; two semesters of graduate-level statistics. S-U or letter grades. E. Wethington.

Introduces doctoral students to the principles and practices of community-based participatory research (CBPR) on health disparities. The course consists of a series of expert presentations from researchers and practitioners involved in community-based research projects in New York City. Individual seminar topics range from theoretical models of different models of CBPR and other translational research models, methodological

education, ethical issues in community-based research, specific community research projects, and funding and publication issues. A primary emphasis is on exposure to interdisciplinary activities, diverse perspectives, and values provided by researcher and community-practice presenters.

HD 6520 Translational Research on Aging Research Seminar

Fall and spring. 1 credit. Prerequisite:

Ph.D. students only or permission of instructor. S-U or letter grades. K. Pillemer, M. S. Lachs, E. Wethington, and M. C. Reid.

Introduces Ph.D. students to multidisciplinary research, proposal development, and journal article development in the area of aging and health. The course is organized as a work-in-progress seminar, videoconferenced between the Ithaca campus and Weill Cornell Medical College. At each monthly videoconference, participants discuss two or three works in progress, including grant proposals, funding opportunities, and papers about to be submitted. Participants are expected to have read the papers and proposals beforehand and each attendee is required to comment on each work.

[HD 6600 Social Development]**[HD 6740 Autism Spectrum Conditions**

Spring. 3 credits. Limited to 25 students. Prerequisites: graduate students in doctoral program; master's students or undergraduates doing research may apply but are accepted only if actively involved in their own research program. S-U or letter grades. Next offered 2011-2012. Staff.

Graduate seminar emphasizing research methodologies and the development of research proposals addressing the neuroscience of autism and other neurobiologically based developmental disorders.]

[HD 6860 Graduate Seminar in Research Methods]**[HD 6870 Issues in Professional Development**

Fall. 3 credits. Prerequisite: at least one semester of graduate-level course work. S-U or letter grades. Next offered 2011-2012. S. Ceci.

Provides graduate students with essential information about professional activities that are related to careers in the academy.]

[HD 6920 Seminar in Translational Developmental Science]**Individualized Special Instruction****HD 7000-8060 Special Studies for Graduate Students**

Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). S-U grades at discretion of instructor. Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 7000: Directed Readings. For study that predominantly involves library research and independent study.

HD 7010: Empirical Research. For study that predominantly involves collection and analysis of research data.

HD 7020: Practicum. For study that predominantly involves field experience in community settings.

HD 7030: Teaching Assistantship. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 7040: Research Assistantship. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 7050: Extension Assistantship. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 7060: Supervised Teaching. 4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 8060: Teaching Practicum. 4 credits. For advanced graduate students who independently develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 8990 Master's Thesis and Research
Fall or spring. Credit TBA; 1–15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S–U grades only.

HD 9990 Doctoral Thesis and Research
Fall or spring. Credit TBA; 1–15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S–U grades only.

POLICY ANALYSIS AND MANAGEMENT

R. Avery, chair (119A MVR, 255-2578); T. Evans, director of undergraduate studies; J. Cawley, director of graduate studies; W. White, director of Sloan Program; B. Hollis, executive director of Sloan Program; Faculty: D. Almond, R. Burkhauser, J. Cawley, R. Dunifon, L. Edlund, R. Geddes, J. Gerner, S. Kleiner, J. Kuder, D. Lichter, M. Lovenheim, C. Lucarelli, A. Mathios, J. Matsudaira, K. Musick, S. Nicholson, E. Owens, A. Parrot, E. Peters, P. Pollak, S. Sassler, K. Simon, S. Tennyson, W. Trochim, M. Waller. Emeritus faculty: J. Allen, J. Ziegler. Lecturers: H. Allen, J. Carmalt, N. Fabrizio, J. Lewis, D. Perosio, W. Schlesinger, M. Weidner

In the Policy Analysis and Management major, students and faculty study the effects of government policies on individuals and families, public health, education, crime, product markets, financial markets, and a wide variety of other social impacts. The research tools learned and used—robust theory, rigorous empirical quantitative skills, and practical applications to real-world policy issues—are highly sought after by the best in both industry and government.

Federal, state, and local government have a central impact on all aspects of American life. The federal government alone taxes and spends in excess of 25 percent of gross domestic product (GDP). Public policy is ubiquitous, covering almost all aspects of societal and market interaction, from the environment to immigration, banks to farming, and social security to crime. Among current major government legislative initiatives are national health care, financial market regulation, education policy, immigration, and tax policy. Getting legislation right is crucially important to individuals, families, and society at large. Studying, understanding, and learning

from the impacts and externalities of government policy are at the heart of Policy Analysis and Management.

Making full use of the theories and methods from economics, sociology, psychology, and demography, Policy Analysis and Management majors first seek to understand the theoretical effect of government policy. Using robust data analysis techniques, PAM majors learn how to measure the magnitude of policy effects. Through published findings, Policy Analysis and Management faculty members help to inform the public debate.

Current Policy Analysis and Management faculty have expertise in health care, family/social welfare, financial markets, transportation, Social Security, FDA regulation of pharmaceutical advertising, education, crime, law, and the economics of obesity, among others. Undergraduate and graduate students take courses from, and conduct research with, experts in the field.

In addition to students entering the labor market into management, government and research positions, PAM attracts large numbers of pre-law and pre-MBA students, and students intending to pursue graduate studies in economics, sociology, and public policy. There is the potential to complete a five-year program resulting in either a B.S. and M.S. in Policy Analysis and Management, or a Master of Health Administration through the department's Sloan Program.

PAM 2000 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisite: ECON 1110 or equivalent. Students must enroll in a sec. T. Evans, R. Geddes, and staff.

Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; and risk.

PAM 2030 Population and Public Policy
Fall. 3 credits. D. Lichter.

Examines from a demographic perspective family policies that concern children and adults. Toward this end, it considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

PAM 2040 Economics of the Public Sector

Fall or spring. 3 credits. Prerequisite: PAM 2000. S–U or letter grades. J. Lewis, E. Owens, and staff.

The public sector now spends nearly two out of every five dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course provides an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis are presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social

justice, and improving equity by altering the distribution of wealth and income.

PAM 2100 Introduction to Statistics

Fall or spring. 4 credits. J. Carmalt, J. Lewis, T. Evans, and staff.

Introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of child and family policy.

PAM 2101 Statistics for Policy Analysis and Management Majors

Fall and spring. 4 credits. Prerequisites: PAM majors only or permission of instructor.

The primary intent is to prepare students to successfully complete PAM 3100 Multivariate Regression. Topics include data presentation and descriptive statistics, summation operator, properties of linear functions, quadratic functions, logarithmic functions, random variables and their probability distributions, joint and conditional distributions, expected value, conditional expectation, statistical sampling and inference, interval estimation and confidence intervals, hypothesis testing using t and F distributions, and an introduction to bivariate regression analysis. The course uses Excel initially to become familiar with data analysis, and then move onto Stata (a powerful statistical analysis computer program).

PAM 2150 Research Design, Practice, and Policy (also SOC 2130)

Spring. 3 credits. Prerequisite: PAM 2100 or equivalent. K. Musick.

Examines systematic approaches for addressing questions about poverty, family life, racial inequality, and a range of other issues central to public policy. It emphasizes the logic and methods of social science research, including the measurement of social phenomena, generalizing results to groups of interest, establishing cause and effect, social experiments, survey research, and qualitative methods. It develops skills to critically evaluate the research of others and provides hands-on experience applying research methods to policy-related problems.

PAM 2220 Controversies about Inequality (also PHIL 1920, DSOC/GOVT/ILROB/SOC 2220)

Fall. 1–4 credits. Prerequisite: permission of instructor. S. Morgan.

For description, see SOC 2220.

PAM 2300 Introduction to Policy Analysis

Fall. 4 credits. R. Avery.

Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students are introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course focuses on public policy analysis in the family/social welfare, health, and market regulatory areas and also includes an introduction to the technical skills required to undertake policy analysis.

[PAM 2350 The U.S. Health Care System

Spring. 3 credits. Next offered 2011–2012. S. Nicholson.]

PAM 3100 Multiple Regression Analysis

Fall and spring. 4 credits. Prerequisites: PAM 2100, AEM/ILRST 2100 or equivalent. Sec meets once a week. Fall, M. Lovenheim; spring, C. Lucarelli.

Introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Discusses assumptions, properties, and problems encountered in the use of multiple regression procedures. Students are required to specify, estimate, and report the results of an empirical model.

[PAM 3240 Risk Management and Policy

Fall. 3 credits. Prerequisite: ECON 1110 and statistics course. Next offered 2011-2012. S. Tennyson.]

PAM 3280 Fundamentals of Population Health

Fall. 3 credits. Prerequisites: Sophomore standing or above and at least one of the following courses: HD 1150, HD 1170, HD 2180, HD 2510, SOC 1101, DSOC 1101, DSOC 2200, PAM 2030, PAM 3360, PSYCH 1101, FGSS 3500, PAM 3500. J. Carmalt.

Provides students with training in the language, theories, concepts, methods, measurement, analysis, and implementation of population health. A framework of core functions and essential features of population health is used to familiarize students with the unique challenges of disease surveillance, health measurement and monitoring, identification of health indicators and determinants, measuring health disparities, and developing population health policies and programs. Key to this course is the role of epidemiology in evaluating population health, and developing interventions to improve different populations' health and reduce health disparities. Students develop competencies in population health analysis and management such as identification, analysis, evaluation, estimation, inference, implementation, and evaluation that are valued not only in the job market but also welcomed in a variety of research and other employment fields.

PAM 3290 Health, Demographic Processes, and the Life Course

Spring. Prerequisites: sophomore standing or above and at least one of the following courses: HD 1150, HD 1170, HD 2180, HD 2510, SOC 1101, DSOC 1101, DSOC 2200, PAM 2030, PAM 3360, PSYCH 1101, FGSS 3500, PAM 3500. Recommended prerequisites: HD 1150, HD 1170, HD 2180, HD 2510, SOC 1101, DSOC 1101, DSOC 2200, PAM 2030, PAM 3360, PSYCH 1101, FGSS 3500, PAM 3500. J. Carmalt.

Provides students with broad training in the theories and methods of demography and the life course and their application to health behaviors and health outcomes. Emphasis is placed on identifying and understanding the determinants and consequences of demographic processes (e.g., relationship formation, education attainment, labor force participation, fertility) on physical and mental health within historic, social/structural, economic, and cultural contexts (e.g., social and geographic environments, media, religion). Socioeconomic, race-ethnic, and gender disparities in health and the role of health policy are addressed. This course is interdisciplinary in nature and allows students to draw from previous training in economics, sociology, demography, and policy analysis to enhance their analytic, methodological, and critical thinking skills as they apply to health.

Students develop competencies in health and demography such as identification, analysis, evaluation, estimation, inference, problem solving, and interpretation, which are not only valued in the job market but also welcomed in a variety of research and other employment fields.

PAM 3300 Intermediate Policy Analysis

Fall. 3 credits. Prerequisites: PAM 2300, PAM 2000. D. Kenkel and staff.

In-depth treatment of methods for public policy analysis. The course focuses on cost-benefit analysis, a method grounded in microeconomics and applied welfare economics. Topics include market failures; willingness to pay; opportunity costs; discounting future costs and benefits; handling uncertainty and risk; incorporating distributional impacts; methods to value a statistical life; and methods to value environmental quality and other non-market goods. Numerous examples are taken from a variety of policy areas, including crime, education, health, welfare, and regulation.

PAM 3340 Corporations, Shareholders, and Policy

Fall. 3 credits. Prerequisites: ECON 1110, PAM 2000 and 2100. S-U or letter grades. R. Geddes.

Uses economic analysis to study the interaction of the market, the corporation, and the law and how these interactions affect the well-being of shareholders and consumers. Examines the costs and benefits of the corporate form of organization. The legal institutions defining the corporation, such as limited liability and shareholder voting, are analyzed along with regulations governing these institutions. A particular focus is mechanisms that control the behavior of managers. Those mechanisms include hostile takeovers, insider trading, outside directors on the board, the role of large investors, and executive compensation plans. Additional topics include government ownership of corporations and nonprofit enterprises.

PAM 3350 Families, Poverty, and Public Policy

Fall. 3 credits. M. Waller.

Considers the experiences and challenges of low-income families in the contemporary United States as documented in qualitative and policy research. The course also examines policies designed to assist these families. The first half of the course looks at topics such as the characteristics and causes of poverty, changes in family structure and the emergence of "fragile families," unmarried fathers' relationships with mothers and their children, and policies to encourage child support and marriage. The second half examines families' participation in the low-wage labor market and welfare system as well as socioeconomic variations in parenting and child well-being.

PAM 3360 Evolving Families: Challenges to Public Policy (also SOC 3360)

Spring. 3 credits. K. Musick.

Examines the social institution of the family, challenges to the institution's well-being and stability, and the role of public policy in these transformations. Topics include family structure and responsibilities; marriage as a traditional building block of the family and challenges to the institution of marriage, including divorce, nonmarital childbearing, cohabitation, and same-sex unions; children, and the impact of family change on their well-being, including the effects of child poverty,

maternal employment, and paternal involvement. The role of public policy in managing and shaping these developments is discussed.

PAM 3370 Race and Public Policy (also SOC 3370)

Spring. 3 credits. S. Sassler.

Provides an overview of perspectives used in sociological studies of race and ethnicity. Students read classic and contemporary research on racial and ethnic relations in the United States. The first part of the course covers a variety of theories on race/ethnic relations and addresses issues related to the social construction of race, racial identities, and the impact of immigration on racial dynamics. Next, the course examines racial and ethnic inequality in social and demographic outcomes. It concludes with readings that explore interracial contact and multiracial populations.

PAM 3400 The Economics of Consumer Policy

Fall. 4 credits. Prerequisite: PAM 2000 or equivalent or permission of instructor. S. Tennyson.

Familiarizes students with the economic analysis of consumer policy issues. Uses the tools of microeconomic analysis to investigate the interaction between government and the marketplace, with an emphasis on how that interaction affects consumers. Examines the rationale for and effects of regulation of industry. Considers alternative theories of regulation, including the capture, economic, and public interest theories. Applies those theories to specific types of regulation, including economic regulation of specific industries (e.g., telecommunications, electricity, trucking, railroads, postal services) as well as to broader social regulation (e.g., health, safety, environmental). The effects of regulatory reform in numerous industries are also examined. An attempt is made to examine current topics relating to consumer policy.

PAM 3410 Economics of Consumer Law and Protection (also ECON 4410)

Spring. 3 credits. Prerequisite: PAM 2000 or equivalent. S-U or letter grades. J. Gerner.

Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 3440 Regulating Financial Institutions

Spring. Prerequisite: ECON 1110. Recommended: PAM 2300. S-U or letter grades. S. Tennyson.

Examines financial institutions and the way that these institutions are regulated in the United States and in other countries. The course provides a history and overview of regulatory institutions, considers the intent of regulatory policies, and evaluates regulatory outcomes. An important focus is on current public policy issues relating to financial institutions regulation.

[PAM 3500 Contemporary Issues in Women's Health (also FGSS 3500)

Spring. 3-5 credits. Next offered 2011-2012. A. Parrot.]

PAM 3800 Human Sexuality

Spring. 4 credits. Limited to 150 students. Prerequisite: introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: biology course. Two 75-minute lec and one sec per week. A. Parrot.

Provides students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. Focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Addresses future trends in sexuality.

PAM 4000-4010-4020-4030 Special Studies for Undergraduates

Fall and spring. Credit TBA. S-U or letter grades. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department field office. This form must be signed by the instructor directing the study, the student's faculty advisor, and the department head, and must be filed at course registration or within the change-of-registration period in the college registrar's office, 146 MVR. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 4000: Directed Readings. For study that predominantly involves library research and independent reading.

PAM 4010: Empirical Research. For study that predominantly involves data collection and analysis.

PAM 4020: Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 4030: Teaching Apprenticeship

Prerequisite: course (or equivalent) in which student is assisting and has demonstrated high level of performance. For study that includes assisting faculty with instruction.

PAM 4050 Reproductive Health Policy (also FGSS 4051)

Fall. 3 credits. Prerequisite: PAM 2030, plus one of the following: PAM 3500, 3050, 3360. Recommended prerequisite: PAM 2300.

Focuses primarily on domestic reproductive health policies, although limited international reproductive health policies are addressed (e.g., the one-child policy in China). Emphasis is placed on structural issues that impact reproductive health policies, reproductive health services, scientific advancements, medical approaches, insurance, health disparities, organizations that provide

reproductive health, and demographic issues relating to reproductive health (e.g., teenage pregnancy, infant mortality).

PAM 4060 Politics and Policy: Theory, Research, and Practice (also GOVT/ALS/AMST 4998)

Fall, spring. Taught in Washington, D.C. Introduces students to theories and methods of data collection techniques such as in-depth interviews, ethnography, focus groups, and surveys as well as mixed-method approaches used in policy and evaluation research. Addresses the strengths and weaknesses of various methods and the design of qualitative and mixed-method studies. Covers epistemology, ethics, induction and deduction, measurement, validity, and triangulation. Also discusses more concrete issues such as gaining access to a field site, developing a qualitative interview guide and survey questionnaire, conducting a qualitative interview, managing data, and assessing data quality.

PAM 4100 Causal Reasoning and Policy Evaluation

Fall. 3 credits. Prerequisites: PAM 2100, PAM 3100. Recommended prerequisites: PAM 2000, PAM 2300.

Teaches how to evaluate causal claims, e.g., about the effectiveness of government policies. Students learn to apply their knowledge of statistics and regression analysis to investigate the effectiveness of important health, welfare, and other public policies using data from real-life examples. Emphasizes the logic of causal inference, and critical thinking about what kinds of evidence are most convincing.

PAM 4330 Topics in Corporations and Policy

Spring. 3 credits. Prerequisite: PAM 2000, PAM 3100, PAM 3340. S-U or letter grades. R. Geddes.

Focuses on several current key policy issues relating to the corporate form of organization. The format is a mixture of lecture, discussion, and student presentations. Topics are chosen on the basis of their relevance to corporate governance, their relationship to important policy questions, and their timeliness. The course is designed to explore in greater detail topics discussed in PAM 3340 Corporations, Shareholders, and Policy that are presently in the policy arena. The number of topics is necessarily more limited. The course explores those topics by examining recent legal, economic, and policy literature to gain a thorough understanding of each topic. One particular focus of the course is the differing approaches to corporate governance internationally.

[PAM 4340 Economics of Criminal Justice Policy

Spring. 3 credits. Prerequisite: PAM 2000 or equivalent or PAM 3100. S-U or letter grades. Next offered 2011-2012. E. Owens.]

PAM 4360 Drugs and Gangs

Spring. 3 credits. Prerequisite: PAM 3330, PAM 3100, or permission of the instructor. S-U or letter grades. E. Owens.

Students examine the development of illegal markets and criminal gangs in the United States and evaluate government attempts to limit the size and scope of these activities. They study the evolution of street gangs, prison gangs, and organized crime from the 19th century to the present, focusing on their

role in informal markets generally and drug markets in particular. Students read current and classic research from economics, criminology, sociology, and ethnography to develop a framework for thinking about the role of "illegal organizations" in American society.

[PAM 4370 Economics of Health Policy (also ECON 4370)

Fall. 3 credits. Prerequisite: PAM 2000, 3100, or equivalent. S-U or letter grades. Next offered 2011-2012. Staff.

Health care systems and health policy are undergoing rapid change as medical technology advances and costs rise. Debates concerning the delivery, regulation and financing of health care have intensified. This course uses basic economic tools to analyze central questions in health care today, as well as fundamental issues in health policy: For example, what is the current role of the government in the health sector, and what should it be? What is the social insurance role of the government, and how is it played out in policies that impact the health of the population? How is health insurance structured, and what are the implications of having employers be the providers of private health insurance? This course is about applying economic tools of policy analysis to gain insight into the workings of the health care system and to analyze current issues in health policy. It is mainly a U.S. institutions-based course, with some international comparisons. It should be of interest to students preparing for all kinds of careers in health care, and to others with an interest in important public policy issues.]

PAM 4380 Economics of Public Health (also ECON 4380)

Spring. 3 credits. Prerequisites: ECON 1110, PAM 2000, 3100, or equivalent. S-U or letter grades. D. Kenkel.

Uses the economic approach to study public health policies. Public health policies focus on tobacco, obesity, alcohol, illicit drugs, gun violence, sexually transmitted diseases, and other major causes of death and disease. Students apply the concepts of market failures and the principles of cost-benefit analysis to public health problems. Students examine how private sector advertising and public information campaigns, taxation, regulation, prohibition, and litigation affect public health. The course also examines policies to address health disparities related to socioeconomic status.

PAM 4440 Violence against Women: Policy Implications and Global Perspectives (also FGSS 4480)

Fall. 3 credits. Prerequisite: course in FGSS or PAM 2300. A. Parrot.

Violence is committed against women worldwide at an alarming rate. This course focuses on the historical and current reasons for and impact of violence against women both domestically and internationally. The impact of legislative, public, social, economic, or religious policies on the incidence of such violence is considered. Current and pending policies are identified and evaluated regarding their impact on violence against women in the United States and worldwide. Violence against women is committed to protect women's virginity, because women are viewed as property, for political reasons, as hate crimes, and in the name of culture, religion, and tradition. The types of violence discussed in

this course include rape, child sexual abuse, homicide, battering, domestic violence, hate crimes, gay bashing, kidnapping, ethnic cleansing, war crimes, forced prostitution, female genital mutilation, honor killings, public beating, lashing, stoning, torture, infanticide, trafficking of women, forced abortions, acid attacks, and sati (self-immolation). Each student is required to evaluate the impact of one current policy and critique the potential value of one pending policy relating to violence against women.

PAM 4460 Economics of Social Security (also ECON 4460)

Fall. 3 credits. Prerequisite: PAM 2000 or equivalent. S-U or letter grades.

R. Burkhauser.

Provides students with an "economic tool-kit" for evaluating social policies. Economic analysis is used to predict the behavioral and distributional consequences of such policies. Students learn to use computer software on data from the Current Population Survey to estimate the economic well-being of both older people with disabilities, show how sensitive their results are to the methods used, and stimulate the effects of alternative policies on these outcomes.

PAM 4470 Families and Social Inequality (also SOC 4470)

Fall. 3 credits. Prerequisite: PAM 2030, PAM 2220, SOC 2208, or equivalent social science course. S-U or letter grades.

K. Musick.

Disparities in family life are widening in the United States, with important implications for the well-being of family members and the reproduction of inequality from one generation to the next. Using tools of demographic analysis, this course explores growing education and income differences in family patterns (e.g., marriage, divorce, childbearing, and parenting), analyzing the forces behind these changes and the potential consequences for children's life chances.

PAM 4570 Innovation and Entrepreneurship in the Health Care Industry

Fall. 3 credits. Prerequisite: PAM 4350 or permission of instructor. J. Kuder.

[PAM 4760 Economic Evaluations in Health Care]

Fall. 3 credits. Recommended: background in microeconomics and statistical tools. S-U or letter grades. Next offered 2011-2012. Staff.]

PAM 4770 Child Policy

Fall. 3 credits. Prerequisites: PAM 2000, PAM 3100. S-U or letter grades. J. Gerner. Topics in public policy dealing with children, with a special emphasis on the impacts of policy on child outcomes. Topics include policy affecting education attendance, high-stakes testing and its impact on performance, policy impacts on family composition and change, and the effects of these on child outcomes.

PAM 4980 Honors Seminar

Fall. 3 credits. Prerequisites: PAM 2100, 2150, and 3100. Letter grades only.

R. Avery.

Designed to help guide students through the development of their honors thesis. The objective of the course is to help students frame a research question that is appropriate for an honors thesis, identify an appropriate methodology to use in answering this question, identify data that can be used to

answer this question, and identify literature appropriate to this question. Students also work collaboratively in critiquing research questions and techniques to be used. Students meet in a seminar-style class each week and also meet with the students individually and with their research mentor throughout the semester as they work on their thesis question and methods. Students who wish to participate in the PAM Honors Program must enroll in this course during their senior year. Students must receive a grade of B or better to continue in the Honors Program.

PAM 4990 Honors Program

Fall or spring. Credit TBA. Prerequisite: PAM 4980. Letter grades only. PAM faculty.

Provides students with the opportunity to undertake basic or applied research that will be preparation of a thesis representing original work of publishable quality. Intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. The number of hours of thesis credit is determined by the student's research mentor. See the director of undergraduate studies for more details.

PAM 5280 Fundamentals of Population Health

Spring. 3 credits. J. Carmalt.

Provides students with training in the language, theories, concepts, methods, measurement, analysis, and implementation of population health. A framework of core functions and essential features of population health is used to familiarize students with the unique challenges of disease surveillance, health measurement and monitoring, identification of health indicators and determinants, measuring health disparities, and developing population health policies and programs. Key to this course is the role of epidemiology in evaluating population health, and developing interventions to improve different populations' health and reduce health disparities. Students develop competencies in population health analysis and management such as identification, analysis, evaluation, estimation, inference, implementation, and evaluation which are not only valued in the job market but also welcomed in a variety of research and other employment fields.

[PAM 5310 Ethics, Public Policy in American Society]

Fall. 3 credits. Prerequisite: senior or graduate standing. J. Ziegler.

Explores current issues of ethics and public policy against a background of theories of ethical behavior. Examines questions of how public officials and managers of public and nonprofit agencies and private enterprises act. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings are drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential.]

PAM 5470 Microeconomics for Management and Policy

Fall. 4 credits. Prerequisite: Sloan students only. S-U or letter grades. W. White. Introduces microeconomic theory and its application to decision making in the management and policy arenas. Places special emphasis on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 5500 Operations and Planning of Senior Living and Related Facilities (also HADM 5503)

Fall. 2 credits. Prerequisites: junior status or above. Recommended prerequisite: PAM 2350.

This two-weekend, 2-credit course is designed to provide students with introductory knowledge and terminology regarding the rapidly growing fields of senior housing, CCRCs, and assisted living. The course exposes students to unique aspects involved in assessing feasibility, development, marketing and operations of these senior housing and related types of properties.

PAM 5520 Health Care Services: Consumer and Ethical Perspectives

Spring. 3-4 credits; 4-credit option may be used as Biology & Society senior seminar option. Limited to 30 students. Prerequisite: undergraduates by permission of instructor. A. Parrot.

Focuses on consumer and ethical issues faced by professionals in the health care field today. Broad topics discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 5540 Legal Aspects of Health Care

Spring. 3 credits. Prerequisite: Sloan students only. Offered alternate years. H. Allen.

Introduces principles of the law that specifically are applicable to health-service delivery. Topics include the liability of hospitals and their staff and personnel for injuries to patients, medical records and disclosure of information; consent to medical and surgical procedures, responsibility for patients' personal property, collection of bills, medical staff privileges, and confidential communications.

[PAM 5560 Managed Health Delivery Systems: Primary-Ambulatory Care]

Fall. 3 credits. Prerequisite: PAM 5570 or permission of instructor. Next offered 2011-2012. J. Kuder.]

PAM 5570 Health Care Organization

Fall. 3 credits. Limited to 30 students. Prerequisite: Sloan students or permission of instructor. J. Kuder.

Graduate-level introduction to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. Describes how health services are structured in the United States and how these different services interrelate along the continuum of care. Describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance

criteria (e.g., equity, quality, efficiency). Also presents innovations by the public and private sectors in the delivery and reimbursement of health care.

PAM 5620 Finance (also AEM 3240)

Spring. 3 credits. Prerequisite: Sloan students only. Staff.
For description, see AEM 3240.

PAM 5630 Health Care Financial Management II

Fall. 3 credits. Prerequisite: PAM 5620 or other financial management course. Staff. Focuses on the financial analyses that managers in the health care industry use to make strategic and operating decisions. Begins by examining how health insurers design and price their products and manage enrollees' medical expenditures. Next reviews two different methods of valuing a medical product/service, and two methods of estimating the value of a company. The four valuation methods covered are net present value of free cash flows, decision tree analysis/real options, multiples, and the venture capital method. Seven cases allow students to apply these skills to examine decisions/situations such as determining why a Medicare HMO is losing money and recommending a redesigned benefit and reimbursement structure, estimating a health system's profitability by product line; valuing a drug that is being developed, valuing a pharmaceutical company, and valuing a drug using decision-free analysis in determining whether a medical device company should go public and how it should price its products.

PAM 5640 Health Care Resource Management and Quality Improvement

Spring. 3 credits. Prerequisite: strong basic computer skills. S-U or letter grades.
J. Kuder.

Exposes students to the opportunities and challenges of using information technologies (IT), such as computerized physician order entry systems, electronic medical records, medical decision support systems, handheld devices for physicians, and remote patient monitoring devices, to improve the quality of medical care and/or reduce costs. Focuses on the manager's role in the application of IT to assess and improve the quality of medical care. Students develop a business plan for a company that uses IT to improve the quality of medical care in the U.S. health care system.

PAM 5660 Strategic Management and Organizational Design of Health Care Systems

Fall. 3 credits. C. Lucarelli. Examines strategy and design issues faced by health care organizations. Topics include analysis of market conditions, organizational culture issues, development of an organizational mission and management strategy, the management of professionals, and the importance of roles, structure, and inter- and intra-institutional relationships within organizations. Taught via a case study approach.

PAM 5670 Health Policy

Fall. 3 credits. Prerequisite: Sloan M.H.A. students, Ph.D. students, or permission of instructor. S. Kleiner. Addresses major health policy issues and the critical processes that influence them. Focuses primarily on the United States, with some coverage of health policy in other countries.

Topics include Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes; the forces involved including economic, social, ethical, and political factors; and key players in health policy, such as special interest groups, public agencies, and elected officials.

PAM 5690 Regression Analysis and Managerial Forecasting

Fall. 3 credits. Prerequisite: at least one statistics course. C. Lucarelli. Teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include ANOVA, correlation, confounding, interaction, and statistical process control. Emphasizes applications to health care organizations.

PAM 5700 Health Care Accounting

Fall. 4 credits. Core course for Sloan M.H.A. students. W. Schlesinger. Introduces the basic concepts of financial and managerial accounting with emphasis on health care applications. Explains the measurement system of business operations, business valuation, financial reporting, budgeting, cost allocation, service and product costing, and special reports for managerial use. Ethical and international issues are integrated throughout the course materials with real world applications. At the conclusion of the course, students should be able to read, understand, and analyze the annual financial reports of an organization. Collaborative learning, cases, discussions, readings, research, presentations, speakers, problem solving, videotapes, and lectures are used for teaching the course.

PAM 5710 Organizational Development/ Human Resource Management in Health Care Organization

Fall. 3 credits. Sloan students only.
N. Fabrizio. Explores (1) the theoretical foundation of organizational theory, research, and human resource management with an emphasis on implementation; (2) real-world problems while analyzing, exploring, and discussing varied interpretations of selected cases; (3) the building blocks of managerial activity, internal organizational issues, performance issues related to organization design, and strategic issues. Key organizational change and development concepts enhance students' perspectives on how the theories, strategies, and practices relate to today's organizations. The course serves as a framework to establish the theory and the conceptual and competency foundations necessary for applying interventions.

PAM 5740 Short Course in Fundamentals of Health Facility Planning for Managers

Spring. 1 credit. B. Hollis. Provides M.H.A. and other students who may be interested in careers in health care management with a basic familiarity regarding some of the concepts and terminology related to health facility planning projects. The course touches on areas that a manager might encounter, including working with designers, the relationship between strategic planning issues and facility planning, basic cost estimating techniques, simplified plan

interpretation, and use of architectural and engineering scales. The course have two primary components. One portion is lectures and hands-on demonstrations on plan reading/measurements and an overview of the process of project planning. We anticipate a tour of an active or recently completed project at either Cornell or Cayuga Medical Center as time allows. The other involves live or videoconference presentations from invited practitioners and researchers in the health facilities area.

PAM 5760 Long-Term Care and Lifestyle Alternatives for the Older Adult

Spring. 1 credit. M. Weidner. Provides students exposure to, and fosters critical thinking about, policy and operational issues related to health care and living alternatives for the well, near frail, and frail older adult. Preliminary readings introduce the student to societal issues of the aging, clinical issues facing the older adult, and management operations for nursing homes, independent living communities, assisted living, and home care. Emphasis is placed on student interaction with instructors and other seminar participants regarding society and management issues. Case studies are used to enhance student interaction and participation.

PAM 5770 Marketing for Health Care Managers

Spring. 3 credits. Prerequisites: microeconomics and permission of instructor. D. Perosio. Introduces students to the substantive and procedural aspects of marketing strategy and management. The course is designed to convey the key concepts of marketing and how they fit into the larger context of overall management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities are explored. Course examples rely heavily on actual situations and experiences in the health care industry. Students apply their knowledge of marketing and health care management to the development of a marketing plan.

[PAM 5810 Measuring and Evaluating Health Program Performance and Quality

Spring. 3 credits. Prerequisites: PAM 5570 and basic multivariate statistics course or permission of instructor. S-U or letter grades. Next offered 2011-2012. J. Kuder.]

PAM 5900 Special Topics in Health Administration and Finance

Fall and spring. 1-3 credits. Prerequisite: Sloan students only. Adjunct faculty. A special topics course specifically designed for students in the Sloan Program in Health Administration. Possible multiple offerings using adjunct faculty teaching in areas of expertise not covered in depth in the Sloan core curriculum and relevant to students preparing for careers in health management. Format ranges from intensive courses offered over several full days to longer courses meeting on a weekly basis.

PAM 5951/2 Field Studies in Health Administration and Planning

Fall or spring. 5951, fall. 1 credit; 5952, spring, 3 credits; 4 total credits. Capstone course for second-year Sloan students.
J. Kuder. Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an

ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 5990 Challenges and Trends in the Health Services Industry

Fall and spring, 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. W. White. Provides students with information and exposure to current and emerging issues in the health services industry. Topics may include financial management of health care facilities, human resource management, information systems, cost-effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 6000 Special Problems for Graduate Students

Fall and spring. Credit TBA. S–U or letter grades. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

[PAM 6030 Experimental, Quasi-Experimental, and Economic Evaluation Methods

Spring, 3 credits. Highly recommended: background in statistics (e.g., AEM 7100 or equivalent) and microeconomics (e.g., PAM 2000 or ECON 6390). Next offered 2011–2012. E. Peters.]

PAM 6040 Qualitative, Survey, and Mixed-Method Approaches to Policy Research

Spring, 3 credits. Prerequisite: Ph.D. students. Highly recommended: previous course in social science research methods. M. Waller. Introduces students to theories and methods of data collection techniques such as in-depth interviews, ethnography, focus groups, and surveys as well as mixed-method approaches used in policy and evaluation research. Addresses the strengths and weaknesses of various methods and the design of qualitative and mixed-method studies. Covers epistemology, ethics, induction and deduction, measurement, validity, and triangulation. Also discusses more concrete issues such as gaining access to a field site, developing a qualitative interview guide and survey questionnaire, conducting a qualitative interview, managing data, and assessing data quality.

PAM 6060 Demographic Techniques (also DSOC 6080)

Spring, 3 credits. S–U or letter grades. D. Gurak and D. Lichter. Provides an introduction to various demographic data sources (e.g., decennial census and vital registration data), measures of demographic processes and population structure (e.g., fertility rates and segregation indices), and standard demographic techniques (e.g., life tables, rate standardization, and population forecasting) used in social demography. The course emphasizes the application of demographic tools and interpretation.

[PAM 6090 Empirical Strategies for Policy Analysis

Spring, 3 credits. Prerequisite: graduate course in econometrics (e.g., ILRLE 7480–7490 or AEM 7100). Next offered 2011–2012. J. Matsudaira. Focuses on empirical strategies to identify the causal effects of public policies and programs. The course uses problem sets based on real-world examples and data to examine techniques for analyzing nonexperimental data including control function approaches, matching methods, panel-data methods, selection models, instrumental variables, and regression-discontinuity methods. The emphasis throughout, however, is on the critical role of research design in facilitating credible causal inference. The course aids students in both learning to implement a variety of statistical tools using large data sets, and in learning to select which tools are best suited to a given research project.]

[PAM 6250 Economics of Family Policy

Fall, 3 credits. Prerequisite: PAM 6390 or ECON 6090 or permission of instructor. S–U or letter grades. Next offered 2011–2012. E. Peters.]

PAM 6280 Family Demography (also SOC 6280)

Spring, 3 credits. S–U or letter grades. D. Lichter. This graduate seminar explores changes in family behaviors and household relationships from a demographic perspective. It focuses centrally on contemporary trends in the United States, considering (often competing) interpretations of the causes and consequences of family change and variation. Emphasis is placed on critically evaluating research in this area, including assessments of data quality, research design, and causal inference. Topics include cohabitation and marriage, divorce, fertility, family structure, and the intersection of work and family.

[PAM 6330 Seminar in Pharmaceutical Policy Issues

Spring, 2 credits. Meets once a week. S–U or letter grades. Next offered 2011–2012. S. Tennyson.]

PAM 6350 Consumers, Information, and Regulatory Policy

Fall, 3 credits. Prerequisites: PAM 6390 or calculus and intermediate microeconomics. S. Tennyson. Examines information problems in markets and how they affect consumers, focusing on market mechanisms and regulatory actions that address those information problems. Major theoretical topics include price and quality uncertainty, moral hazard, adverse selection, and principal-agency theory. The course gives an overview of market mechanisms that deal with information issues such as marketing, advertising, warranties, third-party certification, licensing, and self regulation; the major regulatory institutions that govern consumer policy including the Food and Drug Administration and the Federal Trade Commission; and the way the legal system provides consumer protection. The market for pharmaceuticals is a particular focus. Primary reading material is drawn from economics and policy journals, and the papers from the *Journal of Public Policy and Marketing*.

PAM 6370 Microeconomics for Policy Analysis

Fall, 4 credits. Prerequisites: intermediate microeconomics, calculus. J. Cawley. Trains graduate students in using the tools of microeconomics to prepare them to conduct high-quality research in the social sciences. This comprehensive course covers microeconomic theory and its application to public policy analysis. Topics include consumer decision-making, the theory of the firm, general equilibrium, welfare economics, monopolies and oligopolies, strategy, and market imperfections. Weekly sections are held to review homework and teach supplementary material. Evening examinations are held, at times and dates to be determined.

PAM 6410 Health Economics I (also ECON 6410)

Fall, 3 credits. First course in Ph.D.-level health economics sequence. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. J. Cawley. Comprehensive course covering microeconomic theory and its application to health and health care markets. Topics include consumer decision making, the theory of the firm, welfare economics, monopolies and oligopolies, and market imperfections. Applications in health economics include the demand for health, rational addiction, the industrial organization of health care, cost-effectiveness analysis, price discrimination by health care providers, how consumers respond to information about health care, adverse selection in health insurance, and the moral hazard created by physician compensation strategies. Each student writes a research paper, testing predictions from microeconomic theory by acquiring suitable data and estimating the appropriate econometric model, and presents his or her findings in a research seminar.

PAM 6420 Health Economics II

Spring, 3 credits. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. D. Almond. Covers microeconomic theory and its applications to health and health care markets. Topics include consumer demand for health and health behaviors, the supply side of health promotion, the industrial organization of health care, and cost-benefit and cost-effectiveness analysis of health interventions. Second course in Ph.D.-level health economics sequence, but the courses may be taken in any order.

PAM 6720 Demography Proseminar (also DSOC 6720)

Fall, 3 credits. Staff. Introduces graduate students to demography's substantive and methodological breadth from various disciplinary perspectives. The course consists of seven one- to two-week-long modules, each focusing on one of demography's substantive areas. The modules change from year to year reflecting student and faculty interests. The course is team taught by affiliated faculty of the Cornell Population Program.

PAM 6900 Professional Seminar in Public Policy

Fall, 2 credits. Prerequisite: Enrollment limited to Ph.D. and M.S. students in PAM (as well as Ph.D. students funded by PAM). S–U grades only. R. Dunifon. This proseminar introduces new graduate students to the field of PAM. Students read

and discuss research papers by PAM faculty as well as other readings that provide an overview of the field of policy analysis and management and offer important tools and skills that can be used throughout the graduate career.

PAM 8990 Master's Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades.

PAM 9990 Doctoral Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades.

FACULTY ROSTER

Almond, Douglas, Ph.D., U. of California, Berkeley. Visiting Prof., Policy Analysis and Management

Ashdown, Susan, Ph.D., U. of Minnesota. Assoc. Prof., Fiber Science & Apparel Design

Avery, Rosemary J., Ph.D., Ohio State U. Prof. and Chair, Policy Analysis and Management

Becker, Franklin D., Ph.D., U. of California, Davis. Prof., Design and Environmental Analysis

Bisogni, Carole A., Ph.D., Cornell U. Prof., Nutritional Sciences; Assoc. Dean

Brainerd, Charles, Ph.D., Michigan State U. Prof., Human Development

Burkhauser, Richard, Ph.D., U. of Chicago. Prof., Policy Analysis and Management

Casasola, Marianella, Ph.D., U. of Texas, Austin. Asst. Prof., Human Development

Cawley, John, Ph.D., U. of Chicago. Assoc. Prof., Policy Analysis and Management

Ceci, Stephen J., Ph.D., U. of Exeter (UK). Prof., Human Development

Chu, Chih-Chang, Ph.D., Florida State U. Prof., Fiber Science & Apparel Design

Danko, Sheila, M.I.D., Rhode Island School of Design. Prof. and Chair, Design and Environmental Analysis

Depue, Richard, Ph.D., U. of Oklahoma. Prof., Human Development

Dunifon, Rachel, Ph.D., Northwestern U. Assoc. Prof., Policy Analysis and Management

Eckenrode, John J., Ph.D., Tufts U. Prof., Human Development

Edlund, Lena, Ph.D., Stockholm School of Economics (Sweden). Visiting Prof., Policy Analysis and Management

Elliott, John, M.E. Des., U. of Calgary (Canada). Assoc. Prof., Design and Environmental Analysis

Eshelman, Paul E., M.F.A., U. of Illinois. Prof., Design and Environmental Analysis

Evans, Gary, Ph.D., U. of Massachusetts, Amherst. Prof., Design and Environmental Analysis

Feathers, David, Ph.D., U. of Buffalo, SUNY. Asst. Prof., Design and Environmental Analysis

Frey, Margaret, Ph.D., North Carolina State U. Assoc. Prof., Fiber Science & Apparel Design

Geddes, Raymond R., Ph.D., U. of Chicago. Assoc. Prof., Policy Analysis and Management

Gerner, Jennifer L., Ph.D., U. of Wisconsin. Prof., Policy Analysis and Management

Gibson, Kathleen J., M.A., Ohio State U. Assoc. Prof., Design and Environmental Analysis

Hamilton, Stephen F., Ed.D., Harvard U. Prof., Human Development, Co-Director, Family Life Development Center

Hazan, Cindy, Ph.D., U. of Denver. Assoc. Prof., Human Development

Hedge, Alan, Ph.D., U. of Sheffield (UK). Prof., Design and Environmental Analysis

Hinestroza, Juan, Ph.D., Tulane U. Asst. Prof., Fiber Science & Apparel Design

Hua, Ying, Ph.D., Carnegie Mellon U. Asst. Prof., Design and Environmental Analysis

Jennings, Jan, M.S., Oklahoma State U. Prof., Design and Environmental Analysis

Jirousek, Charlotte, Ph.D., U. of Minnesota. Assoc. Prof., Fiber Science & Apparel Design

Kenkel, Donald, Ph.D., U. of Chicago. Prof., Policy Analysis and Management

Kleiner, Samuel, Ph.D., Carnegie Mellon U. Asst. Prof., Policy Analysis and Management

Koslowski, Barbara, Ed.D., Harvard U. Assoc. Prof., Human Development

Kuder, John, Ph.D., U. of Michigan. Assoc. Prof., Policy Analysis and Management

Kushnir, Tamar, Ph.D., U. of California. Asst. Prof., Human Development

Laquatra, Joseph Jr., Ph.D., Cornell U. Prof., Design and Environmental Analysis

Lemley, Ann T., Ph.D., Cornell U. Prof. and Chair, Fiber Science & Apparel Design

Lewis, Van Dyk, Ph.D., U. of Central England, Birmingham. Assoc. Prof., Fiber Science & Apparel Design

Lichter, Daniel, Ph.D., U. of Wisconsin, Madison. Prof., Policy Analysis and Management

Loeckenhoff, Corinna, Ph.D., Stanford U. Asst. Prof., Human Development

Lovenheim, Michael, Ph.D., U. of Michigan. Asst. Prof., Policy Analysis and Management

Lucarelli, Claudio, Ph.D., U. of Pennsylvania. Asst. Prof., Policy Analysis and Management

Lust, Barbara C., Ph.D., City U. of New York. Prof., Human Development

Mathios, Alan, Ph.D., U. of Pennsylvania. Prof., Policy Analysis and Management; Dean

Matsudaïra, Jordan, Ph.D., U. of Michigan. Asst. Prof., Policy Analysis and Management

Maxwell, Lorraine E., Ph.D., City U. of New York. Assoc. Prof., Design and Environmental Analysis

Mete, Fatma, Ph.D., U. of Leeds (UK). Assoc. Prof., Fiber Science & Apparel Design

Musick, Kelly, Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Policy Analysis and Management

Netravali, Anil, Ph.D., North Carolina State U. Prof., Fiber Science & Apparel Design

Nicholson, Sean, Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Policy Analysis and Management

Obendorf, Sharon K., Ph.D., Cornell U. Prof., Fiber Science & Apparel Design; Assoc. Dean

Ong, Anthony D., Ph.D., U. of Southern California. Asst. Prof., Human Development

Owens, Emily, Ph.D., U. of Maryland. Asst. Prof., Policy Analysis and Management

Parrot, Andrea, Ph.D., Cornell U. Prof., Policy Analysis and Management

Peters, H. Elizabeth, Ph.D., U. of Chicago. Prof., Policy Analysis and Management

Pillemer, Karl A., Ph.D., Brandeis U. Prof., Human Development; Assoc. Dean

Reyna, Valerie, Ph.D., Rockefeller U. Prof., Human Development

Robertson, Steven S., Ph.D., Cornell U. Prof., Human Development

Sassler, Sharon, Ph.D., Brown U. Assoc. Prof., Policy Analysis and Management

Savin-Williams, Ritch C., Ph.D., U. of Chicago. Prof. and Chair, Human Development

Tennyson, Sharon, Ph.D., Northwestern U. Assoc. Prof., Policy Analysis and Management

Trochim, William M. K., Ph.D., Northwestern U. Prof., Policy Analysis and Management

Waller, Maureen R., Ph.D., Princeton U. Assoc. Prof., Policy Analysis and Management

Wang, Q. I., Ph.D., Harvard U. Asst. Prof., Human Development

Wells, Nancy, Ph.D., U. of Michigan. Assoc. Prof., Design and Environmental Analysis

Wethington, Elaine, Ph.D., U. of Michigan. Assoc. Prof., Human Development

White, William, Ph.D., Harvard U. Prof., Policy Analysis and Management

Williams, Wendy M., Ph.D., Yale U. Assoc. Prof., Human Development

DEGREE PROGRAMS

	Degree
Industrial and Labor Relations	B.S.
	M.I.L.R.
	M.P.S.
	M.S.
	Ph.D.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 900 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and outreach, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Outreach.

The school's Conference Center, part of the extension division, initiates and hosts

conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy. For further information on graduate programs, contact the ILR Graduate Programs Office, Cornell University, 214 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Human Resource Studies

The Department of Human Resource Studies consists of world-class faculty members engaged in research, teaching, and practice. These faculty members play integral roles in the administration of the Center for Advanced Human Resource Studies (CAHRS), an ILR-based research center funded by over 50 corporations, and the ILR Executive Education Program, which offers advanced training to HR practitioners. The goal in teaching is to balance a rigorous academic research approach with a real-world practice orientation. In this way, students are provided with state-of-the-art knowledge relevant to managing human resources in organizations.

International and Comparative Labor

The Department of International and Comparative Labor is concerned with industrial relations, unions, human-resource studies, and labor markets throughout the world. World-renowned faculty members are authorities on issues related to labor in Latin America, Europe, Asia, and Africa, as well as North America, and bring this knowledge to bear on the courses they teach to prepare students to understand the global marketplace.

Labor Economics

The Department of Labor Economics deals with labor markets; that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The

topics dealt with in courses and research include analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Labor Relations, Law, and History

The Department of Labor Relations, Law, and History brings together a diverse group of faculty members, all of whom are involved in researching and teaching about workers, employers, and the government policies that affect them. Its courses explore ILR issues in American society within a global framework using methods drawn from the social sciences, the humanities, and the legal professions.

Organizational Behavior

The psychologists and sociologists in the Department of Organizational Behavior use discipline-based theoretical perspectives to examine an array of empirical workplace phenomena. Their teaching and research focus on the impact of environmental, technological, and interpersonal relationships on work group and organizational dynamics.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of bachelor of science, master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty members and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include admitting and orienting new students, maintaining students' personal and academic records, providing information on special study opportunities such as study abroad, and counseling students on personal and academic concerns. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students are advised on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisors for students who wish to consult with them regarding career possibilities in the field, research opportunities, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be directed to counselors in the Office of Student Services.

Multicultural Programs

The School of Industrial and Labor Relations values diversity and is responsive to the unique social, academic and cultural contributions and needs of multicultural students. The school is committed to providing students with support that will enhance academic achievement, career development, and personal growth. The assistant director for multicultural affairs in the Office of Student Services works in conjunction with many university programs to provide services that ensure academic success and an enjoyable quality of life for ILR students. For more information, see the Multicultural Affairs web site: www.ilr.cornell.edu/student-services/advising/multicultural.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs" below.

Study abroad opportunities are available in numerous countries and foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's workplace issues and involve fieldwork in the Ithaca area and elsewhere in the country.

With early planning, some students may apply for and earn the M.S. degree in the fifth year.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit

toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

Leave of Absence or Withdrawal

Students who desire to withdraw or take a personal leave of absence from the university should schedule an interview with a counselor in the Office of Student Services. Counselors will assist students in contacting the appropriate offices or departments of the university, if necessary. All health leaves are handled by Gannett Health Center (www.gannett.cornell.edu).

REQUIREMENTS FOR GRADUATION

To earn the Cornell bachelor of science degree in industrial and labor relations, a student must successfully complete 120 credits. This requires eight semesters of full-time study (30 credits a year on average), including work done while on an approved credit internship or study abroad program. Those who enter the school as transfer students will be required to complete four to six semesters in full-time residence, depending on the number of full-time semesters completed at another institution. Exceptions may be made by petitioning the ILR Academic Standards and Scholarships Committee. Those enrolled in the employee degree program, who typically study on a part-time basis, will be exempt from this requirement.

Junior and Senior Years

ILR Elective courses—40 credits	40
---------------------------------	----

- Must include at least one course from an approved list in each of the following three areas: International and Comparative elective, Labor History elective, and Economic Policy elective
- Minimum of 24 credits of ILR course work, including 4950 Honors, 4990 Independent Study—with a maximum of 16 credits for non-ILR courses at Cornell as approved in ILR departments
- Maximum of 12 credits from foreign language or advanced math
- May include up to 9 credits for one semester abroad or 15 credits for a full year abroad
- Maximum of 16 credits in a credit internship program

Additional general elective credits (in addition to distribution requirements)	12
--	----

Minimum total credits required for graduation	120
--	------------

*Required courses usually taken in the College of Arts and Sciences

**Required courses taken in the ILR School

‡Distribution credits (courses you choose that satisfy requirements in certain categories)

Physical Education credit does not count toward the 120 credits

ILR Math Requirement

A student who took AP calculus in high school and scored a 3 or better on the AB exam, or subscore of the BC exam, has fulfilled the ILR math requirement. If AP calculus wasn't completed, or if the scores noted above were not achieved, the student is expected to take and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics.

The ILR Math Assessment is scheduled in August, January, and May. Those who do not pass in the first attempt are expected to register in an appropriate math course and pass the assessment *before the beginning of their third semester* in the school. Any student who cannot meet the requirement by the beginning of the third semester is enrolled for a terminal semester and is expected to leave the school thereafter.

Transfer students are expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit or pass the ILR Math Assessment before being permitted to register in required courses in statistics or labor economics, with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes

Occasionally, it may be necessary for a student to request changes in his or her course schedule either before a semester begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance

It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty members. In some courses an instructor may permit a maximum number of class absences without a grade penalty or recommend withdrawal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of treatment at Gannett Health Center or by another physician;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

STANDING AND GRADES

Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1. knowingly representing the work of others as one's own;
2. using or obtaining unauthorized assistance in any academic work;
3. fabricating data in laboratory or field work;
4. giving fraudulent assistance to others;
5. fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers,

examinations, and other situations are listed in the code (cunfo.cornell.edu/Academic/AIC.html).

Dean's List

A Dean's List is compiled for each of the four undergraduate classes each semester following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1. achievement of a semester average for freshmen of 3.3 or better, for sophomores of 3.4 or better, and for juniors and seniors of 3.6 or better;
2. a minimum course load for the semester of 12 letter-graded credits;
3. completion of all courses registered for at the beginning of the semester;
4. satisfaction of all good-standing requirements.

Academic Standing

Good standing requires that all of the following criteria be met at the end of each semester:

1. an average of C (2.0) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2. no failing grades in any course, including physical education;
3. a cumulative average of C (2.0) for all completed semesters.

If at the end of any semester a student fails to maintain good standing, or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be placed on a required leave of absence for one or two semesters.

Involuntary Separation from the School for Academic Reasons

A student may be placed on a required leave of absence at the end of any semester when he or she has failed:

1. to establish good standing after a semester on warning;
2. to maintain an average of 2.0 in any semester after a previous record of warning;
3. to achieve good standing after being on warning any two previous semesters;
4. two or more classes in one semester or has a semester average of 1.0 or below.

The Academic Standards and Scholarships Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 2.0.

S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1. the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2. students are limited to registering in *two* S-U courses a semester;
3. S-U registration is limited to 4 credits for each course;
4. students registering for S-U grades must be in good standing;
5. students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete

A grade of incomplete (INC) is assigned when a course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which the work may be made up must be made with the instructor. The school's policy allows a maximum of two full semesters of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish to study in an area of specialization in the school for a master of science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Credit Internship Program

The ILR Credit Internship Program affords advanced undergraduates (juniors and seniors) opportunities to enhance their understanding of the field of industrial and labor relations by working for a semester (approximately 15 weeks) in one of the professional careers it encompasses. The Credit Internship Program operates both domestically and internationally, from Washington, D.C., New York City, and Los Angeles to Geneva, London, Kuala Lumpur, and Beijing, among many other locations. For more information, please visit

ILR's Off-Campus Programs office in 381 Ives East and the ILR Credit Internship web site: www.ilr.cornell.edu/creditinternships. Students are also welcome to send email to Brigid Beachler, assistant director of off-campus credit programs, at bk30@cornell.edu.

Summer Internships

What is a summer internship? During the summer, a student who works in a job that is related to industrial and labor relations may find that the employer refers to that job as an internship. Their terminology differs from that used by ILR and Cornell to refer to credit-bearing internships. Academic credits earned: ILR considers an internship to be a learning experience engaged in during the academic year, for which students earn academic credit, are supervised by a faculty member, are evaluated, have a grade recorded, and pay tuition. With very few exceptions (the Clem Miller Scholarship, Saul Wallen internship, Chaim and Ida Miller Scholarship, all of which are summer support provided to selected ILR students), summer employment has little in common with the semester credit internship program. Approval is required in advance. Some companies tell students that they cannot be employed unless they receive academic credit for a summer internship. Cornell does not grant credit unless a student is registered, pays tuition, has a faculty supervisor, and is in a position to be approved for internship credit.

Programs in Washington

Interns work a minimum of 30 hours per week for the 15 weeks of the semester with approved organizations addressing issues of work and workplace relations. Students are also required to complete a comprehensive research project, related to their internship, that is graded by their ILR faculty supervisor. Students will also be required to take a 4-credit public policy course for ILR credit. Interns will receive a total of 16 ILR elective credits.

ILR/UCD Semester in Dublin Program

The ILR/UCD Semester in Dublin Program is the educational centerpiece of a comprehensive collaboration between the ILR School at Cornell University and the Quinn School of Business at University College Dublin. The program's purpose is to afford eligible ILR undergraduate students (juniors and seniors) opportunities to enhance their understanding of various international dimensions of the field of industrial and labor relations through courses taught by leading scholars at one of Europe's most vibrant and dynamic universities. The curriculum consists of three required courses: European Industrial Relations and Human Resource Management, Multinationals in the Global Economy, and Irish History and Culture. In addition, students will select one elective course related to the ILR field. Students will receive 12 ILR elective credits for the three ILR-related courses and three transfer credits for the Irish History and Culture course, for a total of 15 credits. For more information, please visit the web site www.ilr.cornell.edu/dublin, or contact Brigid Beachler, assistant director of off-campus credit programs, at bk30@cornell.edu.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior

year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 4 credits each semester) to research, write, and then defend the thesis.

Study Abroad

ILR students who plan to study in another country most often do so in the junior year, occasionally in the senior year. They may study in one of the programs that is sponsored by Cornell, in one sponsored by another institution and endorsed by Cornell, or in an approved externally sponsored program. Information about study abroad is available in the Office of Student Services (101 Ives Hall) or the Cornell Abroad office (300 Caldwell Hall).

Students are expected to register for a full course load, the equivalent of 15 credit hours in a semester or 30 hours in a year, when they study abroad. Some courses will be the equivalent of general elective credit or distribution credit, but others may be accepted as ILR elective credit if evaluated and approved by the relevant ILR department chairs. A student may satisfy up to 9 hours of the ILR elective credit in a single semester abroad and up to 15 hours in a year of foreign study.

Application for foreign study requires that the student meet the Cornell deadlines as well as those specified by the program(s) of interest. Applications include tentative class schedules, recommendations from faculty members, approval of the application by an ILR faculty committee, essays, and transcripts. After being approved in ILR, the application is sent to the Cornell Abroad office and then to the program for which the student is applying. For more information, contact Kevin Harris, associate director of student services, 101 Ives Hall, 255-2223, kfh4@cornell.edu, or the Cornell Abroad office, 300 Caldwell Hall, 255-6224, CornellAbroad@cornell.edu, www.cuabroad.cornell.edu.

LABOR RELATIONS, LAW, AND HISTORY

A. Colvin, chair (374 Ives Hall, 225-6693); M. Cook, J. Cowie, I. DeVault, R. Givan, M. Gold, K. Griffith, J. Gross, H. Katz, S. Kuruvilla, R. Lieberwitz, D. Lipsky, N. Salvatore, L. Turner

ILRLR 1100 Introduction to U.S. Labor History

Fall and spring. 3 credits. R. Applegate, J. Berger, J. Cowie, I. DeVault, and N. Salvatore.

Introductory survey covering the major changes in the nature of work, the workforce, and the institutions involved in industrial relations from the late 19th century to the present.

ILRLR 1200 Introduction to Disability Studies

Fall. 2 credits. Staff.

A survey of the facts and issues that affect individuals with disabilities. Topics may include history of the treatment of disabilities; disability in literature; models of disability; disability in education, employment, health

care, and the media; mental health and disability; accessible designs; and technologies for the disabled.

ILRLR 2010 Labor and Employment Law

Fall and spring. 3 credits. M. Gold, K. Griffith, J. Gross, and R. Lieberwitz. Survey and analysis of the law governing labor relations and employee rights in the workplace. Half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The other half surveys the laws against discrimination based on race, religion, sex, national origin, age, and disability. Also serves as an introduction to judicial and administrative systems.

ILRLR 2050 Collective Bargaining

Fall and spring. 3 credits. A. Colvin, R. Givan, R. Hurd, H. Katz, D. Lipsky, R. Seeber, and L. Turner. Comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; and U.S. industrial relations in international and comparative perspective.

ILRLR 2060 Writing Seminar in Law

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. L. Adler, M. Gold, K. Griffith, J. Gross, and R. Lieberwitz. Topics change depending on semester and instructor.

ILRLR 2061 Citizenship, Race, and Class in 20th-Century America

Fall. 3 credits. Fulfills sophomore writing requirement. J. Berger. Explores the ways Americans have defined what it means to be a citizen of the United States. How have understandings of race and ethnicity influenced immigration policy and determined who can or cannot become a citizen? Why do some members of minority groups argue they historically have had only second-class citizenship? What types of benefits and rights should citizenship entail?

ILRLR 2063 Body, Mind, and Soul

Fall. 3 credits. Fulfills sophomore writing requirement. J. Cowie. Bruce Springsteen once said that Elvis Presley freed our bodies and Bob Dylan freed our minds. Ever since then, Springsteen has been working on our souls. This sophomore writing seminar will hone our analytical and writing skills by examining the historical context and artistic expressions of these three icons of the fifties, sixties, and seventies respectively. We will explore the roots of each artist's work in relationship to history, race, gender, class, postwar culture, politics, as well as each other. This writing seminar will require an intensive amount of reading, writing, and rewriting in order to penetrate the complexities of these artists' contributions to American culture.

ILRLR 2070 Writing Seminar in History

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. R. Applegate, J. Berger, J. Cowie, I. DeVault, and N. Salvatore.

Topics change depending on semester and instructor.

ILRLR 2080 Writing Seminar in Collective Bargaining

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. K. Bronfenbrenner, A. Colvin, R. Hurd, H. Katz, and D. Lipsky.

Topics change depending on semester and instructor.

ILRLR 2090 Work and Labor in the Global Economy

Spring. 3 credits. Limited to 20 students. Fulfills sophomore writing requirement. K. Bronfenbrenner.

Examines the evolution of the American workplace in the past 20 years in the context of the global economy. Through a combination of nonfiction, fiction, workplace site visits, worker interviews, guest speakers, and weekly short writing assignments, students explore the changing nature of corporate structure, the workplace, the work process, and workers' lives in a range of occupations in five different sectors of the economy: IT, manufacturing, public sector, health care, and casual labor. Guest speakers include workers, union leaders, and employers from companies in the target sectors. Site visits are made to both union and nonunion facilities. Particular emphasis is placed on exploring how work, workers, and communities have been impacted by globalization.

ILRLR 3010 Labor Union Administration

Fall. 4 credits. R. Hurd.

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the context of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions. Examines the role of union leaders and the strategic choices they make. Attention is given to current developments in the labor movement and to the eternal problems of attaining union democracy.

ILRLR 3020 Strangers and Citizens: Immigration and Labor in U.S. History

Fall or spring. 4 credits. I. DeVault.

Explores immigrant workers' experiences in the 19th and 20th centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States and the ways in which preexisting American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. The main examples are taken from the industrial and union realms.

ILRLR 3030 Working-Class America in Mass Media and Popular Culture

Spring. 4 credits. J. Cowie.

Examines a variety of representations of working people found in commercial popular culture throughout the 20th century as a means to explore the ways in which history, memory, and politics are shaped through

popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the ideological and political influences on our preconceptions of workers, and how those forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRLR 3040 Special Topics: Labor History

Fall or spring. 4 credits. Prerequisite: permission of instructor. R. Applegate, J. Cowie, and I. DeVault.

Undergraduate seminar whose topic changes depending on semester and instructor.

ILRLR 3042 Varieties of American Dissent, 1880-1990 (also AMST/HIST 3240)

Spring. 4 credits. N. Salvatore.

The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

ILRLR 3060 Recent History of American Workers: From the '60s through the '90s

Fall. 4 credits. J. Cowie.

Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics include the transformations of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the rise of neoconservatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.

ILRLR 3070 U.S. Business History: The Changing American Corporation

Spring. 4 credits. R. Applegate.

Surveys the changing organization of business firms in the United States since the Civil War, with a central focus on the historically dominant form of American business organization: the large industrial corporation. Course work covers the distinctive features and historical significance of the corporations known as "big business" by investigating the circumstances of their creation, successive phases of their organizational restructuring, the expanding reach of their managerial controls from firms to industries and markets, and the enduring contest over their governance.

ILRLR 3071 Governing Economic Development: The U.S. Experience

Fall. 4 credits. R. Applegate.

Surveys the history of U.S. economic development from the perspective of the governance structures created to organize and control economic activity, emphasizing the changing regulatory roles of public and private institutions. Course work covers

successive periods of economic development: a comparison of the "old liberal" governance regimes of the 19th century with the "new liberal" regimes created in the 20th century is followed by an investigation of the post-1970s contest between "neoliberal" and "neoprogressive" forms of economic regulation.

ILRLR 3072 Union Advocacy for Equality and Social Justice

Fall or spring. 2 credits. R. Hurd.

An exploration of the U.S. labor movement's relatively recent embrace of immigrant rights and support for the concerns of lesbian, gay, bisexual, and transgender workers. Also a review of labor's longer-term involvement in the women's rights and the civil rights movements. Attention to the role of labor constituency groups including Coalition of Labor Union Women, Asian Pacific American Labor Alliance, A. Phillip Randolph Institute, Coalition of Black Trade Unionists, Labor Council for Latin American Advancement, and Pride at Work. Also covers individual union political advocacy and targeted bargaining innovations related to equality and social justice.

ILRLR 3830 Workers' Rights as Human Rights

Fall or spring. 4 credits. J. Gross.

Examines U.S. domestic labor law and policy using internationally accepted human rights principles as standards for judgment. Considers the idea of human rights, its philosophical and moral origins, and introduces the legal and social obligations of both governments and nonstate actors to respect the human rights of workers. Topics include the Universal Declaration on Human Rights, ILO International Labor Standards, the Declaration on Fundamental Principles and Rights at Work, workers' freedom of association and the right to organize and collectively bargain, occupational health and safety, discrimination, forced labor, child labor, migrant labor, labor rights defined in international trade agreements, the value judgments underlying labor policy choices, and the struggle for enforcement of human rights standards nationally and internationally. The course examines these topics in an internationally comparative context and includes presentations and discussions from international experts on various human rights issues.

ILRLR 3850 African American Social History, 1865 to 1910: The Rural and Urban Experience

Fall. 4 credits. N. Salvatore.

Examines the experience of black Americans from Emancipation through the experience of the first generation born after slavery. Topics include the changing nature of work; political organization and the rise of Jim Crow; protest, accommodation, and separatism; and the continued evolution of black social and cultural expression after slavery.

ILRLR 3860 African American Social History, 1910 to the Present: Race, Work, and the City

Spring. 4 credits. N. Salvatore.

Examines the experience of black Americans from the start of the Great Migration just before World War I. Topics include the effects of migration on work experiences and unionization patterns, the impact of depression and two world wars on black social structure and economic status, the

growth of the Civil Rights movement, and the impact of migration and urbanization on a variety of social and cultural institutions.

ILRLR 3880 Unfree Labor: Servants, Slaves, and Wives

Fall or spring. 4 credits. I. DeVault. Examines various forms of unfree labor, mostly in the antebellum (pre-Civil War) era in the United States. Will look at the situation of indentured servants and apprentices, African slaves, and wives of all social classes. Reading includes both autobiographical and historical studies. Will also discuss the contrasts and interrelationships among these different groups of early American workers.

ILRLR 4000 Union Organizing

Spring. 4 credits. Prerequisites: ILRLR 2010/5010, 2050/5000. K. Bronfenbrenner. Examines the theory, practice, and strategy of organizing in a global economy. Addresses current challenges facing unions organizing in both the public and private sector, in certification elections, and card check campaigns. Topics include review of organizing theory, the social and political context of current organizing, the debate on organizing policy and labor law reform, worker attitudes toward organizing, changing employer strategies and tactics, staffing and financing organizing campaigns, strategic targeting, organizing styles and tactics, changing demographics of newly organized workers, organizing outside the labor board process, and the limits and possibilities of organizing on a global scale.

ILRLR 4020 Migrant Workers (also HIST/LATA/LSP 4310)

Spring. 3 credits. R. Craib. For description, see LSP 4310.

ILRLR 4022 Disability and Employment Policy

Spring. 2 credits. S. Bruyère and T. Golden. Provides an overview of a range of public policies regarding the employment of people with disabilities. Students are introduced to the historical development of disability public policy and to contemporary practices in implementing these policies at the state and organizational levels. Students explore the multiple areas of public policy relevant to persons with disabilities, including veterans legislation, worker's compensation, vocational rehabilitation, workforce development, social insurance, and civil rights legislation such as the Americans with Disabilities Act (ADA). Throughout the class, students will consider the relationship between disability employment policy and larger social and political developments. Students also will analyze how public policies have developed in practice, bridging the divides between policy as written, policy as implemented, and policy as practiced.

ILRLR 4030 The Economics of Collective Bargaining in Sports

Fall or spring. 4 credits. L. Kahn. Surveys economic and industrial issues in the sports industry. Topics include salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRLR 4040 Contract Administration

Fall. 4 credits. Prerequisites: ILRLR 2010/5010, 2050/5000. K. Bronfenbrenner.

Focuses on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public- and private-sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, downsizing, leadership development, membership involvement and commitment, internal organizing, community coalition building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRLR 4050 Employment Law I

Fall. 4 credits. Prerequisites: ILRLR 2010, 5010, or permission of instructor. Attendance and participation mandatory. May be taken either before or after ILRLR 4051. L. Adler.

Takes a similar approach to ILRLR 4051, but the subject matter differs. Topics include employment at will and its exceptions; the role of the Constitution in the U.S. workplace; the law of electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. Reviews primarily federal and state court decisions and focuses upon the way that employees' rights are advanced or constricted by law.

ILRLR 4051 Employment Law II

Fall or spring. 4 credits. Prerequisites: ILRLR 2010, 5010, or permission of instructor. Attendance and class participation mandatory. May be taken either before or after ILRLR 4050. L. Adler.

Takes a similar approach to ILRLR 4050, but the subject matter differs. Topics include the meaning and validity of preemployment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and workfare individuals have on the "job"; and the origin and application of the workers' compensation laws that apply when people are injured or contract disease from their work. Reviews primarily federal and state court decisions and focuses on the way that employees' rights are advanced or constricted by the law. There are considerable reading responsibilities.

ILRLR 4060 Hospitality Industry Labor Relations (also HADM 4481)

Spring. 4 credits. R. Hurd and D. Sherwyn. Topics include critical labor relations issues facing the hospitality industry, including the impact of the structure and performance of the industry on the collective bargaining environment; labor relations strategy of UNITE-HERE, the key union representing hospitality industry workers; labor relations strategies of selected hospitality industry corporations; labor-management partnerships;

and neutrality, union organizing, and the expanding reach of hospitality industry labor relations. All students will participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary developments.

ILRLR 4070 Contemporary Trade Union Movement

Fall. 4 credits. Prerequisites: undergraduates, ILRLR 1100; graduate students, ILRLR 5020. R. Hurd. Examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. Covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement address the class.

ILRLR 4820 Ethics at Work

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold. Examines major theories of ethics, then applies them to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRLR 4860 Collective Bargaining in the Public Sector

Spring. 4 credits. Prerequisites: ILRLR 2010 and 2050/5000. L. Adler. Examines the history of public employees' collective bargaining and other workplace rights. Emphasis is placed on the current trade-offs between municipal and state governments and their unionized employees in New York City and state, although trends in other states and the federal sector are also examined. Topics include representation rights, public sector workers ability to leverage their power, unfair labor practices, impasse procedures, the scope of collective bargaining, and a limited treatment of the U.S. constitution in the public workplace. Also examines the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. Throughout, the course illustrates how the exercise of public employee rights impacts municipal, state, and federal public-policy labor-market considerations. There are several prominent guest speakers.

ILRLR 4880 Liberty and Justice for All

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold. Examines major theories of ethics, then applies them to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRLR 4950 Honors Program

For information, contact ILR Office of Student Services.

ILRLR 4970-4980 Field Research, Internship

Fall and spring. 4970, 4 credits; 4980, 8 credits. Staff. All requests for permission to register for an internship must be approved by the faculty

member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of off-campus credit programs. Upon approval of the internship, the Office of Student Services will register each student for 4970, for 4 credits graded A+ to F for individual research, and for 4980, for 8 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRLR 4990 Directed Studies

Fall and spring. 4 credits. Staff.
For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors, and seniors with a preceding semester of 3.0 semester average are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CoursEnroll to arrange for formal submission of their directed study.

ILRLR 5000 Collective Bargaining

Fall. 3 credits. Prerequisite: graduate standing. Recommended: previous or concurrent enrollment in ILRLR 5010. A. Colvin, H. Katz, S. Kuruvilla, and D. Lipsky.
Comprehensive introduction to the industrial relations system of the United States. Covers the negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; and U.S. industrial relations in international and comparative perspective.

ILRLR 5005 Employee Benefits: Law, Policy, and Practice

Fall or spring, seven-week course. 2 credits. L. Compa.
Offers a general overview of the basics of ERISA, retirement plans, and health insurance, with some additional treatment of other employee benefits such as sick leave, parental leave, and child care. Examines these issues in (1) a policy context, since health insurance and pension protection will be at the top of the national policy agenda with a new administration and Congress in Washington; and (2) a collective bargaining context, since bargaining over employee benefits presents sharp challenges to employer and union negotiators.

ILRLR 5010 Labor and Employment Law

Fall. 3 credits. Prerequisite: graduate standing. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberwitz.
Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRLR 5020 History of Industrial Relations in the United States since 1865

Fall or spring. 3 credits. Prerequisite: graduate standing. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.
Introductory survey course emphasizing historical developments in the 20th century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class lifestyles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRLR 5040 The U.S. Industrial Relations System

4 credits. Offered only in New York City for M.P.S. program. Staff.
Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequality, and practices in different industries and firms. Finally, the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRLR 6000 Special Topics: Labor Law

Fall or spring. 4 credits. Prerequisite: permission of instructor. Open to graduate students and upper-division undergraduates. Sem. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberwitz.
Topic changes depending on semester and instructor.

ILRLR 6011 Negotiation: Theory and Practice

Fall or spring. 4 credits. Prerequisites: background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seeber.
Deals with negotiation and bargaining, focusing on process, practice, and procedures. Concentrates on the use of negotiation and bargaining to resolve conflicts and disputes between organizations and groups. Discusses various theories of negotiation, including conventional, "positional" bargaining, interest-based bargaining, the use of power in negotiation, and game theoretic approaches to bargaining. Examples, cases, and exercises are used to illustrate general principles. This is a generic negotiation course and thus does not deal with labor relations nor does it focus on any particular type of negotiation. Rather, it examines negotiation and bargaining generally, using examples drawn from several contexts, including employment relations, environmental disputes, real estate transactions, and other settings.

ILRLR 6012 Managing and Resolving Conflict

Fall or spring. 4 credits. Prerequisite: background in economics and social sciences or permission of instructor. A. Colvin, D. Lipsky, and R. Seeber.

Deals with managing and resolving workplace conflicts and examines dispute resolution and conflict management in both union and nonunion settings. The course covers two related topics: (1) third-party dispute resolution, including alternative dispute resolution (ADR), with a primary focus on the use of mediation and arbitration but also dealing with other dispute resolution techniques, such as fact-finding, facilitation, peer review, and the ombuds function; (2) conflict management in organizations, including the recent development of conflict management systems. The course reviews the factors that have caused the growth of ADR and conflict management systems, and it provides instruction on the design, implementation, and evaluation of such systems.

ILRLR 6014 Industrial Relations in Transition

Spring. 4 credits. Prerequisite: senior or graduate standing. H. Katz.
Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRLR 6018 Current Issues in Collective Bargaining: Theory and Practice

Spring. 4 credits. K. Bronfenbrenner.
Examines the theory and practice of the collective bargaining process in the past three decades. This will be achieved both through a review of recent literature on bargaining theory and through the analysis and evaluation of a series of collective bargaining campaigns from a variety of industries, unions, strategic models, and outcomes both in the United States and around the world, starting with the Phelps Dodge Strike in 1982 and ending with recent contract campaigns with large transnational firms, which students will research and write about as their final paper. Subjects include changing bargaining climate, bargaining theory, variations in bargaining structures and practices, union and company power analysis, role of membership in bargaining, interest-based bargaining, bargaining with transnational firms, comprehensive and cross-border campaigns, strikes and lockouts, community labor coalitions, bargaining in an era of global economic crisis, and bankruptcy and bargaining.

ILRLR 6019 Dispute Resolution Practicum

Spring. 2 credits. Limited to 20 students. D. Lipsky, R. Scanza, and R. Seeber.
Purpose is to link classroom discussion and analysis of arbitration and mediation with opportunities for students to observe actual arbitration and mediation cases. The course is designed to be an advanced seminar for graduate and undergraduate students who have a serious interest in pursuing a career in

arbitration or mediation. Classroom discussions and readings will focus on both labor arbitration and mediation (i.e., the use of arbitration and mediation in unionized settings) and employment arbitration and mediation (i.e., the use of arbitration and mediation in cases involving nonunion employees).

ILRLR 6020 Arbitration

Fall and spring, 4 credits. Limited to 21 students. Prerequisites: ILRLR 2010, 2050, 5000, and 5010. A. Colvin, J. Gross, and R. Lieberwitz.

Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentations, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRLR 6040 Theories of Equality and Their Application in the Workplace

Spring, 4 credits. R. Lieberwitz.

An examination of the various aspects of equality in the workplace, focusing most closely on issues of race, gender, and national origin and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails research and writing assignments and a high level of student participation in class discussions.

ILRLR 6060 Theories of Industrial Relations Systems

Fall, 4 credits. Prerequisites: senior or graduate standing; ILRLR 1100, 2050, and 5000. H. Katz.

Traces the evolution of theory and research on industrial relations. Topics include theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship with unionization, models of strikes, empirical assessments of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

ILRLR 6070 Values in Law, Economics, and Industrial Relations

Fall and spring, 4 credits. Limited to 21 students. Prerequisites: ILRLR 2010, 2050, 5000, and 5010. J. Gross.

Examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as discrimination; law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRLR 6079 Low-Wage Workers and the Law

Fall or spring, 4 credits. Prerequisite: ILRLR 2010 or permission of instructor. K. Griffith.

Examines labor and employment law as it affects low-wage (including documented and undocumented immigrant) workers. Covers traditional labor and employment law statutes as well as new developments in labor and employment law that affect low-wage workers. Much of the course is dedicated to federal legislation and case law related to the above.

Also covers the overlap between labor and employment law and low-wage and immigrant worker organizing efforts.

ILRLR 6080 Special Topics in CB, LL, and L History

Fall or spring, 4 credits. Staff.

Topics change depending on semester and instructor.

ILRLR 6081 Public Policy and Public Sector Employment Relations

Fall, 4 credits. Prerequisites: ILRLR 2010/5010 or permission of instructor. L. Adler/S. Klingel.

Examines legal and other public employment conflicts created by taxation, education, fiscal failings, and labor/management problems. Student understanding will be informed by assessing the conflict resolution value of litigation, interest-based bargaining, traditional collective bargaining, and alternative dispute-resolution mechanisms. Journal review, legal cases, and policy readings related to current, critical challenges to the public employment relationship will comprise our traditional study. As important will be observations/work with dispute resolution professionals, litigators, and collective bargaining practitioners. In addition to assigned readings, class participation, and an encouraged modest externship, there will be one examination and one or more significant writing assignments.

ILRLR 6082 Collective Bargaining Simulation

Fall, 4 credits. Limited to 18 students. Prerequisite: junior, senior, or graduate standing. (Course may not show on undergraduate track; undergraduates may register via graduate track.) Recommended: previous or concurrent enrollment in collective bargaining theory and labor law course. Attendance at first class is vital; no student accepted if not enrolled before second class. Up to two required evening bargaining sessions. Course workload heavier early in semester. H. Kramer.

Students prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company within a midsize single site bargaining unit context. Students are assigned, usually in line with preferences, to a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle, negotiate language, and bargain over wages, pensions, health care, and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a small, hands-on, interactive, program with active participation essential.

ILRLR 6084 Public Policy and Public-Sector Employment Relations

Fall, 2 credits. Prerequisite: ILRLR 2010 or permission of instructor. L. Adler and S. Klingel.

Examines legal and other public employment conflicts created by taxation, education, fiscal failings, and labor/management problems. Students' understanding will be informed by assessing the conflict-resolution value of litigation, interest-based bargaining, traditional

collective bargaining, and alternative dispute-resolution mechanisms. Journal review, legal cases, and policy readings related to current, critical challenges to the public employment relationship will comprise the traditional study. As important, will be field trip work with dispute-resolution professionals, litigators, and collective-bargaining practitioners.

ILRLR 6830 Research Seminar in the History of Industrial Relations

Fall or spring, 4 credits. Prerequisites: ILRLR 1100, 5020. J. Cowie and I. DeVault. Areas of study are determined each semester by the instructor offering the seminar.

ILRLR 6840 Employment Discrimination and the Law

Fall or spring, 4 credits. Prerequisite: ILRLR 2010/5010 or equivalent. M. Gold, K. Griffith, and R. Lieberwitz.

Examines the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRLR 6870 Introduction to Labor Research

Spring, 4 credits. Limited to 20 students. K. Bronfenbrenner.

Provides students interested in the labor field with the skills necessary to understand and use social science research as it relates to the labor movement. The course's four major goals are to (1) develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; (2) introduce a number of quantitative and qualitative research techniques used by unions and those who study the labor movement; (3) familiarize students with the broad range of library and computer resources that can be used for labor and corporate research; and (4) provide students with an opportunity to design and conduct a research project for a national or local union.

ILRLR 6890 Constitutional Aspects of Labor Law

Fall or spring, 4 credits. R. Lieberwitz. In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. Focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

[ILRLR 7030 Qualitative Research Methods in Industrial Relations and Human Resources

Spring, 4 credits. Prerequisite: M.S. and Ph.D. students; ILRLR 5000. Recommended: statistics course beyond level of ILRST 5100. Next offered 2011–2012. S. Kuruvilla. Advanced doctoral seminar that focuses on the philosophy of inquiry, generally, as well as the various paradigms governing research on labor.]

ILRLR 7070 Seminar on Conflict and Dispute Resolution

Spring, 3 credits. A. Colvin. Examines past and present research on conflict and dispute resolution. Covers a variety of perspectives on conflict and its resolution. Readings will include a mixture of classic works on conflict and dispute resolution in work and employment relations,

as well as recent conceptual and empirical studies in this area.

ILRLR 7080 Negotiations in Practice

Fall. 3 credits. Next offered 2011–2012. S. Kuruvilla.

Provides opportunities for students to develop their negotiating abilities for use in organizational and other settings.]

ILRLR 7081 Seminar in American Labor History (also HIST 6830)

Fall or spring. 3 credits. Prerequisite: graduate standing and permission of instructor. J. Cowie and I. De Vault.

Topics change depending on semester and instructor.

ILRLR 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits. Staff.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLR 7980 Internship

Fall and spring. 1–3 credits.

Designed to grant credit for individual research—under the direction of a faculty member—by graduate students who have been selected for an internship. All requests for permission to register for ILRLR 7980 must be approved by the faculty member who will supervise the project.

ILRLR 7990 Directed Studies

Fall and spring. Credit TBA.

For individual research conducted under the direction of a member of the faculty.

ILRLR 9800 Workshop in Collective Bargaining, Labor Law, and Labor History

Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. S–U grades only. Staff.

Provides a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Labor Relations, History, and Law, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

HUMAN RESOURCE STUDIES

L. Dyer, chair (192 Ives Hall, 255-8805); R. Batt, B. Bell, J. Bishop, D. Burton, D. Cohen, C. Collins, L. Dragoni, L. Gasser, J. Grasso, K. Hallock, J. Hausknecht, R. Hewerston, C. Homrighouse, B. Livingston, L. Nishii, C. Warzinski, W. Wasmuth, P. Wright

ILRHR 2600 Human Resource Management

Fall and spring. 3 credits. Prerequisite: ILR students or permission of instructor. Staff.

Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges (e.g., technology, globalization, legislation, restructuring, work/life balance, changing labor markets). Emphasis is placed on developing relevant problem-solving and critical-thinking skills, as the basic concepts of HRM and the skills developed in this course

are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 2660 Essential Desktop Applications

Fall, spring, and summer. 2 credits. Limited enrollment. C. Homrighouse.

Provides skills in the use of personal computers that run the Windows operating system. Covers the basics and time-saving techniques for Windows, Lexis Nexis, and Microsoft Excel, Access, and PowerPoint. Emphasizes hands-on experience and development of PC-based solutions by using examples that address human resource and other practical real-world issues. The skills developed in this course are useful prerequisites for several elective courses in human resource management and essential in the 21st-century workplace.

ILRHR 2680 Job Loss

Fall. 3 credits. Sophomore writing course. Limited to 15 students. K. Hallock.

Students gain an understanding of the effects of layoffs on firms, from an interdisciplinary perspective. By the end of the course, students should know quite a bit about the who, what, where, when, and why of layoffs and they should understand the effects of the layoffs on firms. Readings from economics, sociology, political science, psychology, finance, industrial relations, and human resource management. The course includes discussion of recent theory and research. However, the strong focus will be on applications and on writing. Issues include federal and state legislation and public policy, how layoffs actually occur—the procedures used by human resource managers in implementing layoffs, reasons for layoffs, types of workers involved in layoffs, timing of layoffs, layoffs and managerial outcomes (such as compensation and managerial turnover), layoffs and firm performance in the short run, layoffs and firm performance in the long run, case studies, and suggestions for policy. Occasional speakers will join the class: for example, Louis Uchitelle from the *New York Times* has agreed to speak about writing and his work on layoffs.

ILRHR 2690 Cross-Cultural Perspectives on Work

Spring. 4 credits. Writing course. Prerequisite: ILRHR 2600 or equivalent. L. Nishii.

Most management theories have been developed and tested by Western scholars, based on Western cultural assumptions regarding the bases of human cognition, motivation, and emotion. Yet, the vast majority of the world's population is non-Western and lives accordingly, based on different cultural assumptions. Students will begin by learning about theories of cultural variation, then will learn about the implications of these cross-cultural differences for basic HR and OB concepts.

ILRHR 3600 Human Resource Economics and Public Policy

Spring. 4 credits. Prerequisite: sophomore, junior, or senior standing. J. Bishop.

