This course will serve as an introduction to philosophy through a consideration of philosophical issues about the nature of mind. Central to the course will be the mind-body problem; here we will be concerned with the question of whether there is a mind (or soul or self) that is distinct from the body and how thought, feelings, sensations, etc., are related to states of the brain and body. Other issues will include knowledge of other minds (how do we know that other human beings are not mindless automata?), the nature of self-consciousness (how do we know about our own mental states?), the nature of mental representation (how can states of a mind be "about" things and a state of affairs outside it?), and the nature of personal identity (what makes someone existing now and someone existing a year ago one and the same person?). Written work for the course will consist of several short papers, and a final examination.

**263 Religion and Reason**
Spring. 4 credits.
T R 10:10–11:25. N. Kretzmann.
Recent and traditional literature will be taken into account in the examination of such topics as evidence for and against the existence of a god, philosophical problems associated with the attributes of God as described in the great monotheistic religions, and philosophical problems associated with the relationship of God to the physical universe and to human beings.

**286 Science and Human Nature**
Spring. 4 credits.
M W F 11:15. R. N. Boyd, N. L. Sturgeon.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena. Topic for 1989–90: Darwin, social Darwinism, and sociobiology.

## Intermediate Courses

Some of these courses have prerequisites.

**[309 Plato**
4 credits. Not offered 1989–90.]

**[310 Aristotle**
4 credits. Not offered 1989–90.]

**311 Modern Rationalism**
Spring. 4 credits.
T R 1:25–2:40. G. Fine.
The focus will be on Descartes, but some attention will be paid to Spinoza and Leibniz. Topics for the course will include substance, necessity, and possibility; free will and determinism; proofs for the existence of God; innate ideas; and skepticism and the limits of knowledge.

**312 Modern Empiricism**
Fall. 4 credits.
T R 2:55–4:10. S. Shoemaker.
David Hume and Thomas Reid. Topics will include: skepticism vs. common sense; the nature of ideas, "abstract ideas," and meaning; the nature of empirical reasoning (and scepticism about it); the nature of belief, memory, and perception; our knowledge of the external world (and scepticism about it); and the nature of causality, substance, and personal identity.

**[314 Topics in Ancient Philosophy**
4 credits. Not offered 1989–90.]

**[315 Special Topics in the History of Philosophy**
4 credits. Not offered 1989–90.]

**[316 Kant**
4 credits. Not offered 1989–90.]

**[317 Hegel**
4 credits. Not offered 1989–90.]

**318 Twentieth-Century Philosophy**
Spring. 4 credits.
T R 11:40–12:55. C. A. Ginet.
Topic for 1989–90: The philosophy of Ludwig Wittgenstein.

**[319 Philosophy of Marx**
4 credits. Not offered 1989–90.]

**331 Formal Logic**
Spring. 4 credits. Prerequisite: Philosophy 231 or equivalent.
M W F 1:25. H. Hodes.
Review of derivations and other material covered in 231; basic set theory; truth in a model and the semantic definitions of consequence, validity, equivalence, and other logic concepts; and the soundness and completeness of a natural-deduction formalization of elementary logic. Further topics will be covered if time permits.

**332 Philosophy of Language**
Spring. 4 credits.
M W F 10:10. M. Crimmins.
An introduction to the philosophy of language, focusing on problems about meaning, truth, and reference in linguistic communication, and how these issues bear on the relations among mind, language, and the world. Readings will be selections from Frege, Russell, Wittgenstein, Quine, Kripke, and others.

**341 Ethical Theory**
Fall. 4 credits.
T R 1:25–2:40. M. Wachsberg.
Topic for 1989–90: Consequentialism and Its Critics.

**342 Law, Society, and Morality (also Law 666)**
Spring. 4 credits.
T R 1:25–2:40. D. Lyons.
This is an introduction to the philosophy of law. It will emphasize the nature of law and its relation to moral principle. Theories to be discussed include natural law, legal positivism, legal realism, and contemporary interpretive and critical theories of law. Other topics may include the justification of legal punishment and coercion, the idea of an obligation to obey the law, and the relevance of justice to law.

**344 History of Ethics—Ancient and Medieval**
Fall. 4 credits.
M W 2:30–3:45. T. H. Irwin.
The development of moral theory in Greek, Roman, and medieval philosophers. Socrates and his questions about morality; the different answers of Plato, Aristotle, and the Stoics; and the influence of Christian thought. Main questions: happiness, welfare, and the human good; the virtues; self-interest and the interests of others; love, friendship, and morality; theories of human nature and their relevance to ethics; comparisons and contrasts with modern moral theory. Readings mainly from Plato, Aristotle, the Stoics, St. Paul, St. Augustine, St. Thomas Aquinas. No prerequisites.

**345 History of Ethics—Modern**
Spring. 4 credits. (Philosophy 344 is not prerequisite for 345.)
M W 2:30–3:45. T. H. Irwin.
A continuation of Philosophy 344. Hobbes's challenge to Greek and Christian ethics, responses to Hobbes, self-interest and the interests of others, the place of reason and sentiment in ethics, the objectivity of ethics, different conceptions of the right and the good, utilitarianism and its critics, and radical critiques of morality. Readings mainly from Hobbes, Butler, Hume, Kant, Sidgwick, Nietzsche, Bradley, and Rawls.

**346 Modern Political Philosophy**
Fall. 4 credits.
M W 2:30–3:45. R. Miller.
A study of the leading current philosophical arguments about rights, equality, liberty, democracy, and the general welfare as they affect basic choices among institutions and political strategies. Topic for 1989–90: Liberalism and its critics—a study of liberal, conservative and socialist perspectives on the choice of basic economic and political institutions, centering on John Rawls's *A Theory of Justice*, Robert Nozick's *Anarchy, State and Utopia*, and Marxist writings.

**361 Metaphysics and Epistemology**
Fall. 4 credits.
T R 11:40–12:55. K. A. Appiah.
The course will focus on three important questions about knowledge. What is it to know something? What sorts of things can be known—in particular, is there such a thing as moral knowledge? Is what we know—either about scientific or moral questions—relative to our own personal or cultural presuppositions?

**[363 Topics in the Philosophy of Religion**
4 credits. Not offered 1989–90.]

**369 Limiting War: The Morality of Modern State Violence (also Government 469)**
Fall. 4 credits.
T R 2:55–4:10. H. Shue.
Modern states employ or threaten violence not only through conventional war but in various other forms including "low-intensity warfare," chemical and biological warfare, terrorism, and nuclear deterrence. This course critically examines the best arguments about limiting or prohibiting various contemporary means and methods of fighting one's enemies, arguments with conclusions ranging from pacificism to "realism." Have traditional doctrines about just war been overtaken by 20th-century events and technologies, or is it still possible to provide a reasonable justification for limiting war? If so, how? Special emphasis is given to moral issues about nuclear weapons. Readings include the U.S. Catholic Bishops' Pastoral Letter on nuclear deterrence, *Just and Unjust Wars*, by Walzer, and *Nuclear Deterrence, Morality and Realism*, by Finnis, Boyle, and Grisez.

**381 Philosophy of Science: Knowledge and Objectivity**
Fall. 4 credits.
W 7–9:30 p.m. R. N. Boyd.
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence; scientific objectivity; the nature of theories, models, and paradigms; and the character of scientific revolutions. In addition to the contemporary literature in the philosophy of science, readings are also drawn from the history of science and from the works of classical modern philosophers such as Locke, Hume, and Descartes.

**[382 Philosophy and Psychology**
4 credits. Not offered 1989–90.]

**[383 Philosophy of Choice and Decision**
4 credits. Not offered 1989–90.]

**384 Philosophy of Physics**
Fall. 4 credits.
M W F 11:15. J. Jarrett.
An introduction to issues arising in a philosophical examination of modern physical science. Relevant aspects of classical statistical mechanics, relativity theory, and quantum mechanics will be considered in connection with such topics as microphysical indeterminateness, probabilistic laws, causality, the direction of time, action-at-a-distance, and scientific explanation.

**[387 Philosophy of Mathematics**
4 credits. Not offered 1989–90.]

**[388 Social Theory**
4 credits. Not offered 1989–90.]

**[389 Philosophy of Science: Evidence and Explanation**
4 credits. Not offered 1989–90.]

**390 Informal Study**
Fall or spring. Credit to be arranged.
Staff.
To be taken only in exceptional circumstances. Must be arranged by the student with his or her adviser and the faculty member who has agreed to direct the study.

## Advanced Courses and Seminars

These courses are offered primarily for majors and graduate students.

**[395 Majors Seminar**
4 credits. Not offered 1989–90.]

**410 Medieval Latin Philosophical Texts**
Variable credit. Fall or spring. Prerequisites: knowledge of Latin and permission of instructor.
Hours to be arranged. N. Kretzmann.
Reading medieval Latin philosophical texts in the original.

**411 Greek Philosophical Texts (also Classics 311)**
Variable credit. Fall or spring. Prerequisites: knowledge of Greek and permission of instructor.
Hours to be arranged. T. H. Irwin.
Reading of Greek philosophical texts in the original.

**412 Medieval Philosophy**
Fall. 4 credits.
W 4:15–6:15. N. Kretzmann.
Topic for 1989–90: The Philosophy of Duns Scotus. Scotus's metaphysics and theology as presented in his rather brief treatise *De primo principio*, and his philosophical psychology and ethics, notable for their emphasis on will over intellect in the analysis of human action and for the conception of human freedom.

**[413 Topics in Ancient Philosophy**
4 credits. Not offered 1989–90.]

**[414 German Philosophy after Kant**
4 credits. Not offered 1989–90.]

**[431 Deductive Logic**
4 credits. Not offered 1989–90.]

**[433 Philosophy of Logic**
4 credits. Not offered 1989–90.]

**[436 Intensional Logic**
4 credits. Not offered 1989–90.]

**[437 Problems in the Philosophy of Language**
4 credits. Not offered 1989–90.]

**[441 Contemporary Ethical Theory**
4 credits. Not offered 1989–90.]

**[442 Ethics and the Philosophy of Mind**
4 credits. Not offered 1989–90.]

**[443 Topics in Aesthetics**
4 credits. Not offered 1989–90.]

**444 Contemporary Legal Theory (also Law 710)**
Fall. 4 credits.
T 4:15–6:15. D. Lyons.
This seminar examines some central issues and recent developments in legal philosophy, such as problems of legal interpretation and "critical legal studies."

**[446 Topics in Social and Political Philosophy**
4 credits. Not offered 1989–90.]

**461 Metaphysics**
Spring. 4 credits.
M W F 2:30. S. Shoemaker.
The course will deal with issues about essence and modality, and will be focused mainly on David Lewis's book *On the Plurality of Worlds*.

**481 Problems in the Philosophy of Science**
Spring. 4 credits.
T R 10:10–11:25. J. Jarrett.
A study of the logical and conceptual structure of quantum mechanics. Topics to be discussed include Heisenberg's Principle, complementarity and the Copenhagen Interpretation, quantum logic, the measurement problem, the "paradoxes" (Schrödinger's cat, Wigner's friend, the EPR argument), Bell's Theorem, and the Everett-Wheeler ("many worlds") Interpretation. Some previous training in physics or mathematics is recommended, but no specialized background will be presupposed. The course will attempt to provide a philosophically responsible account of the structure of quantum mechanics in a way that fosters insight into the reasons certain aspects of the theory remain controversial.

**490 Special Studies in Philosophy**
Fall or spring. 4 credits. Open only to honors students in their senior year.
Staff.

**611 Ancient Philosophy**
Fall and spring. 4 credits.
Fall: T 4:15–6:15, G. Fine; spring: M 4:15–6:15, T. H. Irwin.
Topics for 1989–90: Fall: Plato's later dialogues; spring: Platonism from Plato to Plotinus.

**[612 Medieval Philosophy**
4 credits. Not offered 1989–90.]

**613 Modern Philosophers**
4 credits.
T 4:15–6:15. A. Wood.
Topic for 1989–90: Kant's Practical Philosophy.

**[619 History of Philosophy**
4 credits. Not offered 1989–90.]

**[631 Logic**
4 credits. Not offered 1989–90.]

**633 Philosophy of Language**
Fall. 4 credits.
M 4:15–6:15. M. Crimmins.
Topic for 1989–90: Semantics for folk-psychological expressions, including belief reports. Brief history of the debate followed by close consideration of recent proposals.

**641 Ethics and Value Theory**
Spring. 4 credits.
W 4:15–6:15. M. Wachsberg.
Topic for 1989–90: Feminist Ethical Theory.

**[661 Theory of Knowledge**
4 credits. Not offered 1989–90.]

**662 Philosophy of Mind/The Emotions**
Spring. 4 credits.
R 4:15–6:15. N. Carroll.
Recent years have witnessed an increasing interest on the part of analytic philosophers in the emotions. The purpose of this seminar is to survey a range of topics in this growing literature, including: re-assessments of historical positions about the emotions, questions about the nature and structure of the emotions in general, about the nature of particular emotions, and about the relevance of the emotions to moral and aesthetic theory. Though historical figures will be discussed, the emphasis of the course will be on contemporary debates about the emotions.

**[664 Metaphysics**
4 credits. Not offered 1989–90.]

**665 Metaphysics**
Spring. 4 credits.
W 7–9:30. R. Boyd and R. Miller.
Topic for 1989–90: Realism in the Philosophy of Science and in Metaethics.

**[681 Philosophy of Science**
4 credits. Not offered 1989–90.]

**[682 Philosophy of Social Science**
4 credits. Not offered 1989–90.]

**700 Informal Study**
Fall or spring. Credit to be arranged.
Staff.
To be taken by graduate students only in exceptional circumstances and by arrangement made by the student with his or her Special Committee and the faculty member who has agreed to direct the study.

**773 Proseminar in Cognitive Studies (also Psychology 773 and Cognitive Studies 773)**
Fall. 2 credits.
R 1:25–2:55 Staff (faculty from the Cognitive Studies program).

## Related Courses in Other Departments

**Mathematics 685 Beyond Classical First-Order Logic**
Fall.

**Theatre Arts 665 Advanced Topic in Aesthetics: Comic Theory**
Fall.

# PHYSICS

D. B. Fitchen, chair and director of undergraduate studies (109 Clark Hall, 255-6016); J. P. Alexander, V. Ambegaokar, N. W. Ashcroft, K. Berkelman, D. G. Cassel, G. V. Chester, B. Cooper, R. M. Cotts, P. Drell, V. Elser, M. E. Fisher, C. P. Franck, R. Galik, B. Gittelman, K. Gottfried, L. N. Hand, D. L. Hartill, W. Ho, D. F. Holcomb, M. P. Kalos, T. Kinoshita, H. Kragh, J. A. Krumhansl, A. LeClair, D. M. Lee, G. P. Lepage, R. M. Littauer, N. D. Mermin, N. Mistry, J. Orear, J. M. Parpia, R. O. Pohl, J. D. Reppy, R. C. Richardson, D. L. Rubin, E. E. Salpeter, J. P. Sethna, S. L. Shapiro, R. H. Siemann, A. J. Sievers, E. Siggia, R. H. Silsbee, A. Silverman, P. C. Stein, S. L. Stone, R. M. Talman, M. P. Teter, S. A. Teukolsky, R. Thorne, M. Tigner, H. Tye, J. W. Wilkins, K. G. Wilson, T-M. Yan, D. R. Yennie

The Department of Physics offers a full range of university-level work in physics, from general education courses for nonscientists to Ph.D.-level independent research. Major research facilities are operated by two component organizations, the Laboratory of Atomic and Solid State Physics (LASSP) and the Laboratory of Nuclear Studies (LNS). LASSP carries out extensive research efforts in condensed-matter physics and in low-temperature physics. LNS operates a major

high-energy particle physics research facility at Wilson Laboratory, the Cornell electron-positron storage ring, called CESR. Theoretical work is carried out in many fields of physics, including astrophysics. There is a full schedule of weekly research-oriented seminars and colloquia. Junior and senior students will find many opportunities for research participation and summer jobs.

Three introductory physics sequences are open to freshmen: 101–102, 112–213–214–315, and 207–208. In addition, there is a cluster of general-education courses, Physics 200 through 206. Physics 101–102, a self-paced autotutorial course, is designed for students who do not intend to take further physics courses and who do not have preparation in calculus. Physics 112 and 207 both require calculus (Mathematics 191 or 111), and additional mathematics is required for subsequent courses in sequence. Physics 101–102 or 207–208 may be taken as terminal physics courses. The three- (or four-) term sequence 112–213–214–315 or 116–217–218–315 is recommended for engineers and physics majors.

Courses beyond the introductory level that might be of interest to nonmajors include. Physics 315, Phenomena of Microphysics; Physics 330, Modern Experimental Optics; and Physics 360, Electronic Circuits.

Advanced placement and credit are offered as outlined in "Advanced Placement of Freshmen," or students may consult Professor Cotts, 522 Clark Hall. Transfer students requesting credit for physics courses taken at another college should consult the department office.

## The Major

Various options permit the student to concentrate heavily on physics or to take less physics and pursue an accompanying constellation of courses in a related area. Those desiring a physics concentration as preparation for professional or graduate work should complete Physics 112–213–214 or 116–217–218, and, if possible, 315 by the end of the sophomore year. A basic preparation for a less intensive physics program may include Physics 112–213–214 or 207–208–214. In either case, it is necessary to complete a concurrent sequence of mathematics courses.

Mathematics 191–192–293–294 are usually recommended, except for students especially interested in continuing the study of mathematics, for whom Mathematics 111–122–221–222 (or equivalent) may be preferred.

Prospective majors are urged to make an early appointment at the physics office for advice in planning their programs. Acceptance into the major is normally granted after completion of a year of physics and mathematics at Cornell with grades of B– or better. The student should propose a tentative plan for completing his or her graduation requirements as well as those for the major. The plan may change from time to time, but it must be approved by the major adviser. The major requirements have two components—a core and a concentration. Core requirements for the major include:

1) Physics 112–213–214 or 116–217–218 or 207–208–214.
2) an intermediate physics course in each of four areas: (a) mechanics—Physics 318 or 431, (b) electricity and magnetism—Physics 325 or 432, (c) modern physics—Physics 315 or 443, and (d) laboratory physics—Physics 310 (when not taken as substitute for laboratory work in 214 or 218), 330, 360, or 410.

Mathematics courses prerequisite for these physics courses are also necessary. The choice of core is influenced by the intended concentration. For a concentration in physics, Physics 116–217–218 (or 112–213–214), 315, 318, 325, and any 300-level laboratory course is appropriate, while for concentrations outside physics, part (2) of the core might consist of, for example, Physics 315, 360, 431, 432.

The concentration reflects the student's interest in some area related to physics; the array of courses must have internal coherence and be approved by the major adviser. The concentration must include at least 15 credits, with at least 8 credits in courses numbered above 300. Students have chosen to concentrate in such topics as physics, biophysics, chemical physics, astrophysics; geophysics; natural sciences; history and philosophy of science; computational physics; or physics with economics or business. A combined biology-chemistry concentration is recommended for premedical students or those who wish to prepare for work in biophysics. The concentration in natural science is particularly appropriate for teacher preparation.

The concentration in physics is recommended as preparation for professional or graduate work in physics or a closely related discipline. Twelve of the 15 concentration credits must be selected from physics courses numbered above 300 (in addition to those selected for part (2) of the core); Physics 410 must be included within those 12. The following courses are strongly recommended: Physics 341, 443; Mathematics 421, 422, and 423; and at least one of Physics 444, 454, Applied and Engineering Physics 401, 434, Astronomy 431, 432, or Geological Sciences 388.

**Foreign language requirement.** Students interested in eventual graduate work in physics are advised to meet this requirement with French, German, or Russian.

**Honors.** A student may be granted honors in physics upon the recommendation of the Physics Advisers Committee of the physics faculty.

**Double majors.** Double majors with physics are possible and not at all uncommon. However, if a student plans to complete a major in physics as well as majors in one or more other subjects, then the set of courses used to satisfy the physics major must be completely different from the set or sets used to satisfy the other major(s).

## Distribution Requirement

The requirement in physical sciences is met by any two sequential courses such as Physics 101–102 or 207–208 or 112–213 or any combination of the first term of one sequence and the second term of another. It is also met by any two general education courses from the group 200–206 or by a combination of 101 or 112 or 207 with one from the group 200–206.

## Courses with Overlapping Content

Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with similar content. In general, students may receive credit for only one of the courses in each group.

Physics 101, 112, and 207
Physics 102 and 208
Physics 112, 116, and 207
Physics 208, 213, and 217

## Course Prerequisites

Prerequisites are specified in physics course descriptions to illustrate the materials that students should have mastered. Students who wish to plan programs different from those suggested by the prerequisite ordering are urged to discuss their preparation and background with a physics adviser or with the instructor in the course. In many cases an appropriate individual program can be worked out without exact adherence to the stated prerequisites.

## Courses

**101–102 General Physics**
101, fall; 102, spring (101–102 also normally offered in summer). 4 credits each term. Prerequisites: three years of high school mathematics, including some trigonometry. Prerequisite for Physics 102: Physics 101 or 112 or 207. Includes more modern physics and less mathematical analysis than Physics 207–208 but more mathematics than 201–206. (Students planning to major in a physical science should elect Physics 207–208 or 112–213–214.) A mostly self-paced, mastery-oriented autotutorial format; students work in a learning center at hours of their choice. Repeated tests on each unit are given until mastery is demonstrated.

One opening lecture 7:30 p.m., R Aug. 31 or M Sept. 4 (fall); M Jan. 22 (spring). D. B. Fitchen, B. Richardson.

Basic principles treated quantitatively but without calculus. Major topics for 101: kinematics; gravitational and electric forces and fields; momentum, angular momentum, energy; thermal physics, fluid mechanics; sound waves. For 102: electricity and magnetism, optics, relativity; quantum physics, particle structure of matter. Laboratory emphasizes instrumentation, measurement, and interpretation of data. Text: *Principles of Physics*, by Frank J. Blatt.

**112 Physics I: Mechanics and Heat**
Fall or spring (normally also offered in summer). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisite: coregistration in Mathematics 192 (or 194 or 112), or substantial previous contact with introductory calculus combined with coregistration in Mathematics 191 or 111.

Lecs M W F 10:10 or 12:20; 2 recs each week; six 3-hr. labs. Evening exams: fall, Sept. 28, Oct. 31, Dec. 5; spring, Feb. 15, Mar. 15, Apr. 17. Fall, R. M. Talman; spring, D. F. Holcomb.

Mechanics of particles: kinematics, dynamics, conservation laws, central force fields, periodic motion. Mechanics of many-particle systems: center of mass, rotational mechanics of a rigid body, static equilibrium. Introduction to thermodynamics. At the level of *Fundamentals of Physics*, extended version, by Halliday and Resnick.

**116 Physics I: Mechanics and Heat**
Fall or spring. 4 credits. A more analytic version of Physics 112, intended for students who will be comfortable with a deeper, somewhat more abstract approach. (Intended mainly but not exclusively for prospective physics majors.) Prerequisites: a good secondary school physics course and familiarity with basic calculus. Corrective transfers between Physics 116 and Physics 112 (in either direction) are encouraged during the first few weeks of instruction.

Lecs, M W F 10:10; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams may be scheduled. Fall, D. G. Cassel; spring, N. W. Ashcroft.

A more rigorous version of Physics 112, covering similar topics at the level of *An Introduction to Mechanics*, by Kleppner and Kolenkow.

**200 Art, Isotopes, and Analysis (also Material Science and Engineering 285)**
Spring. 3 credits.

Lec TBA. J. W. Mayer (MS&E), S. Taft (Art), D. Eddy (Univ. Libraries).

This course will be based primarily on the analysis of paintings and rare books and the physical concepts underlying modern analytical techniques. Each week a work of art will be described to include the historical and technical aspects of its creation and its modern analysis. Visual, infrared, and X-ray examination provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic transitions. The ratio of isotopes can be used to identify the geographical origin of a particular pigment as well as to date the pigment. Examples will also be given of authentification and conservation.

**201 Why the Sky Is Blue: Aspects of the Physical World**
Fall. 3 credits.

Lec, T R 2:55–4:10; rec, W 3:35–4:25. A. Sadoff.

This is a descriptive physics course aimed specifically at the non–science student. There is an emphasis on the ideas of modern physics where the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the character of physical laws as shown through the great principles of symmetry and conservation. While there are a few computational problems assigned, the purpose is to help students to understand the concepts rather than to master problem-solving techniques.

**203 The Physics of Space Exploration and of Astronomy**
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school mathematics.

Lec, M W F 2:30; disc, W 3:35. E. E. Salpeter.

The principles of physics (plus simple mathematics) are applied to gain knowledge about planets, stars, galaxies, and the universe.

**204 Physics of Musical Sound**
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra.

Lec, M W F 2:30; disc, T 3:35. E. Cassel.

Many features of the production, propagation, and perception of musical sound may be understood in terms of important concepts in physics. Topics covered will include the mechanism of tone production in musical instruments, distinctions in tone quality, musical scales and tuning, basic principles of room acoustics and reproduction of sound, and some aspects of the mechanism of hearing. There will be hands-on demonstrations using computers where we will generate sound of our own design, and compare real instruments with computer simulations. Familiarity with computers is not expected. At the level of *Musical Acoustics*, by D. E. Hall.

**[205 Reasoning about Luck**
Fall. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra. Not offered 1989–90.

Lecs, M W F 2:30; 5. 1-hr. labs to be arranged. V. Ambegaokar.

An attempt to explain how and when natural scientists can cope rationally with chance. The first part of the course deals in a constructive way with the basic ideas of probability theory and explains why it is that in large systems likely events can become overwhelmingly likely. An introduction to mechanics and to heat as probabilistic mechanics follows. In this way, interested students are given a nontrivial understanding of the second law of thermodynamics, that putative bridge between C. P. Snow's two cultures. Another physical theory, quantum mechanics, in which chance occurs—though in a somewhat mysterious way—is touched on. Approximately five self-paced laboratory experiments will be included.]

**206 War and Peace in the Nuclear Age**
Spring. 4 credits. Intended for nonscientists; does not serve as a prerequisite to further science courses. Assumes no scientific background but will use high school mathematics.

Lecs, T R 12:20–1:35;1 rec each week. K. Gottfried.

This course is intended for any student who wishes to understand the following: the developments in 20th-century physics that culminated in the development of the "atomic" bomb; the principles, types, and effects of nuclear weapons; existing and proposed arsenals and delivery systems; the evolution and present state of the nuclear military strategy of the nuclear powers; and the history of, and current issues in, nuclear arms-control negotiations. The course will also examine important concepts involved in military strategy and arms control. Some attention will also be given to the moral and ethical questions involved. Assignments emphasize development of quantitative reasoning skills as well as knowledgeability about technical aspects of the subject matter.

**207–208 Fundamentals of Physics**
207, fall; 208, spring. 4 credits each term. Prerequisites for Physics 207: high school physics plus coregistration in Mathematics 112 or 192, or substantial previous contact with introductory calculus, combined with coregistration in a math course approved by instructor. Prerequisites for Physics 208: Physics 207 (or 112 or 101 ) and at least coregistration in Mathematics 192 or 112. Physics 207–208 is a two-semester introduction to physics intended for students majoring in a physical science, mathematics, or an analytically oriented biological science.

Lecs, M W F 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 17, Nov. 16; spring, Mar. 1, Apr. 12. Fall, A. Silverman; spring, R. O. Pohl.

207: mechanics, Newton's laws, conservation laws, waves, and selected topics from gravitation, thermodynamics, fluid mechanics, and acoustics.

208: electricity and magnetism, circuits, and introduction to physical and geometric optics. At the level of *Physics*, by H. C. Ohanian.

**213 Physics II: Electricity and Magnetism**
Fall or spring (also normally offered in summer). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 112 and coregistration in the continuation of the mathematics sequence required for 112.

Lecs, T R 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 5, Oct. 31, Nov. 21; spring, Feb. 20, Mar. 15, Apr. 17. Fall, R. C. Richardson; spring, J. Orear, R. Galik; spring, J. Orear.

Electrostatics, behavior of matter in electric fields, magnetic fields, Faraday's law, Maxwell's equations, electromagnetic oscillations and waves, relativity. At the level of *Fundamentals of Physics*, extended version, by Halliday and Resnick. Laboratory covers electrical measurements, DC and AC circuits, resonance phenomena.

**214 Physics III: Optics, Waves, and Particles**
Fall or spring (also normally offered in summer). 3 or 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 213 and coregistration in the continuation of the mathematics sequence required for 112. (Physics 310 may be taken, with permission of the instructor, in place of the Physics 214 lab; credit for 214 is then reduced to 3 credits.)

Lecs, T R 9:05 or 11:15; 2 recs each week; one 3-hr. lab alternate weeks. Evening exams: fall, Oct. 5, Nov. 7; spring, Feb. 20, Mar. 29. Fall, G. P. Lepage; spring, R. M. Littauer.

Physics of wave phenomena, electromagnetic waves, interference and diffraction effects, optics, wave properties of particles, introduction to quantum physics. At the level of *Fundamentals of Physics*, extended version, 3rd edition, by Halliday and Resnick, or *Physics for Scientists and Engineers* (with *Modern Physics*), by D. Giancoli.

**217 Physics II: Electricity and Magnetism**
Fall or spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in Physics 112 or 116 and in mathematics and who desire a more analytic treatment than that of Physics 213. Prospective physics majors are encouraged to select Physics 217. Prerequisites: approval of student's adviser and permission from the instructor. A placement quiz may be given early in the semester, permitting those students who find Physics 217 too abstract or analytical to transfer into Physics 213, which they can do without difficulty at that time. Vector calculus will be taught in this course, but previous contact, especially with the operations *grad*, *div*, and *curl*, is helpful.
Lecs, M W F 10:10, rec, F 2:30. one 3-hr. lab alternate weeks. Evening exams may be scheduled. Fall, R. M. Cotts; spring, N. W. Ashcroft.
At the level of *Electricity and Magnetism*, by Purcell (Vol. 2, Berkeley Physics Series).

**218 Physics III: Optics, Waves, and Particles**
Fall or spring. 3 or 4 credits. Enrollment may be limited. A special section of Physics 214. Conditions governing enrollment are similar to those of Physics 217.
Lecs, M W F 11:15, rec, F 2:30. one 3-hr. lab alternate weeks. (Physics 310 may be taken, with permission of the instructor, in place of the Physics 214 lab, and credit for 214 is reduced to 3 credits.) See Physics 214 or 310. Fall, R. C. Richardson; spring, D. L. Rubin.
Topics covered in recent years have included oscillators, mechanical waves, waves at interfaces, standing waves, electromagnetic waves, guided waves, scattering, interference and diffraction, geometric optics, the doppler effect, and an introduction to matter waves. Evening exams may be scheduled. A more rigorous version of Physics 214.

**310 Intermediate Experimental Physics**
Fall or spring. 3 credits. Enrollment may be limited. Prerequisite: Physics 208 or 213. May be taken concurrently with Physics 214 or 218 in place of the lab work offered in Physics 214, with permission of student's adviser.
Labs, R F 1:25–4:25. Fall, E. Cassel; spring, R. Galik.
Students select from a variety of experiments. An individual, independent approach is encouraged. Facilities of the Physics 410 lab are available for some experiments.

**315 Phenomena of Microphysics**
Fall or spring. 4 credits. Primarily for students of engineering and prospective majors in physics. Prerequisites: Physics 214 and Mathematics 294.
Lecs, M W F 9:05, R 2:30.
Fall, R. M. Littauer; spring, T-M. Yan.
Introduction to the physics of atoms, solids, nuclei, and elementary particles, emphasizing the description of phenomena using the results of elementary quantum and statistical physics. At the level of *Quantum Physics of Atoms, Molecules, Solids, Nuclei and Particles*, by Eisberg and Resnick.

**318 Analytical Mechanics**
Spring. 4 credits. Prerequisites: Physics 208 or 214 plus one of Mathematics 421, 422 or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 431 at a less demanding analytical level. (Applied and Engineering Physics 333 is approximately equivalent to Physics 318.)
Lecs, M W F 10:10, F 2:30. R. M. Talman.
Newtonian mechanics of particles and systems of particles, including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange's equations; Hamilton's equations; normal modes and small vibrations. At the level of *Classical Mechanics*, by Goldstein.