State and local efforts to improve K–12 education are employing a variety of (sometimes contradictory) reform strategies. This course critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies

examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 3620 Career Development: Theory and Practice

Fall, spring, seven weeks. 2 credits. Limited to 30 students. S–U grades only. L. Gasser.

Covers the components of career management, individual factors, and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required: information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a final project.

ILRHR 3650 Organizational Consulting: Process and Results

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. R. B. Hewerston.

Provides students with the insights and tools they need to work successfully as human resource generalists who consult with operating managers to improve organizational effectiveness. The consulting process is examined from both an interpersonal and systems perspective. This includes the knowledge and skills required to build trust and influence, contract with clients, and maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students design and present consulting plans based on actual case situations (e.g., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 3670 Employee Training and Development

Fall. 4 credits. Prerequisite: ILRHR 2600; undergraduate standing. B. Bell and L. Dragoni.

Faced with increasing competition, globalization, technological complexities, and dynamic labor markets, firms increasingly are struggling to determine the best approaches to training and developing their workforces. This course introduces the issues, concepts, and processes with which firms are wrestling, as well as specifics on planning, designing, implementing, and evaluating training and development programs. After completing this course, participants should be able to conduct a needs assessment, evaluate employee readiness, evaluate the strengths and weaknesses of various training and development techniques, solve transfer of learning problems, and design evaluation procedures.

ILRHR 4600 International Human Resource Management

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Nishii.

Illustrates how cultural context affects the structure and implementation of HR practices. The first part focuses on comparative human resource management or the study of how HRM differs across cultures, with a primary emphasis on comparing American HRNI practices with those in East Asia and a secondary focus on Western European HRNI practices. Class readings and discussions are grounded in theories of cultural variation. The second part focuses on IHRM, or the HRM issues facing multinational corporations. Topics include expatriation and repatriation, global leadership, compensation, and training.

ILRHR 4603 Work Groups and Teams

Fall and spring, seven weeks. 2 credits.

Prerequisites: ILRHR 2600; undergraduate standing. B. Bell.

In recent years, there has been a shift from work organized around individual jobs to team-based work structures. This course examines the factors influencing the emergence of teams as basic building blocks of organizations and the implications of team-based work structures for human resource management. The first part of the course focuses on the different types of teams that can exist within organizations and the determinants of work-team effectiveness. Attention is then shifted to examining the key aspects of the creation, development, operation, and management of work teams. The goal of the course is to provide students with a better understanding of how organizations can enhance the effectiveness of their work groups and teams.

ILRHR 4610 Working in the New Economy: The Sociology of Work

Spring, 4 credits. Prerequisite:

undergraduate standing. R. Batt.

This seminar draws on qualitative studies of the workplace in the United States and abroad to examine how workers and managers are affected by changes in globalization technologies, business strategies, labor markets, and other factors. What dilemmas and conflicts emerge, how are they managed, and what are their outcomes? Readings cover firsthand accounts of people's experiences in a wide range of occupations and industries, including professional, service, and factory workers.

ILRHR 4612 Compensation in Service Firms (also HADM 4612)

Spring, 3 credits. Prerequisite: ILRHR 2600. M. Sturman.

This course is designed to give students a practical understanding of the methods and implications of compensation, including hands-on experience designing compensation systems for firms in the service industry. (It provides material that is distinct from that provided in ILRHR 6690 Managing Compensation.) Students will learn how to design a pay plan, including base pay and pay-for-performance plans. By the completion of the course, participants will know how to design pay ranges and grades for organizations in which most jobs can be benchmarked with market data. The course will also devote considerable time to the design of incentive plans, including merit pay, bonuses, gainsharing, profit sharing, piece-rate, tipping, and commission systems. The course is useful for those desiring employment as an entry-level compensation specialist or a human resources generalist, those starting and running their own business, or those who want a better understanding of how human

resource practices are actually managed. For students with a particular interest in compensation, the course can be taken in addition to the ILRHR 6690 course; those interested in compensation in the services industry can take this as a standalone course.

ILRHR 4620 Staffing Organizations

Spring, 4 credits. Prerequisite:

undergraduate standing. C. Collins, J. Hausknecht, and B. Livingston.

Provides an overview of the processes by which organizations staff positions with both internal and external applicants. Through a combination of lectures, cases, and projects, the course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, retention, and internal and external selection practices.

ILRHR 4631 Managing Compensation

Spring, 4 credits. Prerequisites: ILRHR 2600 or equivalent; undergraduate standing.

Staff.

Compensation, including direct wages, indirect payments, and employee benefits, is studied from the points of view of theory and practice. Upon completion of the course, students should be able to analyze wage surveys, evaluate jobs, create salary structures, and administer compensation programs within the context of sound economic and motivational theory, and to align rewards with business strategy. Topics include strategic perspectives on pay, internal equity and alignment; external competitiveness, pay for performance; compensating special groups (including unionized employees, executives, and boards of directors), international compensation, employee benefits, and compensation administration (costing, taxation, regulation, etc.).

ILRHR 4632 Finance for Human Resources

Fall, 4 credits. J. Grasso.

Provides students with basic concepts of financial management and analysis, with an emphasis on human resource applications. The course begins with understanding financial statements, the financial structure of the firm, evaluation of financial performance, cash flow, and time value of money. It then focuses on investment management and performance with a broad overview of debt, equity, and alternative investments and a review of capital markets. The case-study method is used to evaluate several financial-market disruptions during the past decade. The HR portion of the course focuses on valuing pension obligations, stock options and executive pay, costing labor agreements, costing health care and other benefits, preparing a compensation budget, and understanding IRS Form 5500. The course also reviews corporate proxies; governance; social responsibility and corporate transparency, ethics, and fraud; and SEC, FASB, IRS, and Sarbanes-Oxley requirements. Students are required to follow one company stock, industry, or topic throughout the course; write a paper; and work in groups on small projects.

ILRHR 4640 Business Strategy

Fall, 4 credits. Prerequisite: undergraduate standing. D. Cohen.

This integrative course focusing on strategic management provides an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources) and to apply this knowledge to business problems faced by top management in existing organizations. Class format includes lectures and case studies.

ILRHR 4641 Business Strategy, Organizational Design, and Human Resource Strategy

Fall, 4 credits. Prerequisite: ILRHR 2600 or equivalent. Staff.

Explores ways in which the effective use of human capital contributes to organizational success. Specifically, it provides insights into, and practice using, the processes firms employ to attain and maintain alignment among the three key elements involved in this endeavor: business strategies, organizational designs, and human resource strategies. Lectures and discussion are used to promote a clear understanding of the theory, research, and experience that underlie the role of human capital in organizations, as well as the design and alignment of business strategies, organizational designs, and human resource strategies. Case studies are employed to provide hands-on experience in analyzing and working with these concepts in actual situations.

ILRHR 4650 Globalization at Work

Spring, 4 credits. Prerequisite:

undergraduate standing. R. Batt.

Examines how firms are responding to globalization and compares the strategies and outcomes of restructuring in manufacturing and service enterprises. While globalization has been a continuing phenomenon in manufacturing, recent changes in multilateral agreements, advances in information technology, and market deregulation have led to a process of globalization in service activities as well. Outcomes for firms, employees, consumers, and unions are examined.

ILRHR 4660 Entrepreneurship and Small Business

Fall, 4 credits. Prerequisite: undergraduate standing. D. Cohen.

Broadly addresses strategic issues in the startup phase and management of entrepreneurial firms and small businesses. Topics include opportunity recognition, satisfying real market needs, strategy, performance, financial planning, growth, and innovation. The course consists of a mix of lectures, case studies, guest speakers, and a final group project.

ILRHR 4664 Human Resource Analytics

Fall, 4 credits. J. Hausknecht.

Addresses the growing need for data-driven, analytical approaches to managing talent. Introduces students to the fundamental logic, metrics, analysis, and interpretation needed to link human resource practices to broader indicators of organizational performance. Students will be capable of gathering, integrating, analyzing, and interpreting relevant HR metrics to make better decisions about managing people in organizations.

ILRHR 4663 HR, Ethics, and Corporate Social Responsibility

Fall. 4 credits. P. Wright.

Examines the role of the HR function and individual HR professionals in promoting ethics and corporate social responsibility (CSR) within the companies they work for. Covers individual worldview as a source of individual values and ethics, organizational values and ethical leadership, and the concept of CSR and sustainability. The class will use lectures, class discussion, films, and executive speakers to explore these topics.

ILRHR 4670 Developing Student Leadership Capabilities

Spring. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.

"It isn't just nice—these interpersonal skills. It's about stuff that's necessary to lead a complex organization" (Warren Bennis Quoted in the Wall Street Journal, February 12, 2007, B3). Organizations second this reality, craving graduates with leadership capabilities. This course is designed to facilitate students' development of their own leadership abilities through exposure to critical developmental experiences, theoretical and empirical research on leadership development, and intellectual engagement and reflection on key leadership development principles. Students most benefit from this course when they opt to take it during their junior or senior year.

ILRHR 4680 Human Resources Management Simulation

Fall, seven weeks. 2 credits. Limited to 30 students. Prerequisites: junior or senior standing; ILRHR 2600 or equivalent.

Regular attendance mandatory. W. Wasmuth.

Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required.

ILRHR 4950 Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Labor Relations, Law, and History."

ILRHR 4970-4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Labor Relations, Law, and History."

ILRHR 4990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILRHR 5600 Human Resource Management

Fall and spring. 3 credits. Prerequisite: graduate standing. Staff.

Survey course designed to provide an introduction to concepts and topics in human resource management. Consideration is given to theories and applications involved in effectively managing people in organizations. Topics include recruitment, staffing, training, performance management, retention,

compensation, international human resource management, and the legal environment. Emphasis is placed on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 5640 Human Resources Management in Effective Organizations

Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff. Offers students the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 6590 HR Challenge: Balancing Ethics, Economics, and Social Responsibility

Fall. 4 credits. Limited to 15 students. Prerequisites: ILRHR 2600/5600; M.I.L.R. graduates; seniors by permission of instructor. Letter grades only. P. Wright.

Examines the challenges of synthesizing personal/professional ethics with professional responsibilities and synthesizing organizational economic demands with social responsibility, particularly focusing on how these issues impact HR professionals. These concerns are examined from both ends of the political spectrum. The course is taught in a seminar format in which students are expected to participate in and lead class discussions.

ILRHR 6600 HR Leadership: Views from the Top

Fall. 4 credits. Limited to 30 students. Prerequisites: ILRHR 2600/5600 or equivalent, senior or graduate standing, and permission of instructor. L. Dyer.

Hands-on course offering students a unique opportunity to learn about strategic business and human resource issues from the perspectives of senior HR executives. Five chief human resource officers (CHROs) from major corporations meet with the class for lively give-and-take sessions on subjects of strategic and topical interest to their organizations. Before the CHRO visits, teams prepare background papers on the speakers, their companies, and their topics. Students discuss these papers before the visits to assure readiness to address the issues at hand when the CHROs arrive. During the visits, the teams host the CHROs and usually have an opportunity to interact informally with them. After the visits, the teams revise their background papers into white papers that reflect insights gleaned from their research and discussions. Subsequently, all five white papers are assembled in a book that is shared with the CHROs and others.

ILRHR 6601 Research on Education Reform and Human Resource Policy

Fall and spring. 4 credits. J. Bishop. State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. This research seminar critically examines the case that is made for (and against) each of the major reform proposals and review studies

that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 6602 Introduction to HR Information Systems

Fall, seven weeks. 1 credit. Prerequisites: ILRHR 2660 or equivalent; use of Access or similar database package for at least data entry and report generation.

C. Homrighouse.

Focuses on understanding how and why human resource information systems are developed, maintained, and managed. A database is designed from the ground up, beginning with basic instruction on the need for, and how to create, a relational database. Once the initial design is in place, the data are manipulated to create reports, forms, and queries to assist in human resource decisions. The course examines ways to make databases efficient and consistent. Production database systems such as PeopleSoft also are reviewed and used. All instruction is hands-on and supplemented with assigned readings and guest lecturers.

ILRHR 6604 Global Field Study in Strategic Human Resources

Spring. 4 credits. Prerequisite: seniors by permission of instructor. Limited to 25 students. J. Haggerty.

This unique course provides students with in-depth information on strategic HRM in a selected region of the world. Covers the development of selected businesses; the history, role, and current efforts of government in the workplace; and local cultural nuances as they affect the world of work. Students will travel to the region studied and visit a variety of workplaces and institutions during spring break. Student presentations and a final paper will compare and contrast significant aspects of the dominant U.S. strategic HR model with strategic HR model(s) found in the studied region.

ILRHR 6605 Nonprofit Finance and Management

Spring. 4 credits. J. Grasso.

Provides students with a practitioner's focus on financial and managerial issues in the nonprofit sector, including universities, hospitals, government agencies, and foundations. The course will include an overview of nonprofit financial statements, debt issuance, endowment management, credit analysis, organizational governance issues, strategic planning, industry trends, executive compensation, and philanthropy. Students will gain a comprehensive overview of all critical aspects of nonprofit management. A research paper will allow students to focus on a particular nonprofit sector (e.g., environmental organizations, trade unions, private foundations) or to focus on a functional area (e.g., endowment management, philanthropy, organizational governance).

ILRHR 6606 Developing Leadership: Personally and in Organizations

Fall. 4 credits. Prerequisite: ILRHR 5600 or equivalent. L. Dragoni.

David Whitwam, the former chairman, president, and CEO of Whirlpool Corporation

was quoted as saying: "The thing that wakes me up in the middle of the night is not what might happen to the economy or what our competitors might do next. It is worrying about whether we have the leadership capacity and talent to implement the new and more complex global strategies." Evidence suggests that this concern is widely shared among business executives, and this course is designed to explore how organizations are currently meeting this challenge. Specifically, students are exposed to the methods and approaches that organizations use to identify, assess and develop high-potential talent and the means for evaluating these practices.

ILRHR 6607 Executive Compensation

Fall. 4 credits. Prerequisite: ILRHR 5600 or equivalent. K. Hallock.

Provides students with an in-depth understanding of the structure and governance of executive compensation programs and practices. Course material draws upon theory and research in executive compensation and explores current legislative and shareholder reform initiatives affecting executive pay. The topic is approached from a multistakeholder perspective taking into account the interests of shareholders, institutional investors, advocacy groups, social activists, governmental regulators, employees, and executives. Also examined are the linkages between executive compensation and business strategy; issues surrounding compliance with securities laws, tax regulations, accounting standards, and principles of good corporate governance; various types of executive pay programs, including equity-based incentives, perquisites, and executive benefits; the roles of corporate compensation committees and independent compensation consultants; and current trends and best practices.

ILRHR 6611 Seminar on Entrepreneurs and Entrepreneurial Organizations

Spring. 4 credits. D. Burton.

This course brings a social-science perspective to the study of entrepreneurs and entrepreneurial organizations in the United States, with a strong emphasis on the historical context and social institutions that enable and support entrepreneurial activity. Through modern and historical case studies, the course critically evaluates the received wisdom about entrepreneurs and entrepreneurial organizations. This course is intended for advanced undergraduate students and MLR students who are interested in learning more about entrepreneurship. It is not a "How to" course but rather a conceptual overview of entrepreneurship with particular emphasis on labor market and employment-related topics. Students will examine various forms of entrepreneurship, including self-employment, franchising, small and family businesses, high-technology ventures, and social entrepreneurship. An important concern of the course is how entrepreneurship is different for different categories of people, especially women and minorities.

ILRHR 6616 Globalization and HR Strategy

Spring. 4 credits. R. Batt.

The globalization of product, labor, and capital markets has led to profound changes in the competitive environment in which firms operate. Yet, these global economic forces are filtered through national institutions that offer unique sets of opportunities and constraints for multinational corporations doing business

in different countries. Regional governance systems, such as the European Union, add another layer of complexity to the institutional environment in which firms operate; while governments at many levels are creating new regulatory rules in response to recent financial crises. The course examines how corporations respond to these environmental complexities, why they adopt different approaches to business and HR management, and whether alternative strategies affect important outcomes for firms, employees, and other stakeholders.

ILRHR 6620 Agility: HRM When Shift Happens

Spring. 4 credits. Prerequisites: ILRHR 5600 or equivalent. L. Dyer.

We live in turbulent times. Nonetheless, most organizations are designed and managed for stability, not change. So when shift happens, it is often a devastating and traumatic experience, especially for the employees involved. The alternative is for organizations to be designed and managed for agility. This approach is beginning to catch on, although admittedly it is more talked about than tried (in a recent survey, for example, about 90 percent of CEOs indicated that agility was important or very important to the success of their businesses, but few said they had it all figured out). At its core, agility has two dimensions: (1) the capacity to be strategically proactive in the marketplace by constantly out-maneuvering and leap-frogging competitors with innovative products, service, or solutions and (2) the capacity to be operationally reactive, or adept at adapting when events take a turn for the worse. Through lectures, discussions, and case studies, this course explores the virtues and challenges associated with agility, with particular emphasis on the HR issues involved.

ILRHR 6622 Compensation in Service Firms (also HADM 6612)

Spring. 3 credits. Prerequisite: ILRHR 2600/5600. M. Sturman.

Gives students a practical understanding of the methods and implications of compensation, including hands-on experience designing compensation systems for firms in the service industry. Students will learn how to design a pay plan, including base pay and pay-for performance plans. By the completion of the course, participants will know how to design pay ranges and grades for organizations for which most jobs can be benchmarked with market data. The course will also devote considerable time to the design of incentive plans, including merit pay, bonuses, gainsharing, profit sharing, piece-rate, tipping, and commission systems. The course is useful for those desiring employment as an entry-level compensation specialist or a human resources generalist, those starting and running their own business, or those who want a better understanding of how human resource practices are actually managed. For students with a particular interest in compensation, the course can be taken in addition to the ILRHR 6690 course; for those interested in compensation in the services industry, this course can be taken as a standalone course.

ILRHR 6631 Work Groups and Teams

Fall and spring, seven weeks. 2 credits. Prerequisite: ILRHR 5600 or permission of instructor. B. Bell.

In recent years, there has been a shift from work organized around individual jobs to

team-based work structures. This course examines the factors influencing the emergence of teams as basic building blocks of organizations and the implications of team-based work structures for human resource management. The first part of the course focuses on the different types of teams that can exist within organizations and the determinants of work-team effectiveness. Attention is then shifted to examining the key aspects of the creation, development, operation, and management of work teams. The goal of the course is to provide students with a better understanding of how organizations can enhance the effectiveness of their work groups and teams.

ILRHR 6640 HR Online Research and Reporting Methods for Executive Decision-Making

Spring. 4 credits. Limited to 18 students. Prerequisite: ILRHR 5600/2600 or equivalent. S. Basefsky.

Designed to develop key HR competencies and skills for researching and presenting information necessary for executive decision making. Includes a comprehensive overview of primarily web-based resources available to HR executives. Emphasizes hands-on training in the best techniques and methods for extracting conceptual frameworks, checklists, best practices, competitive intelligence, legal information, statistical data, and academic research on topics of current interest to industry. Interviewing skills, report writing, and presentation methods are imparted. Following five weeks of intense information instruction and hands-on experience, students act as consultants in a combined classroom and workplace setting as they work on special projects and topics posed by HR executives of primarily Fortune 500 companies. These team-based assignments give students exposure to different companies, their cultures, and executives while providing real work experience.

ILRHR 6650 Business Strategy and Human Resources

Fall. 4 credits. Limited enrollment. Prerequisite: ILRHR 2600/5600 or 4632/6910 or equivalent experience in finance or accounting. D. Burton.

To survive and prosper over the long term, an organization must create and sustain a competitive advantage over rivals in its industry. This course covers an array of modern strategy frameworks, tools, and concepts HR managers need to analyze and understand the sources of superior organizational performance. Students will learn to identify factors that account for an organizations' past performance as well as the factors inside and outside of the organization that are most likely to influence future performance. The course focuses on two areas of analysis: the external context and organizational architecture. It explores a range of strategic problems, focusing particularly on the sources of competitive advantage and the interaction between industry structure and organizational capabilities. The course will examine the role of HR in organizational alignment and strategy implementation.

ILRHR 6660 Strategic HR Metrics

Spring. 4 credits. Prerequisites: ILRHR 2600/5600 or equivalent, one statistics course, and one elective in HR studies. P. Wright.

The search for the ideal strategic HR metrics misses the larger issue of taking a more analytical approach toward HR decision making. Analytics requires understanding the process through which knowledge is gained, and then applying the tools and techniques to gather and analyze the right kind of data relevant to the question at hand. This course covers topics such as philosophy of science, theory development, research methodology, and data analysis and interpretation, as well as data and practices commonly used to assess the effectiveness of HR activities. Consequently, the class simultaneously addresses the types of information needed for HR decision making, as well as the processes and techniques necessary to gather, integrate, and analyze the data.

ILRHR 6672 Workplace Learning and Development

Fall and spring, seven weeks. 2 credits. Prerequisite: ILRHR 5600 or permission of instructor. B. Bell.

Now more than ever, organizations must rely on workplace learning and continuous improvement in order to achieve competitive advantage. This course focuses on current topics in the field of workplace learning and development, including performance consulting, aligning learning activities with strategic needs, designing and implementing learning and performance improvement programs, and evaluating the success of these efforts. The overall purpose of the course is to provide students with an understanding of how the success of individuals, teams, and organizations is tied to workplace learning and development.

ILRHR 6680 Staffing Organizations

Spring, 4 credits. Prerequisites: ILRHR 2600/5600, one statistics course, or permission of instructor. C. Collins and J. Hausknecht.

Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Because staffing is one of the primary human resource activities, it is critical for HR professionals to understand how theory, research, and legal foundations can inform staffing decisions. Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, HR planning, recruitment and job choice, employment branding, external selection practices, succession planning and internal selection, and employer retention.

ILRHR 6690 Managing Compensation

Spring, 4 credits. Limited to 30 students. Prerequisites: ILRHR 2600/5600 and statistics course. K. Hallock.

Helps students gain an understanding of how to make decisions about compensation. The strong focus is on applications and includes some discussion of recent theory and research. By the end of the course, students should be able to design their own compensation system from scratch. Considers how compensation fits with an overall HR strategy, the internal focus on the firm (including alignment, job analysis, and job evaluation), making pay competitive with the outside market (including designing pay levels, types of pay, and pay structures), considering individual contributions (by examining performance appraisals, pay-for-

performance, and stock options), benefits (such as pensions, child care, and health care), management (including government regulation and managing budgets), and dealing with international issues in setting pay plans. A substantial section focuses on executive compensation and also examines how a consultant might estimate the damages to an employee in the case of wrongful termination.

ILRHR 6900 International Comparative Human Resource Management

Fall, 4 credits. Prerequisite: ILRHR 2600/5600 or permission of instructor. L. Nishii.

Provides students with an understanding of the complexities associated with international human resource management. The central theme of the course is to identify whether and in what ways HRM practices need to be adapted across cultures to be effective. Course material reflects a focus on comparing American HRM practices with those in East Asia and Western Europe. In addition, the major topic areas of concern to HRM managers are covered, including the selection, training, compensation, and performance management of international managers (expatriates), coordination across subsidiaries of a company, the development and tracking of global leaders, and cross-cultural communication and negotiation.

ILRHR 6910 Finance for Human Resources

Fall, 4 credits. K. Hallock.

Helps students understand some basic ideas in finance from the perspective of human resource management. Broadly considers financial markets, how firms issue securities; history and pitfalls in investing; the time value of money; investment criteria such as net present value, risk versus return, and the opportunity cost of capital; capital asset pricing; capital budgeting and risk; market efficiency and predictability; measuring firm financial performance and reading financial statements; event studies in finance and economics; mergers; ESOPs and stock options; executive compensation; the relationship between job loss and firm outcomes; and other organizational forms such as nonprofits. Covers theoretical ideas and has many empirical, policy, and practitioner-relevant applications.

ILRHR 6930 Training and Development in Organizations

Spring, 4 credits. Prerequisite: ILRHR 5600 or permission of instructor. B. Bell.

Acquaints students with aspects of learning in organizations. Begins by discussing organizational learning and then focuses more narrowly on specific ways in which learning is achieved through the training and development functions. Topics include how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 6950 Education, Technology, and Productivity

Fall, 4 credits. J. Bishop.

Investigates the nexus between education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate how

technological progress is changing the nature of work and what this implies for reform of education and training; how education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 6970 Special Topics in Resource Studies

Fall or spring, 4 credits. Staff. Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 6990 Advanced Desktop Applications

Spring, 1 credit. Prerequisite: ILRHR 2660 or significant experience (two to four years) using office applications. Letter grades only. C. Homrighouse.

Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, and PowerPoint. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market. Examples of areas include working with tables, columns, or sections in Word; pivot tables in Excel; taking a PowerPoint presentation "on the road"; and using join tables to create relationships in Access.

ILRHR 7560 Organizational Consulting

Fall, 3 credits. Prerequisite: ILRHR 5600. C. Collins.

Provides students with the insights and tools they need to work successfully as human resource management consultants, both as HR managers operating within a firm to improve organizational effectiveness and as external consultants providing project support to an internal HR organization. The consulting process is examined primarily from a systems perspective. This includes the knowledge and skills required to build trust and influence, to contract with clients, and to maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students will work in teams on a live case providing consulting services to an organization with an existing HR issue (i.e., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 7640 Comparative International Perspectives on Work and Human Resource Systems

Fall or spring, 3 credits. R. Batt. Research seminar focusing on comparative international research on work and human resource systems. It draws on institutional theories and empirical research across several disciplines to examine the intersection between institutions and organizations. What is the relative importance of markets, technology, management strategies, and the institutional environment in shaping work and employment systems? It considers how and why firms adopt alternative approaches to work and how variation in these choices shapes outcomes of interest to firms, employees, and other key stakeholder groups. The seminar is designed to help students

formulate theoretically driven research questions of critical importance to the field and to develop appropriate qualitative and quantitative research methodologies.

ILRHR 7900 ILR M.P.S. Program

Fall and spring, 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 7980 Internship

For description, see “Labor Relations, Law, and History.”

ILRHR 7990 Directed Studies

For description, see “Labor Relations, Law, and History.”

ILRHR 9600 Workshop in Human Resource Studies

Fall and spring, 2 credits. Prerequisite: M.S. and Ph.D. candidates. S–U grades only. Staff.

Provides a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll; candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 9610 Doctoral Research Seminar in Human Resource Management (Micro)

Fall or spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training, and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 9620 Doctoral Research Seminar in Strategic Human Resource Management (Macro)

Fall or spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the current research in SHRM and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.

ILRHR 9630 Research Methods in HRM/Strategic Human Resource Management

Fall and spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

ILRHR 9640 Doctoral Research Seminar: Special Topics

Fall, 3 credits. M.S. and Ph.D. candidates only. Staff.

Advanced doctoral seminar that covers selected topics in human resource management. Topics vary across semesters depending on student and faculty interests. The course is designed to allow students and faculty to pursue scholarly topics that further the scientific study of human resource management issues.

INTERNATIONAL AND COMPARATIVE LABOR

M. Cook, chair (368 Ives, 255-1349); R. Batt, J. Bishop, G. Boyer, A. Colvin, L. Compa, I. DeVault, G. Fields, R. Givan, J. Gross, S. Kuruvilla, L. Nishii, and L. Turner.

ILRIC 2040 Perspectives on Work and Welfare

Spring, 4 credits. R. Givan.

Examines the relationship between work and welfare from a variety of perspectives. Examples will be drawn from advanced industrial countries, and international comparisons will be emphasized. Key topics include welfare state foundation and development; social citizenship; constructions of the deserving and undeserving poor; welfare reform; the relationship between low wage work and welfare; competing notions of entitlement and universality; the male breadwinner model; and firms and welfare.

ILRIC 2301 Migrants and Migration

Fall, 3 credits. Sophomore writing course. M. Cook.

Focuses on the international migration experience through the perspective of migrants themselves, drawing upon first-person accounts, letters and interviews, fiction, and nonfiction. Looks at global and regional migration processes and at national policies that shape migration.

ILRIC 2350 Work, Labor, and Capital in the Global Economy

Fall and spring, 3 credits. Open to ILR freshmen and sophomores; juniors and seniors must obtain prior permission from instructors. R. Applegate, R. Batt, M. Cook, K. Griffith, and S. Kuruvilla. Guest lecturers via video conference.

Provides an introduction to how globalization is changing the nature of work, labor, and capital. It examines both contemporary and historical debates about globalization, but also covers a number of interrelated issues, including the regulation of labor standards, the mobility of capital, the rise of global production systems, and international labor migration. Lectures and discussion for the topics mentioned above will be grounded in the experiences of different countries, firms, workplaces, industrial sectors, and individuals.

[ILRIC 2360 Revitalizing the Labor Movement: A Comparative Perspective

Spring, 3 credits. Sophomore writing course. Next offered 2011–2012. L. Turner. Writing seminar that examines contemporary efforts in the United States and Europe to revitalize unions in broad political, social, economic, and workplace contexts.]

ILRIC 3342 Workplace Health and Safety as a Human Right

Spring, 4 credits. J. Gross.

Examines workplace health and safety in an international context using internationally accepted human rights principals as standards

for judgment. The class will focus on workers who are at increased risk for injury and illness in a wide variety of regions and industries and the policies and strategies used to address these workers' health and safety. Topics covered include relevant United Nations and International Labour Organization (ILO) documents, historical perspectives, current situations, the ILRO, the U.S. Occupational Safety and Health Administration, freedom of association and worker health and safety, the use and misuse of scientific evidence, corporate social responsibility, and enforcement issues.

ILRIC 4330 Politics of the Global North (also GOVT 3303)

Fall and spring, 4 credits. L. Turner. With an emphasis on current events and world affairs, this course examines global governance and economic policy debates. We consider conflicts around markets, democracy, and global justice, including efforts aimed at economic recovery and the reform of national and global economic policy and institutions. We also look at distinctive types of political and economic organization, especially in Europe and the United States, and the capacities of these societies to meet current economic, political, and social challenges, both domestic and international.

ILRIC 4990 Directed Studies

For description, see “Labor Relations, Law, and History.”

ILRIC 6010 Crossing Borders: Migrations in Comparative Perspective

Spring, 4 credits. M. Cook.

Provides an introduction to the challenges posed by the movement of people across borders. Examines the links between globalization and migration, and explores the implications of contemporary migrations for national immigration and integration policies, labor markets, human rights, asylum, security, and politics. Regional and national cases will be drawn from Europe, North America, and Australia, among others.

ILRIC 6011 Comparative Education and Development

Spring, seven-week course. 2 credits. J. Bishop.

Comparative study of educational institutions in Western Europe, North America, Latin America, and Asia (with special emphasis on math and science education) and of the effects of these institutions on economic development, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, and higher education. Data on the consequences of policies are presented and an effort made to understand how human resource policies and educational institutions have contributed to rapid growth in both poor and rich countries. Another focus is understanding the causes of the differences in achievement levels across nations.

ILRIC 6012 Comparative Labor and Employment Law

Spring, 4 credits. A. Colvin.

Examines the laws governing employment and labor relations in comparative perspective. It covers examples of employment and labor law systems of countries from a number of different regions of the world including Europe, the Americas, Africa, Asia, and Australia. It also examines insights from comparative perspectives on major contemporary employment and labor law

issues. The course assumes some existing knowledge of American employment and labor law, but will also consider American employment and labor law in comparative perspective.

ILRIC 6020 Corporate Social Responsibility: Human Rights, Labor, and the Environment

Spring. 4 credits. L. Compa.

Covers recent and current developments in the field of corporate social responsibility (CSR) and socially responsible investment (SRI) in a context of economic globalization. First classes set a foundation on the role of the multinational company in the global economy and international standards on human rights, labor rights, and the environment. Classes then move to topical studies of CSR/SRI initiatives and controversies. A consistent underlying theme of the course is the tension (and how to resolve it) between voluntary corporate self-regulation and mandatory government and intergovernmental regulation of corporate activity.

ILRIC 6310 Comparative Labor Movements in Latin America

Fall. 4 credits. M. Cook.

Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRIC 6320 Revitalizing the Labor Movement: A Comparative Perspective (also GOVT 6413)

Spring. 4 credits. Limited-enrollment seminar for motivated juniors and seniors; graduate students also welcome. L. Turner.

This advanced course examines labor union revitalization strategies in the United States and Europe in the context of today's global economy. The practical focus is on union strategies: recent innovations, successes and failures, and current debates within the labor movement. The essential course requirement is to complete the assigned reading and preparation before each meeting and to be ready for discussion. A successful seminar requires active rather than passive reading on the part of all participants; this means that everyone reads, takes notes, and thinks in advance of questions, arguments, and points for discussion based on the readings. Students should come prepared for discussion and argument based on the readings for the week.

ILRIC 6330 Global Debates and Comparative Political Economy

Fall and spring. 4 credits. Prerequisite: graduate standing. L. Turner.

For description, see ILRIC 4330. The subject matter is similar (and students are encouraged to attend the lectures for 4330), but this course is pitched at graduate students in a seminar format emphasizing particular weekly themes and active student participation.

ILRIC 6331 Special Topics

Fall. 4 credits.

Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 6340 International Labor Law

Fall or spring. 4 credits. Prerequisites: undergraduates, ILRLR 2010; graduate students, ILRLR 5010. L. Compa.

Examines labor rights and labor standards in a world economy regulated by bilateral and multilateral trade agreements, in a context of sharp competition among countries and firms. Readings and discussions focus on the intersections of labor, human rights, and international trade law and policy in this new global economic context. A prior course in a related topic may be helpful but is not required—the first classes are meant to establish a foundation in each area. While labor law is a unifying theme, the course is more policy-oriented than legalistic. After the introductory classes on labor rights, human rights, and trade, the focus turns to a series of topics that reflect the links between labor rights and trade.

ILRIC 6350 Labor Markets, Income Distribution, and Globalization: Perspectives on the Developing World

Spring. 4 credits. Prerequisite: IRLR 2400 or IRLR 5400 or ECON 3130. G. Fields.

The first half of the course is on distribution and development: theory and evidence. The second half is on labor markets in a globalized world.

ILRIC 6360 Comparative History of Women and Work (also FGSS 6360)

Spring. 4 credits. Prerequisite: permission of instructor. I. DeVault.

Explores the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

[ILRIC 6370 Labor Relations in Asia

Fall. 4 credits. Limited enrollment; open to graduate students, seniors, and juniors.

Next offered 2011–2012. S. Kuruvilla.

Serves as an introduction to industrial relations in Asia. The emphasis is on highlighting the variation in industrial relations systems in Asia and will focus more on the systems of Japan, China, India, South Korea, and Singapore.]

ILRIC 7300 Research Seminar on Labor Markets in Comparative Perspective

Fall and spring. 3 credits. Prerequisite: M.S. and Ph.D. students. G. Fields.

For students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Presentations and written papers required.

ILRIC 7310 Industrial Relations in Latin America

Fall. 4 credits. M. Cook.

Examines and compares changes in contemporary industrial relations throughout Latin America, with some comparative references to other regions of the Global South. The aim is to introduce students to the main issues in industrial relations of key Latin American countries, and through individual research papers, to enable students to become familiar with a specific country or sector/theme in two or more countries of the region.

ILRIC 7360 Labor and Global Cities (also GOVT 7060)

Fall. 4 credits. L. Turner.

Examines social coalition building and innovative union strategies aimed at organizing, bargaining, economic development, and political influence in the United States and Europe. Student projects may focus on major cities anywhere in the world.

ILRIC 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRIC 7990 Directed Studies

For description, see "Labor Relations, Law, and History."

Other courses approved to fulfill the ILRIC distribution requirement

ILRHR 2990 Cross-Cultural Perspectives on Work

Spring. L. Nishii.

For description, see "Human Resource Studies."

ILRLR 3830 Workers' Rights as Human Rights

Fall. J. Gross.

For description, see "Labor Relations, Law, and History."

ILRHR 4600 International Human Resource Management

Fall. L. Nishii.

For description, see "Human Resource Studies."

ILRHR 4610 Working in the New Economy: The Sociology of Work

Spring. R. Batt.

For description, see "Human Resource Studies."

ILRHR 4650 Globalization at Work

Spring. R. Batt.

For description, see "Human Resource Studies."

ILRHR 6608 Globalization and Human Resource Strategies

Fall. R. Batt.

For description, see "Human Resource Studies."

ILRHR 6900 Comparative Human Resource Management

Fall. L. Nishii.

For description, see "Human Resource Studies."

ILRHR 6980 International Human Resource Policies and Institutions

Spring. J. Bishop.

For description, see "Human Resource Studies."

ILRLE 4440 The Evolution of Social Policy in Britain and America (also ECON 4440)

Fall, spring. G. Boyer.

For description, see "Labor Economics."

ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 4580)

Fall. G. Boyer.

For description, see "Labor Economics."

ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)

Fall. 4 credits. R. Hutchens.

For description, see "Labor Economics."

INTERDEPARTMENTAL COURSES

ILRID 1500 Freshman Colloquium

Fall. 1 credit. Prerequisite: ILR freshmen. S–U grades only. Staff.

Acquaints first-year students with issues and disciplines in the field of industrial and labor relations and establishes acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. Includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILRID 5660 Public Policy

Spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

The government's influence on the workplace and the role of public policy in the use and preparation of the nation's human resources for employment is assessed. Areas of study include the government's historical role in the labor market and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

ILRID 5990 Cross-Cultural Work Experience

Fall and spring. 1 credit. S–U grades only. W. Sonnenstuhl.

Open to MILR students who will be working in the summer in a country other than that of their citizenship or past work experience. This option is only available for students who have been enrolled for one academic year by the time the internship begins. Enrollment occurs in regular pre-enrollment period, with a grade posted in the fall after the requirements are satisfied. Prior to registering for the course, students must obtain a summer internship offer and international students MUST report to the ISSO (B50 Caldwell Hall) for their work authorization forms.

ILRID 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

K. Hallock, chair (256 Ives Hall, 255-3193); J. Abowd, F. Blau, G. Boyer, R. Ehrenberg, G. Fields, M. Freedman, R. Hutchens, K. Jackson, G. Jakubson, L. Kahn, and R. Smith

ILRLE 2400 Economics of Wages and Employment

Fall and spring. 3 credits. Prerequisites: ECON 1110–1120 or permission of instructor; ILR students may substitute ILRLE 4400 if they have calculus. Staff.

Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 3440 Development of Economic Thought and Institutions (also ECON 3440)

Fall. 4 credits. Prerequisite: ECON 1110–1120 or equivalent. G. Boyer.

Examines the causes and consequences of sustained economic growth, and the development of economics as a discipline, from pre-industrial mercantilist thought through the economics of John Maynard Keynes. Stresses the relationship between the consequences of 19th-century economic growth and the evolution of economic thought.

ILRLE 4400 Labor Market Analysis (also ECON 3410)

Spring. 4 credits. Prerequisites: ECON 3130 and calculus; ILR students who have taken ILRLE 2400 cannot receive credit for this course.

For description, see ILRLE 2400. Designed for ECON majors with calculus.

ILRLE 4410 Income Distribution (also ECON 4550)

Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3410. Students who have taken PAM 370 may not receive credit for 441. R. Hutchens.

Explores income distribution in the United States and the world. Topics include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

ILRLE 4420 The Economics of Employee Benefits (also ECON 4560)

Fall. 4 credits. Prerequisite: ILR 2400 or equivalent. Staff.

In-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Includes detailed international comparisons of health care and retirement systems.

ILRLE 4430 Compensation, Incentives, and Productivity (also ECON 4430)

Fall. 4 credits. Prerequisite: ILRLE 2400 or equivalent. Staff.

Examines topics in labor economics of particular relevance to individual managers and firms. Representative topics include recruitment, screening, and hiring strategies; compensation (including retirement pensions and other benefits); training, turnover, and the theory of human capital; incentive schemes and promotions; layoffs, downsizing, and buyouts; teamwork; and internal labor markets. Focuses on labor-related business problems using the analytic tools of economic theory and should appeal to students with strong quantitative skills who are contemplating careers in general business, consulting, and human resource management as well as in economics.

ILRLE 4440 The Evolution of Social Policy in Britain and America (also ECON 4440)

Fall or spring. 4 credits. Prerequisite: ILRLE 2400 or equivalent. G. Boyer.

Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics include the role of poor

relief in the early 19th century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

ILRLE 4450 Women in the Economy (also ECON 4570, FGSS 4460)

Fall. 4 credits. Prerequisite: ILRLE 2400 or equivalent. Staff.

Examines the changing economic roles of women and men in the labor market and in the family. Topics include a historical overview of changing gender roles, the determinants of the gender division of labor in the family, trends in female and male labor-force participation, gender differences in occupations and earnings, the consequences of women's employment for the family, and a consideration of women's status in other countries.

ILRLE 4470 Social and Economic Data (also ILRLE 7400, INFO 4470)

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor. J. Abowd.

For description, see INFO 4470.

ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 4580)

Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3140. G. Boyer.

Examines the anatomy of the Great Depression through the experiences of the two most important economies of the time: the United States and Great Britain. Also examines the development of macroeconomic policy in the United States and Britain in the 1920s and 1930s and its evolution in the postwar world, culminating with the decline of Keynesian-style demand management policy under Reagan and Thatcher.

ILRLE 4950 Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Labor Relations, Law, and History."

ILRLE 4970–4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Labor Relations, Law, and History."

ILRLE 4990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILRLE 5400 Labor Economics

Fall. 3 credits. Requirement for M.I.L.R. candidates. Prerequisites: ECON 1110–1120 or equivalent. Not open to students who have taken NBA 5440. G. Fields.

A course in labor-market economics for prospective managers in the corporate, union, and governmental sectors. It begins with demand and supply in labor markets, presenting market-level analysis and the decision tools for workers and firms. It then goes on to consider various topics for managers including education and training investments, the interdependence of capital market and labor market decisions, pay and productivity, attracting and retaining talent, workplace metrics, and pensions and

retirement. The final section of the course covers public-policy issues including policy evaluation methods, unemployment, poverty and inequality, and discrimination.

ILRLE 5440 Labor Market and Personnel Economics

4 credits. Offered only in New York City for M.P.S. program. Staff.

Four-module course in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are for students to learn to analyze both business and public policy problems, taking into account basic principles of economic theory and the relevant institutional environments.

ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)

Fall. 4 credits. R. Hutchens.

Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the United States, Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 6470 Economics of Education (also ECON 3470)

Spring. 4 credits. Prerequisites: ILRLE 2400 or intermediate microeconomics and statistics through multivariate linear models. R. Ehrenberg.

A survey of the econometric literature on a wide variety of educational issues, dealing with elementary, secondary, and higher education. The course begins with an introduction to experimental and quasi-experimental design and the implementation of these designs in multivariate regression models. Much of the course involves reading and discussing recent research, and students conduct their own empirical research projects.

ILRLE 6480 Economic Analysis of the University (also ECON 3420)

Fall. 4 credits. Staff.

Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor-market analysis in particular, can usefully be applied to analyze resource allocation decisions at universities. Topics include financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university

resource-allocation decisions or have done research on the subject.

ILRLE 7400 Social and Economic Data (GR RDC) (also INFO 7470, ECON 7400)

Spring. 4 credits. J. Abowd.

Teaches the basics required to acquire and transform raw information into social and economic data. Graduate materials emphasize methods for creating and certifying laboratories in which data privacy and confidentiality concerns can be controlled and audited. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., Eurostat, OECD, and UN statistical infrastructure are covered as are major private data sources. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); analytic methods in the social sciences. Graduate students are assumed to be interested in applying these techniques to original research in an area of specialization, and are required to do individual projects. This class may be taught to students at Cornell and other universities whose emphasis is placed on U.S. Census Bureau procedures.

ILRLE 7410 Applied Econometrics I (also ECON 7480)

Fall. 4 credits. Prerequisite: graduate Ph.D.-level sequence in econometrics or permission of instructor. S-U or letter grades. G. Jakubson.

Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focuses on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (e.g., fixed, random, mixed effects models), factor analysis, measurement error models, and general moment structure methods.

ILRLE 7420 Applied Econometrics II (also ECON 7492)

Spring. 4 credits. Prerequisite: ILRLE 7410 or permission of instructor. S-U or letter grades. G. Jakubson.

Continues from ILRLE 7410 and covers statistical methods for models in which the dependent variable is not continuous. Covers models for dichotomous response (including probit and logit); polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 7430 Applied Econometrics III

Spring. 4 credits. Prerequisites: ILRLE 7410-7420 or permission of instructor. S-U or letter grades. G. Jakubson.

Covers topics not covered in ILRLE 7410-7420, including further development of duration analysis, panel data methods for nonlinear

models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 7410-7420-7430 sequence.

ILRLE 7450 Seminar in Labor Economics I (also ECON 7420)

Fall. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7460 Seminar in Labor Economics II (also ECON 7430)

Spring. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7470 Economics of Education I (also ECON 7470)

Spring. 4 credits. Limited to economics and labor economics Ph.D. students or by permission of instructor. R. Ehrenberg.

Survey of the econometric research on a wide variety of higher education issues. Topics include public and private funding, financial aid and tuition policies, faculty labor markets, and Ph.D. production.

ILRLE 7471 Economics of Education II

Fall. 4 credits. K. Jackson.

Survey of the econometric research and theory on a wide variety of education issues at the elementary and secondary level. Topics include school finance policies, peer effects, accountability, incentives, class size debate, and teacher labor markets. The two-semester sequence in the Economics of Education can be taken in any order.

ILRLE 7490 Economics of Development (also ECON 7720)

Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. G. Fields.

Takes analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ILRLE 7900 ILR M.P.S. Program

Fall and spring. 1-9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 7980 Internship

For description, see "Labor Relations, Law, and History."

ILRLE 7990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILRLE 9400 Workshop in Labor Economics

Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.

Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focuses on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

P. Tolbert, chair (392 Ives Hall, 255-9527); S. Bacharach, M. Besharov, J. Goncalo, T. Hammer, E. Lawler, B. Rubineau, M. Williams, W. Sonnenstuhl

ILROB 1220 Introduction to Organizational Behavior

Fall and spring. 3 credits. Staff.

Introductory survey course of theory and research on individual and group processes (including personality, motivation, communication, and leadership), as well as structural and economic forces (including organizational design, power relations, interorganizational ties, social norms, and laws) that shape the contemporary workplace.

ILROB 2220 Controversies about Inequality (also SOC/PAM/DSOC/GOVT 2220, PHIL 1950)

Spring. 4 credits. S. Morgan.

For description, see SOC 2200.

ILROB 2225 Commitments to Groups and Organizations

Fall. 3 credits. Sophomore writing course. E. Lawler.

Deals with how and when people become committed to groups and organizations. Such commitments are an important source of social order, solidarity, altruism, and citizenship behavior in small groups and large organizations. Emphasizes sociological and social psychological theories of commitment, solidarity, and order, including in particular those dealing with the role of power, legitimacy, trust, affect, and social identity. Taught in a seminar format and involves frequent writing assignments and a major paper.

[ILROB 3200 The Psychology of Industrial Engineering

Fall. 4 credits. Next offered 2011–2012. T. Hammer.

Study of the human factors in the industrial engineering of work, workplaces, tools, and machinery.

[ILROB 3201 Organizational Change: Theory and Practice

Fall. 3 credits. Prerequisite: ILROB 1220. Next offered 2011–2012. M. Besharov.

Examines problems of change in organizations from both a theoretical and practical perspective. The course draws on theory and research from sociology and related disciplines.]

ILROB 3210 Group Solidarity (also SOC 3110)

Fall. 4 credits. M. Macy.

For description, see SOC 3110.

ILROB 3290 Organizational Cultures

Fall or spring. 4 credits. Prerequisite: one or more courses in OB and/or sociology. W. Sonnenstuhl.

Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 3700 The Study of Work Motivation

Spring. 4 credits. Prerequisite: junior or senior standing. T. Hammer.

Designed to acquaint students with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focuses on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

[ILROB 4220 Organizations and Deviance

Fall or spring. 4 credits. Limited to 60 students. Next offered 2011–2012.

W. Sonnenstuhl.

Focuses on the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they became institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon's Valdez oil spill, Iran–Contragate, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.]

[ILROB 4230 Leadership in Organizations

Fall or spring. 4 credits. Next offered 2011–2012. T. Hammer.

Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training materials.]

ILROB 4240 Social Influence and Persuasion

Spring. 4 credits. Prerequisites: junior or senior standing. J. Goncalo.

Many of the most admired organizations are adept at using social influence to achieve their strategic objectives. This course reviews basic theories of social influence such as conformity, group polarization, and social facilitation to

understand how social influence tactics can be used to make organizations more efficient and productive. The course also considers how these tactics can backfire when excessive agreement gives rise to groupthink and poor decisions. Concludes by exploring strategies for managing social influence processes to encourage creativity and innovation in organizations.

ILROB 4260 Managing Creativity

Fall. 4 credits. J. Goncalo.

Although most people can agree that creativity is an important concept, there is often very little agreement about what creativity is and how we can achieve it. This course surveys basic theories of creativity with the goal of applying this knowledge to the management of creativity in organizations. It focuses primarily on (1) cognitive theories about creative thought, (2) personality theories about exceptionally creative individuals, (3) social-psychological theories about creative groups, and (4) the points at which these approaches interact. The course concludes by questioning whether, given the costs involved, anyone would willingly follow the path of a creative individual or implement the practices of the most innovative firms.

[ILROB 4700 Group Processes

Fall. 4 credits. Prerequisites: ILROB 1220 or equivalent; junior or senior standing. Next offered 2011–2012. E. Lawler.

A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance.]

ILROB 4710 Organizations and Negotiation

Spring. 4 credits. *If you have completed ILRLR 6011 you are NOT eligible to take this course.* Course fee: \$31, which includes cases for in-class negotiation simulations, online Negotiation Style Survey, and individualized assessment report. M. Williams.

This introductory course provides understanding of the theory and the processes of negotiations as practiced in a variety of organizational settings. It is designed for relevance to the broad spectrum of bargaining problems faced by team members, managers, and professionals. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, and multiparty negotiations. Advanced topics include: sources of power, dispute resolution, emotionally intelligent negotiations, team on team negotiations (e.g., union management). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 4950 Honors Program

Fall and spring (yearlong). 3 credits each semester.

For description, see "Labor Relations, Law, and History."

ILROB 4970–4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Labor Relations, Law, and History."

ILROB 4990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILROB 5200 Organizational Behavior

Fall. 3 credits. Staff.

Survey of concepts, theories, and research from the fields of sociology, psychology, and social psychology as these relate to the behavior of individuals, groups, and work organizations. Topics include: job attitudes, motivation, leadership and power, group formation, organizational structure, and interorganizational relations. This course is designed for students in professional programs.

ILROB 5210 Organizational Design, Culture, and Change

Spring. 3 credits. Prerequisite: ILROB 5200. M. Besharov.

The goal of this course is to expose students to some of the central challenges in designing effective organizations, shaping organizational culture, and leading organizational change. The course draws on theory and research from sociology and related disciplines. Course material also includes case studies and interactive exercises.

ILROB 5250 Organizational Behavior

Fall and spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their underlying assumptions of human nature; the relationship between organizations and their environment; the role of power, politics, and decision making in organizations; industrial history; and leadership culture.

ILROB 5790 Negotiation and Conflict Resolution

Spring. 4 credits. Course fee: \$31, which includes cases for in-class simulations, online Negotiation Style Survey, and individualized assessment report. M. Williams.

Provides understanding of the theory and the processes of negotiation as practiced in a variety of organizational settings. The course is designed for relevance to the broad spectrum of bargaining problems faced by the manager and the professional. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include distributive bargaining, integrative negotiations, psychological biases, sources of power, and multiparty negotiations. Advanced topics include dispute resolution, emotionally intelligent negotiations, and team on team negotiations (e.g., union-management, mergers). Simulations, exercises, role playing, and cases are emphasized.

ILROB 6202 Political Leadership and Managerial Competence in Organizations

Spring; seven-week course. 2 credits.

The capacity to lead politically is a talent often not made explicit. All too often we're not clear where politics ends and management begins and vice versa. This course will try to clarify these issues. It will focus on key political skills that are necessary in getting agendas put in place in organizations. Making use of historical figures as well as contemporary examples, this course with empirically and theoretically frame the issue

of political skills. Students will be required to write a paper on one political leader and evaluate his or her political skills based on the material presented in this course. Among the leaders to be discussed will be Lincoln, Gandhi, FDR, LBJ, etc. Readings will include Machiavelli's *The Prince*, as well as current texts on leadership. Taught via distance video technology.

ILROB 6221 Dialogues on Diversity: Learning to Work Cross-Culturally

Spring; seven-week course. 2 credits.

Prerequisite: permission of instructor.

W. Sonnenstuhl.

Consist of a series of dialogues between ILR and ESCP-EAP faculty members about diversity-related issues and learning to work with one another in diverse groups. Each session will be organized as a dialogue between two faculty members. The dialogue will highlight the similarities and differences between American and European ideas and provide students with opportunities to examine how those may be applied to work organizations. Some topics to be discussed: What does diversity mean in the United States and Europe? How do people work in diverse international teams? What are the roles of human resource managers in implementing diversity in the United States and Europe? How does immigration impact diversity in the United States and Europe? How do we negotiate across cultures? What does leadership mean in an international workplace? Students will work as part of a U.S.-European team on projects.

[ILROB 6250 Conflict, Power, and Negotiation

Fall. 4 credits. Limited enrollment.

Prerequisite: senior or graduate standing; permission of instructor. Next offered 2011-2012. E. Lawler.

Theoretical seminar that adopts a power perspective on bargaining and conflict resolution.]

ILROB 6251 Building Commitment to Groups and Organizations

Fall. 4 credits. Prerequisite: ILROB 5200

and permission of instructor. E. Lawler.

Graduate seminar intended for Masters in Industrial and Labor Relations (MILR) students. Uses sociological and social psychological theories to understand the foundations of commitment, cohesion, and solidarity in groups and organizations. Topics include the role of rational choice, social dilemmas, trust, social exchange, norms, affect, and social identity. Students read and discuss theoretical/conceptual material in the first half or so of the course; during the second half, they present papers that apply one or more of the theories to a case of their choosing.

ILROB 6260 Organizations and Social Inequality

Fall. 4 credits. P. Tolbert.

Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 6270 Leadership in Organizations

Spring. 4 credits. Prerequisite: graduate

standing; seniors by permission of instructor. T. Hammer.

Examination of theories and research findings from the behavioral sciences that are relevant

to leadership and the influence process in groups and organizations. Discusses personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow. Explores the implications for leadership training, organization development, and action research.

ILROB 6710 Work, Health, and Health Care

Spring. 4 credits. Prerequisite: permission of instructor. W. Sonnenstuhl.

The health care industry is the fastest growing segment of the U.S. economy. This course examines the interplay between business organizations, which fund employee health insurance, and health. The first half focuses on U.S. organizations with topics ranging from corporate culture and power to the structure of work in health care organizations. For instance, the class will examine how power and corporate culture influence the definition of health, employee attention to safety, and employee willingness to use wellness programs. The second half shifts to an international comparative analysis of work, health, and health care in countries with differing institutional environments, including Canada, the United Kingdom, Germany, and Korea.

ILROB 7210 Advanced Micro Organizational Behavior

Spring. 3 credits. Staff.

Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7220 Advanced Macro Organizational Behavior

Fall. 3 credits. Prerequisite: ILROB 5200. Staff.

Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7240 Managing Social Influence

Fall. 3 credits. J. Goncalo.

Survey of basic theories of social influence and how they are applied (and sometimes misapplied) to managing people in organizations. Theories covered include social facilitation, social norms, group polarization, conformity and minority influence. Emphasizes the evaluation of certain popular management techniques in light of social influence processes.

ILROB 7250 Analysis of Published Research in Organizational Behavior

Fall. 3 credits. Prerequisites: ILROB 5200 and one year of statistics. Staff.

Advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 7260 Selected Topics in Organizational Behavior

Spring. 3 credits. Prerequisites: ILROB 5200 and permission of instructor. Staff.

Advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants' interests. Course is

designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (e.g., anthropology, linguistics, philosophy, sociology) that may enrich students' understanding of organizational life.

[ILROB 7270 Leadership in Organizations

Fall or spring. 3 credits. Open to MILR graduates. Next offered 2011–2012.
T. Hammer.

Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training material.]

ILROB 7280 Theories of Motivation and Leadership

Fall. 4 credits. Prerequisite: ILROB 5200.
T. Hammer.

Introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology, and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 7290 Organizational Change and Intervention

Fall. 3 credits. Prerequisite: graduate standing.

Seminar concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Students are encouraged to analyze contemporary changes such as mergers and acquisitions and workforce reductions. Participants submit weekly workforce journals.

ILROB 7780 Solidarity in Groups (also SOC 7780)

Fall. 3 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll.
S–U grades only. E. Lawler.

It analyzes contemporary theories of group solidarity. Particular attention is given to the comparison of rational choice, social exchange, and normative/affective explanations for the development and maintenance of social solidarity at both the micro (group) level and macro (organizational) level. Trust, emotion, and social identities also are analyzed in the context of these approaches. Most of the theoretical work covered in the course falls within the sociological tradition.

ILROB 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 7980 Internship

For description, see "Labor Relations, Law, and History."

ILROB 7990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILROB 9200 Organizational Behavior Workshop

Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S–U grades only. Staff.

This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

SOCIAL STATISTICS

M. Wells, chair (291 Ives Hall, 255-4497);
J. Bunge, T. DiCiccio, M. L. Karns, and
P. Velleman

ILRST 2100 Introductory Statistics (also STSCI 2100)

Fall, spring, and summer. 4 credits.
Prerequisite: introductory algebra. L. Karns,
P. Velleman, and M. Wells.

Statistics is about understanding the world through data. We are surrounded by data, so there is a lot to understand. Covers data exploration and display, data gathering methods, probability, and statistical inference methods through contingency tables and linear regression. The emphasis is on thinking scientifically, understanding what is commonly done with data (and doing some of it for yourself), and laying a foundation for further study. Students learn to use statistical software and simulation tools to discover fundamental results. They use computers regularly; the test includes both multimedia materials and a software package. This course does not focus on data from any particular discipline, but will use real-world examples from a wide variety of disciplines and current events.

ILRST 2110 Statistical Methods for the Social Sciences II

Fall and spring. 3 credits. Co-meets with ILRST 5110. Prerequisite: ILRST 2100 or equivalent introductory statistics course.
T. DiCiccio.

A second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression, multiple linear regression (theory, model building, and model diagnostics), and the analysis of variance. Computer packages are used extensively.

ILRST 2130 Research Strategies and Regression Analysis

Fall. 3 credits. Limited to 20 students.
Prerequisite: ILRST 2100 or equivalent.
L. Karns.

Builds on the introduction to statistics course by considering multivariate regression methods. Application of the methods is explored through the analysis of data found by each student. Topics include: regression inference, indicator variables, analysis of outliers, interaction terms, interpretation, and presentation. Analysis process and interpretation will be emphasized rather than specific research results. Students will present their final models in class.

ILRST 2150 Statistical Applications in Law and Policy

Fall. 4 credits. Prerequisite: ILRST 2100.
Sophomore writing course. L. Karns.

Covers the practical aspects of quantitative research in law and policy (occupational and environmental health, product liability, and employment discrimination). Students evaluate the existing literature on a topic, analyze statistical merits, and make quantitative arguments. Standards of evidence will be considered. Required weekly writing assignments, a preliminary paper, and a final paper. Final oral presentations.

ILRST 2200 Occupational Epidemiology

Fall. 3 credits. Prerequisite: ILRST 2100 or equivalent. L. Karns.

Occupational epidemiology is the investigation of workplace health issues requiring knowledge of medicine, organizational structures, industrial hygiene, and human behavior. An introduction to occupational epidemiology through exploration of research design (cohort, case-control, and cross-sectional), exposure assessment, and statistical evaluation of the health issue. Students will use odds ratios, relative risk, and logistic regression models to measure the relationship between exposure and outcome. All students will select a topic area of interest, summarize current knowledge, and develop a research design protocol for future implementation.

ILRST 3100 Statistical Sampling (also BTRY/STSCI 3100)

Fall. 4 credits. Prerequisite: two semesters of statistics. J. Bunge.

Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Includes an applied project.

ILRST 3110 Practical Matrix Algebra

Fall. 4 credits. J. Bunge.

Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other "research methods" courses in various other disciplines. This course provides students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices, matrix calculations, linear dependence and independence, vector geometry, matrix reduction (trace, determinant, norms), matrix inversion, linear transformation, eigenvalues, matrix decompositions, ellipsoids and distances, and some applications of matrices.

ILRST 3120 Applied Regression Methods

Spring. 4 credits. Prerequisite: ILRST 2100 or equivalent. P. Velleman.

Reviews matrix algebra necessary to analyze regression models. Covers multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

[ILRST 4070 Principles of Probability and Statistics (also BTRY 4070)

Fall. 4 credits. Next offered 2011–2012.
Staff.

For description, see BTRY 4070.]

ILRST 4100 Techniques of Multivariate Analysis (also BTRY 4100)

Spring, 4 credits. Prerequisite: ILRST 3120 or equivalent; some knowledge of matrix notation. Staff.

Discusses techniques of multivariate statistical analysis and illustrates them using examples from various fields. Emphasizes application, but theory is not ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Topics include multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector, comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

ILRST 4110 Statistical Analysis of Qualitative Data (also BTRY 6030, STSCI 4110)

Spring, 4 credits. Prerequisites: two statistics courses or permission of instructor. Staff.

Advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates, contingency tables, log-linear models, binary ordinal and multinomial regression models, and limit dependent variables.

ILRST 4990 Directed Studies

For description, see "Labor Relations, Law, and History."

ILRST 5100 Statistical Methods for the Social Sciences I

Fall, spring, and summer. 3 credits. T. DiCiccio.

A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression, and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 5110 Statistical Methods for the Social Sciences II

Fall and spring, 3 credits. Co-meets with ILRST 2110. Prerequisite: ILRST 5100 or equivalent introductory statistics course. T. DiCiccio.

Second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression, multiple linear regression (theory, model building, and model diagnostics), and the analysis of variance. Computer packages are used extensively.

ILRST 5150 Statistical Research Methods

Fall or spring, 4 credits. Offered only in New York City for M.P.S. program. Staff. Students learn basic skills for conducting qualitative and survey research. They work through an introductory review course at home on their own time. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include an introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

ILRST 6100 Statistical Methods I (Also BTRY 6100)

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor. M. Wells.

Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one-and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

ILRST 6140 Structural Equations with Latent Variables

Spring, 3 credits. Prerequisites: ILRST 2100/5100/5110 or equivalent. J. Bunge.

Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, the instructor treats them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 6190 Special Topics in Social Statistics

Fall, 3 credits. Prerequisite: ORIE 6700 or equivalent. J. Bunge.

The areas of study are determined each semester by the instructor offering the seminar. Topics may include hierarchical linear models, the multivariate normal and Wishart distributions, multivariate sampling, tests of mean and covariance, multivariate regression, principal components, factor analysis, canonical correlation, robustness, and bootstrap confidence regions and tests.

ILRST 7100 Special Topics in Social Statistics

Spring, 3 credits. Graduate students only. M. Wells.

Areas of study are determined each semester by the instructor offering the seminar.

ILRST 7990 Directed Studies

For description, see "Labor Relations, Law, and History."

FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago.
Edmund Ezra Day Prof. of Industrial and Labor Relations, Labor Economics
Applegate, Ronald, Ph.D., SUNY Binghamton.
Lec., Labor Relations, Law, and History
Bacharach, Samuel, Ph.D., U. of Wisconsin.
Jean McKelvey-Alice Grant Prof. of Labor Management Relations, Organizational Behavior
Basesfsky, Stuart, M.L.S., U. of North Carolina.
Lec., Human Resource Studies
Batt, Rosemary, Ph.D., Massachusetts Inst. of Technology. Alice Cook Professorship in Women and Work; Assoc. Prof., Human Resource Studies

JOHNSON GRADUATE SCHOOL OF MANAGEMENT

ADMINISTRATION

L. Joseph Thomas, dean

Mark Nelson, associate dean for academic affairs

Douglas Stayman, associate dean for M.B.A. Program

Sunny Donenfeld, associate dean for administration

Randy Allen, associate dean for corporate relations

Timothy E. Sartin, associate dean for alumni affairs and development

Thomas B. Hambury, director of executive programs

Daniel Szpiro, director of Cornell Queens Executive M.B.A. Program

Randall Sawyer, assistant dean of admissions, financial aid and inclusion

Frederick K. Staudmyer, director of career management center

Nsombi B. Ricketts, director of Office of Diversity and Inclusion

Amanda Shaw, director, Student Services

Rhonda H. Velazquez, director of student activities and special events

Kerwin-Michael Smith, college registrar

The Johnson Graduate School of Management prepares women and men for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the master of business administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in most classes.

UNDERGRADUATE ONLY

NBA 3000 Entrepreneurship and Private Equity

Fall, spring, 3 credits. Prerequisite: non-Johnson School undergraduate students only, Johnson School and graduate students, see NBA 5640. D. BenDaniel. This course uses lectures, live case studies, and business plans written by student teams to address entrepreneurial management in startup ventures and private equity investments. Topics include financing, valuation, growth management, and buying and selling businesses. Guest lecturers speak on specialized topics such as leveraged buyouts, distressed businesses, advice from experienced board members, and private equity deals. The course attempts to integrate marketing, finance, operations, and human resource topics in the context of high-growth business ventures and private equity.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NBA 5061 Comprehensive Financial Statement Analysis

Fall, 3 credits. N. Yehuda. Provides practical tools for financial statement analysis. The first part of the class covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, and firm valuation using discounted cash flow (DCF) and economic value added (EVA) techniques. Emphasis is on practical applications. The second part focuses on using accounting-based information to make investment decisions. Emphasis is on practical applications with current topics in financial statement analysis. Special attention is given to cultivating individual analytical skills. The topics covered include large sample trading strategies; multiples; M&A accounting and analysis, including the understanding of basic deal structures and analyzing consolidated statements; special purpose entities (SPEs); and securitization. Course lectures communicate subtler aspects of the material while case studies provide hands-on experience. The course presumes an understanding of basic corporate finance theory and basic financial accounting, but little or no previous experience in security valuation. Student evaluation is based on case analysis and a take-home midterm. The class is designed for students planning for careers in investment banking, corporate management, venture capital, security analysis, credit analysis, consulting, or public accounting.

NBA 5070 Entrepreneurship for Scientists and Engineers

Fall, spring, 3 credits. Prerequisite: M.Eng., Ph.D., and M.S. students; priority given to seniors as undergraduates. G. Schneider. Specifically designed for mentored independent study, this course is customized using streaming video, guest speakers, distance learning, and special lectures/tutorial

sessions. Work is focused on a single project: students form a startup team and follow a technical business idea of their own choosing through the process of developing and founding a business that can attract venture investors. Learn how high-technology ideas are converted into world-class businesses in venture-backed startup companies as well as in new business development in existing companies. Tutorial sessions with professors apply lessons to the team business plan.

NBA 5150 Leadership Theory and Practice

Fall, spring, 3 credits. M. Hostetler. Focuses on the challenges of effective leadership in a complex world. The course has four significant parts: (1) Exploring historical and contemporary theories and models of leadership through the required text and selected articles; (2) Examining and applying the Johnson School's Leadership Model; (3) Analyzing the practical challenges of leadership through case studies, executive speakers, and company visits; (4) Developing self-awareness of the student's leadership strengths and weaknesses through the use of behavioral instruments and group exercises and creating a personal action plan for improvement. A critical element of this course is the coaching and feedback students receive on their own leadership styles and behaviors from their peers and instructor.

NBA 5530 Accounting and Financial Decision Making

Spring, 3 credits. Prerequisite: non-Johnson School students. J. D'Souza and M. Shackell-Dowell.

Focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals are to (1) give students a working knowledge of the accounting process and the value and limitations of the data that come out of the accounting information system; (2) familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; and (3) promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

NCC 5500 Financial Accounting

Fall, spring, 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5000. Staff. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5530 Marketing Management

Fall, spring, 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5030. E. Wu.

Addresses controllable and uncontrollable marketing variables that managers in multiproduct firms face in today's business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy.

NCC 5540 Management and Leading in Organizations

Spring, 3 credits. Staff.

Ultimately, the goal of managers and leaders is to get things done in organizations. Most of that work is accomplished by effectively managing other people. Using text-based cases, video cases, audio cases, exercises, and readings, the course will focus on the skills managers need to be successful in their firms and in their careers. An important course goal is to help students hone their critical thinking and problem-solving skills. To this end, case analyses will require students to take problems apart into their component parts, to uncover their root causes, and to develop workable solutions. The instructor will introduce frameworks and models that will help students analyze organizational problems and generate appropriate solutions. Major content themes focus on motivating employees, understanding organizational design and organizational culture, persuading and influencing others, and managing change. The course is particularly relevant for students who (1) plan to work in corporations; or (2) intend to manage and lead firms; or (3) plan to work in the consulting industry; or (4) think about founding and/or owning startup companies.

NCC 5560 Managerial Finance

Fall, spring, 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5060. Letter grades only. Staff.

Introduces business finance through theory and case studies. Topics include stock and bond valuation, the capital budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Grading is based on an exam, group case reports, homework, and class participation.

NCC 5580 Managing Operations

Spring, 3 credits. Staff.

Operations Management is the design and management of the processes that transform inputs into finished goods or services. This course provides a foundation for understanding the operations of a firm. The course provides students with the basic skills necessary to critically analyze a firm's operating performance and practices. It focuses on how the "physics" of material, work and information flows, and the design and management of a firm's processes interact to determine a firm's cost structure and its ability to compete effectively in terms of noncost measures such as quality, variety, and speed.

NCC 5590 Strategy

Spring, 3 credits. Staff.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks will be based on

recent advances in game theory, industrial organization, and organization theory, although the course will also draw from the older business policy tradition. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

IMMERSIONS

Only the Johnson School offers learning immersion courses in strategic operations, managerial finance, investment banking, asset management, strategic marketing, sustainability, and entrepreneurship. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies. Please note that courses in immersions may change. The most updated information will be available at the Registrar's Office in 106 Sage Hall.

MFI—Managerial Finance Immersion

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue finance careers. Some students interested in nonfinance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective is to help students make more informed choices about how to launch their finance careers.

IBI—Investment Banking Immersion

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue careers in investment banking. Inappropriate for students interested in following a finance career in nonfinancial industry or nonfinance careers (including consulting).

This course is designed to meld the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and

visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and it is expected that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

CMAM—Capital Markets and Asset Management

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue careers in research (both buy-side and sell-side), sales, and trading, either at Wall Street firms (sell-side) or at buy-side firms such as mutual funds. Melds the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, and it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

SMI—Strategic Marketing Immersion

Limited enrollment. Prerequisites: NCC 5000, 5010, 5020, 5030, and 5060; permission of instructor.

Full-time program for the semester; students are not able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It provides students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high-tech products, services, and global branding are also addressed. In-class methods consist of (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There is considerable off-campus travel for field study.

SSO—Semester in Strategic Operations

Limited enrollment. Prerequisites: NCC 5010 and 5060 for Johnson School students; permission of instructor.

Full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The course is taught by a team of faculty and industrial practitioners, and much of the student work is team oriented. There is off-campus travel for field study of various manufacturing plants.

*Note: Students electing to take the immersion must choose a minimum of five (5) additional credits of course work from the recommended

electives list of Johnson School courses or other courses from other programs at Cornell. Course availability is subject to scheduling.

NCC COMMON CORE COURSES**NCC 5000 Financial Accounting**

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5500. R. Libby.

Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5010 Statistics for Management

Fall. 2.5 credits. Johnson School Core Course. Limited enrollment. A. Farahat.

This course provides the foundations of probability and statistics required for a manager to interpret large quantities of data and to make informed decisions under uncertainty. Topics covered include decision trees, sampling, hypothesis testing, and multiple regression.

NCC 5020 Microeconomics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Frank and M. Waldman.

Introduces microeconomic theory and applies it to problems faced by managers. Topics include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The course employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 5030 Marketing Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5530. S. Gupta and V. Narayan.

Designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Presents both the practical "how" and the fundamental "why" of marketing activities in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 5040 Managing and Leading in Organizations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5540. K. O'Connor and S. Spataro.

Stories are central to how we know and remember events, people, and facts and to how we communicate knowledge and history. Most of the jobs we aspire to involve a particular form of storytelling—the CEO's vision, the analyst's report, the planner's strategy, the salesperson's pitch, the consultant's analysis, and the manager's brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and

statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to make students appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine students' analytical storytelling abilities. To achieve these goals, the course is taught by the case-study method, an efficient way to expand the student's experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. Students learn how to make good inferences about what will and won't work in particular situations, and how to learn from their own experiences and those of others.

NCC 5060 Managerial Finance

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5560. R. Michaely.

Introduces students to the basic concepts of finance. In particular, the course addresses what type of investments firms and individuals should take on and how these investments should be financed. Understanding these concepts is essential to financial managers and professional investors and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting an M.B.A. a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Grading is based on exams, quizzes, group case reports, homework, and class participation.

NCC 5080 Managing Operations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. Prerequisite: NCC 5010 or permission of instructor. Non-Johnson students see NCC 5580. N. Gavirneni and V. Gaur.

Focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; students see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queuing theory and simulation are particularly helpful for analyzing process capabilities. The second part analyzes how goods and services are produced. After describing the strategic role of operations, it examines forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part examines process improvement through quality and productivity management and corporate learning.

NCC 5090 Strategy

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5590. V. Kadiyali and H. Schneider.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and

organization theory, although the course also draws from the older business policy tradition. Students who successfully complete this course are able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 5000 Intermediate Accounting

Spring. 3 credits. Prerequisite: NCC 5000 or equivalent. M. Nelson and R. Swieringa. This course is relevant to a general business career, but is particularly relevant to careers that involve the use of financial statements. Its objective is to enable students to become more knowledgeable, skeptical consumers of financial information by teaching students to (1) understand and be able to reconstruct the accounting that produced the numbers students see in financial statements and the financial press, and (2) anticipate circumstances where financial information is likely to be biased or imprecise, in part by understanding the alternatives that were available at the time that a choice among accounting treatments was made. This objective will be achieved by a combination of lectures and analyzing and discussing articles from the financial press and cases that are based on actual financial statements.

NBA 5010 Taxes and Business Strategy

Spring. 1 credit. Prerequisites: NCC 5000 and NCC 5060. E. Maydew. Part of being financially savvy is having an understanding of how taxation affects business decisions; e.g., forming a corporation and raising capital, operating the firm, distributing cash to shareholders through dividends and share repurchases, expanding through acquisition, and divesting lines of business. Taxes have a direct impact on cash flow and often divert 30 to 40 percent of the firm's pretax cash flow to the government, effectively making the government the single largest stakeholder in many firms. Having an understanding of taxation and how firms plan accordingly is important for just about any career path students choose, whether they will be an investment banker, venture capitalist, consultant, money manager, CFO, treasurer, controller, taking over a family-owned business, or an entrepreneur setting up a new business. Topics include tax planning fundamentals, corporate tax fundamentals, taxation of mergers and acquisitions, taxation of divestitures, international taxation, taxes and wealth planning.

NBA 5020 Managerial Cost Accounting

Fall, spring. 3 credits. Prerequisites: NCC 5000, 5010, and 5020, or equivalent. R. Hilton and R. Bloomfield.

Designed both for those responsible for internal accounting information and those who use such information for decision making. Course topics include budgeting, product costing, activity-based costing, activity-based management, standard costs, cost variance analysis, cost estimation and prediction, cost-volume-profit analysis, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer

pricing. Instruction is a mixture of lecture and case discussion. Student evaluation is based on three prelim exams, a final exam, and class participation.

NBA 5030 Strategic Cost Management

Fall. 1.5 credits. Prerequisite: NBA 5020 or permission of instructor. R. Hilton. Focuses on the concepts and tools of cost management systems and the relationship of cost management to an organization's strategy. Based on cases that explore the use of cost management concepts and tools in a variety of organizations. Course topics include target costing, process value engineering, Kaizen costing, cost reduction, continuous improvement, cost-quality-functionality trade-offs, construction and implementation of a balanced scorecard, activity-based costing, activity-based management, identification of value-added and non-value-added costs, and the value chain. Instruction is based on the presentation and discussion of cases. Student evaluation is based on a case presentation, a final case write-up, and class participation.

NBA 5060 Financial Statement Analysis

Fall, spring. 1.5 credits. Prerequisite: NCC 5060, NBA 5000 (or concurrent enrollment), or permission of instructor. Non-Johnson students, see NBA 5061. N. Yehuda and C. Nichols.

Develops a set of core skills essential to financial statement analysis. Covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, bankruptcy predictions, and firm valuation using discounted cash flow and residual income techniques. Emphasizes practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience. Student evaluation will be based on a take-home exam and a final project.

NBA 5090 Advanced Financial Statement Analysis

Fall. 1.5 credits. Prerequisites: NBA 5060, finance immersion course, or permission of instructor. Not open to students who have completed 3-credit version of NBA 5061. N. Yehuda.

Builds on the core financial analysis skills developed in NBA 5060. Topics include large-sample trading strategies; multiples; M&A accounting and analysis, including basic deal structures and analyzing consolidated statements; special-purpose entities (SPEs); and securitization. The overall focus is on using accounting-based information to make investment decisions. The class is case based with a strong emphasis on practical applications. There is no final exam.

NBA 5110 Financial Modeling

Fall, spring. 1.5 credits. Prerequisites: NBA 5060 or permission of instructor; mastery of basic Excel skills. J. D'Souza and C. Nichols.

Financial modeling is the art and science of constructing spreadsheet models of firms' future financial statements. This class draws on and integrates students' knowledge of concepts learned in prior accounting classes by modeling the effect on the income statement, balance sheet, and statement of cash flows of financial transactions such as leveraged buyouts, mergers and acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

NBA 6060 Evaluating Capital Investment Projects

Spring, 1.5 credits. Prerequisites: NCC 5060. M. Leary.

This course focuses on the financial-economic analysis of corporate investment decisions. One of the most important decisions a firm makes is how to best allocate its capital resources. Both financial and nonfinancial managers alike need to be able to analyze and communicate the value impact of proposed capital expenditures and strategic decisions. Using both financial theory and case examples, we will explore such topics as discounted cash-flow analysis, alternative decision criteria, mutually exclusive investments, lease vs. buy decisions, monte-carlo simulation, and real options. This course is especially useful to anyone preparing for a career role with input to business investment decisions, including marketing, operational, and corporate financial managers.

NBA 6430 Managerial Spreadsheet Modeling

Fall, spring, 1.5 credits. L. Robinson.

The goal of this hands-on, lab-style course, taught in the Parker Center, is to develop proficiency in quantitative modeling within the environment of Microsoft Excel. Students develop and use spreadsheets to analyze a variety of business problems. The course has two principal components: spreadsheets and models. Spreadsheet topics include principles of good spreadsheet design, the effective presentation of information through spreadsheets (including graphical controls like sliding bars), and advanced Excel features (e.g., data validation, conditional formatting, scenarios). Modeling topics include the art of finding the appropriate level of modeling detail, practice in dealing with vague and unstructured problems, sensitivity analysis, and working with incomplete and unreliable data.

NBA 6470 Advanced Spreadsheet Modeling

Fall, 1.5 credits. L. Robinson.

The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

Economics**NBA 5240 Macroeconomics and International Trade**

Fall, spring, 3 credits. Prerequisite: NCC 5020 or equivalent or permission of instructor. O. Heffetz and I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity, and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.

NBA 5270 Applied Economic Analysis

Spring, 3 credits. B. Ho.

Emphasizes how economic analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants is the focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. Also emphasizes strategic thinking and instructs students in the art of "economic naturalism"—the use of economic reasoning to understand and explain everyday patterns of individual and firm behavior.

Entrepreneurship**NBA 5190 Sustainability as a Driver for Innovation in the Entrepreneurial Organization**

Spring, 1 credit. F. Keller.

This one credit eight-session course gives students an overview of the emerging sustainable business model. Using the teacher's business as an example, along with appearances from other business leaders, the class focuses on principles of sustainability and how leaders are transforming their own organizations. While the U.S. version of capitalism has succeeded in providing unprecedented wealth throughout the 20th century, this class will evaluate the potential of "tweaking" capitalism to benefit not only the owners but the whole of society in a manner different than "trickle" economy. Using the Hegelian notion of thesis, antithesis, and synthesis, this class will explore capitalism as practiced today as the thesis. The antithesis will be from environmental and social movement concepts. The principles of sustainability will be synthesized as the potential "new normal" for business in the future. Students will learn that in addition to traditional financial analysis, business decisions can benefit from taking into account the impacts of social capital and ecological capital as well. Students will learn using dialogue and presentations about actual cases and the logic of how the sustainable business model is being constructed.

[NBA 5300 Entrepreneurship Lab

Fall, 3 credits. Prerequisites: M.B.A. students; NBA 5640 or concurrent enrollment or permission of instructor. G. Schneider.]

NBA 5320 Due Diligence in Private Equity Investments

Spring, 0.5 credits. D. BenDaniel.

This is an arranged course featuring expert practitioners covering the following topics: Integrating Strategic Planning into Private Equity Due Diligence, Operational Due Diligence, Effective People and Organizational Due Diligence, Review of Non-Compete and Other Key Agreements, Legal Due Diligence, Tax Planning, and Financial and Accounting Due Diligence. Because of the large enrollment expected, and at the request of the visiting faculty, only students who are prepared to attend all the required sessions will be admitted and can receive credit for the course.

NBA 5570 Case Studies in Venture Investment and Management

Fall, 1.5 credits. D. BenDaniel.

Consists of a series of cases that focus on the venture-capital investment process and the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assembling and evaluating

information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems and on policy issues and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Presentations by venture capitalists and entrepreneurs supplement student discussion and analysis of cases. Grades are based on written reports, quality of classroom participation, and a final exam.

NBA 5590 The Venture Capital Industry and Private Equity Markets

Spring, 0.5 credit. D. BenDaniel.

Four lectures (two on Friday afternoon, two on Saturday morning) will be given by Jesse Reyes, a leading expert on private equity research who was the former head of research for Venture Economics, Thomson/Reuters private equity research and financial information subsidiary. The lectures will focus on the venture capital and private equity industries from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history, and trends; (2) institutional private equity investing—examining how private equity investment fits into the institutional investors asset allocation mix; (3) an examination of private equity performance measurement and trends and how structural differences in private equity investments make optimized allocation decisions challenging; and (4) emerging issues facing the private equity industry such as new regulatory initiatives and fundraising and investment opportunity challenges. There will be a final paper.

NBA 5630 The IPO and Mergers and Acquisition Process

Fall, 3 credits. T. Willett.

Gives students an in-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to initial public offerings, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, and selection of a trading forum. Regarding deal structures, the course explores choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

NBA 5640 Entrepreneurship and Private Equity

Fall, spring, 3 credits. D. BenDaniel and S. Gal.

This course uses lectures, live case studies, and a business plan to address entrepreneurial management in startup high-growth ventures and private equity investments. Topics include valuation and management of startup ventures, buying and selling businesses, and leveraged buyouts. Guest lecturers speak on specialized topics such as negotiations for buying and

selling businesses, role of boards in startup companies, and distressed businesses. The private equity lectures and cases are in the first half of the semester and the business plans are completed by teams in the second half, where the lectures will be on the development of startup business plans. The team business plans will be submitted and judged at the end of the course.

NBA 6180 Global Innovation and Technology Commercialization

Spring. 1.5 credits. W. Sine.

Examines technology commercialization from an investor's point of view. Will address issues related to intellectual property, recognizing and screening opportunities, exploiting technology opportunities, and marketing high technology. Case studies and discussions with practitioners will be used to examine this topic.

NBA 6530 Strategic Alliances

Spring. 1 credit. J. Suwinski.

A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course is taught from the perspective of the general manager of a major business unit. It reviews the various types of alliances and the strategic rationale for using them. Alliances are compared with internal development and M&A as the three vehicles for growing a business, highlighting the strategic pros and cons of each vehicle. The success rate in alliances is 50 percent. This course examines reasons for failure and presents a set of principles to improve the probability of success. Both the creation process and principles for operating alliances successfully will be discussed. The course uses case examples to illustrate good and bad practices and uses the instructor's experience running several alliances at Corning Incorporated. Guest speakers offer their own experiences with alliances.

NBA 6570 Entrepreneurial Marketing

Spring. 1.5 credits. S. Gal.

Entrepreneurial Marketing is a focused practicum on how entrepreneurial companies think about and execute core marketing at the earliest stages of development. Lectures will leverage marketing theory but will focus on direct on-the-ground application and execution. This course is built around a product launch case that will touch on branding, pricing, strategy, launch, and channels in the startup context.

NBA 6780 Advance Private Equity; Negotiations and Structuring

Spring. 1.5 credits. Prerequisites: NBA 5640, NBA 3000, or permission of instructor. Staff.

Focuses on venture capital financing, including the problems and issues facing emerging growth companies as they progress from early stage, startup status to mature public companies. Emphasizes practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, the principal focus being the so-called Series A, or first professional, round of financing. Views the early stage space from three perspectives: (1) the entrepreneur, or founder, (2) the professional investors, or VCs, and (3) the key executives (i.e., the major players in emerging growth finance). Reviews economics, finance, tax, securities, corporate and employment law considerations, and custom and usage in the industry.

NBA 6800 Entrepreneurial Executive

Spring. 1 credit. J. Hogg.

A series of speakers experienced in private equity, venture capital deals, startup acquisition, and new initiatives within large organizations.

NBA 6890 Law for High-Growth Businesses

Fall. 3 credits. Z. Shulman.

In-depth analysis of key issues that an emerging high-growth business must consider and address, including (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital, (4) understanding capitalization structures (e.g., common stock, preferred stock, preferred stock terms, and economics), (5) using stock options as employee incentives, (6) fundamental fair employment practices, (7) proper establishment and use of boards of directors and advisory boards, (8) structuring convertible debt for startups, (9) bribery and the Foreign Corrupt Practices Act, and (10) dealing with lawyers.

Finance

NBA 5120 Applied Portfolio Management

Fall, spring. 3 credits each semester. Limited enrollment. Students must commit to taking course in fall and spring semesters. Priority given to second-year M.B.A.s who successfully completed either NBA 5060 or finance immersion. Students must apply formally; if number of applicants exceeds 12, admission is competitive and merit-based. S. Bhojraj.

Focuses on the management of an investment fund. For full description, see Sanjeev Bhojraj.

NBA 5130 International Finance Cases

Spring. 1.5 credits. W. Bailey.

International finance is different because of two issues: exchange-rate volatility and barriers to the flow of capital. Furthermore, political risk is heightened when money crosses borders, and governance, disclosure, law, and regulation are more varied than in a single-country context. The purpose of this course is to practice applying the ideas and methods of finance to cross-border problems. The course is centered on six cases including discussions of related research and other materials.

[NBA 5210 Advanced Valuation: Mergers, Acquisitions, and Chapter Restructuring]

NBA 5390 Cornell Lectures in Finance

Spring. 1 credit. J. Hass.

Cornell Lectures in Finance is a series of lectures given by Johnson School and other Cornell alumni who have achieved professional success in their business endeavors. Each guest will discuss interesting and relevant issues and experiences in finance and management. Sessions will consist of a presentation by the invited guest and an opportunity for discussion with the guest. The intent is not only to provide Johnson School students with exposure to the thoughts and wisdom of the guests, but to do so in a format that allows sufficient time to explore some issues in depth and engage in meaningful exchanges.

NBA 5400 Advanced Corporate Finance

Fall. 1.5 credits. H. Bierman.

Relevant for both investment banking and the treasurer's activities of an operating corporation and investing officers. Most class sessions are lecture-discussion, but there will be several

corporate finance visiting lecturers. Topics include capital structure, distribution policy, preferred stock, financial strategies, mergers and acquisitions, divesting units, private equity, LBO's, MBO's, and partial MBO's. Investigates corporate financial policy decisions from a normative-quantitative point of view and develops skill in formulating financial models and evaluating models. Uses basic algebra.

NBA 5405 Advanced Corporate Finance Part II

Fall. 1.5 credits. H. Bierman.

This course is relevant for banking, investment banking, security analysis, and the financial activities of an operating corporation. Students can take NBA 5405 without taking NBA 5400 or after NBA 5400, the topics are different in the two courses. Class sessions are lecture-discussion and there will be a few visiting lecturers. We will investigate corporate financial policy decisions from a normative-quantitative point of view and develop some skill in formulating financial models, and in evaluating financial models. Topics include debt securities (duration, convexity, inverse floaters, bond refunding, term structure), and convertible debt. Other topics are buy versus lease, swaps, economic income and valuation. The mathematics used is basic algebra. We want to develop an approach to the analysis of financing decisions of corporations. The time spent on each topic will depend on how long each topic takes.

NBA 5420 Investment and Portfolio Management

Spring. 3 credits. Prerequisite: NCC 5060, NCC 5560, or an equivalent core finance course. G. Saar.

This course emphasizes both conceptual foundations and practical implementation. The material in the course would be helpful to anyone interested in investing. However, the course should be especially useful to students interested in an investment management career (e.g., portfolio management in mutual funds and hedge funds, equity research, equity trading, risk management, investment consulting, and investment banking). After a brief review of fundamental issues (such as the risk/return trade-off), the course contains an extensive module on strategic asset allocation with a focus on practical implementation. The course continues with an exposition of certain approaches to tactical asset allocation. The remainder of the course focuses on topics relevant to security selection and optimal portfolio construction. The course contains an extensive discussion of equity multifactor models and screening, with applications to value and growth investing. The course highlights trends in the investment management industry and introduces terminology and tools familiar to investment professionals.

NBA 5430 Financial Markets and Institutions

Fall, spring. 3 credits. Prerequisite: NCC 5060. W. Bailey and M. O'Hara.

Applies principles of finance to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems that different types of markets address. Studies the question of market efficiency and the interaction between government policies and

financial markets. Analyzes issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public-sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 5450 The Search for Alpha

Fall. 1 credit. R. Marin.

This course will focus on the fundamental trends under way in the asset management industry. While it will start with an overview of the investment management industry, it will move quickly toward a review of the more recent growth in hedge funds. Given the attention that the investment management industry (not to mention the world at large) has put on hedge funds and the relatively unregulated and secretive nature of the breed, the course will seek to answer the question of what exactly is going on in the industry and where it is going. The intention will be to give students an overview of the hedge fund space from the perspective of what comprises it, who the participants are (managers, investors, support areas, and intermediaries), how hedge funds are assessed and measured both individually and in portfolio, how investors access hedge funds, and what major issues face the industry.

NBA 5460 Liability Driven Alpha

Spring. 1 credit. R. Marin.

This course will focus on the fundamental trends underway in the pension management industry. This \$3 trillion arena has, from before the creation of ERISA to the present day, been managed in a very homogenous manner with similar investment approaches and very questionable results. The convergence of accounting, regulatory, and market forces is forcing change upon the industry in a way that will impact a broad range of service providers and potential investors, and indeed the underlying company plan sponsors and the very participants they serve. These changes will produce major dislocations and opportunities for asset managers, investment bankers, insurance companies, private equity firms, hedge funds, and a whole array of processing companies. Given the demographics of the aging baby-boomer population and the looming crisis in global retirement funding, this may prove to be a bellwether issue in finance and social policy for the next decade. The changing regulatory and accounting rules that govern defined benefit plans will be reviewed with emphasis on the Pension Protection Act of 2006, FAS 158 (Phases I and II) and the convergence of U.S. and international accounting standards in this arena.

NBA 5470 Operational Alpha

Spring. 1 credit. R. Marin.

This course will focus on the elements of the asset management industry that most critically add to success, but that are outside the traditional realm of investment strategy. It is generally understood today that risk is comprised of many elements and includes a significant component of operational risk.

There are operational elements of the investment process that clearly add or detract significant value from returns just like operational risk can add to or detract from overall risk. These operational elements that add to return can be called operational alpha and the more mature a market or investment strategy becomes, or the more difficult the return environment, the more important operational alpha becomes.

NBA 5510 Emerging Markets Finance

Spring. 1.5 credits. G. Karolyi.

This course explores financial decision making that is special to emerging economies. These countries constitute the engine-of-growth opportunities in the world economy, but their markets are also prone to crises, a feature that reinforces the importance of measuring risk. Most of the decisions the course evaluates are corporate financial management decisions from the point of view of a multinational corporation that is targeting an investment in an emerging market or is based in an emerging market.

NBA 5520 Cases in Corporate Finance

Fall. 3 credits. Prerequisites: second-year M.B.A.s and accelerated M.B.A. (AMBA) students; NCC 5060 or equivalent.

H. Bierman.

Develops an understanding of the theories of corporate finance and discusses corporate finance cases. Cases and lectures deal with mergers, acquisitions, valuation, corporate restructuring, LBOs, MBOs, distribution policies, and the financing of corporations. The material applies to careers in investment banking, managerial finance, and top-level executives. Several executives working in or with corporate finance will present cases. The goal is to develop a skill in analyzing the financing decisions of corporations.

NBA 5540 International Finance

Spring. 3 credits. Prerequisite: NCC 5060 or permission of instructor. W. Bailey.

Applies principles of finance to the international setting. International finance is different in two basic respects: (1) the existence of multiple currencies adds risk to investment and financing decisions; (2) when corporations and portfolio investors cross international borders, both problems and opportunities arise. This course focuses on these issues and highlights how finance theory can be extended to address them. Students apply the basic principles of international finance to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems in the increasingly globalized business world. The first part of the course outlines exchange rate volatility, barriers to international capital flows, and the value of international diversification. The second part presents a variety of problems, examples, and applications from the three basic themes described in part one. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 5550 Fixed-Income Securities and Interest Rate Options

Fall. 3 credits. Prerequisites: NCC 5060, NCC 5010. R. Jarow.

Designed to study the pricing, hedging, and risk management of fixed-income securities

and interest rate derivatives. Topics include the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, and computer illustrations are an integral part of the course content. A secondary theme of the course is the use of models for risk management.

NBA 5580 Corporate Financial Policy

Fall, spring. 1.5 credits. Prerequisite: NCC 5060. Y. Grinstein and M. Leary.

Provides an understanding of the financial decisions of corporations. Discusses the factors that affect corporate financial decisions and how they determine firms' financing, investment, and hedging policies. These factors include taxes, transaction costs, contracting (between managers and shareholders and between shareholders and other claimholders such as bondholders), and asymmetric information. Much of the material is presented using examples and cases designed to demonstrate how financial decisions create, destroy, or modify value.

NBA 5650 Corporate Governance

Spring. 1.5 credits. Prerequisites: NCC 5060 and NBA 6560 or permission of instructor. Y. Grinstein.

Deals with the ways in which different investors assure themselves of getting a return on their investments. How do investors get managers to return some of the profits to them? How do they make sure that managers do not invest their money in bad projects? These questions are extremely relevant for almost any organization, from startups to Forbes 500 companies. This course explores these issues through a series of case studies and examples. Topics depend on time availability. Career focus: M.B.A. students aspiring to top corporate offices, regardless of functional area, or envisioning a career in M&A/investment banking, financial management, or consulting firms.

NBA 5850 Advanced Topics in Valuation

Fall. credits TBD. Prerequisite: NBA 6560 or equivalent. W. Rehm.

NBA 5850 is an entirely case-based class that builds on the core valuation class. Students will apply the principles of corporate valuation (DCF, APV, and multiples) to several real-life companies in different industries. We will address how to adjust "normal" valuation method—what to do when the standard approach gives strange results. The goal is to prepare students for "real life" valuations of complex, multibusiness-unit companies. Teams of four students will prepare a case for each class. About one-third of each class will be spent on the prepared case, one-third on key technical issues, and one-third on an introduction to the next industry.

NBA 5980 Behavioral Finance

Fall. 1.5 credits. M. Huang.

Traditional finance theories assume that financial market participants are rational, and argue that the financial market is always efficient. Behavioral finance, on the other hand, argues that some financial market phenomena can plausibly be understood only under the assumption that some market participants are not fully rational. This course introduces the conceptual framework of behavioral finance and then applies the framework to study a wide range of issues in

asset pricing, investment, and corporate finance. Topics include investor psychology and behavior, limits of arbitrage, aggregate market timing, anomalies in stock portfolio returns (including value, momentum, size, and many other effects), professional money management, corporate issuance, mergers and acquisitions, investment banking, and earnings management. As a summary of the course, students apply the conceptual framework of behavioral finance to understanding China's financial market.

[NBA 6550 Advanced Valuations]

NBA 6560 Valuations Principles

Fall, spring, 1.5 credits. Staff.

This course is about valuation—the valuation of stocks, companies, parts of companies, and real assets. Three methods of valuation are introduced: intrinsic valuation, relative valuation by multiples using comparables, and contingent claims valuation, based on a real options approach. The rest of the course will be dedicated to understanding each of these methods in greater detail and more importantly, applying them to the valuation of actual companies. This will involve understanding in detail discounted cash-flow models and the many inputs required to build them; dividend discount models; the determination and use of relative-value multiples such as price/earnings and price/book value; and finally, how to apply option theory to specific problems in valuation. The course includes a special session on valuation approaches and challenges specific to venture capital and private-equity investing. This will include a discussion of topics such as required internal rates of return (IRRs), the effects of leverage on valuation, and issues relating to the valuation of high-growth startups.

NBA 6730 Derivatives Securities Part I

Fall, spring, 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. P. Gao and M. Zurack.

This is an introductory course on derivative products, the goal of which is to help students develop a framework for analyzing and using financial instruments. By the end of the course, students should have a good understanding of the features of the commonly used derivative products and the analytical tools they need to make good managerial decisions. Covers forward, futures, and options. For every derivative product, the instructor introduces the market mechanism, develops pricing equations using simple algebra, and discusses how to use it to manage risk. This course is especially appropriate for those students who are interested in understanding the economic intuition behind derivative securities, but do not want to bother with complicated mathematics.

NBA 6740 Derivatives Securities Part II

Fall, 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. P. Gao.

This course is a continuation of NBA 6730 and it covers more advanced materials for derivatives, especially options. Explores how pricing concepts can be applied to other assets, including exotic derivatives, interest rate options, warrants, and corporate bonds, and how to apply the knowledge to general risk management. This course is slightly more mathematical than NBA 6730, but with reasonable hard work, most students should be able to master the materials.

NBA 6940 Equity Derivatives and Related Products

Fall, 3 credits. M. Zurack.

Relying on quantitative techniques and practical experiences, this course attempts to provide an in-depth analysis of how equity derivatives and related products are structured, valued, and used by all types of investors globally. Students attending this class will learn many real-world applications of these products, which they should find useful in equity sales and trading, private wealth management, and investment management, as well as investment banking pursuits. The course is broken into the following sections: Exchange Traded Funds, Futures Portfolio Trading and Swaps; Equity and Credit Options and Convertibles; Strategies; Non-U.S. Markets.

General Management

NBA 5140 Ethics and Corporate Culture

Spring, 1.5 credits. D. Radcliffe and B. Wendel.

In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a “toxic” corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where “only results matter,” it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she does see the dangers, she may still find it hard to avoid them. This course seeks, first, to help M.B.A. and law students understand how a firm's culture can tempt—or push—employees into unethical behavior. Second, the course aims to acquaint students with strategies for dealing with ethical challenges posed by a problematic corporate culture. Class sessions include discussion of case studies and articles reporting on relevant research in organizational behavior, as well as talks by noted guest speakers from the fields of business and law. Since managers and attorneys frequently work together, team projects require collaboration among M.B.A.s and law students, as they bring both business and legal perspectives to bear on tough ethical issues. Course grades are based on class participation and several short writing assignments (individual and group).

NBA 5250 Energy Economics and Management

Spring, 1.5 credits Prerequisite: NCC 5020. B. Ho.

This course is the first half of a two-part course designed to give entrepreneurs, investors, and managers the tools to understand the intersection of energy, the environment, and economics. The first half will focus on energy economics, the second half on environmental economics. Both will combine lectures on the science, economics, and political economy behind energy and the environment respectively; with cases applying the material to analyze business strategy, the strategy of government, NGOs and activists, sustainable development, investment, and entrepreneurial opportunities.

NBA 5260 Environmental Economics and Management

Spring, 1.5 credits Prerequisite: NCC 5020. B. Ho.

This is the second half of a two-part course designed to give entrepreneurs, investors, and managers the tools to understand the intersection of energy, the environment, and economics. The first half will focus on energy economics, the second on environmental economics. Both will combine lectures on the science, economics, and political economy behind energy and the environment, respectively; with cases applying the material to analyze business strategy, the strategy of government, NGOs and activists, sustainable development, investment, and entrepreneurial opportunities.

NBA 5330 Management Cases and Consulting Process

Spring, 3 credits. N. Peck.

The objective of the course is to prepare first-year students for summer internships and careers in consulting and general management by developing their analytic skills and understanding of project-oriented business problems. Students will be expected to answer case questions and present solutions in class. In addition, a semester-long case study of a consulting project will be conducted with teams providing proposal, interim, and final presentations.

NBA 5600 Business Law I (also AEM 3200)

Fall, 3 credits. Requirement for students intending to be professional accountants. Highly recommended for finance students. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, and real property. Uses text readings and case studies.

NBA 5610 Business Law II (also AEM 3210)

Spring, 3 credits. Prerequisite: NBA 5600 or permission of instructor. D. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion covers selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

NBA 5620 Estate Planning (also AEM 4220)

Fall, 14 sessions. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Covers law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures.

NBA 5660 Oral and Written Communication

Fall, spring, 3 credits. B. Mink.

Students cannot take NBA 5670 or NBA 5680 if enrolled in NBA 5660. NBA 5660 integrates oral and written communication for a holistic approach to successful managerial communication. I will focus on several broad topics, including persuasion, organization, plain language, and audience analysis, with case studies and examples. The course requires weekly deliverables, either a writing assignment or business presentation.

NBA 5670 Management Writing

Fall, spring. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback.

NBA 5680 Oral Communication

Fall, spring, seven weeks. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Focuses on improving the presentation skills of management students. Covers speaking formats, delivery, organization, visual aids, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches in the seven-week session. The small class size allows for significant individual attention. Students receive feedback from classmates and the instructor and have the opportunity to review in tutorials the videotapes of most of their presentations.

NBA 5700 Foundations of Leadership

Fall. 1.5 credits. Johnson School students only. Staff.

The purpose of the course is to assess the leadership and management skills of students by providing an opportunity to gather feedback on their strengths and developmental needs. The first two days focus on self-awareness and employ several experiential exercises and self-assessment instruments, including: Johnson Leadership 360 Assessment, the Myers-Briggs Type Indicator (MBTI), and the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B). Class members will be trained in giving and receiving feedback from team members. Activities will include various leadership and team challenges. Professional feedback providers will observe students in group work and provide feedback on their observations and the results of the individual instruments. On the final day of the course, students will focus on goal setting for future leadership development.

NBA 5710 Cornell Management Simulation

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. Not open to students who have completed NBA 5490. S. Smidt.

This computer-based simulation is played by self-selected teams of three or four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a strategic intent paper and, before the results of the last decision have been determined, presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" (BOD) meeting. Grades are based on the value created for the company's shareholders (relative to other firms in the same industry), the team's strategic intent paper, and the

instructor's evaluation of team's performance at the BOD meeting. Meetings are periodic throughout the semester.

NBA 5740 Management Practicum

Fall 3 credits. Prerequisite: M.B.A. R. Allen. This course begins in the summer with a relationship meeting with the companies involved as clients. The clients are recruited between now and then to focus on companies with technology/science content consistent with the background of many of the AMBA students. The types of companies recruited are research centric and ideally within driving distance or closely aligned with the school. Companies that are willing to commit their resources and support provide a two-week internship.

NBA 5750 Management Consulting Projects

Spring. 3 credits. G. Hubbell.

This is a full-semester course designed to apply consulting processes to real business projects. Students will be formed into consulting teams focused on specific strategic, process improvement, or operational problems in companies. Consultant in Residence Greg Hubbell will teach the course supported by Consultant Advisor Rich Schneider. The teams will meet with the faculty advisors on a weekly basis. Sessions will focus on cross-team learning about the application of the consulting process into a variety of consulting engagements. The consultant advisor and CIR will also meet as needed with each individual team to work through real-time issues presented by each consulting project. Consulting projects are intended to include local business clients, not-for-profits, as well as large national and multinational companies. At the end of the project, each student and team will receive 360 feedback from the consultant advisor, CIR, the client, and other team members.

NBA 5770 The Political, Legal, and Social Environment of Business

Spring. 3 credits. B. Ho.

The course addresses the managerial issues in the political, legal, and social environment of business. Most strategy courses focus on interactions with customers, competitors, suppliers, workers, or financial institutions that occur in market contexts. However, many strategic interactions occur outside of the marketplace. Drawing from research in political economy, this course focuses on integrated strategy in nonmarket environments (i.e., strategy that involves nonmarket constituents and institutions such as governments, nongovernment organizations, and intergovernmental organizations). Topics include activists, the media, lobbying, the U.S. political system, environmental and other regulation, antitrust, intellectual property, international political economy, trade policy, ethics, and corporate social responsibility.

NBA 5780 Consulting Process

Spring. 1.5 credits. N. Peck.

Focuses on understanding and applying the basic consulting process by covering the elements of a consulting engagement, including selling the engagement, scoping the project, contracting with the client, forming the consulting team, creating consultant/client work teams, defining deliverables, developing a work plan, conducting analysis, creating a communication and change plan, managing the project, overcoming resistance and barriers, developing recommendations, presenting the deliverables/implementation plan, and

developing potential follow-on work. The course is organized around a real client engagement, examining the consulting process from the perspective of the case. Several guest speakers from the consulting engagement add both client and consulting perspectives. The course is intended for students with no or limited consulting experience who have an interest in exploring consulting as a career or who want to sharpen their analytical and organizational change skills.

NBA 5790 Cases in Business Strategy

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. J. Suwinski.

Focuses on the process of effective strategy formulation from the perspective of the general manager of a business unit. Discusses situational analysis, tools for industry and company analysis, and development of business unit strategies. Complements the core strategy course, with an emphasis on understanding and practicing frameworks that are useful in case-based interviews. Case discussions are focused on current strategic issues facing real companies. Draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and from industry present their approaches to strategy and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases and class discussion, in analyzing business problems/opportunities, and using the strategic process to formulate effective business strategies. The final deliverable is a presentation in a mock board environment that gives each student an opportunity to play the role of a strategy consultant working on a real case.

[NBA 5810 Management Cases

Fall. 1.5 credits. N. Peck.]

NBA 6030 Sustainable Global Enterprise

Spring. 1.5 credits. M. Milstein.

Explores the connections between "global sustainability" and business strategy—the unlimited business opportunities in solving the world's most difficult problems. Through a combination of cases, readings, lectures, videos, and simulations, class sessions will engage students in discussions aimed at developing strategy models and applying new strategy tools that incorporate principles of environmental management and social performance.

NBA 6110 Creative Design for Affordability

Spring. 2 credits. M. Touesnard and S. Danko.

This graduate-level course, co-taught by instructors from the Johnson School and the College of Human Ecology, features guest lecturers from various disciplines and companies. The course uses product design to help students become more aware of their creativity and prepare them to lead or facilitate creative teams in their future careers as managers. Students work in multidisciplinary teams and develop fundamentals of design thinking and comprehensive solutions to design challenges, with a focus on product design and development. Cornell teams are paired with student teams in India to create viable business solutions that address "energy for cooking" for underserved populations in India. Each team will identify the business opportunity, design a solution, and create a viable business plan to compete in the Acara

Challenge (www.acarainstitute.org). No technical background is necessary to take—and excel in—this course.

NBA 6130 Women in Leadership

Spring. 1.5 credits. S. Cabrera.

What are the facts about the current state of women as leaders? What special challenges face women as they transition from students to managers to leaders? What do the latest research findings offer to women who are seeking C-level positions and the organizations that want to benefit from more women leaders? This course takes a multipronged approach to learning about women and leadership to better prepare students of both genders to lead in organizations.

NBA 6140 Green Leap Strategies

Spring. 1.5 credits. S. Hart.

The year 2008 will come to be recognized as the turning point, when a series of crises gripped the planet: the spike in oil prices, the world food shortage, and the global financial meltdown. Add these crises to the list of on-going mega-problems (e.g., poverty and climate change) and it becomes clear that innovation on a massive scale is required to move us toward a more sustainable world. This course explores the innovation strategies needed to effectively address the planetary crisis we now face.

NBA 6770 Systems Tools for Sustainable Enterprise, Concepts, Methods, and Applications

Spring. 1.5 credits. Prerequisite: Graduate students. J. Geurts.

Using readings and cases, this course on strategy making for sustainability introduces students to modern hybrid interactive processes such as systems dynamics group modeling, scenario building, strategic decision analysis, interactive strategic journey designs, and gaming/simulation. Students will get to know and apply the tools mentioned above, which can then be woven together to form systemic and interactive managerial support processes using both systems analytical and collective learning techniques to assist an organization in policy exploration, decision making, and strategic change for sustainability.

[NBA 6900 Sustainable Global Enterprise in Hospitality (also HADM 6690)]

Spring. 4 credits. M. Milstein.]

NBA 6950 Game Theory and Business Strategy

Spring. 1.5 credits. H. Schneider.

Game theory is the science of strategic decision making in situations where players' actions are interdependent. It provides a method for identifying optimal strategies and predicting the outcomes of strategic interactions. Using lectures, in-class games, and assignments, this course develops the basic tools of game theory as they relate to business situations, and then applies them real-world cases. Topics include strategic cooperation and punishment between firms, strategic commitments, predatory and limit pricing, entry deterrence, and auctions. The final deliverable is a take-home essay in which you apply the course material to a game theoretic setting of your choice. This course requires only basic mathematics skills, but a familiarity with microeconomics and strategy is recommended.

International Management

NBA 5240 Macroeconomics and International Trade

Spring. 3 credits. I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.

NBA 5480 Global Business Risk Management

Spring. 1.5 credits. E. Iankova.

The aim of this course is to introduce students to the global risks involved in international business operations, and to develop students' general understanding of the field of global risk analysis and management. More specifically, students will get acquainted with the various types of risks that international businesses face in their overseas operations, such as political risks (asset expropriation, contract repudiation, legal and regulatory risks), macroeconomic risks (taxation risk), market risks (intellectual property risks), financial risks (exchange rate risk), operational risks, and societal risks (activism of international nongovernmental organizations). Through a combination of readings, lectures, discussions, and a group project, students develop practical skills in evaluating and assessing risk, and learn how to approach and manage risks on a global scale.

NBA 5840 International Competitive Strategy

Spring. 1.5 credits. Staff.

Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

NBA 5870 International Mergers and Acquisitions

Spring. 1.5–2 credits, variable. J. Hanks.

Addresses the principal business and legal issues in cross-border mergers and acquisitions, including forms and techniques of combining two businesses, negotiation, pricing and other economic terms, due diligence, issuance of securities, antitrust, duties of managers, and the resolution of employee and other social issues. The graded work is a written proposal for an M&A transaction between two existing companies in different countries prepared by small teams. Proposals are based on publicly available financial, business, legal, and other documents and data and any other information obtained. The goal of the written work is to simulate the process in which business people, investment bankers, and lawyers work together to structure transactions across national borders. The reading covers the basic business and legal issues most frequently encountered in international mergers and acquisitions. Class discussion occasionally refers to the reading but generally covers other issues.

[NBA 5890 International Management

Spring. 3 credits. Staff.]

NBA 5900 Business in Emerging Markets

Fall. 1.5 credits. E. Iankova.

In an increasingly globalized world, more and more companies are pursuing their major business objectives in emerging markets. What are the opportunities and market potential, as well as the risks, of operating in these markets? This course aims to provide a general understanding of the business potential in the world of emerging economies. It offers an in-depth comparative perspective on business development and strategy across the most important regions with emerging markets in the world—Asia, Eastern Europe, and Latin America, with a special emphasis on the BRIC countries (Brazil, Russia, India, and China). More specifically, students will become acquainted with the emerging economies from four major perspectives: market potential, trading opportunities, sourcing, and global competition. The course examines in great detail foreign investment trends, entry strategies and investment decisions, determinants of enterprise behavior, modes of establishing and managing relationships, impact of local cultures, and strategic responses to potential opportunities and risks in emerging markets. To understand better the pressures for change in the emerging economies in their complexity and entirety, students are personally involved in case discussions of organizations and ventures operating in different emerging markets and sectors of the economy.

NBA 5920 Experience in International Management

Fall, spring. 1.5 credits. Fee charged for required faculty-approved study trip. Staff.

Combines classroom sessions and international experience with an increased awareness of business environments outside the United States. On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students also must attend two pre-trip meetings during spring semester (2-1/2 hours each). These meetings are used to present information on international business conditions, industrial structures, management styles, and also to develop cross-cultural skills. Students also must attend one post-trip meeting with a discussion and analysis of their impressions from the trip. A final paper, integrating the material learned in the classroom with their experiences, is required.

NBA 5930 International Entrepreneurship

Spring. 1.5 credits. Prerequisite: At least one finance or economics class.

M. Goldman.

Entrepreneurial startups and their financing across the globe (outside of the United States) are the focus of the course. Sessions will examine the constraints to entrepreneurs and the ways in which they obtain financing with a particular focus on venture capital and emerging markets. The course will use cases of successful entrepreneurs under the most difficult circumstances and will address entrepreneurship in a serious downturn and networking across borders. In addition to common issues related to starting a business and investing in it, the class will address issues not normally on the radar screen of U.S. entrepreneurs and venture capitalists. The course will draw on the experience of investors and entrepreneurs, cases prepared especially for this course, as well as findings reported in the research literature. This course

is meant to be in part a practical guide to students who wish to be entrepreneurs outside the United States or to create cross-border businesses. It may be of interest to people working in entrepreneurial environments in other organizations or students who want to get involved in various forms of financing entrepreneurial ventures. Students may use the course to explore development of a business concept or plan outside (at least in part) the United States. There will be a particular concentration on Asia, the role of government in stimulating entrepreneurship and venture capital and the nitty-gritty issues of valuing young and private firms sharing profits, raising resources, and organizing and managing human resources.

[NBA 5940 Asian Business]
Spring. 1.5 credits. Staff.]

NBA 5950 Economics of Financial Crises
Spring. 3 credits. I. Azis.

Familiarizes students with the analysis of the causes, nature, and consequences of financial crises, and equips them with tools of analyses to better understand the economics of financial instability and alternative strategies for dealing with them. The first part of the course concentrates on financial instability/crisis by way of explaining the empirical episodes of the crisis in various emerging market countries, and elucidating the relevant theoretical concepts in each of the cases. The second part is devoted to discussions of post-crisis episodes, emphasizing the different paths of recovery and major policy responses to the crisis. The latter includes financial and monetary policies and the unsettled relationship between interest rates and exchange rates.

NBA 5990 Business in the European Union

Fall. 1.5 credits. E. Iankova.
Examines the impact of the process of European integration on business organization and strategy. The foundations, institutions, and common policies of the European Union are discussed first. The course further examines how the establishment of the Economic and Monetary Union is shaping the strategies of multinational corporations with operations in Europe. To understand better the complex pressures for change in a "deepening" and "widening" European Union, students are involved in problem solving and case discussions about issues, such as determinants of entrepreneurship in a European-U.S. comparison; management in a European-U.S. comparison; competition policy and Microsoft's antitrust battles in European courts; marketing and retailing in Europe, with an emphasis on WalMart's experience there, environmental policies and business approaches to sustainability in Europe; agricultural policies, agricultural biotechnology, and the challenge of genetically modified organisms; trade policy and the EU's trade disputes with the United States; and a variety of other mini-cases.

NBA 6250 International Marketing

Fall. 1.5 credits. Recommended: background in core marketing. J. Russo.
International Marketing is the application of marketing concepts, skills, and tools in global markets. Students learn to think like marketing executives with an established or desired presence in multiple foreign markets. These executives face three categories of decisions: foreign entry (whether and where), adaptation

to local markets (including subtle cultural challenges), and strategic coordination across multiple countries. Specific issues include the best choice among alternative modes of entry into a foreign market, how to identify and analyze the common challenges and opportunities of a foreign market, and the trade-off between localized marketing activities and coordinated multinational offerings.

NBA 6310 The Global Enterprise

Fall. 2 credits. G. Dowell.
Whether you are working in a large multinational or a business that is focused on the domestic market, global forces are affecting your organization. This course is designed to give you a strong grounding in the basic issues affecting global business today, from macro forces like economic and political risk, to internal organizational issues like assessing your business's preparedness for global business. We bring these issues to life by taking a trip to work with students from a foreign business school and to visit companies in that environment—for the last two years the trip has been to Shanghai, China, and it most likely will involve China again this year.

Strategic Technology Management

[NBA 5180 Data Mining for Marketing, Sales, and Customer Relationship Management]

Spring. 1.5 credits. J. Gehrke.]

NBA 5230 Data-Driven Businesses

Spring. 1.5 credits. J. Gehrke.
Covers management challenges and strategy for businesses where data is a strategic asset. Topics include (1) how to create value from data through tools such as data management, search, and data mining, and (2) management challenges in data-centric businesses, especially managing businesses in markets with network effects such as search online advertising, and social networks. The course includes hands-on experience with a leading mining tool.

[NBA 6000 The Strategic Role of Information Technology]

Fall. 3 credits. D. Huttenlocher.]

NBA 6010 Electronic Commerce

Spring. 3 credits. L. Orman.
Electronic commerce, the use of information technology in conducting economic transactions and managing businesses over computer networks, has captured public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies (e.g., communications, networks, databases, expert systems, and multimedia) and affects a wide variety of managerial issues. It created a new emphasis on information technologies and systems in management; led to the development of new technologies and new combinations of existing technologies to support management; and occasionally radically altered business practices and the role of management. Students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet and case studies and examples of businesses on the Internet.

[NBA 6020 Commercialization of Fundamental Technologies]

Spring. 3 credits. E. Fitzgerald.]

NBA 6080 Innovation in Pharma/Biotech: The Challenge of Change

Spring. 1.5 credits. A. Biloski.
Provides in depth exposure to a variety of timely topics in the health care and biotechnology industries. Among the subject areas for 2010 are (1) The design and execution of clinical trials; (2) Valuation methods and deal structures for alliances; (3) The role of web 2.0 and social networking in health care; (4) Nanotechnology and biotechnology; (5) The role of script tracking for new product forecasting; (6) Systems biology. A major component of the course grade will be group reports and presentations on defined projects.

[NBA 6100 Technology Management, Bio, Info, Nano]

Fall. 1.5 credits. D. Huttenlocher.]

NBA 6120 Disruptive Technologies

Fall. 1.5 credits. Priority given to students with technology of science backgrounds.
Prerequisite: working knowledge of computers. D. Greenberg.
Begins by presenting historical technological advances that created major paradigm shifts for communications. Presents advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission. The second half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, and the computer industry itself. Sessions are devoted to the social and legal issues arising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. The course is especially tailored to a business school and industrial concerns and has interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge of computer science is required.

NBA 6520 Commercializing University Science and High Technology

Spring. 1.5 credits. W. Sine.
How do scientists take their research to the marketplace? How do scientists and entrepreneurs find and create market opportunities? Commercializing University Science and High Technology will tackle these issues and apply our learning to projects drawn from Cornell labs and local high-tech firms. This course is designed to help students identify, evaluate, and obtain control over technology opportunities. The course focuses on three themes: (1) the source, discovery, and evaluation of technological opportunities on a university campus; (2) increasing the efficiency of the innovation process to produce new technologies that satisfy customer needs; and (3) the different mechanisms available to appropriate returns from technology. The course uses readings, cases, and discussions with practitioners to examine this phenomenon. After completing this class, students will be familiar with basic principles related to technology entrepreneurship and will have gained a deeper understanding of the technology

commercialization process at Cornell. The class will be composed of a select group of graduate students drawn from science, engineering, law, medicine, and the Johnson Graduate School of Business (enrollment is limited).

NBA 6650 The Strategic Management of Technology and Innovation

Spring, 3 credits. W. Sine.

This is an introductory management course covering the strategic management of technology and innovation in established firms as well as startup organizations. This course is designed for students who may someday work in, consult for, and/or create firms whose primary product is fundamentally related to technology or innovation. The course typically includes both M.B.A. students and graduate students in science. It starts by examining how industries are transformed by new technologies and how these patterns of industrial change generate both opportunity and high rates of firm failure. We will then explore the questions: Why do some technology leaders fail? and How do technology innovators successfully take on and replace incumbent firms? This leads to an examination of internal management issues, focusing on the design of innovative organizations: designing reward systems, managing growth, overcoming resistance to change, and using organizational culture to promote innovation.

Management and Organizations

NBA 5220 International Negotiations

Spring, 1.5 credits. Staff.

Focuses on negotiation in the global business setting. It will cover the negotiation concepts dealt with in NBA 6660 (Negotiations) and NBA 6820 (Negotiation Essentials). In addition, it will investigate issues that can be particularly troublesome in the global setting, including currency, venue for dispute resolution, and ethics that are unique to the international arena; parties at the cross-cultural negotiation table; and how culture affects negotiators' interests and priorities and strategies. The capstone exercise is a real-time email negotiation with students in Beijing, China.

NBA 5290 Executing Successful Corporate Strategy

Spring, 1.5 credits. Prerequisite: NCC 5090. O. Khessina.

Firms evolve, grow, and change through mergers and acquisitions, as well as through the internal creation of new divisions or subsidiaries. As promising as these pathways can sound, as most people know, the success rate of these efforts is quite poor. In fact, most mergers and acquisitions fail to recover their costs. This course explores the central and critical challenge in corporate strategy, which is to create corporate advantage through investments in a set of businesses that are better off for being commonly owned. It also focuses on features of the firm that interfere with or support these efforts, including the role of culture, organizational capabilities, and existing social, communication, and power networks, among others. By the end of the course, you should be able to examine a firm and offer answers to three main questions: (1) What factors should inform the firm's decision to diversify? (2) What is the right portfolio of businesses for the firm? (3) How can diverse businesses be integrated to achieve strategic

advantage for a corporation? The course is relevant for students who plan to pursue a managerial career in large corporations, intend to start and sell a new business, or plan to work in the investment or consulting industries. Students interested in the managerial aspects of mergers and acquisitions, divestitures, and internal development will find the course especially useful.

NBA 5860 Cross-Cultural Management

Spring, 1.5 credits. Y. Chen.

Takes a multifaceted approach to help students develop their global management skills. Characteristics of an effective global manager include an understanding of personal strengths and weaknesses as a manager, a good sense of cultural differences, interpersonal and group management tools, and knowledge of important issues in cross-cultural management.

NBA 5880 Critical Thinking for Business Leaders

Spring, 1.5 credits. R. Mish.

This course is based on the proposition that leading well requires thinking well—that is, in order to succeed in any business leadership role, one must learn, exhibit, and model critical thinking skills to organizational stakeholders: colleagues, supervisors/senior executives, and clients/customers. The first few class sessions look at a series of brief articles that attempt to advance arguments in favor of a particular business proposition, and students learn how to examine these arguments critically, including by evaluating the strength and limitations of the evidence presented and by identifying and articulating the best counter-arguments to the positions offered. The remainder of the course is spent applying these critical thinking skills to a set of business cases, using a Strategic Thinking Problem-Solving framework. By the end of the course, the goal is for students to be able to approach business problems in a systematic and critically thoughtful way, and to produce and communicate a problem solution that is well reasoned, well received by ultimate decision makers, and likely to be implemented with success by a group/organization that a student is leading.

NBA 6280 Strategic Change and Renewal

Fall, 1.5 credits. Prerequisite: NCC 5040.

G. Dowell.

Today's organizations are beset by change, and if managers want to have a real impact on their company, they must be ready to deal with changes stemming from a variety of internal and external forces. This course will give students the tools to think more systematically about the challenges of managing change, by considering (1) the impetus for the change, and (2) the systemic implications of the change.

NBA 6540 Power and Politics

Fall, 1.5 credits. E. Mannix.

Nothing is more frustrating than having a great idea and not having the political capital to get it recognized and implemented. This course is aimed at providing you with the political intelligence to succeed in an organization. This course aims to: (1) improve your ability to diagnose the underlying distribution of power in organizations, (2) allow you to practice strategies for building your own personal power, and (3) show you how to be fluent in multiple techniques for influencing others.

NBA 6630 Managerial Decision Making

Fall, 3 credits. J. Russo.

This course attempts to make its participants better managerial decision makers. However, most students find that the course applies equally well to their personal decisions. There are two other objectives. The first is to convey an enduring understanding of decision concepts, skills, and tools that, taken as a whole, comprise a troubleshooter's guide to dealing with the uncertainty, complexity, and conflict of the professional world. The second is to provide a framework for a good decision process in which all of the decision concepts, skills, and tools fit coherently. The pedagogical approach uses lectures, in-class exercises, and applications.

NBA 6660 Negotiations

Fall, spring, 3 credits. Staff.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. It is designed to complement the technical and diagnostic skills learned in other courses. A basic premise is that while a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. It is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

NBA 6680 Leading Teams

Spring, 1.5 credits. Priority given to M.B.A.s. Staff.

Examines the design, management, and leadership of teams in organizational settings. The focus is on the interpersonal processes and structural characteristics that influence the effectiveness of teams, individual behavior in face-to-face and distributed group interactions, and the dynamics of interpersonal relationships. The purpose of this course is to understand the theory and processes of group and team behavior so that leaders can successfully work with teams.

NBA 6700 Becoming a Leader

Spring, 1.5 credits. J. Detert.

This course explores the complex process of "becoming a leader" by systematically uncovering beliefs and myths about leadership and rigorously examining how they hold up to the scrutiny of critical thinking, analysis, and research. Each class will address a number of important questions about leadership. Generally, the class uses case studies and videos to first illustrate a topic by focusing on a specific leader and decision or dilemma faced by that leader, then abstract from the specific to the general by discussing the principles and research findings pertaining to that aspect of leadership. Students should also develop a significantly enhanced understanding of their own leadership strengths and objectives because the course requires personalization of concepts via a number of self-reflections and exercises.

NBA 6710 Business Ethics

Fall, spring. 1.5 credits. D. Radcliffe.
 Poor moral judgment can ruin a manager's career or even sink a company. In general, an organization cannot survive without the trust of numerous stakeholders, and ethical lapses destroy trust and threaten vital stakeholder relationships. In today's volatile and fiercely competitive business environment, a manager must be able to identify and effectively resolve ethical issues that inevitably arise in the pursuit of business (and career) objectives. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses those concepts and principles to analyze cases. Discussions are designed to help students understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

NBA 6760 Organizing for Strategic Advantage

Spring. 1.5 credits. Prerequisite: NCC 5090. O. Khessina.
 A company may never benefit from even the most brilliantly formulated strategy if it does not manage to implement that strategy effectively. Strategy implementation (along with strategy creation and evaluation) is a key critical task facing any senior manager. NCC 5090 (Strategy Core) and NBA 5790 (Cases in Business Strategy) teach students tools of strategy creation and evaluation. This course is complementary and will offer frameworks for understanding methods of strategy implementation. Specifically, it will provide conceptual tools for designing and changing organizations given the strategic choices that have already been made. It will place special emphasis on organizational and human resources issues, hence the name, "Organizing for Strategic Advantage." Using case studies, the class analyzes how case managers can avoid common mistakes and traps to succeed at implementing their business strategy. The course is particularly relevant for students who are (1) thinking about working in the consulting industry; (2) planning to manage and lead firms; or (3) planning to found and own startup companies.

NBA 6820 Negotiation Essentials

Fall, spring. 1.5 credits. S. Spataro, Y. Chen, and K. O'Connor.
 Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. A basic premise of the course is that while a manager needs analytical skills to develop optimal solutions, a broad array of negotiation skills is needed in order for these solutions to be accepted and implemented. The course is designed to help students approach negotiations with confidence. They have the opportunity to develop their negotiating skills experientially and to gain insight into what works, what does not, and why.

Marketing**NBA 6170 Emerging Technology Marketing**

Spring. 1.5 credits. Prerequisite: graduate students. B. LaPerle.
 An overview of how successful companies combine a deep understanding of unmet customer needs with a key emerging and enabling technology to create significant new market and shareholder value. A proactive and repeatable 10-step Market Development Planning process will be described with special emphasis on tools and techniques that link industry and competitor technology trends with unmet customer needs. This course will give prospective brand managers, product managers, business and engineering managers the conceptual and operating tools to proactively identify, and successfully bring from the R&D lab to the marketplace, new differentiated value propositions.

NBA 6200 Marketing Research

Spring. 3 credits. Prerequisites: NCC 5010 and NCC 5030 or equivalent. Y. Park.
 Deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better-managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. Covers the use of secondary sources of marketing information as well as qualitative research for designing studies and collecting primary data. Students are exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is more on evaluating research methods and on interpretation and use of results, and less on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 6210 Integrated Marketing Communications (also HADM 6649)

Fall. 3 credits. L. Pearo.
 This course is designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

NBA 6220 Marketing Strategy

Spring. 3 credits. Prerequisite: NCC 5030. V. Rao.
 A sound marketing strategy is essential for the long-term success of a firm. Marketing strategies, while guided by environmental conditions, also seek to anticipate, exploit, and sometimes shape changes in the

environment to gain competitive advantage. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and marketing strategies developed to ensure sustained growth. Successful development of marketing strategy requires an equal measure of analytical and creative thinking. This course introduces students to various concepts and analysis methods of defining opportunities and threats implicit in dynamic environments and to the process of formulating a long-term marketing strategy for a multiproduct organization. Students will learn about the theoretical and applied perspectives of marketing strategy from readings, competitive marketing strategy simulation, developing a marketing strategy plan for a firm of their choice, case analyses, and guest speakers.

NBA 6260 Consumer Behavior

Fall. 1.5 credits. E. Wu.
 Topics include factors that influence response to various kinds of advertising, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

NBA 6290 Current Topics in Marketing

Fall. 1.5 credits. Prerequisite: NCC 5030. J. Russo.
 The focus of this course will be on emerging topics such as new media, measuring ROI for marketing, channel partnerships, and global marketing. Specific topics vary from year to year. For each topic, students will be required to do readings and apply the readings and class material to an assignment in class. Students will work on in-class assignments in groups and will submit an individual term paper.

NBA 6340 Customer Relationship Management

Spring. 1.5 credits. Y. Park.
 The course is aimed at managers who are interested in pursuing activities in CRM built around the notion of customer centricity. The principal objectives of the course are to emphasize how CRM can help accomplish strategic initiatives and improve firm profitability, to develop essential skills using the statistics program, and to implement strategic initiatives in CRM. Students will be exposed to the practical side of CRM through case studies and hands-on exercises.

NBA 6390 Data-Driven Marketing

Spring. 3 credits. V. Rao.
 Deals with the use of data to make marketing decisions. Introduces concepts, methods, and applications of decision modeling to address marketing issues such as segmentation, targeting, positioning, promotions, advertising, and sales-force decisions. Unlike marketing courses that focus on conceptual material, this course provides skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. The course is particularly valuable to students planning careers in management consulting, marketing, and market research. It is designed for students who have some background in quantitative methods and have a willingness to deal with mathematical concepts.

NBA 6930 Strategy and Tactics of Pricing

Spring, 3 credits. V. Rao.

Pricing is a critical management decision that has both strategic and tactical elements. The objective of this course is to introduce participants to proven techniques and frameworks for assessing and formulating pricing strategy and tactics. A marketing manager responsible for pricing needs to understand economic, psychological, and organizational factors. This course revolves around understanding how to make effective pricing decisions, while keeping in mind these factors. Some of the topics to be covered include the analysis of relevant costs, economic value analysis (EVA), measurement of price sensitivity, techniques for price differentiation, competitive pricing, and revenue management. This course should be useful for those pursuing careers in marketing, general management, and consulting.

Operations Management**NBA 5200 Retail Operations**

Spring, 1.5 credits. V. Gaur.

The retailing industry is a major part of the world economy, and at the forefront of business changes through its direct connection with the consumer, wide use of technology, innovations, market uncertainty, and intense competition. Topics in this course include demand forecasting, growth and risk management, performance analysis, incentives, store execution, technology (e.g., RFID), product variety, and emerging economies. The course should be useful for those interested in careers in retailing as well as businesses like banking, consulting, IT, and manufacturing, which provide services to retailers.

NBA 6410 Logistics and Manufacturing Strategy

Spring, 3 credits. Prerequisite: NCC 5080 or permission of instructor. Staff.

Examines major challenges in managing efficient supply chains. Course illustrates various strategic and tactical supply-chain issues such as product design, virtual integration, information-sharing strategy, outsourcing, procurement, distribution strategy, and risk management. Additionally, it offers an opportunity for students to explore emerging supply-chain issues. The course uses case discussions to examine issues related to supply-chain management.

NMI AND NRE RESEARCH AND ADVANCED STUDIES**NMI 5000 Directed Reading and Research**

Fall, spring, 1–3 credits, variable.

Prerequisite: approval of advisors and faculty members involved in research. Staff. Students undertake special-interest research under the supervision of faculty members.

NMI 5030 Principles of Lean Six Sigma Process Improvement

Spring, 1.5 credits. Staff.

A hands-on introduction to understanding process excellence with a focus on Six Sigma from the perspective of Johnson and Johnson. This one-week course is condensed from the two-week Johnson & Johnson six sigma Green Belt certification training that its employees

take. The course teaches the DMAIC roadmap, which is a methodology to solve business problems. Students learn and practice the tools associated with six sigma and the roadmap. The course will be facilitated by Johnson and Johnson certified six sigma belts, but the course does not result in a Green Belt certification for the students. Students will learn (1) How to define, focus, and charter a problem; (2) How to understand what the customer wants; (3) How to map a process; (4) Tools to measure the magnitude of the problem; (5) Statistical tools to uncover root causes of the problem; (6) Tools to develop innovative solutions for the problem; (7) Tools to maintain and control the innovative improvements. Students will be introduced to Minitab as a software tool to accomplish the above objectives and they will conduct an interactive case study to apply the tools.

NMI 5100 Multicultural Work Environments

Fall, 1 credit. Prerequisite: students whose summer internships are in a country other than that of their citizenship or prior work experience. Students should register for course in spring semester before internship after obtaining an internship offer and completing paperwork for course instructors. International students obtain and process work authorization forms with the International Students office. See Charlotte Rosen (435 Sage Hall) for further details about academic and immigration requirements for NMI 5100. C. Rosen and B. Mink.

Independent study. Promotes an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Grades are posted in the following fall semester after completion of the course project (a 10-page paper).

DOCTORAL SEMINARS

Doctoral seminars may change. Please see the Registrar's Office in 106 Sage Hall for current listing.

NRE 5010 Capital Markets Research in Accounting

Spring, 1.5 credits. C. Nichols.

This course is designed to introduce topics in capital markets research and to develop students' ability to evaluate and generate archival research in accounting. In addition, the course is intended to develop students' understanding of common research designs used in archival studies and to identify potential research questions.

NRE 5020 Doctoral Seminar In Marketing

3 credits. Prerequisite: permission of instructor; graduate-level course in mathematical statistics or econometrics (may be waived in special cases). Staff.

Introduces students to empirical research in marketing. Although there is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns) and Bayesian methods in marketing, the content is to some extent driven by the students. Teaching is interactive, and each student is expected to present one of the papers studied to the rest of the class and to replicate the

results of one of the papers, requiring him or her to write the necessary code and briefly discuss their findings. Students are welcome to sit in on parts of the class (e.g., the section on Bayesian Methods is broad enough that students from other areas may find the presentation useful).

NRE 5040 Judgment and Decision Making, Research and Accounting

3 credits. Prerequisite: Ph.D. students.

C. Nichols.

This seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

NRE 5150 Behavioral Decision Making

Spring, 3 credits. Prerequisite: Graduate status. J. Russo.

This seminar focuses on decision making, judgment, and related topics. The initial topic is competing paradigms for research on decision making and the contributions to knowledge that each has made. Specific issues include (a) the kinds of decisions that each paradigmatic approach is most successful in explaining or predicting, (b) the forces that have impelled a shift of emphasis from one paradigm to another, and (c) the expected future productivity of the different paradigms. The remainder of the course is devoted to specific topics within decision research broadly construed, with their selection and priority guided by the interest of participants.

NRE 5170 Macro Organizational Theory Ph.D. Seminar

Spring, 3 credits. G. Dowell.

Reviews the major themes in macro OT research, paying particular attention to institutional theory and organizational ecology, but also including organizational learning, organizational identity, strategic management, and other topics.

NRE 5180 Marketing Model

Spring, 1.5 credits. S. Gupta.

This course is a study of model-based research in the marketing literature. The course aims to accomplish three main objectives: (1) develop student's knowledge of the technical details of various techniques for analyzing data, (2) expose students to "hands-on" use of various computer programs for carrying out statistical data analyses, and (3) have students propose a model of consumer/market behavior that potentially constitutes a contribution to the literature.

NRE 5360 Doctoral Seminar on Introduction to Asset Pricing

Spring, 3 credits. M. Huang.

This course is an introductory Ph.D.-level course on the basic theories of asset pricing. It consists of four parts. The first part deals with individual choices under uncertainty, including expected utility theory, risk aversion, stochastic dominance, and two-period consumption-portfolio problems. The second part deals with equilibrium pricing theories, including implications of no arbitrage and stochastic discount factor, risk sharing, aggregation, and consumption-based pricing in complete markets, mean-variance efficiency and the Capital Asset Pricing Model, and the Arbitrage Pricing Theory. The course also explores the relation between these various pricing theories, and extends the treatment of individual consumption/portfolio problems

and equilibrium pricing to a multiperiod setting. In the third part, recent developments in asset pricing are reviewed by introducing some stylized facts and new theories. The fourth part gives a brief introduction to behavioral finance.

FACULTY ROSTER

Bailey, Warren B., Ph.D., U. of California, Los Angeles. Prof., Finance
 BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
 Bhojraj, Sanjeev, Ph.D., U. of Florida. Assoc. Prof., Accounting
 Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration; Prof., Finance
 Bloomfield, Robert J., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Management; Prof., Accounting
 Chen, Ya-Ru, Ph.D., Columbia U. Prof., Management and Global Business
 D'Souza, Julia, Ph.D., Northwestern U. Assoc. Prof., Accounting. Director of Graduate Studies
 Detert, James R., Ph.D., Harvard U. Asst. Prof., Management and Organizations
 Dowell, Glen W. S., Ph.D., U. of Michigan. Asst. Prof., Management and Organizations
 Dyckman, Thomas R., Ph.D., U. of Michigan. Prof. Emeritus
 Farahat, Amr A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
 Frank, Robert, Ph.D., U. of California, Berkeley. Prof., Economics, Henrietta Johnson Louis Professor of Management
 Gaur, Vishal, Ph.D., U. of Pennsylvania. Assoc. Prof., Operations Management
 Gavirneni, Srinagesh (Nagesh), Ph.D., Carnegie Mellon U. Asst. Prof., Operations Management
 Grinstein, Yaniv, Ph.D., Carnegie Mellon U. Assoc. Prof., Finance
 Gupta, Sachin, Ph.D., Cornell U. Prof., Marketing, Henrietta Johnson Louis Professor of Management
 Hart, Stuart, Ph.D., U. of Michigan. S. C. Johnson Chair in Sustainable Global Enterprise; Prof., Management
 Hass, Jerome E., Ph.D., Carnegie Mellon U. Prof. Emeritus
 Heffetz, Ori, Ph.D., Princeton U. Asst. Prof. of Economics
 Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting
 Ho, Benjamin, Ph.D., Stanford U. Asst. Prof., Economics

LAW SCHOOL

ADMINISTRATION

Stewart J. Schwab, Dean and Professor of Law

Barbara J. Holden-Smith, Vice Dean and Professor of Law

Stephen P. Garvey, Associate Dean for Academic Affairs and Professor of Law

Claire M. Germain, Law Librarian and Professor of Law

Richard D. Geiger, Associate Dean, Communications and Enrollment

Anne Lukingbeal, Associate Dean and Dean of Students

Richard F. Robinson, Associate Dean for Administration and Finance

Karen V. Comstock, Assistant Dean for Public Service

Charles D. Cramton, Assistant Dean for Graduate Legal Studies

John R. DeRosa, Assistant Dean for Student and Career Services

Nan A. Colvin, Registrar

The Law School prepares attorneys for both public and private practice. Graduates are trained to provide the highest quality professional services to their clients and to contribute to the development and reform of law and legal institutions. The curriculum is designed to prepare students for admission to the bar in all American states and territories. Students who pursue the three-year Doctor of Law degree (J.D.) must have a bachelor's degree or equivalent. Students wishing to concentrate in international law may be admitted to a program leading to the J.D. "with specialization in international legal affairs." The Law School also offers a limited number of students an opportunity to earn both a J.D. degree and an LL.M. (Master of Laws) degree in international and comparative law.

Students may pursue combined graduate degree programs with the Johnson Graduate School of Management; the Department of City and Regional Planning of the College of Architecture, Art, and Planning; the School of Industrial and Labor Relations; the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences; the Université de Paris I (Pantheon Sorbonne); L'Institut d'Etudes Politiques de Paris; and Humboldt University.

Each year a limited number of students from abroad pursue the LL.M. degree (Master of Laws) and the J.S.D. degree (Doctor of the Science of Law). A small number of law graduates also may be admitted as special students, to pursue advanced legal studies without seeking a degree. Students in other graduate programs and qualified undergraduate students registered with the university are welcome in many classes with the permission of the instructor. In addition, highly qualified undergraduates in the College of Arts and Sciences may register in the Law School during their senior year.

For further information, refer to the Law School web site, or contact the Office of the Registrar, Myron Taylor Hall. Course descriptions are current as of April 2010. For updated law descriptions, visit www.lawschool.cornell.edu.

The professional curriculum at Cornell Law School conforms to American Bar Association Standard 302 for Approval of Law Schools. It provides our students with substantial instruction in: (1) the substantive law generally regarded as necessary to effective and responsible participation in the legal profession; (2) legal analysis and reasoning, legal research, problem solving, and oral communication; (3) writing in a legal context, including at least one rigorous writing experience in the first year and at least one additional rigorous writing experience after the first year; (4) other professional skills generally regarded as necessary for effective and responsible participation in the legal profession; and (5) the history, goals, structure, values, rules, and responsibilities of the legal profession and its members.

It also offers substantial opportunities for: (1) live-client or other real-life practice experiences, appropriately supervised and designed to encourage reflection by students on their experiences and on the values and responsibilities of the legal profession, and the development of one's ability to assess his or her performance and level of competence; (2) student participation in pro bono activities; and (3) small group work through seminars, directed research, small classes, or collaborative work.

FIRST-YEAR COURSES

LAW 5001 Civil Procedure

Full year. 6 credits. Letter grades only.
K. M. Clermont, B. J. Holden-Smith, and F. F. Rossi.

An introduction to civil litigation, from commencement of an action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law; jurisdiction, process, and venue; and former adjudication.

LAW 5021 Constitutional Law

Fall. 4 credits. Letter grades only.
J. Chafetz, M. Dorf, B. A. Meyler, A. Rana, and S. H. Shiffrin.

A study of basic American constitutional law, including structural aspects of the Constitution and certain of its rights provisions.

LAW 5041 Contracts

Full year. 6 credits. Letter grades only.
R. A. Hillman, J. J. Rachlinski, and R. S. Summers.

An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

LAW 5061 Criminal Law

Spring. 4 credits. Letter grades only.
S. P. Garvey and J. Ohlin.

An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 5081 Lawyering

Full year. 4 credits. Letter grades only.
J. Atlas, L. Freed, J. Mollenkamp, A. J. Mooney, U. H. Weigold, and M. A. Whelan.

Introduces first-year students to lawyering skills, with primary emphasis on legal writing, analysis, research, and oral presentations. Assignments are usually set in the context of a simulated law office (or judge's chambers). In the fall semester, students write predictive memoranda that point out the strengths and weaknesses of their client's case. To prepare the memoranda, students may need to determine the facts of the case by conducting interviews or depositions. Acting as junior attorneys, students also make an oral presentation to a supervising attorney. The spring semester focuses on persuasive advocacy. Students prepare a memorandum, motion, or brief for submission to a court and, later, orally argue for their positions in a simulated court session. Throughout the year, students also learn the fundamentals of legal research. Instruction occurs not only in full-class sessions but also in individual conferences. Students receive extensive feedback on each major assignment.

LAW 5121 Property

Spring. 4 credits. Letter grades only.
G. S. Alexander, E. M. Penalver, E. L. Sherwin, and L. S. Underkuffler.

Course in basic property law covering acquisitions of rights in property, estates in land, concurrent ownership, landlord/tenant relations, and regulation of land use.

LAW 5151 Torts

Fall. 4 credits. Letter grades only. M. Heise, O. Herstein, J. A. Henderson Jr., and W. B. Wendel.

An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSES

LAW 6071 Advanced Legal Research—U.S. Legal Research for LL.M. Students

Fall, first 7 weeks of semester. 1 credit.
Limited enrollment. Limited to graduate students. Graduate program grading: H, S, U, T, Mills.

An introduction to basic legal research in U.S. materials that will be valuable in course work at Cornell and in practice. The focus is on understanding and finding primary legal sources, including statutory codes, session

laws, administrative regulations, and court decisions, as well as explanatory materials, such as law reviews and treatises.

LAW 6761 Principles of American Legal Writing

Fall, spring. 3 credits. Limited enrollment. Limited to graduate students. Satisfies LL.M. writing requirement. Graduate program grading: H, S, U. L. Knight.

Introduces foreign-trained lawyers to the American legal system and essential principles of legal writing in the United States. Students have an opportunity to practice some of the forms of writing common to American legal practice by drafting documents such as memoranda and briefs in the context of representing hypothetical clients. Students are given the opportunity to conference individually with the instructor and to rewrite assignments after receiving the instructor's comments.

LAW 7991 Cornell Research Colloquium

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Seminar course required for all first-year J.S.D. candidates. Also open first to LL.M. students and then to J.D. students to the extent places are available. Visiting scholars and exchange students from foreign institutions highly encouraged to attend in an unofficial capacity. J.S.D. and LL.M. program grading: H, S, U; J.D. program: letter grades only. M. Lasser.

This course in advanced academic research methodology is designed to prepare students to engage in doctoral-level research, analysis, and writing, especially in comparative and international contexts. How is the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines and/or cultures? How is interdisciplinary work to be accomplished? The early portions of the course involve discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portions of the course, students present and critique their methodologically reflective research projects. External speakers present their work in progress to generate methodologically oriented discussion.

LAW 8991 Thesis

Fall, spring. 5 credits. Limited to graduate students and students completing joint J.D.-LL.M. program. Satisfies writing requirement. Graduate program grading: H, S, U; J.D./LL.M. program: letter grades only.

Arrangements for a master's thesis are made by the student directly with a faculty member. A faculty member may require the student to submit a detailed outline of the proposed thesis, as well as a summary of previous writing on the subject or other appropriate information. The work is completed during the academic year under the supervision of a law faculty member.

LAW 9901 Graduate Research

Fall, spring. Limited to J.S.D. students.

UPPERCLASS COURSES

LAW 6001 Accounting for Lawyers

Spring. 2 credits. Intended primarily for students with little or no prior background in bookkeeping or accounting. Limited to students who have had no more than 6 credit hours of accounting (or equivalent) or permission of instructor. S-U or letter grades. R. A. Sarachan.

Introduces students to the basic concepts and fundamentals of financial accounting. Focuses on (1) accrual accounting concepts, principles, and conventions, (2) the presentation of financial statements (balance sheets, income statements, statements of cash flow), (3) the interpretation and analysis of financial statements, and (4) the use and misuse of accounting information. The goal is to enable students to critically review a company's financial statements.

LAW 6011 Administrative Law: The Law of the Regulatory State

Fall, spring. 3 credits. Limited enrollment. Letter grades only. C. R. Farina.

An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; and the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

LAW 6012 Administrative Law Research

Fall, first 6½ weeks of semester. 1 credit. Limited enrollment. Satisfies skills requirement. Letter grades only. P. G. Court.

Focuses on practical aspects of administrative law, learning to maneuver through the federal rulemaking process and locating agency adjudications. Students participate in electronic rulemaking and make use of the Unified Agenda. Expands students' skills in using the legal sources discussed in administrative law courses by putting the process into action. Students currently enrolled in the Administrative Law course are particularly encouraged to take this course.

LAW 6051 Advanced Legal Research in Business Law

Spring, 7 weeks of semester. 1 credit. Limited enrollment. Satisfies skills requirement. Prerequisite: Lawyering or Advanced Legal Research: U.S. Legal Research for LL.M.s. Letter grades only. J. M. Callihan.

Business issues, particularly those relating to corporations, are a given in most areas of practice. This course introduces students to online resources providing company information and enables them to evaluate the information to determine whether the resource is the most appropriate for their research. Students learn how to find what the company says about itself, what regulators say about the company, and what third parties say. Classes are short lectures followed by online sessions using business databases. There are assigned readings in lieu of a required textbook, five assignments, and a short due diligence report on a company of the student's choice. There is no final exam.

LAW 6101 Antitrust Law

Fall. 3 credits. Letter grades only. G. A. Hay.

U.S. antitrust laws protect competitive markets and limit the exercise of monopoly power. Topics include price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; monopolization; and mergers.

LAW 6121 Bankruptcy

Spring. 3 credits. Letter grades only. T. Eisenberg.

Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the business bankruptcy provision of most general applicability. The relationship between the rights of an Article 9-secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyance.

LAW 6131 Business Organizations

Fall, spring. 4 credits. Limited enrollment. S-U or letter grades. Fall, C. K. Whitehead; spring, R. C. Hockett.

An introduction to the legal rules and principles, as well as economic factors, that underlie the conduct of productive enterprise in the United States. A principal focus is on the large, publicly traded corporation that dominates much of the U.S. business environment—in particular, its control and the potentially conflicting interests that the form must mediate. Legal topics include basic fiduciary obligations, shareholder voting rights, shareholder suits, corporate control transactions, and insider trading. We also devote some attention to closely held corporations and other business forms.

LAW 6158 Client Counseling

Spring, meets only part of semester. 1 credit. Limited enrollment. Satisfies skills requirement. S-U grades only. L. Freed.

Clients come to lawyers seeking problem-solving advice. This course follows a "client-centered" approach to counseling that examines techniques lawyers can use to help clients make good decisions. Class sessions include role plays that cover different counseling functions, such as advising the client about his or her options, counseling the client about settlement, and preparing the client for his or her deposition.

LAW 6161 Comparative Law: The Civil Law Tradition

Spring. 3 credits. S-U or letter grades. M. Lasser.

Introduces students to the institutional and conceptual organization of "civil law" legal systems (which govern almost all of Western and Eastern Europe and Latin America, as well as significant portions of Africa and Asia). The course therefore provides a broad overview of "civilian" private law and procedure, criminal procedure, administrative law, and constitutional law. The course is particularly interested in the differences between common law and civil law understandings of the relationship between law-making, legal interpretation, and the judiciary.

LAW 6191 Conflict of Laws

Fall. 3 credits. S-U or letter grades. A. Riles.

Addresses the subject of conflict of laws in its theoretical and historical context, and places a

special emphasis on the international elements of conflict of laws. There is a 3-hour in-class final examination that involves both issue spotter questions and more theoretical questions.

LAW 6201 Constitutional Law II: The First Amendment

Spring, 3 credits. S-U or letter grades.
S. H. Shiffrin.

A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment is also treated to some extent.

LAW 6204 Cornell Prison Education Program Teaching Practicum

Fall, spring, 3 credits. Limited enrollment.
S-U grades only.

Students co-teach a law-related course at either Auburn or Cayuga correctional facilities, as part of the Cornell Prison Education Program (CPEP), which offers college courses to inmates working toward their associates' degrees. Interested students should secure a full-time faculty advisor and submit a course proposal to the CPEP. Accepted students design a detailed course syllabus, procure teaching materials, and teach a two-hour class on a weekly basis. Students are also expected to create, administer, and evaluate midterm and final examinations. Students must travel to and from a correctional facility on a weekly basis, at their own expense. Limited funds are available for teaching materials. Students who have secured a faculty advisor and who have received approval for their course from CPEP should direct inquiries about funding to the associate dean for academic affairs.

LAW 6241 Corporate and White Collar Crime

Fall, 3 credits. S-U or letter grades.
S. P. Garvey.

Examines some of the principal statutes used to prosecute corporate and white collar crime. Theories of liability considered include traditional white collar offenses like mail and wire fraud, insider trading, false statements, perjury, and obstruction of justice. They also include more recent entries into the field such as RICO, money laundering, and laws enacted to combat government contract fraud. In addition, the course looks at the workings of the now-advisory Federal Sentencing Guidelines.

LAW 6263 Criminal Procedure—Adjudications

Fall, 3 credits. Prerequisites: none. S-U or letter grades. J. H. Blume.

Focuses primarily on the adjudication phase of the criminal process, including: (1) the right to counsel, including the right to the effective assistance of counsel and conflict-free counsel; (2) the admissibility of incriminating statements and eyewitness identifications; (3) the law of guilty pleas; (4) jury composition and selection; and (5) fair trial procedures including rights afforded by the Confrontation, Double Jeopardy and Due Process Clauses.

LAW 6264 Criminal Procedure—Investigations

Fall, 3 credits. S-U or letter grades.
S. F. Colb.

Examines the constitutional law that governs police attempts to solve crime and bring perpetrators to justice. Considers the role of the Fourth Amendment prohibition against unreasonable searches and seizures as well as

the Fifth Amendment ban on compelled self-incrimination, in guiding police behavior and in structuring the trials that follow constitutional violations. Students evaluate the wisdom and constitutional validity of the Fourth Amendment exclusionary rule, which prohibits the introduction of evidence obtained as a result of an unreasonable search, and the well-known *Miranda v. Arizona* decision as it has evolved over time.

LAW 6291 Deposition Skills

Fall, meets for only part of semester. 1 credit. Limited enrollment. Satisfies skills requirement. Students who take this course are not eligible to take LAW 7630 (Pretrial Discovery: Depositions). S-U grades only.
M. A. Whelan.

Depositions are a critical component of pretrial discovery, and many cases are lost, won, or settled because of information gleaned at a deposition. Attorneys also often modify trial strategies because of a witness's performance at a deposition. Because depositions play such an important role in litigation, most junior litigation attorneys deal with depositions in some manner from the start of their career. This course takes students through all stages of a deposition: preparing the witness, defending the witness, preparing to ask questions, asking questions, how to use documents, and reviewing the transcript. Students can expect to take and defend mock depositions, to serve as witnesses being deposed, and to observe and critique their fellow students' deposition skills.

LAW 6301 Directed Reading

Fall, spring, 1 or 2 credits. S-U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review registration form available from online registration site or registrar's office.

An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 6331 Employment Law

Fall, 3 credits. S-U or letter grades.
S. J. Schwab.

Survey of major statutory schemes, constitutional principles, and common law doctrines that affect the employer-employee relationship in the public and private sectors, other than laws regulating union formation and collective bargaining, which are covered in Labor Law. Topics include unjust dismissal, trade secrets, noncompetition covenants, drug testing, free speech, privacy, and antidiscrimination laws. In addition, the course provides an overview of major statutory schemes affecting the terms and conditions of employment, such as workers' compensation, the Fair Labor Standards Act, ERISA, and the Occupational Safety and Health Act.

LAW 6361 Environmental Law

Fall, 3 credits. Recommended prerequisite: Administrative Law. Letter grades only.
J. J. Rachlinski.

Surveys the major environmental laws, with a primary focus on federal statutes. Emphasizes the various sources of liability to both individuals and corporations from common law, statutory provisions, administrative regulation and enforcement policy. Covers corporate successor liability through mergers and acquisitions, including the increasing importance of performing a full range due diligence review for environmental conditions

in such transactions. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

LAW 6392 Ethics and Corporate Culture (also NBA 5140)

Spring, second half of semester beginning March 15, 2011. 2 credits. Limited enrollment. Satisfies professional responsibility requirement. Letter grades only. D. Radcliffe and B. Wendel.

In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a toxic corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where “only results matter,” it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she does see the dangers, she may still find it hard to avoid them. This course seeks to help M.B.A. and law students understand how a firm's culture can tempt—or push—employees into unethical behavior. It also considers how employees can meet ethical challenges posed by their firms' cultures and what leaders can do to build ethically healthy cultures.

LAW 6401 Evidence

Fall, 3 credits. Letter grades only.
F. F. Rossi.

The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, experts, and confrontation. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 6401 Evidence

Spring, 4 credits. S-U or letter grades.
S. F. Colb.

Examines the rules that govern attorneys' trial presentations in criminal and civil cases. Beginning with the requirement that every piece of evidence offered be relevant to a fact that bears on the dispute, the course surveys the obstacles that confront attorneys offering proof at trial. We consider the rules barring character evidence, proof of sexual propensity, and hearsay, among others. The Federal Rules of Evidence (FRE) represents the main source of law for the course, though the case method is used and will accordingly, on occasion, expose students to state analogues of the federal rules. The exam is entirely objective, i.e., true-false and multiple choice.

LAW 6415 Fact Analysis and Investigation

Fall, 1 credit. Limited enrollment. Satisfies skills requirement. S-U grades only.
U. H. Weigold.

Students learn (1) how to investigate, organize, assess, and present facts in a legal context; (2) how to develop various sources of facts and examine effective models of organizing facts; (3) how to assess the legal significance of facts, as well as the credibility of their sources. In learning how to properly interpret and present facts, students consider interdisciplinary research, including insights from cognitive psychology and narrative theory; (4) strategies for responding to their legal adversary's facts, including questioning

the adversary's sources, inferences, and context. Students complete several short projects involving fact analysis and investigation.

LAW 6421 Family Law

Spring, 3 credits. S–U or letter grades.
C. G. Bowman.

Broadly understood, family law is the study of state-imposed rules regulating intimacy and intimate relationships in society. This course evaluates our assumptions and beliefs about the appropriateness of a number of current laws regulating families. Substantial attention is devoted to the social and legal consequences of marriage dissolution, including child custody, child support, property distribution, and spousal maintenance. Other topics include the legal significance of marriage rights and obligations; private ordering within the marital context; nonmarital relationships and their regulation; and the legal rights of parents, children, and foster parents in situations of abuse and neglect.

LAW 6431 Federal Courts

Spring, 4 credits. Prerequisite: Constitutional Law and second semester of Civil Procedure. Students without such background should consult with instructor. Knowledge of basic doctrines of administrative law is very useful, although not a strict prerequisite. S–U or letter grades. M. Dorf.

Examines the various constitutional, statutory, and judge-made doctrines that control access to the federal courts to vindicate federal rights. The course is particularly valuable for those planning a career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have or hope to obtain a judicial clerkship. Topics include case or controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C. §1983 and Bivens actions; bars to such actions, including sovereign immunity and abstention doctrines; and habeas corpus.

LAW 6441 Federal Income Taxation

Fall, spring, 4 credits. S–U or letter grades.

Fall, R. A. Green; spring, R. A. Schnur.

Basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 6451 Federal Indian Law

Fall, 2 credits. S–U or letter grades.

D. Jordan.

Focuses on the basics of Federal Indian Law, the ever-changing body of case and statutory law and treaties that define the limits and extent of Indian tribal sovereignty in the United States in the late 20th century. The course explores the nature and extent of tribal sovereignty at the time of European contact, the changing strategies of the United States in relating to tribes, and the lasting impact of those strategies on current-day tribal communities and their rights of self-government. It also explores the role of the United States in protecting tribal sovereignty and tribal resources and examines the powers and jurisdiction of tribal governments with regard to both members and nonmembers of the tribe, as well as the lack or extent, as the case may be, of state jurisdiction over

activities on Indian lands. Students are encouraged to continually identify and question the legal, political, and moral basis of the laws and policies that constitute Federal Indian Law in the United States today.

LAW 6461 Financial Institutions

Fall, 4 credits. S–U or letter grades.

R. C. Hockett.

An introduction to the regulatory structures, as well as economic, technological, and other factors that pattern the conduct of financial intermediation in the United States. The principal focus is on commercial banks, investment companies (mainly mutual funds), insurance companies, pension funds, and securities firms in so far as these institutions discharge a common set of economic functions and give rise to a common cluster of counterparty and third-party ("systemic") risks. Legal topics include entry-, functional, and geographical restrictions; consumer-protection (including disclosure requirements) and competition-promotion; capital adequacy-, solvency-, and related forms of risk-regulation (including deposit insurance); community-reinvestment; and "self-regulation." We also devote some attention to "alternative" financial service providers such as check-cashing services, community development financial institutions, and micro-credit providers; and we take occasional note both of divergent (generally, non-American) jurisdictions' dominant modes of financial intermediation and of the "globalization" of finance, both to place what is distinctive about the dominant American forms into bolder relief and better to understand the forces operating behind recent and still unfolding changes to the American (and global) financial and finance-regulatory environments. No prior background in financial law or economics is required, but it is helpful.

LAW 6471 Health Law

Fall, 3 credits. S–U or letter grades.

H. R. Beresford.

Considers legal aspects of the organization, financing, and distribution of health care in the United States. Emphasis is on issues of access, costs, and quality, and the course addresses the use of regulation, litigation, and market-driven strategies to confront emerging problems. Readings are from a health law casebook, supplemented by occasional handouts of current materials. The goal is to convey an appreciation of the challenges involved in providing health care to those in need and of the role of law and lawyers in meeting these challenges.

LAW 6491 The IPO and M&A Process (also NBA 5630)

Spring, 3 credits. Limited enrollment. S–U or letter grades. T. Willett.

In-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to IPOs, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, and selection of a trading forum. The course also covers certain nontraditional methods of going public, including reverse mergers. Regarding deal structures, the course explores choosing an appropriate transaction structure,

deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

LAW 6501 Insurance Law

Spring, 3 credits. S–U or letter grades.

M. Heise.

Insurance is an increasingly important tool for the management of risk by both private and public enterprises. This course provides a working knowledge of basic insurance law governing insurance contract formation, insurance regulation, property, life, health, disability, and liability insurance and claims processes. The emphasis throughout is on the links between insurance theory, doctrine, and modern ideas about the functions of private law.

LAW 6511 Intellectual Property

Fall, 3 credits. Letter grades; S–U by permission of faculty member. O. Liivak.

A survey of legal mechanisms for protecting intellectual property including patent, trademark, copyright, trade secret, and related state law doctrines.

LAW 6514 International and Foreign Legal Research

Spring, 2 credits. Satisfies skills requirement. S–U or letter grades.

A. Emerson.

The practice of law becomes increasingly dependent upon a clear understanding of the global context in which it occurs. This course provides an overview of sources, methods, and strategies for researching international and foreign law. Topics include the various legal systems of the world, public and private international law, the European Union, and the United Nations. The course is delivered through lectures and hands-on exercises. Selected readings are available online and on reserve; there is no required textbook. There are a series of assignments and a final research project in lieu of a final exam. Foreign language ability is not required.

LAW 6531 International Commercial Arbitration

Fall, 3 credits (students who have taken international commercial arbitration course in the Paris program receive 1 credit; all others receive 3 credits). S–U or letter grades. J. J. Barceló III.

A study of arbitration as increasingly the dispute resolution method of choice for international trade and international business disputes (where the parties are from different countries). The course introduces the sources and hierarchy of norms governing international arbitration and then studies the legal issues and processes concerning enforcement of agreements to arbitrate, selecting and challenging arbitrators, choosing the procedure and applicable law in arbitral proceedings, and enforcement of the resulting arbitral award. The course gives special attention to the 1958 UN Convention on the Recognition and Enforcement of Foreign Arbitral Awards (and agreements to arbitrate) known as the New York Convention, and the UNCITRAL (U.N. Commission of International Trade Law) Model Law. The course's unique approach—patterned on the nature of international commercial arbitration itself—focuses on commercial arbitration as a transnational phenomenon and not on arbitration under any particular national

system. Course materials include court decisions, arbitral awards, national arbitration statutes, the rules of various arbitration institutions, and scholarly writings—drawn from all over the world.

LAW 6545 International Economics Law

Spring. 3 credits. S-U or letter grades.
O. Lienau.

Overview of the legal context of international business transactions. Units include the sale of goods, letters of credit, foreign investment, nationalization and privatization, finance and the role of international financial institutions, conflicts of law, sovereign debt restructuring, and a brief overview of trade law and dispute resolution mechanisms. When applicable, we pay attention to the complementarity and conflict between the law of international business transactions and other international law areas (e.g., human rights, environmental, emerging commitments to ideas of democracy/good governance).

LAW 6561 International Organizations and International Human Rights

Fall. 3 credits. S-U or letter grades.
M. B. Ndulo.

This course has two segments: (1) international organizations and (2) international human rights. The first segment provides a comprehensive legal analysis of problems concerning membership, the structure of the United Nations organization, and its functions in the context of the United Nations Charter. It also considers the use of force under international law with specific reference to the United Nations Charter. The course further considers the structure, jurisdiction, and functions of the International Court of Justice. The second segment introduces the theory, norms, and institutions central to the international human rights legal regime. The course explores the emergence and the enforcement of international human rights norms, the international machinery for the protection of human rights in the world community including the United Nations Human Rights Committee, the European Court of Human Rights, the Inter-American Court of Human Rights, and the International Criminal Court. Relevant decisions of these courts and of municipal courts are studied as well as basic documents.

LAW 6565 Interviewing Skills

Fall, meets for only part of semester.
1 credit. Limited enrollment. Satisfies skills requirement. S-U grades only.
A. J. Mooney.

Covers (1) the components of effective interviewing, particularly client interviewing; (2) the purposes and types of interviews, interviewing for various purposes, information-gathering techniques, verbal and nonverbal communication, ethical considerations, counseling and decision making; and (3) special contexts such as interviewing witnesses, difficult clients, and children.

LAW 6570 Introduction to Chinese Law

Fall. 3 credits. No prerequisites. S-U or letter grades. Z. Yu.

Introduction to the nature and function of law in China. Future legal practitioners and persons who may fill offices dealing with China will gain the knowledge needed to understand how successfully to interact with the Chinese legal system. The course has three parts: (1) a brief review of the historical and theoretical foundations necessary for an

understanding of contemporary Chinese law; (2) an introduction to the current legal system of the People's Republic of China (PRC), with particular focus on major legal institutions and processes; (3) an examination of selected issues in the substantive law of the PRC.

LAW 6592 Labor Law, Practice and Policy

Fall. 3 credits. S-U or letter grades.
A. B. Cornell.

Focuses on the federal laws regulating the organization of private-sector workers and unions and the process of collective bargaining in addition to addressing protected concerted activity unrelated to union organizing. Practice in the field of labor and employment law is highlighted along with important and timely public policy issues.

LAW 6613 Law and Development

Spring. 3 credits. S-U or letter grades.
C. Thomas.

Explores changing ideas about law's role in the economy and the development assistance practices these ideas have inspired. The idea that a "modern" legal system is central to economic development can be traced back to the 19th century. In the 1950s, this idea became the basis for organized development assistance. Today, agencies like the World Bank devote substantial resources to "law and development" and the "rule of law." This growing body of "law and development" practice and policy rests upon key premises regarding the definition of law, the relationship of law to market activity, the role of the state in economic governance, the definition of modernity, and the efficacy of external intervention. These assumptions change over time, and in turn change the policies and practices of the agencies. The course consists of three parts: (1) It sets up the intellectual and historical framework of the most influential development models since World War II (modest interventionism, export-led growth, post-Washington Consensus), examining the economic theories, policies, and legal ideas underpinning these models; (2) discussion of current development projects aimed at changing the legal regimes of developing countries, including judicial reform, land titling, market deregulation, and promotion of human rights; (3) examination of the transnational legal architecture of trade and labor, exploring its links to different experiences of national economic growth. Throughout this course, we reflect on how legal analysis can enhance our understanding of existent choices in a process often presented as inevitable as well as illuminate the moral and political questions involved in development projects.

LAW 6631 Law for High-Growth Business (also NBA 6890)

Fall. 3 credits. Limited enrollment. BR Legal students must preregister to receive first priority for course. S-U or letter grades.
Z. J. Shulman.

In-depth analysis of key issues that an emerging high-growth business must consider and address, including: (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital, (4) understanding capitalization structures and venture capital financing terms (common stock, preferred stock, etc.), (5) use of stock options as employee incentives, (6) fundamental employment practices, (7) proper establishment and utilization of boards of

directors, and (8) acceptable business practices and the Foreign Corrupt Practices Act.

LAW 6641 The Law Governing Lawyers

Spring. 3 credits. Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course. Letter grades only. W. B. Wendel.

Comprehensive overview of the law governing lawyers in a variety of practice settings, including transactional, counseling, and civil and criminal litigation. The course is not focused merely on the ABA's Model Rules, but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other sources of law. A major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and crimes. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

LAW 6651 The Law of Branding and Advertising: Trademarks, Trade Dress, and Unfair Competition

Fall. 2 credits. S-U or letter grades.
N. St. Landau and J. Campbell.

Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to "consumer products companies"; the impact of e-business and the internet on branding strategies and acquisitions; and complex proof issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

LAW 6661 Constitutional Law of the European Union

Fall. 3 credits. S-U or letter grades.
M. Lasser.

Introduces students to the law and institutions of the European Union (E.U.). It examines the composition, organization, functions, and powers of the E.U.'s governing bodies; analyzes the E.U.'s governing treaties and constitutional law; and studies the E.U.'s decision-making processes. The course also explores broader questions of political, economic, and legal integration.

LAW 6681 International Law and Foreign Direct Investment

Spring. 3 credits. S-U or letter grades.
M. B. Ndulo.

Studies legal aspects of direct foreign investments. It seeks to identify legal problems that are likely to affect a commercial investment in a foreign country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital; obstacles to the flow of investments to developing

countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; project financing; transfer of technology; arbitration; investment insurance; unification of trade law; and the settlement of investment disputes.

LAW 6701 Legislation

Spring. 3 credits. S–U or letter grades. J. Chafetz.

Much of the “law” that lawyers work with is statutory. This course examines both how legislatures go about doing their work (i.e., legislative process) and how courts and others use legislative output (i.e., statutory interpretation). We begin with a case study of the drafting and judicial interpretation of the 1964 Civil Rights Act. We then devote substantial attention to theoretical and practical issues in statutory interpretation, including theories of interpretation generally, the canons of construction, and the use of legislative history. We also examine the rules governing legislative behavior and debate, and we consider how the different roles of legislators and judges affect our interpretation of statutes and cases.

LAW 6713 Prelude to the U.S. Supreme Court and Labor and Employment Law

Winter intersession (students register in Oct. during spring registration period). 1 credit. Limited to 6 students with priority given to third-year students. Satisfies skills requirement. S–U grades only. A. Cornell.

Exposes students to a timely labor and employment law topic pending before the U.S. Supreme Court. The class travels to D.C. sometime during the semester to hear the oral argument. During the intersession period, students are required to read the briefs in the case, prepare a five-page paper on a related topic, and present their research in class. Over the break, students are required to read *The Nine: Inside the Secret World of the Supreme Court*, by Jeffrey Toobin or another book about the Court agreed upon by the professor. A one-page review of the book is also required. Additional reading may be assigned.

The course meets for two hours at the end of the fall examination period. During the second week in January, the class meets for two four-hour days to discuss the substantive law in the case and hearing student presentations. The discussion of the case continues on the six-hour drive to D.C. and debriefing on the return leg of the trip. Students have one class session in spring with professors who have clerked in the Supreme Court. During the intersession period, students are required to communicate with the professor regarding their paper topics and research agendas. Note: this course may require students to miss at least one day of class during the semester for travel.

LAW 6731 Dispute Resolution: Negotiation, Mediation, and Arbitration

Fall. 2 credits. Limited enrollment. Satisfies skills requirement. Letter grades only. J. P. Meyer and S. G. Yusem.