**325 Electricity and Magnetism**
Fall. 4 credits. Prerequisites: Physics 214 plus coregistration in one of Mathematics 421, 422, or 423, or permission of instructor. Intended for physics majors concentrating in physics. Similar material is covered in Physics 432 at a less demanding analytical level.
Lecs, M W F 11:15, F 2:30.
S. A. Teukolsky.
Electrostatics: electric charge and fields, potential, multipoles, conductors, Laplace equation and formal solutions, field energy, dielectric materials, polarization. Magnetostatics: currents, magnetic fields and vector potential, dipoles, magnetic materials, field energy. Maxwell's equations. Special relativity. At the level of *Introduction to Electro-dynamics*, by Griffiths.

**326 Electromagnetic Waves and Physical Optics**
Spring. 4 credits. Prerequisite: Physics 325.
Lecs, M W F 11:15, W 2:30. L. N. Hand.
Electrodynamics: applications of Maxwell's equations, propagation in various media, radiation, relativistic electrodynamics, transmission lines and wave guides, interference and diffraction phenomena. At the level of *Classical Electromagnetic Radiation*, by Marion and Heald.

**330 Modern Experimental Optics**
Spring. 4 credits. Enrollment limited to approximately 16 students. Prerequisite: Physics 214 or equivalent.
Lec, M 2:30; lab, T R 1:25–4:15 or W F 1:25–4:15. D. M. Lee.
A practical laboratory course in basic and modern optics. Students spend two-thirds of the course experimenting with the physics of basic optical phenomena: interference, diffraction, coherence, polarization, and image formation. The last part of the course involves a choice among experiments on lasers and applications of lasers, light pulses and optical communication, and holography. The course also serves as an introduction to the use of optical equipment and techniques that are employed in current research in the fields of biology, chemistry, physics, and astronomy.

**341 Thermodynamics and Statistical Physics**
Fall. 4 credits. Prerequisites: Physics 214 and Mathematics 294.
Lecs, T R 9:05–9:55, F 10:10–11, T 2:30.
J. M. Parpia.
Statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Concepts of temperature, laws of thermodynamics, entropy, thermodynamic relations, free energy. Applications to phase equilibrium, multicomponent systems, chemical reactions, and thermodynamic cycles. Application of statistical mechanics to physical systems; introduction to treatment of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics with applications. Elementary transport theory. At the level of *Fundamentals of Statistical and Thermal Physics*, by Reif, or *Thermal Physics*, by Morse.

**360 Electronic Circuits (also Applied and Engineering Physics 363)**
Fall or spring. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor. No previous experience with electronic circuits is assumed; however, the course moves through the introductory topics (DC and AC circuits, basic circuit elements) rather quickly. Students wishing a more complete background might consider taking Electrical Engineering 210 before Physics 360. Fall term is usually less crowded.
Lec, M 2:30–4:25; labs, T R or W F 1:25–4:25. Fall, E. Kirkland; spring, B. Cooper.
An experimental survey of some devices and circuits in two general areas: analog and digital electronics. In analog circuits, the major emphasis is on operational amplifiers and bipolar transistors, and their applications. Simple filters, diodes, and field-effect transistors are covered briefly. In digital circuits, some time is spent on combinatorial logic devices. This experience is then applied to problems in programming and interfacing a simple microcomputer.

**400 Informal Advanced Laboratory**
Fall or spring; (may also be offered during summer). Variable credit. Prerequisites: two years of physics and permission of instructor.
Lab, see Physics 410.
Experiments of widely varying difficulty in one or more areas, as listed under Physics 410, may be done to fill the student's special requirements.

**410 Advanced Experimental Physics**
Fall or spring. 4 credits. Limited to seniors except by special permission. Prerequisites: Physics 214 (or 310 or 360) plus 318 and 325, or permission of instructor.
Lec, M 2:30–4:25; labs, T W 1:25–4:25. Fall, R. O. Pohl; spring, D. L. Hartill.
Selected topics in experimental concepts and techniques. About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. The student performs three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed.

**431–432 Introductory Theoretical Physics I and II**
431, fall; 432, spring. 4 credits each term. Prerequisites: Physics 431: Physics 207–208 or equivalent and Mathematics 294 or equivalent. Physics 432: Physics 431 or equivalent. (Mathematics 421 is recommended.) Primarily for physics majors with concentrations outside physics and for graduate students in a science other than physics (such as chemistry, engineering, biology, geology). Physics 318 and 325 cover similar material at a higher analytical level and are intended for physics majors concentrating in physics.
Lecs, M W F 10:10 and F 1:25. Fall, D. M. Lee; spring, R. M. Cotts.
431: Mechanics. Includes Newtonian mechanics, Lagrange's and Hamilton's equations, central forces, rigid-body motion, and small oscillations. At the level of *Mechanics*, by Symon. 432: Electricity and magnetism. Includes electrostatics, magnetostatics, boundary value problems, dielectric and magnetic media. Maxwell's equations and electromagnetic waves, introduction to special relativity. At the level of *Introduction to Electrodynamics*, by Griffiths.

**443 Introductory Quantum Mechanics**
Fall. 4 credits. Prerequisites: Physics 318 and 325, or 431–432; Physics 315 and Mathematics 421; or permission of instructor.
Lecs, M W F 9:05, F 2:30. Evening exams may be scheduled. A. J. Sievers.
Introduction to concepts and techniques of quantum mechanics, at the level of *Introduction to Quantum Mechanics*, by Dicke and Wittke.

**444 Nuclear and High-Energy Particle Physics**
Spring. 4 credits. Prerequisite: Physics 443 or permission of instructor.
Lecs, M W F 9:05, F 1:25. P. Drell.
Behavior of high-energy particles and radiation; elementary particles; basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of *Concepts of Particle Physics*, by Gottfried and Weisskopf.

**454 Introductory Solid-State Physics**
Fall or spring. 4 credits. Prerequisite: Physics 443 or Chemistry 793, or permission of instructor.
Lecs, fall, M W F 10:10, W 3:35, V. Elser; spring, T R 10:10–11:25, R 3:35, J. Franz.
An introduction to modern solid-state physics, including lattice structure, lattice vibrations, thermal properties, electron theory of metals and semiconductors, magnetic properties, and superconductivity. At the level of *Introduction to Solid State Physics*, by Kittel (fall term), and *Solid State Physics*, by Ashcroft and Mermin (spring term).

**481–489 Special Topics Seminar**
Spring. 2 credits. Limited to senior physics majors and those who receive permission of instructor. S-U grades only.
Hours to be arranged. One selected topic of current interest is studied. Students participate in organization and presentation of material.

**490 Independent Study in Physics**
Fall or spring. 1–3 credits. Ordinarily limited to seniors. Prerequisite: permission of professor who will direct proposed work. Copy of request for independent study form must be filed with physics department course coordinator. Individual project work (reading or laboratory) in any branch of physics.

**500 Informal Graduate Laboratory**
Fall, spring, or summer. Variable credit.

**510 Advanced Experimental Physics**
Fall, spring, or summer. 3 credits.
Labs, T W 1:25–4:25.
Fall, R. H. Siemann; spring, D. L. Hartill.
About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed.

**520 Projects in Experimental Physics**
Fall, spring, or summer. 1–3 credits. To be supervised by faculty member. Students must advise department course coordinator of faculty member responsible for their project. Prerequisite: Physics 510.
Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in Physics 510.

**525 Physics of Black Holes, White Dwarfs, and Neutron Stars (also Astronomy 511, High-Energy Astrophysics)**
Fall. 4 credits.
Lecs, T R 1:25–2:40. S. L. Shapiro.
The formation of compact objects: neutrino and gravitational radiation from supernova collapse and neutron stars. Equilibrium configurations, equations of state, stability criteria, and mass limits. The influence of rotation and magnetic fields. Pulsar phenomena. Mass flow in binary systems; spherical and disk accretion; high-temperature radiation processes. Compact X-ray sources and X-ray bursts. Emphasis will be on the application of fundamental physical principles to compact objects. Topics in diverse areas of physics will be discussed: solid-state physics, nuclear physics, relativity, fluid dynamics, high-energy physics, etc. No astronomy or general relativity prerequisites. Text: *Physics of Black Holes, White Dwarfs, and Neutron Stars*, by Shapiro and Teukolsky.

**551 Classical Mechanics**
Fall. 3 credits. Prerequisite: an undergraduate course in classical mechanics at the level of books by K. Symon or J. B. Marion.
Lecs, T R 10:10, R 2:30. E. D. Siggia.
Lagrangian and Hamiltonian formulation of classical mechanics, with modern applications in nonlinear dynamics. Foundations will be taught at the level of *Mechanics*, by Landau and Lifshitz.

**[553–554 General Relativity (also Astronomy 509–510)**
553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity at the level of *Classical Mechanics*, by Goldstein. Offered alternate years. Not offered 1989–90.
Lecs, T R 1:25–2:40. S. L. Shapiro.
Physics 553 is a systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, experimental tests of gravitation theories. At the level of *Gravitation*, by Misner. Physics 554 is a continuation of 553 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.]

**561 Classical Electrodynamics**
Fall. 3 credits.
Lecs, T R 8:30–9:55. D. R. Yennie.
Maxwell's equations, electromagnetic potentials, electrodynamics of continuous media (selected topics), special relativity, radiation theory. At the level of *Classical Electrodynamics*, by Jackson.

**562 Statistical Mechanics**
Spring. 4 credits. Primarily for graduate students. Prerequisites: a good knowledge of quantum mechanics (at the level of Merzbacher), classical mechanics (at the level of Marion), and statistical mechanics (at the level of Rief).
Lecs, T R 8:30–9:55. V. Ambegaokar.
Thermodynamic functions, equations of state; Second Law phase equilibria; thermodynamic inequalities; kinetic theory, Boltzmann's equation, transport theory. Microstates, ensembles, partition functions, and phase-space averaging. Chemical equilibria. Quantum statistical mechanics, Fermi-Dirac and Bose-Einstein distributions; application to Bose and Fermi systems. Fundamentals of statistical mechanics: density matrix, reduced distribution, Wigner function, correlation functions and fluctuations. Advanced topics include Ising model, lattice gases, and spin systems; and introduction to critical phenomena. At the level of *Statistical Mechanics*, by Huang, and *Statistical Mechanics*, by Pathria.

**572 Quantum Mechanics I**
Fall or spring. 4 credits.
Lecs, fall, M W F 9:05, T-M. Yan; spring, M W F 11:15. N. D. Mermin.
The formulation of quantum mechanics in terms of states and operators. Symmetries and the theory of angular momentum. Stationary and time-dependent perturbation theory. Fermi's golden rule and variational methods. The elements of scattering theory. At a level between *Quantum Mechanics*, by Merzbacher, and *Quantum Mechanics*, by Landau and Lifshitz. Familiarity with elementary aspects of the Schroedinger equation is assumed, including its application to simple systems such as the hydrogen atom.

**574 Quantum Mechanics II**
Fall or spring. 4 credits. Required of all Ph.D. majors in theoretical physics.
Lecs, M W F 11:15. Fall, V. Ambegaokar; spring, G. P. Lepage.
Discussion of various applications of quantum mechanics, such as collision theory, theory of spectra of atoms and molecules, theory of solids, second quantization, emission of radiation, relativistic quantum mechanics. At the level of *Lectures on Quantum Mechanics*, by Gordon Baym.

**635 Solid-State Physics I**
Fall. 3 credits. First semester of a two-semester sequence of solid-state physics for graduate students who have had the equivalent of Physics 572 and 562 and some prior exposure to solid-state physics, such as Physics 454.
Lecs, T R 11:40–12:55. C. P. Franck.
A survey of the basic *phenomenological* knowledge of condensed matter physics, mainly dealing with solids. Probable topics include equilibrium properties such as structure and phase transitions as well as transport phenomena such as electrical and thermal conductivity. Discussions at the level of *Solid State Physics*, by N. W. Ashcroft and N. D. Mermin.

**636 Solid-State Physics II**
Spring. 3 credits.
Lecs, M W F 10:10. D. Divincenzo.
Much in condensed matter physics is not covered in Ashcroft and Mermin or included in Physics 635. Topics will be chosen from: broken symmetries, elementary excitations, and topological defects; critical phenomena, the onset of chaos, and the renormalization group; first order phase transitions, nucleation, and dendritic growth; broken gauge symmetries, superconductors and superfluids, the fractional quantum Hall effect; disordered systems, spin glasses, localization, and percolation theory.

**645 High-Energy Particle Physics**
Fall. 3 credits.
Lecs, M W F 11:15. K. Gottfried.
Introduction to the physics of baryons, mesons, and leptons. Strong, electromagnetic, and weak interactions. Relevance of symmetry laws to particle physics. Introduction to the quark model. Unification of weak and electromagnetic interactions. At the level of *Introduction to High Energy Physics*, by Perkins.

**646 High-Energy Particle Physics**
Spring. 3 credits.
Lecs, T R 2:55–4:10. K. Berkelman.
Topics of current interest, such as high-energy electron and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions, are surveyed. Lectures and reading material are at the level of *Introduction to High Energy Physics*, by Perkins.

*Note:* Only S-U grades will be given in courses numbered 650 or above.

**651 Advanced Quantum Mechanics**
Fall. 3 credits. S-U grades only.
Lecs, M W F 10:10. T-M. Yan.
Relativistic quantum mechanics with emphasis on perturbation techniques. Extensive applications to quantum electrodynamics. Introduction to renormalization theory. At a level somewhat above that of *Relativistic Quantum Mechanics*, by Bjorken and Drell.

**652 Quantum Field Theory**
Spring. 3 credits. S-U grades only.
Lecs, T R 10:10–11:35. H. Tye.
Canonical field theory. Analytic property of scattering amplitudes and dispersion relations. Renormalization and renormalization group. Symmetry and spontaneous symmetry breaking. Gauge theories. At the level of *Quantum Field Theory*, by Itzykson and Zuber.

**653 Statistical Physics**
Fall. 3 credits. Normally taken by graduate students in their second or later years. Prerequisites: competence in the basic principles of quantum mechanics, statistical mechanics, and thermodynamics. S-U grades only.
Lecs, M W F 9:05. C. Henley.
Survey of topics in modern statistical physics, including the theory of simple classical and quantum fluids; the theory of ordered systems such as superfluids and superconductors; kinetic theory and the Boltmann equation; phenomenological Fermi liquid theory and hydrodynamics; theories of inhomogeneous systems; scaling theories and phase transitions. The contents of the course vary with the current interests of the instructor.

**654 Theory of Many-Particle Systems**
Spring. 3 credits. Prerequisites: Physics 562, 574, 635, 636, and 653. S-U grades only.
Lecs, M W F 11:15. E. D. Siggia.
Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Thermodynamic Green's function techniques introduced and applied to such topics as normal and superconducting. Fermi systems, superfluidity, magnetism, insulating crystals.

**661 High-Energy Phenomena**
Fall. 3 credits. Prerequisites: Physics 645, 646, and 651 (652 also desirable). S-U grades only.
Lecs, M W F 10:10. H. Tye.
Field theoretic techniques used to study the strong and electroweak interactions of elementary particles are surveyed. Among these topics are path integrals, quantization of nonabelian gauge theories, renormalization group equations, applications of perturbative QCD, lattice field theories, chiral Lagrangians, and the Standard Model of electroweak interactions. The relevance of these techniques and theories to experimental physics will be stressed.

**[665 Topics in Theoretical Astrophysics (also Astronomy 555)**
Fall. 4 credits. S-U grades only. Not offered 1989–90.
Lecs, M W F 2:30. E. E. Salpeter.
Usually concentrates on the theory of the interstellar medium. At the level of Spitzer's *The Physical Processes in the Interstellar Medium*.]

**[667 Theory of Stellar Structure and Evolution (also Astronomy 560)**
Fall. 4 credits. S-U grades only. Not offered 1989–90.
Lec, M W F 1:25. E. E. Salpeter.
Summary of observational facts on stars; dimensional analysis; nuclear reactions and energy, transport in stellar interiors; models for static and evolving stars. At the level of *Principles of Stellar Energy and Nucleosynthesis*, by Clayton.]

**680–689 Special Topics**
Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, plasma physics, cosmic rays, general relativity, low-temperature physics, X-ray spectroscopy or diffraction, magnetic resonance, phase transitions, and the renormalization group.

**690 Independent Study in Physics**
Fall or spring. Variable credit. Students must advise department course coordinator of faculty member responsible for their project. S-U grades only. Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professional member of the staff.

# PORTUGUESE

See Modern Languages and Linguistics.

# PSYCHOLOGY

D. Bem, S. Bem, U. Bronfenbrenner, W. Collins, J. Cutting, R. Darlington, T. DeVoogd, D. Dunning, H. M. Feinstein, D. Field, B. L. Finlay, E. J. Gibson, T. D. Gilovich, B. P. Halpern, A. M. Isen, R. E. Johnston, F. Keil, K. Keil, C. Krumhansl, H. S. Kurtzman, W. W. Lambert, H. Levin, D. Levitsky, J. B. Maas, R. D. Mack, H. Porte, D. T. Regan, E. A. Regan, T. A. Ryan, E. Spelke

The major areas of psychology represented in the department are human experimental psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such things as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Human experimental psychology includes such courses as cognition, perception, memory, and psycholinguistics. Personality and social psychology is represented by courses and fieldwork in psychopathology as well as courses in social psychology and personality (such as theories of personality, beliefs and attitudes, and sex roles). In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

## The Major

Prerequisites for admission to the major are:

1) any three courses in psychology (students often begin with Psychology 101 );
2) no grade below C+ in any psychology course; and
3) acceptance by the Majors and Advising Committee of the Department of Psychology.

Application forms may be obtained at the department office and should be filed two weeks before the pre–course enrollment period.

Requirements for the major are:

1) a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisers, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2) demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the statistics requirement.)

Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:

1) Human experimental psychology
2) Biopsychology
3) Social, personality, and abnormal psychology

The following classification of Department of Psychology offerings is intended to help students and their advisers choose courses that will ensure that such breadth is achieved.

1) **Human experimental psychology:** Psychology 205, 209, 214, 215, 276, 305, 308, 309, 313, 314, 316, 345, 370, 412, 415, 416, 417, 418, 436, 492, 605, 609, 612, 614, 615, 616, 618, 670, 692, 709, 713, 715, 717.
2) **Biopsychology:** Psychology 123, 307, 322, 324, 326, 332, 361, 396, 422, 425, 429, 492, 607, 622, 625, 626, 629, 692, 696, 722.
3) **Social, personality, and abnormal psychology:** Psychology 265, 275, 277, 280, 325, 327, 328, 329, 379, 383, 384, 385, 389, 402, 404, 426, 450, 467, 468, 469, 481, 482, 486, 488, 489, 491, 650, 684, 689, 691, 785.

The major adviser determines to which group, if any, the following courses may be applied.

4) **Other courses:** Psychology 101, 103, 347, 350, 387, 410, 440, 465, 470, 471, 472, 473, 475, 476, 478, 479, 490.

With the permission of the adviser, courses in other departments may be accepted toward the major requirements.

**Fieldwork, independent study, and teaching.** The department requires students to observe the following limits on fieldwork, independent study, and teaching.

1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.

2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

**Statistics requirement.** Proficiency in statistics can be demonstrated in any one of the several ways listed below.

1) Passing Psychology 350.

2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has usually included Education 352 and 353, Industrial and Labor Relations 210 and 211, and Sociology 301. An up-to-date list is posted outside of 278 Uris Hall. Requests that a particular course be added to this list may be made to Professor Gilovich.

3) Passing a course or course sequence in statistics at some other college, university, or college-level summer school. The course or sequence must be equivalent to at least 6 semester credits. The description of the course from the college catalog and the title and author of the textbook used must be submitted to Professor Gilovich for approval.

4) Passing an exemption examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest. Students planning this option should discuss it in advance with Professor Gilovich. Sample examination questions are posted outside of 278 Uris Hall.

**Concentration in biopsychology.** Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid background in introductory biology; the physical sciences, including at least introductory chemistry; and mathematics. Students will design with their advisers an integrated program in biopsychology built around courses on physiological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, biochemistry, neurochemistry, neurobiology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology adviser.

**Concentration in personality and social psychology.** This concentration is offered in cooperation with the Department of Sociology. Psychology majors who wish to specialize in social psychology are expected to meet the general requirements set by their department, including statistics. To ensure a solid interdisciplinary grounding, students in the concentration will be permitted to include in the major courses in sociology and related fields. Advisers will assist students in the selection of a coherent set of courses from social organization, cultural anthropology, experimental psychology, social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

**Undergraduate honors program.** The honors program is designed for those exceptionally able students who want to pursue an intensive and independent program of research in psychology. Successful participation in this program serves as evidence of the student's facility in the two most important skills of an academic psychologist: the capacity to acquire and integrate a substantial body of theoretical and factual material and the ability to engage in creative research activity. All qualified students planning on a graduate education in psychology or other academic fields should consider the honors program seriously. The program offers most students the closest contact and consultation with faculty that they will receive during their time at Cornell.

The core of the honors program is a research project that the student carries out in close collaboration with a faculty member in the field of psychology. It is assumed that most students will do so while enrolled in Psychology 470 (Undergraduate Research in Psychology). A written report of the research is to be given to the chair of the honors committee (currently Professor Dunning) toward the end of the last semester of the student's senior year. An oral defense of the thesis is then given before a committee of three faculty members, and the student presents his or her work in a public forum. Final honors standing (summa cum laude, magna cum laude, cum laude) is indicated on the student's diploma. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors project in a given year.

A student may formally apply to the honors program at any time during the senior year provided that she or he is actively engaged in independent research. However, students must do so by the end of the fall term. Applications should be given to Professor Dunning and should be made directly by the student.

## Distribution Requirement

The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of Psychology 123, 307, 322, 324, 326, 350, 361, 396, 422, 425, 429, 451, 471, 472, 473, 475, 476, 479, 492, 607, 622, 625, 626, 629, 696, and 722.

## Courses

**101 Introduction to Psychology: The Frontiers of Psychological Inquiry**
Fall. 3 credits. Students may not receive credit for both Psychology 101 and Education 110. Students who would like to take a discussion seminar should also enroll in Psychology 103.
M W F 10:10. J. B. Maas. Prelims: 7:30 p.m., Oct. 2, Nov. 6.
The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

**103 Introductory Psychology Seminars**
Fall. 1 credit. Limited to 400 students. Prerequisite: concurrent enrollment in Psychology 101.
Hours to be arranged; 32 different time options. Staff.
A weekly seminar that may be taken in addition to Psychology 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times will be available at the second lecture of Psychology 101.

**109 Freshman Writing Seminar: The Science of Dreaming Sleep**
Fall. 3 credits. Prerequisite: high school biology and chemistry. Limited to 17 students.
T R (Section 1) 1:25–2:40, (Section 2) 2:55–4:10. H. Porte.
Topics will include the phenomenology and neurobiology of rapid eye movement ("paradoxical") sleep; the REM sleep disorder, narcolepsy; the sense and nonsense of dreams; the problems of dream theory and dream interpretation; animals and people who act out their dreams.

**123 Introduction to Biopsychology**
Fall. 3 credits. May not be taken for credit by students who are registered in or have completed one or more courses offered by the Section of Neurobiology and Behavior of the Division of Biological Sciences or two or more biopsychology courses.
M W F 10:10. E. A. Regan.
The biology of behavior, including both evolutionary and physiological approaches to behavior. Human behavior is discussed whenever possible, but there is also extensive discussion of the behavior of nonhuman species. Specific topics include the structure, function, and development of the nervous system, stress and disease, sleep, genetic and chemical models of mental disorder, and hormones and sexual behavior; biological bases of learning, cognition, communication, and language; and the ecology and evolution of social organization and social development.

**Introductory courses in cognitive psychology.** Each of the following four courses (205, 209, 214, 215) provides an introduction to a major area of study within cognitive psychology. These courses are independent of one another, and none has any prerequisites. Students may take any one of the courses or any combination of them (including all four). Courses may be taken in any order or simultaneously.

**205 Perception**
Spring. 3 credits. Open to first-year students. Graduate students, see Psychology 605.
T R 2:55–4:10. J. Cutting.
One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

**209 Developmental Psychology**
Spring. 4 credits. Graduate students, see Psychology 609.
T R 1:25–2:40; sec to be arranged. E. Spelke.
One of four introductory courses in cognitive psychology. A comprehensive introduction to current thinking and research in developmental psychology. The course focuses on development of action, development of perception and knowledge, development of language, morality, and other aspects of human culture, and development of emotional and social relationships.

**214 Knowledge and Reasoning**
Spring. 3 credits. Graduate students, see Psychology 614.
M W F 1:25. C. Krumhansl.
One of four introductory courses in cognitive psychology. A survey of the following topics: visual and auditory memory, imagery, attention, memory for language, reasoning, decision making, and intelligence.

**215 Psycholinguistics**
Fall. 3 or 4 credits (4-credit option involves term paper). Graduate students, see Psychology 715.
M W F 11:15. H. S. Kurtzman.
One of four introductory courses in cognitive psychology. Introduction to the psychological study of language. Covers basic linguistic theory and contemporary research into language comprehension, production, and acquisition.

**265 Psychology and Law**
Fall. 3 credits. Prerequisite: Psychology 101.
M W F 1:25. D. Dunning.
This course examines the implications of psychological theory and methods for law and the criminal justice system. We concentrate on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), as well as on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

**275 Introduction to Personality Psychology**
Fall. 3 credits. Prerequisite: an introductory psychology course.
T R 10:10–11:25. D. Bem.
An introduction to research and theory in personality psychology, emphasizing contemporary approaches. Topics include the dynamics, structure, and assessment of personality as well as personality development and change. Biological and sociocultural influences on personality are also considered.

**[276 Motivation Theory: Contemporary Approaches and Applications**
Spring. 4 credits. Prerequisite: an introductory psychology course. Not offered 1989–90.
M W F 11:15. Staff.
Models and research in human motivation are examined and integrated. Traditional approaches are used as departure points for the study of more-current themes such as intrinsic motivation and achievement motivation. Attention is given to how pertinent various themes are to real-life behavioral settings.]

**277 Psychology of Sex Roles (also Women's Studies 277 and Sociology 277)**
Spring. 3 credits. Limited to 200 students. Prerequisite: an introductory psychology course.
T R 2:55–4:25. S. Bem.
The course addresses the question of why and how adult women and men come to differ in their overall life styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective, (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, equalitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexualism.

**280 Introduction to Social Psychology**
Spring. 3 or 4 credits; the additional (or fourth) credit is given for the completion of a group research project and write-up. Prerequisite: an introductory psychology course.
T R 8:40–9:55. T. D. Gilovich, D. T. Regan.
An introduction to research and theory in social psychology. Topics include processing of social information; social influence, persuasion, and attitude change; social interaction and group phenomena. The application of social psychological knowledge to current events will also be discussed.

**305 Visual Perception**
Fall. 4 credits. Limited to 20 students. Prerequisite: Psychology 205 or permission of instructor.
M W F 1:25–2:15. J. Cutting.
A detailed examination of theories and processes in visual perception. Topics will include the perception of color, form, and motion; perceptual constancies; adaptation; pattern perception; and photography, television, and film.

**307 Chemosensory Perception**
Fall. 3 or 4 credits; the optional (or fourth) credit is for an independent laboratory project. Registration for the 4-credit option requires permission of the instructor; students will read, analyze, and discuss difficult original literature in the areas covered. Offered alternate years. Graduate students, see Psychology 607.
T R 9:05. B. P. Halpern.
An examination of basic theory, data, and processes for perception of the chemosensory environment. Topics include psychophysical methods for human and nonhuman studies, stimulus control, chemosensory function and development in neonates, role of chemosensory function in food choices, chemosensory communication, effects of pollution of the chemosensory environment, and possible consequences of chemosensory dysfunctions. At the level of *The Perception of Odors*, by T. Engen; *Food Taste Chemistry*, edited by J. C. Boudreau; and *Clinical Measurement of Taste and Smell*, edited by H. L. Meiselman and R. S. Rivlin.

**[308 Perceptual Learning**
Fall. 3 credits. Prerequisite: Psychology 205, 209, or 305, or permission of instructor. Not offered 1989–90.]

**309 Development of Perception**
Fall. 3 credits. Prerequisite: Psychology 205, 209, 214, or 305, or permission of instructor. Graduate students, see Psychology 609.
T R 1:25–2:40. E. Spelke.
An introduction to theories and research on the origins and development of perceptual knowledge. The course focuses on perception of the world as an arrangement in space and time, perception of the world as a unit that can be encountered through multiple sensory modes, perception of the world as a meaningful place that can be acted upon, and organization of the world into objects and events.

**[313 Perceptual and Cognitive Processes**
Spring. 4 credits. Prerequisite: Psychology 205 or 214 or permission of instructor. Not offered 1989–90. Graduate students, see Psychology 713.
R 1:25–4:25. Staff.
A critical examination of selected topics in the area of perceptual and higher mental processes. We will read, discuss, and critically analyze original experimental reports and theoretical articles.]

**314 The Social Psychology of Language**
Spring. 4 credits. Prerequisite: a course in psycholinguistics or social or personality psychology, or permission of instructor.
T R 2:55–4:10. H. Levin.
We are aware that one talks differently to children than to adults, to foreigners than to native speakers, to people we like than to those we detest, to people whose intelligence we respect compared to those we think are idiots. Speech varies by social setting; by the relationships between people; by formality, friendship, affection; and by the purposes of the communication: deception, persuasion, propaganda, etc. What are the rules of social language? How do we acquire the abilities to vary language appropriately and to understand the meanings of such variations?

**[316 Auditory Perception**
Spring. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisite: Psychology 205, 209, 214, or 215 (other psychology, linguistics, or biology courses could serve as prerequisite with permission of the instructor). Not offered 1989–90.
Lecs, T R 2:30–4:25; lab, hours to be arranged. Staff.
Basic approaches to the perception of auditory information, with special consideration of complex patterns such as speech, music, and environmental sounds.]

**322 Hormones and Behavior (also Biological Sciences 322)**
Spring. 3 or 4 credits; the 4-credit option involves a one-hour section once a week, in which students will be expected to participate in discussion and read original papers in the field. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: one year of introductory biology plus a course in psychology or Biological Sciences 221 or 222. S-U grades optional. Because the 4-credit option has very limited enrollment, students should preregister for 3 credits only. Offered alternate years. Graduate students, see Psychology 722.
T R 10:10–11:30. E. A. Regan, R. E. Johnston.
The relationship between endocrine and neuroendocrine systems and the behavior of animals, including humans. Major emphasis is on sexual, parental, and aggressive behavior.

**[324 Biopsychology Laboratory (also Biological Sciences 324)**
Fall. 4 credits. Limited to 25 juniors and seniors. Prerequisites: Psychology 123 or Biological Sciences 221 or 222, and permission of instructor. S-U grades optional. Not offered 1989–90.
T R 1:25–4:25. T. DeVoogd.
Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.]

**325 Introductory Psychopathology**
Fall. 3 credits. Prerequisite: a course in introductory psychology. Students who would like to take a discussion seminar should also enroll in Psychology 329. May be taken concurrently with Psychology 327. Enrollment in Psychology 327 is limited.
T R 1:25–2:40. R. D. Mack.
A survey of the various forms of psychopathology, child and adult, as they relate to the experiences of human growth and development. Presents a description of the major syndromes, investigations, theories of etiology, and approaches to treatment.

**326 Evolution of Human Behavior**
Fall. 4 credits. Prerequisite: Psychology 123, an introductory biology course, or an introductory anthropology course. Graduate students, see Psychology 626.
T R 2:30–4. R. E. Johnston.
A broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics covered will vary but will include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, non-verbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, warfare.