The field of alternative dispute resolution has virtually transformed the practice of law. Today, every lawyer has a professional responsibility to his or her clients to consider the most appropriate process available to resolve issues. The course explores the characteristics of negotiation, mediation, and arbitration as well as the ethical concerns

inherent in them, employing interactive and videotape dispute simulations, enabling the student to engage as a negotiator, dispute resolution advocate, mediator, and arbitrator.

LAW 6732 Cross-Cultural Negotiations

Fall, meets Oct. 20, 21, 22, 23 and Nov. 3, 4, 5, 6, 2010; attendance mandatory for all course sessions. 2 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: LL.M.s and third-year students more likely to benefit than second-year students in fall term. S–U grades only. D. Plant.

Workshop that gives law students an intensive opportunity to develop negotiation skills that can be used in the global marketplace to create and repair relationships and manage conflict. Classes consist primarily of interactive negotiations and communication exercises, together with some lectures. Problems to be negotiated have rudimentary IP overtones.

LAW 6737 National Security Law

Spring. 3 credits. S–U or letter grades. A. Rana.

In the wake of 9/11, the question of American national security has been at the forefront of legal and political debate. This course examines the current constitutional framework guiding national security institutions as well as its historical emergence—especially in the late 19th century and during the early period of the Cold War. We cover such themes as the allocation of power between Congress and the President on matters of foreign policy and war making, as well as the role of the judiciary in checking the political branches. Special attention is paid to how key statutes have shaped national security practices, including the National Security Act, the War Powers Resolution, the Foreign Intelligence Surveillance Act, and the Military Commissions Act. The course also explores such topics as American detention policy (treatment of unlawful combatants and prisoners of war) in the context of international humanitarian law and the use of deportation and immigration powers in the service of national security aims.

LAW 6738 Negotiation Skills

Spring, meets for only part of semester. 1 credit. Limited enrollment. Satisfies skills requirement. S–U grades only. J. Mollenkamp.

Attorneys in all practice areas negotiate frequently. Neither deal lawyers nor litigators can claim negotiation as “theirs” to the exclusion of attorneys in other practice areas. This course gives students an opportunity to learn and begin refining negotiation skills in various transactional and litigation settings. Students engage in several negotiations and receive frequent feedback about them.

LAW 6740 Online Legal Research: Free Sources

Spring, meets first 6½ weeks of semester. 1 credit. Limited enrollment. Satisfies skills requirement. Prerequisite: Lawyering or U.S. Legal Research; LL.M. students who have not taken U.S. Legal Research may be admitted subject to instructor approval. S–U or letter grades. I. Haight.

Free online sources of legal information have proliferated in recent years. This course prepares students to become thoughtful, adaptive researchers who can use these resources to their advantage. Students learn how to evaluate online content, develop strategies for finding legal and nonlegal

information, and use free Web-based applications to organize their research and keep current in their fields. In addition to helping students develop practical research skills, this course considers the role of free resources in the overall legal information context. Weekly problem sets are assigned, and students prepare a final project on a topic of their choice (subject to instructor approval).

LAW 6741 Online Legal Research: Subscription Sources

Fall, meets first 6½ weeks of term. 1 credit. Limited enrollment. Satisfies skills requirement. Prerequisite: Lawyering required for JD students. LL.M. students concurrently enrolled in U.S. Legal Research for LL.M. Students may take this course. S–U or letter grades. M. Morrison.

With the ongoing evolution of legal information, online legal research skills are fundamental. This half-semester course helps students become effective, efficient researchers by developing skills and strategies in using subscription-based sources, including BNA, Bloomberg, Loislaw, Westlaw, Lexis, and others. We explore when and how to use various resources, considering their relationship to each other and to traditional print sources. Weekly problem sets are assigned.

LAW 6742 Patent Law and Trade Secrets

Spring. 3 credits. Prerequisite: intellectual property survey course, e.g., LAW 6511, recommended but not required. Letter grades; S–U by permission of faculty member. O. Liivak.

Focuses on U.S. patent law giving comprehensive coverage of doctrinal elements and touching on key policy issues. No technical background is required.

LAW 6752 Persuasive Oral Presentations

Fall, meets only part of semester. 1 credit. Limited enrollment. Satisfies skills requirement. S–U grades only. J. Atlas.

Explores ways to compile, organize, summarize, and present information effectively. With particular attention to the concepts of clarity, brevity, and audience, students make—and critique—a series of in-class presentations designed to inform and persuade the listener.

LAW 6755 Pretrial Discovery: Depositions

Spring. 2 credits. Limited enrollment. Satisfies skills requirement. S–U grades only. M. A. Whelan.

A more in-depth deposition experience than the Deposition Skills course (LAW 6291), which is a concentrated 1-credit course. Teaches students how to prepare for and take depositions, how to defend a witness at deposition, and how to prepare a witness for deposition. Students have several more opportunities to take and defend mock depositions, to serve as witnesses being deposed, and to observe and critique others doing these things. Students also learn how to handle difficult witnesses and obstructionist opposing counsel. Students who take this course are not eligible to take LAW 6291 (Deposition Skills).

LAW 6781 Products Liability

Fall. 3 credits. Letter grades only. J. A. Henderson, Jr.

Applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. An overview of the relevant case law, statutes,

and administrative regulations, including the Restatement, Third, of Torts: Products Liability.

LAW 6791 Public International Law

Fall. 3 credits. S-U or letter grades.
J. Ohlin.

An introduction to the legal rules governing the conduct of states vis-à-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal and humanitarian law; terrorism; and human rights. Special attention is given to the law governing the use of force.

LAW 6801 Remedies in Litigation

Fall. 3 credits. Letter grades only.
E. L. Sherwin.

Examines the remedial consequences of lawsuits and the remedial choices open to litigants: essential strategic information for students considering a litigation-oriented practice. The course covers compensatory remedies, injunctions, and special remedies such as constructive trusts. It also clarifies the meaning of equity and the role of equity in modern American law, as well as the developing law of unjust enrichment. The course focuses on private law (tort, contract, property), but it also includes some coverage of remedies for enforcement of Constitutional rights and public law.

LAW 6821 Securities Regulation

Spring. 4 credits. Prerequisite:
Corporations/Business Organizations.
Students may enroll concurrently only with permission of instructor. S-U or letter grades. C. K. Whitehead.

Analyzes key issues under the U.S. federal securities laws, principally the Securities Act of 1933 and the Securities Exchange Act of 1934, with respect to the domestic and international offer and sale of securities. Includes a study of what constitutes a security, the public offering process, mandatory disclosure requirements for public companies, exemptions from registration (including exempt global offerings), and potential liabilities and sanctions.

LAW 6822 Social Science and the Law

Fall. 3 credits. S-U or letter grades.
V. Hans.

Examines the relationship of social science to law, focusing on the growing use of social science in the legal system. Over the past several decades, increasing numbers of social scientists have conducted systematic research on the operation of law and legal institutions. At the same time, social scientists themselves are testifying as experts in increasing numbers, encouraging lawyers and judges at both the trial and appellate levels to rely on social science evidence to decide cases. Social science research is also used as a tool in law reform. The aim of the course is to develop a critical analysis of these uses of social science in law and litigation. Are social scientists asking the right questions? Are lawyers, judges, legislators, and legal reformers using social science findings appropriately? Is the law's increasing reliance on social science problematic or advantageous—or both?

LAW 6841 Sports Law

Spring, meets for 10 weeks. 2 credits.
Recommended prerequisites: Antitrust Law and Labor Law. S-U or letter grades.
W. B. Briggs.

Traces the development of sports law in the United States. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, franchise movement, and constitutional law are addressed.

LAW 6844 State and Local Government

Spring. 3 credits. S-U or letter grades.
L. S. Underkuffler.

State and local governments have long been regarded as “laboratories” for possible solutions to difficult social issues, and as political institutions that are closest to the people. In addition to traditional concerns, state and local governments in recent years have been the primary actors in contentious areas such as health care reform, gay marriage legalization, campaign finance reform, property rights protection, and other issues. This course examines the powers of and legal restraints on state and local governments in state systems, and as a part of the American constitutional order. Topics include state constitutions, the rights that they confer, and their methods of interpretation; local government boundary formation and boundary change; state and local service, police, and taxing powers; the emergence of supra-local (regional) government; and the place of state and local governments in the federal system (including commerce clause, privileges and immunities clause, and taxation issues). The final part considers several areas of recent and future litigation as a way to illustrate the difficult issues of conflicting sovereignty that this area of law presents.

LAW 6861 Supervised Teaching

Fall, spring. 1 or 2 credits. S-U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review registration form available from online registration site or registrar's office.

LAW 6871 Supervised Writing

Fall, spring. 1, 2, or 3 credits. S-U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review the registration form available from online registration site or registrar's office.

LAW 6881 Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows

Full year. 4 credits. Prerequisite:
application process. Specific credit limits apply—carefully review registration form available from online registration site or registrar's office. S-U grades only.
Lawyering Program honors fellows serve for the full academic year as teaching assistants in the Lawyering course. With training and guidance from the Lawyering faculty, honors fellows work on myriad course-related tasks and some program-wide initiatives. In addition to meeting regularly with first-year students and critiquing papers, honors fellows may help design course assignments and documents, participate in simulations, and assist the research attorneys with the teaching of legal research. honors fellows also teach classes on the Bluebook. Additionally, honors fellows serve as educational mentors to first-year students and may participate in workshops on basic law-school skills. During

the spring semester, honors fellows may, under the direction of the dean of students, tutor first-year students.

LAW 6891 Taxation of Corporations and Shareholders

Spring. 3 credits. Prerequisite: Federal Income Taxation. LL.M. students must secure permission of instructor. S-U or letter grades. R. A. Green.

Examines the federal income taxation of corporate transactions, including incorporations, dividends, redemptions, liquidations, and reorganizations.

LAW 6892 Negotiated and Collaborative Decision-Making (also ILRLR 6892)

Spring. 3 credits. Limited enrollment.
Letter grades only. C. R. Farina and
M. J. Newhart.

Increasingly, systematic and collaborative techniques are being used both to address conflict and to reach decision in diverse settings, including the workplace, communities, and government. This course focuses on the nature of conflict; personal, cognitive, and cultural factors affecting collaboration and negotiation; systems for conflict management, and different orientations for negotiation, mediation, and facilitation. Private and public settings are considered; emerging processes are discussed. Case studies and exercises are used to develop critical thinking and reasoning abilities, improve negotiation skills, and illustrate the collaborative, creative, and response methods for resolving disputes. Course is cross-listed with ILR and open to ILR graduate students.

LAW 6921 Trial Advocacy

Spring. 4 credits. Limited enrollment.
Satisfies skills requirement. Prerequisite:
Evidence recommended. Students without
prior Evidence study should speak with
instructor before enrolling. S-U or letter
grades. G. G. Galbreath.

The study and weekly performance of the full range of trial techniques. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, opening statement, direct examination, cross-examination, objections, impeachment, exhibits, expert witnesses, child witnesses, pre-trial, and closing argument. In addition to a lecture and student exercises every week, students do a full-day jury trial exercise at the completion of the course on a weekend at a local court with an actual judge and jury. All weekly performances are digitally recorded and reviewed and then re-reviewed by another faculty member with the student individually. There are occasional written assignments and class attendance is mandatory for all exercise sessions and the first class lecture.

LAW 6941 Trusts and Estates

Fall. 4 credits. Prerequisite: first-year
Property. Letter grades only.
G. S. Alexander.

Surveys the law of succession to property, including wills and intestate succession, as well as the law of trusts. The course covers the basic aspects of the federal gift and estate taxes, but does not examine them intensively.

LAW 6981 WTO and International Trade Law

Spring. 3 credits. S-U or letter grades.
J. J. Barceló III.

The law of the World Trade Organization (WTO), including international trade theory, the basic WTO rules and principles limiting national trade policy, and the WTO dispute settlement process. A study of national (U.S.) fair and unfair trade law within the WTO framework (safeguard, antidumping, subsidies, and countervailing duty remedies). Consideration is also given to nontrade values within the WTO system (environment, labor rights, and human rights).

COLLOQUIUMS, SEMINARS, AND PROBLEM COURSES

All problem courses and seminars satisfy the writing requirement and are limited enrollment. However, students selecting a seminar or problem course that satisfies the skills requirement or the writing requirement may use the course to fulfill one of the requirements, but not both. A student selecting a Colloquium, Seminar, and Problem Course designated as fulfilling the professional responsibility and writing requirement may fulfill both requirements.

Admission to all problem courses and seminars is determined by lottery.

LAW 7012 Advanced Criminal Procedure: Post-Conviction Remedies

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: Criminal Procedure strongly recommended. Concurrent enrollment acceptable. S–U or letter grades. K. M. Weyble.

Examines the procedural and substantive law governing collateral challenges to criminal convictions in state and federal courts, and explores the tensions between the criminal justice system's competing interests in finality and production of reliable convictions and sentences. The course includes a historical overview of modern habeas corpus, studies substantive claims for relief common to collateral proceedings, and examines important procedural limitations on relief including the exhaustion requirement, procedural default, and nonretroactivity. Much of the course concentrates on the meaning, application, and impact of the modifications to the federal habeas corpus statutes made by the Antiterrorism and Effective Death Penalty Act of 1996.

LAW 7034 Advanced Legal Writing: Craft and Style

Spring. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. S–U or letter grades. U. Weigold.

Sharpens students' skills in predictive and persuasive legal writing and enhances their ability to create sophisticated legal arguments. Topics include advanced strategies for achieving clarity, precision, and conciseness, as well as effective tone, structure, and style. Students analyze the specific needs of legal and non-legal audiences and explore the ethical and professional issues inherent in legal writing. They examine interdisciplinary theories of persuasion and specialized techniques for crafting arguments at a high level of discourse. Students refine their writing skills by critiquing and rewriting short sample passages from a variety of legal contexts, as well as by creating original documents, like opinion letters, pleadings, motions, briefs, or

transactional documents. The grade is based on several writing projects and participation in class exercises and small-group work.

LAW 7052 Advanced Persuasive Writing and Appellate Advocacy

Fall. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. S–U or letter grades. B. R. Bryan.

Students master the art of persuasive writing and oral advocacy. Lecture topics include knowing your audience; writing a Statement of Facts that appears objective but subjectively persuades; what good judges are taught about good writing; methods to achieve clarity, brevity, and logic; issue selection; the effective use of precedent; establishing credibility; understanding nonlegal factors that influence decisions; the interplay between judges and their law clerks; appellate procedure and standards of review; the winning opening statement; and handling questions from the bench. Students critique actual briefs, judicial opinions and oral arguments for technique and persuasive value. Guest speakers, including judges of the United States Court of Appeals for the Second Circuit and federal prosecutors, provide advice and recommendations. Students apply what they have learned to the drafting of an appellate brief based on an actual court record. The brief is written in stages and followed by one-on-one critiques. Students also present an oral argument. Initial practice arguments are critiqued by the professor and student panels (to permit students to see an argument from a judge's perspective), and the final argument is judged by the professor.

LAW 7070 Animal Law

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. D. Campbell.

This cutting-edge and constantly evolving field of law will explore the statutory and case law in which the legal, social, or biological nature of nonhuman animals is an important factor. The course encompasses companion animals, wildlife, and animals raised for food, entertainment, and research, and surveys traditional law topics like torts, contracts, criminal law, constitutional law, and federal laws as they intersect with animals. Grades are based on participation in open-minded discussions and a paper that satisfies the writing requirement.

LAW 7072 Animal Rights

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. S. F. Colb.

Seminar examining the moral assumptions underlying the legal status and human use of nonhuman animals. State and federal law treat animals primarily as property, sometimes modified to take account of animals' subjective experience. We study a variety of legal and philosophical writings that address the legal and moral status of animals, including the debate between supporters of an "animal welfare" approach that aspires to the reduction of animal suffering, and supporters of an "animal rights" approach that aims to abolish the use of animals. Among the questions the seminar poses are: What capacities, if any, warrant shielding animals from various forms of exploitation? Do animals have interests in continued existence or merely in avoiding suffering? Might some but not other human uses of animals be

justified, and if so, which ones? Medical experimentation? The use of animal products (e.g., milk and eggs) for food? The keeping of animals as pets? In addition to the assigned readings and regular class participation, students are responsible for a research paper. Class participation represents 60 percent of the final grade.

LAW 7091 Biblical Law

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. C. M. Carmichael.

Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., the Ten Commandments), law and religion (e.g., institutions guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., the Sermon on the Mount), social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., an eye for an eye, incest rules, and unjust enrichment).

LAW 7101 Central Topics in Jurisprudence and Legal Theory

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Letter grades only. R. S. Summers.

This seminar addresses four related topics that cut across, yet arise within, all discrete law school courses: (1) the basic features of the overall form and complementary content of a legal system, (2) the distinctive relations between law, legal form, and justice, (3) the special nature of the resources of reason and argument as commonly deployed in the law, and (4) the classic "legal positivism vs. natural law" debate. In the usual law school course, many occasions arise to give such topics as these frontal and systematic treatment, yet there is little or no time to do so without sacrificing important course coverage. The well-educated lawyer should, however, be conversant with the general issues involved, and with at least some of the now very rich literature bearing on their resolution.

Seminar materials include a recent book by the instructor, *Form and Function in a Legal System—A General Study*, published by Cambridge University Press; draft chapters of a book in progress on legal reasons and reasoning by Robert S. Summers; judicial opinions; statutes; and other primary sources. Students have extensive opportunity for class discussion. The grade is based on a seminar paper and class discussion.

LAW 7102 Capital Punishment Law

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. K. Weyble.

Seminar examining the complex body of law governing imposition of the death penalty in the United States. It aims to provide a historical overview of capital punishment law, critically analyze its constitutional doctrines, and introduce aspects of criminal procedure that are unique to death penalty cases. The primary focus is on Eighth Amendment jurisprudence, including challenges to the arbitrary and discriminatory application of the death penalty, the development of modern death penalty statutes, the role of aggravating

and mitigating circumstances in the capital sentencing trial, and constitutional limitations on eligibility for the death penalty. The course also examines the performance standards for counsel in capital cases, difficult problems raised by volunteer defendants who wish to waive mitigation, and the constitutionality of certain methods of execution. The seminar is recommended for students interested in the Capital Trial Clinic or the Capital Appellate Clinic.

LAW 7132 Constitutional Law and Theory Colloquium

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: first-year Constitutional Law. Letter grades only.

J. Chafetz and M. Dorf.

Examines current and classic topics in advanced constitutional law and constitutional theory. Roughly half of the sessions feature presentations of works in progress by constitutional scholars. During the other sessions, assigned readings mostly consist of canonical works in the field. For class meetings in which no faculty presentation occurs, responsibility for presenting the assigned reading rotates among students in the colloquium. Each student produces a research paper on a topic approved by the instructors.

LAW 7144 Colloquium on Law and Development in the Middle East and North Africa

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. C. Thomas.

Begins with a comparative review of contemporary approaches to law and development, from the era of 20th-century decolonization to the present day, then considers particular challenges in the region related to democratic governance and market growth. The bulk of the course features speakers from Cornell and other universities who present their work for critical analysis by the class. Students are required to write six short papers, due in advance of the class session, and make one class presentation at the end of the semester.

LAW 7162 Contemporary American Jury

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. V. Hans.

Evaluates claims about the benefits and drawbacks of the contemporary American jury. Drawing on the work of legal scholars and social scientists, we explore a range of topics relating to criminal and civil juries, including: jury selection; the use of jury consultants; juror perceptions of attorneys, evidence, and experts; individual and group decision-making processes; jury instructions; jury deliberations; damage awards; juries in death penalty cases; and jury reform. By studying legal and empirical scholarship about the jury, seminar participants should develop insights into jury trial functioning and policy debates over the jury's role.

LAW 7164 Counseling the Modern Corporation—Issues and Challenges

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. Prerequisite: Business Organizations. S-U or letter grades. V. Maffeo.

Explores practical issues facing counsel for a public corporation. Using case studies based on actual situations, students examine legal issues from the perspective of the “in-house”

lawyer who is also a member of a senior management team. Topics include areas such as financial reporting and shareholder communications, executive compensation, employment disputes, and international compliance issues. There is a focus on ethical challenges and conflicts of interest. The course also considers the process of conducting an internal investigation, and defending the corporation and its employees from criminal charges. It is assumed that the student has taken an introductory course in Corporate law and has some basic familiarity with Federal Securities law. The course does not require extensive knowledge of Securities law and is not intended to be a substitute for such a course for individuals who intend to practice in that area.

LAW 7170 East Asian Law and Culture Seminar

Fall. 3 credits. May be repeated with permission of instructor. Limited enrollment. Everyone wishing to take course for credit must attend first class. Satisfies writing requirement. Cannot be taken concurrently with LAW 7171. S-U or letter grades. A. Riles.

With many of the world's most dynamic economies now in East Asia, today's law graduates are more likely than ever to be involved with legal issues from that region. At the same time, legal problems in East Asia—from human rights, to judicial and legal education reform, to conflicts over labor, environmental, and minority rights, to local debates about medical and scientific regulation and ethics—are invaluable sources of comparative insight about our own legal system. This seminar introduces students to the challenges and opportunities of studying law and culture in East Asia from a sophisticated interdisciplinary perspective. Students participate in a semester-long colloquium and conference series on law and culture in East Asia in which Cornell faculty and guest speakers from around the world present new research on current legal issues in the region. Students are required to read a series of background materials in preparation for each seminar and to write six three- to five-page papers responding to the presentations.

LAW 7171 East Asian Law and Culture Colloquium

Fall. 1 credit. Does not satisfy writing requirement. Cannot be taken concurrently with LAW 7170. S-U grades only. A. Riles.

Semester-long colloquium and conference series on law and culture in East Asia in which Cornell faculty and guest speakers from around the world present new research on current legal issues in the region. Attendance and participation in all of the six to eight scheduled colloquia as well as the annual Clarke Lecture and Conference are required. Students prepare a three- to five-page response paper summarizing key findings of one workshop event for a wider public audience over the course of the semester.

LAW 7172 Corruption Control

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. R. Goldstock.

Seminar analyzing the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and nontraditional remedies may be used to reduce the frequency and impact of corrupt

activities, and the constitutional and statutory problems implicated by such approaches.

LAW 7194 Empirical Legal Studies Colloquium

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. M. Heise.

In-depth exploration of empirical legal studies, which involves the application of systematic research methods to the study of legal issues. Issues that have been studied using these methods include the structure of the legal profession, the influence of race and gender in legal decision making, the impact of educational policies and practices, reforms in medical malpractice and civil justice, corporate law and finance, bankruptcy, employment discrimination, and criminal sentencing.

LAW 7232 Ethical Issues in Criminal Investigations, Prosecutions, and Policy

Fall. 3 credits. Limited enrollment. Satisfies ethics requirement; can be used to satisfy writing requirement or skills requirement, but not both. S-U or letter grades.

M. Bachrach.

Seminar exploring the role of government lawyers and defense counsel in complex investigations and prosecutions, including cases and matters involving terrorism. We examine recent cases and proceedings, including, for example: the disbarment of Michael Nifong, prosecutor of the Duke Lacrosse team members; cases and new guidelines regarding disclosure in criminal cases; recent cases against criminal defense attorneys Lynne Stewart, Robert Simels, and Arienne Irving; the KPMG case (United States v. Stein) and issues relating to deferred prosecutions. We also address the role of government lawyers in advising on the treatment of detained persons during interrogation. In doing so, we read recently declassified memoranda and reports written by and about lawyers from the Office of Legal Counsel of the Department of Justice on the use of torture in investigations conducted as part of the war on terrorism.

LAW 7261 Feminist Jurisprudence

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. C. G. Bowman.

Seminar examining the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. After studying the historical emergence of sexual equality law in the United States, we discuss a number of paradigmatic feminist legal theories, including formal equality, MacKinnon's “dominance” theory, relational feminism, pragmatic feminism, and various anti-essentialist theories (e.g., critical race feminism and intersectionality). We then proceed to apply these analytical structures to various substantive areas of law of particular concern to women, including but not limited to rape and other types of violence against women; pornography; prostitution; abortion, surrogacy and other reproductive rights issues. Students present their own research on other issues to the class. Grade based on paper and class participation.

LAW 7281 First Amendment Theory

Spring. 3 credits. Limited enrollment.

Satisfies writing requirement. S-U or letter grades. S. H. Shiffrin.

An examination of competing theories about the scope and justification of freedom of

speech, freedom of press, and freedom of religion. The seminar considers free speech theories focused on liberty, formal equality, self-government, public morality, dissent, and anti-domination; the relationship of various conceptions of democracy to freedom of press; and various conceptions regarding the optimal relationship between church and state. Topics at issue include commercial speech, pornography, flag burning, subsidies of the arts, campaign finance, the structure of the mass media, government involvement with religious symbols, and vouchers to religious schools.

LAW 7283 Citizenship in American Constitutional Thought

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. Rana.

What has it meant in the past and what does it mean today to be an American? What are the benefits and responsibilities entailed by membership in the polity, and to what extent have these benefits presupposed formal American nationality? This seminar uses the law of citizenship to explore the historical and philosophical linkages in the United States between full inclusion and judgments about property ownership, race, gender, and immigration. In the process, we also assess how distinct ideologies (ranging from republican self-government to the national security discourse) have altered accounts of political participation, economic independence, and external threat. These topics are addressed by a close reading of landmark cases (including *Cherokee Nation v. Georgia*, *Dred Scott v. Sandford*, *Minor v. Happersett*, *United States v. Wong Kim Ark*) as well as seminal books in the political history and theory of U.S. citizenship.

LAW 7291 Global and Regional Economic Integration: The WTO, EU, and NAFTA

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. J. J. Barceló III.

Seminar studying the process of international economic integration occurring both globally and regionally. In the global context it takes up a basic introduction to WTO law and selected problems. In the regional context it takes up a basic introduction to the European Union, including the institutional and lawmaking processes, the direct effect and supremacy of EU law, and the development of the four freedoms (goods, services, persons, and capital). A basic introduction to NAFTA is also included. Student seminar papers may deal with issues arising within any of the three regimes. Comparative studies are encouraged.

LAW 7305 Housing Discrimination

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. E. Penalver.

Seminar exploring the phenomenon of housing discrimination in the United States. Readings focus on empirical studies of the frequency, causes and consequences of discrimination in private housing markets as well as the law and policy that has developed to combat discrimination.

LAW 7310 Intellectual Property in an Open Innovation World

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. M. Phelps.

Intellectual property is probably the most important yet least understood subject in business, law, and economics today, but, it's increasingly condemned in some quarters as the tool of rich countries and multinationals. Yet research proves it's the greatest tool any nation has to stimulate broad economic growth. It comprises 70 percent of all corporate wealth, but not one in 100 CEOs have any idea how to exploit it to best advantage. The U.S. patent office is without question the most obscure and arcane agency in the entire federal government, yet it is also the single-greatest facilitator of private-sector job creation in the nation.

The approach to this subject is a 50/50 mix of business and legal content. This topic will examine the importance of intellectual property in a world characterized by design elements as much as manufacturing capability. It examines the basics of intellectual property, what it is, how it came about and why it is important. It answers the question "if it is so important in this post industrial world, then why do senior executives pay so little attention to it in the tactical or strategic management of their businesses." Is this just a problem for high-tech and pharma or does it persist in even more mundane industries? And, what of start-ups and venture capital efforts? It explores how intellectual property is relevant and important in trade issues between countries from an historical perspective and currently, especially with respect to China, other Asian nations, and the United States. This course examines the procedural management of intellectual property from a country's perspective; which do it well and why, and the role of the judicial systems, respectively.

There is an emphasis on the U.S. system with special attention to the role of the Court of Appeals for the Federal Circuit and recent Supreme Court involvement and activism in intellectual property issues.

LAW 7311 Immigration and Refugee Law

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: Constitutional Law. S-U or letter grades. S. W. Yale-Loehr.

Explores the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. The course also raises some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. In approaching these questions, the course draws on diverse historical, judicial, administrative, and policy materials.

LAW 7321 International Criminal Law

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Letter grades only. M. B. Ndulo.

Seminar examining the questions surrounding international criminal law as a separate discipline and the sources of and basic principles underlying the subject. Particular attention is paid to the question of jurisdiction over international crimes. It considers (1) international crimes such as aggression; war crimes, crimes against humanity, terrorism, and torture; (2) the treatment of past human rights violations in post-conflict situations; (3) procedural aspects of international criminal law and the forums that deal with international crimes. In that context, it looks at the structure, jurisdiction, and jurisprudence of Truth Commissions; the International Criminal Court (the Rome Statute); the former Yugoslavia Tribunal; Rwanda Tribunal and extradition and mutual legal assistance. The format is class discussions of assigned readings. Final assessment is based on participation in class discussions and a written paper on a subject falling within the themes of the seminar. Paper topics must be submitted to the instructor for review not later than the third week of class. Each student is expected to give a presentation based on his or her paper to the class.

LAW 7322 International Taxation

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: Federal Income Taxation. LLM students must secure permission of instructor. S-U or letter grades. R. A. Green.

Seminar examining the principles underlying the U.S. taxation of U.S. persons who earn income abroad and the U.S. taxation of foreign persons who earn income in the United States.

LAW 7371 Islamic Law and History

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. D. S. Powers.

Designed to introduce law students to the terminology, principles, and concepts of classical Islamic law. After discussing the origins and evolution of Islamic law, we turn first to the organization of qadi courts (procedure and evidence) and then to specific areas of the law, e.g., personal status (marriage and divorce), the intergenerational transmission of property (bequests, gifts, and endowments), commerce (contracts, hire, allocation of loss), and crime. The application of legal doctrine to actual disputes is analyzed through the reading of expert judicial opinions or fatwas (in English translation) issued in connection with medieval and modern court cases.

LAW 7374 Judicial Opinion Writing

Fall. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. S-U or letter grades. J. Mollenkamp.

Judicial opinions are a fundamental part of our legal system. Well-written opinions share many common characteristics, making them effective resolutions of current disputes as well as helpful precedent for the resolution of future disputes. This course is excellent for future judicial clerks as well as second-year students who may want to apply for clerkships next year. It includes a study of cases briefed and argued at the Supreme Court during the current fall term and require students to research, write, and revise majority and dissenting opinions in various cases based upon a careful consideration of the briefs, an oral argument, and any applicable precedent.

LAW 7392 Jurisprudence of War

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. J. Ohlin.

An investigation of the deeper theoretical and conceptual problems underlying the Law of War, including current constitutional developments regarding habeas corpus rights for battlefield detainees; the categories of enemy combatant and War on Terror; the legal definitions of terrorism and torture; the collective nature of genocide, aggression, and crimes against humanity; and modes of liability in international criminal law, including the doctrines of conspiracy, joint criminal enterprise, co-perpetration, and command responsibility. Students are required to write a seminar paper on a topic chosen in consultation with the professor.

LAW 7393 Jurisprudence and Normative Political Theory (also GOVT 7606)

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. A. Smith.

A seminar for graduate students in the normative political theory field and law students. We begin with Hart's classic work, *The Concept of Law*, and then consider Dworkin's criticisms. Then we detour to the Rawls versus Sen debate to place "meta" questions pertaining to distributive justice, rights, and deliberation on the table. Returning to legal theory, we consider Michelman's work on Rawls, social rights, and the constitution, and Cover's theory of plural nomian fields. Dworkin's confidence in the judiciary raises serious questions about the role of judicial review in a liberal democratic society; we consider the critical approaches of Waldron, Tushnet, and Segal in this regard. Finally, we read several works from the critical race theory field; in fall 2010, we concentrate on the writings of Derrick Bell.

LAW 7395 Labor and Employment Arbitration

Fall. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. S-U or letter grades. M. L. Goldstein.

Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

LAW 7561 Legal Aspects of Commercial Real Estate Development

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: first-year Property course or equivalent. Letter grades only. J. E. Blyth.

Using several written memoranda and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, and memoranda thereof; representations and warranties; disclosure required of brokers and sellers; attorneys as brokers; notarial misconduct; conveyancing and surveys; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About half of the semester is devoted to commercial leases, conventional financing, and alternatives to conventional

financing (e.g., tax-exempt financing, mezzanine financing).

LAW 7571 Legal Narratives

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Letter grades only. E. L. Sherwin.

In-depth look at the factual, legal, and social background of notable legal decisions. The seminar is based on a recently published series of texts presenting the "stories" behind well-known first-year cases. After reading and discussing a selection of cases from these sources, each student prepares and presents his or her own case history of a case selected by the student, working from briefs, related legal material, secondary sources, and, if possible, contacts with lawyers and parties. Grades are based on papers and presentations.

LAW 7572 Litigation Drafting

Fall. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. Letter grades only. L. Freed.

Focuses on drafting documents typically encountered during the pretrial phase of civil litigation. As drafters, lawyers must think strategically about, and understand the conventions unique to, each document. Students have repeated opportunities to develop essential drafting and professional skills through a combination of in-class exercises and take-home writing assignments related to pleadings, motions, discovery requests, affidavits, demand letters, and settlement agreements.

LAW 7578 Markets, Democracy, and the Rule of Law

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. O. Lienau.

The promotion of markets, the spread of democracy, and the promulgation of the rule of law are frequently presented as three interrelated goals at both the domestic and international levels. In this seminar, we consider the multiple potential meanings embedded in these goals and the degree to which they may be complementary and/or in tension. The seminar includes a theoretical unit (considering, among other things, the degree to which the definitions of each of these elements are settled or contested), a domestic empirical unit, and an international empirical unit. We discuss both academic scholarship and cases/case studies that highlight these issues. Students write a paper and give a brief presentation to the seminar on their paper topic.

LAW 7580 Markets, Morals, and Methods

Spring. 3 credits. Limited enrollment. Open to law students and graduate philosophy and economics students. Satisfies writing requirement. Letter grades only. R. C. Hockett.

Seminar covering the foundations of choice, agency, and welfare—matters that lie at the core of normative legal and economic theory. It is jointly run by Kaushik Basu, chair of Economics at Cornell, and Robert Hockett, of the Cornell Law School. Readings, guest speakers, and class discussion focus on the nature of preferences, reasons, and norms, as well as (1) their interrelations and (2) their roles in guiding human decision and action. A central theme is the question whether and to what degree welfare, well-being, and wealth for that matter can be understood apart from

and even as determinative of normative propriety ("rightness" and "wrongness"), or whether instead these concepts presuppose a prior conception of normative propriety. Many legal and economic theorists seem to assume the former, but this assumption can be—and in this course is—examined critically. Approximately half of the class sessions feature presentations by distinguished legal theorists, welfare economists, and philosophers. The other class sessions are devoted to discussion of papers sent in advance by these guests, as well as complementary work by others.

LAW 7591 Mergers and Acquisitions

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: prior or concurrent basic Business Organizations/Corporations class at Cornell or another U.S./Canadian law school; prior (not concurrent): basic Contracts class from Cornell or another U.S./Canadian law school or basic contracts class (from any other law school) deemed comparable by the professors. S-U or letter grades. M. I. Greene and R. A. Hall.

Develops the lawyering skills required by an attorney advising a client who is selling or acquiring a business. Individual drafting exercises, as well as strategy discussions and negotiations by student teams acting as counsel to the buyer or seller, are interspersed with lectures on the business acquisition process and analysis of selected publicly available documentation of actual acquisition transactions. The typical chronology of an acquisition: negotiation by the buyer and the seller of the basic terms of the deal including selection of structure (sale of stock or assets; merger); drafting and negotiation of a term sheet or letter of intent; due diligence investigation; drafting and negotiation of the definitive acquisition agreement; handling of problems encountered between the execution of the agreement and the closing of the acquisition; and the closing.

LAW 7593 Income Taxations of Corporate Mergers and Acquisitions

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: Federal Income Taxation unless (1) a student believes he or she has an equivalent academic or professional background, AND (2) receives my advance permission to enroll. S-U or letter grades. R. Schnur.

Advanced seminar that, after reviewing the basic federal income tax principles governing taxable and nontaxable corporate mergers and acquisitions, introduces students to some of the more complex transactional tax issues and explores how these tax concepts are utilized in structuring acquisition transactions. The emphasis is on domestic rather than cross-border acquisitions. There is no final examination, but students are asked to prepare several planning memoranda directed at different merger and acquisition fact patterns.

LAW 7594 Neuroscience and the Law

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S-U or letter grades. P. Johnson.

Seminar examining key findings and implications for the law in the rapidly expanding field of neuroscience. Topics include the neurobiology of decision-making and memory, issues of gender difference in brain function, and the neurophysiology of

trauma, addiction, and aggression. Attention is also given to recently developed technologies for observing the human brain, the history and philosophy of clinical diagnosis as related to psychopathology and deviant behavior, and to prisons as asylums. The goal is to enable students to integrate cutting-edge scientific findings and related controversies into their understanding and approach to legal practice in such areas as criminal justice, mental health disability, domestic violence, gender equity, and child welfare.

LAW 7594 New York Civil Practice

Spring. 3 credits. Limited enrollment. Satisfies ethics requirement; can be used to satisfy writing requirement or skills requirement but not both. Prerequisite: full year of Civil Procedure. S–U or letter grades. N. E. Roth.

Explores the idiosyncrasies and intricacies of New York practice and procedure, with a particular focus on practice in the New York Supreme Court (the primary court of general original jurisdiction in New York). The course also examines rules concerning civility in litigation and the ethical boundaries of zealous representation.

LAW 7601 Organized Crime Control

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. R. Goldstock.

Explores the challenges organized crime poses to society and to traditional law enforcement techniques. Students undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of recalcitrant witnesses before the grand jury. The RICO statute is explored in detail as well as a variety of noncriminal remedies including forfeiture and court-imposed trusteeships.

LAW 7631 Pretrial Practice, Litigation Strategies, and Remedies in Commercial Litigation

Fall. 3 credits. Limited enrollment. Satisfies professional responsibility requirement and writing requirement. Prerequisite: Civil Procedure and Contracts or Contracts in a Global Society. S–U or letter grades. A. M. Radice and M. D'Amore.

Seminar studying the strategies of complex commercial litigation, focusing on case development in the pretrial period. It addresses strategies and approaches to pleadings, jurisdiction, motions, pretrial discovery, and remedies (e.g., preliminary injunctions, damages) in the context of difficult and unclear legal issues. Hardball litigation techniques and ethical considerations are considered as well as the use of litigation to achieve business goals. Actual litigated cases are dissected, and papers in the form of briefs and memoranda are written on each. Since 90 percent of commercial cases settle before trial, this seminar is a real-life presentation of the commercial litigation process.

LAW 7652 Human Free Will and Criminal Law (Seminar in the History of Biology) (also HIST 1450, BSOC/STS 4471, BIOEE 4670)

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. S–U or letter grades. W. Provine.

Aims at understanding human free will. We try to understand the concept and its importance in society, law, and its connections to blame, retribution, punishment, and revenge. We do

our best to define human free will. Some of us find it unintelligible, given the evolutionary origin of humans. Others may consider it a gift of some god, or forbidden by other gods who truly control everything. Still others may find a way to see evolution of humans as the source of approximate free will. Guest speakers will include David Levitsky in Psychology and Nutrition, Derek Pereboom in Philosophy, and Reverend Janet Shortall, CURW. The written requirement is a serious research paper.

LAW 7781 Theories of Property

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Prerequisite: Property. Letter grades only. G. S. Alexander and H. Dagan.

The first set of readings cover the major theories of property, both positive and normative, including the labor theory, the personhood theory, welfarist theories, and rights theories. We then cover how ownership and property rights are structured, both legally and in social practice. Topics range from the numerus clausus problem to commodification to the role of social norms. We also discuss the role of social responsibility as a regulative ideal in property law and the possible ways of conceiving of that ideal.

The seminar also covers four grounded topics: information, the family, the home, and transitions, both legal and political. Information includes but is not restricted to intellectual property. It also covers such problems as the sale of body parts and rights to artifacts of cultural heritage. Family includes marital property and inheritance and intergenerational justice. Home covers a broad spectrum of problems, ranging from landlord-tenant relations to common interest communities to aboriginal land claims. Finally, Transitions treats touches on property problems that result from transitions to new political and legal regimes. These problems range from eminent domain and so-called "takings" to reparations for historic injustices. Throughout this part our aim is to bring theoretical problems concerning property to life by grounding them in some of the most persistent and contentious problems facing societies around the world.

LAW 7783 Topics in Intellectual Property

Spring. 3 credits. Limited enrollment. Satisfies writing requirement. Letter grades only. O. Liivak.

Sizable disagreement and controversy surround many areas of intellectual property. This seminar explores these disputes. By surveying the academic literature the seminar aims to introduce, understand, and ultimately critique the arguments being made for and against various aspects of intellectual property.

LAW 7784 The War on Drugs

Spring. 3 credits. Limited enrollment. Can be used to satisfy writing requirement or skills requirement, but not both. S–U or letter grades. M. J. Satin.

The United States incarcerates more people for drug offenses than any other country. Of the more than 2 million people in prisons or jails, approximately one-quarter have been convicted of a drug offense. This seminar examines America's War on Drugs, including its evolution and development over the past 40 years, and its social and economic consequences. Specific attention is paid to its impact on the poor and people of color. The seminar examines the basis for and effect of

disparities in sentences between crack and cocaine offenses as well as recent federal cases and legislation on this subject. Other topics include mandatory minimum sentences, drug testing in schools, drug treatment and drug court, jury nullification, U.S. foreign policy toward countries supplying drugs, the drug policies of other countries, and the movement to legalize drugs.

LAW 7785 War Crimes Trials

Fall. 3 credits. Limited enrollment. Satisfies professional responsibility writing requirement and writing requirement. S–U or letter grades. M. Rosensaft.

Beginning in November 1945, in an unprecedented attempt to bring war criminals to justice, more than 20 senior government officials and military leaders of Hitler's Third Reich were indicted and tried, in what has become known as the Nuremberg Trial, for crimes against peace, war crimes, and crimes against humanity. Earlier that fall, the SS commandants, officers and guards who had been arrested by the British upon the liberation of the Bergen-Belsen concentration camp, had been tried before a British military tribunal. These were the first of numerous trials of Nazi war criminals and related criminal and civil proceedings arising out of the Holocaust. This seminar examines legal and ethical issues raised in these and other trials of Nazi war criminals and individuals accused of collaborating with the Nazis in perpetrating crimes against humanity, including the Eichmann Trial in Jerusalem, the Auschwitz Trial of former SS officials and guards held in Frankfurt-am-Main, Germany in 1963–65, the 1963–64 Tel Aviv trial of Hersz Barenblat, the head of the Jewish police in the ghetto of Bedzin, Poland, and the trials of Klaus Barbie (1987), Paul Touvier (1994), and Maurice Papon (1997–98) in France.

LAW 7991 Cornell Research Colloquium

Fall. 3 credits. Limited enrollment. Required for all first-year J.S.D. candidates. Then open first to L.L.M. students and next to J.D. students to the extent places are available. Visiting scholars and exchange students from foreign institutions highly encouraged to attend in an unofficial capacity. Satisfies writing requirement. J.S.D. and LL.M. program grading: H, S, U; J.D. program: letter grades only. M. Lasser.

Course in advanced academic research methodology designed to prepare students to engage in doctoral-level research, analysis, and writing, especially in comparative and international contexts. How is the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines and/or cultures? How is interdisciplinary work to be accomplished? The early portions of the course involve discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portions, students present and critique their methodologically reflective research projects. External speakers present their work in progress for the purposes of generating methodologically oriented discussion.

CLINICAL COURSES AND EXTERNSHIPS

All clinical courses and externships have limited enrollment and satisfy the skills requirement.

Admission to all clinic courses is instructor selected.

Detailed clinical descriptions may be found at:

<https://support.law.cornell.edu/students/forms/ClinicalCoursesAndExternshipsDescriptions.pdf>

LAW 7802 Capital Appellate Clinic

Fall. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Criminal Procedure, Evidence, and either Capital Punishment or Post-Conviction Remedies Seminars preferred but not required. S-U or letter grades.

J. H. Blume and K. M. Weyble.

Students assist in the preparation of appellate briefs in selected capital cases. They work intensively with the record, research legal issues, and draft arguments. Unlike most of the death penalty clinics, no travel is expected.

LAW 7811 Capital Punishment Clinic: Post-Conviction Litigation

Spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Criminal Procedure, Evidence, and Capital Punishment Seminar preferred but not required. S-U or letter grades.

S. L. Johnson and K. M. Weyble.

Death penalty litigation: investigation and the preparation of petitions, memoranda, and briefs. Students work on two or possibly three capital cases. Case selection depends on both pedagogical factors and litigation needs of the inmates. Students read the record and research legal issues. Some students are involved in investigation, while others assist in the preparation of papers. All students are included in discussions regarding the necessary investigation, research, and strategy for the cases. Note: This course may require off-premises travel. The Cornell Death Penalty Project will reimburse students for reasonable travel expenses.

LAW 7812 Child Advocacy Clinic I

Spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. S-U or letter grades. A. J. Mooney.

Students participate in the representation of children who are the subject of family court proceedings. Cases are likely to involve children who are the subjects of petitions such as abuse or neglect, custody, termination of parental rights, status offense, and juvenile delinquency. Students interview clients and their families, prepare documents such as pleadings, motions, pretrial memos, and proposed findings of fact, and participate in court conferences and hearings. The in-class component addresses cross-disciplinary concerns such as working with other professionals and using social science to assist a client. Additionally, the course focuses on child development and the particular ethical concerns involved with the representation of children. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7833 Criminal Defense Trial Clinic

Fall. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Evidence recommended. S-U or letter grades L. Salisbury.

Students represent defendants in nonfelony, nonjury criminal cases. The course has both a classroom and courtroom component. The classroom component focuses on all aspects of the handling of a criminal case, including criminal law and procedure, ethics, trial strategy, plea bargaining, and trials. The courtroom component involves attendance at court proceedings, including pretrial conferences. Each student potentially may interview clients and witnesses and prepare clients and witnesses for trial. All students conduct negotiations with the District Attorney's Office, do legal research, conduct fact investigation, prepare discovery demands, and engage in motion practice. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7831-2 Full-Term Externship

Fall, spring. 12 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. S-U grades only. G. G. Galbreath.

Students earn 12 credit hours as externs working full time at approved placement sites (most are with nonprofit organizations or governmental agencies) during the fall or spring semester of their third year or the spring semester of their second year. A written application for the course must be submitted to the instructor and approved during the semester preceding the semester the student plans to participate. The student must be supervised/mentored by an attorney and engage in meaningful and "attorney-like" work at the placement that furthers the student's education and career goals. In addition to his or her work responsibilities for the placement, the extern prepares weekly journal entries, engage in regular electronic communication with the other extern and instructor, hosts the instructor for a site visit, and does a written evaluation of the placement experience. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7855 International Human Rights Clinic

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; International Human Rights and/or Public International Law recommended. Letter grades; S-U with permission of instructor. S. Kalantry.

Students learn substantive human rights law as well as human rights lawyering and advocacy skills. They learn to describe issues in human rights terms, formulate demands using human rights accountability tools, and develop strategies that utilize key features of human rights law. Students develop their international research and writing, and communication skills by working in teams on projects for international organizations and judges. The projects may involve legal action such as impact litigation, legal assistance and counseling, or fact-finding and reporting or human rights education and training, including judicial training. Projects have included drafting a petition submitted in an Indian high court challenging the practice of witch-hunting, fact-finding and drafting a report submitted to the Inter-American Commission on Human

Rights on the right to education in Colombia, researching and drafting a training manual for Indian judges on international fair trial standards, and conducting interviews and drafting a report on the barriers to justice faced by domestic violence victims in New York state who become criminal defendants. Some (but not all) projects may involve optional international travel and some projects may involve human rights issues within the United States. For more information about the clinic, visit our website: www.lawschool.cornell.edu/academics/clinicalprogram/int-human-rights/index.cfm.

LAW 7803 Advanced International Human Rights Clinic

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor and International Human Rights Clinic. Letter grades; S-U with permission of instructor. S. Kalantry.

Students are team leaders in projects undertaken by students in the International Human Rights Clinic. Students advise other students on substantive as well as procedural issues relating to the clinic. Students also continue to conduct research and draft reports and court documents.

LAW 7871 Labor Law Clinic

Spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; preference given to students who have taken Labor Law. It is helpful to have taken Administrative or Employment Law, but not required. S-U or letter grades. A. Cornell.

Gives students a practical opportunity to learn labor law, while making meaningful contributions to the labor movement and working people. This clinic combines a substantive component with practical experience. Students advise labor unions on a variety of legal issues that surface during the semester and may have the opportunity to represent unions in different forums. Students communicate directly with union representatives and are required to sort through the facts, research the issues, and provide information and advice. Students routinely draft legal memoranda, prepare and file pleadings and briefs as required. Students may have the opportunity to represent unions at hearings, mediation, or arbitration. Students may also be required to observe a hearing before the National Labor Relations Board, Public Employment Relations Board, or an arbitration. Students have also been invited to observe the collective bargaining process. A small number of students will have the opportunity to dedicate their clinical time to international labor law. Interested students can support the work of nonprofit organizations or global union federations with ongoing cases or projects. Note: This course may require off-premises travel. Please contact the professor if this is an obstacle.

LAW 7872 Land Use, Development, and Natural Resource Protection Clinic

Spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Land Use and/or Water Law Clinic recommended. S-U or letter grades. K. S. Porter, C. G. Bowman, and E. M. Penalver.

Issues of how land use and development may be managed to control, protect and conserve natural resources, particularly water, are coming to the forefront of national and

international policy. Land use policy is fundamental to both economic development and the protection of natural resources. The rich and complex body of law that balances often-competing needs of different stakeholders involves areas of law as diverse as land use, real estate, property, tax, contract, tort, local government, and water and environmental law. Often, even when stakeholders share a uniform vision, the transaction costs involved in executing alternative development plans are prohibitively high. This clinic provides students with the opportunity to work hands-on to identify, design and implement economically and politically viable solutions to environmental problems arising from land use decisions. Participating students assist clients such as developers, government agencies, community leaders, and public interest groups with a wide range of services. An increasingly critical concern is the role of land use and development on the quantity and quality of water resources. Another high priority, of national as well as local importance, is the development of energy resources such as natural gas or wind farms, and the complexities of the legal issues posed by their land use impacts.

Potential projects include drafting/reviewing municipal ordinances and inter-municipal agreements; consulting on design parameters for development sites (i.e., what type of density is possible, what type of variances are available); drafting petition/explanatory documents for clients who wish to obtain variances; resolving compliance issues with state and local laws; attending meetings, and drafting briefing papers or giving presentations for clients such as local governments and agencies. Because this clinic offers a great variety of transactional work, it will be of benefit to most students who are interested in transactional practices, particularly those interested in a career in real estate, land use, energy issues, finance, general practice, and environmental law. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7881 Law Guardian Externship

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. S-U or letter grades. A. J. Mooney.

Students are placed at the local Attorneys for Children office, where they assist the attorneys in the representation of children in abuse and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases. Students accompany attorneys on home and school visits and attend court conferences, treatment team meetings, and various Family Court hearings. Duties may include client interviewing, investigation, drafting memoranda and motions, and trial preparation. There are several meetings with the instructor during the semester. Weekly journals are also required. Note: This course requires off-premises travel. The student is responsible for travel to and from the office, which is located in downtown Ithaca. A car is not required.

LAW 7911-2-3 Neighborhood Legal Services Externship 1, 2, or 3

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. S-U or letter grades. B. Strom.

Classroom component is provided by Public Interest 1, 2 (fall), or 3 (spring) classes depending on whether the student has previously been enrolled in a course in which Public Interest 1 classes were a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Public Interest 1, 2 (fall), or 3 (spring) classes. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student meets periodically with the faculty supervisor to review the placement experience. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7921 Prosecution Trial Clinic

Fall. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: Evidence or permission of instructor. Interested students must submit a statement of interest and résumé to Prof. Robert Sarachan by July 15, 2010. S-U or letter grades. R. A. Sarachan.

Gives students the opportunity to prosecute nonfelony, nonjury trials in Ithaca City Court. The course has both a classroom component and a courtroom component. The classroom component involves lecture, discussion, and trial simulation exercises. Topics include criminal law and procedure, prosecution ethics, trial strategy and preparation, trial conduct including direct and cross-examination, plea-bargaining, and professional judgment. The courtroom component involves regular attendance at Ithaca City Court's nonjury terms. Students observe and critique trials and prosecute offenses including traffic tickets (e.g., speeding and running a red light), city code violations (e.g., open container and noise offenses), nonfelony penal law violations (e.g., disorderly conduct, possession of marijuana), among others. Each student is expected to conduct multiple trials during the semester, depending on docket volume. Students are also expected to prepare witnesses (typically police officers), conduct plea-bargaining negotiations, case research and fact investigation, respond to discovery demands, and engage in motion practice and appellate practice as needed. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7931 Public Interest Clinic 1

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. S-U or letter grades. B. Strom and G. G. Galbreath.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of clinic faculty. Students interview and counsel; investigate and analyze facts; interrelate substantive and procedural law with facts in the context of actual presentation; develop strategies to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients in hearings. The classroom component develops interviewing, counseling, and advocacy skills through the use of readings, videotapes, discussions, and simulation exercises. Note: This course may

require travel for purposes of participating in hearings.

LAW 7932 Public Interest Clinic 2

Fall. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Public Interest Clinic 1 or clinic course that included Clinical Skills 1 classroom component. S-U or letter grades. B. Strom and G. G. Galbreath.

Students handle civil cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state administrative hearings and courts. Clinical Skills 2 builds on the skills taught in Clinical Skills 1. Note: This course may require travel for purposes of participating in hearings.

LAW 7933 Public Interest Clinic 3

Spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor; Public Interest Clinic 1 or Neighborhood Legal Services Externship 1. S-U or letter grades. B. Strom and G. G. Galbreath.

Students handle civil cases, participate in a classroom component, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state administrative hearings and courts. The classroom component builds on skills developed in Public Interest Clinic 1. Note: This course may require travel for purposes of participating in hearings.

LAW 7953-4-5 Securities Law Clinic 1, 2, and 3

Fall, spring. 4 credits. Limited enrollment. Satisfies skills requirement. Prerequisite: permission of instructor. Pre- or co-enrollment in Securities Regulation or Dispute Resolution recommended but not required. S-U or letter grades. W. A. Jacobson.

Focuses on fundamental investigatory and advocacy skills applicable to representation of public investors in disputes subject to arbitration at the Financial Industry Regulatory Authority (f/k/a National Association of Securities Dealers), with particular attention to the elderly and to small investors. Substantive legal topics include the scope and nature of binding arbitration under the Federal Arbitration Act and New York law, and the legal and regulatory remedies available to defrauded investors. Course work includes training in skills such as interviewing potential clients, evaluating potential claims, preparing pleadings, conducting discovery, representing clients at hearings and negotiating settlements. Class work includes presentations by nationally recognized experts on topics applicable to evaluation of securities accounts, trading, and products. Under faculty supervision students represent investors, provide public education to community groups as to investment frauds, draft position statements to regulatory authorities, and/or participate in preparing amicus briefs, in support of public investors. Note: This course may require off-premises travel for potential client and witness interviews, hearings, and community presentations. Assistance provided to students who lack transportation.

LAW 7951-2 U.S. Attorney's Office Clinic 1 or 2

Fall, spring, 6 credits. Limited enrollment. Satisfies skills requirement. Registration for fall offerings was handled by U.S. Attorney's Office in February 2010 and spring offering will be done in September 2010. S-U grades only. C. E. Roberts.

Law students work 12 to 15 hours per week for the United States Attorney's Office in Syracuse, N.Y. Each student is assigned to work for an assistant U.S. attorney. Students perform research and writing, and trial assistance as needed. Students may qualify to appear in court under the supervision of their attorney and are encouraged to observe court proceedings in the U.S. courthouse. Students also attend a two hour seminar once a week at Cornell. The seminar focuses on writing in practice, including critiques of briefs, motions, and a petition for certiorari. Additional topics include federal criminal and civil practice, prosecutorial discretion, and habeas corpus. Guest speakers may include judges, a special prosecutor, and U.S. Department of Justice officials. Students must be U.S. citizens. Detailed course description available at: <https://support.law.cornell.edu/students/forms/ClinicalCoursesAndExternshipsDescriptions.pdf>. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7961 Water Law in Theory and Practice 1

Fall, 4 credits. Limited enrollment. Prerequisite: permission of instructor. S-U or letter grades. K. S. Porter and C. G. Bowman.

Competing uses of water resources pose high stakes. Serious conflicts now arise with increased frequency. There is growing necessity for effective legal instruments and methods of conflict resolution to avert or resolve disputes. The clinic addresses problems of law related to water through collaboration, consultation, relevant research, and writing. This involves selecting and working on a topic, or a dispute, of local, regional, national, or international importance with leaders and experts having knowledge or involvement in the issues of the topic. A specific purpose of the clinic is to provide real-world transactional experience particularly in resolving or avoiding disputes. Students have available for their projects the extensive network of resources initially established through the New York State Water Resources Institute based at Cornell University. Under faculty supervision, each student selects a project on a topic or dispute of theoretical and practical legal importance. Students consult and work with attorneys, professional staff and stakeholders engaged in work to which the project applies. Projects generally involve the following steps:

Identifying and defining the problem or dispute; formulating a procedure for the project including prospective cooperators and "clients"; developing a basic understanding of the legal issues and applicable methods through the relevant literature and documents; participating in on and off-campus meetings, and field trips; obtaining assistance, as relevant, of faculty in the various colleges and departments at Cornell University (Cornell University is preeminent in its faculty and staff resources with interests in the multiple aspects of water and land resource management); presenting the progress and results of their

project to interested groups and clients, and to the class. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.

LAW 7975 Wrongful Conviction and Actual Innocence

Fall, spring, 3 credits. Limited enrollment. Satisfies skills requirement. Prerequisites: permission of instructor; course in criminal procedure or other criminal law experience preferred. S-U or letter grades. C. Seeds. Focuses on the principal causes of wrongful convictions and provides an opportunity for students to obtain practical training in criminal defense through investigating and litigating on behalf of New York prisoners with claims of actual innocence. Students participate in developing investigation plans, interviewing witnesses, managing case files, reading transcripts, and drafting pleadings and memoranda. Classroom sessions focus on substantive issues relevant to the casework—e.g., false and forced confessions, jailhouse informant ("snitch") testimony, junk forensic science, errors in eyewitness identification, ineffective assistance of counsel, and police and prosecutorial misconduct—as well as postconviction procedure. In contrast to some programs specializing in DNA exonerations, this course concentrates on cases in which there is no biological evidence. Note: For some students, travel may involve long distance in or out of state.

NONPROFESSIONAL COURSES—NOT OPEN TO LAW STUDENTS**LAW 4021 Competition Law and Policy**

Fall, 4 credits. Intended for and limited to non-law students; interested law students should take the Antitrust Law course. Prerequisite: ECON 1110 or equivalent. No legal training or background required. Econ majors can use course as an equivalent to a 4000-level economics course. Letter grades only. G. A. Hay. Begins with actual cases arising under U.S. antitrust law and discusses the legal, economic, and policy issues raised.

LAW 4051 The Death Penalty in America

Spring, 4 credits. Undergraduates only. S-U or letter grades. J. H. Blume and S. L. Johnson.

The death penalty has received increased media attention due to high-profile death row exonerations, and has long been under siege for other reasons, e.g., racial disparities in its imposition and the prevalence of very poor representation by defense counsel. This course surveys the legal and social issues that arise in the administration of the death penalty. The reading is largely comprised of reported death penalty cases, but is augmented by a variety of other sources, including empirical studies of the death penalty and the litigation experience of the professors. Although the focus is on capital punishment as practiced in the United States, we also consider international and comparative perspectives. Guest speakers provide a range of views, and law students with experience working on capital cases lead discussion sections.

LAW 4121 Gender, Public Policy, and Law

Fall, 4 credits. Undergraduates only. S-U or letter grades. C. G. Bowman.

Provides a brief introduction to the history of the women's movement in the United States and to the development of the constitutional standard for gender, followed by a sampling of the competing theoretical approaches that can be taken to legal problems involving gender—a formal equality approach, the dominance approach (exemplified by Catharine MacKinnon), relational or cultural feminism (a "differences" approach represented in the legal academy by Robin West and Mary Becker), socialist feminism, pragmatic feminism, and critical race feminism. After the constitutional and theoretical foundations have been laid, we study a series of issues and issue areas where gender is critical to legal treatment—reproduction (e.g., abortion, surrogate motherhood, and other reproductive technologies), rape, domestic violence, prostitution, pornography, cohabitation, same-sex marriage, and other family law issues. We study how these issues are treated under current law and discuss what might be better approaches to each. To introduce students to the study of law, we use a textbook used in law school courses, Becker, Bowman, Nourse, and Yuracko, *Feminist Jurisprudence: Taking Women Seriously* (3d ed. 2007). No prior knowledge of legal analysis or concepts is presumed. Requirements: two five-page papers and a final exam.

LAW 4131 The Nature, Functions, and Limits of Law (also GOVT 3131)

Fall, 4 credits. Undergraduates only. Letter grades only. K. M. Clermont and R. A. Hillman.

A general-education course to acquaint students with how our legal system pursues the goals of society. The course introduces various perspectives on the nature of law, what functions it ought to serve in society, and what it can and cannot accomplish. The course proceeds in the belief that such matters constitute a valuable and necessary part of a general education, not only for prelaw students but especially for students in other fields. Assigned readings comprise legal materials and also secondary sources on the legal process and the role of law in society. The classes include discussion and debate about current legal and social issues, including equality, safety, the environment, punishment, and autonomy.

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION

Patrick Stover, director

Charles McCormick, director of undergraduate studies

Cha-Sook You, assistant director of undergraduate studies

Charles McCormick, director of graduate studies, field of nutrition

THE DIVISION

Nutritional science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation, biochemistry, and function of nutrients, nutrient requirements throughout the life span, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

This broad field of study at Cornell is in the Division of Nutritional Sciences, which brings together specialists from many disciplines. Faculty members are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered to students enrolled in both colleges. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology. Graduate study in the field of nutrition is administered by faculty members throughout the university.

FACILITIES

Most of the faculty members of the division work in Savage Hall, Kinzelberg Hall, Martha Van Rensselaer (MVR) Hall, and Weill Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. Savage Hall has a graduate reading room and undergraduate student room.

UNDERGRADUATE MAJOR PROGRAMS

The Division of Nutritional Sciences (DNS) offers three programs leading to a B.S. degree:

Nutritional Sciences (NS-CHE), College of Human Ecology: this program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Strong preparation in biology, chemistry, and math is required. Students may prepare for a variety of career interests, including medicine and other health careers, research, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

Nutritional Sciences (NS-CALS), College of Agriculture and Life Sciences: this program provides students with strong training in human nutrition combined with supportive course work in food systems, agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required and prepares students for a variety of careers as mentioned above. Students in the NS-CALS program supplement the core nutrition curriculum with courses in areas such as food policy, food science, animal and plant sciences, business and economics, and environmental sciences as described below.

Human Biology, Health, and Society (HBHS), this program gives students a strong foundation in biology, and fosters the exploration of human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The division also offers the **Program of Study in Human Nutrition for biological sciences majors** who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The Program of Study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and nonessential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states. Students in this program of study are encouraged to complete a diverse set of advanced courses that afford a perspective on current knowledge of nutrient requirements and function and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisors work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through course work or

research. Honors research programs are also available and encouraged for students meeting program criteria. After graduation, many students choose to continue their education in medical or graduate school and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM

Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

Both the NS and HBHS programs require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and statistics requirement for all programs. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course NS 1150 Nutrition, Health, and Society. The NS program requires the completion of four other core courses: NS 2450 Social Science Perspectives on Food and Nutrition; NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 3310 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences.

NS-CHE students also complete 9 credits of advanced electives in nutritional sciences to complete their major requirements.

NS-CALS majors also complete 9 credits of advanced electives in nutritional sciences. Additionally, NS-CALS majors complete 9 credits of CALS electives that support the major but that are outside of nutrition and chosen from the following areas: Food Policy, Food Production and Marketing, Life Sciences, and Environment. Courses relevant to these areas are offered by the CALS departments of Applied Economics and Management, Food Science, Animal Science, International Agriculture, Plant Breeding, Development Sociology, Crop Science, International Agriculture, and Entomology. Course selections are made in consultation with the advisor and considering the interests of individual students.

The HBHS major requires 15 credits of advanced electives that explore health issues from primarily a biological or a social perspective. These courses are offered by faculty in several departments within the College of Human Ecology.

Undergraduate students in all programs have a faculty advisor with whom they meet at least twice a year. Advisors help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In all undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should obtain detailed information about course requirements from the division's Academic Affairs office, B21 Savage Hall. This office offers a wide range of advising materials to help students develop a program of study that matches their interests and needs.

UNDERGRADUATE MINOR PROGRAMS

Nutrition and Health: The Division of Nutritional Sciences (DNS) offers the Nutrition and Health minor to Cornell students who are not in our major programs of NS-CALS, NS-CHE, HBHS, and Biological Sciences with a Program of Study in Nutrition. The minor allows students to choose from courses concerned with human health and nutrition, economic influences on human nutrition, epidemiology and public health, food quality and food service management, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 1150 Nutrition, Health, and Society plus 9 credits of 2000-plus-level didactic NS courses. Several NS courses are excluded from use toward the minor. For details, please check www.nutrition.cornell.edu/che/DNS/academic/minor-in-nutrition.cfm. Enrollment is limited in some courses.

Global Health: The Global Health minor is intended to complement any academic major offered at the university and to provide students with basic knowledge about global health as well as the necessary skills and experience to begin to build their own unique global health career. The minor is open to all undergraduate students in all colleges. For more information about the minor, check the Global Health Program website: www.human.cornell.edu/che/DNS/globalhealth/about/index.cfm.

CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows:

Medicine and Other Health Careers:

Recommended courses for pre-med students include calculus and two semesters of physics. Specific information about medical school admissions requirements can be obtained from the university's Health Careers office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements. Courses of interest may include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.

Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling,

sports nutrition, community nutrition or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetics Education and provides students with the course work necessary for application to an accredited supervised practice program (e.g., Dietetic internships). Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one-time fee is involved to cover the cost of program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing verification statements can be found at www.nutrition.cornell.edu/che/DNS/academic/dietetics.cfm. Upon completion of an accredited supervised practice, students are eligible to take the Registered Examination of the Commission on Dietetic Registration and become a Registered Dietitian (RD). Courses in foods, nutrition and disease, microbiology, food service management, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements, contact the DNS Academic Affairs office, B19 Savage Hall.

Exercise, Nutrition, and Health

Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs office, B21 Savage Hall.

Biomedical Research/Nutritional

Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community Nutrition:

Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Nutrition, Food, and Business:

Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and development sociology.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, development sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy:

Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a semester off-campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 4000, 4010, 4020) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty advisor and the approval of the director of undergraduate studies or consider applying to the honors program.

HONORS PROGRAM

The honors program, which leads to a B.S. degree with honors in the College of Human Ecology or a B.S. degree with distinction in research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research (NS 3980), complete an original piece of research (at least 6 credits of NS 4990), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Professor J. Thomas Brenna, B38 Savage Hall.

COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 1150 Nutrition, Health, and Society is open to all students. After NS 1150, nonmajors with limited backgrounds in chemistry and biology may elect NS 2450 Social Science Perspectives on Food and Nutrition; NS 2470 Food for Contemporary Living; NS 2750 Human Biology

and Evolution; NS 3060 Nutritional Problems of Developing Nations; NS 3150 Obesity and the Regulation of Body Weight; NS 3470 Human Growth and Development: Biological and Behavioral Interactions; NS 4500 Public Health Nutrition. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 3310 Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 4310 Mineral Nutrition and Chronic Disease; and NS 4410 Nutrition and Disease.

GRADUATE PROGRAMS

Graduate study is administered by the field of nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S./Ph.D. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international, and public health nutrition and nutrition education. Teaching experience and participation in the graduate student seminar (NS 7030) are important aspects of graduate training.

The specialties and interests represented by faculty in the field of nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, students should visit the web site or contact the director of graduate studies, field of nutrition, Cornell University, B19 Savage Hall, Ithaca, NY 14853-4401, 255-2628, nutrition_gfr@cornell.edu, or www.nutrition.cornell.edu/che/DNS/academic/graduate.cfm.

COURSES

NS 1150 Nutrition, Health, and Society

Fall. 3 credits. S-U or letter grades. Evening prelim. D. Levitsky. Discusses the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 1160 Personalized Concepts and Controversies

Fall. 1 credit. Limited enrollment. Prerequisite: freshman or transfer standing. Corequisite: NS 1150. S-U grades only. J. Swanson.

Provides students enrolled in NS 1150 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 1200 Nutrition and Health: Issues, Outlooks, and Opportunities

Spring. 1 credit. Prerequisite: freshman, sophomore, or junior standing or permission of instructor. *Not an introductory nutrition course for nonmajors.* S-U grades only. C. You.

For students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course introduces many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments.

NS 1220 Nutrition and the Life Cycle

Spring. 3 credits. Prerequisite: one semester college biology or NS 1150. Letter grades only. V. Utermohlen.

Biology of the life cycle including development, growth, maturation, and aging and its impact on nutritional requirements of humans from the zygote to the elderly is considered. How to meet these nutritional requirements is discussed relative to the feeding issues and context of each major life stage. Course emphasizes the critical analyses of beneficial and adverse outcomes of various nutrient intakes and dietary patterns on the nutritional status and well-being through integration of nutrition and other health sciences in understanding nutritional needs during the life cycle.

NS 2450 Social Science Perspectives on Food and Nutrition

Fall. 3 credits. Limited enrollment. Must be enrolled by third class meeting. Prerequisite: NS 1150. S-U or letter grades. C. Bisogni and J. Sobal.

Uses theories, concepts, and methods from the social sciences to examine food, eating, and nutrition. The food choice process model is used as a framework for examining the scope of social science aspects of nutrition. Assignments include examinations, short papers, and two research projects, one qualitative and one quantitative, for which students prepare proposals, collect and interpret data, and write papers to report data.

NS 2470 Food for Contemporary Living

Fall and spring. 2 credits. Limited enrollment. Priority given to Dietetics students. Highly recommended: NS 1150. Students must attend first lab or placement is forfeited. S-U or letter grades. Lab coat required. E. Gier.

During this laboratory course, the understanding of food ingredients and techniques of food preparation is applied to positive nutritional practices and health promotion goals; basic food science and nutrition principles, food safety/sanitation, sensory evaluation, and social-cultural influences on food choices; food preparation, recipe modification, sensory evaluation (taste

testing required); basic cooking skills, techniques. Introduction to basic menu planning and meeting nutritional requirements while restricted to a budget. Lab performance and a lab practical factored into final student evaluation; attendance at all labs is expected.

NS 2600 Introduction to Global Health

Spring. 3 credits. Limited enrollment. Letter grades only. Evening prelim. R. Stoltzfus and J. Moseley.

Explore contemporary issues, problems, and controversies in global health through an interdisciplinary perspective. Introduces the global burden of disease and then examines complex social, economic, political, environmental, and biological factors that structure the origins, consequences, and possible treatments of global health problems. A limited number of problems are explored in depth (e.g., HIV, maternal mortality, malaria).

[NS 2750 Human Biology and Evolution (also ANTHR 2750)]

Fall. 3 credits. Prerequisite: college biology. S-U or letter grades. Offered alternate years; next offered 2011-2012. J. D. Haas and Z. Gu.

Examines the theories and mechanisms of modern evolutionary biology as they apply to humans using evidence from molecular biology, paleontology, and current biological diversity.]

NS 3000 Special Studies for Undergraduates

Fall or spring. Prerequisite: permission of instructor. S-U or letter grades. DNS faculty. Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the college registrar's office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

[NS 3060 Nutritional Problems of Developing Nations]

Fall. 3 credits. Prerequisite: NS 1150. S-U or letter grades. Offered alternate years; next offered 2011-2012. R. Stoltzfus.

Overview of the important nutrition problems facing low-income nations with an in-depth view of the nutrition problems of one case country or region. Instruction is through lectures, readings, and a group project.]

[NS 3150 Obesity and the Regulation of Body Weight (also PSYCH 3150)]

Spring. 3 credits. Prerequisites: junior or senior standing; NS 1150, PSYCH 1101. S-U or letter grades. Offered alternate years; next offered 2011-2012. D. Levitsky.]

NS 3200 Introduction to Human Biochemistry

Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 1570 or 3570-3580; or permission of instructor. S-U or letter grades. Evening prelim. S. B. Qian and P. Stover.

Presents the principles of biochemistry within the context of human health and disease. Teaches the metabolism of carbohydrates, lipids, proteins, and selected micronutrients from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body. Incorporates the concepts of enzyme catalysis,

enzyme regulation, hormone action, and bioenergetics within this framework. Covers the fundamental concepts of eukaryotic DNA structure, function, and gene expression with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 3220 Maternal and Child Nutrition

Spring. 3 credits. Limited enrollment. Prerequisite: NS 1220 or permission of instructor. S–U or letter grades. Offered alternate years. P. Brannon.

Critical analyses of the impact of nutritional status on the mother, fetus, and young child in domestic and global contexts; advanced aspects of the biological bases of nutritional requirements for reproduction, growth, and development; and integration of nutrition with life and behavioral sciences in understanding these aspects are addressed.

NS 3310 Physiological and Biochemical Bases of Human Nutrition

Spring. 4 credits. Prerequisites: BIOMG 3300 or 3310, or NS 3200, or equivalent. S–U or letter grades. C. McCormick and L. Qi.

Examines the biochemical and physiological bases of human nutritional requirements. Uses an integrated approach to cover the digestion and metabolism of nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases related to nutrition are discussed throughout the semester. Discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

NS 3320 Methods in Nutritional Sciences

Fall. 3 credits. Prerequisites: undergraduate biochemistry; NS 3450, NS 3310 preferred or concurrent registration. Letter grades only. Staff.

Laboratory introduction to principles and analytical techniques of nutritional research. Emphasizes analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids; methods for assessing individual food intake and nutritional status; and methods for assessing the composition of foods.

NS 3410 Human Anatomy and Physiology

Spring. 3 credits. Prerequisite: college biology. Priority given to DNS majors. Letter grades only. K. O'Brien.

Introduces human anatomy and physiology by detailing the structure and function of the human body and mechanisms used to maintain homeostasis. Emphasis is given to aspects relevant to the nutritional sciences and medicine. Content includes language of anatomy, cells, tissue, integumentary, respiratory, skeletal, muscular, digestive, nervous, cardiovascular, urinary, and reproductive systems. Clinical examples are provided to highlight perturbations and physiology of topics discussed. Evaluation is based on attendance, iClicker-based class interaction, weekly quizzes, and a midterm and final.

NS 3420 Human Anatomy and Physiology Laboratory

Spring. 2 credits. Corequisite: NS 3410. Priority given to DNS majors. Students registered for the course who are more than 10 minutes late for the first lab forfeit registration; no admittance after second week. M. Lujan.

Principles of human anatomy and physiology will be presented using anatomical models, drawings, dissections, and histology as well as interactive noninvasive assessment of physiological functions and review of clinical case studies. Weekly lecture will provide content connections with NS 3410. Emphasis will be on location, recognition, and description of anatomical structure and relation to function. Content includes human body orientation and language of anatomy, histology, and regulation of various organ systems. Evaluation based on attendance, two lab practicums, and lab written assignments.

NS 3450 Introduction to Physicochemical and Biological Aspects of Foods (also FDSC 2000)

Fall. 3 credits. Prerequisites: college-level courses in chemistry and biology. Letter grades only. Two evening prelims. R. Parker.

Comprehensive introduction to the physical, chemical, and nutritional properties of foods and to the principles and practice of food science and technology. Topics include chemistry and functionality of commodities and ingredients, chemical and physical phenomena that affect food quality, techniques of processing and preservation, microbiology and fermentation, food safety, regulation, and contemporary issues.

NS 3470 Human Growth and Development: Biological and Behavioral Interactions (also HD 3470, BSOC 3471)

Spring. 3 credits. Prerequisites: BIOG 1101 or 1109 or equivalent; HD 1150 or PSYCH 1101 or equivalent. S–U or letter grades. Offered alternate years. J. Haas and S. Robertson.

Discusses the interrelationships of physical and psychological growth and development in humans during infancy. Considers intrinsic and extrinsic causes of variations in growth including various forms of stimulation. Examines the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

NS 3500 Epidemiology in Context

Spring. 3 credits. Prerequisite: introductory statistics (e.g., PAM 2100, AEM 2100, ILRST 2100). Letter grades only. D. Pelletier.

Provides the conceptual tools to critically analyze the controversies related to a wide range of contemporary health and social issues in the United States and global context. Basic principles of epidemiology are illustrated via case studies of nutritional and biomedical interventions, environmental toxins, and social issues.

NS 3980 Research in Human Nutrition and Health

Fall. 1 credit. Requirement for students in honors research program sponsored by DNS. Open to all students. S–U grades only. J. T. Brenna.

Lecture course focusing on the structures and practice of professional research conducted in human nutrition and health, a field that encompasses questions ranging widely from subcellular components to population-level issues. Introduces the various approaches and methods used by researchers and addresses the topics of ethics and research controls. Describes the structure of scientific literature, preparation of research proposals, roles of

scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

NS 4000–4010–4020–4030 Special Studies for Undergraduates

Fall or spring. Variable to 3 credits. S–U grades only for NS 4000–4010–4020; after completing 2 credits S–U with final grade of S for NS 4000–4010–4020, grading option may be S–U or letter for NS 4000–4010–4020; S–U or letter grades for NS 4030. DNS faculty.

For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the student's faculty advisor. The form, available in B21 Savage Hall or in the Human Ecology registrar's office, is filed at course registration or within the change-of-registration period. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to B21 Savage Hall as early as possible.

NS 4000 Directed Readings

S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4000, grading option may be S–U or letter.

Study that predominantly involves library research and independent reading.

NS 4010 Empirical Research

S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4010, grading option may be S–U or letter.

Study that predominantly involves data collection and analysis or laboratory or studio projects.

NS 4020 Supervised Fieldwork

S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4020, grading option may be S–U or letter.

Study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

NS 4030 Teaching Apprenticeship

S–U or letter grades.

Study that includes assisting faculty with instruction.

NS 4130 Nutritional Genomics—Evolution and Environment

Spring. 2 credits. Prerequisites: senior or graduate standing, BIOMG 2810 or permission of instructor. S–U or letter grades. Z. Gu.

Examines selected topics related to nutrition and genome biology. Discussion of nutrition and human evolution, such as human brain evolution, evolution of taste, population variation related with nutrition, and evolution of human diseases. Reading materials are from literature and participation in class discussion is required.

NS 4210 Nutrition and Exercise

Summer. 3 credits. Prerequisite: BIOAP 3110 or NS 3410; NS 1150 or NS 1220. S–U or letter grades. S. Travis.

Designed for nutrition students. Examines interactions between nutrition, exercise, and athletic performance and considers biological, psychological, and sociological perspectives.

Application is made to various sports through critiques of research studies and evaluation of popular sports nutrition claims. Educational strategies for communicating with athletes, coaches, and trainers are addressed.

NS 4250 Nutrition Communications and Counseling

Spring. 3 credits. Limited enrollment. Prerequisites: NS 1150, 1220, and 2450; junior or senior standing; priority given to senior dietetics/nutrition majors. Letter grades only. S. Travis.

Students learn the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. Provides hands-on experiences in counseling, educational program development, and oral and written communications.

NS 4310 Mineral Nutrition and Chronic Disease

Fall. 3 credits. NS 3310 preferred. S-U or letter grades. C. McCormick.

Evaluate the evidence from primary literature that dietary calcium, sodium, and iron play an important role in the development of osteoporosis, hypertension, and anemia, respectively. An additional goal of the course is to review the molecular processes that are involved in the homeostasis of each mineral and the recommendations for daily nutrient intakes. Class discussion of key research articles is conducted and evaluated.

NS 4410 Nutrition and Disease

Fall. 4 credits. Prerequisites: NS 3310 and physiology course. S-U or letter grades. M. Caudill.

Principles of nutrition, biochemistry, physiology, genetics, pathology, and pharmacology are combined to understand disease risk, prevention, progression, and management. Lecture offers opportunities for the class to engage in the discussion of original research articles on topics of high current interest in the area of nutrition and health. Topics include nutritional genomics, obesity, cardiovascular disease, diabetes mellitus, renal, neurological, and gastrointestinal disorders.

NS 4420 Implementation of Nutrition Care

Fall. 3 credits. Pre- or corequisites: NS 1150, NS 1220, NS 2470, NS 4410, or concurrent registration or equivalent background in courses. S-U or letter grades. Evening prelim. E. Gier.

Develop skills necessary to implement nutrition care. Application of the nutrition care process as it applies to clinical settings is emphasized. Students develop skills to perform nutrition assessment, nutrition diagnosis, nutrition intervention, monitoring, and evaluation. Content includes principles of MNT for acute and chronic diseases, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursement and legislation in dietetics practice.

NS 4450 Toward a Sustainable Global Food System: Food Policy for Developing Countries (also AEM 4450)

Fall. 3 credits. Preferred: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. Letter grades only. P. Pinstrup-Andersen.

Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach bases on case studies and active participation by students will be used.

NS 4500 Public Health Nutrition

Spring. 2 credits. Prerequisite: NS 1150. Students must attend first lec or placement is forfeited. Letter grades only. Evening prelim. K. Rasmussen.

Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national levels. Course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, the development of nutrition-related policies, and the delivery of health, nutrition, and food assistance programs.

[NS 4570 Health, Poverty, and Inequality: A Global Perspective (also ECON 4740)]

Fall. 3 credits. Prerequisite: introductory microeconomics and statistics or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2011-2012. D. Sahn.

Course focuses on global health challenges, and how they are related to poverty and inequality.]

NS 4600 Explorations in Global Health

Spring. 3 credits. Prerequisite: junior or senior standing with completion of all requirements for global health minor, or permission of instructor. Letter grades only. D. Pelletier.

Capstone course for global health minors assists students to explore their topical interests in global health and integrate these with their field experiences, core knowledge in global health, and personal values and ethical frameworks. Course content is driven largely by student topical interests and experiences, and selected guest speakers. Explorations are done through individual work, team projects, and classroom discussions.

NS 4620 Seminar in Global Health and Development Issues: Tanzania

Spring. 1 credit. Restricted to students in the Global Health and IARD Summer Session and Internship Program in Tanzania. S-U grades only. R. Stoltzfus and J. Moseley.

Seminar prepares students for the Global Health and IARD Summer Session and Internship Program in Tanzania during the summer. Students hear from Cornell faculty and other speakers on global health, agriculture, and development issues relevant to Tanzania. Course sessions also cover Tanzanian history, culture, language, and politics. Students will be actively engaged in reading, discussing, and presenting on key seminar topics.

NS 4630 Global Health, Development and Policy Issues in Tanzania

Summer. 4 credits. Prerequisite: NS 4620. Restricted to students in the Global Health and IARD Summer Session and Internship Program in Tanzania. Letter grades only. R. Stoltzfus and S. Langwick.

Engages Global Health minors, IARD majors, and Tanzanian medical students in problem-based learning in a cross-cultural small group context in Tanzania. Develop and justify policy recommendations to address a current issue related to global health, nutrition, food safety, or agriculture. Students will work in assigned teams of three to four, designed to mix Cornell and Tanzanian students.

[NS 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 4750)]

Spring. 3 credits. Prerequisites: BIOMG 3300, 3310-3320 or 3330 (may be taken concurrently). Offered alternate years; next offered 2011-2012. D. Noden and P. Stover. For description, see BIOAP 4750.]

NS 4880 Applied Dietetics in Food Service Systems

Spring. 3 credits. Limited to Dietetics seniors. Prerequisites: HADM 1106 or intro food service management course, NS 2470, and BIOMI 2900. White lab coat required. Fee for special supplies/training and activities: approx. \$110. E. Gier.

Gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; and applied safety and sanitation standards. Through planning and executing a themed event, students develop skills required to operate/manage a food service program. Application of quality management in food service operations and facility management is stressed. Laboratories are arranged through Cornell Dining and other off-campus sites. Completion of a professional portfolio is required. ServSafe training and examination is conducted; successful completion results in ServSafe manager certification.

NS 4900 Manipulating the Mouse Genome (also BIOMG 4900)

Fall. 1 credit. Meets during first half of semester and provides background information for VTBMS/TOX 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both must register for them separately. Prerequisites: BIOMG 2800, 2810, or 2820, 3300, 3320 or 3330, or NS 3200. S-U or letter grades. P. Soloway.

Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. Explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, use of induced pluripotent stem cells, and cloning by nuclear transplant. Also discussed are use of recombinant inbred mice and genome-wide association studies for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

NS 4990 Honors Problem

Fall and spring. Credit TBA. Prerequisite: acceptance into honors research program. Students who have been accepted into the honors research program work on their projects under the guidance of their faculty mentors. Honors research students must complete a minimum of 6 credits of NS 4990, typically spread over two or more semesters. The student and the mentor determine the appropriate number of credits for each semester. Research activities may include reviewing the literature, writing a proposal, developing research methods, collecting data in the field or laboratory, analyzing data, and writing the honors thesis.

NS 5200 Health and the Humanities

Fall. 2 credits. Prerequisite: post-baccalaureate students only. Letter grades only. V. Utermohlen.
Review the roles of the humanities in the development of health care. Through readings, discussions, and field trips to locations on and off campus, you will acquaint yourself with the historical underpinnings of health care through their representations in the arts, and examine how the arts have influenced our understanding of health and illness.

NS 5410 Integrative Health Sciences I

Fall. 3 credits. Prerequisite: post-baccalaureate students only. Letter grades only. V. Utermohlen.
Case-based approach to disease and health maintenance, with an emphasis on integrating the student's knowledge of anatomy, physiology, metabolism, pharmacology, and nutrition in order to solve clinical problems. Classes consist of combined lectures and labs, with media-based exercises. Evaluation based on attendance, participation in discussions, quizzes, case study assignments, and a comprehensive final.

NS 5411 Integrative Health Sciences II

Spring. 3 credits. Prerequisite: post-baccalaureate students only. Letter grades only. V. Utermohlen.
Second semester of course sequence; NS 5410 Integrative Health Sciences I.