**327 Fieldwork in Psychopathology and the Helping Relationship**
Fall. 2 credits. Prerequisites: Psychology 325 or concurrent registration in 325 and permission of instructor. S-U grades only. Students do not enroll in advance for this course. Field placement assignments are made in Psychology 325 during the first two weeks of the semester. Students who have already taken Psychology 325 must contact the instructor during the first week of the semester. Enrollment is limited by the fieldwork placements available. Fee, $25.
T R 12:20–1:10. K. Keil.
An introductory fieldwork course for students currently enrolled in, or who have taken, Psychology 325. Fieldwork placements include the school system, psychiatric institutions, halfway houses, and other mental health-oriented facilities. In addition to fieldwork, weekly supervisory/seminar meetings are held to discuss fieldwork issues and assigned readings.

**328 Continuing Fieldwork in Psychopathology and the Helping Relationship**
Fall or spring. 2 credits each term. Prerequisites: Psychology 325, 327, and permission of instructor. S-U grades only. May not be taken more than twice. Students do not enroll in advance for this course. Students in Psychology 327 should inform their teaching assistant before the end of the semester of their desire to take Psychology 328. Students not currently in a field placement who want to take Psychology 328 should contact the instructor during the first week of the semester. Field placement assignments will be made during the first two weeks of the semester. Enrollment is limited by the fieldwork placements available. Fee, $25.
T R 12:20–1:10. K. Keil and staff.
Designed to allow students who have begun fieldwork as part of Psychology 327 to continue their field placements under supervision and for academic credit. A limited number of students may be allowed to begin their fieldwork with Psychology 328 but only with permission of the instructor.

**329 Introductory Psychopathology Seminars**
Fall. 1 credit. Limited to 90 students. Prerequisite: must be concurrently enrolled in Psychology 325. Letter grade only.
Hours to be arranged; 9 different time options. Staff.
A weekly seminar/discussion section that may be taken in addition to Psychology 325 to provide an in-depth exploration of selected areas in the field of psychopathology. Topics vary from year to year and may include such areas as depression, schizophrenia, psychotherapy, sex-roles and psychopathology, etc. Involves extensive discussion and several short papers related to the seminar topic. Choice of seminar topics and meeting times will be available at the second or third lecture of Psychology 325.

**[332 Biopsychology of Learning and Memory**
Spring. 3 credits. Prerequisites: one year of biology and either a biopsychology class or Biological Sciences 222. Not offered 1989–90.
M W F 11:15. T. DeVoogd.
This course will survey the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics will include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings will be from primary literature.]

**[345 Psychological Research and Afro-Americans (also Africana Studies 345)**
Fall. 4 credits. Prerequisite: one course in introductory psychology or Africana Studies and Research Center 171. Not offered 1989–90.
T R 1:25–2:40. Staff.
In this course we will examine psychological research that has implications for Afro-Americans. The issues to be explored include (1) research methods, (2) racial attitudes within and between groups, (3) measures of group differences, (4) cognitive abilities, and (5) motivational issues. Course requirements include a preliminary exam, a midterm paper, and a final project.]

**[347 Psychology of Visual Communications**
Spring. 4 credits. Limited to 12 students. Prerequisites: Psychology 101 and permission of instructor. Not offered 1989–90.
T 10:10–12:05; lab to be arranged. J. B. Maas.
An exploration of theories of perception, attitude, and behavior change as they relate to the effectiveness of visually based communication systems. Emphasis is on an empirical examination of the factors that determine the nature and effectiveness of pictorial representations of educational messages in non-print media.]

**350 Statistics and Research Design**
Fall. 4 credits. Prerequisite: a course in the behavioral sciences.
M W F 9:05. T. D. Gilovich.
Acquaints the student with the elements of statistical description (measures of average, variation, correlation, etc.) and, more importantly, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related social sciences.

**[361 Biochemistry and Human Behavior (also Nutritional Sciences 361)**
Fall. 3 credits. Prerequisites: Biological Sciences 101–102, Chemistry 103–104, Psychology 123, or permission of instructor. S-U grades optional. Not offered 1989–90.
M W F 11:15. D. Levitsky.
The course is intended to survey the scientific literature on the role of the brain and body biochemical changes as determinants of human behavior. The topics covered include action and effects of psychopharmacologic agents, biochemical determinants of mental retardation, biochemical theories of psychosis, and effects of nutrition on behavior. A fundamental knowledge of human biology and chemistry is essential.]

**[370 Language and Cognition (also Linguistics 370)**
Spring. 4 credits. Prerequisites: Linguistics 101 or 264, Psychology 215, or permission of one of the instructors. Not offered 1989–90. Graduate students, see Psychology 670.
T R 1:25–2:40. J. Bowers, H. Kurtzman.
Examination of current research on selected topics in language from both linguistic and psychological perspectives. Topics include universal grammar and language acquisition, syntactic parsing, word recognition, sentence production, aphasia, and schizophrenic language.]

**[379 Social Cognition**
Spring. 4 credits. Prerequisite: one course in social or cognitive psychology or permission of instructor. Not offered 1989–90.
T R 10:10–11:25. Staff.
The focus of this course is on experimental research that applies cognitive principles to the study of social psychological phenomena. The course begins with an overview of research methodology (no prior knowledge in this area is required). Readings and discussion center around the following topics: (1) the organization and representation of social information; (2) assessing the causes of social behavior; and (3) sources of error and bias in human judgment. Course requirements include an examination, a midterm paper, and a final project.]

**[383 Social Interaction (also Sociology 383)**
Spring. 4 credits. Prerequisite: a course in social psychology. Not offered 1989–90.
M W 2:30–4:25. D. Hayes.
Fine-grain analyses of social behavior, its structure, changes, and determinants. Extensive practice in analysis of filmed and taped interactions. Student research is required throughout the course.]

**[384 Cross-Cultural Psychology**
Spring. 4 credits. Prerequisites: a course in psychology and one in either sociology or social or cultural anthropology, or permission of instructor. Not offered 1989–90. Graduate students, see Psychology 684.
M W F 11:15. Staff.
A critical survey of approaches, methods, discoveries, and applications in emerging attempts to study human nature, experience, and behavior cross-culturally. Focus on studies of cognition, values, socialization, sociolinguistics, personality, attitudes, stereotype, ideology, sociocultural development, and mental illness. Problems of how one can learn another culture will also be dealt with.]

**[385 Theories of Personality**
Spring. 4 credits. Prerequisite: Psychology 101, 214, or 275, or permission of instructor. Not offered 1989–90. Graduate students, see Psychology 785.
M W F 11:15. Staff.
An intermediate analysis of comparative features of the historically and currently important theories of personality, with an evaluation of their systematic empirical contribution to modern personality study, to psychology, and to other behavioral sciences.]

**[387 Health and Disease (also Biology and Society 327 and German Studies 327)**
Fall. 4 credits. Limited to 20 students. Not offered 1989–90.
Hours to be arranged. S. L. Gilman and faculty team.
Everyone knows what health and disease are. Or do they? This Common Learning course on health and disease will explore some of the cultural, psychological, philosophical, anthropological, medical, economic, and political dimensions of these concepts to show how various models of disease function in contexts from business to engineering, from the military to the medical profession. The course will be divided into two segments: the first will examine the general implications of concepts of health and illness; the second will study these general principles as reflected in the definition, treatment, and mythmaking surrounding one specific disease: schizophrenia. The course will draw on specialists from throughout the university.]

**389 Reading Freud: Race, Gender, and Psychoanalysis (also Comparative Literature 347, English 347, German Studies 347, HPST 347)**
Fall. 3 credits.
F 1:25–3:20. S. L. Gilman.
This course will read a series of texts from the formative works of Sigmund Freud (beginning with the *Studies in Hysteria* and concluding with Freud's reading of the Schreber autobiography). These readings will be placed within the tension existing at the turn of the century between concept of the biology of race and biology of gender. Close attention will be paid to the cultural, scientific, as well as polemical literature on the ideas of race and gender from the biological writings of the late nineteenth century. The course will also provide an introduction to the basic concepts of Freudian psychoanalytic theory. The class will consist of a one-hour lecture and a one-hour discussion group. All of the primary readings are available in English.

**396 Introduction to Sensory Systems (also Biological Sciences 396)**
Spring. 3 or 4 credits (4 credits with term paper). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students will be expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Graduate students, see Psychology 696.
M W F 9:05. B. P. Halpern.
The course will be taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. The principles and limitations of major methods used to examine sensory systems will be considered. General principles of sensory systems, and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, thermoreception) will be selected for special attention. At the level of *An Introduction to the Physiology of Hearing*, by J. O. Pickles; *Photoreceptors: Their Role in Vision*, by A. Fein and E. Z. Szuts; *Comparative Studies of Hearing in Vertebrates*, edited by A. N. Popper and R. R. Fay; and "Information Processing in Cutaneous Mechanoreceptors," *Fed. Proc.*, 42:1983.

**402 Current Research on Psychopathology**
Spring. 4 credits. Prerequisite: Psychology 325.
W 1:25–4. K. Keil.
Current research and theory on the nature and etiology of major psychiatric disorders. Approaches from various disciplines are considered. Minimal attention to psychotherapy and symptomatology.

**404 Psychopathology and the Family**
Fall. 4 credits. Limited to 20 students. Prerequisite: Psychology 325.
W 1:25–4. K. Keil.
This course will explore familial influences on the development of abnormal behavior. It will examine how psychological, biological, and cultural factors in a family might contribute to such disorders as anorexia nervosa, depression, sexual abuse, psychopathy, and psychosomatic illnesses. Emphasis will be placed on early childhood experiences in the family and their impact on the development of later psychopathology. The course will also discuss how the evolution of family structures in more recent times (e.g., the rise in day care and divorce) influences the individual. Family therapy approaches and techniques will also be examined.

**410 Undergraduate Seminar in Psychology**
Fall or spring. 2 credits. Written permission of section instructor required for registration. Nonmajors may be admitted, but psychology majors are given priority.
Hours to be arranged. Staff.
Information on specific sections for each term, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Uris Hall.

**[412 Human Experimental Psychology Laboratory**
Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Recommended: knowledge of some high-level programming language, at least one course in human experimental psychology, or graduate standing in psychology. Not offered 1989–90. Graduate students, see Psychology 612.
T R 1:25–2:40; lab to be arranged. Staff.
A laboratory course in current methods of experimentation in perception and cognitive psychology that will focus on the use of microcomputers in laboratory research for both stimulus presentation and data collection. Students will hand in written laboratory reports. Projects will be selected from the areas of visual perception, pattern recognition, reading, memory, language, and concept learning.]

**415 Concepts, Categories, and Word Meanings**
Fall. 4 credits. Prerequisites: Psychology 205, 209, 214, or 215, or permission of instructor. Graduate students, see Psychology 615.
T 1:25–4. F. Keil.
Several different psychological theories about concepts, conceptual structure, and word meaning are considered. Topics will include models of concepts and categorization processes, conceptual change in development and in novice-expert transitions, relations between semantic and conceptual structure, and relations between concepts and intuitive theories of the world.

**416 Psychology of Language**
Spring. 4 credits. Prerequisite: some background in psycholinguistics or linguistics. Graduate students, see Psychology 616.
T R 1:25–2:40. H. S. Kurtzman.
Each year the course focuses on one or two major theoretical issues in current psycholinguistics. An intensive critical examination is made of the relevant literature from psychology, linguistics, and artificial intelligence. The issues are considered not only at the detailed level of specific hypotheses and evidence but also in relation to broader theoretical trends in the field.

**417 The Origins of Thought and Knowledge**
Spring. 4 credits. Prerequisites: Psychology 205, 209, 214, or 215, or permission of instructor. Graduate students, see Psychology 717.
T 1:25–4:05. F. Keil.
An in-depth analysis of current theories concerning the growth of thought and knowledge in childhood. Several controversies will be discussed in detail, including: Are mental abilities organized in local domains or modules that have their own patterns of development, or is cognitive development a more general process? Do comparative studies with other species and evolutionary models provide any useful insights into cognitive development in humans? Are there qualitative restructurings of thought and knowledge with development, or is the process more continuous in nature? What restrictions should these developmental considerations place on models of thought and knowledge in adults?

**418 Psychology of Music**
Fall. 3 or 4 credits, depending on whether student elects to do an independent project. Prerequisites: junior or senior standing with major in psychology or music and some background in both, or permission of instructor. Graduate students, see Psychology 618.
T R 1:25–2:40. C. Krumhansl.
Detailed analysis of topics in the psychology of music, including theories of consonance, perception of tonal-harmonic structure, memory for music, and effects of musical training. Emphasis given to experimental methodologies.

**422 Developmental Biopsychology**
Fall. 4 credits. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 221). Graduate students, see Psychology 622.
M W F 9:05. B. L. Finlay.
We will discuss the relationship of the development and evolution of the brain to the development of behavior. Topics include normal neuroembryology; how neurons are generated, find targets, and establish connections; the emergence of reflexive and complex behavior; how experience affects the developing brain; evolutionary perspectives on the development of perception, memory, and communication systems; and abnormal development.

**[425 Brain and Behavior**
Fall. 3 or 4 credits (4-credit option includes a discussion section and requires an additional paper). Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as Psychology 123 or Biological Sciences 221). Not offered 1989–90. Graduate students, see Psychology 625.
M W F 9:05. B. L. Finlay.
We will study the relation between structure and function in the central nervous system. Human neuropsychology and the contribution of work in animal nervous systems to the understanding of the human nervous system will be stressed. Some topics to be discussed include visual and somatosensory perception, organization of motor activity, emotion and motivation, psychosurgery, and memory and language.]

**[426 Seminar and Practicum in Psychopathology**
Spring. 4 credits. Limited to 16 students. Prerequisite: Psychology 325; permission of instructor required in all cases. Student should apply to the course during preregistration in fall semester; acceptance will be announced before the end of the fall semester. Not offered 1989–90.
T R 2:30–4:25. R. D. Mack.
A seminar and practicum course for advanced students who have mastered the fundamental concepts of personality and psychopathology. An opportunity to explore in depth issues in personality and psychopathology, particularly as they relate to issues of development, fantasy, attachment, and sex roles. Includes an experimental component involving self-disclosure, peer counseling, and group process. The goal: an integration of education and personal growth. It is recommended that students take Psychology 328, the fieldwork course, in conjunction with this seminar.]

**[429 Olfaction and Taste: Structure and Function (also Biological Sciences 429)**
Fall. 3 or 4 credits (4-credit option requires a term paper or research project. The research project can, but does not need to, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Prerequisite: one 300-level course in biopsychology or equivalent. Not offered 1989–90. Graduate students, see Psychology 629.
T R 9:05. B. P. Halpern.
The structural and functional characteristics of olfaction and taste will be explored by reading and discussing current literature in these areas. Structure will be examined at the light levels of electron microscopes as well as at the molecular level. Function will be primarily neurophysiological and biochemical aspects. The emphasis will be on vertebrates, especially air-breathing vertebrates in the case of olfaction, but there will be some coverage of invertebrate forms.]

**[436 Language Development (also Human Development and Family Studies 436 and Linguistics 436)**
Spring. 4 credits. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. Open to undergraduates and graduate students. S-U grades optional. Offered alternate years. Not offered 1989–90. Next offered spring, 1991.
T R 11:40–12:55. B. Lust.
This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of universal grammar and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.]

**440 Sleep and Dreaming**
Spring. 4 credits. Prerequisites: advanced undergraduate standing and Psychology 101 and 123.
T R 1:25–2:40. H. Porte.
The course will emphasize equally the neurobiology of sleep and the psychology of dreaming. The first half of the course will introduce the anatomy and physiology of the states and rhythms of sleep. Special topics will include sleep deprivation and the plausible functions of sleep; sleep and depression; the phylogeny and ontogeny of sleep; sleep disorders and the techniques of sleep disorders medicine. The second half of the course will look at dream data in relation to the components of REM sleep. From this perspective, students will evaluate theories of dreaming from Freud's to Francis Crick's, and will consider whether dreaming is functional or accidental, encoded or direct, wishful or confused.

**450 Seminar in the Psychology of Gender (also Women's Studies 450)**
Fall. 4 credits. Prerequisite: Psychology 277 or permission of instructor. Limited to 12 students. No preregistration. Graduate students, see Psychology 650.
W 2:30–4:30. S. Bem.
This seminar is designed primarily for juniors, seniors, and graduate students. Each time the course is offered, a particular research topic will be selected by the instructor for consideration in depth. The topic will be announced at the first meeting of the course. All interested students should attend that meeting.

**[465 Mathematical Psychology**
Spring. 4 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus), a course in probability or statistics, and a course in psychology. Not offered 1989–90.
T R 10:10–11: 40. Staff.
Mathematical approaches to psychological theory are discussed. Possible topics include choice and decision, signal detectability, measurement theory, scaling, stochastic models, and computer simulation.]

**[467 Seminar: The Examined Self—A Psychohistorical View**
Spring. 4 credits. Prerequisites: 9 credits of psychology including Psychology 325 or equivalent, and permission of instructor before course enrollment. Not offered 1989–90.
T 1:25–3:25. H. M. Feinstein.
Based primarily on American autobiographies dating from the seventeenth century to the twentieth century, this seminar will explore the shifting interface between self and historical context. Students should be prepared to write and talk about their own lives as well as the historical figures selected for study.]

**468 American Madness**
Spring. 4 credits. Limited to 15 students. Prerequisites: Psychology 325 and permission of instructor.
T 1:25–3:25. H. M. Feinstein.
The seminar will be devoted to an analysis of insanity as a psychological and historical phenomenon. Selected writings by the mentally ill and their definers will be studied.

**469 Psychotherapy: Its Nature and Influence**
Spring. 4 credits. Limited to senior psychology majors. Prerequisites: Psychology 325 or equivalent and permission of instructor during preregistration.
W 7–10 p.m. R. D. Mack.
A seminar on the nature of psychotherapy. Issues related to therapeutic goals, differing views of the nature of man, ethical concerns, and research problems are also considered. Experiential and role-playing exercises in class and three hours per week of peer counseling outside of class are integral parts of the seminar experience.

**470 Undergraduate Research in Psychology**
Fall or spring. 1–4 credits. S-U grades optional. Written permission from the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology.
Hours to be arranged. Staff.
Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

**[471 Statistical Methods in Psychology I**
Fall. 4 credits. Not offered 1989–90.
M W F 11:15. Staff.
Basic probability, descriptive and inferential statistics. Topics include parametric and nonparametric tests of significance, Bayesian inference, correlation, and simple linear regression. The level of the course is that of W. L. Hays, *Statistics for Psychologists.*]

**472 Multiple Regression**
Spring, weeks 1–7. 2 credits. Prerequisite: one solid semester of introductory statistics. Analysis of variance is helpful but not required.
M W F 10:10. R. Darlington.
Uses and pitfalls of multiple regression in causal analysis, path analysis, and prediction. Emphasis on analyzing data collected under uncontrolled conditions. Includes colinearity, indicator variables, sets, adjusted and shrunken $R^2$, suppressors, hierarchical analysis, overcontrol, experimental design. Very little hand computation; uses MYSTAT computer program.

**473 General Linear Model**
Spring, weeks 8–14. 2 credits. Prerequisite: Psychology 472 or equivalent.
M W F 10:10. R. Darlington.
Includes multicategorical variables, corrections for multiple tests, diagnostic methods, nonlinear relationships, interaction, main and simple effects, nesting, repeated measures, and MANOVA. Emphasizes MYSTAT, also discusses SYSTAT, SAS PROC REG and SAS PROC GLM.

**[475 Multivariate Analysis of Psychological Data**
Fall. 2 credits. Prerequisite: Psychology 472 or permission of instructor. Not offered 1989–90.
R 10:10–12:05. R. Darlington.
Most of the course concerns relative advantages of factor analysis and newer competing techniques for discovering hidden patterns in correlational data. Uses SYSTAT, SAS PROC FACTOR and PROC PRINCOMP. Also includes brief discussions of MANOVA, logit analysis, logistic regression, canonical correlation analysis, and multidimensional scaling.]

**[476 Representation of Structure in Data**
Fall. 3 credits. Prerequisites: one year of college mathematics (finite mathematics or calculus) and a course in the social sciences. Not offered 1989–90.
W 2:30–4:30. Staff.
Representations of preferences, dominance data, psychological distances, and similarities will be discussed. Topics include unidimensional and multidimensional scaling, unfolding, individual differences scaling, hierarchical clustering, and graph-theoretic analysis.]

**[478 Psychometric Theory**
Fall, weeks 1–10. 3 credits. Prerequisite: Psychology 472 or permission of instructor. Not offered 1989–90.
T R 10:10–12:05. R. Darlington.
Statistical methods relevant to the use, construction, and evaluation of psychological tests.]

**[479 Multisample Secondary Analysis**
Fall, weeks 11–14. 1 credit. Prerequisite: Psychology 350 or equivalent. Not offered 1989–90.
T R 10:10–12:05. R. Darlington.
Statistical methods for analyzing and integrating the results of many independent studies on related topics.]

**481 Advanced Social Psychology**
Fall. 4 credits. Limited to 20 students. Prerequisite: a course in social psychology or permission of instructor.
T R 10:10–11:25. D. T. Regan.
Selected topics in social psychology are examined in depth with an emphasis on the relationship between experimental research and the development of theory. Readings will be mostly primary sources. Among the theoretical approaches to social behavior we may discuss are social comparison theory, cognitive dissonance, attribution processes and social judgment, social exchange theory, and biological perspectives.

**482 Death and Dying**
Spring. 4 credits. Limited to 20 juniors and seniors. Prerequisites: 6 credits in sociology or psychology.
T R 2:30–4:25. W. Collins.
Issues of death and dying in modern American society are explored from the perspectives of psychology, sociology, and the health-related professions. Possible inadequacies in current practice are examined and alternatives discussed.

**[486 Interpersonal and Social Stress and Coping**
Fall. 4 credits. Limited to 25 upperclass students. Prerequisites: background in psychology and introductory statistics, or permission of instructor. Not offered 1989–90.
T 2:30–4:25. Staff.
A critical review of work in intrapersonal, interpersonal, situational, and sociocultural sources of stress and the major psychophysiological concomitants of such stress; resultant coping strategies and aids to coping. Data from laboratory, industry, and other cultures will be analyzed.]

**488 Human Development in Context (also Human Development and Family Studies 488)**
Spring. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: one course in statistics (which may be taken simultaneously) and two courses in the social sciences, or one in human biology and one in the social sciences.
T R 2:30–4:25. U. Bronfenbrenner.
The course examines highlights of what is known about human development in the actual settings in which human beings live and grow. The material presented reveals how development in its various aspects—cognitive, emotional, and social—occurs through the progressive interplay between the maturing capacities and characteristics of an active, exploring, thinking human organism and the changing situational, cultural, and historical contexts in which the person lives. Particular emphasis is given to the role of the family, peer group, school, workplace, community, and social structure and belief systems of the larger society. Course work is carried out primarily through the analysis of selected studies that shed light on critical issues in development. The main focus is not on specific findings but on key processes and principles of development to which the findings point. Students are offered guidance and experience in analyzing and evaluating research reports, with particular emphasis on the nature and intellectual excitement of the scientific process and on the implications of scientific knowledge for public policy and practice. The course is organized in terms of successive stages in the life course. At each stage the material presented will emphasize change and continuity in the two-way developmental processes taking place between a biologically maturing person and the progressively more complex environments into which the person moves through the life.

**489 Seminar: Selected Topics in Social Psychology and Personality (also Sociology 489)**
Spring. 4 credits. Prerequisites: one course in psychology and one course in sociology or permission of instructor. Graduate students, see Psychology 689.
Hours to be arranged. D. Bem.
The specific topics of discussion vary, but the general emphasis is on a critical examination of the study of individuals in social contexts.

**490 History and Systems of Psychology**
Fall. 4 credits. Intended for juniors, seniors, and graduate students, majors and nonmajors. Prerequisites: at least three courses in psychology or related fields or permission of instructor.
W 2–4:30. H. Levin.
The course aims to acquaint students with the recent history of psychology and to help them to identify important trends and underlying assumptions in contemporary writings. After a discussion of relevant nineteenth-century developments, a number of the major historical systems will be surveyed: the introspectionist, functionalist, behaviorist, and Gestalt psychologies; psychoanalysis; and cognitive psychology. Emphasis will be on the ideas that have shaped modern psychology.

**491 Research Methods in Psychology**
Spring. 4 credits. Enrollment limited to 25 students. Recommended: permission of instructor, Psychology 350, experience in upper-division psychology courses, or graduate standing. Graduate students, see Psychology 691.
T R 1:25–2:40. D. Dunning.
An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course will focus on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, we will also discuss what makes a research study actually interesting. The course will, in addition, cover test construction, survey methods, and "quasi experiments." Students will concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

**[492 Sensory Function (also Biological Sciences 492)**
Spring. 4 credits. Prerequisite: a 300-level course in biopsychology, or Biological Sciences 222 or 311, or permission of the instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Not offered 1989–90; next offered 1990–91. Graduate students, see Psychology 692.
M W F 10:10; sec, hours to be arranged. H. C. Howland, B. P. Halpern.
This course covers classical topics in sensory function such as vision, hearing, touch and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, and the development of sensory systems. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of *The Senses*, edited by Barlow and Mollon, and *An Introduction to the Physiology of Hearing*, by Pickles.]

## Advanced Courses and Seminars

Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office. The following courses may be offered either term and carry 4 credits unless otherwise indicated.

**502 Professional Writing in Psychology**

**510–511 Perception**

**512–514 Visual Perception**

**513 Learning**

**515 Motivation**

**517 Language and Thinking**

**518 Psycholinguistics**

**519–520 Cognition**

**521 Psychobiology**

**522 Topics in Perception and Cognition**

**523 Physiological Psychology**

**524 Sex Differences in Brain and Behavior (also Biological Sciences 524)**
Spring. 2 credits. Limited to 12 seniors and graduate students.
Hours to be arranged. T. DeVoogd.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

**525 Mathematical Psychology**

**531 History of Psychology**

**535 Animal Behavior**

**541 Statistical Methods**

**543 Psychological Tests**

**544 Topics in Psychopathology and Personality**

**545 Methods in Social Psychology**

**547 Methods of Child Study**

**551 Distinguished Speakers**

**561 Human Development and Behavior**

**580 Experimental Social Psychology (also Sociology 580)**

**591 Educational Psychology**

**595 Teaching of Psychology**

**596 Improvement of College Teaching**

**600 General Research Seminar**
No credit.

**605 Perception (also Psychology 205)**
4 credits.
J. Cutting.

**607 Chemosensory Perception (also Psychology 307)**
4 credits.
B. P. Halpern.

**609 Development of Perception (also Psychology 309)**
4 credits.
E. S. Spelke.

**[612 Human Experimental Psychology Laboratory (also Psychology 412)**
4 credits. Not offered 1989–90.
Staff.]

**613 Obesity and the Regulation of Body Weight (also Nutritional Sciences 613)**
Spring. 3 credits. Limited to 30 students. Prerequisites: one course in psychology and one course in nutrition. Undergraduate students may register with permission of instructor. S-U grades optional. Offered alternate years.
T R 1:30–3. D. Levitsky.
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

**614 Knowledge and Reasoning (also Psychology 214)**
4 credits.
C. Krumhansl.

**615 Concepts, Categories, and Word Meaning (also Psychology 415)**
4 credits.
F. Keil.

**616 Psychology of Language (also Psychology 416)**
4 credits.
H. Kurtzman.

**618 Psychology of Music (also Psychology 418)**
4 credits.
C. Krumhansl.

**622 Developmental Biopsychology (also Psychology 422)**
4 credits.
B. L. Finlay.

**[625 Brain and Behavior (also Psychology 425)**
4 credits. Not offered 1989–90.
B. L. Finlay.]

**626 Evolution of Human Behavior (also Psychology 326)**
4 credits.
R. Johnston.

**[629 Olfaction and Taste: Structure and Function (also Psychology 429 and Biological Sciences 429)**
4 credits. Not offered 1989–90.
B. P. Halpern.]

**650 Seminar in the Psychology of Gender (also Psychology 450 and Women's Studies 450)**
4 credits.
S. Bem.

**[670 Language and Cognition (also Psychology 370 and Linguistics 370)**
4 credits. Not offered 1989–90.
J. Bowers, H. S. Kurtzman.]

**683 Seminar in Interaction (also Sociology 683)**

**[684 Cross-Cultural Psychology (also Psychology 384)**
4 credits. Not offered 1989–90.
Staff.]

**[685 Sex Differences and Sex Roles (also Sociology 685 and Women's Studies 685)**
Not offered 1989–90.
Staff.]

**689 Seminar: Selected Topics in Social Psychology and Personality (also Psychology 489 and Sociology 489)**
4 credits.
D. Bem.

**[690 Seminar on Nutrition and Behavior (also Nutritional Sciences 690)**
Spring. 3 credits. Prerequisites: a course in psychology, Nutritional Sciences 361, and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
T R 1:30–3. D. Levitsky.
The seminar this year covers several current topics in nutrition and behavior. These topics include early nutritional insult and mental development, malnutrition and behavior, nutrition and learning, food additives and hyperkinesis, megavitamin therapy, inborn metabolic defects and mental illness, nutrition and depression, and hypoglycemia.]

**691 Research Methods in Psychology (also Psychology 491)**
4 credits.
D. Dunning.

**[692 Sensory Function (also Psychology 492 and Biological Sciences 492)**
4 credits. Not offered 1989–90; next offered 1990–91.
H. C. Howland, B. P. Halpern.]

**696 Introduction to Sensory Systems (also Psychology 396 and Biological Sciences 396)**
4 credits.
B. P. Halpern.

**700 Research in Biopsychology**

**709 Developmental Psychology (also Psychology 209)**
4 credits.
E. Spelke.

**710 Research in Human Experimental Psychology**

**[713 Perceptual and Cognitive Processes (also Psychology 313)**
4 credits. Not offered 1989–90.
Staff.]

**715 Psycholinguistics (also Psychology 215)**
4 credits.
H. S. Kurtzman.

**717 The Origins of Thought and Knowledge (also Psychology 417)**
4 credits.
F. Keil.

**720 Research in Social Psychology and Personality**

**722 Hormones and Behavior (also Psychology 322 and Biological Sciences 322)**
4 credits.
E. A. Regan, R. Johnston.

**773 Proseminar in Cognitive Studies I (also Cognitive Studies 773 and Philosophy 773)**
Fall. 2 credits.
R 1:25–2:40. Staff (taught jointly by faculty from Cornell's Cognitive Studies Program, representing fields of psychology and philosophy).
This is the first term of a year-long lecture-and-discussion course which is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, acquisition, and use. Topics for the fall semester include the psychology of perception and cognition and the philosophy of mind, language, and knowledge.

**[774 Proseminar in Cognitive Studies II (also Computer Science 774 and Linguistics 774)**
Spring. 2 credits.
R 1:25–2:40. Coordinator: Fred Landman. Taught jointly by faculty from computer science and linguistics.
This is the second half of a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, its acquisition, and its use. The focus will be on the contribution of linguistics, computer science, and neuroscience to the study of cognition. Topics may include the phonology, syntax, and semantics of natural language; artificial intelligence work in natural language processing, vision, and reasoning; parallel distributed processing, and neuropsychology.]

**[785 Theories of Personality (also Psychology 385)**
4 credits. Not offered 1989–90.
Staff.]

**900 Doctoral Thesis Research in Biopsychology**

**910 Doctoral Thesis Research in Human Experimental Psychology**

**920 Doctoral Thesis Research in Social Psychology and Personality**

### Summer Session Courses

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses will be offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

**101 Introduction to Psychology: The Frontiers of Psychological Inquiry**

**123 Introduction to Biopsychology**

**128 Introduction to Psychology: Personality and Social Behavior**

**215 Psycholinguistics**

**265 Psychology and Law**

**280 Introduction to Social Psychology**

**281 Interpersonal Relations and Small Groups (also Sociology 281)**

**325 Introductory Psychopathology**

**350 Statistics and Research Design**

**380 Community Mental Health**

**469 Psychotherapy: Its Nature and Influence**

### Special Programs

The Department of Psychology, in conjunction with Human Service Studies, the Field Study Office of the College of Human Ecology, and the Tel-Aviv University School of Social Work will periodically offer an eight-week summer program in Community Health. The course will include three weeks at Cornell and five weeks in Israel. It may be taken for 10–12 credits. For further information, contact Ronald Mack in the Department of Psychology.