NS 6000 Special Problems for Graduate Students

Fall or spring. Credit TBA. Prerequisite: graduate students recommended by their chair and approved by instructor in charge. S-U or letter grades. DNS faculty.
Emphasizes independent advanced work. Experience in research laboratories in the division may be arranged.

NS 6050 Molecular and Human Nutrition

Fall and spring. 1 credit. S-U grades only. Molecular nutrition faculty.
Graduate seminar series that focuses on recent advances in molecular nutrition. Weekly presentations are made by faculty members, postdocs, and graduate students and are based on the primary literature. The presentations are followed by a discussion involving all participants.

NS 6080 Epigenetics (also BIOMG 6080)

Fall. 2 credits. Prerequisites: BIOMG 2810 and 3300, 3320, or 3330 or NS 3200. Letter grades only. P. Soloway.
Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. Changes include covalent modifications to DNA itself or to proteins bound to DNA as well as

noncovalent remodeling of chromatin. Course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is lost. Reading materials are from current literature, and participation in class discussion is required.

NS 6100 Proteins and Amino Acids: Nutritional Regulation of Mammalian Protein Synthesis and Degradation

Fall. 2 credits. Letter grades only. Offered alternate years. M. Stipanuk.
Basic biochemistry and cell biology related to processes involved in protein synthesis and degradation and the regulation of these processes. Scientific literature will be used to provide examples of regulation of each of these processes, selected for their relevance to human nutrition and metabolism.

NS 6110 Molecular Toxicology (also TOX 6110)

Spring. 3 credits. S-U letter grades. Offered alternate years. S. Bloom and B. Strupp.
Focuses on metabolism of drugs and environmental chemicals to toxic and mutagenic products and how they can induce developmental and reproductive alterations or carcinogenesis. Signaling pathways that regulate cellular responses to toxicant exposure are discussed. Also emphasizes molecular markers useful for assessment of human exposure to chemicals and radiation.

[NS 6140 Topics in Maternal and Child Nutrition

Fall. 3 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2011-2012. K. Rasmussen.
Advanced course on the role of nutrition during pregnancy and lactation.]

NS 6170 Teaching Seminar

Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. C. You and D. Way.
Individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop and work with instructors on independent learning projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

NS 6180 Teaching Experience

Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. C. You.
Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

NS 6190 Field of Nutrition Seminar (also ANSC 6190)

Fall or spring. 0 credits. S-U grades only. Faculty and guest lecturers.
Lectures on current research in nutrition.

NS 6250 Community Nutrition in Action

Fall. 3 credits. Prerequisite: dietetic interns. Letter grades only. Staff.
Provides students enrolled as dietetic interns with supervised, in-depth experiences in a community nutrition program and fosters the integration of research, theory, and practice. Through placements in community programs, students gain experience in program administration and in assessing, designing, implementing, and evaluating food and nutrition programs for targeted populations through public and private organizations. In weekly seminars (and other seminars and observations as arranged) students integrate theory and practice, reflect upon their placement experience, learn about community nutrition research, and explore the many issues facing community food and nutrition practitioners.

NS 6300 Anthropometric Assessment

Fall, five weeks. 1 credit. Prerequisite: NS 3310 or equivalent and permission of instructor. S-U or letter grades. Offered alternate years. J. Haas.
Topics in this lecture/lab course include biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis and presentation of anthropometric data, reference standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

NS 6310 Micronutrients: Function, Homeostasis, and Assessment

Fall. 2-4 credits. Prerequisites: intro biochemistry and NS 3310 (or equivalent) or permission of instructor. S-U or letter grades. C. McCormick, M. Caudill, K. O'Brien, and R. Parker.
Advanced course in nutrition that focuses on the function, homeostasis, and metabolism of the principal dietary micronutrients (vitamins and minerals). It expands on the principles of nutritional biochemistry provided in introductory courses. One goal is to provide the scientific basis and rationale for recommended Dietary Reference Intakes. The course will draw on primary literature of both past and contemporary research. This course is divided into two parts: minerals and vitamins (each for 2 credits) during the first and second 7-week periods, respectively.

NS 6320 Regulation of Macronutrient Metabolism

Spring. 4 credits. Prerequisite: NS 3310 or permission of instructor. S-U or letter grades. M. Stipanuk, P. Brannon, L. Qi, P. Soloway, T. Brenna, and R. Parker.
Course provides a comprehensive overview of macronutrient metabolism with an emphasis on issues relevant to human nutrition. Topics include regulation of macronutrient utilization by various tissues in response to food intake, energy stores, and energy expenditure; cellular pathways for integration of nutrient, growth, and stress signals; biological regulation of food intake and energy expenditure; the regulation of utilization of macronutrients for growth; dietary reference intakes for macronutrients; specialized functions of essential amino acids and essential fatty acids; lipoprotein and cholesterol metabolism; and the regulation, or dysregulation, of macronutrient utilization in various disease/physiological states.

NS 6350 Introduction to Community Nutrition Research for Dietetic Interns

Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. Letter grades only. Staff.

Introduces the paradigms, concepts, methods, and issues involved in community nutrition research. Students design and conduct individual research projects to inform community nutrition programs. Lectures, readings, and class discussion support students as they conduct their research activities.

[NS 6370 Topics in Nutritional Epidemiology]

Spring. 3 credits. Prerequisites: graduate standing; NS 6520. S-U or letter grades. Offered alternate years; next offered 2011-2012. J. McDermid.

Selected topics will cover the application and extension of general epidemiological concepts and methods in the context of contemporary nutritional epidemiology research and practice.]

NS 6400 Social Science Theories in Nutrition

Fall. 3 credits. Limited enrollment. Prerequisite: graduate standing. Letter grades only. J. Sobal.

Social science theories from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating, and nutrition are discussed to understand how paradigms, theories, and models apply to nutrition topics, issues, and problems.

NS 6420 Globalization, Food Security, and Nutrition (also AEM 6420)

Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen.

Directed readings course with a weekly 50-minute discussion session. Course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. Discussion sessions are based on assigned readings for each week.

NS 6440 Community Nutrition Seminar

Fall and spring. 1 credit. S-U grades only. A. Gillespie.

Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell and about community nutrition theories and research methodologies. The seminar also provides a forum to discuss participants' own research and current issues in community nutrition.

NS 6520 The Foundations of Epidemiology

Spring. 3 credits. Prerequisite: BTRY 6010 or equivalent. Letter grades only. P. A. Cassano.

Intent is to train students to conduct epidemiologic research. Through lectures, classroom discussion, and project-based work, students will learn the principles of epidemiology, evaluate evidence from epidemiologic studies, and design studies to

investigate hypotheses of interest. Students will apply epidemiologic approaches to study questions in health-related specialties including clinical medicine, health services and health care management, and nutritional sciences.

NS 6600 Special Topics in Nutrition

Fall or spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: graduate standing and permission of instructor. DNS faculty.

Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered.

[NS 6800 International Nutrition Problems, Policy, and Programs]

Spring. 3 credits. Prerequisite: permission of instructor. TBA. Offered alternate years. Staff.

Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can help poor countries and communities improve their nutritional and health status.]

NS 6850 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 7711)

Spring. 4 credits. Prerequisites: intermediate microeconomics, intermediate statistics or econometrics (through multiple regression and limited dependent variable models), or permission of instructor. Offered alternate years. D. Sahn.

Advanced seminar explores recent empirical research and evaluation literature on issues of health, nutrition, education and intra-household decision-making in developing countries.

NS 6900 Trace Element and Isotopic Analysis (also CHEM 6280)

Fall. 3 credits. Prerequisite: CHEM 2880 or 3900, 3020 or CHEM 2080 and MATH 1120, or permission of instructor. Primarily for graduate students and advanced undergraduates. S-U or letter grades. Offered alternate years. J. T. Brenna.

Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, elemental MS, atomic, X-ray, and electron spectroscopies, ion and electron microscopies, and biological and solid state applications.

NS 6980 International Nutrition Seminar

Fall and spring. 0 credits. No grades given. Staff.

Consists of presentations by Cornell faculty and graduate students and invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in nonindustrialized countries.

NS 6990 Special Topics in International Nutrition

Fall and spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. Staff.

Designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists of tutorial study on an agreed-upon topic.

NS 7020 Seminar in Toxicology (also TOX 7020)

Fall or spring. 1 credit. S-U grades only. Staff.

Covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Includes presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

NS 7030 Seminar in Nutritional Sciences

Fall and spring. 1 credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. Staff.

Presentations of original articles pertinent to the nutritional sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

NS 7040 Grant Writing

Spring. 2 credits. Prerequisite: NS 7030. S-U grades only. P. Stover.

Interactive course that addresses the knowledge, approach, and professional skills (conceptual, technical, and writing) required to create a successful grant proposal and initiate a career in research. Format is focused around the development, execution, and evaluation of NIH-style grant proposals. Lectures will focus on the development of hypotheses, specific aims, and long term goals, as well as research design and methodology. Issues of human subject and animal experimentation, ethics, and research collaborators are also covered. Students are expected to develop a full-length grant proposal in consultation with their research advisor. Basic guidelines and approach to proposal evaluation and scoring are covered. Course concludes with a mock study section where all proposals are reviewed by the students.

NS 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades. DNS graduate faculty.

NS 9990 Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades. DNS graduate faculty.

OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Steven Alexander, Professor of Military Science and Chair, 255-5651/-4000

Captain M. Epstein, Major Johnson, Major Fosdick, SFC Hart, MSG Davis, Captain G. Epstein, Captain Dwyer

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program covering 1.5 to 4 years. The program includes specific courses in military science, practical training in leadership through participation in the Cadet Corps (including attendance at a five-week summer camp at Ft. Lewis, Wash.), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the 16 branches of the Army. One application can result in a one- to four-year scholarship that currently provides \$166,750 in funding over four years.

All courses are open to enrollment without a military obligation; some require instructor permission. Noncitizens may enroll in courses but not commission. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests.

Four-Year Program

The program is available to graduate and undergraduate students. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior

Division AROTC) may receive advanced standing. Under the Four-Year Program students enroll in the Basic Course (MILS I and II) during the first two years, and the Advanced Course (MILS III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week Leadership Development and Assessment Course (LDAC), with pay, between their junior and senior years. All contracted cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

Scholarships

Scholarships are awarded on the basis of merit and are available for two to four years. Scholarships pay full tuition and mandatory fees, and cadets also receive between \$300 and \$500 a month for up to 10 months a year and \$1,200 a year for books.

Service Obligations

ROTC graduates may serve on active duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the cadet's request. Officers beginning active duty attend the OFFICER BASIC LEADERSHIP COURSE II/III (normally 10 to 16 weeks) for training in their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the OFFICER BASIC LEADERSHIP COURSE II/III, after which they are released to reserve status.

Graduate Study

Graduate students are allowed in the program. Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course. Additionally, cadets work out three days a week.

Freshman Year (MILS I)

MILS 1101 Foundations of Officership
Fall. 1 credit. Required. L. Dwyer.
Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is

examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

MILS 1102 Foundations in Leadership

Spring. 1 credit. Required. L. Dwyer.
Allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (MILS II)

MILS 2201 Individual Leadership Studies/Teamwork

Spring. 1 credit. Required. M. Davis.
Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MILS 1102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course also provides practical knowledge of the various forms of topographic representation. Students use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

MILS 2250 Basic Mountaineering Course

Fall and spring. 2 credits. Open to all students; limited to 20 per sec. Two 1-hour sec: M or R 9-9:50, Barton Hall G-1.
Equipment fee: \$40. M. Hart.
This course instructs techniques for students to cope with mountainous terrain. It discusses and instructs in basic techniques including rappelling, survival, acclimatization, illness and injury, equipment, anchors, evacuation, movement, safety, and training.

MILS 2260 Basic Orienteering

Fall. 1 credit. Open to all students; limited to 20. Equipment fee: \$40. Barton Hall G-1. M. Hart.

This course instructs the principles of orienteering including basic map reading, terrain association, and compass skills. Course running techniques are applied in field orienteering events. Instruction includes safety and survival in hot and cold weather environments.

MILS 2270 Basic Rifle Marksmanship

Fall. 1 credit. Open to all students; limited to 15. W 9-9:50, Barton Hall G-16. Fee for upkeep of systems: \$40. M. Davis.

This course instructs the principles of rifle and pistol safety including marksmanship fundamentals, range procedures, safe weapons handling, and target engagement. Students will use state-of-the-art digital weapons engagement systems as well as real weapons.

MILS 3321 Armed Conflict in Society

Fall. 2 credits. Required. G. Epstein. Provides practical knowledge in American military history. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the 19th century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the 20th century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (MILS III)

MILS 3301 Leadership and Problem Solving

Fall. 2 credits. Required. S. Alexander. After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

MILS 3302 Leadership and Ethics

Spring. 2 credits. Required. S. Alexander. Takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader's decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (MILS IV)

MILS 4401 Leadership and Management

Fall. 2 credits. Required. S. Alexander. Provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

MILS 4402 Officership

Spring. 2 credits. Required. S. Alexander. A continuation of MILS 4401. Conferences and seminars examine the techniques of effective military leadership, with special attention given to professionalism and ethical considerations in the armed forces during

both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training

Army Officer-Education Students

No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one weekend training exercise per semester.

MILS 1111 Leadership Laboratory I

Fall, spring. 0 credits. S-U. MILS I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, physical fitness training, and small group leadership.

MILS 2200 Leader's Training Course

Summer. 1-6 credits. Prerequisite: permission of instructor. S-U grades only. One to six units of credit may be granted depending upon successful completion of training. Six weeks of training, Fort Knox, Ky. Travel pay and salary provided through the Military Science Department. No obligation. LTC graduates eligible to enroll in ROTC Advanced Program.

MILS 2211 Leadership Laboratory II

Fall, spring. 0 credits. S-U. Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, field exercises, and small group leadership.

MILS 3311 Leadership Laboratory III

Fall, spring. 0 credits. Required. S-U. Cadets meet for two hours a week and occasional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical and leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

MILS 3314 Leadership Development and Assessment Course

Summer. 4 credits. Prerequisite: permission of instructor. S-U grades only. Six-week summer training program required to achieve an Army commission. Training and testing as functional Army officers and determination of potential for service. Travel pay, room and board, and salary are provided by the U.S. Army. Held at Fort Lewis, Wash.

MILS 4400 Special Problems for Advanced Undergraduates

Fall, spring. 1-4 credits. Prerequisite: permission of instructor. Letter grade. Individual investigation, research, studies, or surveys of selected problems. Total credit limited to 4 units, with a maximum of 2 units per quarter.

MILS 4411 Leadership Laboratory IV

Fall, spring. 0 credits. Required. S-U. Senior cadets plan and operate the leadership laboratory programs for MILS I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements

In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

Captain Larry Olsen, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant Colonel Jerome Rizzo, United States Marine Corps

Lieutenant Matthew Zarracina, United States Navy

Lieutenant Douglas Raineault, United States Navy

Lieutenant Matthew Houle, United States Navy

The objective of the Naval Reserve Officers Training Corps Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps. This is accomplished by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy and Marine Corps program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

Requirements for Enrollment

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their 17th birthday by September 1 of the year of enrollment and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students can visit the

Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

Programs

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.

Scholarship Program

The Scholarship Program provides approximately 1,000 scholarships in more than 70 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

Benefits

The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a stipend of \$250–\$400 a month for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Naval Service Training Command.

Entering the Scholarship Program

There are three ways to enter the Scholarship Program:

1. by applying to the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.
2. by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.
3. by entering through the Two-Year Scholarship Program.

College Program

Two College Programs are available. Both lead to a commission in the Navy or Marine Corps.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of \$350–\$400 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this book.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

Active Duty Requirements

Scholarship midshipmen commissioned in the Navy or Marine Corps serve on active duty for a minimum of four years. College Program midshipmen commissioned in the Navy or Marine Corps serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

Choice of Assignment

Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed Second Lieutenants in the United States Marine Corps.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as Second Lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Fla., along with their Navy counterparts.

Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional

development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of further courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories

NAVS 1141, 2241, 3341, 4441

All students in the program participate in a two-hour professional development session each week. The session is held from 2:30 until 4:30 on Wednesday afternoons and consists of drill, athletics, and professional information events. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)

NAVS 1101 Fundamentals of Naval Science

Fall. 1 credit. M. Zarracina.

Involves a study of fundamental aspects of naval science. This includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAVS 1102 Sea Power and Maritime Affairs

Spring. 3 credits. M. Zarracina.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

NAVS 1480 Small Boat Sailing (also PE 1480)

Fall and spring. Physical education credit. Instructor TBA.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)

NAVS 2201 Leadership and Management I (also HADM 1115)

Fall. 3 credits. L. Olsen and J. Rizzo.

The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures, reading assignments, films, and discussions

provide students with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high-tech naval environment.

NAVS 3201 Naval Ship Systems I (also MAE 1110)

Fall. 3 credits. M. Houle.

Introduces primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

Junior Year (Navy)

NAVS 2202 Navigation (also BEE 3050)

Spring. 4 credits. D. Raineault.

Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, and study of tides and currents. Electronic navigation systems are discussed.

NAVS 4401 Naval Operations

Fall. 3 credits. D. Raineault.

Covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)

NAVS 3202 Naval Ships Systems II (Weapons)

Spring. 3 credits. M. Houle.

Examines the principles and theories used in the development of naval weapons systems. Extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

NAVS 4402 Leadership and Ethics

Spring. 3 credits. L. Olsen.

Reviews a variety of topics important to the naval officer for both professional and managerial development. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role-playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)

NAVS 3310 Evolution of Warfare

Spring. 3 credits. J. Rizzo.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and governing policy. This course examines the historical evolution of warfare, including principles of war, development of weapons and their effects on warfare, and the political goals associated with specific adversaries through history.

NAVS 4410 Amphibious Warfare

Spring. 3 credits. J. Rizzo.

The history of the development, theory, techniques, and conduct of amphibious operations from 490 BC to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

Other Required Courses

Navy-Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American Military Affairs or National Security Policy (one semester)

English (one year)

Calculus (one year)

Calculus-based physics (one year)

World Cultures/Regional Studies (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

Navy-Option College Program

Navy-option College Program students must complete college-level study in mathematics (1 year), physical science (1 year), and English (1 year), American Military History or National Security Policy (1 semester), and World Culture and Regional Studies (1 semester) as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year, the physical science course by the end of the senior year. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Naval Service Training Command.

Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. One semester (a minimum of 3 hours) of courses in American Military Affairs or National Security Policy is required.

Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities, including sail training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

DEPARTMENT OF AEROSPACE STUDIES

Lieutenant Colonel Michael Williamson, United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Captain Christopher Anderson, United States Air Force, Assistant Professor of Aerospace Studies and Commandant of Cadets, Air Force ROTC Detachment 520

Major Ryan O'Dowd, United States Air Force, Assistant Professor of Aerospace Studies and Unit Admissions Officer, Air Force ROTC Detachment 520

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the mission and organization of the Air Force, the historical development of airpower, leadership, and management. Students study national security policy and the role of the military in a democratic society. This program includes specific courses in aerospace studies and practical leadership laboratories. Additionally, the Department of Aerospace Studies seeks to inform and engage noncadet students about the U.S. military, in general, and the USAF, in particular.

Requirements for Enrollment

The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. Though the program is designed to prepare future Air Force officers, academic courses in the Department of Aerospace Studies are open to all students at Cornell without incurring any military obligation. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission. U.S. permanent residents who are naturalized by their date of graduation may receive a commission.

All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot, navigator, or air battle manager) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements each semester.

Four-Year Commissioning Program

The Four-Year Program is open to all qualified freshmen. Sophomores and juniors may also enter a condensed version of the four-year program with the approval of the department head. Many students join the program after the first semester of their freshman year. If interested, contact the department for details.

Veterans of the U.S. armed forces, students entering Cornell from military schools, or high school students with documented Junior ROTC or Civil Air Patrol involvement may receive advanced academic standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of a two-year General Military Course (GMC) program of study followed by a two-year Professional Officer Course (POC) program of study. For four-year scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. Entry into the POC does carry a military commitment. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course

Students in General Military Courses (GMC) take a 1-credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American airpower. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratories provide cadets with an opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through activities such as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. Students who intend to continue on into the Professional Officer Course and pursue a commission will participate in summer field training for four weeks between their sophomore and junior years; some students may complete field training between their junior and senior years.

Professional Officer Course

The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation. Completing the GMC program of study is not required for POC entry. Many students join the program after their freshman year. Contact the Department of Aerospace Studies for details.

Classroom study in the POC is a 3-credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Commissioning Program

The Two-Year Program consists of the last two years of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining. Graduate or undergraduate entry into this program depends on the needs of the Air Force. Many students join the program after their freshman year. Interested students should contact the department for information.

Scholarships

The Air Force offers three- and four-year scholarships to high school seniors and one-, two-, and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 607-255-4004), from a local Air Force recruiter, via the web at www.afrotc.com, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112-6106, 334-953-2869. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years.

Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from \$3,000 per year to full tuition and fees. There is a monthly \$300-\$500 nontaxable allowance during the school year. A \$900 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board. All AFROTC scholarships are merit-based, not need-based.

Benefits

All cadets in the advanced program—whether they are on scholarship or not—receive a \$450-\$500-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and POC cadets are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

Two types of field training are available: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; team building and leadership training. The five-

week training program includes 60 hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses. Cadets are evaluated for their officer potential at field training.

Cadets may also volunteer for one of many Advanced Training Programs. These programs can include but are not limited to the Air Force Academy Free-Fall Parachute Training, Technical Research and Development Internships, the Academy Soaring Program, Special Operations Training, and language and cultural immersion programs.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program must be awarded a baccalaureate degree before receiving their commission. They then enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for 10 years after completing flying training. Navigators and Air Battle Managers each serve six years after completing training.

Air Force Careers

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, public affairs, transportation, accounting and finance, and other career fields. Specializations for language and cultural studies majors are also available.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year

AIRS 1101 The Foundations of the United States Air Force I

Fall. 1 credit. C. Anderson.

This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer career opportunities, war and the American military, and Air Force heritage.

Leadership laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AIRS 1102 The Foundations of the United States Air Force II

Spring. 1 credit. C. Anderson.

Continuation of AIRS 1101. Topics include Air Force core values, human relations, team building, communication skills, and officer leadership.

Sophomore Year

AIRS 2201 The Evolution of USAF Air and Space Power I

Fall. 1 credit. M. Williamson.

This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of airpower in the Korean conflict. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today's USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

AIRS 2202 The Evolution of USAF Air and Space Power II

Spring. 1 credit. M. Williamson.

Continuation of AIRS 2201. This course covers the role of airpower from Vietnam to the present day. Attending AIRS 2201, while helpful, is not required to take AIRS 2202.

Junior Year

AIRS 3301 Air Force Leadership Studies I

Fall. 3 credits. R. O'Dowd.

This course is a study of leadership required of an Air Force junior officer; it has applicability to any entry-level professional as a junior executive. The course investigates theories and styles of leadership, power and influence, the meaning and function of followership in the military context, critical thinking, problem solving and team building, group conflict management, situational leadership, and management functions and principles. Films and case studies are used for analysis of theories and principles studied. Students receive instruction and practice effective writing (e.g., background and position papers) and briefing skills (e.g., informative and advocacy briefings) for professional communications; students practice both modes of communication. The course also provides professional officer education in terms of defining professional and unprofessional relationships, working with civilian personnel, and the profession of arms. The course is open to any student. For officer candidates, a mandatory leadership laboratory complements this course.

AIRS 3302 Air Force Leadership Studies II

Spring. 3 credits. R. O'Dowd.

A continuation of AIRS 3301. The course investigates advanced skills in leadership: dynamic subordinacy, effective supervision, essentials of counseling, corrective supervision,

professional authority, responsibility, and accountability. The course also investigates the meaning and application of ethical and moral leadership, professional officer ethics, military ethics in joint operations, and the core values of the Air Force. Film and case studies are used for analysis of course content. Written and briefing practice continues. For officer candidates, a mandatory leadership laboratory complements this course.

Senior Year

[AIRS 4401 National Security Affairs/Preparation for Active Duty I

Fall. 3 credits. Next offered 2011–2012.

This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.]

[AIRS 4402 National Security Affairs/Preparation for Active Duty II

Spring. 3 credits. Next offered 2011–2012.

Continuation of AIRS 4401.]

Leadership Laboratory Courses

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIRS 1141 Initial Military Experiences I

Fall. 0 credits. Required. S–U grades.

Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIRS 1142 Initial Military Experiences II

Spring. 0 credits. Required. S–U grades.

Continuation of AIRS 1141.

AIRS 2241 Intermediate Military Experiences I

Fall. 0 credits. Required. S–U grades.

Designed to help students develop skill in giving commands for drill and ceremonies. Students are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies and go on a field trip to a local military installation.

AIRS 2242 Intermediate Military Experiences II

Spring. 0 credits. Required. S–U grades.

Continuation of AIRS 2241.

AIRS 3341 Junior Officer Leadership Experiences I

Fall. 0 credits. Required. S–U grades.

Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIRS 3342 Junior Officer Leadership Experiences II

Spring. 0 credits. Required. S–U grades.

Continuation of AIRS 3341.

AIRS 4441 Advanced Leadership Experiences

Fall. 0 credits. Required. S–U grades.

Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

AIRS 4442 Precommissioning Laboratory

Spring. 0 credits. Required. S–U grades.

Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION

Michael I. Kotlikoff, dean

William A. Horne, director, Cornell University Hospital for Animals

Alfonso Torres, associate dean for veterinary public policy

Drew M. Noden, secretary of the college

Katherine M. Edmondson, assistant dean for learning and instruction

Robert F. Gilmour Jr., associate dean for research and graduate education

Gene R. Wheeler, assistant dean for finance and administration

Kevin Mahaney, assistant dean for alumni affairs and development

Lorin D. Warnick, associate dean for veterinary curriculum

Judith A. Appleton, associate dean for academic affairs and director, James A. Baker Institute for Animal Health

Bruce L. Akey, assistant dean for diagnostic operations

Carol S. Gary, director of student financial planning

Erla Heyns, director, Flower Sprecher Veterinary Library

Mary Beth Jordan, director of human resources

Douglas D. McGregor, director of leadership and training initiatives

Jennifer A. Mailey, director of admissions

Jai Sweet, director of student services and multicultural affairs

DEPARTMENT CHAIRS

Biomedical Sciences: M. Roberson

Clinical Sciences: M. McEntee

Microbiology and Immunology: A. August

Molecular Medicine: M. Linder

Population Medicine and Diagnostic Sciences: Y. Grohn

THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the doctor of veterinary medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or academia, or become engaged in one of an increasing number of biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to doctors of veterinary medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of master of science or doctor of philosophy.

More detailed information is available at the College of Veterinary Medicine web site, www.vet.cornell.edu.

Note: 5000- and 6000-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine's professional curriculum comprises courses in two categories: Foundation courses and Distribution courses.

Courses contributing to the D.V.M. degree begin with VTMED.

FOUNDATION COURSES

Foundation courses are interdisciplinary and represent approximately 70 percent of the professional curriculum. In Foundation courses I, III, and IV (VTMED 5100, 5300, 5400), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. In some courses, three two-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty members are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are scheduled primarily during the mornings, thereby reserving time in the afternoon for independent study. By learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [] are approved courses that are not offered during the 2010–2011 academic year.

VTMED 5100 The Animal Body (Foundation Course I)

Fall. 12 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. J. Hermanson and staff.

Designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Emphasizes developmental anatomy to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 5200 Cell Biology and Genetics (Foundation Course II)

Fall and spring. 8 credits. Prerequisite: first-year veterinary students; VTMED 5100.

Letter grades only. G. A. Weiland and staff. Designed to develop an appreciation of the molecular and cellular basis of animal health and disease. Students gain an understanding of the molecular mechanisms that regulate cell function, the molecular signaling processes that form the basis of integrated function and the response to disease, and the mechanisms underlying inherited traits and genetic disease. Students are introduced to the pathologic basis of disease and the immune response by studying cellular responses to injury. Emphasis is placed on defining and characterizing normal cell function and on understanding how mutations in specific genes promote disease. Fundamental biological processes as revealed by gross and microscopic pathological changes are emphasized. The course is divided into two parts separated by a midterm exam. The first part is made up of three sections: Principles of Cell Biology, Cell Signaling, and Medical Genetics. The second half of the course builds upon and expands these principles, using examples from veterinary medicine including wound repair and cancer. In both parts, clinical cases are utilized to illustrate the concepts presented.

VTMED 5220 (522) Neuroanatomy

Spring. 2 credits. Prerequisite: first-year veterinary students. Letter grades only. M. FitzMaurice.

This course introduces students to the anatomy and clinically relevant functioning of the nervous system, with a strong emphasis on the central nervous system. Students begin by studying the gross anatomy of the brain, spinal cord, cranial cavity, and vertebral canal, including the meninges and vasculature associated with the CNS. Clinical applications in anesthesia and radiology, such as epidural anesthesia, myelography, and MRI are covered. As the course progresses, students learn how the nervous system functions in various contexts including spinal and cranial nerve reflexes, autonomic regulation,

somatosensory and visual pathways, and motor control. Clinical applications covered include anatomical localization of nervous system lesions based on neurological exam findings and the effects of pain and stress on aspects of physiology via CNS pathways.

VTMED 5300 Function and Dysfunction: Part I (Foundation Course IIIa)

Spring. 9 credits. Prerequisite: first-year veterinary students; VTMED 5200. Letter grades only. Fee charged for course guide. Live animals used on limited basis for demonstration of noninvasive procedures. R. Rawson and staff.

Designed to develop students' understanding of how an animal maintains itself as a functional organism; how the maintenance of function is achieved through the integration of different organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how organ function can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 5310 Function and Dysfunction: Part II (Foundation Course IIIb)

Fall. 7 credits. Prerequisite: second-year veterinary students; VTMED 5300. Letter grades only. Fee charged for course guide. R. Rawson and staff.

Continuation of VTMED 5300 Function and Dysfunction: Part I.

VTMED 5400 Host, Agent, and Defense (Foundation Course IV)

Fall. 12 credits. Prerequisite: second-year veterinary students; VTMED 5310. Letter grades only. Fee charged for course guide. D. Bowman (course leader) and staff.

This course seeks to develop an understanding of the interplay between the immunological system of the host and the most significant bacterial and viral agents that cause disease in animals. Lectures focus primarily on adaptive and innate immunity, as well as bacterial and viral pathogens and the diseases they cause. Autoimmunity, epidemiological methods to investigate infectious disease at the herd and single-animal levels, and techniques and tools to control infectious disease are also important components of the course. In the laboratory, animals are used to illustrate some aspects of infectious diseases.

VTMED 5410 Veterinary Parasitology

Fall. 2.5 credits. Prerequisite: second-year veterinary students. Letter grades only. D. D. Bowman.

Provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasizes parasites representative of significant disease processes or of significant clinical importance to veterinarians. Elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

VTMED 5500 Animal Health and Disease: Part I (Foundation Course V)

Spring. 10 credits. Prerequisite: second-year veterinary students; VTMED 5400. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott.

Integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course is presented on a systems basis, moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

VTMED 5510 Animal Health and Disease: Part II (Foundation Course V, continued)

Fall. 20 credits. Prerequisite: third-year veterinary students; VTMED 5500. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott.

Continuation of VTMED 5500 Animal Health and Disease: Part I.

VTMED 5600 Ambulatory and Production Medicine

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Students can take more than one week early but a minimum of one week must be completed during Block VI. C. Guard and staff.

Clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 5601 Community Practice Service: Medicine

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals.

Students interact directly with clients presenting their pets for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 5602 Small-Animal Medicine

Fall, spring, winter, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and R. Goldstein.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 5603 Small-Animal Soft-Tissue Surgery Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and small-animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours, diagnostic techniques, planning of therapy, and daily care of dogs and cats under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized.

VTMED 5604 Large-Animal Medicine Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. G. Perkins, D. Ainsworth, T. Divers, and M. Flaminio.

Students assigned to this service assist the faculty, technicians, and residents of the Large-Animal Medicine Service in the diagnosis and care of patients. The goal of this course is for students to acquire knowledge and skills in history taking, physical examination, selection and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.

VTMED 5605 Large-Animal Soft Tissue Surgery Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 5606 Anesthesiology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. L. Campoy, R. D. Glead, J. W. Ludders, M. Flores, and staff.

Designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. Students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 5607 Dermatology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott.

During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 5608 Ophthalmology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. T. Kern, N. Irby, and E. C. Ledbetter.

Combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the autotutorial center titled *Ocular Examination I and II* before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 5609 Pathology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. P. McDonough and staff.

The pathology rotation strives to integrate gross pathology with other diagnostic modalities. Students will work in groups of three to five for the two-week rotation performing necropsies on mammals, birds, exotic species, and laboratory animals under the guidance of pathology faculty and residents. Students will prepare written reports of the necropsies performed and discuss the findings at daily morning rounds. Students will also be instructed by faculty of the Animal Health Diagnostic Center with expertise in ancillary diagnostic techniques. Students will be expected to learn to use diagnostic testing regimens as integral parts of comprehensive diagnostic and therapeutic plans. Instruction will consist primarily of the discussion of clinical cases with emphasis on laboratory diagnostics. Students will be expected to lead and participate in these discussions and will be evaluated on their ability to do so.

VTMED 5610 Radiology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and staff.

Two-week clinical experience in the imaging section of the Cornell University Hospital for Animals. Students use radiographic, ultrasonographic, CT, MRI, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic studies with guidance from radiology faculty and technical staff. Autotutorial teaching films are used to familiarize students with radiographic examples of common diseases of large- and small-animal species. Small-group discussions are scheduled to present and discuss the teaching files and current cases. The safe use of X-ray-producing equipment and radioisotopes is discussed.

VTMED 5611 Small-Animal Clinical Emergency and Critical Care Medicine

Fall, winter, spring, and summer. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. G. Schoeffler, D. Fletcher, and staff.

Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills include the appropriate evaluation (triage) and stabilization of emergency patients, the management of post-operative and other critical patients, and sensitive and effective client communication. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Students will participate in the management of incoming emergency cases as well as have primary patient care responsibilities in both intensive care and intermediate care units. Students will be expected to work closely with technicians and clinicians to develop familiarity with technical and nursing procedures.

VTMED 5612 Fourth-Year Seminar

Fall and spring. 1 credit. Required component of Clinical Rotations (Foundation Course VI). First-, second-, and third-year students and all faculty and staff members also invited and encouraged to attend. S-U grades only. M. Smith, chair of Senior Seminar Committee.

Gives the student the responsibility and opportunity of selecting and studying a disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report is presented at a weekly seminar. A written report is also submitted within two weeks after the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

VTMED 5701 Veterinary Practice: Physical Examination (Foundation Course VIIa)

Fall. 1.5 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Complements and augments material learned in VTMED 5100 (Foundation Course I—The Animal Body). The class is divided into small groups and each group meets for four to five hours each week during the first 11 weeks of the fall semester. Using live dogs, cats, horses, and cows as models for learning how to perform a physical examination, this laboratory course teaches the skills of observation, auscultation, palpation, and percussion as well as related basic diagnostic procedures. The body systems are examined sequentially and follow the order of study in Foundation Course I.

VTMED 5702 Veterinary Practice: Ethics and Animal Care (Foundation Course VIIb)

Last part of fall semester through end of winter session. 1 credit. Prerequisite: first-year veterinary students; VTMED 5701. Letter grades only. Lects average two hours each week; lab, 12 hours spread throughout course. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Consists of both lectures and laboratory sessions. Lectures partially complement materials learned in VTMED 5200 (Foundation Course II—Cell Biology and Genetics), but for the most part focus primarily on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory reviews basic equine and bovine husbandry skills and the small-animal physical examination.

VTMED 5703 Veterinary Practice: Communication Skills (Foundation Course VIIc)

Spring. 1 credit. Prerequisite: first-year veterinary students; VTMED 5702. Letter grades only. Fee charged for course guide. Live animals used in course instruction.

N. L. Irby, J. Morrissey, C. McDaniel, and staff. Introduces students to medical record keeping and to the communication skills and techniques necessary for effective communication with clients. In addition, students are introduced to the human-animal bond and its implications for veterinary medicine, animal death, and grief counseling. This course gives students the opportunity to practice interviewing clients while refreshing their physical exam skills.

VTMED 5704 Veterinary Practice: Public Health and Preventative Medicine (Foundation Course VIId)

Fall. 2 credits. Prerequisite: second-year veterinary medical students; VTMED 5703. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, L. D. Warnick, and staff.

Complements and augments material learned in VTMED 5400 (Block IV—Host, Agent, and Defense). Emphasizes veterinary public health and preventive medicine. Topics include aggressive animals and animal bites, routes of disease transmission, rabies control programs, zoonotic diseases, emerging infectious diseases, environmental health, and preventive health care programs including vaccination protocols in large and small animals.

VTMED 5705 Veterinary Practice: Introduction to Clinical Procedures (Foundation Course VIe)

Spring. 0.5 credit. Prerequisite: second-year veterinary students; VTMED 5704. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Laboratory course that provides a basic introduction to clinical skills students will need when they start their clinical rotations in the Cornell University Hospital for Animals. Includes a brief review of the physical examination of the dog, cat, horse, and cow. Clinical procedures include but are not limited to ear examination and treatment, IM and SQ injections, fluid administration, naso- and orogastric tube placement, urinary catheterization, and IV catheterization.

VTMED 5706 Veterinary Practice: Professional Development (Foundation Course VIIf)

Fall. 1.5 credits. Prerequisite: third-year veterinary students; VTMED 5705. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Complements material learned in VTMED 5510 Foundation Course V—Animal Health and Disease. Examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), professional liability and malpractice insurance, professional and unprofessional conduct, environmental issues (EPA), biosecurity measures for the practicing DVM, and infection control in CUHA. Also includes a review of communication skills important for students as they enter the clinical rotations. The laboratory component consists of night treatments in the Equine and Farm Animal Hospital.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic science disciplines with clinical medicine and are co-taught by faculty members representing both areas. Students from different classes have the opportunity to take many of these courses together.

Grading options for distribution courses are either letter or S–U.

VTMED 6100 Anatomy of the Carnivore

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. P. S. Maza.

Students study carnivore anatomy by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with prosections, radiographs, palpation of live cats, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures

augment the laboratory dissection and introduce the student to clinical anatomy of the cat and functional morphological comparative features in the Order Carnivora, as well as introduce topics in feline medicine and surgery. Students do an independent project on the carnivore species of their choice and give an oral presentation on this to the class.

VTMED 6101 Anatomy of the Horse

Spring. 3 credits. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. A. J. Bezuidenhout.

Organized as a traditional anatomy course that relies primarily on students learning the anatomy of horses through hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and medicine. Its relevance to clinical practice is emphasized by the regional approach to dissection. Most lectures emphasize structural-functional correlations that are unique or important in the horse. Student dissection cadavers are supplemented by skeletal materials, radiographs, models, preserved predissected specimens, and fresh specimens when available. A live horse will be available for palpation.

VTMED 6102 Anatomy of the Ruminant

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. L. A. Mizer.

Covers the regional anatomy of several ruminant species using dissection laboratories and lectures. Emphasizes the functional consequences of structural modifications and anatomical features relevant to clinical practice. Correlates microscopic anatomy with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, predissected specimens, and postmortem specimens. Students are required to complete an independent study project on a relevant subject of their choice. Assessment includes written and practical exam.

VTMED 6103 Comparative Anatomy: Pattern and Function

Spring. 3 credits. Prerequisite: VTMED 5100; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. J. Hermanson.

The goal of this course is to study anatomical variability among amniote (mammals, birds, and reptiles) and anamniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

VTMED 6120 Anatomy and Histology of Fish

Spring. 2 credits. Minimum enrollment 4; maximum 6. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S–U or letter grades. P. R. Bowser.

Provides an overview of the diversity of anatomy and histology of fish. Students participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student prepares a term project and makes one oral presentation.

VTMED 6198, 6298, 6398, 6498, 6598, 6698, 6798 Special Projects in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member.

Provides students the opportunity to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

VTMED 6199, 6299, 6399, 6499, 6599, 6699, 6799 Research Opportunities in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member.

Provides students the opportunity to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

VTMED 6222 Canine and Feline Medical Genetics

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisites: VTMED 5200, 5300, and 5310. S–U or letter grades. V. N. Meyers-Wallen.

Covers the genetic and pathophysiologic mechanisms underlying inherited diseases in dogs and cats that may be encountered in small-animal practice. Specific disorders of clinical importance are presented in a lecture format to illustrate the distribution, diagnosis, and control of inherited diseases in individuals and populations. Ethical considerations regarding treatment, prevention, and control measures are discussed.

VTMED 6320 Clinical Pathology

Spring. 2 credits. Minimum enrollment 25; maximum 90. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. T. Stokol, D. Schaefer, and H. Priest.

Addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Foundation Courses III and IV and provides additional experiences in practical clinical pathology procedures and microscopy.

VTMED 6321 Management of Fluid and Electrolyte Disorders

Spring, 2 credits. Minimum enrollment 20; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. R. Rawson.

Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid-base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium, calcium, and phosphate abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 6324 Antimicrobial Drug Therapy in Veterinary Medicine

Spring, 1 credit; may be repeated for credit a maximum of two times. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark.

Familiarizes students with antimicrobial drugs used in veterinary practice. Builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and anticancer drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

[VTMED 6327 Current Concepts in Reproductive Biology (also BIOAP 7570)]

Fall, 3 credits. Minimum enrollment 6. Prerequisite: first-, second-, and third-year veterinary students and appropriate undergraduate/graduate training. Letter grades only. Offered odd-numbered years. Next offered 2011-2012. J. Fortune, P. A. Johnson, and staff.

For description, see BIOAP 7570.]

VTMED 6328 Veterinary Clinical Toxicology

Spring, 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U or letter grades. K. Bischoff.

Provides veterinary students with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is conducted with three one-hour lectures per week and one hour-long large-group discussion per week. Grades are based on weekly homework assignments, a midterm, and a final exam.

VTMED 6329 (737) Principles of Pathology

Spring, 1.5 credits. Minimum enrollment 6; maximum 40. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. McDonough.

Intended for students who wish to strengthen and broaden their knowledge of the pathologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes are emphasized. Molecular mechanisms are integrated into the discussion where appropriate. General pathologic processes are organized into a logical and uniform system in

order to facilitate comprehension and learning, with particular attention paid to definition and proper usage of terminology. The course includes two lectures per week and a one-hour large-group discussion, which allows students to apply general knowledge gained in lecture to a specific problem.

VTMED 6420 Foreign Infectious Diseases of Animals

Spring, 1 credit. Minimum enrollment 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. A. Torres, R. Gilbert, and D. Schlafer.

Describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of the most important foreign and emerging animal diseases that present serious economic threats to the United States. Several foreign and emerging animal diseases are also important zoonoses affecting public health. The recent spread and impact of foot-and-mouth disease, avian influenza virus, bovine spongiform encephalopathy, and chronic wasting disease are good examples of the need to emphasize the importance to practicing veterinarians so they in turn can educate producers, consumers, and the public in general.

VTMED 6421 Epidemiology of Infectious Diseases

Spring, 1 credit. Maximum enrollment 8. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohammed and staff.

Introduces the epidemiologic methods used in infectious disease investigations. Also discusses the importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies. Emphasizes understanding the relationships between the host, the agent, and the environment as they relate to disease causation. Explores contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

VTMED 6422 Clinical Biostatistics for Journal Readers

Spring, 1 credit. Minimum enrollment 3; maximum 12. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades. H. N. Erb.

Students become familiar with the statistical methods commonly used in veterinary clinical articles, learn to recognize obvious misuse of those methods, and become able to interpret the statistical results.

VTMED 6423 Clinical Diagnostic Parasitology

Fall and spring, 0.5 credit for attending eight one-hour parasitology sessions; student usually can easily obtain two hours on each of the five participating rotations (Ambulatory, Community Practice Service, Dermatology, Pathology, and Wildlife). Prerequisite: VTMED 5510; third- and fourth-year veterinary students. S-U grades only. A. Lucio-Forester and D. D. Bowman.

Gives students experience in diagnosing parasitic infections. Students perform appropriate parasitological testing methods on clinical samples from patients on their rotation. They also evaluate the test results in terms of treatment or management of the infections. If clinical specimens are not available, appropriate materials are provided for study and evaluation. Ambulatory students typically do qualitative and quantitative floatations on samples from large-animal cases they have encountered that week. In CPS, one hour is spent testing samples from current dog and cat patients, while a second hour is devoted to a discussion of the treatment of common endo- and ecto-parasites. Pathology students typically examine and identify intact parasites they retrieve from various organs at necropsy. This course is considered to be a logical extension of Foundation Course IV: Host, Agent, and Defense, and is expected to build on the didactic material presented in Large- and Small-Animal Parasitology.

[VTMED 6424 Approaches to Problems in Canine Infectious Diseases]

Spring, 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. Next offered 2011-2012. S. C. Barr.

Emphasizes the clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention of select infectious diseases. Practical skills in managing clinical cases are emphasized.]

VTMED 6425 Shelter Medicine I

Spring, 1 credit. Minimum enrollment 5; maximum 40. Prerequisite: VTMED 5400; third- and fourth-year veterinary students. Highly recommended: VTMED 6734. Letter grades only. J. M. Scarlett, E. Berliner, K. Bollen, and others.

Shelter medicine is a new and exciting discipline in veterinary medicine. Caring for animals in animal shelters requires a "herd health" as well as an individual animal perspective. This course addresses the role of veterinarians working with and for animal shelters, the principles of preventive medicine and population health in companion animals; behavioral enrichment, temperament testing, and diagnosis and treatment of behavior problems in shelter animals; design and implementation of high-quality, high-volume spay/neuter programs for shelters; design and implementation of trap/neuter/release programs by shelters; and the medical management of common infectious diseases and approved methods of euthanasia for companion animals. This is the second course in a three-course sequence.

VTMED 6426 Timely Topics in Veterinary Parasitology: Large-Animal

Spring, 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to large-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss the practical control of the disease and to provide in-depth coverage of primary literature related to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 6427 Timely Topics in Veterinary Parasitology: Small-Animal

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to small-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 6428 Vaccines: Theory and Practice

Spring. 1 credit. Minimum enrollment 10. Prerequisite: introductory immunology course or VTMED 5400 or VETMI 3150; second-, third-, and fourth-year veterinary students and graduate students or others by permission of instructor. Letter grades only. Grades based on one take-home final exam. Offered odd-numbered years. S. Mendez.

Broad overview of veterinary vaccines and vaccine programs used in contemporary small- and large-animal medicine, the poultry industry, aquaculture, and equine practice. Considers general guidelines for vaccine use and the process underlying vaccine development from an industry and scientific perspective. Addresses fundamental mechanisms governing vaccine efficacy, as well as recent advances in the use of carriers, adjuvants, and immunostimulants; attenuated pathogens; recombinant subunit vaccines; viral and bacterial vectors for vaccine delivery; and genetic immunization with "naked" DNA. Course also covers the novel applications of vaccine use in the prevention of cancer and neurological disease and the ethics and public perception of vaccine use.

VTMED 6429 Infectious Diseases and Management of Swine

Spring. 2 credits. Minimum enrollment 6; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. S-U or letter grades. K. Earnest-Koons.

Provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. Good management practices for swine farmers are also reviewed and their relationship to disease is discussed. The course is conducted with three one-hour lectures per week and one hour-long large group discussion per week. Meets two days per week for one hour and one day per week for two hours. Grades are based on weekly quizzes, a final exam, a short paper, and attendance/participation.

VTMED 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also BEE/BIOMI 6430)

Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students, graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. Letter grades only. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

VTMED 6432 Fish Health Management

Spring. 1.5 credit. Minimum enrollment 8; maximum 16. Prerequisite: first-, second-, third, and fourth-year veterinary students or written permission of instructor. S-U or letter grades. P. R. Bowser.

Lecture and laboratory course providing an overview of the aquatic environment and the important infectious and noninfectious diseases of fish. Covers important diseases encountered in commercial aquaculture, aquarium systems, and natural waters. The laboratory is designed to provide students with a knowledge base and hands-on diagnostic experience in diseases of fish. Students also maintain and manage aquarium systems during the course to gain an appreciation for the science behind the operation of those systems. The laboratory requires time outside the normal scheduled class sessions (to be scheduled by the students) for management of the aquarium systems. Each student also makes a presentation on a topic in aquatic animal health during the course.

VTMED 6433 Anaerobic Infections of Animals

Spring, two 1-hr. lec per week for eight weeks. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: VTMED 5400.

S-U grades only. P. L. McDonough and staff. Presents anaerobic infections in clinical context as an adjunct to the material covered in Foundation Course IV. Students gain an understanding of the diversity and biology of anaerobic bacteria and the niches that they occupy in the animal and avian body. A basic, clinically oriented taxonomy is presented, and students learn about the virulence and pathogenesis of the major anaerobes that they will encounter in clinical practice. The clinical signs of anaerobic infections, laboratory identification and susceptibility testing, and the use of specimen transport media are also covered. Treatment of common infections, including wound care, is covered and vaccines currently available are discussed in detail. In the second four weeks of the course, students learn about the major clinical syndromes caused by anaerobes.

VTMED 6434 Shelter Medicine II

Spring. 1 credit. Minimum enrollment 3; maximum 20. Prerequisite: third- and fourth-year veterinary students. Highly recommended: VTMED 6425. Letter grades only. J. M. Scarlett, E. Berliner, and K. Bollen.

Shelter medicine is a new and exciting discipline in veterinary medicine. Shelter Medicine II is the third course in the shelter medicine series, and topics in this course build upon those taught in the previous courses. Topics include veterinary forensic medicine, shelter metrics for population health, guidelines for effective foster care and transport programs, physical structure and health in shelters, animal restraint, behavior modification, and management of behavioral problems in the shelter environment.

VTMED 6435 Forensic Science for Marine Biologists (also BIOSM 4450)

Summer. 2 credits. Held at Shoals Marine Laboratory. By application through Shoals Marine Laboratory. Maximum enrollment 21. Prerequisite: satisfactory completion of a year of college-level biology, ecology, or marine science. S-U or letter grades. Special fee required. P. R. Bowser.

For description, see BIOSM 4450.

VTMED 6521 AQUAVET II: Comparative Pathology of Aquatic Animals

Two weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 2 credits. Maximum enrollment 18. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. S-U or letter grades. Fee charged. Available by competitive application process to veterinary and graduate students. P. R. Bowser.

Advanced course (sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service) covering the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic-animal medicine.

VTMED 6522 Diseases of Birds

Spring. 2 credits. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. Emphasizes the latest diagnostic and control approaches. Diseases will be discussed from an etiologic and species-specific standpoint.

[VTMED 6524 Feline Infectious Diseases

Spring. 1 credit, two 50-min. lec each week for eight weeks. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. Next offered 2011-2012. S. C. Barr.

Emphasizes the clinical aspects of feline infectious diseases complementing knowledge acquired in Foundation Course IV. Practical skills in managing clinical cases are emphasized.]

VTMED 6525 Osteoarthritis

Spring, 1 credit. Minimum enrollment 8; maximum 24. Prerequisite: graduate and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust. Provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. Includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. Considers the interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enervation. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is emphasized, but the diseases in other animals such as mice, guinea pigs, rabbits, cats, and horses are mentioned. Therapies such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

VTMED 6526 Veterinary Nutrition

Spring, 2 credits. Minimum enrollment 10; maximum 90. Prerequisite: second- and third-year veterinary students or permission of instructor. Recommended for second- and third-year veterinary students. Letter grades only. J. Wakshlag. The first half of this course provides information on the requirements for and metabolic uses of the essential nutrients of companion animals as well as on formulation and evaluation of practical rations for species of veterinary interest. These concepts are applied in discussion of life-stage nutritional needs, including growth, adult maintenance, gestation, lactation, aging, performance, and production. The second half covers clinically relevant diseases of nutritional deficiency and excess, including obesity, as well as the role of nutrition in the management of diseases of the various organ systems—e.g., renal, lower urinary tract, cardiac, G-I, hepatic, and musculoskeletal system disease. Other topics include the role of nutrition in managing cancer and hypersensitivity disorders and in critical care, including enteral and parenteral nutrition. The course also includes an introduction to nutrition for exotic and zoo animals.

VTMED 6527 Veterinary Aspects of Captive Wildlife Management

Spring, 2 credits. Minimum enrollment 10; maximum 40. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias. Concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non-North American wildlife species (e.g., African, Asian, Australian, and Central and South American species). Format includes lectures and student presentations. In odd-numbered years it focuses more on the North American (native) wildlife species, presented in lectures and laboratories.

VTMED 6528 Equine Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 3; maximum 21. Enrollment by lottery. Prerequisite: VTMED 6101; priority given to students who have indicated career interest in equine medicine and surgery; third- and fourth-year veterinary students. S-U grades only. S. Fubini (coordinator) and other large-animal surgeons. Consists of five laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation.

VTMED 6529 Food-Animal Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 6; maximum 21. Enrollment by lottery. Prerequisite: VTMED 6103; priority given to students who have indicated career interest in farm animals; third- and fourth-year veterinary students. S-U grades only. S. Fubini and other large-animal surgeons. Consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food-animal practice after graduation.

VTMED 6530 Llama Tutorial

Fall, spring, summer. 1 credit. Prerequisite: VTMED 5400; second-semester second-, third-, and fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith.

Autotutorial or group tutorial course covering common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 6531 Poisonous Plants

Fall. 1 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. M. C. Smith. Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

VTMED 6532 Avian Medicine and Surgery

Spring, 2 credits. Minimum enrollment 20; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used in some laboratories. G. V. Kollias and staff. Designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 6533 Advanced Equine Lameness

Spring, 2 credits. Minimum enrollment 7; maximum 21. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades. Live animals used for learning. N. Ducharme, A. Nixon, R. Radcliffe, L. Fortier, and staff. Designed to teach students the methodology of equine lameness diagnosis. Places a strong emphasis on a hands-on approach to learning and is primarily laboratory-based. During laboratories, students work in small groups on live horses to diagnose the cause of their lameness. To this end, students learn both the practical skills, such as perineural and intra-articular blocks, as well as the methodology necessary to systematically work up a lameness case. Laboratories also provide students with the opportunity to practice field radiography and gain ultrasound skills as they pertain to equine lameness. Additionally, students have the opportunity to practice basic farrier skills. Lecture topics are intended to round out the students' understanding of lameness by providing them with a knowledge base of the common causes of lameness, organized by response to local anesthesia. Imaging interpretation is emphasized through case discussions. The course is recommended for students anticipating entry into equine practice. Students seeking hands-on experience with horses are also welcome.

VTMED 6534 Equine Reproduction

Spring, 2 credits. Minimum enrollment 8; maximum 20. Enrollment priority given to Equine/Large Animal pathways. Prerequisite: third- and fourth-year veterinary students. Letter grades only. K. A. Beltaire. Provides the fundamental knowledge and skills necessary for application of routine and advanced practices in equine reproduction. This will be accomplished through hands-on experiences during laboratory sessions as well as lectures focused on the reproductive anatomy, physiology, behavior, and management of mares, stallions, and neonatal foals.

VTMED 6536-6537 Advanced Dairy Reproduction

Spring, 6536, lec; 6537, lab. Lec, 1 credit; lab, 1 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lecture and lab corequisite: enrollment in both lecture and lab components. Letter grades only. R. Gilbert. Offers lectures and labs that provide both theoretical and practical training in current approaches to the veterinary aspects of dairy-cow reproductive care and management. The aim is to empower the student with entry-level, current knowledge, and skills for the reproductive aspects of any modern dairy practice.

VTMED 6538 Special Problems in Equine Medicine

Spring, 0.5 credit. Minimum enrollment 10; maximum 30. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. S–U grades only. T. Divers and staff.

Intended for students anticipating equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.

VTMED 6539 Disorders of Large-Animal Neonates

Spring, 1 credit. Minimum enrollment 10; maximum 100. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Perkins.

Introductory neonatology course. The emphasis is on the wellness examinations and preventive care for neonatal calves, crias, and foals in the first few days of life. Followed by exploration of the medical and surgical problems of neonates, with an emphasis on the foal. Students also spend several hours in the neonatal intensive care unit providing medical care to hospitalized patients under staff supervision.

VTMED 6540 Equine Soft-Tissue Surgery

Spring, 1 credit. Minimum enrollment 6; maximum 24. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Hackett and staff.

Intended for students anticipating equine practice after graduation. Builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case-based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepurchase examination). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 6541 Surgical Pathology

Spring, summer, fall, 1–2 credits, variable; one or two weeks, approx. eight hours per day for 1 credit per week. May be repeated for a maximum of 4 credits. Prerequisite: second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. S. McDonough.

Provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records *within the official add/drop period*. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. *Second-year students* should not enroll for any term other than summer *unless* they have actually reserved a January or spring-break slot through Dr. McDonough.

VTMED 6542 Medical and Surgical Problems of Dairy Cattle: Emphasis on the Individual Animal

Spring, 1 credit. Minimum enrollment 6; maximum 28. Prerequisite: third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff.

Provides students who have a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasizes case discussions, physical examination techniques, and ethical and practical matters. Emphasizes individual cow treatment.

VTMED 6543 Special Problems in Small-Animal Medicine

Spring, 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. S–U grades only. K. Simpson (coordinator) and staff.

Students work through selected problems in small-animal medicine in two-hour weekly seminars. The focus is on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

VTMED 6544 Practice Management

Spring, 2 credits. Prerequisite: third- and fourth-year veterinary students. S–U grades only. M. Kraus, J. Ludders, J. Morrisey, and K. Cummings.

Professional practice and financial managers teach veterinary medical students the essential elements of a successful practice, concentrating on management and organizational skills. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, marketing, building and maintaining clients, practice growth, personal finances, money management, insurance, animals and the law, malpractice, medical records, inventory and pharmacy management, and contracts.

VTMED 6545–6546 Sheep and Goat Medicine

Spring, 6545, lec; 6546, lab. Lec, 1 credit; lab, 0.5 credit. Prerequisite: third- and fourth-year veterinary students. Lab corequisite: Sheep and Goat Medicine lec. S–U grades only. M. C. Smith.

Discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economically important contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, correction of dystocias, and common surgical procedures are discussed and demonstrated in laboratory sessions.

VTMED 6547 Clinical Ophthalmology

Spring, 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S–U grades only. R. Riis, N. Irby, and T. Kern.

The principles and practice of entry-level veterinary ophthalmology introduced in Foundation Course V, Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision making, and recognition of ocular conditions appropriate for referral. One of the four class periods is devoted to ocular surgical techniques performed on cadaver tissues.

VTMED 6548 Dairy Production Medicine

Fall, 2 credits. Minimum enrollment 6; maximum 14. Prerequisite: third- and fourth-year veterinary students. S–U grades only. C. Guard.

Intermediate course in techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the dominant software currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 6550 Clinical Pharmacology

Spring, 0.5 credit; may be repeated for credit max. of two times. Prerequisite: third- and fourth-year veterinary students. S–U grades only. W. S. Schwark.

Offered after Foundation Courses I–V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the Cornell University Hospital for Animals as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 6551 Topics in Veterinary Emergency and Critical Care Medicine

Spring, 1 credit. Minimum enrollment 20. Prerequisite: third- and fourth-year veterinary students; for all others, permission of instructor. S–U or letter grades. D. Fletcher.

This course builds upon the foundation built in Block V. It will consist of a combination of lecture and case discussion sections. Although all of the discussions will center on small animal medicine, the same principles often apply to both small animal and large animal situations. Topics that MIGHT be covered include a selection from the following list: shock, trauma, stabilization, cardiopulmonary resuscitation, respiratory emergencies, cardiac emergencies, endocrine emergencies, acute

renal failure, hematologic emergencies, transfusion medicine, respiratory monitoring, hemodynamic monitoring, acute abdomen, emergency surgical procedures, and sepsis. The class will focus on both emergency stabilization and management of critically ill patients.

VTMED 6554 Reptile and Amphibian Medicine and Surgery

Spring. 1.5 credits. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students or graduate students. Letter grades only. G. V. Kollias. Designed to introduce veterinary students to the basic principles and practice of reptile and amphibian husbandry, management, diseases and medicine, and surgery.

VTMED 6555 Dairy Business Management and Health Economics

Spring. 2 credits. Minimum enrollment 5; maximum 18. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. Warnick, C. Guard, and D. Nydam.

This course helps veterinary students understand basic principles of dairy economics and business management and develop specific skills used by veterinarians in health economic decision making. Three main topic areas are covered: (1) overview of dairy economics from regional and national perspectives; (2) the terminology and concepts used in dairy business financial analyses and economic decision-making; (3) dairy health economics, including the application of economic tools to decisions related to disease treatment, health maintenance, and productivity.

VTMED 6556 Dairy Herd Health Epidemiology

Spring. 1 credit. Prerequisite: third- and fourth-year veterinary students. Letter grades only. L. D. Warnick, D. V. Nydam, and Y. T. Grohn.

Veterinarians are increasingly asked to advise dairy producers on productivity and management decision-making. This course addresses the relationships of dairy cattle diseases with herd-performance parameters. Through a combination of lectures and laboratory exercises, students learn analytic techniques and computer software skills to evaluate dairy herd disease and production problems. Topics include (1) how often production diseases occur and when; (2) how they are interrelated; (3) the impact of disease on milk production, reproductive performance, and risk of culling; and (4) how to use this information in production medicine.

VTMED 6557 Exotic Small Mammals as Pets

Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: third- and fourth-year veterinary students and graduate students. Students enrolled in VTMED 6603 encouraged to enroll. Letter grades only. J. K. Morrisey.

Concentrates on the husbandry, clinical presentation, diagnosis, and treatment of common diseases of nontraditional small mammals that are kept as pets. These species include ferrets, rabbits, guinea pigs, chinchillas, rats, mice, hamsters, gerbils, hedgehogs, sugar gliders, and other animals. Grading is based on a midterm and final exam. Information regarding these species in the laboratory setting will also be discussed.

VTMED 6559 Applied Dairy Nutrition for Practitioners

Spring. 2 credits. Minimum enrollment 5; maximum 25. Prerequisite: veterinary students or permission of instructor. S-U grades only. D. Nydam, T. Overton, and others.

Provides a foundation in the principles of dairy cattle nutrition for veterinary students interested in dairy production medicine. Emphasizes integration of the principles of dairy cattle nutrition with practical rational formulation and troubleshooting on dairy farms, both preventive and curative.

VTMED 6560 Small-Animal Veterinary Dentistry

Spring. 0.5 credit. Prerequisite: second-, third-, and fourth-year veterinary students who have completed Block III. S-U grades only. J. Rawlinson.

This is an introductory-level course in small-animal dentistry. Students will complete an online auto-tutorial course that covers the basics of oral examination, dental radiography, oral pathology, and treatment options in the disciplines of oral surgery, periodontology, endodontics, orthodontics, restorative dentistry, and prosthodontics. This will be complemented by one mandatory three-hour laboratory on a Saturday covering oral examination, regional analgesia, and simple and advanced extractions.

VTMED 6561 Advanced Imaging: Cross Sectional and Functional Modalities

Spring. 1 credit. Minimum enrollment 20; maximum 80. Prerequisite: VTMED 6501. Letter grades only. M. Thompson, N. Dykes, and P. Scivani.

Elective course designed to complement Block V Distribution course in a lecture and laboratory format designed to introduce veterinary students to nonradiographic imaging modalities including ultrasound, CT, MRI, and nuclear scintigraphy. Content includes discussion of neuroimaging, abdominal ultrasound, and functional imaging of bone, thyroid, kidney, and liver. A focus on recognition of appropriateness of examination and modality will be emphasized. The course focuses on conditions affecting dogs and cats.

VTMED 6562 Animal Pain: Recognition, Prevention, and Treatment in the 21st Century

Spring. 1 credit. Minimum enrollment 10; maximum enrollment 30 (80). S-U grades only. A. Looney, J. Ludders, L. Campoy, J. Baesch, and M. Flores.

This elective course will form the foundation of veterinary pain physiology, pathophysiology, assessment, treatment, and prevention for companion and farm animals. Emphasis will be placed on pharmacologic and nonpharmacologic treatment of acute pain, surgical pain, and chronic pain typical of cancer, degenerative diseases, and surgical or traumatic disease in small animals, horses, and food and farm animals. Final project will utilize either case-based or problem-based critical literature review to benefit students' understating of pain recognition and treatment in animal patients.

VTMED 6600 Theriogenology Service

Spring. 2 or 4 credits. Maximum enrollment 5 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Bedford, K. Beltaire, and R. Gilbert.

Exposure to clinical procedures in theriogenology as provided by Cornell University Hospital for Animals patient load and augmented by teaching herd animals. Clinical techniques taught include palpation and ultrasound evaluation, artificial insemination and pregnancy diagnosis in mares; semen collection and evaluation in stallions; and foaling monitoring and neonatal foal care. Additionally, students get exposure to breeding management and assisted reproduction in mares at the Equine Park and to theriogenology clinical cases and emergencies in CUHA comprising all equine, camelid, canine, and bovine species.

VTMED 6601 Cardiology Service

Fall and spring. 2 credits. Minimum enrollment 1 per rotation; maximum 2. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Moise and staff.

Provides students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized, including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

VTMED 6602 Laboratory-Animal Medicine

Fall and spring. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. M. Martin.

The practice of laboratory-animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is an introduction to that specialty. Students accompany laboratory-animal veterinarians on clinical rounds of Cornell's research-animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include field trips to other institutions.

VTMED 6603 Clinical Wildlife-, Exotic-, and Zoo-Animal Medicine

Fall, winter, spring, summer. 2 credits. Maximum enrollment 3 per rotation (plus one intern or extern). Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife-, zoo-, and exotic-animal medicine include the wildlife clinic cases at the Cornell Wildlife Health Center, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

VTMED 6604 Quality Milk

Fall. 2 credits. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. Y. Schukken and QMPS staff.

Covers the causes, diagnosis, treatment, and prevention of bovine mastitis. Stresses the role of management practices. Includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm with udder-health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

VTMED 6605 Special Opportunities in Clinical Veterinary Medicine

Fall, spring, and summer. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. S-U grades only. W. Miller and N. Ducharme.

Provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the assistant dean for learning and instruction for review and approval. Onsite supervisors of the block are required to evaluate each student formally.

VTMED 6607 Poultry Medicine and Production Rotation

Fall, two-week rotation that takes place at University of St. Hyacinthe or University of Guelph in alternating years. 2 credits. Prerequisite: VTMED 5510; third- and fourth-year veterinary students.

Recommended: VTMED 6522. K. A. Schat. Provides an introduction in practical poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler, layer, and turkey farms.

VTMED 6608 Clinical Oncology

Fall and spring. 2 credits. Maximum enrollment 4 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick and staff.

Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation of animals with cancer; sensitive and effective client and referring-veterinarian communication; ability to access relevant information from numerous sources related to cancer management; and ability to understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 6610 Herd Health and Biosecurity Risk Evaluation Using the NYS Cattle Health Assurance Program (NYSCHAP) Model

Summer, fall. 2 credits. Minimum enrollment 5. Prerequisites: VTMED 5400; second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam, K. Kaufman, F. L. Welcome, and Diagnostic Lab faculty.

Introduces students to the identification of disease risk and the evaluation of cattle operations, focusing on animal health, food safety, and the environment. The course combines information on risk assessment, creation of herd plans, biosecurity, Johne's disease, standard operating procedures, global trade, and environmental issues. Additionally, two local farms are visited to give students the opportunity to implement knowledge gained in lectures.

VTMED 6611 Small-Animal Orthopedic Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. R. Todhunter and small-animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours; diagnostic techniques; planning of therapy; and daily care of dogs and cats under the direction of interns, surgical residents in training, and faculty. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized. Students are expected to be able to successfully perform an orthopedic examination and localize the lameness by the end of the rotation. Shelter dogs and cats will be neutered by the students on the service as time permits.

VTMED 6612 Large-Animal Orthopedic/Sport Medicine Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. N. Ducharme, A. Nixon, L. Fortier, and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 6613 Equine Specialty Rotation

Fall. 2 credits. Minimum enrollment 5; maximum 15. Prerequisite: VTMED 5510. Priority given to fourth-year veterinary students in equine pathway. Letter grades only. Live animals used for learning. G. Perkins and R. Hackett.

The objective of the rotation is to teach students basic diagnostic recognition and clinical skills for those interested in equine practice. These skills prepare students to respond on equine-related calls on their first day of work, with special emphasis on dentistry and podiatry. The Cornell horse population is used to teach these practical skills. The emphasis of this elective is hands on, with discussions, rounds, lectures, and field trips.

VTMED 6614 Large-Animal Clinical Emergency and Critical Care

Summer and spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Radcliffe and staff.

The evaluation and management of critical patients and other emergency problems represents a significant component of the practice of large-animal veterinary medicine. As emergency cases are frequently presented to these practitioners, it is imperative such veterinarians are well prepared. The focus of this clinical rotation is for students to acquire the knowledge, skills, and thought processes necessary to triage large-animal emergencies

and manage critical patients. These skills include the appropriate evaluation, stabilization, and treatment of emergency patients and the management of post-operative cases and other critical patients. Participants access relevant information from various sources related to emergency and critical-care medicine and surgery in an effort to understand and apply these principles to clinical cases. Participants primarily have patient care responsibilities in the Large-Animal Intensive Care Unit of the Cornell University Hospital for Animals and work closely with technicians and clinicians to develop familiarity with technical and nursing procedures. In addition, students will learn common veterinary skills and techniques using teaching animals when time permits. The large-animal emergency and critical-care rotation is primarily an after-hours rotation.

VTMED 6615 Special Topics in Ambulatory and Production-Animal Medicine

Fall, winter, spring, and summer. 1-2 credits, variable. Prerequisite: second-, third-, and fourth-year veterinary students; VTMED 5600 and permission of instructor. Letter grades only. C. Guard and staff.

Provides specialized experiences in the Ambulatory and Production Medicine Service. Consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem-solving, records analysis, and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, and small-ruminant medicine. A special, intensive dairy health management experience is available in two-week increments. In this opportunity the student will work full-time at a local dairy alongside veterinarians from our staff and with experienced health technicians performing routine health management tasks and diagnosing and treating sick cows.

VTMED 6616 Veterinary Dentistry Service

Fall, winter, spring, summer. 2 credits. Prerequisite: third- and fourth-year veterinary students who have completed Foundation Course V. Letter grades only. Offered even-numbered years. J. Rawlinson.

This rotation is designed to introduce students to clinical veterinary dentistry with an emphasis on small animals. The goal of this rotation is for students to become proficient in completing thorough oral examinations, identifying oral pathology, interpreting dental radiographs, discussing appropriate dental therapeutic options, and performing dental prophylaxis, basic periodontal procedures, and basic and advanced extractions.

VTMED 6617 South American Camelid Specialty Rotation

First 2 weeks in June. 2 credits. Minimum enrollment 6; maximum 10. Prerequisite: completion of second year of Vet curriculum and VTMED 6530. Letter grades only. S. Bedford-Guaus, S. Purdy, G. Perkins, N. Ducharme, S. Fubini, M. Martin-Flores, L. Mizer, J. Wakshlag, E. Dubovi, E. Ledbetter, and A. Watts.

The objective of the rotation is to provide students with the necessary skills to be able to attend a routine camelid medical problem upon graduation. During the first week,

students will work with the alpaca herd at the University of Massachusetts, Amherst, learning basic clinical skills and common health problems under the supervision of Dr. Purdy. During the second week, clinicians at Cornell University will provide specialty lectures and laboratories covering advanced medical problems and clinical techniques that will build upon the skills learned during the first week. The rotation will also include farm visits to familiarize students with different management systems and some of the clinical laboratories will be performed during these visits.

VTMED 6620 Introduction to Ambulatory Primary Care Medicine

Spring, summer, fall. 1 credit. Prerequisite: first-, second-, and first-semester third-year veterinary students. S-U grades only. M. White.

This a clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care and production medicine services to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), sick and lame animal evaluation and treatment, and other health maintenance procedures make up the majority of nonemergency work. Emergencies are usually obstetric cases, injuries, and acute illness. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 6621 Introduction to Small-Animal Clinical Orthopedics

Fall and spring. 2 credits. Prerequisites: UVIS training; ability to perform physical examination through Block VIIA laboratory; permission of instructor. No expertise necessary in orthopedics. S-U grades only.

This distribution will allow students early in the curriculum early exposure to small-animal clinical orthopedic practice. Students will shadow the senior students for the first week until they and the supervising faculty are sure they can function more independently. Students will perform activities expected of a senior DVM student whose primary responsibility is patient care, through which they learn how to prevent, diagnose, and treat clinical orthopedic disease. History taking, physical and orthopedic exams, radiography, laboratory testing, diagnosis, and options for treatment will be learned. Students will participate in rounds, scrub into surgery, administer post-operative care, learn the SOAP format for patient management; discuss patient care with owners; become facile with electronic UVIS records; and write discharge instructions and review them with owners and discharge patients.

VTMED 6622 Small-Animal Emergency Clinical Experience

Summer (Fall). 2 credits. Prerequisites: completion of first year of veterinary school; permission of instructor. S-U grades only.

Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus

of this course will be the initial development of a knowledge base and skill set necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills will include the appropriate evaluation (triage) and stabilization of emergency patients, the management of postoperative and other critical patients, and sensitive and effective client communication. Participants will work closely with fourth-year students, interns, residents, technicians, and faculty on the Emergency and Critical Care Service to become familiar with technical and nursing procedures as well as to develop clinical skills and a systematic approach to clinical cases.

VTMED 6630 Student Rounds in Radiology

Fall and spring. 0.5 credit. Does not count toward elective rotation credits. Prerequisite: permission of instructor. P. Scrivani, M. Thompson, and N. Dykes.

Radiology rounds are a gathering of veterinarians and veterinary students to discuss the condition and imaging diagnosis of patients in the hospital. These are student-presented rounds and all students are expected to attend. Presentations emphasize the selection of the appropriate imaging examination, detection of imaging signs, diagnostic or prognostic importance of imaging signs, and the impact of the imaging examination on subsequent patient care.

VTMED 6631 Diagnosis and Treatment of Diseases of the Dairy Cow—A Case-Based Approach Utilizing Hospitalized Cases

Fall, winter, spring, summer. 0.5–1 credit; 0.5 credit requires participation in seven sessions; 1 credit requires participation in 14 sessions during the semester; students may change credits up through seventh week of class; course may be taken up to three semesters. Maximum enrollment 14. Students selected after submission of résumé, letter of intent, and documentation of career focus on dairy cattle. Prerequisite: completion of first-year vet curriculum and permission of instructor. S-U grades only. T. Divers and S. Fubini.

This course is designed for dairy-focused veterinary students and will expose them to diagnosis and management of diseases of dairy cattle, focusing on individual animal medicine and surgery rather than production. According to and utilizing existing hospital cases, students will meet with clinicians during the academic year to examine and discuss cases. Case logs, literature review, attendance, and class presentations will be required.

VTMED 6720 The Literature and Subject Matter of Natural History

Spring. 1 credit. Minimum enrollment 10; maximum 30. S-U grades only. H. E. Evans.

Introduces natural history literature. Shows and discusses materials relating to the earth sciences and the biology of plants and animals from around the world. Students are required to show and discuss a book that concerns natural history in a country of their choice and submit a one-page book report for duplication. (A recommended reference text is *The Cambridge Illustrated Dictionary of Natural History* by R. J. Lincoln and G. A. Boxshall, 1990.) Golden Guides for mammals, birds, reptiles, fishes, insects, pond life, seashore life, and tropical fish may be given to participants.

VTMED 6721 Introduction to Avian Biomedicine

Spring. 1.5 credits. Minimum enrollment 10; maximum 60. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. G. V. Kollias, A. J. Bezuidenhout, and D. Muscarella.

Introduction to avian biology for veterinary students. Includes lectures and laboratories involving avian anatomy, physiology, and natural history. The course emphasizes the development of a strong foundation in avian biology that is applied in VTMED 6522 Diseases of Birds and VTMED 6532 Avian Medicine and Surgery.

VTMED 6722 AQUAVET I: Introduction to Aquatic Veterinary Medicine

Four weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 4 credits. Maximum enrollment 24 students from Cornell U., the U. of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by competitive application process, to veterinary and graduate students. S-U grades only. Fee charged. P. R. Bowser.

Sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. Introduces veterinary students to aquatic-animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic-animal medicine. Students present seminars on appropriate topics.

VTMED 6723 Veterinary Medicine in Developing Nations

Spring. 2 credits. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. Offered even-numbered years. K. A. Schat.

This seminar course provides veterinary students with information on and insight into the multitude of complex issues facing U.S. veterinarians working in developing nations.

VTMED 6724 Senior Seminar

Fall and spring. 0.5 credit. Does not fulfill 1-credit Set VII minimum. Prerequisite: first-, second-, and third-year veterinary students. S-U grades only. M. Smith.

Attendance at 10 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course. If not completed during semester enrolled, an incomplete grade will be assigned and the remaining sessions must be completed during the following semester or a failing grade will be assigned.

VTMED 6726 Introduction to the Professional Literature

Spring. 1 credit. Minimum enrollment 6; maximum 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students. S–U grades only. S. Whitaker.

Introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques and strategies for personal information management, as well as exploring the use of veterinary-related online information.

VTMED 6727 Introduction to Community Practice Service

Fall, winter, spring, and summer. 1 credit. Prerequisite: first- and second-year veterinary students; permission of instructor. S–U or letter grades. W. E. Hornbuckle.

Introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination, and routine treatment of pets and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 6728 Clinical Management of Native Wildlife

Fall, spring, summer (credit given in fall). 1 credit. Maximum enrollment 30 students per semester. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Introduces veterinary students to primary care for native wildlife and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Wildlife Health Center by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty and residents on a daily basis. Scheduling is organized by a designated student supervisor. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Before the end of the semester, students are required to submit two case summaries, or alternatives approved by the course leader, and a log of their clinical hours.

VTMED 6729 Introduction to Equine Practice

Spring. 0.5 credit. Maximum enrollment 70. Prerequisite: veterinary students. Intended for students with little or no experience working with horses. Letter grades only. R. Hackett and C. Collyer.

Introductory course in equine husbandry. Lecture topics include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries.

VTMED 6731 Behavior Problems of Small Animals

Spring. 1 credit. Minimum enrollment 10. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S–U grades only. Staff.

The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 6733 Veterinarians and Food-Animal Production Systems: An Introduction

Spring. 1 credit. Minimum enrollment 5. Prerequisite: first- and second-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and invited speakers.

This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians to various food-animal production systems, how veterinarians interact with them, and the synergy between these systems and veterinarians in society. Each week the production structure of the dairy, beef, swine, poultry, or aquaculture industry, veterinarians' role in them, and career opportunities and expectations are discussed. The offering is intended for first- or second-year students so that they can plan appropriately to take additional courses or set up externships in the following years.

VTMED 6734 Companion Animal Welfare Issues

Spring. 1 credit. Minimum enrollment 3; maximum 50. Letter grades only. J. M. Scarlett, E. Berliner, K. Bollen, and staff.

Companion animal welfare issues have become a major concern for many American communities. Precipitated by the changing status of companion animals, the proliferation of free-roaming cats, and human safety issues, communities are considering (or have passed) breed-specific bans, restrictions on declawing, and solutions for "free-roaming" cats. This course will address these and other issues such as pet surplus—animals entering shelters and those euthanized in shelters; the "no-kill" movement; reasons for relinquishment to shelters; recognition and documentation of animal abuse; the use of pediatric neutering in population control—studies relating to safety and potential adverse effects; and dog fighting and the role of the veterinarian in the recognition and reporting of these activities. The objective of the course is to provide information for veterinary students such that they can assume leadership with regard to these issues in their future communities.

VTMED 6735 Conservation Medicine

Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: veterinary students, graduate students at CVM, others by written permission of instructor. Letter grades only. G. V. Kollias, A. J. Travis, and N. Abou-Madi.

Conservation Medicine will introduce students to the basic concepts of free-ranging and captive wildlife conservation and will engage veterinary students in issues of sustainable development relating to wildlife. The course will present information not included in other courses within the curriculum that is

fundamental for veterinarians contemplating a career in conservation medicine, wildlife health, or zoological medicine. This course will complement existing courses in the curriculum including, but not limited to, Introduction to Avian Biomedicine, Avian Diseases, Veterinary Aspects of Captive Wildlife, Veterinary Medicine in Developing Nations, The Literature and Subject Matter of Natural History, Comparative Anatomy, Foreign Animal Diseases, Epidemiology of Infectious Diseases, Anatomy and Histology of Fishes, and Fish Health Management. Students will learn how wildlife populations are regulated by their environment and how such populations are managed and assessed. Various habitat preservation strategies will be presented and discussed. Conversely, for critical endangered species, the focus will be on *ex situ* recovery programs.

VTMED 6736 Pet Loss and Bereavement Counseling Course

Spring. 0.5 credit. S–U grades only. M. McEntee.

This course introduces veterinary students to the key issues related to the loss of a companion animal and bereavement counseling. The course provides a structured background to assist students in developing the necessary skills to deal with clients and the grieving process. Students will participate in Cornell University's Pet Loss Support Hotline, a telephone-based community outreach program designed to provide support to callers grieving the loss of a companion animal. Students actively participate in the prerequisite nine hours of training in the fall semester, followed by hands-on experience staffing the Pet Loss Support Hotline and attendance in rounds (twice a semester). Students will maintain a case log and write one case report.

VTMED 6737 Field Techniques of International Wildlife Management

Spring, summer. 2 credits. Prerequisites: open to veterinary students with an interest in wildlife medicine who have volunteered at the Wildlife Health Center for one semester or a minimum of 20 hours; permission of instructor. Letter grades only. J. Morrissette, G. Kollias, N. Abou-Madi, and M. Bezjian.

This course teaches students about various nonnative species and offers hands-on experience working with these animals. Students will also learn about local cultures and work with wildlife sanctuaries, refuges, and bioparks in developing nations. Students will be graded on preparation, participation, and a presentation.

VTMED 6738 Veterinary Medicine: The Versatile Profession

Spring. 0.5 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students. S–U grades optional. D. Smith.

An overview of the major historical events that shaped the veterinary profession during the past 150 years. Particular attention is paid to the impact of transformational veterinarians and how they responded to challenges, adversity, and societal change.

UNDERGRADUATE AND GRADUATE COURSES

These courses are taught by the faculty in the College of Veterinary Medicine but do not contribute to the D.V.M. degree requirements.

Biomedical Sciences

VTBMS 3460 Introductory Animal Physiology (also BIOAP 3110) (Undergraduate)

Fall, 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S-U (letter grades by permission of instructor). E. R. Loew.

For description, see BIOAP 3110.

VTBMS 6000 Special Projects in Anatomy

Fall, spring, 1 credit per 2.5-hour period. Prerequisite: permission of instructor. S-U grades only. Biomedical science staff.

VTBMS 6100 Genomes as Chromosomes

Fall, 1 credit. Prerequisites: upper-level undergraduates and graduate students; others by permission of instructor or BIOGD 2810 and BIOBM 3320. Letter grades only. Offered alternate years. P. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. This course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair, and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

VTBMS 6120 Overview of Model Genetic Organisms

Spring, 1 credit. Minimum enrollment 5; maximum enrollment 20. Prerequisites: upper-level undergraduates and graduate students; BIOGD 2810 or BIOGD/VTBMS 4000 or permission of instructor. S-U or letter grades. Offered alternate years. J. Schimenti and guest lecturers.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed are *Arabidopsis*, yeast, *Drosophila*, *C. elegans*, zebrafish, and mice.

VTBMS 6200 Research Fellowship in Biomedical Sciences

Fall, spring, 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Offered by individual faculty members in the Department of Biomedical Sciences for DVM students undertaking research in research fellowship.

VTBMS 7010 Mouse Pathology and Transgenesis (also TOX 7010)

Fall, meets during second half of semester and relies on background information from NS BIOGD 4900, which meets during first half. Students interested in both courses must register for them separately. 1 credit. Maximum enrollment 12 students. Prerequisite: permission of instructor.

Highly recommended: basic histology course (BIOAP 4130) and BIOGD 4900.

Letter grades only. A. Nikitin and staff. Introductory course on contemporary mouse pathobiology explains principles and methods of pathology. The course focuses on systematic evaluation of new genetically modified mice, with particular attention to such topics as experimental design, validation of mouse models, and identification of novel phenotypes. Also included is supervised mouse necropsy.

VTBMS 7020 The Practice of Laboratory Animal Medicine

Fall, spring, 1 credit. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U or letter grades. M. E. Martin.

Laboratory animal veterinarians must be trained in the regulatory aspects of research and teaching utilizing animals; in addition, they must understand the principles of facility management and design. Also, to work with researchers, lab animal veterinarians must have knowledge of basic research methodologies and animal welfare issues. This course may also be of interest to other veterinarians, veterinary students, and researchers who wish to understand the workings of the specialized field that oversees and enables the use of animals in research and teaching. The topics covered include: Laboratory Animal Medicine: Historical Perspectives; Laws, Regulations, and Policies; Design and Management of Animal Facilities; Anesthesia, Analgesia, and Euthanasia; Techniques of Experimentation; Control of Biohazards Used in Animal Research; Selected Zoonoses/Xenozoonoses; Genetic Monitoring; Transgenic and Knock-out Mice; Factors Influencing Animal Research; Animal Models in Biomedical Research; Research in Lab Animal and Comparative Medicine; and Lab Animal Behavior.

VTBMS 7030 The Biology and Diseases of Laboratory Animals

Fall, spring, 2 credits. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U or letter grades. M. E. Martin.

Intended for veterinarians entering the field of laboratory animal medicine. It may also be of interest to other veterinarians, veterinary students, and researchers with a basic knowledge of anatomy and pathology who use animals in research or teaching. This course will cover the main laboratory animal species (rodents, rabbits, nonhuman primates, ruminants, swine, dogs, cats, ferrets, reptiles, amphibians, and fish). The biology, husbandry, diseases, pathology, and main research uses of these species will be covered. The course will meet for two hours weekly and will extend over the course of two years.