## ROMANCE STUDIES

The Department of Romance Studies (Mary Gaylord, chair) offers courses in French literature, Italian literature, and Spanish literature. In addition, the department's program includes courses in French and Spanish languages, French linguistics, semiotics, and courses in French, Italian, and Hispanic culture. Through its course offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

### French

J. Bëreaud (director of undergraduate studies, 265 Goldwin Smith Hall, 255-6407), A. Berger, A. M. Colby-Hall, N. Furman, D. I. Grossvogel, R. Klein, P. Lewis, J. Ngate, A. Seznec, S. Tarrow, L. R. Waugh.

#### The Major

The major in French is designed to give students proficiency in the oral and written language, to acquaint, them with French literature and culture, and to develop skills in literary and linguistic analysis.

While prospective majors should try to plan their programs as far ahead as possible, no student will be refused admission merely because of a late start. It is even possible for a student to begin French at Cornell and become a major. Students wishing to major in French literature should consult the director of undergraduate studies of the Department of Romance Studies, Professor J. Bëreaud, who will admit them to the major. After their admission students will choose an adviser from among the French faculty. Students interested in a major in French linguistics should read the description of the major under Modern Languages and Linguistics—French.

### The Core

1) All majors are expected to acquire a sound degree of competence in language. This competence is demonstrated by the successful completion of French 312 or by the passing of a special examination to be taken no later than the end of the junior year. A typical program will involve two semesters of language at the 200 level (to be taken no later than the end of the sophomore year) and two semesters of language at the 300 level (French 311–312). Students may bypass any part of the sequence through placement examinations.
2) In addition, all majors are expected to take French 201 and 202. At least one of these should be completed successfully no later than the end of the sophomore year.

### The Options

1) The successful completion of six courses in French literature or civilization at the 300 level or above. These courses will be selected in consultation with the student's major adviser and will normally include at least one course from each of the three major periods of French literature (Medieval to Renaissance, the seventeenth and eighteenth centuries, and the nineteenth and twentieth centuries).
2) The successful completion of two related courses in one of the following: (a) French literature; (b) French linguistics; (c) French history, culture, music, or history of art or architecture; (d) courses in linguistic theory, history of language, psycholinguistics, or philosophy of language.

### Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the departments of Romance Studies and Modern Languages and Linguistics facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students interested in studying in France are encouraged to consider the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell and by Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the year or the semester as fully matriculated students at the University of Paris and other institutions of higher learning in Paris, including the Institut d'Etudes Politiques (Sciences Po) and the Ecole du Louvre, selecting courses in many fields from the regular university course offerings. Students begin the academic year with an intensive three-week orientation into French history, society, and daily life. This three-credit orientation helps students adjust quickly to immersion in French life and is designed to fill needs for students at all levels of background on France.

EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

**Honors.** The honors program encourages well-qualified students majoring in French literature to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading, and extensive rewriting to a degree not practically possible in the case of course papers.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429–430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

**Fees.** Depending on the course, a small fee may be charged for copies of texts used in course work.

### Language and Linguistics

Most language courses and French linguistics courses are offered by Modern Languages and Linguistics. Further language courses (conversation and advanced level), French linguistics courses, and all literature courses are listed below.

*Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listings under "Literature" for descriptions of the literature courses, any of which may be taken concurrently with 203–204 (offered by Modern Languages and Linguistics) or 200 described below.*

**200 Intermediate Course: Language and Literature**
Fall or spring. 3 credits. Prerequisite: qualification in French with a CPT score no higher than 629. Offered by the Department of Romance Studies. Conducted in French.
Fall: M W F 10:10, 11:15, or TR 10:10–11:25, S. Tarrow and staff; spring: M W F 9:05, 10:10, or 12:20. P. Lewis and staff.
Designed to provide an introduction to contemporary French culture and literature. Texts read and discussed are selected for their cultural and humanistic value. One-third of class time is devoted to grammar review, with emphasis on oral participation as well as improvement of language skills.

**210 Intermediate French Conversation**
Fall or spring. 2 credits. Limited to 15 students. Prerequisite: French 203 or 211 or equivalence (Q+) on the Cornell Advanced Standing Examination (CASE).
Fall: T R 8:40–9:55, 11:40–12:55, or 1:25–2:40; spring: T R 8:40–9:55 or 10:10–11:25. J. Bereaud and staff.
The course is based on audio-visual materials used in class; slides and recordings will accompany extensive discussions. A modest amount of reading each week will aim at increasing students' active vocabulary.

**310 Advanced French Conversation**
Spring. 2 credits. Limited to 15 students. Priority given to seniors. Prerequisite: French 204 or 212 or Cornell Advanced Standing Examination (CASE) placement of Q++.
T R 8:40–9:55, 11:40–12:55, or 1:25–2:40. J. Bereaud and staff.
This course is based on discussion of articles published in the French press (*L'Express* magazine). A few recordings and films will also be used.

**311 Advanced French**
Fall. 4 credits. Limited to 15 students. Prerequisite: French 204 or 212 or placement by the Cornell Advanced Standing Examination (CASE).
M W F 10:10, J. Bereaud; M W F 12:20, staff; M W F 1:25, staff.
All-skills course. Detailed study of present-day syntax. Reading and discussion of texts of cultural relevance. Weekly papers.

**312 Advanced French**
Spring. 4 credits. Limited to 15 students. Prerequisite: French 311 or placement by the Cornell Advanced Standing Examination (CASE).
M W F 10:10 or 11:15. J. Bereaud and staff.
Continuation of work done in French 311. Less emphasis will be placed on study of grammar, more on the examination of texts, on questions of style, and on oral presentation by students. Weekly papers.

**[400 Semiotics and Language (also Comparative Literature 410 and Linguistics 400)**
4 credits. Not offered 1989–90.]

**[408 Linguistic Structure of French I (also Linguistics 408)**
4 credits. Not offered 1989–90.]

**[424 Composition and Style**
4 credits. Not offered 1989–90.]

**604 Contemporary Theories of French Grammar**
Spring. 4 credits. Prerequisite: permission of instructor
To be announced. L. Waugh.
Selected readings of twentieth-century French linguistics.

### Literature

**[105 Freshman Writing Seminar: The French Novel**
Spring. 3 credits. Not offered 1989–90.]

**[107 Freshman Writing Seminar: Readings in Modern Literature**
3 credits. Not offered 1989–90.]

**109 Freshman Writing Seminar: Techniques of Interpretation: An Introduction to Semiotics (also Romance Studies 109)**
Fall or spring. 3 credits.
Fall: M W F 9:05 or T R 10:10–11:25. Spring: MWF 9:05 or 10:10. P. Lewis and staff.
In its broadest meaning semiotics is the study of signs that carry information: roadside signs, fashions, advertisements, publicity posters, literary modes. This course, which does not presuppose prior technical knowledge, will introduce the students to a critical reading of signs: the signifier (the concrete expression of the sign) and the signified (the message) and their various interactions. Exercises will be essays on how to analyze various signs taken from practical experience, such as advertisements from magazines or TV or from cultural phenomena (fashion codes, artistic modes).

**201 Introduction to French Literature**
Fall, spring, or summer. 3 credits. Prerequisite: a CPT score of 600 or higher or a 200-level language course. French 201 serves as a prerequisite for all 300-level courses in French literature and is required of all majors. The course is divided into small sections. Some are taught entirely in French; the others are taught in English. (For times of the all-French sections, see the supplemental course description available in Goldwin Smith Hall 283.) Readings for all sections are the same and all in French. Papers may be written in French or in English.
Fall: M W F 9:05, staff; M W F 10:10, staff; M W F 11:15, A. Colby-Hall; M W F 12:20, J. Ngate, staff; T R 8:40–9:55, D. Grossvogel; T R 10:10–11:25, D. Polachek. Spring: M W F 10:10, J. Bëreaud; M W F 11:15, staff; M W F 12:20, staff; T R 10:10–11:25, staff; T R 11:40–12:55, staff.
Stress is on the development of reading skills and, more generally, on cultural, sociological, and aesthetic implications of the texts. Readings will include works by major nineteenth- and twentieth-century authors in each of three principal genres: poetry, theatre, and novel.

**202 Studies in French Literature**
Fall or spring. 3 credits. Prerequisite: French 201 or a CPT achievement score of 650 or more (students who have not taken French 201 should obtain consent of instructor; those with scores in the 560–649 range should see the description of French 200 and 201). Required of all majors, but not limited to them. Conducted in French.
Fall: M W F 12:20 or T R 1:25–2:40. D. Polachek and staff. Spring: M W F 11:15 or 1:25 or T R 10:10–11:25. A. Berger and staff.
Study of the classic literature of seventeenth-century France (Corneille, Racine, Moliere, Madame de Lafayette) and its immediate forebears (Montaigne) and successors in the Enlightenment (Voltaire, Rousseau, Diderot, Beaumarchais). Special attention will be paid to the connections between classicism and humanistic trends.

**[309 Mystery and the Mystery Story (also Comparative Literature 309)**
4 credits. Not offered 1989–90.]

**[318 Music and Poetry in France: Late Middle Ages and Renaissance (also French 618 and Music 373/673)**
4 credits. Not offered 1989–90.]

**320 French Civilization**
Fall. 4 credits. Prerequisite: proficiency in French (typically taken after French 204 or 212). Conducted in French.
M W F 11:15. J. Bëreaud.
Study of contemporary France: its resources, institutions, culture, and attitudes. Students will be expected to research topics for papers and oral presentation. Audiovisual materials will be used.

**325 The Modern French Novel: A Form in Search of Itself**
Fall. 4 credits.
T R 10:10–11:25. D. Grossvogel.
Evolutions of the novelistic form through the experiments of such writers as Balzac, Stendhal, Flaubert, Zola, Gide, Proust, Colette, Robbe-Grillet, etc.

**329 Francophone Caribbean Literature**
Spring. 4 credits.
T R 11:40–12:55. J. Ngate.
A general introduction to the literature through the reading of representative poems, plays, short stories and novels by writers such as Jacques Roumain, Aimé Césaire, René Depestre, Maryse Condé, Léon Damas, Myriam Warner-Vieyra and Bertène Juminer. The course will be taught in French and with student participation in discussion of the assigned texts.

**[330 Francophone African Literature**
4 credits. Not offered 1989–90.]

**[331 Masterpieces of French Drama I: The Classical Era**
4 credits. Not offered 1989–90.]

**[332 Masterpieces of French Drama II: The Comic in the Modern Era**
4 credits. Not offered 1989–90.]

**[333 Contemporary French Thought**
Spring. 4 credits. Not offered 1989–90.]

**[334 The Novel as Masterwork**
4 credits. Not offered 1989–90.]

**335 Romance to Revolution: The French Novel before 1789**
Fall. 4 credits. Prerequisite: French 201 or permission of instructor. Conducted in French.
T R 1:25–2:40. P. Lewis.
In addition to considering formal questions relating to the development of the novel in French, this course will examine problems such as the appearance of narrative and historical consciousness, the representation of woman, and the relation between literature and society. Texts read will include those of such major writers as Rabelais, Mme de LaFayette, Prévost, Rousseau, Diderot, and Sade.

**[338 French Poetry from Its Origins to the Revolution of 1789**
4 credits. Not offered 1989–90.]

**[354 New Prose, Old Prose**
4 credits. Not offered 1989–90.]

**[358 Gustave Flaubert**
4 credits. Not offered 1989–90.]

**[362 Poems, Institutions, and Other Fictions in the Realm of Francis the First (also History 362)**
4 credits. Not offered 1989–90.]

**369 Comic Theater in the Seventeenth Century**
Spring. 4 credits.
M W F 12:20. P. Lewis
The principal focus of this course will be the comedies of Corneille and Moliere. In addition, there will be an attempt to follow the evolution of a half-century of comic theater (1625 to 1675), with attention to some interesting, if relatively minor theatrical experiments by Racan, Mairet, Scarron, and Racine. Conducted in French.

**370 Perspectives on the Age of Enlightenment: "Enlightened" Literature**
Spring. 4 credits.
M W F 1:25. A. Berger.
Through a reading of various works of the French eighteenth century (by Montesquieu, Voltaire, Diderot, Rousseau, and Sade), we will study the emergence of new literary discourses and practices aiming at a "secularisation" of the literary field, in conjunction with the ideological and epistemological changes that took place under the name of Enlightenment.

**[371 Eighteenth-Century Theater**
4 credits. Not offered 1989–90.]

**[372 Reading Order of Tragedy**
4 credits. Not offered 1989–90.]

**[375 Eighteenth-Century Novel**
4 credits. Not offered 1989–90.]

**[379 Victor Hugo—Romantic Movement**
4 credits. Not offered 1989–90.]

**[380 Introduction to French Romanticism**
4 credits. Not offered 1989–90.]

**[388 The French Lyric Romance from Symbolism to Surrealism**
4 credits. Not offered 1989–90.]

**[389 French Romanticism (also Women's Studies 493)**
4 credits. Not offered 1989–90.]

**[390 Modern French Criticism**
4 credits. Not offered 1989–90.]

**[395 Camus and His Contemporaries**
4 credits. Not offered 1989–90.]

**[396 The Contemporary French Novel: 1950 to the Present**
4 credits. Not offered 1989–90.]

**[398 Six French Poets**
4 credits. Not offered 1989–90.]

**[404 Cogito Ergo Sum: Thought and Existence from Descartes to Sartre (also Comparative Literature 404 and Romance Studies 404)**
4 credits. Not offered 1989–90.]

**419–420 Special Topics in French Literature**
419, fall; 420, spring. 2–4 credits each term.
Prerequisite: permission of instructor.
Staff.
Guided independent study of special topics.

**[422 Three Ages of Theater (also Comparative Literature 422)**
4 credits. Not offered 1989–90.]

**429–430 Honors Work in French**
429, fall; 430, spring. 4 credits each term, with permission of the adviser. Open to juniors and seniors. Consult the director of the honors program, A. Berger.

**435 Césaire et Lautréamont**
Spring. 4 credits.
R 2–4:25. J. Ngate.
Césaire et Lautreamont ont en commun de pouvoir se réclamer a la fois de la France (sur le plan de l'héritage culturel et littéraire) et du Nouveau monde (de par leur naissance). Ceci expliquerait-il qu'il y ait chez eux une forte tendance a la recherche de la démesure dans la production de leurs textes littéraires? Et peut-on vraiment parler d'une esthétique de la démesure? Quelles en seraient les données de base?

**[436 Francophone African Fiction (also French 636)**
4 credits. Not offered 1989–90.]

**438 La poésie de la Négritude (also French 638)**
Fall. 4 credits.
W 2–4:25. J. Ngate.
The course will start by looking at the poetry of a precursor (the Malagasy J.-J. Rabéarivélo), and then move on to the work of the three founders of Negritude (Aimé Césaire, Léon Damas, and Léopold S. Senghor). Two African poets of the second and third generations (the Congolese Tchicaya U Tam'si and the Ivorian J.-M. Adiaffi) will finally be read against the background of the theory and the practice of the founding "fathers."

**447–448 Medieval Literature**
447, fall; 448, spring. 4 credits each term. Prerequisite: French 201 or permission of instructor. First term not prerequisite to the second.
M W F 9:05. A. Colby-Hall.
French 447 deals with the epic and the theater; 448 deals with the romance and the lyric. Facility in reading Old French and appreciation of these four major genres are the primary goals of this course.

**[452 Theatre in Sixteenth-Century France**
4 credits. Not offered 1989–90.]

**453 Masterpieces of French Renaissance Prose**
Spring. 4 credits.
T R 1:25–2:40. D. Polachek.
This course will focus on representative works of the three major prose writers of the sixteenth century: Rabelais, Marguerite de Navarre, and Montaigne. We will first place these authors in their historical and cultural moment and see with what traditions in form each writer works and to what individual uses each writer places these traditions. Class discussions will then focus on analyses of selections from such texts as *Gargantua, l'Heptameron*, and the *Essais*. By asking how each work is structured and by concentrating upon its particular preoccupations (e.g., society and its institutions, love and sexuality, introspection and self-portraiture), we will explore the relationship between literary form and content in the Renaissance. Since each of the three authors represents a different point in the development of Renaissance thought, students will be able to compare the differing world views presented in each. Readings and discussions in French.

**[456 Diverse Poetries in Sixteenth-Century France**
4 credits. Not offered 1989–90.]

**[457 Rabelais**
4 credits. Not offered 1989–90.]

**[458 Montaigne**
4 credits. Not offered 1989–90.]

**[459 Petrarchism and the Lyric Experience in France (also French 659)**
4 credits. Not offered 1989–90.]

**[460 The Moralist Tradition (also French 660)**
4 credits. Not offered 1989–90.]

**[461 The Theater of Moliere**
4 credits. Not offered 1989–90.]

**[462 Racine (also French 662)**
4 credits. Not offered 1989–90.]

**[470 Perspectives on the Age of Enlightenment**
4 credits. Not offered 1989–90.]

**[473 Diderot and the Enlightenment**
4 credits. Not offered 1989–90.]

**479 Facing the Revolution: Chénier, Hugo, Baudelaire (also Society for Humanities 411)**
Fall. 3 credits. Limited to 17 students.
T 2:30–4:25. E. Burt.
Readings in histories of the French Revolution and in selected poems will lead to questions concerning the relationship between revolutions in the political and poetical domains. What is the rationale that leads Furet to call the revolution a "language," or De Tocqueville to speculate that the revolutionary turn came when the abusive language whereby the *ancien régime* maintained its power turned against its user? What is the likeness between the French Revolution and a text? What, on the other hand, is the significance of the borrowing by poets of revolutionary terminology to signify their innovations in poetic form? Does Hugo call his language "jacobin" by metaphor? These questions revolve around a further problem, namely, the sharper disassociation of poetry, in the wake of the revolution, from the overtly political sphere. Is this separation a "retreat" on the part of poets from an engagement in politics, as it has often been claimed? Is it, on the contrary, in order to reflect on the seductiveness of metaphors (like the metaphor comparing the order of the poem with the order of the state) that the poem effects its retreat? Readings in Michelet, Kant, De Tocqueville, Chénier, Hugo, Baudelaire.

**[485 Reading Workshop: The Short Story**
4 credits. Not offered 1989–90.]

**[487 Rimbaud and the Question of Reading**
4 credits. Not offered 1989–90.]

**[488 Baudelaire**
4 credits. Not offered 1989–90.]

**[493 French Feminisms (also Women's Studies 493)**
4 credits. Not offered 1989–90.]

**[494 Surrealism**
4 credits. Not offered 1989–90.]

**[496 The Early Twentieth-Century French Novel (also Comparative Literature 496)**
4 credits. Not offered 1989–90.]

**[497 Poetry since Baudelaire**
4 credits. Not offered 1989–90.]

**[498 Dostoevsky, Mann, and Gide (also Comparative Literature 498)**
4 credits. Not offered 1989–90.]

**499 Fiction and Film in France (also Comparative Literature 499)**
Spring. 4 credits.
T R 2:55–4:10. D. Grossvogel.
The nature of selected dramatic structures and fictional forms (especially in realism and surrealism) and their influence on the motion pictures derived from them.

**596 Colette: Can She Be a Subject of Masculine Discussion in the '80s?**
Spring. 4 credits.
W 2:30–4:25. D. Grossvogel.
From her first writings under the tutelage of her husband, Willy, to her emergence as one of the most important authors in the first half of the century. Gabrielle Colette's story is one of both emancipation and of a particular sensitivity that allowed critics to praise her as the greatest of all French women writers. Her life and writings thus raise questions about gender, narrative voice, sexual roles, and the like—questions that are very much with us today and add to the complexity of any attempt at this kind of analysis.

**[607 Proseminar: The Interpretation of Texts**
4 credits. Not offered 1989–90.]

**[608 Proseminar**
4 credits. Not offered 1989–90.]

**[618 Music and Poetry in France: Late Middle Ages and Renaissance (also French 318 and Music 373/673)**
4 credits. Not offered 1989–90.]

**[629 Historical French Phonology**
4 credits. Not offered 1989–90.]

**638 La Poésie de la Négritude (also French 438)**
Fall. 4 credits.
W 2–4:25. J. Ngate.
For description see French 438.

**639–640 Special Topics in French Literature**
639, fall; 640, spring. 4 credits each term.
Staff.
Guided independent study for graduate students.

**644 Medieval Seminar: The Old French Epic**
Spring. 4 credits.
M 2:30–4:25. A. Colby-Hall.
Topic: The epic world of Guillaume d'Orange.

**[646 Medieval Seminar: Villon**
4 credits. Not offered 1989–90.]

**[648 Medieval Seminar: *Le Roman de la Rose***
4 credits. Not offered 1989–90.]

**[659 Petrarchism and the Lyric Experience in France (also French 459)**
4 credits. Not offered 1989–90.]

**[660 The Moralist Tradition (also French 460)**
4 credits. Not offered 1989–90.]

**[661 Racine and His Critics**
4 credits. Not offered 1989–90.]

**[662 Racine (also French 462)**
4 credits. Not offered 1989–90.]

**[663 La Fontaine and Perrault: Fables, Tales, and Narrative Traps**
4 credits. Not offered 1989–90.]

**[665 The Emergence of Aesthetics**
4 credits. Not offered 1989–90.]

**[666 Seventeenth-Century Seminar: Moralities in Fiction: The Classical Moment (also Comparative Literature 666)**
4 credits. Not offered 1989–90.]

**[669 Seventeenth-Century Seminar: Illusion and Representation**
4 credits. Not offered 1989–90.]

**[679 Comedy and Philosophy in the French Enlightenment**
4 credits. Not offered 1989–90.]

**685 Stendhal, Balzac, Flaubert (also Comparative Literature 610)**
Fall. 4 credits.
R 10:10–12. J. Culler.
Study of *Le Rouge et le noir, La Chartreuse de Parme, La Peau de Chagrin, La Cousine Bette, Madame Bovary,* and *L'Education sentimentale,* with particular attention to questions of narrative structure and technique and issues of power, gender, and knowledge.

**687 Poetry and the Threat of Modernity: The Case of Rimbaud**
Fall. 4 credits.
M 2:30–4:25. A. Berger.
We will examine the ways in which Rimbaud's text stages the conflict between the idealizing and ahistorical (if not anti-historical) discourse of poetry and of history, the notion of which frames the modern experience of the world. To better locate the sources of Rimbaud's dilemma, close attention will be paid to the context of its enunciation. Readings will include selected works by Rimbaud's immediate forebearers and contemporaries (such as Hugo, Banville, Baudelaire, minor Parnassians, proto-symbolists, etc.) as well as theoretical writings on Aesthetics and the history of genres (Hegel, Nietzsche, Adorno).

**[688 Gerard de Nerval**
4 credits. Not offered 1989–90.]

**[689 Bohemians and Dandies**
4 credits. Not offered 1989–90.]

**[690 André Gide (also Comparative Literature 695)**
4 credits. Not offered 1989–90.]

**[691 Laughter**
4 credits. Not offered 1989–90.]

**[692 Sartre and Genêt**
4 credits. Not offered 1989–90.]

**[693 Nineteenth-Century Seminar**
4 credits. Not offered 1989–90.]

**[694 Surrealism**
4 credits. Not offered 1989–90.]

## Italian

A. Grossvogel (director of undergraduate studies, 261 Goldwin Smith Hall, 255-4264), M. Migiel

### The Major

Students who wish to major in Italian should choose a faculty member to serve as a major adviser; the general plan and the details of the student's course of study will be worked out in consultation with the adviser. Italian majors are encouraged to take courses in related subjects such as history, art history, music, philosophy, anthropology, classics, linguistics, and other modern languages and literatures. While a major often occupies only the junior and senior years, it is wise for students to seek faculty advice about the major as early as possible.

Students who elect to major in Italian ordinarily should have completed Italian 201 by the end of their sophomore year. Exemptions can be made on the basis of an examination. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature, to acquaint themselves with the outlines of Italian literary history, and to develop some skill in literary analysis. To this end, students will be expected to complete successfully 32 credits of Italian literature courses at the 300 level or higher, with papers to be written in Italian or English. Required courses for the major are Italian 303, 304, and 334. Italian 402, History of the Italian Language, and 403, Linguistic Structure of Italian, may be counted toward the 32 credits required for the major (an introductory linguistics course is a prerequisite of Italian 402 and 403).

Students majoring in Italian will also be expected to acquire competence in the handling of the language. That competence may be demonstrated by passing an oral and written examination to be arranged with the adviser.

Italian majors will also be required to complete successfully two courses in related fields (for example, Italian history, Italian art history, literary theory).

Italian majors may study in Italy, generally during their junior year, under any of those study-abroad plans organized by American universities that allow the transfer of grades and credit, such as the Cornell program in Rome.

The College of Architecture, Art, and Planning maintains a program open to all qualified students attending Cornell. The program is housed in the sixteenth-century Palazzo Massimo, designed by the architect Baldassare Peruzzi, on the Corso Vittorio Emanuele, in the heart of Rome. Students may enroll for a semester in the fall or spring. Courses regularly taught at the Palazzo Massimo include Italian language (beginning and intermediate); Architecture 300, 401, 402, 500, 502, Design Studio; Architecture 338 and 399, Special Topics in Architectural History; Architecture 458, Special Projects in Design Communications; Architecture 367, Contemporary Italian Culture; Architecture 510, Thesis Introduction; Art 251, 311, 322, and 371; and History of Art 371, Renaissance and Baroque Art in Rome.

To be eligible, students must have completed the first two years of their curriculum requirements and be in good academic standing.

**Fees.** Depending on the course, a small fee may be charged for copies of texts for course work.

### Literature

Most language courses and Italian linguistic courses are offered by Modern Languages and Linguistics. Advanced language courses and all literature courses are listed below.

**109 FWS: Italian Literature Revisited**
Fall or spring. 3 credits.
Fall: T R 11:40–12:55; spring: T R 11:40–12:55. M. Migiel and staff.
The permanent presence of early Italian literature in our cultural heritage results not only from the continued popularity of the original works, but also from their recurrence in later literature and art. In this course, we will read selections from early Italian literature (especially Dante's *Divine Comedy,* Petrarch's *Canzoniere,* and Boccaccio's *Decameron)* and we will study the way in which authors and artists from the middle Ages to the present day (including Chaucer, Shakespeare, Pasolini, and Vonznesenskaya) have taken early Italian literature to be a source of inspiration for their own works. We will consider the cultural, ideological, and aesthetic implications of adaptations of literary source materials. Particular attention will be given to the ways in which an artist uses literary models to interpret contemporary social and historical reality and to define his or her place in the artistic tradition. All foreign texts will be read in English translation.

**201 Introduction to Italian Literature**
Fall. 3 credits. Prerequisite: permission of instructor. Conducted in Italian.
M W F 11:15. M. Migiel.
Exploration of the cultural, sociological, and aesthetic implications of Italian literary texts. Emphasis on the development of students' oral, written, and reading skills. Readings will include prose, poetry, and drama written by major Italian authors.

**[303 Introduction to Medieval and Renaissance Literature**
4 credits. Not offered 1989–90.]

**304 Introduction to Modern Italian Literature**
Spring. 4 credits. Prerequisite: Italian 201 or permission of instructor. Conducted in Italian.
T R 11:40–12:55. A. Grossvogel.
A reading of masterpieces of modern Italian literature with attention to the context in which they arose. Highlights of Galileo and Vico's writing. Selections of novels from romanticism to the contemporary period. The theater of Goldoni and Pirandello. Poetry from Leopardi to Montale.

**[322 Italian Civilization: Literature and Regionalism**
4 credits. Not offered 1989–90.]

**[334 Dante's Divine Comedy (also Italian 634)**
4 credits. Not offered 1989–90.]

**[340 Literature and Society in the Italian Renaissance**
4 credits. Not offered 1989–90.]

**[354 Italian Humanism (also Italian 654)**
4 credits. Not offered 1989–90.]

**[357 The Italian Renaissance Epic**
4 credits. Not offered 1989–90.]

**[370 Eighteenth-Century Thought**
4 credits. Not offered 1989–90.]

**[381 Narrative of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 581)**
4 credits. Not offered 1989–90.]

**384 Early Modern Italian Autobiography (also Italian 684)**
Spring. 4 credits.
T R 2:55–4:10. J. Schiesari.
This course will focus on the development of various representations of selfhood in both narrative and poetic texts of the late Medieval through the Enlightenment periods. The emergence of autobiography as a specific genre in the eighteenth century will be studied in terms of its relation to the confessional tradition inaugurated by Augustine and elaborated in the *canzoni* of Petrarch, Bembo, della Casa, and Tasso. We will then study the ways in which this tradition is revised in the longer narrative autobiographies of Cellini, Vico, da Ponte, and Alfieri. The development of this self-interpretative writing will be organized by three different types of inquiry. First, we will consider the role of ideological and cultural conditions in determining the possibility and modes of representing personal experience. Second, we will examine how a subject of discourse, the "I" that is presupposed by any utterance, can legitimate and authorize the taking of its own past as the theme of writing. Finally, the style of each autobiographical text will be considered as a coherent system that creates the effect of personhood through metaphors, topoi, and other rhetorical strategies.

**390 Literature to Cinema**
Fall. 4 credits. Conducted in English.
T R 2:30–4:25. A. Grossvogel.
A study of the ways literary language has influenced Italian cinema. The films to be screened will be by Antonioni, Bertolucci, Bolognini, De Sica, Fellini, Pasolini, Rossellini, Scola, Taviani, Visconti, Zeffirelli, and Zurlini. The works of literature to be read in conjunction with these films will include selections from Boccaccio's *Decameron* and from the narrative works of Verga, Fogazzaro, D'Annunzio, Pirandello, and others.

**[391 The Theater of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 691)**
4 credits. Not offered 1989–90.]

**[393 Narrative and Ideology in Contemporary Italian Literature (also Italian 693 and Comparative Literature 393)**
4 credits. Not offered 1989–90.]

**395 Readings in Contemporary Italian Fiction**
4 credits. Not offered 1989–90.]

**399 Cinema to Literature**
Spring. 4 credits. Conducted in English.
T R 2:30–4:25. A. Grossvogel.
The course will consist of a comparative study of selected films by Fellini, Antonioni, Visconti, and others and of works by major contemporary writers such as Montale, Ungaretti, Gadda, and Calvino. These authors' similarities and contrasts in invention, style, and techniques will be explored to illustrate the evolution of contemporary aesthetics in cinematography and poetry in Italy.

**419–420 Special Topics in Italian Literature**
419, fall; 420, spring. 2–4 credits each term.
Prerequisite: permission of instructor.
Staff.
Guided independent study of specific topics.

**[427–428 Dante: *La Divina commedia***
4 credits. Not offered 1989–90.]

**429–430 Honors in Italian Literature**
429 fall; 430, spring. 4 credits each term.
Limited to seniors. Prerequisite: permission of instructor.
A. Grossvogel.

**[437 Petrarch: *Canzoniere***
4 credits. Not offered 1989–90.]

**440 The Gendering of Melancholia**
Spring. 4 credits.
W 2:30–4:25. J. Schiesari.
The theoretical framework for the problems will be initially elaborated by an attentive reading of Freud's "Mourning and Melancholia" and of subsequent psychoanalytic commentators such as Klein, Lacan, Torok and Abraham, Irigaray, Kristeva, and Silverman. This theoretical context with its strategic positioning and eliding of gender differences will then allow us to read the Renaissance celebration of the *homo melancholicus* as it is most manifestly stated and explored in the philosophical works of Marsilio Ficino (*De Amore* and *De Vita Triplici*), and the writings of Torquato Tasso (especially *Il Messaggiero*, *La Canzone al Metauro*, and portions of the *Gerusalemme Liberata*). We will also consider the discourse of mourning in Isabella di Morra and Gaspara Stampa as a counterpoint to the appropriation of femininity in the melancholic male tradition. Attention will also be paid to the place of melancholia in the figural arts (notably Dürer) and in the medical and philosophical treatises of Weyer, Burton, and Bodin.

**445 Boccaccio (also Italian 645)**
Fall. 4 credits.
W 2:30–4:25. M. Migiel.
The course will focus mainly on the *Decameron*, with some attention to Boccaccio's Humanist production and his minor works in Italian (*Filostrato*, *Teseida*, *Corbaccio*). Particular attention will be devoted to Boccaccio's development of narrative techniques, his use of literary sources, and his commentary on the social and ideological function of literature. Conducted in Italian.

**[448 Italian Lyric Poetry, 1255–1600: The Formation of the Canon**
4 credits. Not offered 1989–90.]

**[458 Tasso**
4 credits. Not offered 1989–90.]

**[472 Eighteenth-Century Italian Theater: From Melodrama to Tragedy**
4 credits. Not offered 1989–90.]

**[474 Opera (also German 374/674 and Music 374/674)**
4 credits. Not offered 1989–90.]

**485 The Nineteenth Century: Foscolo, Manzoni, Leopardi**
Fall. 4 credits. Conducted in Italian and English.
M 2:30–4:25. A. Grossvogel.
Manzoni's novel together with Foscolo's *Ultime lettre di Jacopo Ortis* and Leopardi's *Operette morali* constitute the now-acknowledged major contribution to the renewal of literary prose in nineteenth-century Italy. A close study of the texts, their poetics, and their proximity will bring out intentions, achievements, and the unwilling reciprocity of the three major Italian writers of the century as they set out, in the brief span of a quarter of a century, to constitute modern prose.

**[488 Giacomo Leopardi and Nineteenth-Century Poetry**
4 credits. Not offered 1989–90.]

**[495 Readings in Contemporary Italian Fiction**
4 credits. Not offered 1989–90.]

**[496 Futurism in Italy and Europe**
4 credits. Not offered 1989–90.]

**[497 Modern Italian Poetry: D'Annunzio to Montale**
4 credits. Not offered 1989–90.]

**[498 Eugenio Montale and Contemporary Italian Poetry**
4 credits. Not offered 1989–90.]

**[557 The Italian Renaissance Epic**
4 credits. Not offered 1989–90.]

**[581 Narrative of Verga, D'Annunzio, Svevo, and Pirandello (also Italian 381)**
4 credits. Not offered 1989–90.]

**[634 Dante's Divine Comedy (also Italian 334)**
4 credits. Not offered 1989–90.]

**639–640 Special Topics in Italian Literature**
639, fall; 640, spring. 4 credits each term.
Staff.

**645 Boccaccio (also Italian 445)**
Fall. 4 credits.
W 2:30–4:25. M. Migiel.
For description, see Italian 445.

**[654 Italian Humanism (also Italian 354)**
4 credits. Not offered 1989–90.]

**684 Early Modern Italian Autobiography (also Italian 384)**
Spring. 4 credits.
T R 2:55–4:10. J. Schiesari.
For description, see Italian 384.

**[691 Theater of Verga, D'Annunzio, Svevo, and Pirandello**
4 credits. Not offered 1989–90.]

**[693 Narrative and Ideology (also Italian 393 and Comparative Literature 393)**
4 credits. Not offered 1989–90.]

## Romance Studies

### Literature

**109 Freshman Writing Seminar: Techniques of Interpretation: An Introduction to Semiotics (also French 109)**
Fall or spring. 3 credits.
Fall: M W F 9:05 or T R 10:10–11:25.
Spring: M W F 9:05 or 10:10. P. Lewis and staff.
In its broadest meaning, semiotics is the study of signs that carry information: roadside signs, fashions, advertisements, publicity posters, literary modes. This course, which does not presuppose prior technical knowledge, will introduce the students to a critical reading of signs: the signifier (the concrete expression of the sign) and the signified (the message) and

their various interactions. Readings will include such books as R. Barthes, *Mythologies*, and T. Hawkes, *Structuralism and Semiotics*. Exercises will be essays on how to analyze various signs taken from practical experience, such as advertisements from magazines or TV, or from cultural phenomena (fashion codes, artistic modes).

**[361 The Culture of Early Renaissance (also Comparative Literature 361 and History of Art 350)**
4 credits. Not offered 1989–90.]

**[404 Cogito Ergo Sum: Thought and Existence from Descartes to Sartre (also French 404 and Comparative Literature 404)**
4 credits. Not offered 1989–90.]

**[424 Composition and Style**
4 credits. Not offered 1989–90.]

**[431 Isms: General Concepts in Modern Cultural History (also Comparative Literature 431)**
4 credits. Not offered 1989–90.]

**[459 Being, God, Mind: Key Terms of Western Thought from Plato to Vico (also Comparative Literature 369)**
4 credits. Not offered 1989–90.]

**[460 Biology and Theology: Approaches to the Origin of Life, Evolution, Heritage and Freedom, Sexuality and Death (also Comparative Literature 460)**
4 credits. Not offered 1989–90.]

**[497 Heidegger: Short Writings (also Comparative Literature 497 and German 497)**
3 credits. Not offered 1989–90.]

## Spanish

D. Castillo, U. J. DeWinter, M. Gaylord (chair), J. W. Kronik, A. Monegal, C. Morón-Arroyo, J. Piedra, M. Stycos, J. Tittler (director of undergraduate studies [literature], 286 Goldwin Smith Hall, 255-4048)

## The Major

The major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in literary and linguistic analysis. Satisfactory completion of the major should enable students to meet language and literature requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake preprofessional training for graduate study in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies in Spanish—Professor Tittler (286 Goldwin Smith Hall)—who will admit them to the major and choose an adviser from the Spanish faculty. Spanish majors will then work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

Spanish 201 and 204 or 212 (or equivalent) are prerequisite to entering the major in Spanish. All majors will normally include the following core courses in their programs:

1) Spanish 315–316–318
2) Spanish 311 and 312 (or equivalent)

Spanish majors have great flexibility in devising their programs of study and areas of concentration. Some typical options of the major are:

1) Spanish literature, for which the program of study normally includes at least 20 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses in all the major periods of Hispanic literature.
2) A combination of literature and linguistics.
3) Any of the above options with certain courses in other disciplines counted toward the major. Whichever option a student chooses, he or she is encouraged to enrich the major program by including a variety of courses from related fields or by combining Spanish with related fields such as history, philosophy, sociology, anthropology, art, music, Classics, English, comparative literature, and other foreign languages and literatures. In particular the interdepartmental programs in Latin American Studies and Hispanic American Studies sponsor relevant courses in a variety of areas.

The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

For the major in Spanish linguistics, see Modern Languages and Linguistics—Spanish.

**Study abroad in Spain.** Cornell and the University of Michigan cosponsor an academic year in Spain program. Students enrolled in this program spend the first four weeks before the fall semester begins in a residential college located on the campus of the University of Madrid, where they take a course in Spanish language and contemporary society and take advantage of special lectures and field trips to Madrid and Castile. This course carries three credits. In early October the program moves to Seville, where students enroll in as many regular classes at the University of Seville as their language competency and general education permit. Their academic work is supplemented by courses designed explicitly for the program by Seville faculty, as well as a seminar regularly offered by the resident director, who is chosen from the faculty of either Cornell or Michigan. The special courses normally include history of art and architecture, Spanish composition and syntax, and modern Spanish history. In Seville students live with selected families or in a few cases in *colegios mayores*. Cornell-Michigan also maintains a center in Seville, which is used by students for special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have attained at least proficiency in Spanish prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. Students interested in the study abroad program should consult with the Cornell Abroad office for further information.

**Honors.** Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essays (see Spanish 429–430).

**Fees.** Depending on the course, a small fee may be charged for film use or for copies of texts for course work.

### Language

Most language courses and Spanish linguistic courses are offered by Modern Languages and Linguistics. Advanced language courses and all literature courses are listed below.

*Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listing under Spanish 201 for description of the literature course which may be taken concurrently with the 203–204 (offered by Modern Languages and Linguistics) or 211–212 language courses described below.*

**[211 Intermediate Spanish**
3 credits. Not offered 1989–90.]

**[212 Intermediate Spanish**
3 credits. Not offered 1989–90.]

**311 Advanced Composition and Conversation**
Fall. 4 credits. Prerequisite: Spanish 204 or 212 or equivalent.
M W F 11:15, A. Monegal, or M W F 12:20, M. Stycos.
Advanced language skills, developed through reading, grammar review, and intensive practice in speaking, writing, and translation. Analysis of present-day Spanish usage in a wide variety of oral and written texts.

**312 Advanced Composition and Conversation**
Spring. 4 credits. Continuation of spring 311 but may be taken separately. Required of Spanish majors.
M W F 12:20, M. Stycos, or T R 11:40–12:55, A. Monegal.
Readings and class discussion will focus on the stylistic analysis of modern texts. Increased emphasis, through weekly essays, on students' development of an effective Spanish prose style.

### Literature

**105 Freshman Seminar. Paradise Lost: Biculturalism in America (also English 168)**
Fall. 3 credits.
T R 11:40–12:55. L. Carrillo.
A dissection of the myth of the American Dream through a study of literature written by American ethnic minority authors. How expectations clash or coincide with reality and what mechanisms evolve to maintain biculturality in our predominantly white society. Representative semifictional works may include Toni Morrison's *Bluest Eye* (Afro-American), Maxine Hong Kingston's *China Men* (Asian American), Scott Momaday's *House Made of Dawn* (Native American), Piri Thomas' *Down These Mean Streets* (Hispanic American), and the movie *El Norte*.

**[106 Freshman Seminar: Searching for Self in Hispanic Fiction**
3 credits. Not offered 1989–90.]

**109 Freshman Seminar: Revolution and Literature in Latin America**
Fall or spring. 3 credits.
Fall: M W F 10:10 or 11:15. Spring: M W F 9:05. J. Tittler and staff.
Using selected works of contemporary Latin American fiction as a springboard for discussion and study, the course will consider the question of radical change from a variety of standpoints, including the historical, institutional, psychological, and literary. Readings will include Julio Cortázar's *A Manual for Manuel*, Carlos Fuentes's *The Death of Artemio Cruz*, Antonio Skármeta's *The Insurrection*, and Manual Puig's *Kiss of the Spider Woman*. Assignments will give students the opportunity to write essays of both an analytical and expressive sort. The role of biculturalism in the revolutionary process, as well as in the act of textual composition, will receive particular attention.

**[110 Freshman Writing Seminar—Invented Reality: The Media and Central America**
3 credits. Not offered 1989–90.]

**[125 Freshman Writing Seminar: The City in Hispanic Novels**
3 credits. Not offered 1989–90.]

**126 Freshman Seminar: The Complex Fate—Self-Identity in the Literature of United States Hispanic and Other Ethnic Groups**
Spring. 3 credits.
T R 11:40–12:55. L. Carrillo.
Our purpose in this seminar will be to examine representative literature written by Chicano(a)/Mexican American, Puerto Rican, and Cuban authors that traces the process of self-definition against the backdrop of American society and culture. Our discussions will center on such issues as the role of Hispanic ethnicity and its ties to language and bilingualism; the influences exerted by family, school, church, and workplace; and the impact of values presented by American feminism. Readings will include such works as Jose Antonio Villarreal's *Pocho*, Nicholasa Mohr's *Nilda*, Roberto Fernandez's *Raining Backwards*, and Sandra Cisneros's *The House on Mango Street* or Gloria Anzaldua's *Borderlands, La Frontera*. Written work will involve analytical/critical essays on the readings.

**130 Freshman Seminar: Old World, New World—The Discovery and Conquest of America in Hispanic Literature**
Fall. 3 credits.
M W F 9:05. M. Gaylord.
When Spaniards reached the "Indies," what did they see? And how did they see it and write about it? Through readings ranging from the discoverers' own letters and chronicles to contemporary Latin American fictions, this seminar explores the dramatic encounter between Old World vision and New World realities. Discussions and writing focus on the issues of ideology, morality, and perception that are raised when we attempt to understand what is radically different.

**201 Introduction to Hispanic Literature**
Fall or spring. 3 credits. Prerequisite: qualification in Spanish or permission of instructor. The course is divided into small sections and is conducted mainly in Spanish. (Fulfills both the language proficiency requirement and, followed by a 300-level Spanish literature course, the humanities distribution requirement. The literature course that normally follows Spanish 201 is either 315, 316, or 318.)
Fall: M W F 9:05, 10:10, or 11:15 or T R 8:40–9:55. Spring: M W F 9:05, 10:10, or 11:15 or T R 11:40–12:55. M. Stycos.
An intermediate reading course designed to improve reading, writing, speaking, and comprehension skills in Spanish through the reading and discussion of contemporary literary works of various genres (narrative prose, drama, poetry) from Spain and Spanish America. Emphasis is placed on the development of fluency in reading and of critical and analytical abilities. The cultural, sociological, and aesthetic implications of texts by authors such as Borges, Cortázar, Fuentes, García Márquez, García Lorca, and Cela are considered.

**[313 Spanish Civilization**
4 credits. Not offered 1989–90.]

Note: Spanish 315, 316, 317, and 318 can be taken in any order. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor.

**315 Readings in Sixteenth- and Seventeenth-Century Hispanic Literature**
Spring. 4 credits. Prerequisite: Spanish 201, four years of high school Spanish, or permission of instructor. This course is not a prerequisite for Spanish 316 or 318.
T R 11:40–12:55. C. Arroyo.
Readings and discussion of representative texts of the period from both Spain and her colonies in the New World: Garcilaso de la Vega, *Lazarillo de Tormes*, San Juan de la Cruz, Cervantes, Lope de Vega, Calderón, and others.

**316 Readings in Modern Spanish Literature**
Fall. 4 credits. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor. Taught in Spanish.
M W F 1:25 or 2:30 or T R 10:10–11:25. J. Kronik and staff.
Readings and discussion of representative texts from Spain from the romantic period to the present. Bécquer, Galdós, Unamuno, García Lorca, Cela, and others.

**317 Readings in Colonial Spanish-American Literature**
Fall. 4 credits.
T R 2:55–4:10. J. Piedra.
Early masterpieces of Spanish American literature from the "chronicles of discovery" to the first novels. The paradoxical relationship between the historical and literary forms, as well as the serious and the humorous contents, that characterizes writings from the journals of Columbus to those of the picaros.

**318 Readings in Spanish-American Literature**
Spring. 4 credits.
M W F 10:10, staff; T R 10:10–11:25, J. Tittler; or T R 1:25–2:40, staff.
Readings and discussion of representative texts of the nineteenth and twentieth centuries from Spanish America: Darío, Borges, Neruda, Paz, Cortázar, García Márquez, and others.

**[323 Readings in Latin American Civilization**
4 credits. Not offered 1989–90.]

Note: The prerequisite for the following courses, unless otherwise indicated, is Spanish 315, 316, or 318, or permission of instructor.

**[329 The Spanish Civil War in Literature and the Visual Arts (also Comparative Literature 329)**
4 credits. Not offered 1989–90.]

**[332 The Modern Drama in Spanish America**
4 credits. Not offered 1989–90.]

**[333 The Spanish-American Short Story**
4 credits. Not offered 1989–90.]

**345 Contemporary Spanish-American Novel**
Fall. 4 credits. Prerequisite: Spanish 317 or equivalent.
M W F 12:20. J. Tittler.
Reading and discussion of selected works of narrative fiction by today's leading authors: Cabrera Infante, Cortázar, Donoso, Fuentes, García Márquez, Puig, Vargas Llosa, and others. Two abiding concerns will be the way in which history interacts with aesthetic form and the role of the bicultural reader in actualizing the text's potential.

**[346 Hispanic Caribbean Culture and Literature**
4 credits. Not offered 1989–90.]

**[351 Spanish Drama of the Golden Age**
4 credits. Not offered 1989–90.]

**[356 Spanish Lyric Poetry of the Golden Age**
4 credits. Not offered 1989–90.]

**[368 The Birth of the Novel in Spain**
4 credits. Not offered 1989–90.]

**[375 The Picaresque Novel in European Perspective**
4 credits. Not offered 1989–90.]

**[376 The Contemporary Spanish Novel**
4 credits. Not offered 1989–90.]

**385 Studies in Spanish Realism and Naturalism**
Fall. 4 credits.
T R 1:25–2:40. U. DeWinter.
An analysis of some of the major authors and their works in the context of nineteenth-century Spanish Realism and Naturalism. We will discuss some of the works of Galdós, Pardo Bazán, Charín, Palacio Valdes, and Blasco Ibáñez, among others.

**[389 The Generation of 1898**
4 credits. Not offered 1989–90.]

**[390 Fiction of Modern Hispanic Women (also Women's Studies 390)**
4 credits. Not offered 1989–90.]

**[391 The Post-Civil War Drama in Spain**
4 credits. Not offered 1989–90.]

**[392 The Spanish Vanguard Theater: Lorca and Valle-Inclán**
4 credits. Not offered 1989–90.]

**[393 The Reader in the Novel (also Comparative Literature 369)**
4 credits. Not offered 1989–90.]

**[394 Art and Politics of Latin America**
4 credits. Not offered 1989–90.]

**395 The Novel in Spain after the Civil War**
Spring. 4 credits. prerequisite 315, 316, 318 or permission of instructor.
T R 10:105–11:25. J. Kronik.
Representative works of fiction by the major novelists from the 1940s to the 1980s will be studied thematically and structurally. Emphasis will be placed on their struggle against the existing socio-political order and on their experimentation with new forms. Works by Cela, Delibes, Sánchez Ferlosio, Martín-Santos, Goytisolo, and Martín Gaite.

**396 Modern U.S.-Hispanic Prose Fiction**
Spring. 4 credits. Taught in Spanish.
M W F 11:15. D. Castillo.
A detailed examination of representative twentieth-century fictional works (novels, short stories, plays) by Hispanic-American authors. Discussion will be centered on such issues as the social and political concerns raised by the fiction and the authors' need to struggle with a double linguistic and cultural tradition. Authors include Nicholasa Mohr, Piri Thomas, Rolando Hinojosa-Smith, Alejandro Morales, Tomás Rivera, Ron Arias, Raymond Barrio, and Luis Valdéz.

**[397 Colombian Literature**
4 credits. Not offered 1989–90.]

**[398 Postrevolutionary Mexican Novel**
4 credits. Not offered 1989–90.]

**399 Spanish Film**
Spring. 4 credits. Taught in Spanish.
T R 2:55–4:25. A. Monegal.
Examines the evolution of Spanish cinema during and after Franco's dictatorship, both from a historical and a cinematic perspective. The focus will be on film as document, taking into account its potential for the representation of reality, and on film as fiction, analyzing its narrative techniques. The problematic relation between film and literature will be addressed through the comparative study of adaptations and their sources. Special attention will be given to the encoding of political discourse under a system of censorship. Selected films include works by Buñuel, Saura, Erice, Borau, Chávarri, and Gutiérrez Aragón, among others.

**[415 The Black within: Hispanic Race and Literature**
3 credits. Not offered 1989–90.]

**419–420 Special Topics in Hispanic Literature**
419, fall; 420, spring. 2–4 credits each term. Prerequisite: permission of instructor.
Staff.
Guided independent study of specific topics. For undergraduates interested in special problems not covered in courses.

**429–430 Honors Work in Hispanic Literature**
429, fall; 430, spring. 4 credits each term. Limited to seniors. Prerequisite: permission of instructor.
J. Piedra.

**440 Medieval Spanish Literature**
Spring. 4 credits. Taught in Spanish.
T 2:30–4:25. C. Arroyo.
A reading of the most important texts in the different genres. An attempt at defining the very concept of genre and its applicability to medieval works. Exploration of concepts such as courtly love. Incorporation of Spanish texts into their philosophico-theological background. French and Italian parallels.

**[450 Literature of Conquest**
4 credits. Not offered 1989–90.]

**[455 Cervantes: *Don Quijote***
4 credits. Not offered 1989–90.]

**[466 Golden-Age Spanish Short Fiction**
4 credits. Not offered 1989–90.]

**[469 Mystics and Moralists**
4 credits. Not offered 1989–90.]

**[479 Colonial Spanish-American Literature: Voices of the Colonized**
4 credits. Not offered 1989–90.]

**[481 Eighteenth- and Nineteenth-Century Spanish Drama**
4 credits. Not offered 1989–90.]

**[485 The Nineteenth-Century Spanish Novel: Galdós and Clarín**
4 credits. Not offered 1989–90.]

**[488 The Novel in Early Twentieth-Century Spain**
4 credits. Not offered 1989–90.]

**[489 Hispanic Romanticism**
4 credits. Not offered 1989–90.]

**490 Surrealism in Spain**
Fall. 4 credits. Taught in Spanish. Reading knowledge of French helpful, but not required.
M 2:30–4:25. A. Monegal.
The course will trace the impact of French surrealism in Spain and its connections to Spanish avant-garde movements, in an attempt to answer the question of whether there was a Spanish surrealism. The objective will be to formulate a definition of surrealism applicable to the Spanish model, through the analysis of texts by Alberti, Aleixandre, Buñuel, Cernuda, Dalí, García Lorca, and Larrea, in relation to some by Breton and other French surrealists. Background readings will include relevant theoretical and critical works, as well as essays by key figures of the period, such as Gómez de la Serna, de Torre, and Ortega.

**[495 Gabriel García Márquez**
4 credits. Not offered 1989–90.]

**496 The Fiction of Manuel Puig**
Spring. 4 credits. Prerequisite: Spanish 317.
W 2:30–4:25. J. Tittler.
Often dismissed as "kitsch," "camp," or "pop" in its literary register, when not hailed as revolutionary in its use of montage and other defamiliarizing narrative devices, the fiction of Manuel Puig has attracted considerable attention among critics and general readers alike. In reading and discussing such works as *La traición de Rita Hayworth, El beso de la mujer araña,* and *Maldición eterna a quien lea estas Páginas,* among others, we shall explore the delightfully insidious role the culture industry plays in contemporary life. Puig's seductively mass-mediated novels will be shown to float on a turbulent thematic sea of uncertain personal identity, political commitment, and collective myths.

**[497 Spanish Poetry and Poetics**
4 credits. Not offered 1989–90.]

**[498 Mallarmé in Latin America**
4 credits. Not offered 1989–90.]

**[499 Borges (also Comparative Literature 499)**
4 credits. Not offered 1989–90.]

**639–640 Special Topics in Hispanic Literature**
639, fall; 640, spring. 4 credits each term.
Staff.

**667 Seminar in Golden Age Literature: Golden Age Poetry and Poetics**
Spring. 4 credits.
M 2:30–4:25. M. Gaylord.
Intensive reading of major texts of sixteenth- and seventeenth-century Spanish poetry (Garcilaso, Herrera, Lope de Vega, Góngora, Quevedo). The seminar will seek to situate these works in the context of a contemporary critical and theoretical dialogue that grew out of poetry and in turn contributed to it. We will examine golden age concepts of genre, rhetoric, imitation, and reading, attending both to theories of poetic language and to the language of these theories.

**[686 Seminar in Nineteenth-Century Spanish Literature: Galdós**
4 credits. Not offered 1989–90.]

**[690 Hispanic Feminisms (also Women's Studies 692)**
4 credits. Not offered 1989–90.]

**691 Native Revenge (also Comparative Literature 691)**
Fall. 4 credits.
W 2:30–4:25. J. Piedra.
This course deals with the "anthropological" intrusion of French writers and literary theorists into the life and texts of Latin American "natives," as well as their strategies of revenge. Among the intruding explorers we have: Montaigne on New World cannibals, Todorov on Columbus, Lévi-Strauss and Derrida on the Nambikwara, Foucault on Borges, and Barthes on Sarduy. Among the avenging natives we have: the voices and writings of those intruded upon and their defenders, including Carpentier, Pax, Vargas Llosa, Fuentes, Lispector, Andrade, and the Campos brothers. The course will explore the "conciliatory" solutions already advanced by the anthropological theories on "the scene of arrival," as well as the "drastic" solutions considered by ethnopoetic films such as: "Macunaima" and "How Tasty Was My Little Frenchman." Taught and readings in English.

**[694 Seminar in Modern Spanish Literature**
4 credits. Not offered 1989–90.]

## RUMANIAN

See Department of Modern Languages and Linguistics.

# RUSSIAN

L. H. Babby, E. W. Browne, P. Carden (director of undergraduate studies [literature], 235 Goldwin Smith Hall, 255-8348), G. Gibian, R. L. Leed (director of undergraduate studies [language and linguistics], 302 Morrill Hall, 255-2322), N. Pollak, M. Scammell, S. Senderovich, G. Shapiro

## The Russian Major

Russian majors study Russian language, literature, and linguistics, emphasizing their specific interests. It is desirable, although not necessary, for prospective majors to complete Russian 101–102, 201–202, and 203–204 as freshmen and sophomores, since these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of Russian 102 or the equivalent. Students who elect to major in Russian should consult both Professor Carden and Professor Leed as soon as possible. For a major in Russian, students will be required to complete (1) Russian 301–302 or 303–304 or the equivalent, and (2) 18 credits from 300- and 400-level literature and linguistics courses, of which 12 credits must be in literature in the original Russian.

Certain courses may, with the permission of the instructor, be taken for one additional hour's credit. Such courses will involve a one-hour section each week with work in the Russian language. These courses count one hour each of credit toward the 12 courses of Russian literature in the original language required for the major.

## Study Abroad

Cornell is an affiliated institution in the program for Russian language study at Leningrad State University. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Wayles Browne.

**Honors.** Students taking honors in Russian undertake individual reading and research and write an honors essay.

**Fees.** Depending on the course, a small fee may be charged for photocopied texts for course work.

**Freshman writing seminar requirement.** The following courses will satisfy the freshman writing seminar requirement: Russian 103, 104, 105, 107, and 108.

## Russian and Soviet Studies Major

See "Special Programs and Interdisciplinary Studies," which follows the department listings.

## Russian Literature

P. Carden (director of undergraduate studies, 235 Goldwin Smith Hall, 255-8348), G. Gibian, N. Pollak, M. Scammell (chair), S. Senderovich, G.Shapiro.

The Department of Russian Literature offers a variety of courses: some with readings in English translation, others in the original Russian, or both. The connection between Russian history, society, and literature is particularly close, so instruction and discussion in class often include a variety of topics, such as culture and intellectual history, as well as literature. Several courses are interdisciplinary, cosponsored with the departments of History, Economics, Government, Comparative Literature, etc. Students interested in majoring in Russian are strongly urged to take Russian 101–102 as soon as possible, preferably in their first year, or by their second at the latest. Russian 203–204, offered by the Department of Modern Languages and Linguistics, and Russian 201–202, offered by the Department of Russian Literature, complete basic language instruction and introduce students to literature. A further sequence of literature courses in Russian follows Russian 202.

For further information about courses and majors, see Modern Languages and Linguistics.

**103 Freshman Writing Seminar: Classics of Russian Thought and Literature**
Fall or spring. 3 credits.
M W F 9:05 or 11:15. Staff.
Russian society has always seen its literature as having a mission important to the development of the nation. In this course we will examine Russian literature as it participates in the debate, whither Russia? We will look in particular at the conflict between the Slavophiles, those who thought Russia had its own unique destiny, and the Westernizers, those who thought Russia should look to the West for a model in its development. We will be reading such Russian authors as Turgenev, Dostoevsky, Herzen, and Solzhenitsyn in English translation. The course will examine the rhetorical means each author uses to make his argument. All reading is in English traslation.

**104 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces**
Fall or spring. 3 credits.
M W F 9:05 or 10:10. Fall: N. Pollak and staff. Spring: P. Carden and staff.
This course will introduce students to a broad selection of the major works of the Russian literary tradition. Our emphasis will be on what makes each work interesting as writing, what themes have been particularly interesting to Russians, and how we recognize the distinctive voice of each of the writers we are studying. Among the authors read are Pushkin, Gogol, Turgenev, Dostoevsky, Tolstoy, and Chekhov. All reading is in English translation.

**105 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces**
Fall or spring. 3 credits.
Fall: T R 8:40–9:55. Spring: M W F 11:15 or T R 8:40–9:55. Staff.
Russian literature in the twentieth century has endured many ups and downs. At times it has produced great masterpieces of modern art. At times it has been forced into the dry mode of "socialist realism," in which it had to voice the ideas forced upon it by a totalitarian government. Russian authors have been glorified as the voice of the nation, and they have also perished in concentration camps in the far north of Siberia. In this course we will read a representative selection of these authors, including those who took the path of art, those who bent to the "social command," and those who assumed a politically dissident stance. Among the authors read will be Babel, Pasternak, Olesha, and Solzhenitsyn. All reading in English translation.

**[107 Freshman Writing Seminar: Writers on Writing**
Fall or spring. 3 credits. Not offered 1989–90.
T R 10:10–11:25. Staff.
Why do we write or read? The centrality of reading and writing in our lives evidences our dependence on language. Both processes paradoxically mirror and create reality. We will examine how writers of nineteenth- and twentieth-century Russian literature from Gogol to Olesha portray reading or writing processes in their works and, with the help of selections from Schiller, Poulet, Sartre, and others, we will analyze how and why we read and write.]

**[108 Freshman Writing Seminar: 100 Years of Russian Fiction (1830–1930)**
Fall. 3 credits. Not offered 1989–909.
M W F 10:10. N. Pollak.
What is the "truth" of the work of fiction? Native responses to Russian literature in the nineteenth and twentieth centuries have included two apparently antithetical—and passionately proclaimed—responses to this question. According to one view, that truth lies in the ideal content of the work, its fidelity to "objective" reality, and its social relevance. According to the other view, which arose in part as a response and counterweight to the first, the truth is inseparable from the stylistic aspects of the work. In reading short fiction by such writers as Pushkin, Gogol, Tolstoy, Chekhov, and Babel, we will attempt to examine the ways each of them asserts his conception of the truth—and the ways these approaches must overlap in the determination of the complex truth that is the work of art.]

**201–202 Readings in Russian Literature**
201, fall; 202, spring. 3 credits each term.
Prerequisite: qualification in Russian. Open to freshmen.
M W F 10:10 or 1:25. G. Shapiro or N. Pollak.
These courses are designed as the initial courses students take after qualification in Russian and are conducted mainly in Russian. Considerable guidance is provided, however, and there is no presumption of fluency. The goals of the courses are to introduce students to Russian literature in the original, to sample differing literary styles, and to accomplish both with minimal recourse to English in class. Several short papers in Russian and English will be assigned. Readings from nineteenth- and twentieth-century masters of prose and verse such as Pushkin, Lermontov, Tiutchev, Tolstoy, Chekhov, Babel, and Zoshchenko.

**307 Themes from Russian Culture**
Fall. 4 credits.
M W 9:05. G. Shapiro.
This course is based on lectures, discussions, and audio-visual presentations (slides, tapes, films). It includes within its scope various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought from its very beginnings through the eighteenth century. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country which plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.

**[308 Themes from Russian Culture II**
Spring. 4 credits. Not offered 1989–90.
M W F 1:25. G. Shapiro.
This course is based on lectures, discussions, and audiovisual presentations (slides, tapes, films). It includes various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought over the last two hundred years. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country that plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.]

**[314 Intellectual Background of Russian Literature, 1825–1930**
Not offered 1989–90.]

**[329 Eastern Europe Today: Economics, Government, Culture (also Economics 329 and Government 326)**
Fall. 4 credits. Not offered 1989–90.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.
Introductory interdisciplinary survey of Poland, Hungary, Czechoslovakia, and Yugoslavia since World War II, with emphasis on contemporary developments. The goals of the course are to examine differences among East European countries as well as common elements.]

**330 The Soviet Union: Politics, Economics, and Culture (also Economics 330 and Government 330)**
Spring. 4 credits.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.
Interdisciplinary survey of the U.S.S.R. since the Revolution, with emphasis on contemporary developments.

**331 Introduction to Russian Poetry**
Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 11:40–12:55. S. Senderovich.
A survey of Russian poetry with primary emphasis on the analysis of individual poems by major poets.

**[332 Russian Theatre and Drama**
Not offered 1989–90.]

**333 Twentieth-Century Poetry**
Spring. 4 credits.
T R 11:40–12:55. N. Pollak.
Close readings of lyrics by major twentieth-century poets. All reading is in Russian. Geared towards undergraduates.