VTBMS 7130 Cell Cycle Analysis

Spring, 1 credit. Minimum enrollment 5. S-U grades only. Offered even-numbered years. A. Yen.

Presents a brief historical review of the cell cycle; a summary of cell-cycle regulatory processes; and practical methods for cell-cycle analysis, including mathematical representations. Topics include growth control of bacterial cell cycle including chemostats, mammalian-cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory

protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell-cycle phase durations, cell-cycle phase specific growth factor sensitivity, and timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell-cycle analyses that will be used in their research.

VTBMS 7200 Animal Physiology and Anatomy Seminar

Fall, spring, 1 credit. Prerequisite: admission to graduate field of physiology; permission of instructor. S-U or letter grades.

Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

VTBMS 7880 Seminar in Surgical Pathology

Fall, spring, 1 credit. Intended for residents in anatomic pathology; third- and fourth-year veterinary students may attend. Letter grades only. D. H. Schlafer and faculty of the Section of Anatomic Pathology and visiting pathologists.

The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

Clinical Sciences

VETCS 6180 Principles of Medical Imaging (also BME 6180)

Fall, 3 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. Letter grades only. Y. Wang and N. Dykes.

For description, see BME 6180.

VETCS 7000 Pathophysiology of Gastrointestinal Surgery

Fall, 1 credit. S-U grades only. Offered every third year. S. L. Fubini.

Initially presents normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores, and ruminants. This is followed by in-depth discussion of the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions, and short bowel syndrome. This course emphasizes development of an advanced understanding of surgically relevant gastrointestinal problems leading to appropriate decision making.

VETCS 7010 Pathophysiology of Orthopedic Surgery (Graduate)

Spring, 1.5 credits. Prerequisites: D.V.M., M.D., or equivalents or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon.

Provides specialized training in the anatomic, physiologic, and pathologic process of

musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.

VETCS 7020 Pathophysiology of Respiratory and Cardiac Surgery (Graduate)

Fall. 1.5 credits. Prerequisite: D.V.M. or equivalent. S-U grades only. Offered every third year. R. P. Hackett, S. L. Fubini, and N. G. Ducharme.

Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper-airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.

VETCS 7030 Surgical Principles and Surgery of the Integumentary System (Graduate)

Spring. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. S. L. Fubini.

Designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

VETCS 7040 Pathophysiology of Urogenital Surgery (Graduate)

Fall. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. R. P. Hackett.

Designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology is stressed. Some classes consist of reprints with discussion.

VETCS 7060 Pathophysiology of Neurologic Surgery (Graduate)

Spring. 1.5 credits. Prerequisite: D.V.M.s, M.D.s, or equivalent or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon.

Provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.

VETCS 7100 Advanced Veterinary Anesthesiology I

Fall. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 7110 Advanced Veterinary Anesthesiology II

Spring. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 2990 Research Opportunities in Microbiology and Immunology

Summer, six-week session. 6 credits; minimum 120 hours lab time expected per 3 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level). Letter grades only. Microbiology and Immunology faculty.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College).

VETMI 5000 Independent Study in Immunology

Fall, spring. 1-3 credits. S-U or letter grades.

This course will allow students to gain in-depth knowledge of basic immunology through independent study under the guidance of faculty on individual topics.

VETMI 6050 Special Projects in Microbiology (Undergraduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor; good background in microbiology or immunology. Recommended: background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff.

Normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 6200 Research Fellowship in Microbiology and Immunology

Fall, spring. 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Faculty TBA. Offered by individual faculty members in the Department of Microbiology and Immunology for DVM students undertaking research in Research Fellowship.

VETMI 7000 The Biology of Animal and Plant Viruses (Graduate and Upper-Level Undergraduate)

Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and virology faculty.

Examines current topics in studies of animal and plant viruses. Topics examined include the structures of viruses and their interactions with hosts and host cells, and evolutionary processes.

VETMI 7050 Advanced Immunology

Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years. C. Leifer and staff.

This course covers selected topics in immunology at an advanced and in-depth level through lectures and paper discussions.

VETMI 7070 Advanced Work in Bacteriology, Virology, and Immunology (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Microbiology staff.

Designed primarily for graduate students with a good background in pathogenic microbiology and immunology. May be elected by veterinary students who are properly prepared.

VETMI 7120 Seminars in Infection and Immunity

Fall, spring. 1 credit. Requirement for graduate students in Department of Microbiology and Immunology and field of immunology. S-U grades only. D. G. Russell.

Invited speakers in immunology and infection biology acquaint students with current advances in the field. For seminar schedule and speaker list, see the web site at www.vet.cornell.edu/public/InfectionAndPathobiology/seminar_fall.htm and www.vet.cornell.edu/public/InfectionAndPathobiology/seminar_spring.htm.

VETMI 7190 Immunology of Infectious Diseases

Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S-U or letter grades. Offered odd-numbered years. M. Bynoe and staff.

Focuses on molecular and cellular mechanisms underlying the immunity and innate recognition of viruses, bacteria, and protozoa pathogens.

VETMI 7230 Current Topics in Immunology

Fall, spring. 1 credit. Registration each semester required of immunology graduate students. Prerequisite: graduate standing. S-U grades only. Immunology faculty.

Immunology discussion group in which students present research papers from the contemporary scientific literature.

VETMI 7250 Mechanisms of Microbial Pathogenesis (also BIOMI 7250)

Spring. 3 credits. Prerequisites: BIOMI 4040, 4090, 4170 or equivalent course; written permission of instructor for undergraduates. Letter grades only. D. Debbie, H. Marquis, and M. Scidmore.

Covers the mechanisms of pathogenesis of bacteria, fungi, parasites, and viruses. Addresses the need for a course covering the breadth of microbial pathogenesis. Emphasizes, at the molecular and cellular levels, the methods microbial pathogens use to enter, survive, and cause damage to their hosts. By studying the molecular mechanisms of all the major microbial groups together, students will be able to appreciate the commonality of pathogenic mechanisms as well as to see the unique properties of each group of organisms. The contribution of the host response to the pathogenesis process will be covered, but in less detail as this information is addressed in VETMI 7190 Immunology of Infectious Diseases.

VETMI 7251 Current Topics in Microbial Pathogenesis

Spring, 1 credit. Prerequisites: none. S-U grades only. H. Marquis and C. Altier. This journal club-course, based on contemporary scientific literature related to microbial pathogenesis, will enhance students' reading and public speaking skills.

VETMI 7370 Advanced Work in Animal Parasitology (Graduate)

Fall, spring, 1-3 credits. Prerequisite: advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty. Intended for advanced undergraduate, graduate, and veterinary students with interests in parasitology research.

VETMI 7700 Advanced Work in Avian Diseases (Graduate)

Fall, spring, 1-3 credits. Letter grades only. K. A. Schat.

VETMI 7720 Advanced Work in Aquatic Animal Diseases (Graduate)

Fall, spring, 1-3 credits. S-U grades only. P. R. Bowser.

VETMI 7730 Advanced Work in Avian Immunology

Fall, spring. Variable credit. Letter grades only. K. A. Schat.

VETMI 7830 Seminars in Parasitology (Graduate)

Fall, spring, 1 credit. Prerequisite: veterinary or graduate students or permission of instructor. S-U grades only. D. D. Bowman.

Seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

Molecular Medicine**VETMM 2990 Undergraduate Research in Pharmacology**

Summer, six-week session. 3 to 6 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisites: one year basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level.) Letter grades only. R. A. Cerione.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give a brief (15- to 20-minute) oral presentation of their work and submit a manuscript in a form suitable for publication. The faculty director has ultimate responsibility for evaluating the student's work and assigning the grade.

[VETMM 4700 Biophysical Methods (also AEP/BIONB 4700)]

Fall, 3 credits. Prerequisite: permission of instructor; basic knowledge of physics and mathematics. Recommended: some knowledge of physical chemistry, molecular and cell biology, or neurobiology. Letter grades only. Next offered 2011-2012. M. Lindau.

For description, see AEP 4700.]

[VETMM 5710 Biophysics Methods Advanced Laboratory (also AEP 5710)]

Spring, taught daily during first three weeks of Jan. 3 credits. Prerequisites: VETMM 4700. S-U or letter grades. Next offered 2011-2012. M. Lindau.

For description, see AEP 5710.]

VETMM 6100 Cellular and Molecular Pharmacology

Fall, 2 credits. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years. C. M. S. Fewtrell and pharmacology faculty.

Graduate-level course surveying the molecular and cellular aspects of receptor mechanisms, signaling pathways, and effector systems, and chemotherapeutic approaches. Topics include drug-receptor interactions; ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; calcium signaling; nutrient and nitric oxide signaling; mechanisms of receptor-mediated effects on neural excitability, electrical pacemakers, muscle contraction and gene expression; and chemotherapy, including antimicrobial agents and cancer chemotherapy.

VETMM 6110 Systems Pharmacology

Spring, 2 credits. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty.

Graduate-level course surveying system- and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology; pharmacology of inflammation, allergy and platelet function; and cardiovascular, gastrointestinal, endocrine, renal, and gastric pharmacology.

VETMM 6120 Topics in Pharmacology

Fall (even sections), spring (odd sections), taught once a week for 10 weeks during the semester. 0.5 credit. Prerequisite: none. S-U grades only. L. M. Nowak (even sections); H. Sonderman (odd sections).

A journal club-workshop course based on topics corresponding to the Department of Molecular Medicine seminar series. In the journal club, students will select and present papers with guidance from the course director. Career development topics will be intended to promote students reading widely in the scientific literature and to develop their public speaking skills.

VETMM 6130 Medical Pharmacology

Spring, taught from third week of March through first week of May. 2 credits.

Prerequisite: permission of instructor. Letter grades only. Offered odd-numbered years.

A lecture course covering basic principles of pharmacology and physiology, will feature the central and peripheral nervous system and muscle, cardiovascular, renal pulmonary systems, and gastrointestinal tract. This course is intended to provide graduate students with a strong foundation in medical pharmacology required for teaching in a medical curriculum. Grades will be based on take-home midterm and final exams.

VETMM 7010 Organ-System Toxicology (also TOX 6110)

Fall, 1 credit. Prerequisite: graduate students in environmental toxicology. S-U grades only. Offered even-numbered years. W. S. Schwark.

Minicourse on molecular mechanisms involved in chemical toxicity. Considers specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system.

VETMM 7030 Receptor-Ligand Interactions

Fall, 2 credits. Prerequisite: permission of instructors. S-U or letter grades. Offered even-numbered years. G. A. Weiland and R. E. Oswald.

Covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.

VETMM 7040 CNS Synaptic Transmission

Fall, 2 credits. Limited to 20 students.

Prerequisite: graduate students, undergraduate seniors, or juniors majoring in neurobiology; permission of instructor. S-U or letter grades. Offered even-numbered years. L. M. Nowak.

Survey course in vertebrate central nervous system physiology and pharmacology that focuses on mechanisms of neuro-transmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal brain and neurological disorders are discussed. Topics are introduced in lectures and followed up by discussions of recent journal articles.

VETMM 7050 The Chemistry and Biology Behind Cell Signaling

Spring, 2 credits. S-U or letter grades. Offered even-numbered years.

R. A. Cerione.

Focuses on the mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

VETMM 7060 Growth Factor-Coupled Signaling (also BIOBM 7340)

Fall, 0.5 credit. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years. R. A. Cerione.

The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins are covered.

VETMM 7070 Protein NMR Spectroscopy (also BIOBM 7300)

Spring, 2 credits. Prerequisites: CHEM 3890 and 3900 or 2870 and 2880 or permission of instructor. S-U or letter grades. Offered even-numbered years. R. E. Oswald and K. L. Nicholson.

The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are

presented. The application of these techniques to proteins for resonance assignments, structure determination, and dynamics characterization is studied.

VETMM 7200 Patch Clamp Techniques in Biology

Spring, taught daily during second and third weeks of Jan. 2 credits. S-U grades only. Offered even-numbered years. Times TBA. L. M. Nowak.

Students learn theoretical background for patch clamp studies in morning lectures. The experimental techniques of conventional and permeabilized patch whole-cell recording and single channel recordings in cell-attached and excised membrane patches are taught in 15 hours of afternoon laboratory instruction per student. Lab training sessions are arranged individually throughout the spring semester.

VETMM 7300 Graduate Research in Pharmacology or Molecular Medicine

Fall, spring, and summer. 1-12 credits. May not be used to fulfill formal course requirements for field of pharmacology. Prerequisite: permission of instructor. S-U grades only.

Offered by individual faculty members in the Department of Molecular Medicine and the graduate field of pharmacology for graduate students undertaking research toward M.S. or Ph.D. degrees.

VETMM 7400 Special Projects and Research in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. May not be used to fulfill formal course requirements for field of pharmacology. S-U or letter grades. Field of pharmacology faculty.

Enables students to undertake research in an area related to the research interests of a faculty member in the graduate field of pharmacology. Topics include but are not limited to Mechanisms of Growth-Factor Action—R. A. Cerione; Mechanisms of Neurotransmitter Release—M. Lindau; and Central Nervous System Neurotransmitters—L. M. Nowak.

VETMM 7600 Directed Readings in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. S-U or letter grades. Reading and disc. Field of pharmacology faculty.

Individual members of the graduate field of pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include but are not limited to Receptor Mechanisms—G. A. Weiland; Biochemical Neuropharmacology—G. A. Weiland; Amino Acid Neurotransmitters—L. M. Nowak; and Calcium—C. M. S. Fewtrell.

Population Medicine and Diagnostic Sciences

VTPMD 2990 Undergraduate Research in Epidemiology

Fall, spring, and summer. 3 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisite: undergraduate standing; one year of basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level) or permission of instructor. J. Scarlett, H. Erb, Y. Grohn, L. Warnick, H. Mohammed, Y. Schukken, and D. Nydam.

Mentored research apprenticeship program designed to give laboratory experience in

applied epidemiology to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory, academic life, and appropriate acquisition of techniques. At the end of the six-week session, they are expected to give a brief (15- to 20-minute) oral presentation on their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

VTPMD 6250 Evolutionary Genomics of Bacteria

Spring. 1 credit. Prerequisite: graduate standing. S-U or letter grades. M. J. Stanhope.

Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course includes lectures, discussion of relevant scientific literature, and hands-on bioinformatics exercises.

VTPMD 6640 Introduction to Epidemiology (Graduate)

Fall. 3 credits. Corequisite: BTRY 6010 (College of Agriculture and Life Sciences) or permission of instructor. S-U or letter grades. H. N. Erb.

Lectures and discussion deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

VTPMD 6650 Study Designs (Graduate)

Spring. 2 credits. Prerequisites: VTPMD/VETCS 6640 and BTRY 6010 (College of Agriculture and Life Sciences). S-U or letter grades. H. O. Mohammed.

Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial). Design issues include sample size, bias, and relative advantages and disadvantages. Course objectives are to (1) know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies. Consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional and other hybrid designs).

VTPMD 6660 Advanced Methods in Epidemiology (Graduate)

Fall. 3 credits. Prerequisites: VTPMD/VETCS 6650 and BTRY 6020 (College of Agriculture and Life Sciences). S-U or letter grades. Y. T. Grohn.

Concepts introduced in VTPMD 6640 and 6650 are developed further, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis, repeated measures, and strategies for the analysis of epidemiologic data.

VTPMD 7010 Special Projects in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Y. Chang.

Provides laboratory experience with attention to specific aspects of infectious disease problems.

VTPMD 7020 Special Topics in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Y. Chang.

Offers a broad exposure to various aspects of infectious diseases.

VTPMD 7040 Master's-Level Thesis Research (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades only. Diagnostic Laboratory faculty.

Research leading to an M.S. degree.

VTPMD 7070 Clinical Biostatistics (Graduate)

Spring. 2 credits. Minimum enrollment 2; maximum 25. Prerequisite: veterinary residents and graduate students. Letter grades only. Offered odd-numbered years. H. N. Erb, J. M. Scarlett, and H. O. Mohammed.

Explains the theory behind and interpretation of parametric and nonparametric statistical techniques commonly used in research/clinical medicine. Students analyze small data sets using a commercial statistical-software package.

VTPMD 7080 Epidemiology Seminar Series (Graduate)

Fall, spring. 1 credit. S-U grades only. Y. T. Grohn.

Discusses advanced theoretical and analytical epidemiologic concepts and techniques.

VTPMD 7660 Graduate Research (Graduate)

Fall, spring, summer. Credit TBA. Prerequisite: master's and Ph.D. students; permission of graduate faculty member concerned. S-U grades only. Y. T. Grohn.

Enables students outside the section of epidemiology to receive graduate research credits for projects with epidemiological components.

VTPMD 7690 Doctoral-Level Thesis Research

Fall, spring, and summer. Credit TBA. Prerequisite: master's and Ph.D. students in epidemiology. S-U grades only. Y. T. Grohn.

Enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 7990 Independent Studies in Epidemiology

Fall, spring, 1-3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.

The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

COLLEGE OF ARTS AND SCIENCES

ADMINISTRATION

G. Peter Lepage, dean—255-4146

Walter Cohen, senior associate dean—255-4147

Elizabeth Adkins-Regan, senior associate dean—255-4147

David DeVries, associate dean of undergraduate admissions and education—255-3386

Jane V. Pedersen, associate dean of administration—255-7507

Susan Robertson, director of communications—255-6386

Paul Sawyer, associate dean and director of writing programs—255-4061

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences is a community of about 4,100 undergraduates and 600 faculty members. It is also a graduate school and research center. Altogether it attracts faculty members whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 20,270 undergraduate and graduate students and faculty members. This wider community provides depth and diversity of applied and professional studies beyond what a college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college and the university their distinctive character.

The richness of the college's undergraduate curriculum is extraordinary; there is no course that all students must take, and there are over 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one's critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty advisor to design a sensible, challenging, and appropriate course of study.

The faculty of the College of Arts and Sciences believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective writing and quantitative skills,

study foreign languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree.

Summary of Requirements

1. First-year writing seminars: two courses. (See "John S. Knight Institute for Writing in the Disciplines," p. 605.)
2. Foreign language: completion of one course taught in the language at the nonintroductory level or above (Option 1) or at least 11 credits in one language (Option 2).
3. Distribution: nine courses (may overlap with courses counting toward a major).
4. Breadth: two courses (may overlap with courses for distribution, major, or electives).
5. Major (see individual department listings for major requirements).
6. Electives: four or five courses (at least 15 credits) not used to fulfill other requirements (other than the breadth requirements) and not in the major field.
7. Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See "Acceleration" below.)
8. 34 courses: a 3- or 4-credit course counts as one course. A 2-credit course counts as half a course; a 1-credit course does not normally count toward the requirement; a 6-credit language course counts as one and one-half courses. (See "Courses and Credits" for some 1-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course.)
9. Credits: a total minimum of 120 academic credits, of which a minimum of 100 must be taken in the College of Arts and Sciences at Cornell. (See "Noncredit Courses" below for courses that do not count as academic credits or courses.)
10. Physical education: completion of the university requirement (passing a swim test and two 1-credit nonacademic courses). Note: Physical education credit does not count toward the 120 credits needed to graduate or toward the 12-credit minimum required for good academic standing each semester.
11. Application to graduate (see "Graduation," p. 464).

Undergraduates are responsible for knowing and fulfilling the requirements for graduation and for alerting the college to any problems with their records. To check on their progress toward the degree, students are urged to consult their advising deans in 55 or 172

Goldwin Smith Hall and to check their DUST (Distributed Undergraduate Student Tracking) reports at <http://data.arts.cornell.edu/as-stus>. The DUST report is updated after each semester to reflect the student's progress in college requirements. To check on their progress in the major, students should consult their major advisors.

Explanation of Requirements

Foreign Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying a language other than one's own helps students understand the dynamics of language, our fundamental intellectual tool, and enables students to understand another culture. The sooner a student acquires competence, the sooner it will be useful. Hence, work toward the foreign language requirement should be undertaken in the first two years. Students postponing the language requirement for junior and senior years risk not being graduated in time. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, China and Asia-Pacific Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian.

The language requirement may be satisfied in one of the following ways:

Option 1: Passing (a) a nonintroductory foreign language course of 3 or more credits at Cornell at the 2000 level or above or (b) any other nonintroductory course at the 2000 level or above conducted in a foreign language at Cornell. **OR**

Option 2: Passing at least 11 credits of study in a single foreign language (taken in the appropriate sequence) at Cornell.

Any exceptions to these rules will be noted elsewhere in individual department descriptions.

Students whose speaking, reading, and writing competence in a language other than English is at the same level we would expect our entering freshmen to have in English (as shown by completing high school in that language or by special examination during their first year here at Cornell) are exempt from the college's language requirement.

Placement

Entering students who have completed two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Being placed by examination into the first course at a nonintroductory level does not earn credit

toward the degree. Degree credit is earned only for demonstrated mastery of work equivalent to the first course at an intermediate level at Cornell and placement into the second intermediate course. Students should seek to satisfy the language requirement in their first years at Cornell. Those with test scores one or more years old may be required to take a Cornell Advanced Standing Examination (CASE) if the instructor deems the student is insufficiently prepared for the level in which he or she has enrolled.

Placement Tests and Advanced Placement Credit

1. The following language placement and advanced standing tests are scheduled at the beginning of each semester:

- Chinese (Cantonese and Mandarin), Hindi, Japanese, and Korean (schedule available from Department of Asian Studies, 350 Rockefeller Hall);
- French, Italian, and Spanish (schedule available from Department of Romance Studies, 303 Morrill Hall) [These placement tests are also offered online during the summer.];
- German (schedule available from Department of German Studies, 183 Goldwin Smith Hall);
- Russian (schedule available from Department of Russian, 226 Morrill Hall).

The advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. In Russian only, all students seeking placement take the CASE.

Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact David Cruz de Jesus in 305 Morrill Hall, dc36@cornell.edu. Speakers of Spanish who completed their secondary education in a non-Spanish-speaking country are required to present either SAT II or AP or LPS scores for placement, or for eligibility to take the CASE exam.

2. Arabic: departmental examination, Department of Near Eastern Studies, 409 White Hall.
3. Greek: departmental examination, Department of Classics, 120 Goldwin Smith Hall.
4. Hebrew: departmental examination, Department of Near Eastern Studies, 409 White Hall.
5. Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

6. Persian: departmental examination, Department of Near Eastern Studies, 409 White Hall.
7. Turkish: departmental examination, Department of Near Eastern Studies, 409 White Hall.

Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements.

Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfulfilled and how to fulfill them with courses that complement their overall program. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

Students must complete four courses in science and quantitative reasoning, identified below under the categories Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR). In addition, they must complete five courses of 3 or more credits each from four of the five categories of courses in the humanities and social sciences with no more than three in the same department. The five categories of courses fulfilling the distribution requirements in humanities and social sciences are: Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge Cognition and Moral Reasoning (KCM-AS), Literature and the Arts (LA-AS), and Social and Behavioral Analysis (SBA-AS). How an individual course is categorized is indicated with the appropriate abbreviation in its description under its department.

It is important to recognize that only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences. Some topics courses and courses offered through the Society for the Humanities, among others, do not count toward distribution.

Students wishing to take an Arts and Sciences course that does not have a rubric assigned to it in this volume should consult their advising dean to ascertain the status of the course and see if it has, in fact, been assigned any distribution rubric after the publication of this volume. Students may not petition to change the rubric of any given course, nor may any faculty member change the rubric of a course for an individual student. Faculty members wishing to change the rubric for a course they teach must petition the Educational Policy

Committee for a change in rubric, and that rubric must then be applied to the course for all students in the course.

- **Cultural Analysis (CA-AS)**

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

- **Historical Analysis (HA-AS)**

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

- **Knowledge, Cognition, and Moral Reasoning (KCM-AS)**

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

- **Literature and the Arts (LA-AS)**

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

- **Social and Behavioral Analysis (SBA-AS)**

Courses in this area examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict

resolution). Please note that CRP 1100 (The American City) and CRP 1101 (Global City) satisfy SBA-AS.

- **Physical and Biological Sciences (PBS)**

In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences:

Primary list:

(The courses listed individually are all cross-listed in an A&S science department.)

Animal Science

4270 Fundamentals of Endocrinology

Anthropology

3710 Human Paleontology

Applied and Engineering Physics

3300 Modern Experimental Optics

3630 Electronic Circuits

4500 Introduction to Solid-State Physics

4700 Biophysical Methods

Astronomy: all 3- or 4-credit courses except ASTRO 1109, 1110, and 1700

Biological Sciences: all 3- or 4-credit courses except BIOG 1115, 2990, 4980; BIOEE 3620; BIOBM 1320, 3990; BIOMG 1320; BIOMI 1720; BIONB 3210, 4200, 4230, 4350, and BIOSM 2040, 2250, 3620, 3710. BIOG 2000 and 4990 require permission from the Office of Undergraduate Biology.

Biological and Environmental Engineering

4710 Introduction to Groundwater

4800 Our Changing Atmosphere

Biology and Society

2141 Biological Basis of Sex Differences

4471 Seminar in the History of Biology

4611 Environmental Policy

4612 Environmental Policy

Biomedical Engineering

4910 Principles of Neurophysiology

Chemistry and Chemical Biology

all 3- or 4-credit courses

Cognitive Science

1110 Brain, Mind, and Behavior

3300 Introduction to Computational Neuroscience

Computer Science

4812 Quantum Information Processing

Crop and Soil Sciences

3970 Environmental Microbiology

4830 Land, Water, Agriculture, and Environment

Earth and Atmospheric Sciences

all 3- or 4-credit courses except 1400, 1420, 2500, 2900, 3750, 4350, 4940

Electrical and Computer Engineering

4870 Intro to Radar Remote Sensing

Engineering

1220 Earthquake!

Entomology

3250 Insect Behavior

3690 Chemical Ecology

4400 Phylogenetic Systems

4550 Insect Ecology

4700 Ecological Genetics

Feminist, Gender, & Sexuality Studies

2140 Biological Basis of Sex Differences

Food Science
3940 Applied and Food Microbiology

History
2870 Evolution
4150 Seminar in the History of Biology

Horticulture
2430 Taxonomy of Cultivated Plants
4730 Ecology of Agricultural Systems

Music
1466 Physics of Musical Sound

Natural Resources
3030 Introduction to Biogeochemistry
4560 Stream Ecology

Nutritional Sciences
4750 Mammalian Developmental Defects

Physics
all 3- or 4-credit courses

Plant Pathology
4090 Principles of Virology
4480 Symbiotic Association: Evolution and Ecology

Psychology
1110 Brain, Mind, and Behavior
3220 Hormones and Behavior
3240 Biopsychology Laboratory
3300 Introduction to Computational Neuroscience
3320 Biopsychology of Learning and Memory
4240 Neuroethology
4310 Effects of Aging on Sensory and Perception Systems
4440 Neural Computation
4920 Sensory Function

Science and Technology Studies
2871 Evolution
4471 Seminar in the History of Biology

Toxicology
4370 Cell Proliferation and Senescence (3 cr)

Students may select additional science courses from the following **supplementary list**:

Animal Science
1100 Domestic Animal Biology I
1150 Domestic Animal Biology II
2120 Animal Nutrition

Anthropology
1300 Human Evolution: Genes, Behavior, and the Fossil Record
2310 Chimpanzees and Politics
3270 Environmental Archaeology
3390 Primate Behavior and Ecology
4263 Zooarchaeological Method
4264 Zooarchaeological Interpretation

Applied and Engineering Physics
1100 Lasers and Photonics

Archaeology
3270 Environmental Archaeology
4011 Ceramic Analysis for Archaeology
4263 Zooarchaeological Method
4264 Zooarchaeological Interpretation

Dance
3120 The Moving Body: Form and Function

Electrical and Computer Engineering
4300 Lasers and Optical Electronics

Engineering (Intro course)
1100 Lasers and Photonics

Entomology
2011 Alien Empire: Bizarre Biology of Bugs
2100 Plagues and People (3 cr.)

2120 Insect Biology
3150 Spider Biology

Food
2000 Intro to Physio & Bio Aspects of Food

Natural Resources
2010 Environmental Conservation
2100 Introductory Field Biology
3110 Fish Ecology, Conservation, and Management
4200 Forest Ecology

Nutritional Sciences
1150 Nutrition and Health
3450 Introduction to Physiological and Biological Aspects of Food
3610 Biology of Normal and Abnormal Behavior

Plant Pathology
2013 Magic Mushrooms, Molds, and More
2015 Mushrooms, Molds, and Molecules

Psychology
2230 Introduction to Biopsychology
3260 Evolution of Human Behavior
3610 Biology of Normal and Abnormal Behavior

- **Mathematics and quantitative reasoning (MQR)**

In completing four courses in science and quantitative reasoning, students must take at least one of the following courses (note that EDUC 1150 Introductory College Mathematics counts neither toward the college degree nor toward distribution):

Applied Economics and Management
2100 Introductory Statistics

Biometry
3010 Biological Statistics I

City and Regional Planning
3210 Introduction to Quantitative Methods
3280 Quantitative Methods in Policy Planning

Cognitive Science
4240 Computational Linguistics

Computer Science
1110, 1112, 1113, 1114 Introduction to Computing
2110 Object-Oriented Programming and Data Structures
2800 Discrete Structures
3110 Data Structures and Functional Programming
3740 Computational Linguistics
4210 Numerical Analysis and Differential Equations
4220 Numerical Analysis: Linear and Nonlinear Equations
4860 Applied Logic

Earth and Atmospheric Sciences
4350 Statistical Methods in Meteorology and Climatology

Ecology and Evolutionary Biology
3620 Dynamic Models in Biology

Economics
3190 Introduction to Statistics and Probability
3200 Introduction to Econometrics
3210 Applied Econometrics
3680 Game Theory
4760/4770 Decision Theory I and II

Engineering
1101 Engineering Applications of ORIE
1700 Computation, Information, and Intelligence
2110 Object-Oriented Programming and Data Structures

Industrial and Labor Relations
2100 Introductory Statistics
2120 Statistical Reasoning

Information Science
1700 Computation, Information, and Intelligence

Linguistics
4424 Computational Linguistics
4485 Topics in Computational Linguistics

Mathematics
all 3- or 4-credit courses except 1000 and 1009

Natural Resources
3130 Biological Statistics I

Philosophy
2310 Introduction to Deductive Logic
3300 Foundations of Mathematics
3310 Deductive Logic
4310 Mathematical Logic
4311 Topics in Logic

Policy Analysis and Management
2100 Introduction to Statistics

Psychology
3500 Statistics and Research Design

Sociology
3010 Evaluating Statistical Evidence

Statistical Science
2100 Introductory Statistics
2200 Biological Statistics I

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics. Nor may they earn credit toward the degree for overlapping courses: AEM 2100 Introductory Statistics, ILRST 2100 Introduction to Statistics, ILRST 2120 Statistical Reasoning, MATH 1710 Statistical Theory and Application in the Real World, PAM 2100 Introduction to Statistics, PSYCH 3500 Statistics Research and Design, SOC 3010 Evaluating Statistical Evidence, STSCI 2100 Introduction to Statistics.

Breadth Requirements

Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the 20th century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses (not credit from an examination) conferring proficiency in a non-Western language toward the geographical breadth requirement.

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements

Students may not apply AP credit or transfer credit from another institution to the breadth requirements or to any distribution requirement.

Students who transfer to the college from another institution are under the above rules for advanced placement credit, but are eligible to have credit for post-high school course work taken during regular semesters (not summer school) at their previous institution count toward all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.

Restrictions on Applying Cornell Courses to the Distribution and Breadth Requirements

1. First-year writing seminars may not count toward any other college requirement.
2. No single course may satisfy more than one distribution requirement.
3. Students may count courses in their major toward distribution and breadth.
4. Only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences.
5. A student may not petition for alteration of a particular course's distribution rubric, nor may a faculty member change a course rubric for an individual student. The rubric for a course may be changed only if the Educational Policy Committee grants a petition by the course's instructor to change the rubric. If the rubric changes, it does so for the class as a whole and never for an individual student.

The Major

In their last two years, students devote roughly one-half of their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and must be no later than second semester of sophomore year. To apply, they take a copy of their official transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree and risks not being allowed to continue in the college. That student must meet with an advising dean and may be placed on a leave of absence as early as the first semester of the junior year if he or she has not declared a major.

Available majors

Majors are offered by each of the departments. There are also majors in American Studies, Archaeology, Biology & Society, China and Asia-Pacific Studies, Feminist, Gender, & Sexuality Studies, Information Science, Religious Studies, and Science of Earth Systems.

Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty advisor, an independent major that includes courses from several departments and even colleges. See "Independent Major and College Scholar Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double majors

Only one major is required for graduation. Some students choose to complete two or more majors. No special permission or procedure is required; students simply become accepted into multiple majors and find an advisor in each department. All completed majors are posted on the official transcript. However, even though courses in a second major count among the required 15 credits of electives (see immediately below), double majoring can constrict the variety of electives that might be valuable for an education in the liberal arts and sciences. Students should "double major" only if their intellects and deep interests direct them to do so. If a student majoring in more than one subject decides s/he does not wish to complete the second major, s/he must go to the department and formally withdraw from that major.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate department or program listing in this *Courses of Study* or contact the appropriate department for information on minors offered and how to pursue a minor.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary minors. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects; some develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential community for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers.

Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the B.A. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full semesters and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Internal transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the college. Only if a transfer student spends at least four semesters in the College of Arts and Sciences can he or she accelerate (see "Acceleration," below).

Approved study abroad, SEA Semester, Urban Semester, FALCON, and Cornell in Washington are considered semesters of residence but not semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester. Dual-degree students spending 10 semesters at Cornell who feel they need three semesters abroad may petition the Academic Records Committee for permission but must demonstrate the academic necessity of the extended time away. Semesters of extramural study in Cornell's School of Continuing Education, semesters of study at other institutions, and summer sessions anywhere do not count as semesters of residence.

Acceleration

The faculty of the college desires that each student achieve depth, as well as breadth, from his or her undergraduate education. Indeed, benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. When a student feels he or she does not need eight semesters in order to achieve this depth, the student can apply to be able to accelerate by a term (and in rare cases, two terms), compressing the first four semesters into three (or two), and completing the prerequisites for the major in time to spend four full semesters in the major.

A student desiring to accelerate should meet with an advising dean in the first month of the desired penultimate semester so that he or she may have time to submit the online application to graduate by the deadline. The advising dean will determine the student's eligibility to accelerate. Accelerants must fulfill the following requirements:

1. All graduation requirements except for the residency requirement (120 total credits, 100 Arts and Sciences credits, 34 courses, all college requirements, and the university's physical education requirement).
2. Either condition *a* or *b*:
 - a. 60 credits before beginning their last four semesters in the college and the prerequisites for admission to the major in time to spend *four* semesters in the major.
 - b. 48 credits in College of Arts and Sciences courses numbered 3000 and above and prerequisites for admission to the major in time to spend *four* semesters in the major. No more than three upper-level courses taken in other colleges at Cornell University may count toward the 48 credits and then only if approved as part of the major.
3. 100 credits at Cornell at "C" (not C-) or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement and transfer credits do not count toward this requirement.
4. Students may not use credits earned while on leave of absence to reduce their terms of residence. In other words, they must be eligible to accelerate without applying any credit toward the degree that they earned while on leave.
5. Accelerants may not finish the degree with credits earned through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell in Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as first-year students may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must spend at least four semesters in the college on campus in Ithaca. Acceleration is thus limited to transfer students who enter as sophomores. If a student does not meet the requirements for acceleration, that student may not petition for an exception. Acceleration is, in itself, an exception to the normal rules of the college, and the Academic Records Committee does not grant exceptions to exceptions.

Ninth semester

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses and full access to campus resources for full tuition, but allows financial aid only from loans or outside agencies, not from Cornell

funds. Students who need fewer than 12 credits in a ninth or tenth semester to graduate should complete the outstanding courses and pay prorated tuition. Students may spend a ninth semester with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to the following:

1. Students who have been ill or experienced other untoward circumstances beyond their control.
2. Students who were academically underprepared for the curriculum at Cornell and needed to begin with a lighter schedule of courses than normal. (See your advising dean about this option.)

Extramural study

Students in good academic standing may take a personal leave of absence and enroll in the School of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial medical circumstances make studying part-time temporarily necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for a part-time schedule and proration of tuition in the college.

Prorated tuition in the final semester

Students may complete their degrees by taking fewer than 12 credits and pay prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1. They have completed all requirements by the end of the sixth or seventh semester, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.
2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking exactly two courses, one of which is the thesis itself. They must register for the thesis and one additional course.

A student must see an advising dean to confirm his or her eligibility for prorated tuition and receive a petition to be approved by his or her faculty advisor. The student must specify the number of credits to be taken in the final term, and the faculty advisor must be able to certify that those credits will allow the student to complete his or her graduation requirements. Once the student's petition has been approved, he or she must see college registrar Sally O'Hanlon in 55 Goldwin Smith Hall to complete the prorated tuition form necessary for the Office of the Bursar. Both the petition form and prorated tuition form must be completed and approved before the end of the second week of the semester.

Courses and Credits

Students must complete at least 34 full courses (which may include courses students place out of with AP credit) to be graduated—that is, an average of four full courses during each

of six semesters and five courses during each of two semesters. Not all courses are full courses. Course equivalencies are as follows:

Counting courses:

1-credit courses: Certain 1-credit courses in Music, and in Theatre, Film, and Dance, may aggregate so that each two can count as a half course, and four can count as a full course. Otherwise, single-credit courses do not count as part of the 34.

2-credit course = one-half course

3- or 4-credit course = one full course

5-credit BIOMG 2810 (Genetics) = one and one-half course

Other 5-credit courses = one full course each

6-credit language course = one and one-half course

Other 6-credit courses = one full course each

8-credit FALCON courses = 2 full courses each

16-credit FALCON semester = 4 full courses

16-credit Intensive Arabic semester = 4 full courses

Counting credits: Students must complete a minimum of 120 credits (which may include AP credits). Of the 120, a minimum of 100 must be from courses taken in the College of Arts and Sciences at Cornell.

Courses that do not count toward the 120 credits required for the degree or toward good standing: The College of Arts and Sciences does not grant credit toward the degree for every course offered by the university. Courses in military training, training as an emergency medical technician, service as a teaching assistant, physical education, remedial or developmental training, precalculus mathematics (including EDUC 1150), supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, and keyboarding are among those for which degree credit and credit toward the 12 credits required each semester for good academic standing are not given. Students should consult <http://as.cornell.edu/academics/advising/coursesdonotcount.cfm> for more information and a list of courses.

Other cases in which a course may not receive credit or count toward good standing include the following:

- A course identified as a prerequisite for a subsequent course may not be taken for credit once a student completes that subsequent course.
- A repeated course. (For more information, see "Repeating courses," below.)
- A course with material that significantly overlaps with material in a course a student has already taken, for example, SOC 1101 Introduction to Sociology, and DSOC 1101 Introduction to Sociology; or any of the following statistics courses: AEM 2100 Introductory Statistics, ILRST 2100 Introduction to Statistics, ILRST 2120 Statistical Reasoning, MATH 1710 Statistical Theory and Application in the Real World, PAM 2100 Introduction to Statistics, PSYCH 3500 Statistics Research and Design, SOC 3010 Evaluating Statistical Evidence, STSCI 2010 Introduction to Statistics.

Courses that count toward the 100 required Arts and Sciences credits may include liberal

arts courses approved for study abroad during a semester or academic year of full-time study (not summer study), courses taken in certain off-campus Cornell residential programs, courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements (and substituting for A&S courses), and courses (up to two) that an advisor accepts as part of a completed and formally established cross-college, interdisciplinary minor. In addition, **all** courses that appear on the Supplementary Science and Mathematics and Quantitative Reasoning lists, count toward the 100 credits required in the College of Arts and Sciences.

Courses that do not count toward the 100 required Arts and Sciences credits include credits earned in other colleges at Cornell (except in the cases noted above), credits earned in any subject at institutions other than Cornell, and advanced placement credits. AP credits count as part of the 120 credits and 34 courses required for the degree but not as part of the 100 Arts and Sciences credits and may not be applied to distribution or breadth. AP credits are posted on the transcript. If, subsequently, a student takes the course out of which s/he had placed, the AP credit will be removed because of the overlap in content (for more information on AP credits, please see pages 452-454).

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content is significantly different, credit is granted a second time. If the content is the same, both grades nonetheless appear on the transcript and are included in any GPA that is calculated, but the course and credit count toward the degree only once. Repeated courses do not count toward the 12 credits required for good standing. Students considering repeating a course under this circumstance should discuss the matter with their advisor and an advising dean. Students who plan to repeat a course must submit a petition to the college registrar, Sally O'Hanlon, 55 Goldwin Smith Hall. If the original course grade was F or U, no petition is necessary.

Using courses to fulfill more than one requirement:

A course may fulfill more than one college requirement in any of the following situations:

1. A course may be used to fulfill distribution, breadth, and a major requirement (except as noted in earlier sections on restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).
2. A one-semester course in foreign literature (not language) or culture that is acceptable for certifying option 1 in that language may also be applied to the relevant distribution requirement and, if appropriate, to the breadth requirement.
3. Courses may count toward breadth requirements and toward any other requirement except first-year writing seminars.
4. Courses in a second major may count as electives.

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell's summer

session or by successfully petitioning for transfer credit for summer courses at other colleges. Students should consult their advisors regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available online, www.as.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Students are advised to submit course descriptions, syllabi, and approval forms to the director of undergraduate studies in the relevant Cornell department for prior approval of each course. Transcripts for completed work at other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer courses abroad) counts toward the 120 credits and 34 courses required for the degree, but not toward the 100 credits required in the college at Cornell. It may not be applied to distribution or breadth requirements but may be applied to elective requirements and to major requirements (with the approval of the department).

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement. Students are permitted to earn up to 12 credits in one summer.

Transferring credit earned away from Cornell while on leave of absence

See "Leaves of Absence."

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They must always complete at least 60 credits and 18 courses at Cornell and be in residence on campus in the college for at least four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the bachelor of arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission. Once matriculated in Arts and Sciences at Cornell, transfer students must adhere to the same rules for transferring credit earned on leave as all other students.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following four programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who

show the maturity to plan and carry out, with the help of their advisor, a well-designed program of study. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses into a coherent subject. Up to 40 students in each class are accepted into the program.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, the university's physical education requirement, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study but are not required to fulfill the other usual college requirements for the degree. All college scholars must complete a senior project. Although they are not required to complete or fulfill the general education requirements, members of the College Scholar Advisory Board believe that the spirit of those requirements is good.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday of classes in the spring of the freshman year. Students should contact Dean Ken Gabard, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a bachelor of science degree from the College of Engineering; or (2) a bachelor of fine arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a bachelor of science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a bachelor of science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for 10 semesters with financial aid. For further information contact Dean Tammy Shapiro in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty advisor and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the bachelor's degree. Students should contact Dean James Finlay, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the

calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School or the Johnson Graduate School of Management is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the B.A. degree after the first year of professional school.

Students with 8 or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School, the Cornell Institute for Public Affairs (CIPA), or the Graduate School of Management, or in early admission to the master's of engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in Arts and Sciences courses.

Teacher Education

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science or physical science and a minor (concentration) in education. They are then able to complete a master of arts in teaching (MAT) in one year and earn certification in New York State. Students in agricultural science may be able to complete all certification requirements as undergraduates, although this option is not recommended.

For more information, contact the program director, Deborah Trumbull, at 255-3108 or djt2@cornell.edu.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the

work. Students must prepare a proposal for independent study (proposal forms are available in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to 6 credits with one instructor or up to 8 credits with more than one instructor. Students who are being paid for assisting faculty in research *cannot* earn course credit for that work.

Undergraduate Research

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. See www.rso.cornell.edu/curb.

Students interested in research should consult the director of undergraduate studies in the department of interest to find out about available opportunities. For more general information on the process of research or on petitioning for independent study credit for research, students should consult Dean Maria Davidis or Dean David DeVries, in the Office of Undergraduate Admissions and Advising, or consult www.research.cornell.edu/undergrad.

Language Study

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad in China or Japan. Students interested in this program should contact the Department of Asian Studies, 388 Rockefeller Hall; e-mail: falcon@cornell.edu.

Prelaw Study

Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are applying to law school may consult Dean Heather Struck in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

The college offers a minor in law and society. This program offers a broad scope, complements almost any major, and attracts many students not intending to become lawyers as well as a subset of those intending to.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such education has a profound effect on the doctor's understanding of the world and hence usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

Students in the College of Arts and Sciences who are planning careers in medicine should meet with their advising dean, <http://as.cornell.edu/academics/advising/index.cfm>.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. Students wishing to participate in any off-campus program must petition their advising dean with a list of courses they wish to take during the program and a well-reasoned explanation of why the proposed semester is crucial for their course of study.

Study Abroad

The College of Arts and Sciences encourages study, both on campus and abroad, that provides a greater understanding of the world's peoples, cultures, economies, and environments, and prepares graduates for the challenges of international citizenship in the 21st century. Study abroad is open to students in any major who meet the college requirements and have a strong academic goal. Well-chosen and well-planned study abroad contributes a global or comparative dimension to your chosen field, enhances critical thinking and communication skills, and provides firsthand immersion in and appreciation of another culture. Focused academic work in the right institution abroad can be excellent preparation for advanced study or honors work in your final semesters at Cornell, and can lead to a career with a global component.

Requirements

- GPA of 3.0 or higher and good academic standing
- language study at the required level
- area studies course work
- fulfillment of the College of Arts and Sciences residence requirement
- meet requirements set by the foreign university or program

All students requesting to study abroad during the academic year must be approved by the College of Arts and Sciences and apply through Cornell Abroad. For more information, see Dean Patricia Wasyliv, 55 Goldwin Smith Hall. The full A&S study abroad policy can be found on the Arts and Sciences advising website <http://as.cornell.edu>.

edu/academics/opportunities/study-abroad/index.cfm. Information on program choice and the application process can be found on the Cornell Abroad website <https://www.cuabroad.cornell.edu>.

The college advocates study abroad that enables students to become competent in another language, so that they can engage fully in daily life in another culture, develop social relationships, and complete formal course work in that language. To study abroad in a country where the host language is not English, the student must demonstrate competence in the language as a prerequisite.

For study abroad in Europe and Latin America, students must complete at least **two semesters of the appropriate foreign language at the 2000 level** at Cornell; additional course work is strongly encouraged and will increase students' chances for acceptance into the most highly competitive programs. Consult this catalog for the required level of course work in specific languages. For study abroad in Asia, the Middle East, and parts of Africa, course work entirely in the host language is not always practical, even after several semesters of language preparation at Cornell. Students should still plan to complete as much language preparation as possible within the Cornell curriculum, at least one to two years of study, and may be approved for language-intensive programs (at least half of the permitted 15 credits) with appropriate course work in English.

For study abroad in English-speaking countries, direct university enrollment is approved and expected. Cornell students will engage in a full course of study, generally in their major field, alongside regular degree candidates in the host country. In general, the college requires that at least 50 percent of the classes the student enrolls in be advanced-level course work in their major field.

Students will need to acquire background knowledge of the country or region where they intend to study. At least one area-studies course or one course in the history, culture, economics, politics, or social relations of the country of destination (3 or more credits) **in addition to language study** should be part of every student's preparation for study abroad. Some especially competitive programs require substantial prior course work in the proposed course of study as a prerequisite to acceptance. Students who intend to enhance their major with study abroad may need advanced course work in that field. As with language study, area-studies preparation beyond the minimum is highly recommended.

All A&S students must be formally accepted into a major before going abroad, and should ideally be accepted into a major before beginning the application process. Most students plan a significant amount of academic work toward the major while abroad. Whether or not students intend to earn major credit, the college requires that time spent abroad will not impede their progress toward the degree. The student's faculty advisor and departmental director of undergraduate studies must review and approve the study-abroad plans before the application is submitted to the college.

Study abroad can earn up to 15 A&S credits/four courses per semester of full-time course work as long as the curriculum abroad is

consistent with that of the college. Completion of one trimester of study earns a maximum of 10 credits. Two terms at Oxford or Cambridge may earn up to 20 credits. You must carry a full course load as defined by the host institution, which should be equivalent to at least 15 credits at Cornell, and all courses must be taken for a letter grade. Any course that falls outside the scope of the liberal arts and sciences may only be taken with the **prior approval** of Dean Wasyliv, and will earn non-A&S credits. Students are limited to one such course per semester. Some foreign universities offer courses for visiting students that do not carry any academic credit. Students may **not** earn additional credit for enrolling in extra courses during the semester or year abroad.

Credit for study abroad will be awarded only after completion of the semester abroad, and after the college receives your official transcript. To receive credit, students must fill out a **Request for Credit from Study Abroad** form and submit it to the advising office. All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not become part of the Cornell GPA, since grades at other institutions are rarely equivalent to grades at Cornell. **Students must save all written work from all courses until their grades are received and recorded on their Cornell transcript.**

The maximum length of study abroad that can count toward A&S degree requirements is two semesters, which is also the amount of time recommended for true immersion in another culture and language. Approved semesters away from campus include Cornell in Washington, Urban Semester, and SEA Semester as well as all Cornell Abroad destinations. Students who transfer to Cornell must complete a minimum of four semesters of residence on campus in Ithaca and may not study abroad during any of those four semesters. Internal transfers must complete four semesters of residence on campus in the or in the Internal Transfer Program. College of Arts and Sciences. Students interested in the Cornell in Rome Program should contact Dean Wasyliv.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, Turkey, and New York State. Students should contact the Archaeology Program for information about the sites currently available. Students planning on attending field schools organized by other institutions should contact Professor Lauren Monroe, 417 White Hall, or LM283@cornell.edu.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers more than 30 college courses that award Cornell credit and paid internships, a variety of courses and experiences designed to introduce undergraduates to marine science. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine

Laboratory Office, G14 Stimson Hall, or e-mail shoals-lab@cornell.edu, for further information.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. The Cornell in Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington program. For further information, see p. 23 or inquire at M101 McGraw Hall, 255-4090.

Off-campus Programs Offered by Other Colleges

Students wishing to participate in the Urban Semester program, Capital Semester in Albany program, or the Earth and Environmental Systems (EES) semester in Hawaii must petition their advising dean with a list of the courses they wish to take during the program and a well-reasoned explanation of why the proposed semester is crucial for their major course of study. Students interested in the Cornell in Rome program should consult Dean Patricia Wasyliv in 55 Goldwin Smith Hall.

ACADEMIC INTEGRITY

Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about their own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues or parents. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask the instructor. For more information, consult cuinfo.cornell.edu/Academic/AIC.html.

Forgery or Fraud on Forms

Forging signatures or credentials on college forms is an academic offense and constitutes

academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated; such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If the student forges more than once, or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student's transcript, suspension, or dismissal.

ADVISING

The following advisors and offices provide academic advising, help with problems, and information on college procedures and regulations.

Pre-Major Advisors

Each new student is assigned a faculty advisor. Advisors help students plan programs of study and advise them about ways to achieve their academic goals. Advisors may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisors recognize and address problems early.

Advisors and new advisees meet first during orientation week to discuss course selection. New students are encouraged to see their advisors again early in the semester, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisors and advisees should meet at least once each semester to discuss courses for the following semester, and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Major Advisors

After acceptance into a major, each student is assigned a faculty advisor in his or her department, with whom the student shapes and directs the course of study. The advisor eventually certifies the completion of the major. Students should consult their major advisor about all academic plans, including honors, study abroad, acceleration, and graduate study. The advisor's support is especially important if a student petitions for an exception to the normal procedures or requirements.

Student Advisors

Student advisors pass on lore about the college and life at Cornell and help new students become oriented to the university.

Office of Undergraduate Admissions and Advising

This office, located in 55 Goldwin Smith Hall, 255-5004, and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisors and for individual students and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise:

David DeVries, associate dean for undergraduate admissions and advising and undergraduate research, 255-3386

Juliette Corazón, minority students and liaison to Latino Studies Program, 255-4833

Maria Davidis, juniors, seniors, Tanner Dean's Scholars, Rawlings Cornell Presidential Research Scholars, Mellon Mays Fellows, undergraduate research, and postgraduate fellowships, 255-4833

Christa Downey, career services, 255-4166

James Finlay, first- and second-year students, external transfers, Independent Major Program, and peer advisors, 255-5004

Ken Gabard, first- and second-year students and College Scholar Program, 255-5004

Ray Kim, juniors, seniors, internal transfers, student ambassadors, 255-4833

Irene Komor, career counseling, 255-4166

Clare McMillan, first- and second-year students, students with disabilities, Tanner Dean's Scholars, 255-5004

Diane J. Miller, career services, 255-4166

Sally O'Hanlon, registrar, 255-5794

Myra Sabir, juniors, seniors, Mellon Mays Fellows, and minority students, 255-4833

Tammy Shapiro, juniors, seniors, dual-degree students, 255-4833

Arthur Smith, first- and second-year students, 255-4833

Heather Struck, juniors, seniors, prelaw students, 255-4833

Patricia Wasyliv, first- and second-year students, academic integrity, study abroad, 255-5004

Committee on Academic Records

The college faculty's standing Committee on Academic Records has two main tasks: (1) to decide on students' petitions for exceptions to college requirements or rules and (2) to review the records of students who fail to maintain good academic standing and to take appropriate action. It accomplishes both those tasks without formulae and with attention to each individual situation. Its overriding goal is to help students achieve the best undergraduate education possible.

Petitions

The college faculty takes graduation requirements seriously, and the faculty's Committee on Academic Records virtually never waives a requirement outright. However, some students, with the support of their advisors, propose structuring their educations or fulfilling the spirit of college requirements in ways other than the specified norms. The Committee on Academic Records decides on such requests. Students who find that their undergraduate education would be better realized by satisfying requirements or proceeding in a way that requires an exception to normal rules, for example, a substitution for the language requirement, should meet with an advising dean in the Office of Undergraduate Admissions and Advising. The deans are expert in the college's expectations and procedures and can help the student formulate a petition, if appropriate. The committee decides petitions on the basis of their educational merit.

Actions

The College of Arts and Sciences has no minimum grade requirement for graduation beyond the guideline that at least 100 Cornell credits of the 120 total required for graduation be passed with grades of C (not C-) or above. Consequently, only through actions of the Committee on Academic Records, described below under "Academic Standing," does the college maintain the quality of the degree and attend to individual situations when things academic are not going well.

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students

During orientation week, new students attend briefings and other information sessions, and meet with faculty advisors.

Continuing Students

Continuing students select and schedule up to 22 credits during the semester before the one in which the courses will be taken. Students who do not "pre-enroll" during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they most want. Before enrolling in courses, students plan their programs and discuss long-range goals with their faculty advisors. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each semester, students find their schedules on Student Center at www.studentcenter.cornell.edu. Periodically during the semester, and particularly just before the 3-, 7-, and 12-week deadlines, they should confirm the accuracy of their records.

Limits on Numbers of Courses and Credits

To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (Note: AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester

To maintain good academic standing as a full-time student, students must complete at least 12 degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty advisor and an advising dean. Permission is by petition only, and after the first semester, such permission is given only in extraordinary circumstances.

Maximum number of credits per semester

First-year students must petition to enroll in more than 18 credits; other students may enroll in up to 22 credits if their previous semester's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's

Committee on Academic Records. Students who fail to receive approval for excess credits from the committee may count only 18 or 22 credits, depending on their previous semester's average, toward the degree for that semester. Students taking summer courses may earn no more than 12 credits in any one summer.

Attendance

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Student athletes should discuss scheduled absences with their instructors at the beginning of the semester. Courses vary in their tolerance of absences. Instructors are not obligated to approve absences for purposes of participating in extracurricular activities, although most will be as flexible as is sensible for a student's academic program.

Adding and Dropping Courses

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until just before the new semester begins. During the first three weeks of the semester, students may change courses without petitioning. (Note: the add period for first-year writing seminars is only two weeks.)

After the third week of classes, students must petition to add courses and may add them only for a letter grade. They may drop courses through the seventh week of the semester if no issue of academic integrity is at stake. Between the seventh and 12th weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the advisor approves; (3) an advising dean approves; (4) the drop does not result in fewer than 12 credits; and (5) no issue of academic integrity is at stake. Students must meet with an advising dean to obtain petition forms.

Courses officially dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. **This is a matter of record and cannot be petitioned. Petitions to withdraw from courses may not be submitted after the end of the 12th week in the semester.** Deadlines for short courses will be adjusted according to the length of the courses.

The effective date of all course changes will be the day the student submits all completed paperwork to the Office of Undergraduate Admissions and Advising.

GRADES

Letter Grades

See "Grading Guidelines," pages 15-16.

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better-prepared students for high grades. Students are expected to devote full effort and commitment to a course and complete all work in a course they take for an S-U grade. The S-U option is contingent upon the instructor's willingness to assign such grades. **Students must select their grading option and obtain the instructor's approval for the S-U option during the first three weeks of the semester. No exceptions to this deadline are permitted, and consequently students adding courses after the third week of the semester must add them for a letter grade.** After the third week of the semester, students may not petition for a grade option change, unless the course in question has been taken for S-U and is now part of the student's major. Students should note that a grade of S is equivalent to a grade of C- or higher; a grade of U, which is equivalent to any grade below C-, is a failing grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Prerequisite courses for graduate school and courses counting toward the major should not be taken for an S-U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy distribution and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. First-year writing seminars and most language courses disallow the S-U option. In any case, students are advised to use the S-U option sparingly, if they intend to apply to graduate school or for transfer to another college. In addition, second-semester seniors in particular are advised to use the S-U option carefully: A student receiving a D in a nonmajor course he or she needs for graduation will still be graduated if that course has been taken for a letter grade. If, however, the student has taken the course S-U, the D will be recorded as a U and the student will be unable to be graduated on the desired degree date. There is no limit on the number of courses each semester for which students may elect the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Note of Incomplete

An incomplete (INC) signifies that a course was not completed before the end of the semester for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be

completed, and the grade (or permanent—"frozen"—incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students should be aware that INCs are interpreted as credits not passed during a given semester. If a student's INC takes his or her record below 12 credits in a given semester, the student risks being placed on warning or on leave by the Academic Records Committee. If placed on leave, the student must complete the INC before being allowed to return, and readmission will be permitted only at the beginning of a given semester. If the INC is not completed by the beginning of a regular academic term, the student may not register for that term. Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

Note of R (Yearlong Courses)

R is recorded for satisfactory progress at the end of the first semester of a two-semester course. Students enroll in such courses both semesters. The grade recorded at the end of the second semester evaluates the student's performance in the course for the entire year and will also replace the grade of "R" for the first semester of the course.

Students enrolled in an R course for the thesis may occasionally wish or feel compelled not to complete that thesis. In order to drop the thesis but continue with an independent study, the student should see Sue Downes in 172 Goldwin Smith Hall for the appropriate forms.

Grade Reports

Grade reports are available online on Student Center at www.StudentCenter.cornell.edu; they are not mailed to students. Students should periodically check their courses and grades to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean's List

Inclusion on the Dean's List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at <http://as.cornell.edu/academics/advising/deans-list-req.cfm> and in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the semester if they successfully complete at least 12 degree credits by the end of the semester and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the 120 credits for the degree. Courses

listed under “courses that do not count toward the degree” do not count toward good academic standing in a semester. <http://as.cornell.edu/academics/advising/coursesdonotcount.cfm>

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college faculty's Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision or action of the committee if they have new relevant information and documentation. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student's college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems, and they must submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. “Leave” is posted on the student's official transcript.

Required withdrawal

The Faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one semester or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. “Withdrawal” is posted on the student's official transcript.

Leaves of absence (LOAs)

Most leaves of absence are not required. Taking time off from college to gain experience or funds, or to find direction, is sometimes useful. In general, students arrange in advance for leaves to take effect the following semester. Students in good academic standing must see an advising dean to obtain and submit a leave of absence statement, to be approved by the advising dean. Students may take a personal leave of absence up to the beginning of the semester (defined as the first day of classes). Students not in good academic standing may pursue a conditional leave of absence from the college up to the first day of classes. If medical issues are involved, students must consult Gannett: Cornell University Health Services about the advisability of a medical leave of absence.

Any student who wishes to take a leave of

absence must consult with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

Students sometimes find it necessary to take a leave of absence at some point during the semester. In addition to the serious financial consequence of taking leaves after the semester has begun (see the Proration Schedule for Withdrawals and Leaves of Absence in the General Information section of this catalog), all leaves taken during the semester are granted at the discretion of the college and must, if granted, be conditional leaves of absence. Students must discuss their need for a LOA with an advising dean.

Leaves of Absence are of four types:

1. *Personal leaves* impose no conditions concerning reentering the college except for the five-year limit (see “Return from Leave,” below). Readmission is automatic upon written request made by the student to his or her advising dean by August 1 for a fall semester, or January 1 for a spring semester. The college is not obliged to re-admit any student who does not meet the deadline for a given semester.
2. *Conditional leaves* are granted by the college for students who wish to take a leave but are not in good academic standing, or for students who wish to take a leave during the current semester. In consultation with the student, an advising dean and the Committee on Academic Records set the conditions for the student's return. Students may not return from conditional leaves for at least two semesters and/or until specific and individual conditions, such as completing unfinished work, have been met, and permission to return must be granted by the Committee on Academic Records. Students may be granted conditional leaves after the 12th week of a semester only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.
3. *Medical leaves* are granted by the college only upon the recommendation of Gannett Health Services, and are usually issued for at least six months. The college may attach additional conditions appropriate to the individual situation. The student's academic standing is also subject to review at the time of the leave and on return. Students must then receive clearance from both Gannett and the college to be readmitted to study. Students wishing to return from a medical leave should contact Gannett several months in advance to initiate the return process, and only then contact the college.
4. *Required leaves.* The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See “Academic Actions.”

Students on conditional or required leaves of absence (LOA) may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on a medical LOA may not register for classes at Cornell unless they obtain the permission of the college and a recommendation from Gannett. Courses taken without college permission will not count toward degree requirements.

Return from Leave

Students wishing to return from leave must contact the college and, where appropriate, provide documentation that all conditions for readmission have been satisfied. All requests for readmission must be received by the college by August 1 for the fall semester and January 1 for the spring semester. In the case of conditional and/or medical leaves, students must consult well in advance of those dates with both the college and Gannett. On readmission, the student's graduation date will be recalculated to account for the time spent away. Five years is the maximum length of time a student may be on leave before being withdrawn from the college.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Petitions are available in 55 and 172 Goldwin Smith Hall and at <http://as.cornell.edu>. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to elective requirements or to the major, as allowed by the department, but not to any of the breadth or distribution requirements. **Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence below the required eight. See “Residence.”**

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country **only**, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from candidacy for the degree. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a semester will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw because of a highly unsatisfactory academic record, and the college may require a student to withdraw because of failure to register in a timely fashion.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for students whose intellectual interests change (or become more focused). Students who wish to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be conditionally admitted. During the semester immediately preceding transfer into the

College of Arts and Sciences, students must complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and with no grades of *Incomplete*, S-U grades (unless only S-U grades are offered for that particular course), or grade below C (C- is below C). Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the B.A. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. They also must complete at least 100 credits at Cornell with grades of C (not C-) or above. Interested students should see Dean Ray Kim, 172 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "artium baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate

In the first semester of their senior year, students will receive an e-mail instructing them to complete an online application to graduate. The application is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. *Nonetheless, meeting graduation requirements is the student's responsibility*; problems that are discovered, even late in the final semester, must be resolved by the student before the degree can be granted. Students are responsible for checking their DUST reports and transcripts and alerting their advising deans of any problems with the academic record.

Degree Dates

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts *cum laude*, *magna cum laude*, or *summa cum laude* will be conferred upon a student who, in addition to having completed the requirements for the degree of Bachelor of Arts, has been recommended for a level of honors by the major department, the Independent Major

Program, or the College Scholar Program. Minors do not offer honors programs.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1. completed at least 60 credits while registered in regular sessions at Cornell;
2. achieved a GPA in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3. received a grade below C- in no more than one course;
4. received no failing grade;
5. have no frozen Incompletes on their records; and
6. maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four semesters. (Students who have been approved to be prorated for the final semester in order to complete an honors thesis are considered to be in good academic standing and therefore eligible to receive distinction.)

CALENDAR SUPPLEMENT

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are additional dates that are of importance for students in the College of Arts and Sciences.

	Fall 2010	Spring 2011
Last day for adding courses without petition	Sept. 17	Feb. 11
Last day for adding a first-year writing seminar	Sept. 10	Feb. 4
Last day for changing grade option to S-U or letter	Sept. 17	Feb. 11
First deadline for submitting independent major requests. Go to 55 Goldwin Smith Hall for further information.	Sept. 27	Feb. 28
Last day for dropping courses without petition	Oct. 15	March 11
Last day to petition to withdraw from a course	Nov. 19	April 22
Second deadline for submitting independent major requests. Go to the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.	Nov. 29	April 4
Deadline for requesting internal transfer to the College of Arts and Sciences for the following semester.	Dec. 3	May 5

Deadline for applying to the College Scholar Program.

May 4

Deadline for applying to study abroad

See Cornell Abroad Office, 474 Uris Hall

Departments, Programs, and Courses

AFRICANA STUDIES AND RESEARCH CENTER

S. Hassan, director; A. Ademoyo, N. Assié-Lumumba, C. Boyce Davies, J. Byfield, director of graduate studies; L. Edmondson, G. Farred, T. Gosa, R. Harris, A. Mazrui, S. Mhkonza, A. Nanji, R. Richardson, director of undergraduate studies; J. Turner, M. Younas, director of African languages. Offices: 310 Triphammer Road, 255-4625.

The Africana Studies and Research Center (ASRC) is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, Caribbean, and the entire African Diaspora. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages are consistently offered fall and spring semesters and some are also taught during summer/winter session.

ASRC offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African American), through the university's Graduate School. A student may also minor in Africana Studies. The Africana Studies minor program enables the student to complete a major in other disciplines while at the same time fulfilling requirements for the minor. This pursuit of a minor requires only a few more credits than is usually the case when one completes a single major course of study. ASRC courses are open to the Cornell community and may be used to meet a number of college distribution requirements such as first-year writing seminars, languages, expressive arts, humanities, social sciences, and history.

ASRC brings distinguished visitors to the campus, sponsors a Black Authors/New Books series, a colloquium series, and houses our own Africana library, the John Henrik Clarke Library. The ASRC supports faculty and student research, promotes intellectual pursuit, and sponsors vibrant and relevant academic programming.

The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African American, African, Caribbean, and African Diaspora experiences. Because of the comprehensive nature of the program, it is to the students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:

1. a statement of why they want to be an Africana Studies major;

- a tentative outline of the area of study they are considering (African, African American, Caribbean or African Diaspora) for the major; and
- a full transcript of courses taken and grades received.

The director of undergraduate studies will review the applications and notify students within two weeks of the status of their request.

The Africana major must complete 36 credits in courses offered with African American, African, Caribbean, and African Diaspora content of 50 percent or more and that meet the distribution requirements of the College of Arts and Sciences. The student must take 8 credits of courses numbered 2000 or above and 15 credits numbered 3000 or above. The program of an undergraduate major may have a specifically African American, African or Caribbean, or African Diaspora focus. Please visit <http://asrc.cornell.edu> for up-to-date listings of courses and the requirements they meet.

The Africana Minor

ASRC offers minors in Africana Studies. The director of undergraduate studies will assist students in the design and coordination of minor programs. For the minor the center will require that at least 16 credits be taken courses with at least 50 percent African American, African, Caribbean, and African Diaspora content.

Double Majors

In the case of double majors, students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Honors

The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B- cumulative average in all courses and a B+ cumulative average in their Africana courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's advisor and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

Language Requirement

African language courses in Arabic, Swahili, Yoruba, and Zulu may be used to satisfy the language requirements of the College of Agricultural and Life Sciences and College of Arts and Sciences. ASRC majors are required to take a language, and the study of an African language is recommended.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions of the five courses offered each semester by ASRC.

Arabic

ASRC 1201/1202 Elementary Arabic I and II (also NES 1201–1202)

Fall, spring, summer. 4 credits. M. Younes. For description, see NES 1201–1202.

ASRC 1203/2200 Intermediate Arabic I and II (also NES 1203–2200)

Fall, spring, summer. 4 credits. *ASRC 2200 @ satisfies Option 1.* M. Younes. For description, see NES 1203–2200.

ASRC 3100/3101 Advanced Intermediate Arabic I and II (also NES 3201–3202) @

Fall/spring. 4 credits. *ASRC 3100 satisfies Option 1.* M. Younes. For description, see NES 3201–3202.

Swahili

ASRC 1100 Elementary Swahili I

Fall, winter, summer. 4 credits. Language lab times TBA. A. Nanji.

Beginner's Swahili. Part 1—Grammar for speaking, reading, and writing. Requires no knowledge of language. Swahili is spoken in the East and Central parts of Africa.

ASRC 1101 Elementary Swahili II

Spring, summer, winter. 4 credits. Prerequisite: ASRC 1100. A. Nanji. Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills are used in this course to help develop the student's comprehension of the language. Swahili tapes are used during all of these sequences.

ASRC 2102 Intermediate Swahili I @

Fall. 4 credits. *Satisfies Option 1.* Prerequisites: ASRC 1100 and 1101. A. Nanji. Advanced study in reading and composition.

Yoruba

ASRC 1108/1109 Introduction to Yoruba I and II

Fall, spring. 4 credits. A. Ademoyo. A two-semester beginner's course in Yoruba language and culture. Organized to offer Yoruba language skills and proficiency in speaking, reading, listening, writing, and translation. Focus is placed on familiar informal and formal contexts, e.g., home, school, work, family, social situations, politics. Course uses Yoruba oral literature, proverbs, rhetoric, songs, popular videos, and theatre as learning tools for class comprehension. First semester focuses on conversation, speaking, and listening. Second semester focuses on writing, translation, and grammatical formation. Through the language course students gain basic background for the study of an African culture, arts, and history both on the continent and in the diaspora. Yoruba language is widely spoken along the west coast of Africa and in some African communities in diaspora. Yoruba video culture, theatre, music, and arts have strong influence along the west coast and in the diaspora.

ASRC 2110 Intermediate Yoruba I @

Fall. 4 credits. *Satisfies Option 1.* Prerequisite: ASRC 1109. A. Ademoyo.

The intermediate course extends the development of the main language skills—reading, writing, listening, and conversation. The course deepens the development of correct native pronunciation, the accuracy of grammatical and syntactic structures; and the idiomatic nuances of the language. Students who take the course are able to (1) prepare, illustrate, and present Yoruba texts such as poems, folktales, advertisements, compositions, letters, (2) read Yoruba literature of average complexity, (3) interpret Yoruba visual texts of average difficulty, (4) comprehend Yoruba oral literature and philosophy—within the context of African oral literature and philosophy—of basic complexity. Through the Yoruba language students appreciate African oral literature and philosophy. The primary textual media are Yoruba short stories, poems, short plays, films, songs, and newspapers.

ASRC 2111 Intermediate Yoruba II @

Spring. 4 credits. *Satisfies Option 1.* Prerequisite: ASRC 1110. A. Ademoyo. Intermediate Yoruba II is a follow-up to Intermediate Yoruba I. It is a fourth-semester Yoruba language course. The course assists students to acquire advanced level proficiency in reading, speaking, writing, and listening in Yoruba language. Students are introduced to grammatical and syntactic structures in the language that will assist them in describing, presenting, and narrating information in the basic tenses. At the end of the course, students will be able to listen to, process, and understand programs produced for native speakers in media such as television, radio, and films. They will be able to read and understand short stories, novels, and plays written for native speakers of the language.

Zulu

ASRC 1114/1115 Elementary Zulu I and II

Fall, spring. 4 credits. S. Mkhonza. Zulu, known by native speakers as IsiZulu, is one of the 11 official languages of South Africa. Out of the four Nguni languages (Zulu, Xhosa, Swati, and Ndebele), Zulu is the most widely spoken. The advantage of learning IsiZulu is that it forms the basis for understanding the other Nguni languages. This is a two-semester elementary course that introduces students to the basic structures of the language which are applied to rapidly develop the primary speaking, reading, and writing skills of the Zulus. The class will also explore traditional and contemporary cultures of the Zulu people.

ASRC 2116 Intermediate Zulu I @

Fall. 4 credits. *Satisfies Option 1.* Prerequisite: ASRC 1115. S. Mkhonza. The course will help students to expand their understanding of the Zulu language through the communicative approach. We will focus on the four skills—speaking, listening, reading, and writing. Intermediate work focuses on reading and speaking spontaneously. We will introduce composing in Zulu more reading.

ASRC 2117 Intermediate Zulu II @

Spring. 4 credits. *Satisfies Option 1.* Prerequisite: ASRC 2116. S. Mkhonza. The course will help students to expand their understanding of the Zulu language through the communicative approach. We will focus on the four skills—speaking, listening, reading, and writing. Intermediate work

focuses on reading and speaking spontaneously. We will introduce composing in Zulu more reading.

Topics Courses

ASRC 1300 Africa: The Continent and Its People @ (HA-AS)

Fall. 3 credits. L. Edmondson.
Introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; and contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization are also explored.

ASRC 1600 Black Families and the Socialization of Black Children (SBA-AS)

Fall. 3 credits. T. Gosa.
This course explores the historic and contemporary dynamics of the African American family in U.S. society. We will begin our work by focusing on the sociohistorical, -political, and -cultural contexts of black family formations and functions in the African Diaspora. Students will be challenged to consider the continuation of African heritage in black family organization. We will review Afrocentric, feminist, and sociological frameworks for understanding black families. The course proceeds to consider more contemporary topics including gender roles, divorce and marriage dissolution, sexuality and love, mate selection, parenting and fatherhood, and the well-being of black children. We will pay special attention to how black families are (re)imagined in popular culture, including representations in the news, film and television, and music.

ASRC 1900 Research Strategies in Africana and Latino Studies (also LSP 1101)

Spring. 1 credit. E. Acree and T. Cosgrave.
For description, see LSP 1101.

ASRC 2100 Swahili Literature @ (LA-AS)

Spring. 4 credits. *Satisfies Option 1.*
Prerequisite: ASRC 1102. A. Nanji.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

[ASRC 2106 Intro to Quranic Arabic (also NES/RELST 2204) @ (LA-AS)]

Spring. 4 credits. Next offered 2011-2012.
M. Younes.
For description, see NES 2204.]

ASRC 2240 Perspectives on Caribbean (also LATA/SPAN 2240) (CA-AS)

Fall. 4 credits. Prerequisite: SPAN 2190 or permission of instructor. G. Aching.
For description, see SPAN 2240.

ASRC 2300 African Cultures and Civilizations # @ (CA-AS)

Spring, summer. 3 credits. J. Byfield.
Concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. Focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the

development of the major world civilizations. Also deals with the sociopolitical organization of African societies, their kinship systems, cross-cutting ties, rites of passage, gender relations, and arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

ASRC 2307 The White Image in the Black Mind (also HIST 2412) @ (HA-AS)

Fall. 4 credits. S. Greene.
For description, see HIST 2412.

[ASRC 2308 Caribbean History (also HIST 2308) @ (HA-AS)]

Fall. 3 credits. Next offered 2011-2012.
J. Byfield.
This course provides an historical overview of the Caribbean beginning with a brief examination of indigenous society and the impact of European colonization. Most of our attention will focus on the development of the plantation economy, slavery, post-emancipation and post-colonial society. Readings pay particular attention to the ways in which race, gender, and ethnicity shape the histories of the peoples of the region. The course uses a pan-Caribbean approach by focusing on three islands—Cuba, Haiti, Jamaica—that belonged to competing empires. Although their histories are shaped in distinct ways by their former metropolises, they share certain common features. Therefore, we examine the differences and similarities of their histories as they evolved from plantation-based colonies to independent nations.]

ASRC 2413 Monuments, Museums, and Public History (also HIST 2413) (HA-AS)

Spring. 4 credits. S. Greene.
For description, see HIST 2413.

[ASRC 2505 Literature, Sports, and Ideology (also ENGL 2751) (LA-AS)]

Fall. 3 credits. Next offered 2011-2012.
G. Farred.
This course will explore the relations amongst sport, literature, and ideology. Reading texts from a variety of genres, novels, "memoirs," social histories (that are also love letters to a particular team), and some forms that refuse easy categorization, this course seeks to understand the very distinct role, and often hard to define exactly, that sport "performs" in literature. From Don DeLillo's *Underworld* to Eduardo Galeano's beautiful, cryptic contemplation on football (*Soccer in Sun and Shadow*) to CLR James' magisterial work on cricket (*Beyond a Boundary*), this course will engage writings on sport from all over the world. Sport, the premise is here, opens the reader up to the world in a way that no other literary pursuit does.]

ASRC 2602 The Sociology of the African-American Experience (SBA-AS)

Fall. 3 credits. J. Turner.
This is an introductory course to the field of Africana Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African beginnings of humankind and the classical role of Black people in world civilization and the making of early culture. The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the Africana Center.

[ASRC 3200 Politics of Global Africa @ (SBA-AS)]

Fall. 4 credits. A. Mazrui.
This course will combine the study of Africa with the study of two Diasporas. The Diaspora of Enslavement concerns enslaved Africans and descendents of slaves in both the Western and Eastern Diaspora. The Diaspora of Colonization concerns demographic dispersal as a result of colonialism. African Americans are part of the Diaspora of Enslavement. Algerian immigrants into France are part of the Diaspora of Colonization. Jamaicans and Trinidadians in Briton are a double Diaspora—products of both enslavement and colonialism. This course will also examine the debate about whether the African peoples are owed reparations by either the West of the Arabs or both. This course will address the following areas of comparative Black experience: the politics of race, gender, religion, liberation, language, civil rights, and postcoloniality.]

[ASRC 3205 Thinking Black Intellectuals

Spring. 4 credits. Next offered 2011-2012.
G. Farred.

"Thinking Black Intellectuals" departs from the premise that there is always, in one form or another, a "crisis"—or, a question about the "role" of the intellectual. However, in the conception of this course, the intention is not to address this issue. Instead, the course seeks to "demonstrate" the act of, properly speaking, Black intellectual thinking. By reading a series of texts, from Black scholars in philosophy such as Valentin Mudimbe to the renowned African-American theologian and preacher, Gardner C. Taylor, from the artistic oeuvre of Fela Kuti to the interventionist work of Angela Davis, this course will engage the thought of Black intellectuals. What, the guiding question will be, does it mean to think, specifically, or not, as a Black intellectual?]

[ASRC 3300 African History: Earliest Times to 1800 @# (HA-AS)]

Fall. 3 credits. *May be used for history requirement.* Next offered 2011-2012.
Staff.

As the second largest continent with vast and varying geographical and sociocultural conditions combined with recently established fact as an original home of human species, Africa provides a rich and diverse oral and written early history. The course covers some of the major historical signposts from the origins of human species to 1800. Among the topics for discussion are: Physical and Economic Geography of Africa, the Cradle of Humankind, the Peopling of Africa, Historical Perspectives and Sources, the Nile River Cultural Complex, Berber, Carthage and Maghreb of North Africa, Upper Guinea and Western Sudan of West Africa, cities of the East African Coast, and Great Zimbabwe and other sites of Southern Africa.]

ASRC 3302 West Africa and West: 1450-1850 (also HIST 3650) @ # (HA-AS)

Spring. 3 credits. S. Greene.
For description, see HIST 3650.

ASRC 3304 African American History: B. T. Washington to B. Obama (also AMST/HIST 3304) (HA-AS)

Spring. 4 credits. R. Harris, Jr.
This course will examine the changing contours of the African American past from the post-Reconstruction period to the present. W.E.B. Du Bois in *The Souls of Black Folk* evoked the need to study Black America from

the inside out and in relation to the trajectory of American history. This course will seek to understand the challenges, triumphs and tragedies, of African Americans in the quest for racial equality in the United States. It will consider, against the backdrop of the past, the extent to which the election of a Black President of the United States has signaled the end of Black history and the arrival of a post-racial America.

ASRC 3500 African American Art (also ARTH 3500) (LA-AS)

Fall. 3 credits. C. Finley.
For description, see ARTH 3500.

ASRC 3508 African American Literature 1930s–Present (LA-AS)

Spring. 4 credits. R. Richardson.
In 1940, with the publication of his novel *Native Son*, Richard Wright helped to launch the protest era in African American literature. This course focuses on the development of key fiction and nonfiction genres that have shaped the development of African American literature from the mid-20th-century to the contemporary era. Genres that we will consider include poetry, fiction, the essay, the speech, autobiography, and the novel. We will explore the main periods in this literature's development such as the Black Arts movement of the 1960s and the black women's literary renaissance of the 1970s, and consider the rise of science fiction writing. Authors who will be considered include Richard Wright, Ann Petry, Ralph Ellison, Gwendolyn Brooks, James Baldwin, Lorraine Hansberry, Malcolm X, Amiri Baraka, Nikki Giovanni, Maya Angelou, Toni Morrison, Alice Walker, Ishmael Reed, and August Wilson. We will also incorporate discussion of works in film and art that have been the outgrowth of writing by African American authors. The course will include screenings of scenes from the class film *A Raisin in the Sun*, along with the films *Dutchman* and *Beloved*.

ASRC 3510 Caribbean Literature (also ENGL/FGSS 3510) @ (LA-AS)

Fall. 4 credits. C. Boyce Davies.
This course examines representative literature of the Caribbean, including work by Caribbean women writers. We will examine the writings of Caribbean communities abroad as we broaden the meanings of what is Caribbean. Traditional and contemporary oral/folk/urban forms of creative expression and film expression will be features of our ongoing analysis. We will pursue some of the themes that have been current in Caribbean literature and the particular relationships of Caribbean literature to the construction of American and/or English literatures and the definitions of Caribbeaness. Our sub-theme focuses on the discourses of migration that have garnered substantial attention in recent years and is a fundamental feature of the construction of Caribbean identities and literatures.

ASRC 3600 Government and Politics in Africa @ (SBA-AS)

Spring. 4 credits. A. Mazrui.
Deals with power and political participation in Africa. Topics include the colonial background and its political consequences, the precolonial continuities in the post-colonial politics; ethnicity and allegiance in the African polity; and the monarchical tendency in African political culture. Discussion covers a spectrum of topics from the warrior tradition to the

military coup in the post-colonial era; from the elder tradition to presidential gerontocracy; from the sage tradition to intellectual meritocracy. Other major topics include class versus ethnicity in African politics; the one-party versus the multiparty state; sociocultural versus socioeconomic ideologies; the gender question in African politics; the soldier and the state; and the African political experience in a global context.

ASRC 3604 U.S. Education, Oppression, Resistance (SBA-AS)

Spring. 4 credits. T. Gosa.
Despite salient reductions in educational inequality over the past 30 years, the academic underachievement of Black, Latino/a, and Native American youth remains one of the most researched, yet stubborn social problems in American society. The goal of this course is to explore issues of race and ethnicity in American education. Students will be asked to consider the ways in which schools foster poor academic performance and devalue minority youth's cultural and ethnic identities. Topics include school and residential segregation, academic tracking, language isolation, teacher quality, pedagogy and curriculum, and family/peer group influences. We will pay special attention to how students resist unfair schooling conditions and persist against the odds. The course will conclude with the limits and possibilities for school reform.

ASRC 3652 African Economic History (also HIST 3652) @ # (HA-AS)

Fall. 4 credits. S. Greene.
For description, see HIST 3652.

ASRC 4201 Islam in Africa and Its Diaspora (also ASRC 6206, DSOC 4360/6630, NES 4501) (CA-AS)

Spring. 4 credits. A. Mazrui.
It has been estimated that one-third of the Muslim population of the world is in Africa and the African Diaspora. This course addresses the historical dimension of Islam in the Black experience examining Global Africa as a whole. Within the African continent, Islam is part of the triple religious heritage, which includes rivalry with Christianity and co-existence with African indigenous religions. In the Americas, Islam is up against Western secularism and Christianity. We are concerned with how Islam has affected the politics and cultures of the African peoples worldwide, issue of slavery and Islam, and the interaction between Islam and contemporary ideologies of socialism, nationalism, and race consciousness in the Black experience.

ASRC 4272 Apartheid and Its Afterlife (also HIST 4272) (HA-AS)

Fall. 4 credits. D. Magaziner.
For description, see HIST 4272.

ASRC 4301 African American History: Black Leaders and Movements (also HIST 4301) (HA-AS)

Spring. 4 credits. R. Harris, Jr.
From rebellions aboard slave ships through the quest for black self-determination, African Americans have sought to define freedom, justice, and equality for themselves and in the process have challenged the universality of the American Creed. This course will examine the dynamics of leadership, types of leaders, and the major movements that have emerged among African Americans from the early 17th century to the present. The relationship

between leaders and followers, balance between ends and means, and measures of success and failure will be major concerns of the course.

[ASRC 4305 African Environmental History (also HIST 4271) @ (HA-AS)]

Fall. 4 credits. Next offered 2011–2012.
D. Magaziner.]

[ASRC 4306 To Be Enslaved Then and Now (also HIST 4421) # (HA-AS)]

Spring. 4 credits. Next offered 2012–2013.
S. Greene.]

[ASRC 4502 African Cinema (also ARTH 4578) @ (LA-AS)]

Fall. 4 credits. Next offered 2011–2012.
S. Hassan.

This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past; the "Social Realist" narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, styles, and aesthetics of African cinema will also be discussed. The course offers a unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.]

ASRC 4504 Exhibiting Cultures (also ARTH 4508) (CA-AS)

Spring. 4 credits. C. Finley.
For description, see ARTH 4508.