**334 The Russian Short Story**
Spring. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 11:40–12:55. S. Senderovich.
A survey of two centuries of Russian story telling. Emphasis on the analysis of individual stories by major writers, on narrative structure, and on related landmarks of Russian literary criticism.

**[335 Gogol**
Spring. 4 credits. There may be a special section for students who read Russian; if they are Russian majors, they may count this course as one in the original language. Also open to graduate students. Not offered 1989–90.
M W 2:30–3:45. Staff.
Selected works of Gogol read closely and viewed in relation to his life and to the literature of his time. Readings in English translation.]

**[350 Education and the Western Literary Tradition (also Comparative Literature 350 and College Scholar 350)**
Spring. 4 credits. Not offered 1989–90.
M W F 10:10. P. Carden.
A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human contacts is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasts who use the forms of fiction to explore fundamental issues of education. In this course we will examine several key philosophical fantasies, among them Plato's *Republic*, Rousseau's *Emile*, and Tolstoy's *War and Peace*. Our aim will be to understand how the discourse on education became a central part of our Western tradition.]

**367 The Russian Novel (also Comparative Literature 367)**
Fall. 4 credits. Also open to graduate students. Special discussion section for students who read Russian.
T R 9:05 plus 1 hour to be arranged. G. Gibian.
Realism and modernism. The prosaics of Russian writers of the nineteenth and twentieth centuries. Novels and short stories by Gogol, Turgenev, Tolstoy, Dostoevsky, Chekhov, Solzhenitsyn, and others. Readings in English translation.

**368 Soviet Literature from Revolutionary Times to "Glasnost"**
4 credits. Also open to graduate students. There will be a special section for students who read Russian.
T R 1:25–2:40. M. Scammell.
An introductory survey of Soviet literature, beginning with the revolutionary fervor of the twenties, continuing through the dark days of the thirties and the war years of the forties, and ending with an account of Khrushchev's "thaw," the rise of the dissident movement and the introduction of "glasnost." Writers and movements to be discussed include Mayakovsky and the Futurists; Zamyatin, Platonov and anti-utopian fiction; Gorky and Socialist Realism; Gulag literature; Pasternak; Solzhenitsyn and the dissidents; the meaning of "glasnost."

**[369 Dostoevsky (also Comparative Literature 383)**
Fall. 4 credits. Not offered 1989–90.]

**[371 Literature of the Third Wave**
Spring. 4 credits. Not offered 1989–90.
M W 11:15 plus 1 hour to be arranged. M. Scammell.
The literature of the "third emigration." A survey of recent Russian literature by writers who have voluntarily or involuntarily left the Soviet Union during the past fifteen years. Among the authors discussed will be Solzhenitsyn, Sinyavsky, Brodsky, Zinoviev, Sokolov, Aksyonov, Vionovich, Limonov, Vladimov, Maximov, Aleshkovsky, Dovlatov, and Gorbanevskaya. Some consideration will be given to the influences of émigré publishing houses and literary magazines on the development of contemporary Russian literature and literary and political issues being debated by émigré literary circles.]

**[373 Chekhov**
Fall. 4 credits. Not offered 1989–90. A special section is offered for students who read Russian.
T R 11:40–12:55. S. Senderovich.
Reading and discussion of Chekhov's works, with emphasis on the short story. The course is designed for non-specialists as well as literature majors. A variety of approaches will be employed; informal lectures and discussions.]

**[375 Literature of the Soviet Period, 1917–1945**
Fall. 4 credits. Prerequisite: permission of instructor. Also open to graduate students. Russian majors may do part or all of the reading in Russian by prior agreement with the instructor. Not offered 1989–90.
T R 11:40–12:55. M. Scammell.
A survey of the development of Russian literature during the second quarter of the twentieth century, with the emphasis on attempts to create a purely Soviet literature but also taking into account the achievements of non-Soviet writers, including émigrés and the so-called fellow travelers.]

**[376 Literature of the Soviet Period, 1945–1985**
Spring. 4 credits. Prerequisite: permission of instructor. Also open to graduate students. Russian majors may do part or all of the reading in Russian by prior agreement with the instructor. Not offered 1989–90.
T R 11:40–12:55. M. Scammell.
A survey of the development of Soviet literature after World War II, including the thaw, the literature of the Gulag, the rise of the dissident movement, and the creation of the "third emigration."]

**379 The Russian Connection (also Comparative Literature 379)**
Spring. 4 credits.
T R 2:55–4:10. P. Carden.
We will examine the development of a Russian psychological literature of the interior self in its interrelationship with European literature. Using early examples of psychological prose such as Rousseau's *Confessions* and Benjamin Constant's *Adolphe*, we will examine the connection to Russian prose of the romantic period in Pushkin's *Queen of Spades* and Lermontov's *Hero of Our Time*. We will compare Hoffmann's and Gogol's employment of the fantastic to probe the more obscure sides of the psyche. After reading Stendhal's *Charterhouse of Parma*, we will turn to two of the most significant psychological novels of the Russian tradition, Tolstoy's *War and Peace* and Dostoevsky's *The Idiot*. All reading is in English translation.

**[380 Soviet Dissident Literature**
Fall. 4 credits. Not offered 1989–90.
T R 1:25–2:40. M. Scammell.
Study of the dissident movement. Defining the meaning of the term; political dissidence and cultural and literary dissidence; and the religious dissident movement. The writings of Siniavsky-Tertz, Pasternak's *Doctor Zhivago*, and other figures of the past two generations. This course is intended for students of government and society in general, not only for students of Russian literature.]

**[387 Teaching and Learning: Ideas of Education in the Western Tradition (also Comparative Literature 387)**
Spring. 4 credits. Not offered 1989–90.
M 2:30–4:30, plus 1 hour to be arranged.
P. Carden and guest lecturers.
Education is a central theme in our cultural tradition. What makes a person educated? Should a child be shaped to benefit society or to benefit some notion of his own good? What makes a good teacher? Should we have schools and, if so, what kind? What role should the state play in determining what to teach and how it should be taught? These questions are fundamental to our philosophical discourse from Plato to Rousseau. Fiction takes school and learning as primary subjects, and narrative has developed under the influence of the pedagogical discourse; public policy is shaped by the debate over teaching and learning. Writing shapes education, both as a vehicle of pedagogical discourse and as a necessary practice at every level of education. These topics will be the focus of our discussion as we look at a number of texts from the philosophical, literary, and public policy discourse.]

**[388 Ideas and Form in Novels of Social Inquiry (also Comparative Literature 388)**
Spring. 4 credits. Not offered 1989–90.
M W F 9:05. G. Gibian.
From the French Revolution to the present. Problems of relations between politics and the writer. Literary representations of conflict between political ideologies (ideas of revolution, justice, nationalism) and private needs (art, nature, love, order). Marx, Flaubert, Dostoevsky, Conrad, Trotsky, Lenin, V. S. Naipaul, Richard Wright, Solzhenitsyn, Kundera, and others. Some poetry will also be included.]

**389 Modern Literature in Poland, Czechoslovakia, Hungary, and Yugoslavia (also Comparative Literature 389)**
Spring. 4 credits.
9:05 plus 1 hour to be arranged.
G. Gibian
The course will focus on novels and short stories, but some consideration will also be given to drama and poetry. No knowledge of Eastern European languages is required; the reading will be done in English translation. Primary emphasis will be on the texts as literary works of art, but attention will also be given to historical and political background.

**[390 The Power of Nationalism: Expressions of National Feelings in Politics, Literature, History, and the Arts (also Comparative Literature 390)**
Fall. 4 credits. Not offered 1989–90.
T R 2:55–4:10. G. Gibian and others.
The course will deal with various aspects of the general subject of national identity and feeling. In addition to studying the political phenomenon of nationalism, we will also study the roles played by national awareness in the perception of one's identity, the self-images of national character, stereotypes of national and ethnic qualities, and the relation between a sense of belonging to a nation and various other groups. Case studies of several nations and ethnic groups. There will be guest lecturers.]

**393 Honors Essay Tutorial**
Fall or spring. 4 credits.
Hours to be arranged. Staff.

**[400 Reading the Great Tradition**
Fall. 4 credits. Prerequisite: Russian 202 or equivalent. Recommended: a course at the 300 or 400 level in which reading has been done in Russian. This course may be counted toward the 12 credits of Russian literature in the original language required for the Russian major. Not offered 1989–90.
T R 2:55–4:10. Staff.
The course is designed to improve the reading facility of advanced undergraduates and beginning graduate students by reading selected works of Russian literature in the original and paying close attention to their stylistic qualities. Works of contemporary Russian authors, both those officially approved and dissidents, those in the Soviet Union and those in emigration, will be read.]

**[409 Russian Stylistics**
Fall. 4 credits. Not offered 1989–90. Also open to graduate students. Prerequisite: three years of Russian.
T R 1:25–2:40. S. Senderovich.
A few steps beyond normative grammar. Introduction to the subtleties of idiomatic Russian on the levels of morphology, syntax, vocabulary, and phraseology. Introduction to the genres of live colloquial and written language. Development of writing skills through short assignments and their analyses. First notions of literary stylistics and their practical application.]

**[415 Postsymbolist Russian Poetry**
Spring. 4 credits. Open to graduate students. Prerequisite: permission of instructor. Not offered 1989–90.
M W 2:30–4. N. Pollak.
We will examine works by three poets in the first quarter of this century: Innokentij Annenskij, the Symbolist whom the Acmeists considered their mentor; Osip Mandelstam, a founding Acmeist; and Boris Pasternak, associated, at least for a time, with the Futurists. Through close readings of their verse, and also critical prose and manifestos, we will attempt to determine some of the general features that link poets of such diverse orientations in the years following the crisis of Symbolism. We will also outline the features that distinguish them as representative of their respective movements.]

**[418 Pedagogy and the Nineteenth-Century Novel (also Comparative Literature 418)**
Fall. 4 credits. Not offered 1989–90.
M 2:30–4:30, plus 1 hour to be arranged.
P. Carden.
Platonic thought affiliates basic philosophical questions to pedagogy. How do we know? How do we learn? What education will produce worthy citizens and rulers? Rousseau in his *Émile* took up the high philosophical tradition of pedagogy and recast it as a myth and as an incipient novel. In so doing, he opened the way to what we can call the great pedagogical novels of the nineteenth century. In this seminar we will examine the principles of a pedagogy designed to encompass the whole of life, as it is set forth in such works of Plato as *Meno*, *Phaedo*, *Symposium*, and *Republic* and as it is reintroduced into the mainstream of philosophical thought by Rousseau's *Émile* and Schiller's *Letters on Aesthetic Education*. Then we will turn to several novels of the nineteenth century, among them Tolstoy's *War and Peace*, Dostoevsky's *Notes from Underground*, and Flaubert's *A Sentimental Education*, to see how the presumptions of a philosophical pedagogy rooted in Platonic thought were tested by authors who found in the novel a vehicle for philosophical and pedagogical myths or for their debunking.]

**[431 Contemporary Russian Prose**
Fall. 4 credits. Not offered 1989–90. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 2:55–4:10. M. Scammell.
Aksyonov, Erofeyev, Siniavsky-Tertz, Sokolov, Solzhenitsyn, and other Soviet and émigré writers of the last two decades, approached through the style and structure of their short fiction.]

**[432 Pushkin**
Spring. 4 credits. Not offered 1989–90. Prerequisites: Russian 202 or equivalent, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students.
T R 1:25–2:40. S. Senderovich.
Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and *Eugene Onegin*.]

**491 Reading Course: Russian Literature in the Original Language**
Fall or spring. 1 credit each term. Prerequisite: permission of instructor.
Hours to be arranged. Staff.
This course is to be taken in conjunction with any Russian literature course in English translation. Students will receive one credit for reading and discussing works in Russian in addition to their normal course work.

**492 Supervised Reading in Russian Literature**
Fall or spring. 1–4 credits each term.
Hours to be arranged. Staff.

**[493 Tolstoy's *War and Peace* and *Children's Stories*: Thematic Invariance and Plot Structure**
Not offered 1989–90.]

**498 Russian Symbolism (also 698)**
Fall. 4 credits.
M 2:30–4:30 and W 2:30–3:20.
P. Carden.
Around 1886 the trends in French culture represented by Baudelaire and Mallarme crystallized into a new cultural movement, called in some of its aspects the Decadence and in others Symbolism. The new sentiments about the nature of art spread throughout Europe, drawing in England, the Scandinavian countries, Germany, and Russia. The first stirrings of Symbolism were in the ascendant in Russian cultural life and it remained the dominant force until 1910. Our task will be to study the phenomenon of Symbolism as it touched the arts in Russia, including not only literature, but dance, theater, and the visual arts. Since Symbolism was a movement that cut across national boundaries, we will study the seminal works of European art that created the climate in which Russian Symbolism was conceived and came to maturity.

**499 Russian Modernism (also 699)**
Spring. 4 credits.
M 2:30–4:30 and W 2:30–3:20.
P. Carden.
We will be investigating the rich and innovative period of the avant-garde in Russia from 1910 to 1925. In addition to examining outstanding works in a variety of forms, we will look at the movements, social context, and ties to the European avant-garde. Among the writers whose works we will examine are Blok, Bely, Mayakovsky, Khlebnikov, Pilnyak and Babel. We will examine theater through the Futurist performance piece, "Victory Over the Sun," through Meyerhold's productions of Mayakovsky's plays and other experimental pieces, and through mass spectacles. We will discuss the film theories of Eisenstein and Dziga Vertov and see several of their films. In the visual arts we will be examining the experiments of Larionov and Goncharova, Malevich, Kandinsky, and Tatlin. We will also look at the photomontage of Rodchenko.

### Graduate Seminars

**[600 Proseminar: Research Methodology in Russian Literature**
Fall. 4 credits. Not offered 1989–90.
W 3:45–5:45. P. Carden.
This course is intended for graduate students beyond the first-year level who want a more advanced training in research methodology. Among the topics to be covered are the research library, its resources and obstacles; bibliography of Russian literature and culture; Russian archives, what they contain and how to use them; finding and evaluating information; reading criticism analytically; evaluating different editions of an author's works; editing and revising a paper to meet professional standards of cogency and format. Each student should be working concurrently on a paper, which might be an upgrading of a seminar paper, a draft of the master's essay, or a chapter of the dissertation.]

**611 Supervised Reading and Research**
Fall or spring. 2–4 credits. Prerequisite: permission of the department.
Hours to be arranged. Staff.

**[615 Postsymbolist Russian Poetry**
Not offered 1989–90.
For description see Russian 415.]

**[617–618 Russian Stylistics I and II**
Not offered 1989–90.]

**[619 Seventeenth-Century Russian Literature**
Fall. 4 credits. Not offered 1989–90.
F 2:30–4:30. G. Shapiro.
Seventeenth-century Russian literature is often studied together with Medieval literature. Is such an arrangement justified, or does seventeenth-century literature have its own problematic that makes it worth studying separately? In the scholarship the seventeenth century is referred to as the Age of Baroque. Did Muscovite Russia experience its own Baroque, and, if so, what are its unique features? These and other important issues will be addressed in the seminar. In the course of the seminar a variety of concepts, genres, and themes characteristic for the epoch will be discussed. We will read the works of such authors as Simeon Polotsky, Silvester Medvedev, Karion Istomin, and the archpriest Avvakum.]

**[620 Twentieth-Century Russian Poetry**
Spring. 4 credits. Not offered 1989–90. Open to advanced undergraduates with permission of instructor.
W 3:35–5:35. N. Pollak.
An in-depth study of the writings of selected twentieth-century poets. Authors may include Blok, Mandelstam, Pasternak, Tsvetayeva, and Khlebnikov.]

**[621 Old Russian Literature**
Spring. 4 credits. Not offered 1989–90.
T 4–6. S. Senderovich.
A survey.]

**622 Eighteenth-Century Literature**
Spring. 4 credits.
T 4–6. S. Senderovich.
Introduction to the first century of modern Russian literature. Cultural identity of the age: Baroque, Neo-Classicism, Enlightenment, Sentimentalism. Reading of representative texts of the major writers of the century: Trediakovsky, Lomonosov, Sumarokov, Novikov, Karamzin, etc. Main connections with nineteenth-century literature: roots, evolution, intertextuality.

**[623 Early Nineteenth-Century Literature**
Not offered 1989–90.]

**[624 Russian Romanticism**
Fall. 4 credits. Taught in Russian. Not offered 1989–90.
T 4:15–6:15. S. Senderovich.
A survey of concepts, themes, genres, and main individual contributions in Russian literature of the Age of Romanticism. The Age of Romanticism encompasses the first four decades of the nineteenth century. Zhukovsky, Batiushkov, Pushkin, Baratynsky, Gogol, and Lermontov are the major representatives of this style and the most important period of Russian literature. The emphasis is on poetry, its historical and theoretical problems. It was, above all, the golden age of Russian poetry, which prepared and deeply influenced the following age of great Russian prose. Turgenev, Tolstoy, Dostoevsky, and Chekhov are full of allusions to the texts of the golden age and cannot be properly understood without it.]

**[625 Russian Realism**
Spring. 4 credits. Not offered 1989–90. Also open to advanced undergraduates with permission of instructor.
R 3:35–5:35. P. Carden.
A study of the development of psychological realism in Russian prose of the nineteenth century, with some attention to the poetic tradition. In addition to reading representative works, we will pay attention to the historical background of the period. We will approach the works through the critical writings of several important theorists, in particular those of Lydia Ginzburg.]

**630 Gogol**
Spring. 4 credits. Taught in Russian.
W 4:15–6:15. G. Shapiro.
Gogol's artistic career from his "Ukrainian" cycles to *Dead Souls*. We will examine representative works from each of the major divisions of Gogol's early work, in particular from his cycles *Evenings on a Farm near Dikanka* and *Mirgorod*, and will trace the writer's development toward his magnum opus, *Dead Souls*. Although some of the readings will be done in English to enable the class to cover a significant amount of material, the class work will be focused on close analysis of the Russian text.

**[669 Seminar: Dostoevsky**
Fall. 4 credits. Not offered 1989–90. Also open to advanced undergraduates.
R 4:15–6:15. G. Gibian.
Study of representative works from various periods of Dostoevsky's life, from *Poor Folk* and *The Double* to *The Brothers Karamazov*, including some articles, speeches, and parts of *The Diary of a Writer* against the context of nineteenth-century Western European and Russian literature. A variety of critical and scholarly approaches (from Russian formalists to 1980s Western scholars) will be sampled and evaluated.]

**671 Seminar in Nineteenth-Century Russian Literature**
Fall. 4 credits.
T 4:15–6:15. S. Senderovich.
Topic: Chekhov. Prosaic and dramatic works. Close reading. Problems of Chekhov's poetics. Poetics and meaning in Chekhov. Chekhov in the history of Russian culture. Orientation in the field of Chekhov criticism. Readings in Russian. Work on a research project.

**[672 Seminar in Twentieth-Century Russian Literature**
Spring. 4 credits. Open to advanced undergraduates. Not offered 1989–90.]

**673 The Russian Nabokov**
Fall. 4 credits. Also open to advanced undergraduates.
R 4:15–6:15. M. Scammell.
Vladimir Nabokov wrote much verse, several plays, numerous short stories, and nine novels in Russian before switching to English. He is a major Russian writer of the twentieth century. This seminar will examine his work in the context of modern Russian literature, concentrating in particular on the novels. Knowledge of Russian is highly desirable, but all the works discussed also exist in English translation.

**[674 Solzhenitsyn**
Fall. 4 credits. Not offered 1989–90.
R 4:15. M. Scammell.]

**675 Literature of the Soviet Period, 1917–1945**
Fall. 4 credits.
W 4–6. G. Gibian.
Study of the main works as well as the chronological development of all literary genres. Twofold approach: as it looked at the time; and how it looks from the perspective of hindsight: rehabilitations and revisionisms of the "glasnost" period. From Babel and Mayakovsky to Bulgakov, Sholokov, and Zoshchenko; from Futurism through Emigration and Writing for the Drawer to Socialistic Realism.

**[676 Literature of the Soviet Period, 1945–1985**
Not offered 1988–89.]

**698 Russian Symbolism**
Fall. 4 credits.
M 2:30–4:30, W 2:30–3:20. P. Carden.
For course description, see 498.

**699 Russian Modernism**
Spring. 4 credits.
M 2:30–4:30, W 2:30–3:20. P. Carden.
For course description, see 499.

**[701 Proseminar: Methods in Research and Criticism**
Not offered 1989–90.]

**[702 Graduate Seminar: Neglected Masterpieces of Short Russian Prose**
Spring. 4 credits. Not offered 1989–90.
R 3:35–5:35. G. Gibian.
Nineteenth- and twentieth-century works chosen according to the needs of the students enrolled. Stress on skills useful in teaching Russian literature.]

# SOCIOLOGY

R. L. Breiger, chair; M. Abolafia, S. Caldwell, J. Freeman, M. Hannan, D. P. Hayes, R. McGinnis, M. McPherson, L. Meltzer, P. Moen, V. Nee, D. Nelkin, S. Olzak, B. C. Rosen, B. Rubin, L. Smith-Lovin, R. Stern, J. M. Stycos, P. Tolbert, D. Weakliem, R. M. Williams, Jr.

The subject matter of sociology is human social organization and institutions. The Department of Sociology offers courses in social organization that include (among other issues) examination of inequality on the basis of race, ethnicity, income, and occupation; political behavior and public policy; relations and affect in small groups; and contemporary social movements for change. Courses that analyze institutions include the family, politics and policy issues such as welfare and poverty, the analysis of voluntary organizations, and the study of networks of political and organizational action.

The Department of Sociology offers the opportunity to develop fundamental theoretical insight and advanced research skills appropriate for the study of social behavior and institutions. Graduates of the Department take up careers in university, government, and business settings and in law, management, architecture, and other professions seeking men and women who demonstrate a disciplined understanding of society and social issues.

## Sociology Courses for Non-Majors

The social sciences provide students with particularly effective ways to understand the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Sociology Department is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that will be of particular interest to undergraduates who may not major in Sociology. First- and second-year students should note that the introductory courses (101, 103, 104, 106) provide substantial focus on the sociological analysis of major issues of public life. A wide selection of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, the descriptions of Sociology 365 (fall) and Sociology 335 (spring), for which there are no prerequisites other than junior or senior status.

## Related Courses in Other Departments

Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences and of these other departments: Organizational Behavior (College of Industrial and Labor Relations), Human Development and Family Studies (College of Human Ecology), and Rural Sociology (College of Agriculture and Life Sciences).

## The Major

Requirements for general sociology: (1) 101 and any other 100-level course (excluding Freshman Writing Seminar) with a 2.5 minimum grade-point average; (2) no later than the junior year, the 301 and 303 methods courses; (3) one course in the department at the 400 level or higher (491 is recommended); and (4) 20 additional credits in sociology, of which 9 may be taken in related departments if approved by the student's adviser.

**Requirements for social relations:** This major is offered jointly by the departments of Anthropology and Sociology. See page 323 for a description and a list of requirements.

**Requirements for honors:** Potential honor students are encouraged to begin taking the methods and statistics courses during their sophomore year and to take at least 2 credits of Sociology 491, Independent Study, during their junior year. Honors students take Sociology 495–496 during their senior year. Graduation with honors requires a cumulative average of at least B+ in all sociology courses and the successful completion of an oral defense of the honors thesis. Interested students should consult the director of undergraduate studies no later than the second semester of their junior year.

**Cornell-in-Washington program.** Qualified sociology majors may include a semester in the Cornell-in-Washington program, in which students take courses and undertake a closely supervised internship. For further information, see p. 15.

**Supervised research.** Qualified sociology majors are invited to participate with faculty members in conducting research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case the student should enroll in Sociology 491. Interested students may direct inquiries to any faculty member.

### Society and Economy Concentration

Sociology majors or students in other disciplines who wish to prepare for graduate study (in any of the social sciences) or a profession (business, management, or law) may elect to acquire a concentration in society and economy. This program is designed to provide training in economic sociology, formal organizations, and social science methods. The requirements for the concentration in society and economy are: (1) three of the following courses in economic sociology and formal organizations: 245, 324, 350, 365, 375, 443; and (2) two of the following courses in methods: 241, 301, 302, 460. For further information, consult Professor Victor Nee, 330 Uris Hall.

## Introductory Courses

**101 Introduction to Sociology**
Fall or spring. 3 credits.
M W 11:15–12:05 plus one sec.
Fall: S. Caldwell; spring: M. Hannan.
With a focus on public issues that might in any semester include collective violence, markets and organizations, and social policies aimed at lowering the rate of poverty, this course provides an introduction to theory and research in sociology and demonstrates how the insights and methods of sociological analysis can be brought to bear in understanding major issues of public life. The goal is to convey a sense of the interrelations between the formulation of theories about social behavior and the collection and analysis of data in order to evaluate those theories. Instead of simply describing research, this course provides "hands-on" experience in analyzing sociological problems. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

**103 Introduction to Sociology: Microsociology**
Fall. 3 credits.
M W F 9:05–9:55. D. P. Hayes.
An introduction to microsociology, focusing on concepts and theory of social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

**104 Class, Race, and Ethnicity**
Spring. 3 credits.
T R 10:10–11:25. S. Olzak.
What is the relationship between race and social class? To what extent does discrimination produce barriers to achievement and attainment for African Americans, Hispanics, Asians, and other immigrants in American society? Why are some groups more likely to be the targets of ethnic and racial hostility than others? This course uses sociological analyses to answer these questions about the nature of race, ethnic, and social class in our society and others. This course is designed as an introduction to the sociology of inequality, and is primarily for freshmen and sophomores.

**106 Family and Work**
Spring. 3 credits.
T R 10:10–11:25. L. Smith-Lovin.
The events of the past 30 years have profoundly transformed arrangements governing love, work, and their routinization in households and employment. In this course, students will look at data from census and time use studies showing what has changed and what has remained relatively stable. Sociological theories that explain these trends will be examined. Students will have the opportunity to test their own ideas with analyses of data from a national survey. The impact of sociological ideas for public issues like child care, welfare policy, sex discrimination statutes, and comparable worth will be discussed. This course is primarily for freshmen and sophomores.

**121 Sociology of Deviance**
Summer. 3 credits.
3-week session: M-F 2:30–5.
L. Zimmer.
Nonconformist behavior—its causes, its consequences, and the social reaction to it. Analysis of social structure, social change, and social control. Topics may include prostitution, teenage pregnancy, drunk driving, homosexuality, drug use, mental illness, crime, and forms of elite deviance.

## General Education Courses

**202 Writing in the Social Sciences (also Writing 202)**
Fall or spring. 3 credits. Limited to 17 students. Prerequisite: at least one social science course.
Fall: T R 11:40–12:55; spring: M W F 11:15–12:05. K. Hjortshoj.
This course offers students the opportunity to strengthen their writing, become more aware of the diverse writing styles and strategies used in the social sciences, and experiment with new approaches to composition and revision. Students will benefit from detailed written comments on their work and from extensive discussion of student writing in class. Initial writing and reading assignments will explore styles of description, the ways in which writers adapt their work to different audiences, the differences between academic and popular writing in a particular field, and methods of revision. Subsequent assignments will include the interpretation of primary data, the review of a documentary film, and writing based on research literature in a field of the student's choice. The instructor will hold frequent individual conferences with students to discuss finished essays and work in progress. During the semester students will write, and often revise, 8 to 10 papers—about 40 pages of finished work.

**205 Population Dynamics (also Rural Sociology 201)**
Spring. 3 credits.
T R 1:25–2:40. J. M. Stycos.
An introduction to population studies, which includes the determinants and consequences of population change. The primary focus is on the influences of demographic dynamics on society and the economy, with emphasis on marriage, family formation, mortality, crime and deviance, migration, and marketing behavior.

**240 Personality and Social Change**
Spring. 3 credits.
T R 1:25–2:40. B. C. Rosen.
An analysis of social and psychological factors that affect and reflect social change. Topics to be examined will include models of man and society, national character, modern melancholy, feminism, family and sex roles, industrialism, economic development, and psychocultural conflict.

**243 Family**
Fall. 3 credits.
T R 10:10–11, plus one sec. B. C. Rosen.
A social and historical analysis of the family both in the West and cross-culturally. Specific areas examined include sex roles, socialization, mate selection, sex and sexual controls, internal familial processes, divorce, disorganization, and social change.

**245 Inequality in America**
Fall. 4 credits.
T R 10:10–11:25. S. Olzak.
This course deals with sociological explanations for various forms of social and economic inequality, particularly inequalities associated with class and work. We will describe systems of inequality, analyze various theoretical explanations for those systems, and examine the various structures designed to reduce or eliminate inequality.

**[248 Politics in Society**
Spring. 3 credits. Not offered 1989–90.
M W F 1:25–2:15. B. Rubin.
An examination of the relationships between economic, social, and political structures in industrial societies with particular emphasis on the United States. Topics include democratic forms of participation in society at large, social movements, the structure of power and its legitimation, the emergence of the welfare state, and the tensions between political and economic structures.]

**264 Minorities in America**
Summer. 3 credits.
3-week session: M-F 12–2:30. C. Elliott.
The dynamics of race and ethnic relations in the United States. Lectures and discussions focus on the current and historical experiences of Native Americans, Afro-Americans, Asian Americans, and Hispanic Americans. Immigrant assimilation, prejudice, discrimination, and women as a minority group.

**265 Hispanic Americans**
Spring. 3 credits (4-credit option available).
T R 2:55–4:10. H. Velez.
Analysis of the present-day Hispanic experience in the United States. An examination of sociohistorical backgrounds as well as the economic, psychological, and political factors that converge to shape and influence a Hispanic group-identity in the United States. Perspectives are developed for understanding the diverse Hispanic migrations, the plight of Hispanics in urban and rural areas, and the unique problems faced by the different Hispanic groups. Groups studied include Dominicans, Chicanos, Cubans, and Puerto Ricans.

**277 Psychology of Sex Roles (also Psychology 277 and Women's Studies 277)**
Spring. 3 credits. Limited to 200 students. Prerequisite: an introductory psychology course.
T R 2:55–4:25. S. Bem.
This course addresses the question of why and how adult women and men come to differ in their overall life styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective, (b) the biological perspective, (c) the historical and cultural evolutionary perspective, (d) the child development perspective, and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, equalitarian marriage relationships, gender-liberated child-rearing, female sexuality, homosexuality, and transsexualism.

**283 Groups and Relationships**
Fall or spring, and summer. 3 credits. Enrollment limited to ten men and ten women in each section. Not open to freshmen.
Fall and spring: M or W 7:30–10 p.m.; 6-week summer session: M and W 7–10 p.m. L. Meltzer.
The processes and societal functions of small groups (such as teams, committees, and fraternities) and dyadic relationships (such as engaged couples, parent and child, and friends). Involvement in self-study as individuals and as group participants is an integral part of the course. The goal is increased sensitivity to group processes, heightened awareness of the effects we have on others, and an understanding of how these phenomena relate to larger societal phenomena.

## Methods and Statistics Courses

**301 Evaluating Statistical Evidence**
Fall. 4 credits.
M W F 10:10–11. R. L. Breiger.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

**[302 Sociological Differences in Contemporary America**
Fall. 4 credits. Not offered 1989–90.
M W F 10:10. S. Caldwell.
A course providing training in analysis of socioeconomic data using introductory statistics. The course is organized around the analysis of data sets reflecting major areas of social science research. Emphasis is placed upon involving students in the use of computers in understanding contemporary society and social issues.]

**303 Design and Measurement**
Spring. 4 credits. Prerequisite: a course in sociology.
T R 2:30–4:25. D. P. Hayes.
Foundations of sociological analysis; issues arising from using humans as data sources; the quality of our primary data; methods of its collection; research designs in wide use and their limitations; pragmatic considerations in doing research on humans, organizations, communities, and nations.