ASRC 4507 Black Women Writers: International Dimensions (also ASRC 6507, ENGL 4507, FGSS 4507/6507) (LA-AS)

Spring. 4 credits. C. Boyce Davies.
An exploration of writing by representative black women writers. We will examine specific texts as well as necessary critical and theoretical ideas that have been generated through, or with which this literature is in conversation. Students will develop critical thinking and other analytical skills as they engage the meanings of the politics of black women's lives in cross-cultural contexts. We will therefore consistently broaden the definition of black women's writing so that the transnational contexts of this writing become visible. Among other ideas, the course will explore the social construction of black womanhood; social and literary hierarchies that locate black women and their writing in specific ways; aspects of black women's creativity. Moving beyond the questions of the representation of black women by others, our focus will be on the way that black women represent themselves.

[ASRC 4508 The Harlem Renaissance (also ENGL 4508) (LA-AS)]

Fall. 4 credits. Next offered 2011–2012.
R. Richardson.

In this course, we will examine the Harlem Renaissance, including works by James Weldon Johnson, Jean Toomer, Nella Larsen, Langston Hughes, Countee Cullen, George Schuyler, Wallace Thurman, and Zora Neale Hurston. The Harlem Renaissance occurred during the 1920s in the wake of the Great Migration to the urban North. It encompassed a range of other art forms and media beyond

literature, such as painting, photography, and music and coincided with the "Jazz Age." We will consider the rise of Josephine Baker as a phenomenon in Paris. We will consider overlapping literary movements that also shaped the Harlem Renaissance profoundly, from modernism to Negritude (i.e., in France and the Caribbean). Additionally, we will explore the work of noted photographers, artists, and musicians of the period.]

[ASRC 4509 Toni Morrison's Novels (also ASRC 6513, ENGL 4509) (LA-AS)]

Spring. 4 credits. Next offered 2011-2012.
R. Richardson.

The course will focus on reading novels by Toni Morrison, including *The Bluest Eye*, *Sula* (1973), *Song of Solomon* (1977), *Beloved* (1987), *Jazz* (1992), *Paradise* (1998), *Love* (2003), and *A Mercy* (2008). The presentation of her novels in trilogy form and her contributions to the genre of historical writing will be given some consideration. We will explore the author's stylistic innovation and expansion of this genre. We will consider topics such as how to read novels critically. We will pursue our study with attention to major public works of Morrison, from her art project as a curator at the Louvre to the Toni Morrison Society's "Bench by the Road" project and its 2008 conference in Charleston, South Carolina and upcoming Paris meeting in summer 2010.]

[ASRC 4600 Politics and Social Change in the Caribbean @ (SBA-AS)]

Fall. 4 credits. Next offered 2011-2012.
L. Edmondson.

Study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies.]

ASRC 4601 Education Innovation in Africa and the Diaspora (also EDUC 4590) @ (SBA-AS)]

Fall. 4 credits. N. Assié-Lumumba.

This course deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora.

ASRC 4602 Women and Gender Issues in Africa @ (SBA-AS)]

Spring. 4 credits. N. Assié-Lumumba.

There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view, women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Topics include women in nonwesternized/precolonial societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

[ASRC 4603 Politics and Social Change in Southern Africa @ (SBA-AS)]

Spring. 4 credits. Next offered 2011-2012.
L. Edmondson.

Focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topics include the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa's relations with its neighbors; geopolitical, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule; prospects for stability, democracy, and equality; and South Africa's new role in the African continental and global arenas. Instructor's lectures are supplemented by films and class discussions.]

ASRC 4605 Public Policy and the African-American Urban Community (SBA-AS)]

Spring. 4 credits. J. Turner.

The socioeconomic conditions of the African-American urban community are the central focus of the course. Community development models are explored in relationship to the social needs of the African-American population. The changing configuration of internal organization of the African American community nationally is examined.

ASRC 4606 The Family and Society in Africa (also SOC 4780) @ (SBA-AS)]

Fall, summer. 4 credits. N. Assié-Lumumba.
Concepts of the nuclear and extended family; the roles, rights, and obligations of different age groups and generations; and marriage and its related issues.

ASRC 4671 International Cultural Studies (also ENGL 4671)]

Spring. 4 credits. G. Farred.
For description, see ENGL 4671.

ASRC 4682 Healing and Medicine in Africa (also ANTHR 4682) (CA-AS)]

Spring. 4 credits. S. Langwick.
For description, see ANTHR 4682.

ASRC 4900-4901 Honors Thesis

4900, fall; 4901, spring. Prerequisite: permission of ASRC director of undergraduate studies. Africana Center faculty.

For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

ASRC 4902-4903 Independent Study

4902, fall; 4903, spring. Africana Studies faculty.

For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

ASRC 4951 Photography and Decolonial Imagination (also ARTH/HIST/SHUM/VISST 4951, COML 4067)]

Spring. 4 credits. Limited to 15 students.
J. Bajorek.

For description, see SHUM 4951.

ASRC 6200 Politics of Global Africa (also ASRC 3200)]

Fall. 4 credits. A. Mazrui.
For description, see ASRC 3200.

ASRC 6201 Government and Politics in Africa

Fall. 4 credits. A. Mazrui.
For description, see ASRC 3600.

ASRC 6206 Islam in Africa and Its Diaspora (also ASRC 4201, DSOC 4360/6630, NES 6710)]

Spring. 4 credits. A. Mazrui.
For description, see ASRC 4201.

ASRC 6207 Black Feminist Theories (also ENGL/FGSS 6207, COML 6465)]

Fall. 4 credits. C. Boyce Davies.
This course examines black feminist theories, placing particular emphasis on the cross-cultural experiences of women as expressed both theoretically and creatively. It follows the chronologies and variations of modern black feminisms, beginning with the U.S. articulations and moving toward how particular feminist positions are constructed and theorized in other locations across the African diaspora such as Black British feminism, Caribbean feminism, African feminism. Thus we will explore the various theories and texts within their sociopolitical and geographical frames and locations, analyzing these as appropriate against or in relation to a range of feminist activisms and movements.

ASRC 6301 African American Politics

Spring. 4 credits. J. Turner.
The central thesis of African American politics has been its movements for political change and democratic access and human rights. This development since the 17th century is a complex political legacy. This course conducts a close study of African American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people are analyzed. Critical historical stages in the process of Black politics are examined. The development of electoral offices in federal and statewide politics in critical industrial centers, as well as rural hamlets, center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republications/conservatives constitute the emphasis on contemporary events. The course reviews the development of the literature in African American politics.

ASRC 6303 Nationalism and Decolonization in Africa

Spring. 4 credits. J. Byfield.
This course examines the rise of nationalism as well as the process and aims of decolonization in sub-Saharan Africa. It draws on films and a variety of primary and secondary materials in order to illuminate the complex and contested arenas from which African nationalisms emerged. Throughout the course we will examine the ways in which race, ethnicity, gender, and class shaped the discourse of nationalism as well as nationalist strategies and agendas. We will also explore the ways in which the conflicts and tensions of the nationalist period continue to shape post-colonial state and society.

[ASRC 6304 Marriage and Divorce in the African Context (also FGSS 6304)]

Fall. 4 credits. Next offered 2011-2012.
J. Byfield.

Marriage was the widely expected norm within African societies. The institution was an important marker of adulthood, linking individuals and lineages in a network of

mutual cooperation and support. Marriage practices and their concomitant gender expectations varied significantly between societies, and over time. As a result, marriage and divorce are especially rich terrain for exploring social history, women's agency, discursive constructions of "woman," masculinity, and gender relations of power. This course explores some of the newest scholarship on marriage by Africanist scholars. The readings demonstrate the wide cultural variety in marriage as well as the dynamic relationship between marriage and historical change. They especially highlight women's roles and expectations in marriage, masculinity, and the ways men and women negotiated the rules and boundaries of marriage.]

ASRC 6305 Dress, Cloth, and Identity: Africa and the Diaspora

Spring. 4 credits. J. Byfield.

This course uses a multidisciplinary approach to examine the importance of textiles in African social and economic history. It combines art history, anthropology, social and economic history to explore the role of textiles in marking status, gender, political authority, and ethnicity. In addition, we examine the production and distribution of indigenous cloth and the consequences of colonial rule on African textile industries. Our analysis also considers the principles of African dress and clothing that shaped the African diaspora in the Americas as well as the more recent popularity and use of African fabrics and dress in the United States.

ASRC 6306 Figures of Thought: Africana Intellectuals

Spring. 4 credits. G. Farred.

The process by which intellectuals come to stand as such, as figures of thought, is the consequence of an often difficult, sometimes protracted process. In this course, we will focus on a small number of Africana intellectuals, including Saint Augustine, Frantz Fanon, Jacques Derrida, and Patrice Lumumba. We will read a range of primary and secondary texts in order to grapple with the question of how intellectuals are formed. To this end, we will read about the "failed" revolution aspired to by Lumumba, as well as taking a hard look at Fanon's *Wretched of the Earth* as an anti-intellectual work.

ASRC 6400 Africana Thought (also ENGL 6401)

Fall. 4 credits. G. Farred.

What kind of thinking is being and has been produced, historically by figures in Africana philosophy? Intention of course is not—though that may a collateral effect—to argue against those who naysay the existence of Africana philosophy nor is it to "define" the field, as if such a project were even possible. "Africana Thought" will, instead, seek to engage those thinkers who produce this philosophy. The readings will run from the "Confessions" of St. Augustine through Alexander Crummell's musings to Valentin Mudimbe's "The Invention of Africa," from intense reflections on the condition of black subjugation that is Frantz Fanon's writing to locating Jacques Derrida as a philosopher of the Maghreb. Course about Africana philosophy as a project that persistently questions itself.

ASRC 6401 The Politics of Theory (also ENGL 6402, FREN 6401)

Spring. 4 credits. G. Farred.

There is an old and hoary chestnut that pits theory against politics, presuming, arguing, that theory is not, has no, politics. This course is not designed to either rebut or ignore that antagonism. Instead, the intent here is simply to read a range of theorists, from John Stuart Mill ("On Liberty") to Alain Badiou, to think how the politics of theory and the theory of politics. Badiou, Mill, Carl Schmitt and Jacques Ranciere, never shy away from their sense of the political. If anything, this course will delight in how unreflectively these thinkers take the matter of politics. In fact, and here Schmitt is crucial, at issue will be: how could we not think our politics theoretically?

ASRC 6510 Pan-Africanism and Feminism (also COML 6460)

Fall. 4 credits. C. Boyce Davies.

This course examines the particular theoretical intersections of Pan-Africanism and feminism through a study of works that address the lives of activist women and men who lived political lives that demanded an articulation of this intersection. It will examine representative texts in each of these broad fields, paying particular attention to those works that explicitly address the intersection. Students will select and study the work of one thinker in either category and examine the written life from a few angles. In particular, we will address the conflicts, disjunctions, and slippages between these positions; the possibilities and limitations as expressed by these thinkers; and the issues of collaboration, erasure articulated. Students will also have the opportunity to identify and discuss popular culture that addresses these themes.

ASRC 6511 Middle Passage: Theorizing the African Diaspora

Spring. 4 credits. C. Boyce Davies.

The Middle Passage is perhaps the most evocative and simultaneously the most painful of transitions any people have made. Whereas for many the passage to the Americas was loaded with expectation of freedom, for Africans the passage across the Atlantic was loaded with pain, loss, and separation. The Middle Passage (referred to as the *Maafa*) then becomes a journey of separation, dismemberment, and dislocation. But it was also on the Middle Passage, for those who survived, that the transformation into African Diaspora peoples began. This course examines a range of middle passage texts such as novels, poetry, film, drama, slave narratives, and historical texts in order to explore comparatively how artists from across the African Diaspora have approached this historically and emotionally loaded event.

ASRC 6513 Toni Morrison's Novels (also ASRC 4509)

Spring. 4 credits. R. Richardson.

For description, see ASRC 4509.

ASRC 6520 Thinking Heidegger

Fall. 4 credits. G. Farred.

It is, of course, a truism to suggest that Martin Heidegger, more than any 20th-century philosopher, is preoccupied with thinking. It is, again, obviously, present in *Was heist Denken?* However, in a work such as *The Principle of Reason* there is a similar preoccupation with thinking. Not, as in *Was heist Denken?*, for its own sake, but as an integral part of Heidegger's intellectual project. Using Heidegger as the central figure, this

course will, additionally, think thinking the work of philosophers such as Hannah Arendt and Michel Foucault.

ASRC 6600 Education and Development in Africa

Spring. 4 credits. N. Assié-Lumumba.

Human capital theory establishes a positive and linear relationship between formal education and individual productivity and socioeconomic attainment and economic growth and development of nations. While enjoying considerable popularity in industrial and developing countries, including African countries, education has also been perceived as a hindrance to development. The concept of human capital and paradigms of development including modernization, dependency, and Third World Forum are first introduced. Specific issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and language, access, output, and outcome based on social class, ethnicity, race, and gender. Employment, migration and international brain drain, the information and communication technologies, indigenous knowledge systems, and the role of higher education in regional and international cooperation are also examined.

ASRC 6606 Politics of the Hip-Hop Generation

Spring. 4 credits. T. Gosa.

This graduate seminar investigates the political dynamics of the hip-hop generation. The primary focus of this course will be the major political and economic forces that have shaped the worldview of Black and Latino/a youth born between 1965 and 1984. Students will critically address major topics surrounding hip-hop including race-ethnicity, gender and sexuality, social class, segregation/mass-incarceration, politics, and education. After reviewing the sociohistorical development of hip-hop, we will examine the role of hip-hop in modern black politics and activism, including its significance for mobilizing youth. Special attention will be given to the generational gap between the hip-hop generations and the Civil-Rights/Black Power parents.

ASRC 6900-6901 Independent Study

6900, fall; 6901, spring. Variable credit.

Prerequisite: graduate standing. Africana Studies faculty.

ASRC 6902-6903 Africana Studies Graduate Seminar

6902, fall; 6903, spring. 4 credits. Africana Studies faculty.

Designed for first-year ASRC graduate students. The seminar is coordinated and supervised by one professor but team taught by three or four faculty members per semester. Each participating faculty member is responsible for a topical segment of the course related to her or his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

ASRC 6990 Studies in African American Literature: Performance and African American Literature (also ENGL 6990)

Fall. 4 credits. M. Crawford.

This seminar will explore two different registers of performance and performativity: (1) the role of performance in cultural movements; and (2) comparisons of race and

gender performativity. Race and gender are both performative and lived experiences of race and gender are often inseparable, but the performativity of gender is sometimes taken for granted in a manner that racial performativity is not. African American performance studies exposes the connections and differences between theories of gender and race performativity. This seminar will be a deep plunge into the most pivotal work in this field of black performance studies as well as the most complicated depictions of performativity in African American literature. The poetics and drama of the 1960s and '70s Black Arts movement will be our launching pad. Although Gil Scott-Heron proclaimed, "The revolution will not be televised," the revolution was performed. The Black Arts movement also sheds light on the reasons why "race as performative" is not embraced, in everyday life and scholarship, in the same manner as "gender as performative." After our study of the role of performance in a cultural movement, we will turn to theory, cultural studies, and literature that reveal the role of the surface/depth tension in gender and race performativity. Our texts may include John Jackson's *Real Black: Adventures in Racial Sincerity*, Patrick Johnson's *Appropriating Blackness*, Kimberly Benston's *Performing Blackness*, Judith Butler's *Bodies that Matter*, and *Race/Sex: Their Sameness, Difference and Interplay* (ed. Naomi Zack). The literary texts may include Toni Morrison's *Tar Baby*, Danzy Senna's *Caucasia*, Nella Larsen's *Passing*, and James Baldwin's *Tell Me How Long the Train's Been Gone*.

ASRC 8900-8901 Thesis

8900, fall; 8901, spring. Prerequisite: ASRC graduate students. Africana Studies faculty.

AMERICAN STUDIES

M. Katzenstein, director; G. Altschuler, E. Baptist, R. Bense, M. P. Brady, D. Chang, E. Cheyfitz, J. Cowie, J. Frank, J. E. Gainor, M. C. Garcia, F. Gleach, S. Haenni, A. Hammer, R. Harris, M. Jones-Correa, K. Jordan, K. Kassam, M. Katzenstein, J. Kirschner, R. Kline, I. Kramnick, C. Lai, F. Logevall, T. J. Lowi, B. Maxwell, K. McCullough, L. L. Meixner, R. Mize, V. Nee, M. B. Norton, J. Parmenter, R. Polenber, S. Pond, M. Rossiter, A. Sachs, N. Salvatore, S. Samuels, M. E. Sanders, V. Santiago-Irizarry, M. Shefter, A. M. Smith, S. Villenas, M. Washington, S. Wong, M. Woods, D. Woubshet. Affiliated faculty: J. E. Bernstock, M. Hatch, J. Jennings, J. Peraino, P. Sawyer. Emeritus: S. Blumin, J. Brumberg, M. Kammen, D. E. McCall, R. L. Moore, J. Silbey

The Major

The major in American Studies, appropriate for a wide array of future professions, began as a program of coordinated study in the history, literature, and politics of the United States. These remain the core elements, but American Studies aims to be inclusive in its subject matter. Given the nation's diverse population and cultures, the program wants its majors to examine American experience in broad terms, drawing on the materials and methods of a variety of disciplines.

Students who contemplate becoming American Studies majors are encouraged to speak with the program director as early as possible to arrange for a major advisor.

All students majoring in American Studies must take a minimum of 12 courses selected from the American Studies roster, completing them with a grade of C or better. No more than six of these courses can come from any one discipline. Of the 12 courses at least three must have a substantial focus on material before 1900, at least two must deal with American diversity (AMST 1109 and 1110 are especially recommended), and at least one must be a 4000-level seminar, either one of the American Studies 4300 course range (4300-4399) or an appropriate substitute seminar at the 4000 level (AMST 4997/4998, taught in Washington, D.C., does not fulfill the seminar requirement though it counts as one course toward the major). Note: A single course may satisfy more than one of these requirements: e.g., a course on Native Americans in the 1800s is both a course dealing substantially with pre-1900 material and one dealing with American diversity.

Although a good bit of freedom is encouraged in the selection of courses, American Studies majors, in consultation with their advisor, must define an area of concentration and complete six courses in that area. The area of concentration can be designed to fit the particular interests of a student, but it must include subjects in at least two disciplines. Possible areas of concentration include "visual studies," "cultural studies," "race and ethnicity," "legal and Constitutional studies," "American institutions," "class and social structure," "the American environment." (Courses taken to satisfy the concentration may be used to fulfill other requirements for the major.)

Students may find courses relevant to American experience that they wish to take but that are not on the American Studies course list. With their advisor's approval, students may count two such courses toward fulfilling the major.

Honors

Candidates for honors must maintain an average of B+ in courses pertinent to the major and have taken at least one course in which they wrote a research paper. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies faculty and discuss their ideas for a project. With approval from the faculty member students may then register in the fall of their senior year for AMST 4993, the honors essay tutorial. At the end of the fall semester, honors candidates meet with their advisor and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students complete their honors essays in the spring by enrolling in AMST 4994.

Category Key: Courses in American Studies are broken into different categories. To determine which category (ies) a course falls in, please note the reference at the end of each course description. The key is as follows: ASE = Anthropology, Sociology, and Economics, LT = Literature and Theatre Arts, GP = Government and Public Policy, HI = History, MV = Music and Visual Studies, HR = Honors, Reading and Research.

American Studies 4300 Seminars

[AMST 4300 The Milman Seminar

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2011-2012. G. C. Altschuler.

The Milman Seminar: Baseball in American Culture. Through a reading of fiction and nonfiction, we examine the role of baseball as it has shaped and reflected the attitudes and values of Americans. (HI)

AMST 4301 The Rabinor Seminar (also ENGL 4301)

Spring. 4 credits. Prerequisite: permission of instructor.

The Rabinor Seminar explores the role of diversity in the formation of a distinct American tapestry. The specific topic varies each year, but the general subject is the promise and experience of pluralism. Topic for 2011: TBA.

[AMST 4310 Topics in American Studies: American Politics and Dissent, 1945 to 2000 (also HIST 4311)

4 credits. Permission of instructor required. Next offered 2011-2012. N. Salvatore.

This course will examine the Civil Rights movement, anti-Vietnam protests, a revitalized conservative politics, and the re-emergence of an evangelical presence in American politics, with particular focus on the electoral process after 1964. A series of papers and a term paper are required. (HI)

AMST 4311 Dissenting Patriots

Fall. 4 credits. N. Salvatore.

This seminar examines the complex nature of dissent in America in the post-1945 decades. Our readings will look at dissenters, their ideas, and their movements across the political spectrum, with particular attention to how they legitimize their divergent political views. Requirements include weekly discussions, some short essays evaluating the common reading, and a term paper (about 25 pages) on a topic selected in consultation with me. There are no exams. (HI)

Courses

AMST 1101 Introduction to American Studies # (CA-AS)

Spring. 4 credits. B. Maxwell.

This course is an introduction to interdisciplinary considerations of American culture. We will reflect on topics ranging from Native American relations to the land, to the European conquest of the Americas, to the development of American civic life and political culture and the ongoing African American struggle for freedom and equality. We will also study immigration as a (threatened) constant in national life and labor, the distinctions between mass culture and popular culture, the promise of American life, and violence as a persisting national woe. We'll examine these themes through literature, historical writing, music, art, film, architecture, and political economy in the United States. The course will also give attention to the many methods through which scholars have, over time, developed the discipline of American Studies, and to ongoing debates over the intellectual and political stakes of those methods. (LT)

AMST 1143 Space Cowboys: The '60s Hero (HA-AS)

Summer only. 4 credits. J. Pickett.

The close of World War II marks the beginning of America's ascendancy to unrivaled prosperity and political power. But it also marks the beginning of an American self-examination whose fiercest discontent found expression in the 1960s, in part through the youth movement. We'll look at novels by Kerouac, Kesey, and cover as well as films like *Easy Rider* and *Fight Club* to see how a

certain kind of revolution continues to rewrite American ideas and ideals while maintain and developing connections with quintessentially American ideas and ideals found in Transcendentalism and the myth of the cowboy.

AMST 1240 Democracy and Its Discontents: Political Traditions in the United States (also HIST 1240) (HA-AS)

Summer. 3 credits. N. Salvatore.

An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the 19th century and expanded rights for women and working people in the 20th century, free-speech issues, the civil-rights movement, religious-based critiques of American culture, and conservative critiques of American liberalism. The course serves as an investigation of the ways in which political expression takes forms in modern American culture. In addition to lectures, the course features several afternoon programs that include guest lecturers and hands-on instruction in how to use the modern electronic research library. (HI)

[AMST 1311 Popular Music in America: A Historical Survey (also MUSIC 1311) # (LA-AS)]

3 credits. Next offered 2011–2012. S. Pond. For description, see MUSIC 1311. (MV)

AMST 1312 History of Rock Music (also MUSIC 1312) (LA-AS)

Spring. 3 credits. J. Peraino. For description, see MUSIC 1312. (MV)

AMST 1313 A Survey of Jazz (also MUSIC 1313) (LA-AS)

Fall. 3 credits. S. Pond. For description, see MUSIC 1313. (MV)

AMST 1530 Introduction to American History (also HIST 1530) # (HA-AS)

Fall. 4 credits. J. Parmenter. For description, see HIST 1530. (HI)

[AMST 1531 Introduction to American History: 1865–Present (also HIST 1531) (HA-AS)]

4 credits. Next offered 2011–2012. (HI)

AMST 1600 Introduction to American Indian Studies I: Indigenous North America to 1890 (also AIS 1100) # (HA-AS)

Fall. 3 credits. P. Nadasdy. For description, see AIS 1100. (HI)

AMST 1601 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America (also AIS 1110) (CA-AS)

Spring. 4 credits. K. Kassam. For description, see AIS 1110. (HI)

AMST 1800 Immigration in U.S. History (also HIST/LSP 1800) (HA-AS)

Spring. 4 credits. M. C. Garcia. For description, see HIST 1800. (HI)

AMST 2010 Popular Culture in the United States, 1900 to 1945 (HA-AS)

Fall. 4 credits. G. Altschuler.

AMST 2010 deals with American popular culture in the period between 1900 and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, the goal is to better understand the ways in which

popular culture as “contested terrain,” the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to “control” images and themes. Topics include the Western; Cultural Heroes and the Cult of Individualism in the 1920s; The Hays Code and the Black Sox scandal; Mae West and the “New Women”; Advertising in an Age of Consumption; Gangsters and G-Men; and Jackie Robinson and the American Dilemma. (HI)

AMST 2020 Popular Culture in the United States, 1950 to Present (HA-AS)

Spring. 4 credits. G. Altschuler.

AMST 2020 treats the period from 1950 to the present as we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music. We try to better understand the ways in which popular culture shapes and/or reflects American values. The course also depicts popular culture as “contested terrain,” the place where social classes, racial and ethnic groups, women and men, the powerful and less powerful seek to “control” images and themes. Topics include *The Honeyymooners* and 1950s television, soap operas; “gross-out” movies; Elvis; the Beatles, and Guns ‘n Roses; gothic romances; and *People Magazine* and *USA Today*.

[AMST 2022 The Court, Crime, and the Constitution (also HIST 2020) (HA-AS)]

Fall. 4 credits. Next offered 2011–2012. R. Polenberg. (HI)

AMST 2030 Introduction to American Literature (also ENGL 2030) # (LA-AS)

Fall. 4 credits. L. Donaldson. For description, see ENGL 2030. (LT)

AMST 2040 Introduction to American Literature (also ENGL 2040) (LA-AS)

Spring. 4 credits. J. Braddock. For description, see ENGL 2040. (LT)

AMST 2041 Asian American Communities (also HIST 2041) (HA-AS)

Spring. 4 credits. D. Chang. For description, see HIST 2041. (HI)

[AMST 2060 The Great American Cornell Novel (also ENGL 2060) (LA-AS)]

Spring. 4 credits. Next offered 2011–2012. M. Hite. (LT)

AMST 2090 Seminar in Early American History (also FGSS/HIST 2090) # (HA-AS)

4 credits. Limited to 20 students. M. B. Norton. For description, see HIST 2090. (HI)

[AMST 2100 Progressive Reform in America, 1900–1940]

4 credits. Limited to 15 students. Priority given to sophomores. Next offered 2012–2013. N. Salvatore.

This course looks at progressive reform from the early 20th century to the edge of World War II. We will look at politics, the impact of world war, contesting ideologies, the role of the corporation, and the evolving meaning of liberalism through a variety of movements and individuals. Short essays and a research paper required. (HI)

AMST 2105 The American Musical (also ENGL/THETR 2150, MUSIC 2250) (LA-AS)

Spring. 3 credits. N. Salvato. For description, see THETR 2150. (MV)

[AMST 2110 Black Religious Traditions: Sacred and Secular (also HIST/RELST 2110) (HA-AS)]

4 credits. Next offered 2012-2013.
M. B. Norton. (HI)]

[AMST 2760 Survey of American Film (also FILM 2760, VISST 2300) (LA-AS)]

4 credits. Each student must enroll in a section and attend one screening per week. Next offered 2012-2013. S. Haenni. Focusing mostly on Hollywood film, this course surveys some major developments in and approaches to 20th-century American cinema. We trace changes in film aesthetics and film style, the development of the American cinema as an institution that comprises an industrial system of production,

social and aesthetic norms and codes, and particular modes of reception. The course introduces methodological issues in American film history—especially questions of narrative, genre, stardom, and authorship—and focuses on the ways film shapes gender, race, class, ethnic, and national identities. Screenings include work by D. W. Griffith, John Ford, Howard Hawks, Alfred Hitchcock, and others and are supplemented by readings in film criticism and history. (LT)]

AMST 2765 Cinema and Migration (also FILM/VISST 2765) (CA-AS)

Fall. 4 credits. S. Haenni.
The invention of cinema in the late 19th century coincided with major waves of migration to and within the United States. Immigrants from Eastern Europe are often said to have “invented” Hollywood; those from Southern Europe were among its first and most eager consumers. By migrating north, many African Americans simultaneously “migrated to the movies.” This course will start by looking at this confluence between migration and cinema: How did European immigrants shape an emerging Hollywood? How did African American migrants negotiate the new medium? How did newly emerging issues of diversity manifest themselves in terms of representation, production, and reception of the filmic image? What in the end does that tell us about the American film industry, its hold on the nation, and its global dominance? Such questions will provide a grounding for the exploration of case studies, and different immigrant groups later in the 20th and 21st centuries. (MV)

AMST 2820 Photography and the American Landscape (also LA 2820)

Fall. 3 credits. A. Hammer.
For description, see LA 2820. (MV)

AMST 2980 Inventing an Information Society (also ECE/ENGRG 2980, HIST 2920, STS 2921) (HA-AS)

AMST 3240 Varieties of American Dissent, 1880 to 1990 (also HIST 3240) (HA-AS)

Spring. 4 credits. N. Salvatore. (HI)

The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture. (HI)

[AMST 3812 Edge Cities: Celluloid New York and Los Angeles (also ARCH/FILM/VISST 3812) (CA-AS)]

Spring. 4 credits. S. Haenni and M. Woods. Anchoring the east and west coasts, New York and Los Angeles have been celebrated and excavated in films. On the edge literally and metaphorically, these cities seem to be about competing visions of urban form, culture, and modernity. And the iconic forms of New York (tenements and skyscrapers) and of Los Angeles (highways and suburban homes) have fascinated film makers from the 19th century to the present day. We will both evoke and complicate the contrast between New York and Los Angeles by mapping the intersections of each city with cinema. We explore how the urban experience has been said to give rise to particular cinematic forms and the ways in which cinematic styles may be translated into urban design. Topics may include density and sprawl; place and creativity; class and ethnicity; race and gender; culture and commercialism; industrial and media economies; and insularism and cosmopolitanism. Screenings will include documentary, experimental, and commercial films and cover such genres as early actualities, city symphonies, film noir, science fiction, etc. Readings will be drawn from theories and histories of film, urbanism, and architecture. Possible field trips.

[AMST 3818 Special Topics in the History of Architecture and Urbanism (also ARCH 3818)]

3 credits. Prerequisites: ARCH 1801-1802 or permission of instructor. Next offered 2011-2012. M. Woods. (MV)]

[AMST 4061 Politics of Slow-Moving Crises (also AMST/GOVT 6161, GOVT 4061) (SBA-AS)]

Spring. 4 credits. M. Jones-Correa.
For description, see GOVT 4061. (GP)

[AMST 4142 Causes and Consequences of U.S. Foreign Policy (also GOVT 4142/6142, AMST 6142) (SBA-AS)]

4 credits. Next offered 2011-2012. E. Sanders.
For description, see GOVT 4142. (GP)]

[AMST 4180 Audio Documentary: Stories from the Land (also LA 4180) (CA-AS)]

Fall. 3 credits. Next offered 2011-2012. A. Hammer.
For description, see LA 4180. (MV)]

[AMST 4200 Asian American Communities (also HIST 4200, AAS 4240) (HA-AS)]

4 credits. Limited to 15 students. Next offered 2011-2012. D. Chang. (HI)]

[AMST 4222 Political Culture (also GOVT 4222)]

4 credits. Next offered 2011-2012. R. Bense. (GP)]

[AMST 4231 The 1960s: Conceptualizing the Future from the Past (also GOVT 4231) (CA-AS)]

4 credits. Next offered 2012-2013. J. Kirshner and T. Lowi. (GP)]

[AMST 4241 Contemporary American Politics (also AMST 6291, GOVT 4241/6291) (HA-AS)]

Spring. 4 credits. Next offered 2011-2012. M. Shefter.
For description, see GOVT 4241. (GP)]

[AMST 4260 The West and Beyond: Frontiers and Borders in American History and Culture (also HIST 4260) (HA-AS)]

4 credits. Next offered 2012-2013. A. Sachs. (HI)]

[AMST 4261 Commodification and Consumerism in Historical Perspective: Sex, Rugs, Salt, and Coal (also HIST 4261) @ # (HA-AS)]

4 credits. Next offered 2011-2012. A. Sachs. (HI)]

[AMST 4272 Historical Archaeology of Indigenous Peoples (also AIS 4270/7720, AMST 6272, ANTHR/ARKEO 4272/7272) # (HA-AS)]

Fall. 4 credits. Next offered 2011-2012. K. Jordan. (ASE)]

[AMST 4281 Government and Public Policy: An Introduction to Analysis and Criticism (also AMST 6281, GOVT 4281/7281) (SBA-AS)]

Fall. 4 credits. T. Lowi.
For description, see GOVT 4281. (GP)

[AMST 4400 Seminar in Recent American History (also HIST 4400) (HA-AS)]

4 credits. Next offered 2011-2012. R. Polenber. (HI)]

[AMST 4508 Exhibiting Cultures (also AMST 6508, ARTH 4508/6508, ASRC 4504/6508) (CA-AS)]

4 credits. C. Finley.
For description, see ARTH 4508. (MV)

[AMST 4509 Black Arts Movement (also ARTH 4509, ASRC 4505) (CA-AS)]

Summer. 4 credits. C. Finley.
For description, see ARTH 4509. (MV)

[AMST 4510 Multiculturalism and Education (also EDUC/LSP 4510) (SBA-AS)]

Spring. 3 credits. S. Villenas.
For description, see EDUC 4510. (ASE)]

[AMST 4530 20th-Century Women Writers of Color (also AAS/ENGL/FGSS 4530) (LA-AS)]

Fall. 4 credits. Next offered 2011-2012. S. Wong.
For description, see ENGL 4530. (LT)]

[AMST 4585 American Political Thought (also AMST 6585, GOVT 4585/6585) # (HA-AS)]

4 credits. Next offered 2011-2012. J. Frank. (GP)]

[AMST 4600 Melville (also ENGL 4600) # (LA-AS)]

Fall. 4 credits. B. Maxwell.

[AMST 4610 Studies in Modern Art: U.S. Art of the 1960s (also ARTH 4600)]

Spring. 4 credits. J. Bernstock.
For description, see ARTH 4600. (MV)

[AMST 4616 Interpreting Race and Racism: DuBois (also GOVT 4616) (HA-AS)]

4 credits. Next offered 2011-2012. A. M. Smith.
For description, see GOVT 4616. (GP)]

[AMST 4620 The American Enlightenment (also ENGL 4620)]

Spring. 4 credits. M. Jonik.
For description, see ENGL 4620. (LT)

[AMST 4625 Sexuality and the Law (also AMST 6625, FGSS 4610/7620, GOVT 4625/7625) (KCM-AS)]

4 credits. Next offered 2011-2012. A. M. Smith. (GP)]

- AMST 4631 Entering History, Entering Fiction: Gender, Race, and Nation in 19th-Century U.S. Fiction (also ENGL/FGSS 4631) (LA-AS)**
Fall. 4 credits. K. McCullough.
For description, see ENGL 4631. (LT)
- [AMST 4635 Feminist Theory/Law and Society (also GOVT 4635) (CA-AS)**
4 credits. Next offered 2011–2012.
A. M. Smith.
For description, see GOVT 4635. (GP)
- [AMST 4662 Contemporary American Indian Poets (also ENGL 4662) (LA-AS)**
4 credits. Next offered 2011–2012.
E. Cheyfitz. (LT)
- [AMST 4690 The Paranoid Style in Contemporary American Fiction and Film (also ENGL 4690) (LA-AS)**
4 credits. Next offered 2011–2012. K. Attell. (LT)
- AMST 4750 Seminar in Cinema I (also FILM 4750) (LA-AS)**
4 credits. D. Fredericksen.
For description, see FILM 4750. (LT)
- [AMST 4755 Advanced Seminar in the 20th Century: AIDS Literature (also ENGL 4750)**
Spring. 4 credits. Next offered 2012–2013.
D. Woubshet.]
- AMST 4809 Politics of '70s Film (also GOVT 4809) (SBA-AS)**
Spring. 4 credits. J. Kirshner.
For description, see GOVT 4809. (GP)
- AMST 4850 Immigration Since 1965 (also HIST/LSP 4850) (HA-AS)**
Fall. 4 credits. M. C. Garcia.
For description, see HIST 4850. (HI)
- [AMST 4851 Refugees (also HIST/LSP 4851) (HA-AS)**
4 credits. Next offered 2011–2012.
M. C. Garcia. (HI)]
- [AMST 4900 New World Encounters, 1500 to 1800 (also AIS/HIST 4900) (HA-AS)**
4 credits. Next offered 2012–2013.
J. Parmenter. (HI)]
- AMST 4955 Sensation and Indigenous Intent (also SHUM/ARTH/VISST 4955)**
Spring. 4 credits. J. Rickard.
For description, see SHUM 4955.
- [AMST 4970 Jim Crow and Exclusion-Era America (also AAS/HIST 4970, AMST/HIST 6970) (HA-AS)**
4 credits. Next offered 2011–2012.
D. Chang. (HI)]
- AMST 4997 Research Seminar in American Studies (also CAPS/HIST 4997)**
Fall or spring. Offered in Cornell in Washington Program only. S. Jackson.
For description, see HIST 4997. (HI)
- AMST 4998 Politics and Policy: Theory, Research, and Practice (also ALS/CAPS/GOVT 4998, PAM 4060)**
Fall and spring. 8 credits each semester.
S. Jackson.
Offered in Cornell in Washington Program. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington Program. (GP)
- AMST 5710 Social and Political Context of American Education (also AMST 6710, EDUC/SOC 2710/5710)**
Fall. 4 credits. J. Sipple.
For description, see EDUC 2710. (ASE)
- [AMST 6050 U.S.–Cuba Relations (also AMST/HIST/LSP 4050/6050)**
4 credits. Next offered 2012–2013.
M. C. Garcia. (HI)]
- AMST 6102 Asian American Politics and Public Policy (also AMST 3102, CRP 3102/6107, AAS 3901)**
Spring. 3 credits. C. Lai.
For description, see CRP 3102.
- AMST 6105 Urban Political Economy Seminar: Property and Expropriation (also CRP 3105/6105, AMST 3105)**
Spring. 3 credits. C. Lai.
For description, see CRP 3105. (HI)
- [AMST 6121 American Political Development in the 20th Century (also AMST 4041, GOVT 4041/6121)**
4 credits. Next offered 2011–2012.
E. Sanders.
For description, see GOVT 4041. (GP)]
- [AMST 6142 Causes and Consequences of U.S. Foreign Policy (also AMST/GOVT 4142/6142)**
4 credits. Next offered 2011–2012.
E. Sanders. (GP)]
- AMST 6161 Politics of Slow-Moving Crises (also AMST/GOVT 4061, GOVT 6161)**
Spring. 4 credits. M. Jones-Correa.
For description, see GOVT 4061. (GP)
- [AMST 6202 Political Culture (also GOVT 6202)**
4 credits. Next offered 2011–2012.
R. Bensel. (GP)]
- [AMST 6248 Iroquois Archaeology (also AIS/ANTHR/ARKEO 6248)**
4 credits. Next offered 2011–2012.
K. Jordan. (ASE)]
- [AMST 6272 Historical Archaeology (also AMST 4272, ANTHR/ARKEO 4272/7272)**
Fall. 4 credits. Next offered 2011–2012.
K. Jordan.
For description, see ANTHR 4272. (ASE)]
- AMST 6281 Government and Public Policy: An Introduction to Analysis and Criticism (also AMST 4281, GOVT 4281/7281)**
Fall. 4 credits. T. Lowi.
For description, see GOVT 4281. (GP)
- [AMST 6291 Contemporary American Politics (also AMST 4241, GOVT 4241/6291)**
Spring. 4 credits. Next offered 2011–2012.
M. Shefter.
For description, see GOVT 4241. (GP)]
- [AMST 6301 Institutions (also GOVT 6301)**
4 credits. Next offered 2011–2012.
R. Bensel. (GP)]
- [AMST 6424 Ethnoracial Identity in Anthropology, Language, and Law (also ANTHR/LSP 6424, LAW 7231)**
4 credits. Next offered 2011–2012.
V. Santiago-Irizarry. (ASE)]
- [AMST 6585 American Political Thought (also GOVT 4585/6585, AMST 4585)**
4 credits. Next offered 2011–2012. J. Frank.]

4 credits. Next offered 2011–2012.
E. Cheyfitz.]
- AMST 6612 Colonial American Literature (also ENGL 6612)**
Spring. 4 credits. E. Cheyfitz.
For description, see ENGL 6612. (LT)
- [AMST 6625 Sexuality and the Law (also AMST 4625, FGSS 4610/7620, GOVT 4625/7625)**
4 credits. Next offered 2011–2012.
A. M. Smith. (GP)]
- [AMST 6631 American Poetry, 1955–1980 (also ENGL 6631)**
4 credits. Next offered 2011–2012.
R. Gilbert. (LT)]
- AMST 6632 Modern American Poetry (also ENGL 6632)**
Fall. 4 credits. R. Gilbert.
For description, see ENGL 6632. (LT)
- AMST 6635 Education, Social Justice, and the Law (also GOVT 6635)**
Spring. 4 credits. A. M. Smith.
For description, see GOVT 6635. (GP)
- [AMST 6645 Democratic Theory (also GOVT 6645)**
4 credits. Next offered 2011–2012. J. Frank. (GP)]
- [AMST 6690 Gift and Contract in the 19th-Century United States: Social and Sexual Constructions of Whiteness, Race, and Ethnicity (also ENGL 6690)**
4 credits. Next offered 2011–2012.
S. Samuels. (LT)]
- AMST 6801 Asian American Urban Experience (also AAS/CRP 3801/6801, AMST 3801)**
Fall. 3 credits. C. Lai.
For description, see AAS 3801. (HI)
- AMST 6811 James Baldwin (also ENGL/FGSS 6811)**
Spring. 4 credits. D. Woubshet.
For description, see ENGL 6811. (LT)
- AMST 6950 Race, Space, and Place (also AMST/AAS 3950, CRP 3101/6101)**
Fall. 3 credits. C. Lai.
For description, see CRP 3101.
- [AMST 6970 Jim Crow and Exclusion Era America (also AMST 4970, HIST 4970/6970)**
4 credits. Next offered 2011–2012.
D. Chang. (HI)]
- AMST 6999 Studies in African American Literature: Performance and African American Literature (also ENGL 6999)**
Fall. 4 credits. M. Crawford.
For description, see ENGL 6999. (LT)

Honors

Please see description of major for information about registration in these courses.

AMST 4993–4994 Honors Essay Tutorial
4993, fall; 4994, spring. 4 credits. See director of American Studies for appropriate advisors. (HR)

ANTHROPOLOGY

A. Willford, chair; H. Miyazaki and N. Russell, directors of graduate studies; S. Langwick, director of undergraduate studies; A. Clark Arcadi, J. Fajans, M. Fiskesjo, F. Gleach, D. Greenwood, J. Henderson, D. Holmberg, K. Jordan, K. March, H. Miyazaki, V. Munasinghe, P. Nadasdy, A. Riles, N. Russell, S. Sangren, V. Santiago-Irizarry, M. Small, T. Volman, M. Welker. Emeritus: R. Ascher, B. J. Isbell, B. Lambert, J. Siegel, R. Smith.

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal "liberal arts" major. It also serves as a major that, when well designed by the student with his or her advisor, prepares students for a wide range of professional careers, e.g., law, medicine, foreign service, human rights, social services, international development, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 2000- and 3000-level courses do not have formal prerequisites and students without prior experience in anthropology are welcome in these classes. For additional information, see the anthropology department web page (falcon.arts.cornell.edu/Anthro).

The Major

The major is structured to provide both general grounding in three subfields of anthropology (sociocultural anthropology, archaeological anthropology, and biological anthropology) and detailed focus on a particular area of concentration. Areas of concentration include a wide variety of subjects within and between these three subfields. Topics ranging from identity politics and globalization to prehistory and human evolution can be pursued in classes focused on every major geographical region in the world. Upper-level courses span a range of topical and theoretical issues related to religion, gender, economics, colonialism, democratization, prehistoric cultures, race, behavioral evolution, and conservation, to name a few.

No prerequisites are required to enter the anthropology major. Students should see the director of undergraduate studies to apply to the major and obtain an advisor. Majors prepare a short statement about their interests and goals for the major, and then meet with their advisor. Majors and advisors collaboratively build a program of study that reflects the student's individual interests and the intellectual breadth of the field. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

A minimum of 37 credits are necessary to complete the major. To complete the major, students must take:

- One course of 3 or more credits in each of the three subfields (sociocultural,

archaeological, biological) at the 1000 or 2000 level.

- ANTHR 3000: Introduction to Anthropological Theory
- Two other courses of at least 4 credits at the 3000 level that are designated "comparative survey" courses in the catalog.
- Two 4000-level courses, one of which must be a seminar course in your senior year (4000, 4258, 4260, and 4263 are not seminar courses and do not fill the requirements).
- An additional 8 credits in elective courses, which may be in cognate disciplines with the approval of your advisor.

Exceptions to these requirements may be granted if a written petition is approved by the director of undergraduate studies.

No S-U credits or First-Year Writing Seminars may count toward the major. A letter grade of C- or better is required in all courses counted toward the major.

Study abroad and off-campus study

programs: The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration. The director of undergraduate studies serves as the anthropology study abroad advisor.

The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major advisor, the anthropology study abroad advisor, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. Undergraduate students interested in working for an honors degree should apply to the chair of the Honors Committee in the second semester of their junior year (requests for late admission may be considered, but not later than the second week of the first semester of the senior year). It is the student's responsibility to identify an appropriate topic for a thesis and to find a faculty member willing to sponsor and supervise the research; the advisor and at least the general subject of the thesis must be identified at the time of application for admission to the Honors Program. Note that clearance from the University Committee on Human Subjects usually is required before research involving living people may begin; students contemplating such research should begin to work with their thesis advisors to design their

investigations and obtain the clearance well in advance of the date when the involvement with research subjects is to begin.

Admission to the Honors Program requires an overall GPA of 3.3 or greater and a 3.5 GPA in the major. In addition, the student should have no outstanding Incompletes in courses that will be used toward the major (provisional admission with Incompletes is possible at the discretion of the chair of the Honors Committee on evidence that a good faith effort to finish them is under way). Under special circumstances, a student with an overall GPA of 3.0 may petition for admittance to the program.

Writing an honors thesis typically is a two-semester project involving 8 credits of course work; most students do this work during their senior year. During their first semester of honors work, students typically register for (1) ANTHR 4983 Honors Thesis Research (3 credits); and (2) ANTHR 4991 Honors Workshop I (1 credit). During their second semester of honors work, students typically register for (1) ANTHR 4984 Honors Thesis Write-up (2 credits); and (2) ANTHR 4992 Honors Workshop II (2 credits). The two-course/term arrangement reflects the division of supervision over the thesis between the thesis advisor and the chair of the Honors Committee. The thesis advisor is ultimately responsible for guiding the scholarly development of the thesis; the chair of the Honors Committee is mainly responsible for assuring timely progress toward completion of the thesis, and providing a context for students in the Honors Program to share ideas (both editorial and substantive) as their theses progress.

Special Programs and Facilities

Collections: The department has an extensive collection of archaeological and ethnological materials housed in the Anthropology Collections. A limited number of students can make arrangements to serve as interns in the Anthropology Collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (B65 McGraw Hall) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: Specialized individual study programs are offered in ANTHR 4910 Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained permission and supervision of a faculty member. Undergraduates should note that many 6000-level courses are open to them by permission of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 P.M. in 215 McGraw Hall. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the director of undergraduate studies or visit the Department

of Anthropology web page (falcon.arts.cornell.edu/Anthro).

I. Introductory Courses

Each of these introductory courses provides an introduction to one of the subfields of anthropology. They do not form a sequence; students can take them in any order and at any point during their time at Cornell.

ANTHR 1200 Ancient Peoples and Places (also ARKEO 1200) @ # (HA-AS)

Spring. 3 credits. J. Henderson.

A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)

Spring. 3 credits. Fee for lab usage and maintenance: \$5. M. Small.

The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework.

ANTHR 1400 The Comparison of Cultures @ (CA-AS)

Fall. 3 credits. D. Holmberg.

An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology, as a comparative enterprise that poses distinct cultural systems in relief, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or corequisite: ANTHR 1300 or 1400. S-U grades only. D. Holmberg.

This course is intended for majors in anthropology, prospective majors. Each week a different member of the faculty in anthropology at Cornell will make a presentation on the nature of their work within the field and discuss their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

ANTHR 2400 Cultural Diversity and Contemporary Issues @ (SBA-AS)

Spring. 3 credits. B. Perley.

This course will introduce students to the meaning and significance of forms of cultural diversity for the understanding of

contemporary issues. Drawing from films, videos, and selected readings, students will be confronted with different representational forms that portray cultures in various parts of the world, and they will be asked to examine critically their own prejudices as they influence the perception and evaluation of cultural differences. We shall approach cultures holistically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered: “political correctness” and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; global process and cultural integrity.

II. Sociocultural Anthropology

Sociocultural anthropology is rooted in the precise observation and rigorous analysis of human cultural capacities and human social practices, relations, and institutions. All sociocultural anthropology involves both inquiry into the diversity of human cultures (ethnography) and comparative analysis of human social dynamics (social theory). Historically, sociocultural anthropology specialized in the study of nonwestern peoples, but today there are few places and domains of human activity that sociocultural anthropologists do not study. To give a few examples, sociocultural anthropologists study nuclear weapons scientists in California, the transformation of state power in Russia, and the politics of development in India. They study how television producers in Egypt contribute to nationalism, the social effects of truth commissions in Guatemala and South Africa, and the emergence of new religious and social movements in Latin America. What distinguishes sociocultural anthropology as a field is its engagement with the full abundance of human lived experience and its integrated, comparative effort to make sense of the key processes shaping this experience. As such, sociocultural anthropology is an excellent, flexible choice of major. It teaches core critical, analytical, and expressive skills and important perspectives on human cultural creativity and social life that are widely applicable. Recently, our majors have gone into careers as diverse as academic scholarship, activism, advertising, consulting, design, film, journalism, marketing, medicine, NGO-work, and politics and government.

ANTHR 1400 The Comparison of Cultures @ (CA-AS)

Fall. 3 credits. D. Holmberg.

For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. D. Holmberg.

For description, see Introductory Courses.

ANTHR 2400 Cultural Diversity and Contemporary Issues @ (SBA-AS)

Spring. 3 credits. B. Perley.

For description, see Introductory Courses.

ANTHR 2410 South Asian Diasporic Location (also AAS 2100) (CA-AS)

Spring. 3 credits. V. Munasinghe.

For description, see AAS 2100.

ANTHR 2428 Slavery and Human Trafficking # (CA-AS)

Fall. 4 credits. M. Fiskesjo.

In this course we will study slavery and trafficking in human slaves in the world today,

as well as its roots and history in Asia, Africa, as well as in medieval Scandinavia, and in America and Europe today. We will make use of anthropological perspectives to look at influential historical and Classical definitions of slavery, such as Aristotle's idea of the “natural slave,” and ask how ownership and domination over fellow humans have been justified in different societies. While introducing themes of gender, race, ethnicity, etc., and basic philosophical issues regarding autonomy and dependence, we also examine the economic forces of exploitation in the floating world of economic migration, people smuggling, and human trafficking.

ANTHR 2450 The Anthropology of Food and Cuisine @ (CA-AS)

Spring. 4 credits. J. Fajans.

You are what you eat! This course examines the way food is produced, prepared, exchanged, presented, and given meaning in cultures around the world. It examines the symbolism of specific foodstuffs. Who prepares food and how is it done? Who feeds whom and how these relations are expressed and valued? In addition to looking at these questions we analyze ideas about commensality; how food is used in public contexts for presentation or exchange, and how food is a marker of gender, class, status, ethnicity, and identity. In addition to looking specifically at food, we analyze cultural ideas about gender, the body, and identity in terms of how these cultural patterns are produced and expressed through concrete activities like eating, fasting, and special diets. In this class we stress critical and comparative thinking about subjects we tend to take for granted.

ANTHR 2468 Medicine, Culture, and Society (also BSOC/STS 2468) (CA-AS)

Fall. 3 credits. S. Langwick.

Medicine has become the language and practice through which we address a broad range of both individual and societal complaints. Interest in this “medicalization of life” may be one of the reasons that medical anthropology is currently the fastest-growing subfield in anthropology. This course encourages students to examine concepts of disease, suffering, health, and well-being in their immediate experience and beyond. In the process, students will gain a working knowledge of ecological, critical, phenomenological, and applied approaches used by medical anthropologists. We will investigate what is involved in becoming a doctor, the sociality of medicines, controversies over new medical technologies, and the politics of medical knowledge. The universality of biomedicine (or hospital medicine) will not be taken for granted, but rather we will examine the plurality generated by the various political, economic, social, and ethical demands under which biomedicine has developed in different places and at different times. In addition, biomedical healing and expertise will be viewed in relation to other kinds of healing and expertise. Our readings will address medicine in North America as well as other parts of the world. In class, our discussions will return regularly to consider the broad diversity of kinds of medicine throughout the world, as well as the specific historical and local contexts of biomedicine.

ANTHR 2520 Indonesia Today

Spring. 3 credits. M. Welker.

Comprised of over 10,000 islands, Indonesia is the world's fourth most populous country and has the world's largest Muslim population. This culturally diverse country has a colorful history and a complex political and religious life. This course will draw together faculty from the fields of Anthropology, History, Government, Linguistics, Ethnomusicology, and History of Art to introduce students to scholarship and debates over Indonesia's past, present, and future.

ANTHR 2546 South Asian Religions in Practice @ (CA-AS)

Spring. 3 credits. A. Willford.

This course offers an anthropological approach to the study of religious traditions and practices in South Asia (India, Pakistan, Sri Lanka, and Nepal). The course begins with a short survey of the major religious traditions of South Asia: Hinduism, Buddhism, Jainism, Sikhism, and Islam. We look to the development of these traditions through historical and cultural perspectives. The course then turns to the modern period, considering the impact of colonialism, nationalism, and globalization upon religious ideologies and practices. The primary focus of the course will be the ethnographic study of contemporary religious practices in the region. We examine phenomena such as ritual, pilgrimage, possession, devotionalism, monasticism, asceticism, and revivalism through a series of ethnographic case studies. In so doing, we also seek to understand the impact of politics, modernity, diasporic movement, social inequality, changing gender roles, and mass mediation upon these traditions and practices.

[ANTHR 2560 Japanese Society Through Film @ (CA-AS)]

Fall. 3 credits. Next offered 2012-2013. H. Miyazaki.]

ANTHR 2721 Anthropological Representation: Ethnographies on Latino Culture (also AMST/LSP 2721) (CA-AS)

Fall. 3 credits. V. Santiago-Irizarry.

Representation is basic to anthropology. In translating cultures, anthropologists produce authoritative representations of and about other people's lives. In this course, we will examine, with a critical eye, the production of representations about U.S. Latino cultures as these are embodied in anthropological texts. Issues to be explored include the relation between the ethnographer and the people s/he is studying, the contexts in which ethnographic texts are produced, and the way they may position different cultural groups within the larger national context.

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Spring. 4 credits. P. Nadasdy.

This seminar course is designed to give anthropology majors an introduction to classical and contemporary social and anthropological theory and to help prepare them for upper-level seminars in anthropology. The seminar format emphasizes close reading and active discussion of key texts and theorists. The reading list will vary from year to year but will include consideration of influential texts and debates in 19th-, 20th-, and 21st-century anthropological theory especially as they have sought to offer conceptual and analytical tools

for making sense of human social experience and cultural capacities.

ANTHR 3130 Latin American Forms of Colonial Possession @ # (CA-AS)

Fall. 4 credits. C. Garces.

The persistence of colonial relationships in Latin America will be interrogated in this course using methods drawn from ethnography, psychoanalysis, historiography, political theory, and experimental literature. Key to this line of inquiry is the anthropological problematization of metaphors and practices of possession. Our course readings will explore the psychological internalization of colonial domination; the political ceremonies of territorial sovereignty; the everyday rituals of personal enchantment and disenchantment; the occult applications of magic, witchcraft, and sorcery; and the historical processes of de- and re-colonization that mark notions of "possession" with such longstanding and fraught cross-cultural implications. This class will demonstrate how commonplace understandings of race, class, ethnicity, labor, gender, sexuality, subjectivity, personhood, religion, and the state gain shape and meaning through discourses of possession.

[ANTHR 3406 Gifts and Exchange (SBA-AS)]

Spring. 4 credits. Comparative survey. Next offered 2012-2013. H. Miyazaki.]

[ANTHR 3410 Nationalism and Revivalism (CA-AS)]

Spring. 4 credits. Comparative survey. Next offered 2011-2012. Staff.]

ANTHR 3420 Myth, Ritual, and Symbol (also RELST 3230) @ (CA-AS)

Spring. 4 credits. Comparative survey. D. Holmberg.

Examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. Focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (e.g., color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (e.g., spirit mediums, curers, priests, ascetics) and nonspecialists in producing these cultural forms.

ANTHR 3421 Sex and Gender in Cross-Cultural Perspective (also FGSS 3210) @ (SBA-AS)

Fall. 4 credits. Comparative survey. K. March.

Introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. Examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

[ANTHR 3422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 6422) (CA-AS)]

Spring. 4 credits. Next offered 2011-2012. P. Nadasdy.]

ANTHR 3425 Anthropology of the University (SBA-AS)

Spring. 4 credits. D. Greenwood.

Turning an anthropological gaze on the contemporary university as a social and cultural system, this seminar involves an examination of the convergences and

divergences between the trajectories of the sciences and engineering, the humanities, and the social sciences in contemporary universities and some international comparisons with the trajectories of universities around the world. The overall aim is to link an ethnographic analysis of the microstructures of departmental differentiation, professional hegemonies, and local financing with the larger-scale processes of transformation of universities' place in society under the pressures of corporatization, globalization, and competition from a host of alternative higher education institutions.

[ANTHR 3428 Conflict, Dispute Resolution, and Law in Cultural Context (SBA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2011-2012. V. Santiago-Irizarry.]

ANTHR 3447 Sport @ (CA-AS)

Spring. 4 credits. S. Sangren.

Long overlooked by anthropologists, sport and recreation are increasingly recognized as important windows into culture. Sport can be approached from a number of directions—interpreted as a ritual; viewed as a spectacle of ethnic, regional, or national identity; seen as a metaphor for life; understood as a major industry. This course will consider these and other approaches to sport, encouraging students to bring their own involvements in sport to reflect not only upon sport itself, but also upon how such reflection can illuminate cultural, psychological, and political dimensions of social life. Why, for example, do we take sport (and other forms of recreation) so seriously? Why do many of us apparently invest more passion in such pursuits than to life's allegedly more serious activities? How is sport integrated into people's identities? Readings will draw from popular literature and media as well as academic writing from a variety of disciplines (psychology, sociology, history) in addition to anthropology.

[ANTHR 3451 Global Movements of Cultural Heritage @ (CA-AS)]

Spring. 4 credits. Comparative survey. Next offered 2012-2013. M. Fiskesjo.]

[ANTHR 3461 Anthropology of Organizations (also ANTHR 6461) (SBA-AS)]

Spring. 4 credits. Next offered 2012-2013. D. Greenwood.]

ANTHR 3462 Democratizing Research (also ANTHR 6462) (SBA-AS)

Fall. 4 credits. D. Greenwood.

This course centers on a family of research approaches variously known as activist research, engaged research, community-based research, public scholarship, and action research. These are both alternatives to and critiques of the common forms of university-centered research that separate "expert" researchers from the subjects of research and claim that the quality of research can be determined only by trained academics. Participants in engaged research view research as a means of social learning. Most importantly, they are guided by democratic ideals and values, in pursuit of public purposes and interests. No course can cover the full range of approaches and so this course brings the different approaches to the attention of the students, shows what the strengths and weaknesses of each are, and exhibits the various strategies and methods

that typify them. A subset of the students will be participating in an ongoing community service activity of their own creation. The internships/community projects will be supported and overseen by the course supervisor, a faculty board, and the director of the Cornell University Public Service Center.

ANTHR 3465 Anthropology of the Body (also ANTHR 6465) @ (CA-AS)

Fall. 4 credits. S. Langwick.

This course examines a range of texts that treat the body as the subject and object of cultural, technological, political, and ethical processes. Students investigate the cultivation of physical and social bodies through ethnographic and historical materials concerning healing and medicine, discipline and labor, governance and religion, aesthetics and desire. The production and reproduction of bodies and embodied practices have long been central to the way that power works. In this class, we will read and discuss a range of approach to the body. There is much contention over how work, politics, environment, technologies, and violence shape the body and the senses. We will debate how histories of the body are intertwined with histories of gender, race, class, sexuality, (post)coloniality, modernization, science, transnationalism, and the webs of institution, ideas, and capital that comprise these phenomena. Some readings will investigate the complex mediations that account for the body as icon, text, metaphor, commodity, and raw material. Others will contend that serious attention to the production and reproduction of the body across different times and spaces challenge traditional notions of materiality and physicality. Because every examination of the body rests—implicitly or explicitly—in a theoretical and methodological approach to experience, we will also explore the histories of bodily senses, appetites, and capabilities. Ultimately, our inquiry into contests over and reflections on “the body,” as well as specific anthropological questions about authority, agency, sovereignties, and material life.

ANTHR 3479 Culture, Language, and Thought (CA-AS)

Spring. 4 credits. Comparative survey. V. Santiago-Irizarry.

The relationship among culture, language, and thought has been a core concern in anthropology. Language and culture are commonly defined as processes that are public and shared yet they also operate within and upon subliminal experiential realms. In this course we shall examine how anthropologists have explored this relationship, which is engendered in the interaction between culture and language as parallel mediating devices for the constitution, interpretation, and expression of human experience.

[ANTHR 3514 Learning in Japan @ (SBA-AS)]

Spring. 4 credits. Next offered 2011–2012. H. Miyazaki.]

[ANTHR 3516 Power, Society, and Culture in Southeast Asia @ (CA-AS)]

Fall. 4 credits. Next offered 2011–2012. M. Welker.]

ANTHR 3545 Peoples and Cultures of the Himalayas (also ANTHR 7545) @ (CA-AS)

Fall. 4 credits. K. March.

A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

ANTHR 3546 Asian Minorities (also ASIAN 3345) @ (CA-AS)

Fall. 4 credits. M. Fiskesjo.

This course will survey the situation of ethnic minorities in several Asian countries. We will learn about their culture and history, their recognition, identity and political status, as well as various forms of discrimination. We will adopt a comparative perspective that enables us to understand minorities in different Asian countries such as China, Japan, Burma, Thailand and others, and also compare with the United States and elsewhere, as well as enabling a discussion of identity production, race, power, and ethnicity on the global arena. We'll use a relational approach that includes understanding the majorities against whom the minorities are defined, as well as the political and historical background that will help explain the sometimes very different current situation for ethnic minorities in Asian countries.

[ANTHR 3554 Male and Female in Chinese Culture and Society (also FGSS 3440) @ (SBA-AS)]

Fall. 4 credits. Next offered 2012–2013. S. Sangren.]

ANTHR 3703 Asians in the Americas: A Comparative Perspective (also AAS 3030) (CA-AS)

Fall. 4 credits. V. Munasinghe.

The common perception of ethnicity is that it is a “natural” and an inevitable consequence of cultural difference. “Asians” overseas, in particular, have won reputations as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the “Asians”? On what basis can we label “Asians” an ethnic group? Although there is a significant Asian presence in the Caribbean, the category “Asian” itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course will examine the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies will focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

ANTHR 3734 Brazil: Many Cultures, One Nation @ (CA-AS)

Spring. 4 credits. J. Fajans.

From the streets of Rio to the shores of the Amazon, anthropology studies the lives, communities, beliefs, practices, and politics of the diverse region known as Brazil. This course will look at issues of race, gender, ethnicity, religion, ritual, environment,

development, and human rights across Brazil. We will examine rural and urban cultures, discuss African and European Influences, and explore the relations between indigenous and national cultures. In this context, we will look at the roles that religion, food, dress, soccer, samba, and carnival all play in producing this vibrant culture.

[ANTHR 3777 The United States (also AMST/LSP 3777) (CA-AS)]

Fall. 4 credits. Next offered 2011–2012. V. Santiago-Irizarry.]

ANTHR 3820 Anthropology of Spain: Cultural Politics and Ethnogenesis (also ANTHR 6820)

Spring. 4 credits. D. Greenwood.

Spain is undergoing extraordinary processes of decentralization and ethnic regionalism since its transition to democracy. The current 17 home-rule communities in Spain are engaged in processes of identity formation, political activism, and resource acquisition that significantly decentralize the Spanish state. At the same time the European Community imposes ever-more homogeneous processes and norms on European countries. Social scientists and historians have played an active role in the creation of Spain's new or renewed regional cultural identities and cultural imaginaries in Spain in a complex interplay with Spanish history and geography. The course examines these processes anthropologically and compares the ethnic regionalism and identity politics in Spain with multiculturalism and identity politics in the United States.

ANTHR 4000 Development of Anthropological Thought (also ANTHR 7000) (SBA-AS)

Fall. 4 credits. Prerequisite: for undergraduates, two prior anthropology courses or permission of instructor. J. Fajans.

Examination of the history and development of anthropological theory and practice. Focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

ANTHR 4165 Anthropology of Humanitarianism

Spring. 4 credits. C. Garces.

It is commonplace to hear that we live in a humanitarian age, but to what extent is humanitarianism coextensive with global and cultural politics today? This seminar will explore how institutions and governments identify “states of emergency” in order to safeguard populations and political alliances. Our readings will problematize gift exchange and the logic of sacrifice across charitable, philanthropic, and peacekeeping efforts. Key topics include the gendered dynamics of aid distribution; the impact of philanthropy on private-public balances of power; the role of displaced populations as biopolitical communities; and the democratic applications of charity to mask imperial resemblances. We will together challenge the ethical knot of using “voluntary actions” as the basis of normative political systems, highlighting contingencies and exploring paradoxes in humanitarian endeavors.

ANTHR 4403 Ethnographic Field Methods (also ANTHR 6403) (SBA-AS)

Fall. 4 credits. V. Santiago-Irizarry.

This course will provide students with practical understanding about what anthropologists actually do in the field. We will examine problems that emerge in conducting fieldwork that raise ethical, methodological, theoretical, and practical issues in the observation, participation in, recording, and representation of culture(s). Students will be expected to develop a semester-long, local research project that will allow them to experience fieldwork situations.

[ANTHR 4406 The Culture of Lives (also FGSS 4060) @ (CA-AS)

Spring. 4 credits. Next offered 2012–2013. K. March.]

ANTHR 4410 Indigenous Peoples, Ecological Sciences, and Environmentalism (also ANTHR 7410)

Spring. 4 credits. P. Nadasdy.

This course examines the long, complex, and ambivalent relationship among indigenous peoples (with an emphasis on the North American context), scientific ecology, and environmentalism. It begins by looking at the key role played by images of the “ecologically noble savage” in the historical development of the ecological sciences and the environmental movement. It then turns to an in-depth examination of several historical and ethnographic case studies in an effort to understand how the entanglement of indigenous peoples, environmental activists, and ecological scientists have shaped—and continue to shape—environmental politics and struggles over indigenous rights.

ANTHR 4415 Creolization, Syncretism, and Hybridity

Spring. 4 credits. V. Munasinghe.

The concepts of Creolization, Syncretism, and Hybridity all convey a state of “mixture” that assumes a diasporic situation. This course explores theories and empirical case studies of processes of racial, cultural, and religious mixture from an interdisciplinary perspective. The course explores the interconnections among concepts denoting “mixture” that have diverse originary points. The overarching line of inquiry is to explore the genealogies of the three concepts as a necessary precursor to understanding how these terminologies may, in concert, illuminate different aspects of the dynamics structuring processes of mixture in different historical and ethnographic settings.

[ANTHR 4419 Anthropology of Corporations (also ANTHR 7419) (SBA-AS)

Spring. 4 credits. Next offered 2011–2012. M. Welker.]

ANTHR 4426 Ideology and Social Production (also ANTHR 7426) @ (SBA-AS)

Spring. 4 credits. S. Sangren.

This course is premised on the notion that understanding social life requires understanding how social institutions are produced and sustained through time—that is to say, one must understand “society” as a process of production. By the same token, all cultures produce ideas or “representation” (e.g., about reality, nature, society, gender, authority) that serve to legitimize or validate each society’s particular social arrangements. These ideologies play an important role in social production, on the one hand, and are also products of social processes, on the other. This course focuses on the linkages

between ideology and social production in readings drawn from social theory and ethnographic case studies. We discuss strongly diverging views (psychoanalytic, postmodernist, poststructuralist, practice-theory, neo-Marxist) on how best to conceive social processes. An integrating theme is that understanding ideology and its alienating operations is essential in developing a coherent understanding of what culture, in the last analysis, is.

ANTHR 4429 Anthropology and Psychoanalysis (also ANTHR 7429) @ (SBA-AS)

Fall. 4 credits. S. Sangren.

Psychoanalysis holds that desire emerges from the clash between individuals’ predisposition and the need to accommodate to others in society. Yes anthropology has been resistant to the role that psychoanalytic theory might play in linking individual desire to culture. Does psychoanalysis have anything to offer cultural anthropology? Can understanding of collective institutions be advanced with reference to theories of individual motivation and desire? Conversely, can collective life be understood without reference to individual motivation and desire? Is desire best understood as sexual in nature, or is it better understood in more abstract and existential terms? With such questions in mind, this course surveys anthropology’s engagements with psychoanalysis. We read theoretical works as well as ethnographically grounded case studies on topics ranging from religious experience, mythic narratives, the cultural construction of gender and desire, and modern popular culture.

ANTHR 4435 Postcolonial Science (also ANTHR 7435) @ (CA-AS)

Spring. 4 credits. S. Langwick.

This course examines science and technology in so-called “non-Western” countries as well as the ways that science and technology are shaping new “transnational” or “global” relations. We will explore the post-colonial as a dynamic space that both plays off of and refigures the complicated dynamics of colonialism. The postcolonial challenges the dichotomies through which colonial power moved: western/indigenous, white/black, modern/traditional, global/local, developed/underdeveloped, and science/non-science. At the same time, it confronts the ways in which colonial histories are still embodied in institutions, identities, environments, and landscapes. Techno-scientific knowledge and practice have both enacted colonial divisions and been called on in post-colonial struggles. How then might we understand the work of scientific knowledge and practice in the kinds of hegemonies and struggles that shape our world today? We will explore this question by examining the way that technoscience is performed—by scientists, development workers, activists, government officials, and others. The class will pay particular attention to the located processes through which claims to the universal or global emerge. In addition by considering controversies over the environment, medicine, and indigenous knowledge, we will consider the effects of such claims.

ANTHR 4437 Anthropology of Development (also ANTHR 7437) @ (CA-AS)

Fall. 4 credits. M. Welker.

This course provides an anthropological perspective on international development. After reading orthodox theories of development and considering them in historical context, we will examine ethnographic accounts of postcolonial development that draw on political economy and poststructuralist traditions. The final portion of the course looks critically at the emergence of discourses such as participation, empowerment, social capital, civil society, and sustainability in mainstream development.

[ANTHR 4439 Sovereignty and Biopolitics @ # (CA-AS)

Spring. 4 credits. Next offered 2012–2013. M. Fiskesjo.]

ANTHR 4444 God(s) and the Market (also ANTHR 7444) @ (CA-AS)

Fall. 4 credits. H. Miyazaki.

One of the oldest and most powerful insights of anthropology is that different domains of society such as religion and economy shape and condition each other. We will discuss a variety of old and new anthropological explorations into the intersections of religion and economy, from Max Weber’s classical study of the relationship between Protestantism and the rise of capitalism to recent studies of the work of faith in financial markets. This seminar is intended to bring together students interested in religion and students interested in business and economy.

ANTHR 4455 Anthropology in the Real World (SBA-AS)

Spring. 4 credits. Staff.

This course is designed to expose students to the range of ways and fields within which practitioners employ anthropological theory, methods, and perspectives. Class format will include both seminar discussions and workshop sessions with invited speakers. Both the invited speakers and the discussion topics will represent different broadly defined fields in which anthropologists practice. Through class discussion and writing, students will be expected to critically consider such issues as research ethics, professional responsibility, the academic versus activist role, methodological practices, and the relationship between individual practitioners and the national, international, and organization contexts within which they work. Students will produce a major research paper examining a particular field of “practical” anthropology of their interest.

[ANTHR 4478 Taboo and Pollution (CA-AS)

Spring. 4 credits. Next offered 2012–2013. M. Fiskesjo.]

ANTHR 4479 Ethnicity and Identity Politics: An Anthropological Perspective (also AAS 4790) (SBA-AS)

Fall. 4 credits. V. Munasinghe.

The most baffling aspect of ethnicity is that while ethnic sentiments and movements gain ground rapidly within the international arena, the claim that ethnicity does not exist in any objective sense is also receiving increasing credence within the academic community. How can something thought “not to exist” have such profound consequences in the real world? In lay understandings, ethnicity is believed to be a “natural” disposition of humanity. If so, why does ethnicity mean different “things” in different places? Anthropology has much to contribute to a

greater understanding of this perplexing phenomenon. After all, the defining criterion for ethnic groups is that of cultural distinctiveness. Through ethnographic case studies, this course will examine some of the key anthropological approaches to ethnicity. We will explore the relationship of ethnicity to culture, ethnicity to nation, and ethnicity to state to better understand the role ethnicity plays in the identity politics of today.

[ANTHR 4480 Anthropology and Globalization (also ANTHR 6480) (CA-AS)

Fall. 4 credits. Next offered 2011–2012. Staff.]

[ANTHR 4513 Religion and Politics in Southeast Asia (also ASIAN 4413) @ (CA-AS)

Spring. 4 credits. Next offered 2012–2013. A. Willford.]

[ANTHR 4523 Making History on the Margins: The China-SE Asia Borderlands (also ANTHR 7523) # @ (HA-AS)

Fall. 4 credits. Next offered 2012–2013. M. Fiskesjo.]

[ANTHR 4542 Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas (also ANTHR 6542) @ (CA-AS)

Fall. 4 credits. Next offered 2011–2012. D. Holmberg.]

ANTHR 4682 Healing and Medicine in Africa (also ASRC 4682) (CA-AS)

Spring. 4 credits. S. Langwick.

The most baffling aspect of ethnicity is that while ethnic sentiments and movements gain ground rapidly within the international arena, the claim that ethnicity does not exist in any objective sense is also receiving increasing credence within the academic community. How can something thought “not to exist” have such profound consequences in the real world? In lay understandings, ethnicity is believed to be a “natural” disposition of humanity. If so, why does ethnicity mean different “things” in different places? Anthropology has much to contribute to a greater understanding of this perplexing phenomenon. After all, the defining criterion for ethnic groups is that of cultural distinctiveness. Through ethnographic case studies, this course will examine some of the key anthropological approaches to ethnicity. We will explore the relationship of ethnicity to culture, ethnicity to nation, and ethnicity to state to better understand the role ethnicity plays in the identity politics of today.

III. Anthropological Archaeology

Anthropological archaeology studies the diverse societies of the past using the material traces they left behind in the archaeological record. In addition to studying artifacts, archaeologists use unique methods to study the settings in which artifacts were produced and used by examining regional settlement patterns, the structure of sites and communities, the organization of activities, and ancient symbolism and social relations. The concerns of anthropological archaeology range from basic questions about continuity and change in the past, to application of hard science methods to date sites and determine the sources of artifacts, criticism of the uses to which the past is put in contemporary society,

and protection of the archaeological record. Anthropological archaeology can be distinguished from other forms of archaeology (such as Classical or Art Historical archaeology) based on its emphasis on holistically studying past cultural systems, and by the theories and approaches it shares with sociocultural and biological anthropology. There are numerous career opportunities for anthropological archaeologists, including work with museums, government agencies, and historic preservation groups in addition to academic employment. Private companies engaged in federally mandated cultural resource management (or CRM) archaeology employ thousands of archaeologists in the United States, and similar management programs exist in many other countries.

ANTHR 1200 Ancient Peoples and Places (also ARKEO 1200) # @ (HA-AS)

Spring. 3 credits. J. Henderson.
For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. D. Holmberg.
For description, see Introductory Courses.

ANTHR 2015 Archaeology of Empires (also ARKEO 2015) @ # (HA-AS)

Fall. 3 credits. L. Khatchadourian.
The word “empire” today evokes modern, capitalist, European, even American experiments in expansion and asymmetrical relations of power. This course considers the precursors of these modern imperialisms. It offers a comparative study of early empires of the Old and New Worlds, approached from an archaeological perspective. We confront broad theoretical problems of empire—what they are, what they do, why they fail—and address these problems through archaeological interventions into such topics as conquest, colonialism, kingship and ideology, identity and inequality, tolerance and domination, and the everyday workings of empire. Is the very concept of empire as a construct of political, social, or historical analysis useful across time and space? What is archaeology’s contribution to the study of these complex, expansive, and messy sociopolitical phenomena?

ANTHR 2200 Early People: The Archaeological and Fossil Record (also ARKEO 2200) # (HA-AS)

Spring. 3 credits. T. Volman.
A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretation will be stressed. Demonstrations and films supplement the lectures.

ANTHR 2201 Early Agriculture (also ARKEO 2201) @ # (HA-AS)

Spring. 3 credits. N. Russell.
Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in (pre)history. This course examines the current evidence for the appearance and spread of agriculture (plant and animal domestication) around the world. We will consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ANTHR 2215 Stone Age Art (also ARKEO 2215) # (CA-AS)

Fall. 3 credits. T. Volman.
When did “art,” however defined, appear during the human career, how was it produced and for what purposes? These are some of the questions we will investigate through a survey of the discovery, validation, analysis, and interpretation of the earliest art. The course will cover a variety of finds from the Old World, including the well-known cave art of southwestern France and northern Spain, and also consider portable art and decoration. The contributions of new analytical techniques and interpretive approaches are highlighted.

ANTHR 2220 Field Course in Iroquois Archaeology (also ARKEO 2220) # (SBA-AS)

Summer only. 3 credits. K. Jordan.
This course offers hands-on training in archaeological field methods through survey and excavation at historic-period Iroquois sites in the Finger Lakes region. The majority of class time will be spent engaging in supervised fieldwork, supplemented by lectures introducing archaeological methods and Iroquois history and material culture. Excavations will gather data on Iroquois residential architecture and domestic activities. Students will master field procedures, record-keeping, and interpretation of field data; study Iroquois material culture; and write a short research paper (7–10 pages) that uses data generated by the project to evaluate a topic of anthropological interest. Most class time will be spent off campus; transportation will be arranged by the instructor.

ANTHR 2235 Archaeology of North American Indians (also AIS/AMST 2350, ARKEO 2235) # (HA-AS)

Spring. 3 credits. K. Jordan.
This introductory course surveys archaeology’s contributions to the study of American Indian cultural diversity and change in North America north of Mexico. Lectures and readings will examine topics ranging from the debate over when the continent was first inhabited to present-day conflicts between Native Americans and archaeologists over excavation and the interpretation of the past. We will review important archaeological sites such as Chaco Canyon, Cahokia, Lamoka Lake, and the Little Bighorn battlefield. A principal focus will be on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies, and the disruptions that accompanied the arrival of Europeans to the continent.

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Fall. 4 credits. P. Nadasy.
For description, see Sociocultural Anthropology.

ANTHR 3217 Stone Age Archaeology (also ARKEO 3217) (HA-AS)

Fall. 4 credits. Comparative survey. T. Volman.
A survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences, excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.

ANTHR 3230 Humans and Animals (also ARKEO 3230) @ # (CA-AS)

Spring. 4 credits. Comparative survey. N. Russell.

Human-animal relationships are often seen in utilitarian, especially nutritional terms. This is especially true of the analysis of animal remains from archaeological sites. It is clear, however, that animals and meat have significance far beyond their economic value. This course focuses on these non-dietary roles of animals in human societies, past and present. We will explore a broad range of issues to gain a fuller view of human relations to animals. Domestication involves not only the technical process of controlling animal movements and breeding but more crucially requires a fundamental shift in the human perception of animals and their relationship to them. Are pets domestic animals in the same sense as animals that are eaten, or does their owners' relationship with them more closely resemble that of hunters with their prey? Do wild animals mean the same thing to hunter-gatherers and farmers who hunt? We will also consider the importance of animals as wealth, as objects of sacrifice, as totems (metaphors for humans), and as symbols in art. Meat has undeniable dietary value, but the social aspect of consumption is also important. Meat can be used in the context of such behaviors as feasting and meat sharing to create, cement, and manipulate social relationships. In this seminar, we will examine these issues primarily (but not exclusively) in the context of the ethnography and archaeology of the Old World with which the instructor is most familiar, but students are encouraged to offer examples from their own areas of expertise. This course is open to students of archaeology, cultural anthropology, and other disciplines with an interest in human-animal relations.

[ANTHR 3232 Politics of the Past (also ARKEO 3232) @ # (HA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2012-2013. N. Russell.]

ANTHR 3248 Iroquois Archaeology (also AIS/AMST/ARKEO 3248/6248, ANTHR 6248) # (HA-AS)

Spring. 4 credits. K. Jordan.

This course surveys the long-term development of Iroquois (Haudenosaunee) culture from an archaeological perspective. Issues examined will include the geographic origins of the Iroquois; material culture, settlement, and subsistence; the founding of the Iroquois Confederacy; Iroquois responses to European-borne diseases, the fur trade, and territorial encroachment; the practicalities of doing Indian archaeology in New York State; and contemporary Haudenosaunee perspectives on archaeology. The Six Nations Iroquois will be emphasized, with some material drawn from surrounding Northern Iroquoian groups. Visits to local archaeological sites and museum collections will supplement classroom instruction.

ANTHR 3255 Ancient Mexico and Central America (also ARKEO 3255, LATA 3550) @ # (HA-AS)

Fall. 4 credits. J. Henderson.

A survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnographic and historical information to enrich archaeological interpretation is a general theme. Specific topics include the emergence of settled farming life, the rise of

civilization and the state, and the development of mechanisms that linked the many societies in the region into a single sphere of interaction.

[ANTHR 3256 Archaeology of the Andes (also ARKEO 3256) @ # (HA-AS)]

Fall. 4 credits. Next offered 2012-2013. J. Henderson.]

[ANTHR 3269 Gender and Age in Archaeology (also ANTHR 6269, ARKEO 3269/6269, FGSS 3700/6700) (SBA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2012-2013. N. Russell.]

[ANTHR 3270 Environmental Archaeology (also ANTHR 6270, ARKEO 3270/6270) (PBS Supplementary List)]

Fall. 4 credits. Comparative survey. Next offered 2011-2012. T. Volman.]

[ANTHR 3272 Hunters and Gatherers (also ANTHR 6272, ARKEO 3272/6272) @ # (SBA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2011-2012. T. Volman.]

[ANTHR 4209 Approaches to Archaeology # (SBA-AS)]

Spring. 4 credits. Next offered 2011-2012. K. Jordan.]

ANTHR 4256 Mesoamerican Religion, Science, and History (also ARKEO 4256, LATA 4250) @ # (CA-AS)

Spring. 4 credits. J. Henderson.

An introduction to belief systems in ancient Mexico and Central America, emphasizing the blending of religion, astrology, myth, history, and prophecy. Interpreting text and image in pre-Columbian books and inscriptions is a major focus.

[ANTHR 4258 Archaeological Analysis (also ANTHR/ARKEO 6258, ARKEO 4258) (SBA-AS)]

Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Next offered 2011-2012. J. Henderson.]

[ANTHR 4260 Field and Analytical Methods in Archaeology (also ARKEO 4260) # (SBA-AS)]

Spring. 4 or 6 credits. Next offered 2011-2012. K. Jordan.]

[ANTHR 4262 Catalhoyuk and Archaeological Practice (also ANTHR/ARKEO 7262, ARKEO 4262) @ # (HA-AS)]

Spring. 4 credits. Next offered 2011-2012. N. Russell.]

[ANTHR 4263 Zooarchaeological Method (also ARKEO 4263) (PBS Supplementary List)]

Fall. 5 credits. Next offered 2012-2013. N. Russell.]

[ANTHR 4264 Zooarchaeological Interpretation (also ARKEO 4264) (PBS Supplementary List)]

Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2012-2013. N. Russell.]

ANTHR 4267 Origins of Agriculture (also ARKEO 4267) # (HA-AS)]

Fall. 4 credits. N. Russell.

This course will examine the origins of plant and animal domestication and the profound social transformations that accompanied this

innovation in several areas of the world. While we will consider the evidence for domestication, the focus will be on critical analysis of the models offered to explain the origins of agriculture. A comparative perspective will help us to evaluate whether there is a single universal explanation for agricultural origins.

ANTHR 4268 Myth, History, and Politics: The Aztecs and Their Empire (also ARKEO 4268, ANTHR/ARKEO 7268) @ # (HA-AS)]

Fall. 4 credits. J. Henderson.

Examines the structure and history of the largest polity in ancient Mexico, the "empire" of the Aztecs, using descriptions left by Spanish invaders, accounts written by Aztecs under Colonial rule, and archaeological evidence. Explores Aztec visions of the past, emphasizing the roles of myth, religion, and identity in Aztec statecraft and the construction of history

[ANTHR 4270 Political Economy in Archaeology (also ANTHR/ARKEO 7270, ARKEO 4270) # (SBA-AS)]

Fall. 4 credits. Next offered 2012-2013. K. Jordan.]

[ANTHR 4272 Historical Archaeology of Indigenous Peoples (also AMST 6272, AIS 4720/7720, ANTHR/ARKEO 7272, ARKEO/AMST 4272) # (HA-AS)]

Fall. 4 credits. Next offered 2011-2012. K. Jordan.]

ANTHR 4294 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 4294) (HA-AS)]

Spring. 4 credits. T. Volman.

An exploration of the archaeological record associated with early modern and near-modern humans as well as their nonmodern contemporaries, such as the Neanderthals. Major issues include what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the "Out-of-Africa" hypothesis of a recent, African origin for all modern humans?

IV. Biological Anthropology

Biological anthropology is the subfield of anthropology that explores the physical diversity, evolutionary history, and behavioral potential of our species. Consistent with anthropology more generally, biological anthropology is concerned with human variation. The distinctive perspective of this subfield is that it examines human variation within the framework of evolutionary theory. Analyses of both biology and culture, and of the interaction between the two, mark the broad boundaries of this discipline. Within that wide scope, specific areas of inquiry are diverse, including fossil studies, primate behavior, nutrition and development, sexual behavior, parental investment, molecular and population genetics, adaptation to environmental stress, disease evolution, life history analysis, and more. Some of the most pressing social issues of our time fall within the domain of biological anthropology as well as a range of professions: the controversy over evolution and intelligent design; race, gender, and genetic determinism; the control of disease; the roots of aggression; and conservation and the role of humans in ecological systems. Although the number of

anthropology courses offered in this subfield are limited, students can pursue their interests through a variety of related courses in other departments and by constructing independent study courses with specific faculty members.

ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)

Spring. 3 credits. Lab usage and maintenance fee: \$5. M. Small.

For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. D. Holmberg.

For description, see Introductory Courses.

ANTHR 2310 The Natural History of Chimpanzees and the Origins of Politics (PBS Supplementary List)

Fall. 3 credits. A. Clark Arcadi.

This course will examine the natural history of wild chimpanzees with an eye toward better understanding the changes that would have been necessary in human evolutionary history to promote the emergence of human culture and political life. After an overview of early research and preliminary attempts to apply our knowledge of chimpanzee life to social and political theory, the class will focus on our now extensive knowledge of chimpanzees derived from many ongoing, long-term field studies. Topics of particular interest include socialization, alliance formation and cooperation, aggression within and between the sexes, reconciliation, the maintenance of traditions, tool use, nutritional ecology and social organization, territorial behavior, and the importance of kin networks. The question of whether apes should have rights will also be explored.

[ANTHR 2750 Human Biology and Evolution (also NS 2750)]

Fall. 3 credits. Next offered 2011–2012. J. D. Haas.]

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Fall. 4 credits. P. Nadasdy.

For description, see Sociocultural Anthropology.

[ANTHR 3302 Anthropology of Everyday Life @ (SBA-AS)]

Fall. 4 credits. Next offered 2012–2013. M. Small.]

ANTHR 3305 Anthropology of Parenting @ (SBA-AS)

Spring. 4 credits. M. Small.

Human children are packets of genes that represent individual reproductive success. Like all animals, humans are selected by evolution to care for their offspring, but human infants and children require more intense parental investment than the offspring of most other species. Why is this so? Human parents are also influenced by cultural belief systems and ideology that play out in parenting styles. How do various belief systems influence parent-offspring interaction? In this course we will examine the human infant as a biologically designed organism that has co-evolved with caretakers, and then look at the various parenting styles across cultures that also mold our young.

[ANTHR 3390 Primate Behavior and Ecology (PBS Supplementary List)]

Spring. 4 credits. Comparative survey.

Prerequisite: ANTHR 1300 or permission of instructor. Next offered 2011–2012. A. Clark Arcadi.]

ANTHR 4390 Topics in Biological Anthropology

Fall. 4 credits. Prerequisites: ANTHR 1300, 3390, or permission of instructor. A. Clark Arcadi.

Current topics in biological anthropology are explored. Topics change each semester. For further information, contact the professor or department office.

V. Honors, Field Research, and Independent Study

ANTHR 4910 Independent Study: Undergrad I

Fall or spring. Credit TBA. Prerequisite: undergraduate standing. Staff.

Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 4920 Independent Study: Undergrad II

Fall or spring. Credit and times TBA.

Prerequisite: undergraduate standing. Staff. For description, see ANTHR 4910, section II, "Honors and Independent Study."

ANTHR 4983 Honors Thesis Research

Fall. 3 credits. Prerequisite: permission of Honors Committee. Staff.

Research work supervised by the thesis advisor, concentrating on determination of the major issues to be addressed by the thesis, preparation of literature reviews, analysis of data, and the like. The thesis advisor will assign the grade for this course.

ANTHR 4984 Honors Thesis Write-Up

Spring. 2 credits. Staff.

Final write-up of the thesis under the direct supervision of the thesis advisor, who will assign the grade for this course.

ANTHR 4991 Honors Workshop I Write-Up

Fall. 1 credit. Staff.

Course will consist of several mandatory meetings of all thesis writers with the honors chair. These sessions will inform students about the standard thesis production timetable, format and content expectations, and deadlines; expose students to standard reference sources; and introduce students to each other's projects. The chair of the Honors Committee will assign the grade for this course.

ANTHR 4992 Honors Workshop II

Spring. 2 credits. Staff.

Course will consist of weekly, seminar-style meetings of all thesis writers until mid-semester, under the direction of the honors chair. This second semester concentrates on preparation of a full draft of the thesis by mid-semester, with ample time left for revisions prior to submission. Group meetings will concentrate on collective reviewing of the work of other students, presentation of research, and the like.

Relevant courses in other departments

MUSIC 1302 Introduction to World Music II: Asia

Spring. 3 credits. M. Hatch.

MUSIC 1341 Gamelan in Indonesian History and Cultures

Fall and spring. 3 credits. Prerequisite: permission of instructor. M. Hatch.

BSOC/HD/NS 3470 Human Growth and Development: Biological and Behavioral Interactions

Spring. 3 credits. J. Haas and S. Robertson.

NS 6300 Anthropometric Assessment

Spring. 1 credit. J. Haas.

VI. Graduate Seminars

The graduate program in anthropology is described in much greater detail on the anthropology department web page at falcon.arts.cornell.edu/Anthro. The seminars described immediately below pertain to the program in sociocultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in sociocultural anthropology: ANTHR 6000 and 6010. ANTHR 6403 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

ANTHR 6000 Proseminar: Culture and Symbol

Fall. 6 credits. H. Miyazaki.

Focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiology, etc., the course investigates how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlins, among others, as well as contemporary theories are given careful attention.

ANTHR 6010 Proseminar: Social Organization

Spring. 6 credits. M. Welker.

Focuses on linkages between culture and social institutions, representations, and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist,

poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of "practice" follows. The issues addressed in this section carry over into the next, colonialism and post-colonialism, in which poststructuralist readings of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

ANTHR 6248 Iroquois Archaeology (also ANTHR 3248, ARKEO/AIS 3248/6248)

Fall. 4 credits. K. Jordan.
For description, see ANTHR 3248.

Fall. 4 credits. Next offered 2011-2012.
T. Volman.]

ANTHR 6403 Ethnographic Field Methods (also ANTHR 4403)

Fall. 4 credits. V. Santiago-Irizarry.
For description, see ANTHR 4403.

ANTHR 6420 Ritual and Myth

Spring. 4 credits. D. Holmberg.
This seminar focuses on theories of ritual and myth, engaging first classic formulations as found in Durkheim, Weber, and Evans-Pritchard, then the contributions to what converged as symbolic anthropology and structuralism including Levi-Strauss, Geertz, and Victor Turner. In the second part of the semester we engage new directions in anthropology of ritual and myth considering psychoanalytic approaches, practice theory, and deconstruction. Everyone in the seminar is expected to write a term paper on a topic of their choice.

[ANTHR 6421 Gender and Culture (also FGSS 6310)]

Fall. 4 credits. Next offered 2012-2013.
K. March.]

[ANTHR 6422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 3422)]

Spring. 4 credits. Next offered 2011-2012.
P. Nadasdy.]

[ANTHR 6424 Ethnoracial Identity in Anthropology, Language, and Law (also AMST/LSP 6424, LAW 7231)]

Spring. 4 credits. Next offered 2011-2012.
V. Santiago-Irizarry.]

[ANTHR 6430 Concepts and Categories in Theory and Practice]

Fall. 4 credits. Next offered 2012-2013.
P. Nadasdy.]

ANTHR 6440 Research Design

Spring. 4 credits. Staff.

This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include identifying appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar, and students will complete a proposal suitable for submission to a major funding agency in the social sciences.

[ANTHR 6450 Social Studies of Economics and Finance]

Fall. 4 credits. Next offered 2011-2012.
H. Miyazaki.]

[ANTHR 6452 Evidence: Ethnography and Historical Method]

Fall. 4 credits. Next offered 2012-2013.
H. Miyazaki.]

ANTHR 6460 Language Ideologies and Practices

Spring. 4 credits. V. Santiago-Irizarry.

Cultural identity and citizenship in the United States have often been organized around linguistic difference and the issues this raises in an English-dominant society. Drawing from anthropological theories on language, this course will look at the place of language as a signifying practice in the United States by focusing on the experience of Latino communities. Topics to be explored include linguistic diversity and change, accommodation and resistance, language maintenance and shift, linguistic ideologies, the production of language hierarchies, and institutional applications of language.

[ANTHR 6461 Anthropology of Organizations (also ANTHR 3461)]

Spring. 4 credits. D. Greenwood. Next offered 2012-2013.]

Fall. 4 credits. S. Sangren.
For description, see ANTHR 4429.

ANTHR 7435 Postcolonial Science (also ANTHR 4435)

Spring. 4 credits. S. Langwick.
For description, see ANTHR 4435.

ANTHR 7437 Anthropology of Development (also ANTHR 4437)

Fall. 4 credits. M. Welker.
For description, see ANTHR 4437.

ANTHR 7444 God(s) and the Market (also ANTHR 4444)

Fall. 4 credits. H. Miyazaki.
For description, see ANTHR 4444.

ANTHR 7520 Southeast Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

[ANTHR 7523 Making History on the Margins: The China-SE Asia Borderlands (also ANTHR 4523)]

Fall. 4 credits. Next offered 2012–2013.
M. Fiskesjo.]

ANTHR 7530 South Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7545 Peoples and Cultures of the Himalayas (also ANTHR 3545)

Fall. 4 credits. K. March.
For description, see ANTHR 3545.

ANTHR 7550 East Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7910 Independent Study: Grad I

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7920 Independent Study: Grad II

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
For description, see ANTHR 7910.

ANTHR 7930 Independent Study: Grad III

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.

ARCHAEOLOGY

S. Baugher, director (Landscape Architecture), K. M. Clinton (Classics), A. Alexandridis (History of Art), K. Bowes (Classics), J. E. Coleman (Classics), M. Fiskesjo (Anthropology), F. Gleach (Anthropology), K. L. Gleason (Landscape Architecture), J. S. Henderson (Anthropology), K. Jordan (Anthropology), K.A.R. Kennedy (Ecology and Evolutionary Biology), S. Manning (Classics), R. McNeal (Asian Studies), C. Monroe (Near Eastern Studies), L. Monroe (Near Eastern Studies), D. I. Owen (Near Eastern Studies), A. Ramage (History of Art), E. Rebillard (Classics), N. Russell (Anthropology), B. S. Strauss (History), M. A. Tomlan (City and Regional Planning), T. P. Volman (Anthropology), J. R. Zorn (Near Eastern Studies).

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major and a master's degree. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major

Prospective majors must complete ARKEO 1200 or one of the basic courses as defined below before they will be admitted to the major.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields selected in consultation with a major advisor of their choosing. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods of uncovering and interpreting them. Sixteen of the credit hours should be at the 3000 level or above. At least two courses must be taken from each of the following categories: II. Anthropological Archaeology; III. Classical, Near Eastern, and Medieval Archaeology; and IV. Methodology and Technology. Only 4 credits of ARKEO 3000 Individual Study or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word "Basic" after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors. Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 GPA in the major and a 3.0 grade point average overall. They should consult with the director of undergraduate studies by the beginning of the senior year. The honors essay is normally prepared over two semesters

in consultation with a faculty advisor during the senior year. Students may enroll in ARKEO 4981 Honors Thesis Research, and to complete the thesis, they may enroll in ARKEO 4982 Honors Thesis Write-Up. Both courses are offered in the fall and spring. Only ARKEO 4981 may count toward hours for completion of the archaeology major requirements. The credit hours for these courses are variable.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her advisor. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Minor

Students in Cornell schools and colleges other than Arts and Sciences may elect a minor in archaeology. To minor in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) ARKEO 1200 and four other courses from categories II–IV (described above), at least three of which must be basic courses, or (2) five courses from categories II–IV, at least four of which must be basic courses. Minors are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars

For course descriptions, see the First-Year Writing Program brochure.

I. Introductory Courses and Independent Study Courses**ARKEO 1200 Ancient Peoples and Places (also ANTHR 1200) @ # (HA-AS)**

Spring. 3 credits. Basic. J. Henderson.
Broad introduction to archaeology: the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ARKEO 3000 Individual Study in Archaeology and Related Fields

Fall and spring. Credit TBA. Prerequisite: ARKEO 1200 or permission of instructor.
Undergraduate students pursue topics of particular interest under the guidance of a faculty member.

ARKEO 4981 Honors Thesis Research

Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program. Independent work under the close guidance of a faculty member.

ARKEO 4982 Honors Thesis Write-Up

Fall or spring. 4 credits, variable.

ARKEO 6000 Special Topics in Archaeology

Fall and spring. 4 credits, variable.
Graduate students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 8901-8902 Master's Thesis
8901, fall; 8902, spring. 4 credits, variable.
Prerequisite: master's students in
archaeology. S-U grades only.
Students, working individually with faculty
member(s), prepare a master's thesis in
archaeology.

II. Anthropological Archaeology

**ARKEO 2015 Archaeology of Empires
(also ANTHR 2015) @ # (HA-AS)**

Fall. 3 credits. L. Khatchadourian.
For description, see ANTHR 2015.

**ARKEO 2200 Early People: The
Archaeological and Fossil Record
(also ANTHR 2200) # (HA-AS)**

Spring. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 2200.

**ARKEO 2201 Early Agriculture (also
ANTHR 2201) @ # (HA-AS)**

Spring. 3 credits. Basic. N. Russell.
For description, see ANTHR 2201.

**ARKEO 2215 Stone Age Art (also ANTHR
2215) # (CA-AS)**

Fall. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 2215.

**ARKEO 2235 Archaeology of North
American Indians (also AIS/AMST
2350, ANTHR 2235) # (HA-AS)**

Spring. 3 credits. Basic. K. Jordan.
For description, see ANTHR 2235.

**ARKEO 3217 Stone Age Archaeology
(also ANTHR 3217) (HA-AS)**

Fall. 4 credits. Basic. T. P. Volman.
For description, see ANTHR 3217.

**ARKEO 3230 Humans and Animals (also
ANTHR 3230) @ # (CA-AS)**

Spring. 4 credits. N. Russell.
For description, see ANTHR 3230.

**[ARKEO 3232 Politics of the Past (also
ANTHR 3232) @ # (HA-AS)**

Fall. 4 credits. Next offered 2012-2013.
N. Russell.]

**ARKEO 3248 Iroquois Archaeology (also
AIS 3428/6428, AMST/ANTHR/ARKEO
6248) # (HA-AS)**

Spring. 4 credits. K. Jordan.
For description, see ANTHR 3248.

**ARKEO 3255 Ancient Mexico and Central
America (also ANTHR 3255, LATA
3550) @ # (HA-AS)**

Fall. 4 credits. Basic. J. Henderson.
For description, see ANTHR 3255.

**[ARKEO 3256 Archaeology of the Andes
(also ANTHR/LATA 3256) @ # (HA-AS)**

Fall. 4 credits. Basic. Next offered 2012-
2013. J. Henderson.]

**[ARKEO 3269 Gender and Age in
Archaeology (also ANTHR 3269/6269,
FGSS 3700/6700) (SBA-AS)**

Fall. 4 credits. Next offered 2012-2013.
N. Russell.]

**[ARKEO 3272 Hunters and Gatherers
(also ANTHR 3272/6272, ARKEO
6272) @ # (SBA-AS)**

Fall. 4 credits. Next offered 2011-2012.
T. Volman.]

**ARKEO 3600 Preindustrial Cities and
Towns in North America (also LA
3600, CRP 3600)**

Spring. 3 credits. S. Baugher.
For description, see LA 3600.

**ARKEO 4256 Mesoamerican Religion,
Science, and History (also ANTHR
4256) @ # (CA-AS)**

Spring. 4 credits. J. Henderson.
For description, see ANTHR 4256.

**[ARKEO 4262 Cataloyuk and
Archaeological Practice (also
ANTHR 4262, ARKEO/ANTHR 7262) @
(HA-AS)**

Spring. 4 credits. Next offered 2011-2012.
N. Russell.]

**ARKEO 4268 Myth, History, and Politics:
the Aztecs and their Empire (also
ANTHR 4268, ARKEO/ANTHR 7268) @
(HA-AS)**

Fall. 4 credits. J. Henderson.
For description, see ANTHR 4268.

**[ARKEO 4270 Political Economy in
Archaeology (also ANTHR 4270,
ARKEO/ANTHR 7270) # (SBA-AS)**

Fall. 4 credits. Next offered 2012-2013.
K. Jordan.]

**[ARKEO 4272 Historical Archaeology of
Indigenous Peoples (also AIS
4270/7720, AMST 4272/6272, ANTHR/

ARKEO 4272)**

Fall. 4 credits. Next offered 2011-2012.
K. Jordan.]

III. Classical, Near Eastern, and Medieval Archaeology

**ARKEO 2567 Daily Life in Ancient Egypt
and Mesopotamia (also NES/JWST
2567) @ # (CA-AS)**

Fall. 4 credits. A. Kleinerman.
For description, see NES 2567.

**ARKEO 2650 Ancient Iraq (also NES/
JWST 2650)**

Spring. 4 credits. D. Owen.
For description, see NES 2650.

**ARKEO 2661 Ships and Seafaring—Intro
to Nautical Archaeology (also JWST/
NES 2661) @ # (HA-AS)**

Fall. 3 credits. Basic. C. Monroe.
For description, see NES 2661.

**ARKEO 2668 Ancient Egyptian
Civilization (also JWST/NES 2668) @
(HA-AS)**

Spring. 3 credits. Basic. C. Monroe.
For description, see NES 2668.

**ARKEO 2677 The Jewish Galilee in Late
Antiquity (also CLASS 2637, NES/
JWST/RELST 2677)**

Fall. 3 credits. G. Herman.
For description, see NES 2677.

**ARKEO 2700 Introduction to Art History:
The Classical World (also ARTH
2200, CLASS 2700) # (HA-AS)**

Fall. 4 credits. Basic. A. Alexandridis.
For description, see ARTH 2200.

**[ARKEO 2728 Art and Archeology of the
Ancient Mediterranean World (also
ARTH 2227, CLASS 2727) # (HA-AS)**

Fall. 4 credits. Next offered 2011-2012.
S. Manning.]

**ARKEO 3505 By the Rivers of Babylon
(also NES/JWST/RELST 3505)**

Spring. 4 credits. G. Herman.
For description, see NES 3505.

**ARKEO 3588 Biblical Archaeology (also
NES/JWST/RELST 3588) @ # (CA-AS)**

Spring. 4 credits. L. Monroe.
For description, see NES 3588.

**ARKEO 3661 Sumerian Language and
Culture I (also JWST/NES 3661) @ #
(HA-AS)**

Fall. 4 credits. D. Owen.
For description, see NES 3661.

**[ARKEO 3665 Ancient Iraq II: 2000-331
BCE (also NES 3665) @ # (HA-AS)**

Fall. 4 credits. Next offered 2011-2012.
D. Owen.]

**[ARKEO 3666 History and Archaeology of
the Ancient Near East (also ARKEO/
JWST/NES 3666/6666) @ # (HA-AS)**

Fall. 4 credits. Next offered 2011-2012.
D. Owen.

For description, see NES 3666.]

**ARKEO 3690 History and Culture of Ur
(also NES/JWST 3690)**

Fall. 4 credits. D. Owen.
For description, see NES 3690.

**[ARKEO 3800 Introduction to the Arts of
China (also ARTH 3800) @ # (LA-AS)**

Fall. 4 credits. Next offered 2011-2012.
A. Pan.

For description, see ARTH 3800.]

[ARKEO 4644 Late Bronze Age World of Ugarit (also JWST/NES 4644, CLASS 4744) @ # (HA-AS)]

Spring. 4 credits. Next offered 2011–2012. C. Monroe.]

[ARKEO 7729 Emergence of Greek Civilization (also CLASS 7729)]

Spring. 4 credits. Next offered 2012–2013. S. Manning.
For description, see CLASS 7729.]

LA 5450 The Parks and Fora of Imperial Rome

Spring. 3 credits. Prerequisites: advanced standing in design field, classics, or history of art, or permission of instructor. K. Gleason.

IV. Methodology and Technology**ARKEO 2220 Field Course in Iroquois Archaeology (also ANTHR 2220) # (SBA-AS)**

Summer only. 3 credits. K. Jordan.
For description, see ANTHR 2220.

ARKEO 2610 Urban Archaeology (also CRP/LA 2610)

Fall. 3 credits. Basic. S. Baugher.
For description, see LA 2610.

ARKEO 2620 Laboratory in Landscape Archaeology (also LA 2620)

Spring. 3 credits. Basic. S. Baugher.
For description, see LA 2620.

[ARKEO 2728 Art and Archaeology in the Ancient Mediterranean World (also ARTH 2227, CLASS 2727) # (HA-AS)]

Fall. 4 credits. Basic. Next offered 2011–2012. S. Manning.]

ARKEO 3002 Archaeology Underwater

Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Brady.
This course focuses on the archaeology of the Isles of Shoals within the Gulf of Maine. Students participate in fieldwork, including foreshore study and underwater exploration.

ARKEO 3003 Island Archaeology

Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Hamilton.
This course trains students in standardized and innovative methods and technology used in archaeological surveys, excavations, assessments, research, and compliance work. Includes field logistics, scheduling, ethics, and personnel management training.

ARKEO 3090 Introduction to Dendrochronology (also ARTH 3250, CLASS 3750) # (HA-AS)

Fall. 4 credits. Limited to 10 students. Prerequisite: permission of instructor. Letter grades only. S. Manning.
For description, see CLASS 3750.

[ARKEO 3270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 6270) (PBS Supplementary List)]

Fall. 4 credits. Next offered 2011–2012. T. P. Volman.]

ARKEO 4020 Designing Archaeological Exhibits (also ARKEO 6020, LA 4050/6050)

Fall. Variable credit. Letter grades only. S. Baugher.
Students will learn method and theory on museum design and curation. The course also provides hands-on experience in designing and building exhibits for State Parks in the

Finger Lakes. For the outreach component, students will work with staff from State Parks and Friends of the Parks.

[ARKEO 4258 Archaeological Analysis (also ANTHR 4258/6258, ARKEO 6258) (SBA-AS)]

Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Next offered 2011–2012. J. S. Henderson.]

[ARKEO 4260 Field and Analytical Methods in Archaeology (also ANTHR 4260) # (SBA-AS)]

Spring. 4 or 6 credits. Next offered 2011–2012. K. Jordan.]

[ARKEO 4263 Zooarchaeological Method (also ANTHR 4263) (PBS Supplementary List)]

Fall. 5 credits. Next offered 2012–2013. N. Russell.]

[ARKEO 4264 Zooarchaeological Interpretation (also ANTHR 4264) (PBS Supplementary List)]

Spring. 4 credits. Prerequisites: ANTHR/ARKEO 4263; permission of instructor. Next offered 2012–2013. N. Russell.]

ARKEO 4267 Origins of Agriculture (also ANTHR 4267) # (HA-AS)

Spring. 4 credits. N. Russell.
For description, see ANTHR 4267.

[ARKEO 4370 Geophysical Field Methods (also EAS 4370) (PBS)]

Fall. 3 credits. Prerequisite: PHYS 2213 or 2208 or permission of instructor. Offered alternate years; next offered 2011–2012. L. D. Brown.
For description, see EAS 4370.]

ARKEO 4600 Late Quaternary Paleocology (also EAS 4600) (PBS)

Fall. 4 credits. Offered alternate years. M. Goman.
For description, see EAS 4600.

ARKEO 6000 Special Topics in Archaeology

Fall and spring. 4 credits. Staff.

ARKEO 6020 Designing Archaeological Exhibits (also ARKEO 4020, LA 4050/6050)

Fall. Variable credit. Letter grades only. S. Baugher.
For description, see ARKEO 4020.

[ARKEO 6270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 3270)]

Fall. 4 credits. Next offered 2011–2012. T. P. Volman.]

[ARKEO 6510 Advanced Fieldwork in Historical Archaeology]**[ARKEO 6520 Advanced Laboratory in Historical Archaeology (also ARKEO 4520)]**

Spring. 3 credits. S. Baugher.
This is a course for archaeology majors and minors who want to obtain more in-depth skills in laboratory work, identification, and cataloguing of historic period ceramics, glass, and metal. The course will provide the students with skills to undertake laboratory analysis of artifacts. Students will undertake independent research projects on specific artifacts (in lieu of a term paper).]

ARKEO 7742 Research Methods in Archaeology (also CLASS 7742)

Spring. 4 credits. S. Manning.
For description, see CLASS 7742.

V. Relevant Courses at Ithaca College

Contact Sherene Baugher in Landscape Architecture at sbb8@cornell.edu or the Ithaca College Anthropology Department at 274–1331 for further information or visit their web site at www.ithaca.edu/hs/anthro.

Prehistory of South America. M. Malpass. Every other year.

New World Complex Societies. M. Malpass. Irregular offering.

Archaeological Methods and Techniques. M. Malpass.

Archaeology of Colonial America. S. Stull.

World Prehistory. J. Rossen. Every semester.

North American Prehistory. J. Rossen. Every year.

People, Plants, and Culture: Archaeobotany and Ethnobotany. J. Rossen. Every other year.

Seminar: Hunter-Gatherers. J. Rossen. Every other year.

Seminar: Origins of Agriculture. J. Rossen. Every other year.

Ethnoarchaeology. J. Rossen. Every other year.

Archaeological Field School.

ASIAN STUDIES

R. McNeal, chair (350 Rockefeller Hall, 255–5095); A. Blackburn, B. Bledsoe, D. Boucher, B. de Bary, S. Divo, W. George, D. Gold, G. Green, E. Gunn, B. Herath, H. Huang, S. Ichikawa, N. Jagacinski, J. Kanemitsu, Y. Katagiri, N. Larson, J. M. Law, Y. Lee, Y. Lee-Mehta, L. McCrea, D. McKee, S. Mukherjee, S. Oja, J. Pandin, K. Park, L. Paterson, H. Phan, B. Rusk, N. Sakai, T. Savella, S. Singh, M. Song, R. Sukle, M. Suzuki, K. Taylor, Q. Teng, T. Tranviet, S. Tun, D. X. Warner, L. Zheng; Emeritus: K. Brazell, T. L. Mei, J. Wolff; Associated Faculty: A. Carlson, J. Chen, Z. Chen, S. Cochran, A. Cohn, M. Fiskesjo, M. Hatch, R. Herring, T. J. Hinrichs, K. Hirano, D. Holmberg, M. Katzenstein, V. Koschmann, T. Loos, T. Lyons, K. March, S. Martin, K. McGowan, H. Miyazaki, S. Mohanty, V. Munasinghe, V. Nee, A. Nussbaum, A. Pan, P. Sangren, J. Siegel, E. Tagliacozzo, N. Uphoff, J. Whitman, A. Willford

The Department of Asian Studies and associated faculty members in other departments encompass the study of East Asia, South Asia, and Southeast Asia and offer courses in most of the disciplines of the social sciences and the humanities. Over 40 faculty members specialize in topics arranged under our rubrics of “Literature and Linguistics,” “Religion,” and “Society and Culture,” as well as offering more broad courses under our “General Education” heading. Asian Studies courses through the 4400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill various distribution requirements.

The Major

To become an Asian Studies major, applicants must first successfully receive a minimum grade of B in at least two Asia content courses. These may include one language course, but writing seminars do not fulfill the requirement. Applications to major in Asian Studies must be approved by the director of undergraduate studies.

Completion of the major requires 30 credits at the 2200 level and beyond with a minimum grade of B (S-U grades not accepted), including:

- one course at the 3300 level
- one course at the 4400 level
- a maximum of 6 credits of language study beyond those required for proficiency may be used
- at least one course from two of the Asian Studies course categories (RL, SC, LL)
- demonstration of two-year proficiency in an Asian language:
- testing into and completing the second semester of the second year of that language
- obtaining a two-year proficiency test result
- testing into a language course beyond the 2200 level

Certain courses about Asia offered in other departments at the 1100 level may fulfill requirements with approvals from the major advisor and director of undergraduate study, e.g., HIST/ASIAN 1191, 1192.

Category Key: Courses in Asian Studies are broken into different categories. To determine which category a course falls in, please note the reference at the end of each course description. The key is as follows: GE = General Education, LL = Literature and Linguistics, RL = Religion, and SC = Society and Culture.

Honors

To be eligible for honors in Asian Studies, a student must have a cumulative GPA of 3.7 in all Asian Studies area courses and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second semester of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian Studies advising faculty. During the first term of the senior year, the student does research for the essay in conjunction with an appropriate Asian Studies course or ASIAN 4401. By the end of the first term, the student must present a detailed outline of the honors essay and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 4402, the honors course, which entails the writing of the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Minor in East Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a minor in East

Asian studies by completing at least 18 units of course work in East Asian studies.

Students normally take five courses in East Asian Studies from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses taught outside of the Asian Studies department. Of these, nonlanguage courses should be selected at the 2200 level or above. Two courses in an East Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. East Asian graduate courses may also be taken for the minor, as well as East Asia-related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the minor. A minimum grade of B must be received for all courses counted toward the minor. S-U courses are ineligible. Students minoring in East Asian studies should select an advisor from the East Asia Program faculty for consultation on their course of study. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Minor in South Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may achieve a minor in South Asia studies by completing at least 18 units of course work (typically five courses) in South Asian studies. A recommended plan would include ASIAN 2215 and four additional courses. These courses are selected from South Asia courses listed under the Department of Asian Studies, or from other Asia-related courses offered by other departments. Of these, nonlanguage courses should be selected at the 2200 level or above. Two courses in an South Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. Appropriate South Asia graduate course work may be included in the minor with consent of the instructor and the advisor. One South Asia-related course with a research paper on a South Asia subject may be included with the consent of the advisor and the director of undergraduate studies. A minimum grade of B must be received for all courses toward the minor. S-U courses are ineligible. Students minoring in South Asian studies are considered members of the South Asia Program and will have an advisor from the program faculty. (This advisor will supervise a student's minor and does not substitute for a student's major advisor.) For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Minor in Southeast Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a minor in Southeast Asian studies by completing 18 units of course work, including a history course and three courses or seminars at the intermediate or advanced level. Up to two Southeast Asian language courses at the 1100 level or above may be included in the minor courses. A recommended plan would include ASIAN 2208 and four additional courses. A minimum grade of B must be received for all courses counted toward the minor. S-U courses are ineligible. Students taking a minor in Southeast Asian studies are members of the Southeast Asia Program and will have an advisor from the Southeast Asia program

faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for a semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam. Fellowships are available for undergraduates through the Cornell Abroad Program. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Intensive Language Program (FALCON)

The FALCON Program offers intensive instruction in either Japanese or Mandarin Chinese. Aside from the exclusive language schools of some government agencies, FALCON is the only program in the world that offers a full year of intensive instruction beginning at the elementary level and continuing through the advanced level. FALCON is a full-time program; the degree of intensity does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. Students typically take the entire sequence of 1160, 2260, and 3360, but they may take any portion of the program if they have the necessary background as determined by a placement interview. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University.

Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. The 1160-2260-3360 sequence fulfills the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. Applications are available in 388 Rockefeller Hall or on the FALCON web site at lrc.cornell.edu/falcon/apply.

Study Abroad

There are many strong options for study abroad in Asia. Cornell Abroad helps students plan a year or semester abroad as part of their Cornell undergraduate degree. Cornell has affiliations with several programs and institutions in Asia and sends students to those and others.

Cornell is affiliated with IUP, the Inter-University Program for Chinese Language Studies in Beijing (at Tsinghua University) and is a member of CIEE and IES, organizations sponsoring study abroad programs offering Chinese language instruction at several levels as well as courses in Chinese studies in the humanities and social sciences. Students may also study at other programs in China, Hong Kong, and Taiwan. The Chinese FALCON program includes a spring semester in Beijing at Peking University.

Cornell is a member of the consortium of the Kyoto Center for Japanese Studies, an undergraduate semester or year program in Japanese language and Japanese studies. An agreement with International Christian University (ICU), outside Tokyo, permits Cornell students to attend that institution. Cornell students have attended CIEE and IES programs as well as other programs and institutions in Japan.

Cornell is a member of the American Association of Indian Studies, which offers fellowships for intensive study in India or Hindi, Bengali, and Tamil. There are study abroad options in universities or other organizations in various regions of India. In cooperation with Tribhuvan National University of Nepal, Cornell organizes the Cornell–Nepal Study Program for undergraduate and graduate students wishing to spend a semester or year studying and conducting research in Nepal.

Students may spend a semester or year in Mongolia, Korea, Vietnam, Indonesia, Thailand, Singapore, or the Philippines or choose to study about Asia at such institutions as the School of Oriental and African Studies in London or the Faculty of Asian Studies at the Australian National University. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, Southeast Asia Program, or South Asia Program offices.

Students may apply up to 15 credits from abroad to the major.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

Asia—General Education Courses

ASIAN 1190 East Asia to 1800 (also HIST 1900) @ # (HA-AS)

Spring. 4 credits. K. Hirano and T. J. Hinrichs.

For description, see HIST 1900. (GE)

ASIAN 1191 Introduction to Modern Asian History (also CAPS/HIST 1910) @ (HA-AS)

Fall. 4 credits. D. Ghosh and S. Cochran.

For description, see HIST 1910. (GE)

[ASIAN 1192 Introduction to World Music II: Asia (also MUSIC 1302) @ (CA-AS)

Fall. 3 credits. Next offered 2011–2012. M. Hatch.

For description, see MUSIC 1302. (GE)

ASIAN 2208 Introduction to Southeast Asia @ (CA-AS)

Fall. 3 credits. L. Paterson.

For anyone curious about the most diverse part of Asia; defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information. (GE)

ASIAN 2209 Script and Culture in East Asia (also ARTH 2801, HIST 2891) @ # (LA-AS)

Fall. 3 credits. B. Rusk.

Introduction to the history and cultures of writing systems in East Asia, from the invention of writing to text messaging. (GE)

ASIAN 2211 Introduction to Japan @ # (CA-AS)

Fall; may be offered during winter session. 3 credits. J. M. Law.

This course surveys major disciplinary approaches in the social sciences and humanities to the study of Japan by focusing on different historical formulations of Japanese native and national identity: Japan the sacred nation, Japan the aesthetic, Japan the warrior nation, Japan the peaceful (victim) nation, Japan the industrious economic superpower and Japan the hyper-modern. We introduce Japanese performance traditions, read fiction, poetry and plays, see classical films and recent anime, and study historical cases relating to each of these formulations. (GE)

ASIAN 2212 Introduction to China @ # (CA-AS)

Spring. 3 credits. B. Rusk.

Interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. Explores literature, history, religion, art and archaeology, and other aspects of China's rich and diverse heritage, from earliest times to the present. (GE)

[ASIAN 2215 Introduction to South Asia @ (HA-AS)

Fall. 3 credits. Next offered 2011–2012. L. McCrea. (GE)

ASIAN 2218 Introduction to Korea @ (CA-AS)

Fall. 3 credits. Y. Lee.

Multidisciplinary introduction to Korean history, society, and culture. The first part of the course will examine sources of Korean tradition in their historical contexts. The second part, on the transition to a modern society, will cover the mid-19th century to the Korean War. The last part will be devoted to contemporary society. (GE)

ASIAN 2244 Asia in World History @ # (HA-AS)

Fall. 3 credits. K. Taylor.

This course presents Asia in the context of world history. It will introduce students to how Asian religions, ideologies, societies, economies, and political systems have developed from prehistoric times to the present as a part of the larger human experience on earth. It will show the distinctive characteristics of, and the interconnectedness among, the various regions of Asia: East Asia, Southeast Asia, Central Asia, South Asia, and West Asia. (GE)

ASIAN 2250 Introduction to Asian Religions (also RELST 2250) @ # (HA-AS)

Spring. 3 credits. D. Boucher.

Explores religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South Asian and East Asian), Sikhism, Confucianism, Daoism, and Shinto. Encounters a wide range of religious expressions as well, including myth, ritual, pilgrimage, mysticism, meditation, and other spiritual technologies. (GE)

Asia—Literature and Linguistics Courses

The following courses are taught entirely in English and are open to any Cornell student.

ASIAN 2261 Cinema and Anime in Japan @ (LA-AS)

Fall. 3 credits. B. de Bary.

An introduction to Japanese film that traces its evolution from the early 20th century. We will consider topics such as the impact on film of kabuki, shimpa, and shingeki theatrical traditions; the relation of politics and melodrama in early film; surrealism and silent film; social realist films of the early 1930s; film and national imperialism; war films and the emergence of anime; postwar humanism; New Wave cinema; the anti-Ampo movement in documentary and New Wave films. A final section of the course will deal with the extent to which anime builds on or diverges from established film traditions, and the abundant new literature addresses the social and aesthetic significance of anime. (LL)

ASIAN 2270 Love, War, and the Supernatural in Pre-Modern Japan @ # (LA-AS)

Fall. 3 credits. J. Kanemitsu.

In this course, students will meet some of the most memorable characters depicted in Japanese literature, from the 8th through 18th centuries. In addition to each work's historical and cultural contexts, we will consider its literary conventions and think about how genres have been defined. A survey of representative works in Japan's literary history, this course examines changing representations of idealized male and female protagonists as they pursue desire, conquest, and occasionally both. (LL)

ASIAN 2271 China's Literary Heritage: An Introduction in Translation @ # (LA-AS)

Fall. 3 credits. D. X. Warner.

This is a survey course designed for, though not limited to, nonmajors with or without any knowledge of Chinese language, history, or culture. Students read a broad selection in translation of poems, prose, and narrative writings from the pre-modern period on a variety of themes. (LL)

ASIAN 2279 Chinese Mythology @ # (LA-AS)

Summer. 3 credits. R. McNeal.

Students will study Chinese myths from the earliest times down to the late imperial era. Focus will be on understanding the form Chinese myths take, how they are related to religion, literature, historical accounts and intellectual trends. (LL)

[ASIAN 3318 Literature and Media in Japan (also COML 3150, VISST 3318) @ (CA-AS)

Spring. 3 credits. Next offered 2011–2012. B. de Bary.

Dissolving the conventional distinction between literary studies and media studies, the course will first consider the formation of a modern national literature within the environment of rapidly transforming media in late 19th-century Japan. The primary focus, however, will be on dynamic relays and reciprocal influences among contemporary novels, films, anime, comics, video games, and digital arts. The course will use materials with translations or subtitles in English. (LL)

[ASIAN 3365 Traditional Japanese Theatre (also ASIAN 6665)

Spring. 4 credits. Next offered 2011–2012. J. Kanemitsu. (LL)

ASIAN 3370 Global Martial Arts, Film, and Literature (also COML/FILM 3701) @ (LA-AS)

Fall. 4 credits. P. Liu.

For description, see COML 3701. (LL)

ASIAN 3373 20th-Century Chinese Literature @ (LA-AS)

Fall. 4 credits. E. Gunn.

A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory. (LL)

ASIAN 3374 Chinese Narrative Literature @ # (LA-AS)

Spring. 4 credits. E. Gunn.

Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized. (LL)

ASIAN 3379 Southeast Asian Literature in Translation (also ASIAN 6679) @ (LA-AS)

Spring. 4 credits. L. Paterson.

This course is an introduction to modern Southeast Asian literature in translation, concentrating on contemporary short stories and novels from the mainland. The course will explore the literature thematically with reference to such issues as modernization, decolonization, changing gender roles and relationships, and the urban-rural dichotomy. (LL)

[ASIAN 3380 Vietnamese Literature in Translation (also ASIAN 6680) @ # (LA-AS)]

Fall. 4 credits. Next offered 2011-2012.

L. Paterson. (LL)

[ASIAN 3387 Literature and Film of South Asia (also COML 3860, VISST 3870) @ (LA-AS)]

Spring. 4 credits. Next offered 2011-2012.

A. Banerjee. (LL)

[ASIAN 3389 Partition/Fiction and Film (also COML 3850) @ (HA-AS)]

Fall. 4 credits. Next offered 2011-2012.

A. Banerjee. (LL)

[ASIAN 4411 History of the Japanese Language (also LING 4411, JAPAN 4410) @ # (HA-AS)]

Fall. 4 credits. Next offered 2011-2012.

J. Whitman.

For description, see LING 4411. (LL)

[ASIAN 4412 Linguistic Structure of Japanese (also LING 4412) (KCM-AS)]

Spring. 4 credits. Next offered 2011-2012.

J. Whitman.

For description, see LING 4412. (LL)

ASIAN 4424 Asia Memoirs: Trauma and Social Upheaval in East and Southeast Asia (also ASIAN 6627) @ (CA-AS)

Fall. 4 credits. L. Paterson.

From the Chinese Cultural Revolution to Khmer Rouge Cambodia, social upheaval in Asia has given rise to a genre of trauma memoir. In this course we will discuss how periods of societal terror are represented and remembered within these personal narratives. Through reading such accounts in conjunction with secondary scholarship, we will examine various issues of representation such as intended audience, construction of memory, and framing of individual experience. We will

also examine to what extent these accounts contribute to, or contradict, national narratives of the respective countries. (LL)

[ASIAN 4430 Structure of Korean (also LING/KOREA 4430) (KCM-AS)]

Spring. 4 credits. Next offered 2011-2012.

J. Whitman.

For description, see LING 4430. (LL)

[ASIAN 4437 Research Methods in Pre-Modern China (also ASIAN 6611) @ # (LA-AS)]

Fall. 4 credits. Next offered 2011-2012.

B. Rusk. (LL)

ASIAN 4446 Classical Indian Poetry and Comparative Poetics (also SHUM 4846)

Fall. 4 credits. L. McCrea.

For description, see SHUM 4846. (LL)

[ASIAN 4481 Translation and Cultural Difference (also COML 4700) @ (KCM-AS)]

Spring. 4 credits. Next offered 2011-2012.

N. Sakai. (LL)

ASIAN 5505 Methodology of Asian Language Learning and Teaching

Spring. 2 credits. Limited enrollment.

Priority given to graduate students in Asian Studies and Linguistics. R. Sukle.

This is a course for anyone interested in the pedagogy of Asian languages; required for graduate students seeking appointment as teaching assistants and those seeking as continuing appointments as teaching associates in the Department of Asian Studies for Chinese, Hindi and Urdu, Japanese, and Korean. The course presents theories of language teaching and learning, provides classroom observation and practice teaching, and outlines the basics of phonology, morphology, grammar, sociolinguistics, pragmatics, and discourse structure and other features of language use. (LL)

Asia—Religion Courses**[ASIAN 2277 Meditation in Indian Culture (also RELST 2277) @ # (CA-AS)]**

Spring. 3 credits. Next offered 2011-2012.

D. Gold. (RL)

ASIAN 2299 Buddhism (also RELST 2299) @ # (CA-AS)

Fall. 3 credits. D. Boucher.

This course will explore the Buddhist tradition from its origins in ancient India to its migrations throughout Asia and eventually to the West. The first part of the course will deal with Indian Buddhism: the Buddha, the principal teachings and practices of his early followers, and new developments in spiritual orientation. We will then turn to the transmission of Buddhism to Sri Lanka and Southeast Asia, where at least one of the early schools has been preserved. Next we will look at Mahayana Buddhism as it moves north and east, encompassing China, Japan, and Tibet. While much of the course will be devoted to developments in traditional times, we will also look at some of the ways Buddhist cultures have responded to modernity. (RL)

ASIAN 3309 Temple in the World: Buddhism in Contemporary South and Southeast Asia (also RELST 3309) @ (CA-AS)]

Spring. 3 credits. A. Blackburn.

Buddhism is often thought of as a meditative and philosophical tradition, remote from the concerns and pleasures of everyday life,

practical ethics, and politics. This course explores the unfolding of Buddhist life in contemporary South and Southeast Asia, in locations such as Burma, Thailand, India, Sri Lanka, Malaysia, and Cambodia. We will see how the practices of meditation and philosophical reflection enter the lives of Buddhists, along with other expressions of devotion, aesthetic fascination, political action, and sociability. Our goal will be to recognize the sensual, emotional, and social qualities of Buddhist practice, and the ways in which life unfolds in a Buddhist idiom. (RL)

ASIAN 3310 Heavens, Hells, and Purgatories: Buddhist and Christian Notions of the Afterlife (also RELST 3310) @ # (CA-AS)

Fall. 4 credits. D. Boucher.

Buddhists and Christians have envisioned and prepared for the afterlife. We will focus on ways different communities within these traditions have described states of supreme bliss, have warned followers of the perils of perdition, and have guided them through states in between. We will be particularly interested in how the promise and threat of these post-mortem states offer insight into forms of social and political coercion via religious sanction. (RL)

[ASIAN 3344 Introduction to Indian Philosophy # @ (KCM-AS)]

Spring. 4 credits. Next offered 2011-2012.

L. McCrea. (RL)

[ASIAN 3347 Tantric Traditions (also RELST 3347) @ # (CA-AS)]

Fall. 4 credits. Next offered 2011-2012.

D. Gold. (RL)

[ASIAN 3351 Indian Religious Worlds (also RELST 3351) @ (CA-AS)]

Spring. 4 credits. Next offered 2012-2013.

D. Gold. (RL)

[ASIAN 3355 Japanese Religions (also RELST 3355) @ (CA-AS)]

Spring. 4 credits. Next offered 2011-2012.

J. M. Law. (RL)

[ASIAN 3359 Japanese Buddhism: Texts in Context (also RELST 3359) @ # (HA-AS)]

Spring. 4 credits. Next offered 2012-2013.

J. M. Law. (RL)

[ASIAN 4405 Zen Buddhism: Experience and Ideology (also RELST 4405) @ # (CA-AS)]

Spring. 4 credits. Next offered 2011-2012.

J. M. Law. (RL)

[ASIAN 4438 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 6638, RELST 4438/6638) (CA-AS)]

Spring. 4 credits. Next offered 2011-2012.

A. Blackburn. (RL)

ASIAN 4444 Ritual Puppetry in a Global Context (also RELST/THEATR 4444, DANCE 4377) @ # (CA-AS)]

Fall. 4 credits. J. M. Law. (RL)

Following a review of critical literature in puppetry studies as it relates to ritual and a discussion of the ritual uses of human body effigies and puppets in other cultural contexts, this course surveys the major traditions of ritual puppetry in Japan, including the uses of puppets and effigies in appeasement rites developed at the Usa shrine and spread throughout the Inland Sea from the seventh century, the use of hitogata as human substitutes, shamanistic uses of puppets in the

Tohoku region of Japan by blind shamanesses, the use of infant body substitutes, and the practice of epidemic spirit appeasement using puppets. This course will focus on discerning the patterns of the ritual decision to use a human body substitute, a puppet or effigy, to broaden our understanding of the ritual and theatrical power of puppets. Students will be asked to pursue a research topic and write short responses to cases and readings throughout the term. (RL)

ASIAN 4449 History and Methods of the Academic Study of Religion (also RELST 4449) # (KCM-AS)

Spring. 4 credits. Prerequisite: two courses in religious studies major or permission of instructor. D. Boucher.

Provides advanced students in religious studies or the humanities familiarity with important methodological issues in the academic study of religion. (RL)

[ASIAN 4460 Indian Meditation Texts (also RELST 4460) @ # (KCM-AS)]

Fall. 4 credits. No knowledge of Indian languages required. Next offered 2012–2013. D. Gold.

Draws on approaches from literary criticism, anthropology, and religious studies to explore texts that record religious experience. (RL)]

[ASIAN 4462 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN 6662, RELST 4462) @ (CA-AS)]

Fall. 4 credits. Prerequisites: one course in ANTHR, ASIAN, HIST, RELST at 3000 level or above or permission of instructor. Next offered 2011–2012. A. Blackburn. (RL)]

[ASIAN 4489 Religion and Sustainability: Traditionalist Discourses in the 21st Century (also RELST 4489) @ (CA-AS)]

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2012–2013. J. M. Law. (RL)]

Asia—Society and Culture Courses

ASIAN 2206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 5507, HIST 2070/5070) @ (CA-AS)

Fall. 4 credits. T. Loos.

For description, see HIST 2070. (SC)

ASIAN 2210 Pop Culture in China (also HIST 2210) @ (HA-AS)

Fall. 4 credits. T. J. Hinrichs.

For description, see HIST 2210. (SC)

ASIAN 2225 Literature, Politics, and Genocide in Cambodia (also ASIAN 4422) @ (CA-AS)

Summer. 3 credits. G. Chigas.

This course will examine various literary, historical, and political responses to the Cambodian genocide, particularly literary testimony by survivors and governmental efforts to bring the perpetrators to justice. The course considers the limited effectiveness of these responses for addressing the causes and effects of genocide despite the vow of “never again.” To pursue these questions, students will read selections from novels and poetry written by Cambodian survivors, along with historical accounts of the genocide and analysis attempts by the Cambodian government and the international community to bring the perpetrators to justice. (SC)

ASIAN 2228 Indian Ocean World (also HIST 2280) @ # (HA-AS)

Fall. 4 credits. Limited to 15 students.

E. Tagliacozzo.

For description, see HIST 2280. (SC)

[ASIAN 2238 Families in China Since the 17th Century (also HIST 2380) @ (HA-AS)]

Fall. 4 credits. Next offered 2011–2012.

S. Cochran. (SC)]

ASIAN 2245 Gamelan in Indonesian History and Cultures (also MUSIC 1341, VISST 2744) @ (LA-AS)

Fall or spring. 3 credits. Prerequisite:

permission of instructor. C. Miller.

For description, see MUSIC 1341. (SC)

ASIAN 2257 China Encounters the World (also CAPS 2570, HIST 2571) @ (HA-AS)

Fall. 3 credits. J. Chen.

For description, see HIST 2571. (SC)

[ASIAN 2259 The Vietnam Wars in Film (CA-AS)]

Spring. 3 credits. Next offered 2011–2012.

L. Paterson. (SC)]

ASIAN 2260 Popular Culture of Japan @ # (CA-AS)

Spring. 3 credits. J. Kanemitsu.

Writing-intensive course that examines and analyzes the emergence of and transitions in particular forms of popular culture in Japan. Materials range from the Tokugawa period, Japan's early modern era (1603–1868) to the present. Course focuses on overarching themes: media and information technology; entertainment and gender; fashion; commodified romance; fiction; and television dramas.

ASIAN 2275 History of Modern South Asia (also HIST 2750) @ # (HA-AS)

Spring. 4 credits. D. Ghosh.

For description, see HIST 2750. (SC)

[ASIAN 2281 Antiquity and Modernity in Contemporary China (also CAPS 2281) @ # (CA-AS)]

Spring. 3 credits. Next offered 2012–2013.

R. McNeal. (SC)]

ASIAN 2283 Introduction to Art History: Approaches to Asian Art (also ARTH 2800)

Spring. 3 credits. K. McGowan.

For description, see ARTH 2800. (SC)

Fall. 4 credits. Next offered 2011–2012.

K. Hirano. (SC)]

ASIAN 2296 From Slow Boats to CEOs?: The Chinese of Southeast Asia @ (CA-AS)

Spring. 4 credits. L. Paterson.

From a Thai king's pamphlet on the “Jews of the East,” to the 1998 anti-Chinese riots in Indonesia, the ethnic Chinese of Southeast Asia have long been positioned as a privileged and wealthy elite who wield disproportionate power and influence. But what lies behind these stereotypes? Beginning with the history of Chinese migration to Southeast Asia, this interdisciplinary course will examine the changing relationship between China and its Southeast Asian sojourners, as well as Chinese cultural and social impact in the region. Through a series of case studies, the course will interrogate issues of how Chinese ethnicity is constructed within this transnational Chinese Diaspora, and how it impacts contemporary issues in Southeast Asia. Countries emphasized will include the city-state of Singapore, Indonesia, Malaysia, Thailand, Vietnam, and Burma. (SC)

ASIAN 2298 The U.S.–Vietnam War (also HIST 2890) @ (HA-AS)

Spring. 4 credits. K. Taylor.

Covers politics and warfare among Vietnamese during the era of direct U.S. involvement (1950–1975). Evaluates the policies of the United States and also of other countries involved in Vietnamese events, particularly the PRC and the USSR. Analyzes how civil war affected Vietnamese society, politics, and culture and also how U.S. intervention affected American society, politics, and culture. (SC)

[ASIAN 3302 Art of War in Ancient China @ # (HA-AS)]

Fall. 4 credits. Next offered 2012–2013.

R. McNeal. (SC)]

ASIAN 3305 Seminar on American Relations with China (also CAPS 3000, HIST 3391) (HA-AS)

Fall. 4 credits. Taught in Washington, D.C.

R. Bush.

ASIAN 3388 Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 6688, COML 3980/6680, FGSS 3580/6580) @ (CA-AS)

Fall. 4 credits. N. Sakai. (SC)
For a long time area studies have overlooked the questions of gender, race/ethnicity, and social class in fields related to East Asia and the trans-Pacific regions. Little attention has been paid to how to conceptualize gender and race/ethnicity; how to analyze the mutual implication of sexism, racism, and class essentialism (some call it "class racism"), and how to understand the relationships of these topics to the broader contexts of colonialism, imperialism, and nationalism. This course is designed to offer a series of discussions about the following problems: (1) the historically specific modes of sexism and racism in social spaces related to Japan and other places in the trans-Pacific; (2) the mutual implication of sexism, racism, and social class in various contexts including those of colonialism, imperialism, and nationalism; (3) the roles of gender, race, and social class in the United States' knowledge production about East Asia in general; and (4) the conceptions of gender and race in the social formations particular to East Asia. The assigned readings include both English and Japanese materials. However, those who register in ASIAN 3388 are exempt from reading the materials in Japanese. (SC)

ASIAN 3394 The House and the World: Architecture of Asia (also ARTH 3855, VISST 3655) @ # (HA-AS)
Fall. 4 credits. K. McGowan.
For description, see ARTH 3855. (SC)

ASIAN 3396 Southeast Asian History from the 18th Century (also HIST 3960) @ (HA-AS)
Spring. 4 credits. E. Tagliacozzo and T. Loos.

E. Tagliacozzo. (SC)]

ASIAN 4410 Chinese Film @ (LA-AS)
Fall. 4 credits. E. Gunn.
Additional film viewing hours TBA. The course surveys Chinese films from the 1920s to the present and various responses to them. Films from mainland China, Hong Kong, and Taiwan are included, together with critical studies employing a variety of different critical methods. (SC)

[ASIAN 4413 Religion and Politics in Southeast Asia (also ANTHR 4513) @ (CA-AS)]
Fall. 4 credits. Next offered 2012-2013.
A. Willford.
For description, see ANTHR 4513. (SC)]

ASIAN 4417 Themes and Problems in Asian Studies # (CA-AS)
Spring. 4 credits. A. Blackburn.
Strongly recommended for Asian Studies majors and prospective majors, this course provides an overview of themes and problems central to work in Asian Studies. We will see how Asian Studies developed as a field of academic inquiry, and explore central themes in the present discipline of Asian Studies. How are Asian traditions invented and transmitted? How do we study the histories of Asian literatures and aesthetics? How have mixed media and technologies shaped Asian worlds from the age of manuscripts and block prints to the digital era? What is the place of ritual and performance in Asian contexts? Is "popular culture" a new phenomenon in Asia? This course is intended for juniors and seniors. Open to first- and second-year students only with permission of instructor. (SC)

ASIAN 4428 Formation of the Field (also HIST 4428) @ (HA-AS)

Spring. 4 credits. Prerequisite: permission of instructor. N. Sakai.
This course will provide both a historical introduction to and critical analysis of the constitution of Japanese Studies as a "field" of postwar academic inquiry. While reading texts particularly influential in the early and contemporary formation of the field, we will consider such questions as the domestic and international contexts in which Japanese studies has been institutionalized and maintained, and the relationship between "Japan" as an object of area studies discourse and "Japan" as represented in American journalism, popular culture, and politics. The course will examine the historical origins of area studies and various critiques conducted about area studies as a model of academic discipline. Possibilities for cross-disciplinary research (along lines recently undertaken in fields such as feminist criticism and cultural studies) will also be explored. (SC)

ASIAN 4435 Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 6632, THETR 4320/6320) @ (CA-AS)
Fall. 4 credits. H. Yan.
For description, see THETR 4320. (SC)

[ASIAN 4436 Topics in Indian Film (also VISST 4436) @ (LA-AS)]
Spring. 4 credits. No knowledge of an Indian language required. Next offered 2011-2012. D. Gold. (SC)]

[ASIAN 4456 Dancing the Stone: Body and Memory (also ARTH 4858)]
Spring. 4 credits. Next offered 2011-2012.
K. McGowan. (SC)]

ASIAN 4465 Cold War Aesthetics in East Asia (also COML 4430) @ (LA-AS)
Spring. 4 credits. P. Liu.

[ASIAN 4469 History of Medicine and Healing in China (also ASIAN 6692, BSOC/HIST/STS 4961, HIST 6961) @ # (HA-AS)]
Spring. 4 credits. Next offered 2011-2012.
T. J. Hinrichs. (SC)]

ASIAN 4470 Modernity in East Asia @ (CA-AS)

Fall. 4 credits. N. Sakai.
An introduction to the comparative study of social, political, and intellectual modernity in East Asia and the North Atlantic. The course will examine the characteristics of East Asian modernity with much emphasis on the relationship between colonialism and modernity. We will focus on the problems of historical time and language, and read the philosophical and sociological works of the 20th century in order to understand the ways in which cultural activities and the modalities of identification were transformed during the 18th, 19th, and 20th centuries. The questions of the civilizing mission and national subjectivity will play central roles in this course. (SC)

ASIAN 4487 Threads of Consequence (also ARTH 4855)

Spring. 4 credits. K. McGowan.
For description, see ARTH 4855. (SC)

[ASIAN 4490 China's Economy Under Mao and Deng (also ECON/CAPS 4690) @ (SBA-AS)]

Spring. 4 credits. Next offered 2011-2012.
T. Lyons.
For description, see ECON 4690. (SC)]

ASIAN 4493 Problems in Modern Chinese History (also ASIAN 6693, HIST 4930/6930) @ (HA-AS)

Fall. 4 credits. Prerequisite: ASIAN 2294/HIST 2940 or permission of instructor. S. Cochran.
For description, see HIST 4930. (SC)

ASIAN 4495 Exotic Scents: Cross-Cultural Aesthetics of Smell (also SHUM 4952)

Spring. 4 credits. J. McHugh.
For description, see SHUM 4952. (SC)

ASIAN 5599 East Asian Colloquium (also HIST 6020)

Fall and spring, 2 credits. Graduate students only. Staff.

For description, see HIST 6020. (SC)

Asia—Graduate Seminars

For complete descriptions of courses numbered 6000 or above, see www.lrc.cornell.edu/asian.

ASIAN 6602 Southeast Asia Seminar

Spring, 4 credits. Staff. (SC)

ASIAN 6603 Southeast Asia Field Seminar

Spring, 4 credits. Staff. (SC)

[ASIAN 6604 Southeast Asia Topical Seminar

Spring, 3–4 credits. Next offered 2011–2012. Staff. (SC)]

[ASIAN 6611 Research Methods in Pre-Modern China (also ASIAN 4437)

Fall, 4 credits. Next offered 2011–2012. B. Rusk. (LL)]

ASIAN 6612 Japanese Bibliography and Methodology

Fall, 1 credit. Requirement for honors students and M.A. candidates. Prerequisite: permission of instructor. D. McKee. (LL)

ASIAN 6613 South East Asian Bibliography and Methodology

Spring, 1 credit. Recommended: reading knowledge of at least one SE Asian language or other Asian language and a major European language. G. Green. (LL)

[ASIAN 6615 Histories of Tokugawa Japan (also HIST 6150)

Fall, 4 credits. Next offered 2011–2012. K. Hirano. (SC)]

[ASIAN 6617 Archipelago: The Worlds of Indonesia (also ASIAN 4409, HIST 4100/6617)

Spring, 4 credits. Next offered 2012–2013. E. Tagliacozzo. (SC)]

ASIAN 6619 Graduate Seminar: Translation in Theory (also COML 6160, VISST 6619)

Spring, 4 credits. B. de Bary.

The course provides an introduction to various aspects of translation theory, and emphasizes relations between translation theory and trauma theory, post-structuralism, post-colonial theory, and debates on comparative literature, “world literature,” and area studies. (LL)

[ASIAN 6626 The 18th Century and the Emergence of Literary Modernity (also COML 6380)

Spring, 4 credits. Next offered 2011–2012. N. Sakai. (LL)]

ASIAN 6627 Asia Memoirs: Trauma and Social Upheaval in East and Southeast Asia (also ASIAN 4424)

Fall, 4 credits. L. Paterson.

For description, see ASIAN 4424. (LL)

[ASIAN 6629 Contemporary Studies of Japan

Spring, 4 credits. Next offered 2011–2012. N. Sakai. (SC)]

ASIAN 6632 Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 4435, THETR 4320/6320)

Fall, 4 credits. H. Yan.

For description, see THETR 4320. (SC)

ASIAN 6633 Borderwork (also COML 6335, LATA/LSP/SPANL 6640)

Fall, 4 credits. D. Castillo and A. Banerjee. The seminar explores a new model of South-South comparison through a study of borders in Latin America and South Asia. Rather than the traditional vantage point of examining mobility, inclusion, and exclusion between West and East or North and South, we privilege theoretical insights and site-specific texts generated within the two regions and emerging out of their dialogue. Discussions will be organized around topics including indigeneity, gender, labor, and violence, and dates such as 1848, 1947, 1971, and 9/11 that decisively affected the concept and function of borders in Latin America and South Asia. (SC)

[ASIAN 6638 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 4438, RELST 4438/6638)

Spring, 4 credits. Next offered 2011–2012. A. Blackburn. (RL)]

[ASIAN 6650 Seminar in Asian Religions (also RELST 6650)

Fall, 4 credits. Limited to 10 students.

Prerequisite: graduate standing. Next offered 2011–2012. Staff. (RL)]

[ASIAN 6659 Seminar in Vedic Philology (also CLASS 7459, LING 6659)

Fall, 4 credits. Next offered 2011–2012. M. Weiss.

For description, see LING 6659. (LL)]

[ASIAN 6662 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN/RELST 4462)

Fall, 4 credits. Prerequisites: one course in ANTHR, ASIAN, HIST, RELST at 3000 level or above or permission of instructor. Next offered 2011–2012. A. Blackburn.

For description, see ASIAN 4462. (RL)]

[ASIAN 6665 Traditional Japanese Theatre (also ASIAN 3365)

Spring, 4 credits. Next offered 2011–2012. J. Kanemitsu. (LL)]

ASIAN 6679 Southeast Asian Literature in Translation (also ASIAN 3379)

Spring, 4 credits. L. Paterson.

For description, see ASIAN 3379. (LL)

[ASIAN 6680 Vietnamese Literature in Translation (also ASIAN 3380)

Fall, 4 credits. Next offered 2011–2012. L. Paterson. (LL)]

[ASIAN 6681 Intellectual History of Empire (also HIST 6810)

Fall, 4 credits. Next offered 2011–2012. J. V. Koschmann and N. Sakai. (SC)]

ASIAN 6686 Readings in Japanese Historiography (also HIST 6861)

Fall, 4 credits. K. Hirano.

For description, see HIST 6861. (LL)

ASIAN 6688 Theorizing Gender and Race in Asian Histories and Literature (also ASIAN 3388, COML 3980/6680, FGSS 3580/6580, HIST 3880/6880)

Fall, 4 credits. Prerequisite: reading knowledge of Japanese. N. Sakai.

For description, see ASIAN 3388. (SC)

[ASIAN 6692 History of Medicine and Healing in China (also ASIAN 4469, BSOC/HIST/STS 4961, HIST 6962)

Spring, 4 credits. Next offered 2011–2012. T. J. Hinrichs. (SC)]

ASIAN 6693 Problems in Modern Chinese History (also ASIAN 4493, HIST 4930/6930)

Fall, 4 credits. S. Cochran.

For description, see HIST 4930. (SC)

[ASIAN 6694 Problems in Modern Chinese History (also ASIAN 4499, HIST 4990/6940)

Spring, 4 credits. Next offered 2011–2012. S. Cochran. (SC)]

ASIAN 6696 Southeast Asian History from the 18th Century (also HIST 6960)

Spring, 4 credits. T. Loos.

For description, see HIST 6960. (SC)

ASIAN 6697 Premodern Southeast Asia (also ASIAN 3397, HIST 3950/6950)

Fall, 4 credits. E. Tagliacozzo.

For description, see HIST 3950. (SC)

ASIAN 6698 Seminar in Japanese Thought (also HIST 6980)

Spring, 4 credits. Limited to 15 graduate students. Prerequisite: reading knowledge of Japanese. J. V. Koschmann.

For description, see HIST 6980. (SC)

[ASIAN 7702 Graduate Seminar in East Asian Literature

Spring, 4 credits. Next offered 2011–2012. B. de Bary. (LL)]

ASIAN 7703–7704 Directed Research

7703, fall or spring; 7704, fall or spring. 1–4 credits. Staff.

[ASIAN 7708 Academic Study of Religion

Fall, 4 credits. Prerequisite: graduate standing and permission of instructor. Letter grades only. Next offered 2011–2012 or by demand. J. M. Law.

This course is limited to graduate students with a strong interest in the academic study of religion. (RL)]

ASIAN 8899 Master's Thesis Research

Fall, spring, 2–4 credits. Staff.

ASIAN 9999 Doctoral Dissertation Research

Fall, spring, 2–4 credits. Staff.

Asia—Honors and Supervised Reading Courses**ASIAN 4401 Asian Studies Honors Course**

Fall or spring, 4 credits. Prerequisite: senior standing; admission to honors program. Staff.

Supervised reading and research on the problem selected for honors work.

ASIAN 4402 Asian Studies Honors: Senior Essay

Fall or spring, 4 credits. Prerequisite: admission to honors program. Staff.

The student, under faculty direction, prepares an honors essay.

ASIAN 4403-4404 Asian Studies Supervised Reading

Fall, spring, or both. 1-4 credits.

Prerequisite: permission of instructor; majors and other qualified students.

Intensive reading under the direction of a member of the staff.

Bengali**BENGL 1121-1122 Elementary Bengali I and II**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for BENGL 1122, BENGL 1121 or examination. Letter grades only. S. Mukherjee.

For beginners, provides a thorough grounding in conversational, reading, and writing skills.

BENGL 2201-2202 Intermediate Bengali I and II @

2201, fall; 2202, spring. 4 credits each semester. **BENGL 2201 satisfies Option 1.** Prerequisites: for BENGL 2201, BENGL 1122 or examination; for BENGL 2202, BENGL 2201 or examination. Letter grades only. S. Mukherjee.

Continuing focus on reading, writing and conversational skills, this course is designed to advance students' oral competence and enhance comprehension skills through reading, conversations, and listening.

BENGL 3301-3302 Advanced Bengali I and II @

3301, fall; 3302, spring. 4 credits. **BENGL 3301 satisfies Option 1.** Prerequisites: for BENGL 3301, BENGL 2202 or permission of instructor; for BENGL 3302, BENGL 3301 or permission of instructor. S. Mukherjee.

Continuing instruction in Bengali at the advanced level focusing on conversation, interview and writing skills.

BENGL 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. S. Mukherjee.

Intended for advanced language study.

Burmese

Note: Contact E. Knuutila in 350 Rockefeller Hall before classes begin for placement or other testing and organizational information.

BURM 1121-1122 Elementary Burmese I and II

1121, fall; 1122, spring. 4 credits each semester. Prerequisites: for BURM 1122, BURM 1121. Letter grades only. Staff.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

[BURM 2201-2202 Intermediate Burmese Reading I and II @

2201, fall or spring; 2202, fall or spring. 3 credits each semester. **BURM 2201 satisfies Option 1.** Prerequisites: for BURM 2201, BURM 1122; for BURM 2202, BURM 2201. Letter grades only. Next offered 2011-2012. S. Tun.

Continuing instruction in Burmese. For consolidating and extending skills acquired at the elementary level in both spoken and written Burmese, and for strengthening the understanding of literary Burmese.]

[BURM 2203-2204 Intermediate Burmese I and II @

2203, fall or spring; 2204, fall or spring. 3 credits each semester. **BURM 2203 satisfies Option 1.** Prerequisites: for BURM 2203, BURM 2202; for BURM 2204, BURM 2203 or by examination. Letter grades only. Next offered 2011-2012. S. Tun.

Continuing instruction in Burmese at the higher intermediate level with a focus on improving oral expression, reading and interpretation of written texts, and further development of listening skills using language learning materials based on authentic audio-video clips.]

[BURM 3301-3302 Advanced Burmese I and II @

3301, fall or spring; 3302, fall or spring. 3 credits each semester. Prerequisites: for BURM 3301, BURM 2202 or permission of instructor; for BURM 3302, BURM 3301. **BURM 3301 satisfies Option 1.** Letter grades only. Next offered 2011-2012. S. Tun.

For further development of listening skills in Burmese with emphasis on enriching vocabulary, strengthening grammatical competence, and understanding various genres and styles of written Burmese, such as articles on current events, anecdotes, short stories, etc.]

[BURM 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits variable. Prerequisite: permission of instructor. Letter grades only. Next offered 2011-2012. S. Tun.

Intended for advanced language study.]

Chinese

Note: Testing for placement, including those with near-native abilities, takes place in registration week, before classes begin. Time and place will be posted at lrc.cornell.edu/asian/programs/placement and on the bulletin board outside 350 Rockefeller Hall.

CHIN 1101-1102 Beginning Mandarin I and II

1101, fall; 1102, spring. 6 credits each semester. Limited to 12 students per sec. Prerequisite: for CHIN 1102, grade of C+ or higher in CHIN 1101, or permission of instructor. Students must enroll in lec and one sec. Because of limited sec size, students missing first two class meetings without university excuse are dropped so others may register. No students added after second week of classes. Letter grades only. S. Divo and staff.

For beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 1109-1110. Students who read Chinese, but who speak "dialects," such as Cantonese or Amoy, should enroll in CHIN 2215.

CHIN 1109-1110 Beginning Chinese Reading and Writing for Students of Chinese Heritage I and II

1109, fall; 1110, spring. 4 credits each semester. Students who complete CHIN 1110 normally continue with CHIN 2209 and 2210. Because of high demand, students missing first two meetings without university excuse are dropped so others may register. Letter grades only. Y. Lee-Mehta and staff.

Intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese (Mandarin) pronunciation.

CHIN 1111-1112 Elementary Cantonese I and II

1111, fall; 1112, spring. 4 credits each semester. Prerequisite: for CHIN 1111, none; for CHIN 1112, CHIN 1111 or equivalent. Students with Mandarin background should consult with instructor for enrollment. Letter grades only. H. Huang.

CHIN 1111 is for beginners with no or very limited Chinese/Cantonese language background from heritage or previous formal training. CHIN 1111-1112 gives basic training in oral/aural Cantonese spoken and used in Guangzhou and Hong Kong. CHIN 1112 gives some basic training in reading Cantonese characters besides the training in oral/aural Cantonese. For more details, see lrc.cornell.edu/asian/courses/ch/chin111 and lrc.cornell.edu/asian/courses/ch/chin112.

CHIN 2201-2202 Intermediate Mandarin I and II @

2201, fall or summer; 2202, spring or summer. 4 credits each semester. **CHIN 2201 satisfies Option 1.** Prerequisites: for CHIN 2201, CHIN 1102 with grade of B- or above or CHIN 1160 with grade of B or above or equivalent as determined through placement exam; for CHIN 2202, CHIN 2201 or equivalent. Letter grades only. Q. Teng and staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 2209-2210 Intermediate Chinese Reading and Writing for Students of Chinese Heritage I and II @

2209, fall; 2210, spring. 4 credits each semester. **CHIN 2209 satisfies Option 1.** Prerequisites: for CHIN 2209, a grade of B in CHIN 1110 or equivalent as determined through placement exam; CHIN 2210, CHIN 2209. Letter grades only. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 2211-2212 Intermediate Cantonese I and II @

2211, fall; 2212, spring. 4 credits each semester. **CHIN 2211 satisfies Option 1.** Prerequisites: for 2211, CHIN 1112 or equivalent, or elementary conversational skills in Cantonese from heritage or previous formal training in Cantonese; for 2212, CHIN 2211 or equivalent. Mandarin speakers should consult with instructor for enrollment. Letter grades only. H. Huang.

Gives comprehensive training in oral and written Cantonese at a higher level than CHIN 1111-1112. Oral training covers conversational Cantonese expression on daily life topics with more vocabulary and more sophisticated sentence structures. Written training includes reading with proper Cantonese pronunciation and writing Cantonese characters. For more details, see lrc.cornell.edu/asian/courses/ch/chin211 and lrc.cornell.edu/asian/courses/ch/chin212.

CHIN 2215 Mandarin for Cantonese Speakers @

Fall. 4 credits. *Satisfies Option 1.* Limited to 15 students. Prerequisite: for students who are fluent Cantonese speakers with intermediate literacy skills and above or for students who have completed intermediate Cantonese courses at Cornell. Letter grades only. S. George.

Works on standard Chinese pronunciation and differences in vocabulary and grammar between Cantonese and Mandarin.

CHIN 3301-3302 High Intermediate Mandarin I and II @

3301, fall; 3302, spring. 4 credits each semester. *CHIN 3301 satisfies Option 1.* Prerequisites: for CHIN 3301, grade of B+ or higher in CHIN 2202, or equivalent as determined through placement exam; for CHIN 3302, CHIN 3301. Letter grades only. Y. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 3309-3310 Business Chinese in Cultural Context I and II (also CHIN 5509/5510) @

3309, fall; 3310, spring. 4 credits each semester. *CHIN 3309 satisfies Option 1.* Prerequisite: two years of Chinese and permission of instructor only. Letter grades only. Z. Chen.

First part of a two-semester sequence for those who studied Mandarin to advanced level. Will cover first five chapters of the textbook, developed surrounding five real cases. These are multinational companies, successfully operated in China by adapting their strategies to special needs of the Chinese market. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a "carrier of culture," acquiring a better understanding of China in economic and cultural terms. To expand students' knowledge on various business-related issues, in addition to business case analysis, supplementary reading, writing, and listening exercises as well as clips of TV shows and interviews will also be provided. Highlights are: Listening comprehension of business news reports; translation of business terms and documents; discussion of Chinese business laws, commercial language and word processing. Class will be in Chinese.

CHIN 3311-3312 Advanced Cantonese I and II @

3311, fall; 3312, spring. 4 credits each semester. *CHIN 3311 satisfies Option 1.* Prerequisites: for CHIN 3311, CHIN 2212 or equivalent; CHIN 3312, CHIN 3311 or equivalent. Letter grades only. H. Huang.

CHIN 3311 will give comprehensive training in oral and written Cantonese to enable the students to conduct discussions or narrations to express both concrete and abstract ideas on simple academic or special topics about society, culture, or technology. It will also strengthen the skill to read articles and write short essays in Cantonese characters. CHIN 3312 will give comprehensive training in oral and written Cantonese to enable the students to acquire the skills to understand without major difficulties, conduct discussions on common academic topics and public broadcast news, as well as the skills to read articles on public publishings and write essays on academic or special topics in Cantonese characters.

CHIN 3341 High Intermediate Mandarin: CAPS in D.C. @

Fall. 4 credits. *Satisfies Option 1.* Letter grades only. Staff. For description, see CHIN 3301.

CHIN 4406 Readings in Chinese History and Business Culture (also CAPS 4406) @

Fall. 4 credits. *Satisfies Option 1.* Z. Chen.

This course is especially designed for those who are majoring in China and Asian Pacific Studies (CAPS) and have studied Mandarin to the advanced level (or equivalent). The main goal of the course is to continuously enhance the students' Chinese proficiency while, at the same time, preparing them for studying in a Chinese-language learning setting in China. In recent years, along with the rapid growth of Chinese economy, issues on Chinese business and economy became a hot topic. Following this trend, the course is aimed to enhance students' Chinese skills in the business context and promote their understanding of the macro and micro business environment and culture in China. In addition, texts selected from a variety of sources and introducing the history of the most famous historical sites in different places in China will be used as required readings for the course to help students prepare for their travels in China.

CHIN 4411-4412 Advanced Mandarin I and II @

4411, fall; 4412, spring. 4 credits each semester. *CHIN 4411 satisfies Option 1.* Prerequisites: for CHIN 4411, grade of B+ or higher in CHIN 3302, or equivalent as determined through placement exam; for CHIN 4412, grade of B+ or higher in CHIN 4411 or permission of instructor. Letter grades only. Q. Teng.

Reading, discussion, and composition at advanced levels.

[CHIN 4425 Special Topics (also CHIN 6625) @

Spring. 4 credits. *Satisfies Option 1.* Prerequisite: permission of instructor. Letter grades only. Next offered 2011-2012. Staff.]

CHIN 4426 Reading and Viewing Modern China (also CAPS 4450, CHIN 6626, HIST 4650/6650) @

Spring. 4 credits. *Satisfies Option 1.* Prerequisite: permission of instructor. Z. Chen.

For description, see HIST 4650.

CHIN 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Staff.

Intended for advanced language study.

CHIN 4441 Advanced Mandarin: CAPS in D.C. @

Fall. 4 credits. *Satisfies Option 1.* Letter grades only. Staff.

For description, see CHIN 4411.

CHIN 4445 Directed Study: CAPS in D.C.

Fall. 1-4 credits. Letter grades only. Staff. For description, see CHIN 4431-4432.

CHIN 4451 Advanced Mandarin: CAPS in Beijing @

Fall. 4 credits. *Satisfies Option 1.* Letter grades only. Staff.

For description, see CHIN 4411.

CHIN 4455 Directed Study: CAPS in Beijing

Fall. 1-4 credits. Letter grades only. Staff. For description, see CHIN 4431-4432.

CHIN 4457 High Advanced Mandarin: CAPS in Beijing @

Fall. 3 credits. *Satisfies Option 1.* Letter grades only. Staff. For description, see CHIN 4427.

CHIN 5509-5510 Business Chinese in Cultural Context I and II (also CHIN 3309-3310)

5509, fall; 5510, spring. 4 credits each semester. Letter grades only. Z. Chen. For description, see CHIN 3309-3310.

[CHIN 6625 Special Topics (also CHIN 4425)

Fall. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2011-2012. Staff.]

CHIN 6626 Historical Documents on Modern China (also CHIN 4426, HIST 4650/6650)

Spring. 4 credits. Prerequisite: permission of instructor. Z. Chen. For description, see HIST 4650.

Chinese FALCON (Full-Year Asian Language CONcentration)

For full information, brochures, etc., see the FALCON Program coordinator in 388 Rockefeller Hall or e-mail: falcon@cornell.edu or lrc.cornell.edu/falcon

FALCON is designed to help students develop "copability" in Mandarin Chinese by bringing them to the level where they can make progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in China typically receive. This allows students to develop levels of fluency, accuracy, and control that are not achieved in other academic settings. By taking the entire full-year sequence, students can complete as much Chinese in one calendar year as they would complete in three or more years of regular study at most academic institutions. The full-year sequence is CHIN 1159 or 1160 (summer), 2260 (fall), and 3360 (spring). Students typically take the entire sequence, but they may take any portion of the program if they have the necessary background as determined by a placement interview. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. For more information and application forms, please contact the FALCON program office. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University. In the summer and fall, three small interactive classes per day are conducted entirely in Chinese, and one lecture is conducted in both Chinese and English. In the spring semester, all four classes are conducted entirely in Chinese. In the summer and fall, students are also required to spend at least two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings. The demands of this 16-credit program do not normally permit students to take other courses simultaneously.

Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or at lrc.cornell.edu/falcon/apply.

CHIN 1159 Summer Intensive Chinese (FALCON)

Summer only. 1-7 credits. Prerequisite: some previous language study in Chinese; permission of program director. S. Divo and staff.

This course is for students with significant prior background in Chinese who take CHIN 1160 for fewer than 8 credits. Formal application and a placement interview are required.

CHIN 1160 Introductory Intensive Mandarin (FALCON)

Summer only. 8 credits. Students who complete this course with grade of at least B are normally eligible to enroll in CHIN 2201. S. Divo and staff.

This is a nine-week intensive, 8-credit course that meets only in the summer, Monday through Friday from 8:30 a.m. to 4:30 p.m., beginning from an absolutely introductory level introducing the spoken and written language. Lectures on linguistics and cultural matters, intensive practice with native speakers, and laboratory work prepare students for an intermediate level of study. This course involves work on all four skills: speaking, listening comprehension, reading, and writing. Students who complete this course with a grade of B or higher are normally eligible to enroll in CHIN 2201, if they choose not to continue to CHIN 2260.

CHIN 2260 Intermediate Intensive Mandarin (FALCON) @

Fall. 16 credits. *Satisfies Option 1.* Prerequisites: grade of B+ in CHIN 1160 or equivalent with permission of instructor. Students must apply formally to FALCON program; open to all Cornell students and students from other institutions. S. Divo and staff.

Students work on spoken and written Chinese at the intermediate level, developing fluency, accuracy, and control that are not achieved in other academic settings. This is a full-time academic program that meets Monday through Friday from 9:05 a.m. to 4:30 p.m., with 1-3 hours per day of self-directed practice in Cornell's Language Resource Center.

CHIN 3360 Advanced Intensive Mandarin (FALCON) @

Spring. 16 credits. *Satisfies Option 1.* Prerequisite: grade of B+ or higher in CHIN 2260 or permission of instructor. CHIN 3360 is scheduled to be held in Beijing, People's Republic of China. S. Divo and staff.

After finishing the summer and fall terms at Cornell, students have the language skills to benefit fully from a Chinese linguistic and cultural environment. FALCON's full-year students spend their last semester in Beijing, where they continue to improve their skills and put them to effective use in daily life. In Beijing, students continue to attend four small-group classes with FALCON-trained Chinese language teachers; these classes include comprehensive training to develop reading, writing, and speaking proficiency, a course in newspaper reading and translation, as well as a course in advanced listening skills. In

addition, a variety of activities outside the classroom, including field trips and guest lectures, are provided. Spring FALCON is scheduled at the School of International Studies at Peking University.

Literature in Chinese

CHLIT 2213-2214 Introduction to Classical Chinese @ # (LA-AS)

2213, fall; 2214, spring. 3 credits each semester. *CHLIT 2213-2214 does NOT satisfy Option 1.* Prerequisite: for 2213, qualification in Chinese or permission of instructor; for 2214, 2213 or permission of instructor. May be taken concurrently with CHIN 1101-1102, 2201-2202, 3301-3302. Open to students who have studied at least two years of any language that employs Chinese writing system (e.g., Mandarin, Cantonese, Japanese). R. McNeal and B. Rusk.

Two-part introductory course. Students learn the fundamental grammar and vocabulary of classical Chinese by analyzing and translating short passages. (LL)

CHLIT 3307 Readings in Classical Chinese Literature @ # (LA-AS)

Spring. 4 credits. Prerequisite: CHLIT 2214 or permission of instructor. D. X. Warner. This course surveys selected texts—primarily in prose—from the ancient and medieval periods. (LL)

CHLIT 4418 Medieval Chinese Narrative Tales @ # (LA-AS)

Spring. 4 credits. Prerequisite: at least three years of Chinese language training and preferably one year classical Chinese. D. X. Warner.

This course introduces students to medieval Chinese narrative literature. (LL)

[CHLIT 4420 T'ang Poetry: Themes and Contexts (also CHLIT 6620) @ # (LA-AS)]

Spring. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. Next offered 2012-2013. D. X. Warner. (LL)

CHLIT 4421-4422 Directed Study

Fall or spring. 2-4 credits each semester. Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content. (LL)

[CHLIT 4435 Chinese Buddhist Texts @ # (LA-AS)]

Fall. 4 credits. Prerequisite: one year of classical Chinese or permission of instructor. Open to students in any area of East Asia with an interest in developing skills in Buddhist texts. Next offered 2011-2012. D. Boucher. (LL)

CHLIT 4466 Later Chinese Literary Prose (also CHLIT 6666) @ # (LA-AS)

Fall. 4 credits. Prerequisite: CHLIT 2213-2214 or permission of instructor. B. Rusk. This seminar introduces the prose writing styles of the last millennium of Literary Chinese (roughly the years 1000 through 1900) through close reading of a selection of original documents. Students will learn work on skills to enable them to read further texts on their own, including the identification of styles and linguistic registers, use of relevant reference books, punctuation of unpunctuated

documents, and techniques for translation into English. Readings will be mainly in Literary/Classical Chinese, with additional secondary readings in Modern Chinese and/or English. (LL)

CHLIT 6603 Seminar in Chinese Fiction and Drama

Spring. 4 credits. Prerequisite: permission of instructor. E. Gunn. (LL)

[CHLIT 6605 Seminar in Chinese Fiction and Drama]

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2011-2012. E. Gunn. (LL)

[CHLIT 6610 Chinese Cultural Criticism]

Spring. 4 credits. Next offered 2011-2012. E. Gunn. (SC)

CHLIT 6613 Early Chinese Text Studies

Fall. 4 credits. Prerequisite: permission of instructor only. R. McNeal.

Students will explore theoretical issues related to methods of textual analysis of early Chinese sources and develop practical experience employing various text critical approaches to reading specific texts. (LL)

[CHLIT 6620 T'ang Poetry: Themes and Contexts (also CHLIT 4420)]

Fall. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. Next offered 2012-2013. D. X. Warner. (LL)

CHLIT 6621-6622 Advanced Directed Reading: Chinese Historical Syntax

6621, fall; 6622, spring. 2-4 credits.

Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings. (LL)

CHLIT 6666 Later Chinese Literary Prose (also CHLIT 4466)

Fall. 4 credits. B. Rusk.

For description, see CHLIT 4466. (LL)

Hindi

HINDI 1101-1102 Elementary Hindi I and II

1101, fall; 1102, spring. 6 credits each semester. *Students may not receive credit for both HINDI 1101 and 1109. Students may not receive credit for both HINDI 1102 and 1110.*

Prerequisite: for HINDI 1102, HINDI 1101 or equivalent. Letter grades only. S. Singh and staff.

This is a course designed for a complete beginner in Hindi. Students are not expected to have any prior knowledge in Hindi before taking this course. In this course, they will learn how to read and write Hindi script and how to speak survival Hindi in different social settings. While reading, writing, and listening are very important components of this course, much emphasis is put on spoken Hindi.

HINDI 1109–1110 Accelerated Hindi I and II