## Intermediate Courses

**310 Sociology of War and Peace**
Fall. 4 credits. Prerequisite: a course in sociology or government.
T R 1:25–2:40. R. M. Williams, Jr.
Every human group, community, or society presents many examples of altruism, helping, cooperation, agreement, and social harmony. Each grouping or society also manifests numerous examples of competition, rivalry, opposition, disagreement, conflict, and violence. Both conflict and cooperation are permanent and common aspects of the human condition. Collective conflicts, especially wars and revolutions, are frequent and dramatic events. But "peace" and "war" are equally active social processes, not passive happenings. This course describes various commonly accepted but erroneous notions of the causes and consequences of war and deterrence. It deals with the major theories concerning the sources of war in international and intranational social systems. The last half of the course analyzes the modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

**[324 Organizations and Associations**
Fall. 3 credits. Prerequisite: two courses in sociology. Not offered 1989–90.
T R 11:40–12:55. M. McPherson.
This course provides an overview of the literature on social organization as it bears on the formation, maintenance, and dissolution of formal organizations. These organizations are extremely diverse, ranging from large multinational firms to neighborhood improvement groups. Throughout the course we will seek to discover the theoretical similarities among these diverse forms. We will be reading from the literature on firms, unions, voluntary associations, churches, political groups, and other types of organizations. We will study how these organizations relate to one another, how individuals come to join them, and the process by which they grow and decline.]

**[328 Sociology of Work**
Spring. 4 credits. Not offered 1989–90.
M W F 11:15–12:05. B. Rubin.
With the exception of those too rich, too ill, too young, or too old, most people in the United States will spend the majority of their waking lives working. Some will spend that time engaged in activity they enjoy. Others will be trapped in jobs that deaden the senses, cramp creativity, and provide only a paycheck as a reward. Nevertheless, the centrality of work in most of our lives is taken for granted; so too are the ways in which work is organized, rewards are distributed, and (though perhaps less so) workers recruited. The purpose of this course, then, is to explore, and thereby increase our understanding of, the underlying causes and consequences of the organization of work in capitalist America.]

**335 Industrial and Post–Industrial Society**
Spring. 4 credits. Open to juniors and seniors in any department. No prerequisites.
T R 1:25–2:40. D. Weakliem.
Service and information–based industries are steadily growing in all modern societies. Many people claim that this development fundamentally changes social structure, social conflict, politics, and culture. Others say that post–industrial society is just a continuation of industrial society. This course will explore issues concerning post–industrial society: for example, are traditional social categories such as class or religion giving way to new divisions? It will explore theories of post–industrial society and allow students to test them with data on recent changes in social conditions.

**[348 Sociology of Law**
Fall. 4 credits. Not offered 1989–90.
M W F 1:25. C. Bohmer.
Legal decisions and legal practices viewed within the context of society's institutions and customs. Topics vary from semester to semester but deal with issues such as civil rights versus society's rights, variations in permissible sexual practices in different cultures, the social organization of police departments and its effects on justice and equity, changing divorce laws in relation to changes in the status of women, the role of psychiatry in the legal process, and judicial attitudes toward rape victims.]

**[350 Organizations, Individuals, and Social Structure**
Spring. 4 credits. Prerequisite: one course in sociology. Not offered 1989–90.
T R 10:10–11:25. D. Weakliem.
Organizations are composed of people, but at the same time they can be regarded as actors in their own right, distinct from their members. This course introduces recent sociological theory and research on the relations among organizations and between organizations and individuals. Topics include the reasons for organization, effects on social conflict, stratification among organizations, and the extent to which organizations represent their members' interests. Examples will be taken from firms, labor unions, and political organizations.]

**355 Social and Political Studies of Science (also City and Regional Planning 442 and Biology and Society 442)**
Spring. 3 credits.
T R 10:10–11:25. D. Nelkin.
A view of science, less as an autonomous activity than as a social and political institution. We will discuss such issues as secrecy in science, ethical and value disputes, and the limits to scientific inquiry in the context of the changing relationships between science and the public.

**363 Remaking Socialism (also Society for the Humanities 425)**
Fall. 3 credits.
R 12:20–2:30. D. Stark.
This course examines the problems and prospects of restructuring the socialist economies of Eastern Europe. It addresses obstacles to creating markets administratively from above and explores recent efforts from below. On the basis of recent ethnographic studies, it analyzes conceptions of work, worth, and honor where diverse processes of evaluation and justification compete and coexist.

**[364 Race and Ethnicity**
Spring. 4 credits. Not offered 1989–90.
T R 1:25–2:40. S. Olzak.
This course examines the sociology of race and ethnic relations in the United States, Western Europe, South Africa, and other settings. The topics covered include the role of immigration and competition, the dynamics of upward mobility for some (but not all) ethnic-racial groups in the United States, the sociology and politics of ethnic-racial caste systems such as apartheid in South Africa, and the dynamics of ethnic boundaries in developing countries compared to those in underdeveloped countries.]

**365 Comparative Perspectives on Socialist Societies and Economies**
Fall. 3 credits. Open to juniors and seniors in any department. No prerequisites.
W 2:30–4:25. V. Nee.
This course focuses on analyzing the relationship between state, economy, and society in socialist societies. Particular attention is given to the tensions between planning and market, equality and equity, center and locality, bureaucratic domination and individual choice, and ideology and dissent. What are the problems in state-socialist societies and what are the dynamics and limits of reform movements? What are the areas of difference and convergence in the patterns of state, market, and household relations in capitalist and socialist societies? Readings will draw primarily on case studies of the Chinese, Eastern European, and Soviet experiences.

**[369 Contemporary Chinese Society**
Spring. 4 credits. Not offered 1989–90.
T R 2:55–4:10. V. Nee.
This course provides an introduction to Chinese society, its social organization, and its institutions. Since 1949 the various development models China has pursued have had differing consequences for society. What effects have they had on societal change—on stratification, community development, politics, the economy, work, schooling, family life, the position of women, personal relationships, and the meaning of life and values? What lessons can we draw from the Chinese experiences in implementing state-directed social change? How do we assess their accomplishments and failures? Recent field research on China will be cited.]

**[372 Sex Discrimination: Law and Social Policy (also Women's Studies 372 and Government 306)**
Spring. 4 credits. Not offered 1989–90.
M W F 10:10. C. Bohmer.
This course will cover the legal and social trends in the area of sex discrimination. It will examine the relationship between feminist consciousness and developments in gender-related constitutional law. We will discuss the meaning of sex discrimination in the context of various areas of importance and examine the role of the law in redressing or perpetuating social and legal inequities.]

**385 Personality and Social Systems**
Spring. 3 credits. Prerequisite: one course in any social science. Enrollment limited to 20 students.
T 10:10–12:05. B. Rosen.
A discussion seminar. Perspectives will be developed for understanding personality and behavior in a cultural context. A number of theories and conceptual approaches that have been used to understand the relationship between personality and social systems will be critically examined. Some themes in contemporary American culture will be discussed.

## Advanced Courses

The following courses are intended for advanced undergraduates with substantial preparation as well as for graduate students in sociology and related disciplines. The normal prerequisite for all 400-level courses is one introductory course plus 301 (or an equivalent statistics course). Students who are not sure whether their background is sufficient for a particular course should consult the professor in charge.

**[405 Sociology of Emotions**
Fall. 3 credits. Prerequisite: at least one of Sociology 101,103, or 205. Not offered 1989–90.
M W F 1:25. L. Smith-Lovin.
The seminar examines (1) theories that explain emotional response as a function of social interaction and (2) the impact of emotional displays on social processes such as attribution, labeling, and identity maintenance. Sociological approaches to emotion are compared with psychological and biological views. Readings include classic works as well as current theory and research. Student research is an integral part of the course.]

**[420 Mathematics for Social Scientists**
Fall. 2–4 credits. Not offered 1989–90.
M W 1–3; lab, F 1–3. R. McGinnis.
Elementary matrix algebra, probability theory, and calculus.]

**[426 Policy Research**
Spring. 3 credits (4-credit option available). Prerequisite: a course in multivariate methods. Not offered 1989–90.
R 9–11. S. Caldwell.
Examines the distinctive character of that social research which is sponsored and carried out explicitly for the purpose of informing policy. Intended especially for students considering nonacademic careers. Draws frequently from case studies to probe the methodological requirements, substantive flavor, and partisan context of applied research and also to identify the institutional actors involved in its sponsorship, production, and use.]

**[444 Contemporary Research in Social Stratification**
Fall. 4 credits. Not offered 1989–90.
R. L. Breiger.
Stratification and mobility as paired concepts requiring mutual articulation. The interplay of structure (occupational groups, labor markets, organizational demographics, social classes) and process (tracking, career trajectories, socioeconomic attainment).]

**460 Field Research in Sociology**
Spring. 3 credits.
M 3:35–5:30. V. Nee.
This course will deal with the organization and execution of studies of social life in naturally occurring settings—through participant observation and various forms of interviewing, as well as through the analysis of personal and historical documents. After a brief discussion of selected issues in the methodology and social research, attention will center on a critical examination of five published studies—to ascertain in each case just what the investigator was trying to do and the extent to which he or she succeeded. During the semester each student will be expected to develop a detailed study design and to do whatever preliminary tasks that are necessary. This may be a doctoral dissertation, an M.A. research project, or some other inquiry on a problem of personal interest.

**463 Political Sociology**
Fall. 4 credits. Prerequisite: Sociology 248 or equivalent or any three courses in sociology and government.
T R 11:40–12:55. D. Weakliem.
Analyzes the relation between politics and social structure, focusing on contemporary capitalist democracies. Considers classical and contemporary views on social class and politics. Topics include ideology, voting behavior, and recent changes in class structure.

**[468 Women and Achievement**
Fall. 3 credits. Not offered 1989–90.
T 1:30–3:30. B. C. Rosen.
An analysis of social and psychological factors affecting female achievement. Topics will include women in the labor force, sex differences in children's achievement, the impact of sex roles on the socialization of competence and achievement among women, and the impact of marriage and the family on career choice and occupational achievement.]

**[485 Social Structure and Personality**
Fall. 3 credits. Not offered 1989–90.
T 1:25–3:25. B. C. Rosen.
An analysis of the ways in which social and psychological factors interact to affect the development of personality, the rates of individual and group behavior, and the functioning of social systems.]

**491 Independent Study**
Fall or spring. 1–4 credits. For undergraduates who wish to obtain research experience or to do extensive reading on a special topic. Interested students must submit a petition, available at the departmental offices, 314–318 Uris Hall. Permission to enroll for independent study will be granted only to students who present an acceptable prospectus and secure agreement of a faculty member to serve as supervisor for the project throughout the term. Graduate students should enroll in 891–892.

**495 Honors Research**
Fall or spring. 4 credits. Limited to sociology majors in their senior year. Prerequisite: permission of instructor.
Hours to be arranged. Staff.

**496 Honors Thesis: Senior Year**
Fall or spring. 4 credits. Prerequisite: Sociology 495.
Hours to be arranged. Staff.

**497 Social Relations Seminar (also Anthropology 495)**
Spring. 4 credits. Limited to seniors majoring in social relations.
Hours to be arranged. T. Kirsch.

## Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor. Graduate students in sociology will normally take each of the five courses listed below, but with the concurrence of their special committees other arrangements may be made.

**501 Basic Problems in Sociology I**
Fall. 4 credits.
R 2:55–4:55. V. Nee.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

**502 Basic Problems in Sociology II**
Spring. 4 credits.
W 10:10–12:05. S. Olzak.
Analysis of theoretical perspectives shaping current sociological research. A continuation of Sociology 501.

**505 Research Methods I: Logic of Social Inference**
Fall. 4 credits. Prerequisite: a first course in statistics and probability.
M W 2:30–4:25 plus a weekly lab.
S. Caldwell.
The stages and logic of social inquiry, using the formal language of multivariate regression, with emphasis on applications. Threats to inference—and techniques for meeting such threats—are examined within each stage of inquiry: conceptualization; measurement; design; specifying, exploring, testing and evaluating models; dissemination and influence of results. Scope includes survey, comparative-historical, and experimental styles. Work load includes weekly lab exercises with data, attention to subject-matter, articles, and a research proposal. The first course in a three-course methods sequence (505–507).

**506 Research Methods in Sociology II**
Spring. 4 credits. Prerequisite: Sociology 420 or 505 or equivalent.
M W 1:25–3:20. M. McPherson.
A survey of methods for analyzing sociological data, including measurement error models, confirmatory factor analysis, panel models, and general structural equation methods. Readings from the sociological research literature will illustrate various methods. Periodic assignments on micro and mainframe computers will integrate theory, method, and data.

**507 Research Methods in Sociology III**
Fall. 4 credits. Prerequisite: Sociology 505.
W 2:30–5. D. Weakliem.
The statistical analysis of temporal change. Major topics are time-series and event-history (survival) analysis, with some discussion of panel data.

## Graduate Seminars

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered in 1989–90, but others may be added and some may be deleted. Students should check with the department before each term.

**[509 Seminar on Sociology of Organizations (also Management NRE 509)**
Fall. 4 credits. Not offered 1989–90.
Hours to be arranged. J. Freeman.
This course explores current research on organizations. The current literature can be broken up into four subareas: (1) population ecology of organizations (the class will read Hannan and Freeman, *Organizational Ecology*); (2) institutional theory; (3) organizations as mechanisms of social stratification (including work on occupational mobility and internal labor markets); and (4) economics of organization (including such topics as agency theory, transaction costs, and economic approaches to collective action). These areas will be explored in depth reflecting student interest. For each, stress will be placed on the opportunities for empirical research and limitations of operationalization.]

**513 Social Networks and Social Structure**
Spring. 4 credits.
T 10:10–12:05. R. L. Breiger.
A critical survey of theories and techniques of structural analysis in sociology, centering on the usefulness of social network analysis in providing integration of studies at different levels of generality. Applications in the areas of the sociology of organizations, community studies, social stratification, and dependence relations among nations. Emphasis on the mutual relevance of theories and operation research procedures.

**515 The Politics of Technical Decisions I (also City and Regional Planning 541, Management NBA 686, Biology and Society 415, and Government 628)**
Fall. 4 credits.
M 2:30–4:25. Staff.
Political aspects of decision making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

**516 The Politics of Technical Decisions II (also City and Regional Planning 542, Management NBA 687, Biology and Society 416, and Government 629)**
Spring. 4 credits. Prerequisite: The Politics of Technical Decisions I.
Hours to be arranged. D. Nelkin.
Continuation of the Politics of Technical Decisions I. Political aspects of decision making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

**517 The Sociology and Demography of Science and Technology**
Spring. 4 credits.
F 1:25–3:20. R. McGinnis.

**[551 Seminar in Collective Action**
Spring. 4 credits. Not offered 1989–90.
R 3–5. S. Olzak.
Examination of current research and theory in collective action, including neo-Marxist, resource mobilization, breakdown, and competition perspectives of the rise and fall of collective action and social movements. Comparison of different methods of data collection and analysis, including examination of recent event-history methods applied to collective-action research.]

**[563 Contemporary Research in Political Sociology**
Spring. 4 credits. Not offered 1989–90.
W 3:15–5:45. D. Weakliem.
Considers research from several theoretical perspectives in political sociology. The main focus will be on contemporary society, but some historical work may be included. Topics may include state economy relations, class structure and politics, and political ideology, among others.]

**[565 Seminar on Voluntary Associations**
Spring. 4 credits. Not offered 1989–90.
M 3–5:30. M. McPherson.
This is a study of the literature on voluntary associations, which can be described as groups that are not business, government, or family. The literature reflects the extreme diversity of the subject: there are thousands of references in sociology, political science, anthropology, psychology, economics, and related areas. The course will draw on readings from a broad selection of these sources, beginning with some of the earliest references and finishing with some modern empirical and theoretical work.]

**[582 Models of Social Action**
Spring. 4 credits. Not offered 1989–90.
T 9:30–12. L. Smith-Lovin.
This course introduces students to models that link meaning, knowledge, and social behavior. Three types of models will be explored: (1) models that relate social structure to shared knowledge; (2) production system approaches, which view knowledge as a role program; and (3) cybernetic models, which suggest that meaning and behavior can be described as a negative feedback system. Related work on knowledge representation in psychology, linguistics, and artificial intelligence will be reviewed.]

**591 Special Seminars in Sociology**
Fall and spring. 2–4 credits.
Hours to be arranged. Staff.
These graduate seminars will be offered irregularly. Topics, credit, and instructors will vary from semester to semester. Students should look at the sociology department bulletin board at the beginning of each semester for possible offerings.

**606–607 Sociology Colloquium**
Fall and spring. No credit. Required of all graduate students. Juniors and seniors are encouraged to attend.
F 3:35–5. Staff.
A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

**608 Proseminar in Sociology**
Fall. One credit. Required of all first-semester graduate students.
T 11:40–12:55. Staff.
Discussions on the state of sociology and on the interests of the members of the field, given by members of the field.

**[620 Processes in Small Groups**
Spring. 4 credits. Not offered 1989–90.
T 2–4:30. L. Smith-Lovin.
Analysis of processes in small groups, including communication, cohesiveness, norm development, group culture, conformity, deviance, status differentiation, leadership, power, and productivity. The seminar will cover both theory and research methods in the investigation of groups in face-to-face interaction.]

**625 Seminar on Organization Ecology**
Fall. 4 credits. Prerequisite: coregistration in Sociology 507 or permission of instructor.
M 12:20–2:15. M. Hannan.
Considers theory and research on the ecology of organizations with an emphasis on contemporary developments. Issues treated include evolution of organizational forms, interactions of competitive and institutional processes, density dependence in vital rates, niche width dynamics, and the evolution of size distributions.

**627 Models of Error**
Spring. 4 credits.
T 2:55–5:30. M. McPherson.
This is a methods seminar that focuses on solutions to the classical problems of estimation in linear models: measurement error in the independent variables, specification error, reciprocal effects, multiple indicators, unmeasured variables, correlated errors, and the like. The goal of the course will be to gain facility in the use of now-standard solutions to these problems, such as the LISREL model, the EOS approach, and such variants as LINCS. Both mainframe- and micro-based applications will be explored. We will integrate both theory and practice by studying the underlying statistical models and applying them to standard datasets. The standard core methods sequence will be ample preparation for this course.

**681 Special Topics in Social Psychology**
Fall. 4 credits.
T 1:25–4:10. L. Smith-Lovin.
This course will treat current research issues on the interrelationship of identity, behavior, and emotion. We will focus particularly on applying theories of interaction to small group contexts. Theoretical work that attempts to relate task and socio-emotional behavior in groups will be critiqued. The seminar will emphasize students' own theoretical work and research design.

**683 Social Interaction (also Psychology 683)**
Spring. 4 credits.
M 2:30–5. D. P. Hayes.
Seminar: topic to be announced.

**[685 Sex Differences and Sex Roles (also Psychology 685 and Women's Studies 685)**
Fall. 4 credits. Not offered 1989–90.
Hours to be arranged. S. Bem.]

**891–892 Graduate Research**
891, fall; 892, spring. Up to 4 credits each term, to be arranged. Prerequisite: graduate status and permission of a faculty member willing to supervise the project.

**895–896 Thesis Research**
895, fall; 896, spring. Up to 6 credits each term, to be arranged. Prerequisite: permission of thesis director.

### Related Courses in Other Departments

**Advanced Macro–organizational Behavior (ILR 722)**
Fall. 3 credits.
W 7–10 p.m. P. Tolbert.

**Contemporary Family Theory and Research (Human Development and Family Studies 650)**
Fall. 3 credits.
T 9:30–12. P. Moen.

**[Families and Social Policy (Human Development and Family Studies 456)**
Fall. 3–4 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. On campus and in Washington. Not offered 1989–90.
F 10–12. P. Moen.]

**Organizational Theory and Behavior (Management NCC 504)**
Fall. 3 credits.
Hours to be arranged. M. Abolafia.

**[Population Policy (Rural Sociology 418)**
Fall. 3 credits. Not offered 1989–90.
R 1:25–4:30. J. M. Stycos.]

**Strategy Implementation: Process and Politics (Management NBA 660)**
Fall. 3 credits.
Hours to be arranged. M. Abolafia.

**The Professions: Organization and Control (ILR 427)**
Fall. 4 credits.
M W 2:30. P. Tolbert.

## THEATRE ARTS

### Theatre, Film, and Dance

B. Levitt, Chairman; R. Archer, S. Banes, D. Bathrick, S. Brookhouse, N. Carroll, D. Feldshuh, D. Fredericksen, E. Gainor, P. Gill, P. Guion, D. Hall, M. Hays, J. Johnson, J. Moon, J. Morgenroth, M. Rivchin, P. Saul, and A. Van Dyke.

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, dance, and film. It offers a theatre arts major with concentration in theatre or film and a major in dance. These majors educate students in accordance with the general liberal arts ethic of the college. The programs in dance and film and the advanced undergraduate training program in theatre give some measure of professional preparation in those arts as well. The department encourages academic and studio participation by students from all disciplines and also provides the Cornell community with an opportunity to take part in its productions on an extracurricular basis.

### Theatre Arts Major

#### Theatre Concentration

The theatre concentration offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design/technology, and stage management.

**Course requirements for theatre concentration:** **Credits**

1) **TA 240** and **TA 241** (two-semester introduction to theatre) 8
**TA 250** Introduction to Theatre Design and Technology 4
**TA 280** Introduction to Acting 3

2) Four laboratory courses distributed as follows: **Credits**
**TA 151** Production Lab I 1-3
**TA 153**, **TA 253**, or **TA 353** Stage Management Lab I, II, or III 1-3
**TA 155** Rehearsal and Performance or **TA 151** in a different area 1-3
**TA 251** or **TA 351** Production Lab II or III 1-4

3) Four courses in the area of Theatre Studies chosen in the following manner:
Two courses selected from TA 331 through 399 8
Two courses selected from TA 400 or above 8

4) Three courses (at least 9 credits) in other Theatre Arts courses chosen in consultation with the faculty advisor. Course taken to qualify for admission to the Advanced Undergraduate Training Program (described below) may also be used to fulfill this requirement.

5) Courses in which a student receives a grade below "C" cannot be used to fulfill the requirements for a Theatre Arts major.

### The Advanced Undergraduate Training Program

The department offers advanced training in acting, directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in coursework. Criteria for admission to the AUTP is by the completion of the appropriate "track" of courses and invitation of the faculty. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists. Department productions will be chosen to offer a unique experience to the individual student selected for the program. (For specific requirements please see listing of courses at end of department listings.)

### Film

The study of film began in this department in the 1930s and continues to be based here. However, in the interim years it has also spread into a significant number of other departments in the college: Africana studies, anthropology, Asian studies, comparative literature, English, German studies, history, psychology, and romance studies. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national cinemas to national literatures and specific cultures, film to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The four currently being used are as follows: 1) concentrating on film within a Theatre Arts major; 2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); 3) focusing on film as a College Scholar; and 4) concentrating in Visual Studies. Students interested in option 4 should consult Marilyn Rivchin (Theatre Arts) and/or Robert Ascher (Anthropology). Students interested in options 2 or 3 should consult Don Fredericksen (Theatre Arts) and Lynne Abel (director, College Scholar and Independent Major programs). Students interested in the first option should consult Alison Van Dyke (director, Undergraduate Studies, Theatre Arts) and one of the department's film faculty (Don Fredericksen, Marilyn Rivchin, Noel Carroll, and David Bathrick).

*Please note:* the requirements for film concentration within a Theatre Arts major have been changed significantly for students in the class of 1991 and beyond. For students in the class of 1990, the requirements in place when they initially declared their film concentration remain effective. Both sets of requirements are listed below.

**Film Concentration Requirements for Class of 1991 and beyond:** **Credits**

The department's revised film concentration requires a total of 50 credits in film, theatre, and related courses. *Introduction to Film Analysis* will now be the primary prerequisite for the concentrator, rather than three theatre courses.

1. **TA 274** Introduction to Film Analysis 4
2. *One* of the following theatre courses:
   **TA 250** Fundamentals of Theatre Design/Technology 4
   **TA 280** Introduction to Acting 3
   **TA 398** Directing I (prerequisite TA 280) 4
3. A core of *three* film courses:
   **TA 375** History of Commercial Narrative Film 4
   **TA 376** History of Documentary and Experimental Film 4
   **TA 377** Fundamentals of 16mm Filmmaking 4
4. *Four* courses (16 credits) in film offered by Theatre Arts as below, each 4 credits, or by other departments (with adviser):
   **TA 378** Russian Film of 20s and French Film of 60s 4
   **TA 379** International Documentary from 1945 to present 4
   **TA 396** German Film 4
   **TA 413** Film and Performance 4
   **TA 475** Seminar in the Cinema I 4
   **TA 476** Seminar in the Cinema II 4
   **TA 477** Intermediate Film Projects 4
   **TA 478** Seminar in the Theory of Motion Pictures 4
   **TA 494** Advanced Film Production 4
   **TA 654** Special Topics in the Theory of Motion Pictures 4
   **TA 676** New German Cinema 4
5) *15 credits* of related coursework in or outside of Theatre Arts
6) With a grade of less than C, a course cannot be used toward the concentration

**Film Concentration for Class of 1990**

Requirements:

1) Theatre Arts 230 or 240, 250 and 280 (230 is no longer offered)
2) Theatre Arts 374 with a grade of C+ or better. (TA 274, 1991 and beyond)
3) 16 credits in film that should include:
   a) two courses chosen from Theatre Arts 375, 376, 378, and 379;
   b) Theatre Arts 377;
   c) Theatre Arts 475 or 477.
4) 8 credits in other theatre arts courses.
5) 12 additional credits of related work outside the department.
6) An average of C+ or better in all theatre arts courses.

## Film Study Abroad

The College of Arts and Sciences, through this department and in consort with seventeen other colleges and universities, offers up to a full year's study at the Inter-University Center for Film and Critical Studies in Paris, France. The center's program is theoretical, critical, and historical. It is most useful to students pursuing a major in film studies and serves as an intensive supplement to their Cornell film courses. Fluency in French is required, and Theatre Arts 274, 375, and 376 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell's liaison with the center.

## The Dance Program

The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, and the history, theory, and criticism of dance. Technique courses include modern dance at four levels and ballet at three levels. Other dance forms, such as tap, historical dances, Japanese Noh, Indian, Javanese, and African dance are offered on a rotating basis. Courses in ballroom dance taken through the Physical Education program supplement these offerings. Technique classes develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to four academic credits (one each semester) in level III and IV technique only (see TA 304, 306, and 308). Students may also satisfy the physical education requirement by taking dance technique classes in the dance program. The schedule for all dance technique classes is available in the main office of the Center for Theatre Arts. Registration for technique classes takes place in Teagle Hall. Students taking technique for academic credit must also register through their own colleges.

The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance classes is by audition. Students may receive one academic credit (S-U grades only) when performing in student-faculty concerts by registering for TA 155.

### The Dance Major

To be admitted to the major, students must have completed two technique courses in modern dance or ballet (at level II or above for the performance/composition concentration) and TA 201 (dance improvisation). It is also recommended that TA 250 and Music 105, both requirements for the major, be taken before the junior year. The dance major offers two options for concentration: 1) composition and performance (studio); 2) history, theory, and criticism (academic). The following requirements are expected of majors in both concentrations.

**Prerequisites for the major:**

Two technique courses in modern dance or ballet (at level II or above for the performance/composition concentration)

**TA 201** Dance Improvisation

**Requirements for the major:** **Credits**

**Music 105** (or substitute at the appropriate level) 3
One course in historical, tap, jazz, ballroom, or non-Western dance 0–3
**TA 210** Beginning Dance Composition and Music Resources 3
**TA 250** Fundamentals of Design and Technology 4
**TA 314–315** Western Dance History 8
**TA 418** or other 400-level academic dance course 4
**TA 155** Rehearsal and Performance 1

**Additional requirements for the studio concentration:** **Credits**

Two semesters each of ballet and modern dance technique (in addition to the prerequisite) 0–4
**TA 310–311** Intermediate Projects in Dance Composition 6
**TA 312** Physical Analysis of Movement 3
**TA 410–411** Advanced Dance Composition 6

Students concentrating in the studio option will be expected to perform in at least two concerts and to present at least two of their own dances, in addition to the senior project.

**Additional requirements for the academic concentration:** **Credits**

A total of at least two semesters each of ballet and modern dance techniques (including prerequisite) 0–2
Dance history, theory, criticism, and aesthetics courses 8
**TA 490** (senior paper) 4

For both options, additional credits, for a total of 45, should be selected in consultation with the advisor. Of the 45 credits, at least 32 must be at the 300 level or higher.

## Department Courses

### Theatre Courses

**240 Introduction to Western Theatre I**
Fall. 4 credits.
T R 10:10-11:25. E. Gainor.
A survey of the major developments in the theatre—playwriting, acting, staging, architecture, and dramaturgy—in Classical Greece and Rome, medieval and Renaissance Europe. Representative plays will be read and discussed in their theatrical context.

**241 Introduction to Western Theatre II**
Spring. 4 credits.
T R 10:10-11:25. E. Gainor.
A survey of the major developments in the theatre–playwriting, acting, staging, architecture, and dramaturgy–since 1642. Among the areas considered will be French Neoclassicism, the English Restoration, the eighteenth and nineteenth centuries in England, France, and Germany and the modern international stage. Representative plays will be read and discussed in their theatrical context.

### Theatre Studies Courses

**130 American Myth in Drama**
Fall or spring. 3 credits.
M W 11:15-12:05. Staff.
This course examines the images of America presented on the twentieth-century stage. How do Americans view themselves? How are they seen by foreign dramatists? To what ends do dramatists use the American myth?

**140 From Script to Stage: Writing about the Theatrical Process**
Fall or spring. 3 credits.
M W F 12:20–1:10. Staff.
In this course students will explore and write about the process through which drama becomes theatre: how the methods of playwright, actor, director, and designer dovetail to create the theatrical piece. Students will be asked to apply the rhetorical strategies of theatre to their own essay writing. Texts will include Theatre Cornell productions.

**160 Vietnam and the American Theatre**
Fall. 3 credits Limited enrollment.
T R 1:25–2:40. B. Wright.
The Vietnam War has spawned a diverse range of dramatic texts and events. This course will investigate some central questions regarding this dramaturgy, such as: What types of theatrical events developed from the Vietnam War? How did this dramaturgy reflect attitudes about the war? How did it change over time? Where did it go in the 1970s and early 1980s? Why has there been a recent resurgence of theatrical interest in this topic? The class will investigate plays by David Rabe, Megan Terry, The Living Theatre, The Bread and Puppet Theatre, and others, in addition to various Happenings and events. Students will read and discuss the dramaturgy as the basis for their critical assignments.

**[325 Classic and Renaissance Drama (also Comparative Literature 352)**
Spring. 4 credits.
A. Caputi. Not offered 1989–90.
A study of the major traditions in Western drama from the beginnings among the Greeks to the Renaissance in England and Spain. The work will consist of both lectures and discussions, focusing primarily on a close reading of the plays. But we shall also give attention to the physical conditions of production and to social and political contexts. Among the authors to be read will be Aeschylus, Sophocles, Euripides, Aristophanes, Marlowe, Shakespeare, and Lope de Vega.]

**326 European Drama, 1660 to 1900 (also Comparative Literature 353)**
Spring. 4 credits.
M W F 9:05–9:55. A. Caputi.
Readings from major dramatists from Corneille to Chekhov, including such authors as Moliere, Congreve, Marivaux, Goldoni, Gozzi, Schiller, Kieist, Gogol, Ostrovski, and Ibsen.

**[327 Modern Drama (also Comparative Literature 354)**
Fall. 4 credits.
T R 12:10–1:25. E. Gainor. Not offered 1989–90.
Readings in European drama from Ibsen to the present.]

**[331 The Classical Theatre**
Fall. 4 credits. Prerequisite: Theatre Arts 230 (will be 240 after 1989–90) or permission of instructor. Not offered 1989–90.
An examination of major developments in the theatre—acting, staging, dramaturgy—and the historical background to these developments in Greek and Roman society. Representative plays will be read and discussed in their theatrical text.]

**[332 Medieval and Renaissance Theatre**
Spring. 4 credits. Prerequisite: Theatre Arts 230 (will be 240 after 1989–90) or permission of instructor. Not offered 1989–90.
A study of theatrical styles and production modes. Topics include the medieval liturgical and secular stages, the Renaissance court and public stages on the Continent and in England and the professionalization of the theatre. Representative plays will be read and discussed in their theatrical context.]

**333 From the Neo-classical Theatre to the Well-Made Play**
Fall. 4 credits. Prerequisite: Theatre Arts 240 or 241.
M W 2:30–4:00. M. Hays.
A study of theatrical styles and production modes. Topics include the English Restoration and French Neoclassical theatres, the European court theatre, romanticism in the theatre, and the rise of standing commercial theatre companies. Representative plays will be read and discussed in their theatrical context.

**335 The Modern and Contemporary Theatre**
Fall. 4 credits. Prerequisites: Theatre Arts 230 (will be 240 after 1989–90) or permission of instructor.
T R 12:10–1:25. E. Gainor.
A study of theatrical styles and production modes. Examination of advances in acting, directing, design, and dramaturgy in theory and in practice from the late nineteenth century through the present day. Representative plays will be read and discussed in their theatrical context.

**[336 American Drama and Theatre**
Fall. 4 credits. Prerequisite: Theatre Arts 230 (will be TA 240 after 1989–90) or permission of instructor. Not offered 1989–90.
T R 12:20–1:25. E. Gainor.
A study of the American theatre and representative American plays, with emphasis on drama from O'Neill to the present.]

**[338 Japanese Theatre (also Asian Studies 338)**
Fall. 3 credits. Not offered 1989–90.
W 2:30–4. K. Brazell.
A study of traditional forms of Japanese theatre. Topics will include ritual and theatre, noh and kyogen, kabuki and the puppet theatres, and contemporary theatrical use of traditional forms. Special emphasis will be placed on dramaturgy, acting styles, performance aesthetics, and theories of performer training.]

**[400 Dance, Theatre, and Film of the 1960s**
Fall. 4 credits. Not offered 1989–90.
W 2–4:25. S. Banes.
This course will be concerned with the burgeoning avant-garde arts scene in New York City in the early 1960s. Postwar American economic expansion and the shift of cultural as well as political power from Europe to the United States gave an impetus to new movements ranging from postmodern dance to Off-Off Broadway to underground film to new intermedia genres like happenings, and to new modes of criticism in the arts. A survey of the other arts will provide additional context. We will trace themes of community, freedom, the body, and the "other" in these avant-garde works as sites where cultural themes of the sixties were both reflected and produced.]

**[431 Theory of the Theatre and Drama I**
Fall. 4 credits. Prerequisite: some theatre history and dramatic literature work at the 300 level or permission of instructor. Not offered 1989–90.
M 2:30–4:25. M. Hays.
A study of various theories of dramatic form and theatrical presentation from Aristotle and Horace to Goethe and Schiller.]

**432 Theory of the Theatre and Drama II**
Spring. 4 credits. Prerequisites: Course work in theatre history or dramatic literature at the 300 level or permission of instructor.
M 2:30–4:25. M. Hays.
An examination of dramatic theory and its performance context from Schiller to the present.

**433 Dramaturgy: Play and Period. Topic for 1989–90: The Female Dramatic Tradition**
Spring. 4 credits.
T 12:20–2:15. E. Gainor.
Is there a "female dramaturgy"? What is the female tradition in the theatre? The course will explore these questions through an investigation of texts by women dramatists, including Hrotsvitha, Aphra Behn, and Caryl Churchill, as well as theory by such critics as Sue Ellen Case and Jill Dolan.

**[434 Theatre and Society**
Spring. 4 credits. Prerequisite: permission of instructor or some work in theatre history or dramatic literature at the 300 level. Not offered 1989–90.
M 2:30–4:25. M. Hays.
An exploration of the ways in which the theatre serves to formulate cultural and aesthetic norms.]

**[435 Special Topics**
Not offered 1989–90.]

**[438 East and West German Drama**
Fall. 4 credits. Not offered 1989–90.
W 1:25–3:25. D. Bathrick.
This course will cover the major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiiss, Hochhuth, Muller, Braun, Kroetz, Handke, and others) will be treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.]

**455 Topics in Aesthetics/Horror**
Spring.
W 4:15–6:15. N. Carroll.
This course focuses on the genre of horror and seeks to explore its nature, its characteristic effects and structures, its imagery and its narrative forms, its social implications and the nature of the pleasures it affords audiences. The primary text for the course will be *Paradoxes of the Heart: The Philosophy of Horror* by Noel Carroll, along with selected readings by Burke, Lovecraft, King, Twitchell, Heller, and Waller. Philosophical articles on the topics of how it is possible to fear fictions and on how one can derive pleasure from what is distressing will also be examined. Plays, films, novels, and short stories will also be discussed on a weekly basis in class in terms of the ways in which they shed light on the genre as a whole.

**456 Race and Theatre in America (also English 656)**
4 credits. Spring.
T 3:30–5:30. B. Jeyifo.
The course will explore the representation(s) of race in selected periods and movements of dramatic writing and theatrical performance in America. Drawing both on conventional dramatic theories of "types" and "masks" and poststructuralism theories of "otherness" and "difference," the course will study important dramatic texts and performance forms which have made race such a historically crucial dimension of the American theatre. One major area of our exploration will be the changing patterns of the politics of representations of race in the American theatre. Class discussion will draw on supplementary materials such as films, video, and slides.

**[494 Four Directors: Stanislavsky, Meyerhold, Brecht, Brook**
Spring. 4 credits.
S. Banes. Not offered 1989–90.
Of all the arts in the theatrical ensemble, the art of the director, while currently the most influential, is by far the youngest. These four directors, whose work spans the twentieth century, have been instrumental in refining the art of the metteur-en-scene with a unified vision. We will study their theories of directing in the context of specific products. We will look as well through Stanislavsky to American method directors (such as Kazan); through Meyerhold at the other experimental Russian directors of the 1920s; through Brecht at Piscator and more recent political theatre; through Brook at Artaud's theories, on the one hand, and at the other Artaud-influenced directors of the last twenty-five years (including Grotowski and the Living Theatre), on the other.]

**[633 Seminar in Theatre History**
Spring. 4 credits.
W 2:30–5. E. Gainor. Not offered 1989–90.
Advanced work in a specific area of theatre history.]

**636 Seminar in Dramatic Criticism**
Fall. 4 credits. Prerequisite: Permission of instructor.
T 2:30–4. M. Hays.
Critical approaches to the drama.

**637 Seminar in Dramatic Theory**
Spring. 4 credits. Prerequisite: Permission of instructor.
T 2:30–4. M. Hays.
Expectation and alienation: hermeneutic and dialogic approaches to the drama.

**[648 East and West German Drama: Post 1945 (also German Studies 438)**
Fall. 3 credits. Not offered 1989–90.
W 1:25–3:25. D. Bathrick.
This course will cover the major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiiss, Hochhuth, Muller, Braun, Kroetz, Handke, and others) will be treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue. (Not offered 1989–90)]

**655 Advanced Topics in Aesthetics/ Comic Theory**
Fall. 4 credits.
W 4:15–6:15. N. Carroll.
This seminar will examine traditional and contemporary theories of laughter and humor, including writings by Plato, Aristotle, Cicero, Hazlitt, Spencer, Freud, Bergson, Roger Scruton, Stanley Cavell, Ronald deSousa, Ted Cohen, and John Morreall, among others. The course will attempt to isolate the nature and structure of jokes, puns, riddles, farces, parodies, satires, caricatures, sight gags, cartoons, and a gamut of comic forms, including stand-up monologues and informal badinage. Selected films, plays, club recordings, novels, short stories, cartoons, and videos will be studied to ground our theorizing empirically. The ethical, social, and political ramifications of humor will also be a concern of the course.

**656 Race and Theatre in America (also English 656)**
Spring. 4 credits.
T 3:30–5:30. B. Jeyifo.
The course will explore the representation(s) of race in selected periods and movements of dramatic writing and theatrical performance in America. Drawing both on conventional dramatic theories of "types" and "masks" and poststructuralism theories of "otherness" and "difference," the course will study important dramatic texts and performance forms which have made race such a historically crucial dimension of the American theatre. One major area of our exploration will be the changing patterns of the politics of representations of race in the American theatre. Class discussion will draw on supplementary materials such as films, video, and slides.

**[678 Theory and Practice of Modern Drama**
Spring. 4 credits.
W 3:35. D. Bathrick Not offered 1989–90.
The course will explore different theories of modern drama (Szondi, Brecht, Artaud, etc.) and discuss these on the basis of a number of representative works of modern drama. The point will be to trace the interchange between theory formation and dramatic practice.]

**688 Theodore W. Adorno: Mass Culture and the Avant-Garde (also German Studies and Comparative Literature 688)**
Fall. 4 credits.
T 1:25–3:20. P. Hohendahl.
In this country Adorno is primarily known for his philosophical writings and his music criticism. His literary criticism and his contributions to aesthetic theory, on the other hand, remain to be discovered. The seminar will explore Adorno's importance for contemporary criticism; it will focus on Adorno's theory of art as well as his literary and music criticism, especially those parts concerned with the Avant-garde and its role in the age of modern mass culture. The readings will be taken from Adorno's essays as well as *Minima Moralia, Dialectic of Enlightenment, Philosophy of Modern Music, Prisms,* and *Aesthetic Theory.*

**695 Brecht and Artaud (also Comparative Literature 695 and German Studies 695)**
Fall. 4 credits.
W 12:20–2:15. D. Bathrick.
This course will explore in depth the writings and practices of two major twentieth century theatrical artists, Bertolt Brecht and Antonin Artaud, in order to a) map out differences and similarities between the two as representatives of avant-garde theatre; b) situate their respective work in the political and cultural contexts out of which they emerged; and c) explore their impact upon succeeding movements and artists of modern drama and cinema. A central focus of the course will be to explore the differing and changing notions of "avant-garde theatre" as demonstrated in the work and reception of Brecht and Artaud. The face off between the two will serve methodologically both to delineate and interrogate critically what have become two discrete "models" of avant-garde theatre as well as to consider ways to which these two models have been and could be synthesized.

**698 Performing the Sixties**
Fall. 4 credits.
T 4:15–6:15. S. Banes.
During the 1960s, the roots of postmodernism in the arts were planted as artists and critics posed fundamental questions about the relationship between "high" and "low" culture; about the interdisciplinarity of art forms; and about the relationship between art and community. Performance itself became the key site of artistic investigation for artists in various media. This seminar will examine performance practice in the 1960s, focusing on the avant-garde in the early part of the decade as a harbinger of the cultural explosion later in the decade. We will look at Happenings and Fluxus, as new genres of performance generated by the cultural milieu of this era; at the beginnings of postmodern dance and the Off-Off Broadway movement; at underground film; at new genres, later in the decade, of the spectacle of anti-war protest and guerrilla theatre; and at the broader context of popular culture and its appropriations by the avant-garde. An in-class presentation of an original research project will be required, as will some outside film screenings (times to be arranged).

### Acting

**155 Rehearsal and Performance**
Fall or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

**280 Introduction to Acting**
Fall or spring. 3 credits.
An introduction to an actor's technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus will be on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

**281 Acting I**
Fall or spring. 3 credits. Prerequisite: TA 280 and audition.
A continuation of the study of technique and performance skills with greater concentration on scene work. Special consideration will be given to modern naturalistic plays with further text and character analysis, physical exploration, and some improvisation.

**282 Introduction to Voice and Speech for Performance**
Fall or spring. 2 credits.
TR 10:10–12:05. Staff.
Study and practice in the development of the speaking voice with emphasis on tone quality, breathing, articulation, and practice of standard American English pronunciation. Some oral interpretation of poetic, narrative, and dramatic text.

**283 Voice and Speech for Performance**
Spring. 2 credits. Limited to 12 students. Primarily for department majors. Prerequisites: TA 282.
Registration only through department roster in the main office of the Center for Theatre Arts. Development of the speaking voice with additional emphasis on dramatic interpretation.

**284 Speech and Dialects for Performance**
Fall. 3 credits. Limited to 12 students. Primarily for department majors or advance undergraduate training program candidates. Prerequisites: TA 280, 281.
Registration only through department roster in the main office of the Center for Theatre Arts. Development of speech and dialects in dramatic text.

**287 Summer Acting Workshop**
Summer. 3 credits. Limited to 16 students in a section. Fee for theatre admissions, $10.
An introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology. Productions of the Hangar Theatre company attended and used as performance examples. Includes visits by guest artists and Hangar Theatre company members.

**380 Acting II**
Fall. 3 credits. Prerequisite: TA 280, 281 and audition.
T R 12:20–2:15. Staff.
A continuation of Acting I. Special consideration will be given to verse and drama and plays in transition.

**381 Acting III**
Spring. 3 credits. Prerequisite: TA 280, 281, 380, and audition.
A continuation of Acting II. Special consideration will be given to scene study which presents particularly difficult physical and vocal challenges to the actor, as well as dramatic texts in which language and style are key elements.

### Directing

**155 Rehearsal and Performance**
Fall or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

**398 Fundamentals of Directing I**
Fall. 3 credits. Limited to 12 students. Prerequisite: Theatre Arts 280 and permission of instructor.
M W 12:20–2:15. D. Feldshuh.
Focused, practical exercises to teach the student the fundamental staging techniques that bring a written text to theatrical life. A core objective of the course is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student will direct a number of exercises as well as a short scene.

**498 Fundamentals of Directing II**
Spring. 4 credits. Enrollment strictly limited. Prerequisite: Theatre Arts 280 and 398, and permission of instructor.
M W 12:20–2:15 plus lab time to be arranged. D. Feldshuh.
The course builds on the staging techniques learned in Fundamentals of Directing I. In this course each student will direct a series of projects and public presentations focusing on specific directoral challenges. The student will develop an increased ability to articulate and defend directoral choices and learn to work with actors on a diverse range of material. The course is open to graduate and undergraduate students. Directors will cast from a company of actors to be auditioned early in the semester. Each actor in the company will earn two credits as part of Theatre Arts 155.

**499 Seminar in Directing**
Fall or spring. 1–4 credits. Prerequisites: Theatre Arts 240, 250, 280, 398, 498, and permission of instructor.
Hours to be arranged. D. Feldshuh.
This seminar will give the student the opportunity to direct a full evening of theatre. It may also involve an internship with a prominent director on campus and a final paper focusing on a specific aspect of directing.

### Playwriting

**348 Playwriting**
Fall. 4 credits. Prerequisite: permission of instructor.
T R 2:30–3:45. J. O'Neal.
A laboratory for the discussion of student plays. Following exercises in dramatic structure and technique, students will be expected to write two or three one-act plays.

**349 Advanced Playwriting**
Spring. 4 credits. Prerequisite: Theatre Arts 348.
T R 2:30–3:45. Staff.
A continuation of Theatre Arts 348, culminating in the composition of a full-length play.

**497 Seminar in Playwriting**
Fall. 1–4 credits. Prerequisite: Theatre Arts 348 and 349 or permission of instructor.
To be announced. W. Soyinka.
This seminar will provide the student with the opportunity to collaborate with faculty directors, designers, and actors in the production of his/her own work. The course will include a final paper and faculty critique of the manuscript and the production process.

## Design, Technology and Stage Management

### Design

**120 The Unfashionable Human Body**
Fall. 3 credits.
T R 2:55–4:10. J. Johnson.
At an early age we learn the magic power of dress. There are many theories about why we wear clothes: protection from the elements, love of ornamentation, sexual attraction, and modesty, to name a few. Whatever the reason(s), our dissatisfaction with the human body expresses itself in all cultures, and that expression is endlessly changing.

Students will explore the various theories, look at examples from decoration to distortion (i.e., masks, corsets, tattoos, and fads) and write about how society addresses (or undresses) "the unfashionable human body."

**250 Fundamentals of Theatre Design and Technology**
Fall and spring. 4 credits. Not open to first term freshman. Limited to 20 students. A minimum of one credit of Production Lab (TA 151 or 251) is strongly recommended concurrently.
M W F 12:20–2:15. R. Archer, J. Johnson, J. Moon, P. Gill, D. Hall.
An introduction to design and technology in the theatre. Lectures, discussion, and project work introduce the visual principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage.

**362 Lighting Design Studio I**
Fall. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost $25.00). Prerequisite: TA 252 and 340 or permission of instructor.
T R 12:20–2:15. P. Gill.
An examination of the fundamental theories of color and the physical characteristics of light. Through discussion and a series of projects in the light lab this course examines the role of light as a flexible, expressive art medium; its visual nature and dramatic impact, the conceptual and intuitive nature of the successful approach to stage lighting and the influence of professional practices on the application of lighting design to many areas including architecture and theatre.

**364 Scenic Design Studio I**
Fall. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50.00). Prerequisite: TA 340 and 354 or permission of instructor.
M W 10:10–12:05. J. Moon.
An exploration of the process of designing scenery for the stage: analysis of the dramatic text, use of research and imagery, theatre architecture, communication techniques, and materials for building the scenic model. Four required design projects will use the major stage forms and involve the design and construction of full color scale models. Each project will represent a formative period in the history of dramatic literature and theatre architecture.

**366 Costume Design Studio I**
Fall. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50.00). Prerequisite: TA 356 or permission of instructor.
T R 10:10–12:05. J. Johnson.
Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and understanding production style.

**368 Sound Design Studio**
Spring. 4 credits. Limited enrollment to 6 students. Prerequisite: TA 252 or permission of instructor. Students are required to purchase supplies (approximate cost $30.00).
T R 10:10–12:05. D. Hall.
The use of sound as a medium of design for the theatre; research and creation of sound score, recording and engineering techniques, live effects and projects in live and studio sound production.

**462 Lighting Design Studio II**
Spring. 4 credits. Prerequisite: TA 362 or permission of instructor.
T R 12:20–2:15. P. Gill.
An in-depth study of selected topics in the history of lighting design, contemporary design style, and the aesthetics of lighting the dramatic text. In addition to advanced projects and research, this course can also provide a tutorial for all student lighting designers in the advanced undergraduate training program.

**464 Scenic Design Studio II**
Spring. 4 credits. Students are required to purchase materials which the instructor will specify (approximate cost $50.00). Prerequisite: TA 364 or permission of instructor.
M W 10:10–12:05. J. Moon.
A continuation of the course of study begun in TA 364, specifically, the analysis and design of two major theatrical works, one operatic, and one dramatic. Two full color scale models and formal design presentations will be the culmination of the class.

**466 Costume Design Studio II**
Spring. 4 credits. J. Johnson. May be repeated for credit. Prerequisite: Theatre Arts 364 and permission of instructor.
T R 10:10–12:05. J. Johnson.
This course builds on the Costume Design I topics (script analysis, period research, the use of the elements of design, developing figure drawing and painting, and understanding the theatrical process) by stressing the practical production situations that influence design and the relationship between designer, director, and the scenography team. Theatrical styles and actual production work are explored in more depth. Extensive project work includes both the rendering of design projects and actual costume construction.

### Technology

**252 Technical Production Studio I**
Fall. 2 credits. A minimum of one credit of production laboratory (TA 151 or 251) is required concurrently. Prerequisite: TA 250 or permission of instructor.
T R 10:10–12:05. C. Hatcher, C. Watts.
*Stage Lighting Technology:* The practical aspects of lighting technology: stage electrics, equipment, organization, techniques, and paperwork will be explored through projects, lecture, and class discussion. *Stage Sound Technology:* The practical aspects of sound technology: equipment set-up, organization, recording techniques and paperwork will be explored through projects, lecture, and class discussion.

**254 Theatrical Make-up Studio**
Spring. 3 credits. Students are required to purchase make-up kits which the instructor will provide (approximate cost $30.00). Prerequisite: permission of instructor.
T R F 2:30–4:25. J. Johnson.
Basic techniques of make-up for the stage including corrective, old age, and fantasy; use of prosthetics, wigs, hair and hairpieces.

**256 Technical Production Studio II**
Spring. 2 credits. A minimum of one credit of production laboratory (TA 151 or 251) is required concurrently. Limited to 6 students. Students are required to purchase materials which the instructor will specify (approximate cost $25.00). Prerequisite: TA 250 or permission of instructor.
T R 10:10–12:05. B. Johnson, G. Bakke.
*Scene Painting:* Techniques of paint and set decoration for the stage including large format layout, grid systems, transfer methods, color mixing and matching, dye painting, airbrush and spray systems are a traditional approach to scenic art. *Stage Properties:* The design and construction of scenic, hand and costume props, concentrating on period research and accuracy of detail, use of various materials, crafts and construction techniques, and painting and finishing.

**340 Theatrical Drafting and Technical Drawing Studio**
Fall. 3 credits. Limited to 10 students. Prerequisite: Theatre Arts 250 or permission of instructor.
M W F 9:05–9:55. S. Brookhouse, P. Gill.
Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. A series of projects to familiarize students with the convention and process of drafting in all areas of theatrical production and design.

**354 Stagecraft Studio**
Spring. 3 credits. A minimum of one credit of production laboratory (TA 151 or 251) is strongly recommended concurrently. Prerequisite: TA 250 or permission of instructor.
M W 10:10–12:05. R. Archer.
An exploration of the techniques and practice of theatre operation, scenic construction, stage mechanics, rigging, painting, and model building.

**356 Costume Construction Studio**
Fall. 3 credits. A minimum of one credit of production laboratory (TA 151 or 251) is strongly recommended concurrently. Prerequisite: TA 250 or permission of instructor
M W 10:10–12:05. J. Johnson.
A project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

### Stage Management

**153 Stage Management Production Laboratory I**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting in the scene shop in the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes.
P. Guion.
Practical production experience in theatrical production as an assistant stage manager for a smaller scale production under the supervision of the faculty production stage manager. Theatre Arts 370 complements this course.

**253 Stage Management Laboratory II**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop.
P. Guion.
Practical experience in theatrical production as assistant stage manager for a large scale production under the supervision of the faculty production stage manager. TA 370 complements this course.

**353 Stage Management Laboratory III**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop.
P. Guion.
Practical experience in theatrical production as stage manager for a small scale production under the supervision of the faculty production stage manager. TA 370 complements this course.

**370 Stage Management Studio**
Fall and spring. 1 credit. Prerequisite: TA 250 or 280. T 2:30–4:25
P. Guion.
Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. TA 153, 253, and 353 complement this course.

**453 Stage Management Laboratory IV**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop. Prerequisite: permission of instructor.
P. Guion.
Practical experience in theatrical production as stage manager for a large-scale production under the supervision of the faculty production stage manager.

### Production Laboratories

**151 Production Laboratory I**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop.
J. Johnson, G. Bakke, S. Brookhouse, P. Guion, C. Hatcher, C. Watts.
Practical experience in theatrical production. Students register for sections by areas of interest. 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound, 06 Stage Crew. No prerequisites or experience required.

**251 Production Laboratory II**
Fall and spring. 1–3 credits.
J. Johnson, G. Bakke, S. Brookhouse, P. Guion, C. Hatcher, C. Watts.
Practical experience in theatrical production, in a position of major responsibilities on the production staff. Prerequisite: TA 151 or permission of instructor. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound.

**351 Production Laboratory III**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound. Prerequisite: Permission of instructor.
R. Archer, D. Hall, G. Bakke, P. Gill, J. Johnson, J. Moon.
Practical experience in theatrical production, in a position of major responsibility on the production staff or as assistant to a faculty or guest designer.

**451 Production Laboratory IV**
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the scene shop. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound. Prerequisite: permission of instructor.
R. Archer, D. Hall, G. Bakke, P. Gill, J. Johnson, J. Moon.
Practical experience in theatrical production, in the position of designer or in another position of major responsibility on the production staff.

## Internships

**485 Undergraduate Internship**
Summer. 1–6 credits. Prerequisite: permission of AUTP faculty.
Program of supervised experience with a noted professional company or individual either in the United States or abroad chosen in consultation with the faculty advisor.

### FILM

**274 Introduction to Film Analysis: Meaning and Value**
Fall or summer. 4 credits.
T R 10:10–12:05. D. Bathrick (fall 1989); D. Fredericksen (fall 1990).
Consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Emphasis may vary with instructor.

**[375 History and Theory of the Commercial Narrative Film**
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Not offered 1989–90; next offered 1990–91.
T R 1:25–4:25. D. Fredericksen.
Consideration of the broad patterns of narration in the history of the commercial narrative film, viewed as an artistic medium and as a system requiring the massive consumption of artifacts. Emphasis placed upon the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist narration. Major figures discussed include Griffith, Eisenstein, Murnau, Von Stroheim, Dreyer, Chaplin, Renoir, Ford, Hitchcock, Welles, Antonioni, Fellini, Bergman, Bunuel, Resnais, Godard, and Herzog. Students majoring in film should have taken Theatre Arts 374 previously or concurrently.]

**376 History and Theory of Documentary and Experimental Film.**
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: Theatre Arts 374 is strongly recommended, but not required.
T R 1:25–4:25. D. Fredericksen.
The history and theory of documentary form up to the end of World War II. Major figures covered include Vertov, Flaherty, Ivens, Grierson, Lorentz, Riefenstahl, Capra, Hurwitz, and Jennings. Within the history and theory of the experimental and personal film form, emphases are: the avant-garde of the twenties in Germany, France, U.S.S.R., and the U.S., the movement toward documentary practice in the thirties, and American experimental and personal film from the forties to the present. Major figures covered include Deren, Brakhage, Baillie, Belson, the Whitneys, Hill, and Mekas.

**377 Fundamentals of 16mm Filmmaking**
Fall or spring. 4 credits. Limited to 12 students. Intended for juniors and seniors (who may need to sign up a year or more in advance). Prerequisite: Theatre Arts 374 and permission of instructor. Fee for maintenance costs, $50 (paid in class). The average cost to each student for materials and processing is $300.
M W F 2–4:25. M. Rivchin.
A hands-on course in the basics of 16mm filmmaking techniques, requiring no prior experience. Each student will complete a number of short film projects to explore narrative, experimental, documentary, animation, and abstract genres. A longer, final sound film project will be screened publicly.

**[378 Russian Film of the 1920s and French Film of the 1960s**
Spring. 4 credits.
Fee for screening expenses, $10 (paid in class). Prerequisite: Theatre Arts 375 is strongly recommended, but not required. Not offered 1989–90; next offered 1990–91.
T R 1:25–4:25. D. Fredericksen.
An intensive treatment of two distinct periods of innovation in film theory and history. Emphasis on working relationship between theory and practice. Major figures include Eisenstein, Pudovkin, Vertov, Dovzhenko, Room, Godard, Truffaut, Resnais, Eustache, Rivette, and Bresson.]

**379 International Documentary Film from 1945 to present**
Spring. 4 credits. Prerequisite: Theatre Arts 376. Fee for screening expenses, $10 (this fee is paid in class).
T R 1:25–4:25. D. Fredericksen.
Emphasis on the contemporary documentary film as a sociopolitical force, as an ethnographic tool within and without a filmmaker's own culture, and as an artistic form with a distinct history and set of theatrical questions. Major figures, structures, and movements covered include Jennings, Rouquier, Leacock, Maile, Rouch, Solanas, national film boards, Challenge for Change, direct cinema, cinema verite, and revolutionary documentary of the Third World.

**413 Film and Performance**
Fall. 4 credits. Prerequisite: permission of both instructors. Previous work in at least one appropriate medium.
T R 2:30–4:25. M. Rivchin and staff.
This course is designed to encourage interdisciplinary connections among the students of the theatre, dance, and film programs in the Department. The course will focus on one program (dance, acting, or directing) and how it relates to film and video media. Students will work collaboratively to produce new work in both performance and recorded modes.

Topic for 1989: **Interactive Theatre and Video Documentation**. Students will be involved in script development, acting, directing, video shooting and editing to produce two projects in conjunction with the Theatre Outreach program. Readings on theatre and education, special guest lectures, and screening of films and videos will complement production work. M. Rivchin, D. Feldshuh, and Outreach staff.

**474 Advanced Film Projects**
Summer. 4 credits. Limited to 12 students. Prerequisite: TA 280, 281, or 377 or equivalent and permission of instructor. Maintenance fee, $50.
M. Rivchin.
Students work in small crews to produce a short dramatic film and/or short documentary film, using synchronous sound filming and editing equipment. Equipment is provided, but students must pay for film and processing (average cost, $250).

**475 Seminar in the Cinema I (also College Scholar Seminar)**
Spring. 4 credits.
T R 10:10–12:05. D. Fredericksen.
Topics for 1990: Jung, film, and the process of self-knowledge. "Know thyself": this has been called our culture's most enduring psychological need, and it has been frequently offered as the *raison d'etre* for liberal studies. C. G. Jung's answer to how one might "know oneself" is based on his claim that "image is psyche" and his informing metaphor is depth. The seminar will trace the elaborations of his position in Jung, James Hillman, Russell Lockhart, and Murray Stein. It will also test the critical capacities of this position with respect to film images given us by Bergman, Fellini, Brakhage, Gunvor Nelson, Suzan Pitt, Larry Jordan, Bruce Baille, and others. The manner in which Jung's claim might provide an archetypal and imaginal alternative to current approaches to liberal studies will be asked throughout the seminar; the nature of education will thereby become a central theme of the semester's work.

**476 Seminar in the Cinema II**
Fall. 4 credits.
T R 9:05–12:05. D. Fredericksen.
Topic for 1989: the films of Ingmar Bergman. Close stylistic and thematic study of approximately twelve of Bergman's films, using biographical, formal, cultural, and psychological approaches.

**477 Intermediate Film Projects**
Spring. 4 credits. Limited to 8 students. Prerequisite: Theatre Arts 377 or equivalent, and permission of instructor. Fee for maintenance costs, $50 (this fee is paid in class). The minimum cost to each student for materials and processing is $300. Students retain ownership of their films.
MW 10:10–12:05. M. Rivchin.
The development and completion of individual projects, with emphasis on personal and documentary modes. Includes preparation of an original script or storyboard, direction, cinematography, synchronous-sound recording, editing, and follow-through to a composite print.

**[478 Philosophical Problems of Classical Film**
Spring. 4 credits.
T R 11:40–12:55; screening time T 7–9 p.m. Not offered 1989–90.
This course explores the development of film theory from the silent era to the advent of semiotics. Questions to be addressed concern the nature of cinema, the nature of cinematic representation and expression, the objectivity of film criticism, and so on. Readings include works by Munsterberg, Arnheim, Benjamin, Eisenstein, Pudovkin, Panofsky, Sontag, Bazin, Kracauer, Perkins, Cavell, and others.]

**650 Culture in the Weimar Period (also German Studies 650)**
Spring. 4 credits.
T 3:35–5:35. D. Bathrick.
This survey course will treat major developments in the area of German culture (literature, cinema, painting) between 1900 and 1933. Individual representative texts will be studied and discussed in their relation to the cultural, political, and social contexts out of which they emerge. Lectures and discussions will focus *both* on detailed interpretation of individual works as well as the general historical background and developments of the period.

**653 Myth onto Film (also Anthropology 653)**
Fall and spring. 4 credits. Open to undergraduate and graduate students with permission of instructor. Enrollment limited by available studio space and equipment. Prerequisite: some knowledge of any one of the following: anthropology, filmmaking, mythology, graphics, drawing, and painting.
T 2–4:25. R. Ascher.
In myths, whales fly, pebbles throw themselves across streams, and trees are transformed into women. Toward the end of visualizing myths—in particular the myths of other people—we explore the possibilities of animated film. The technique used is cameraless animation; that is, we draw and paint, frame by frame, directly onto motion picture film. The intellectual problem is to visualize the myths of others so that they are comprehensible to us but are not thought to be of us. Reading includes introductory works on both myth and animation, and there is background reading on the particular myth that is committed to film.

**[654 Topics in Recent Film Theory (also Comparative Literature 654)**
Fall. 4 credits.
W 2:30–4:25. N. Carroll. Not offered 1989–90.
This course is an examination of the broad range of options in film theory today. The first part of the course will explore the reigning film theory of the cinema studies' establishment This theory is an amalgam of Althusserian Marxism and Lacanian psychoanalysis. Some of the followers, whose writings we will study, include Metz, Heath, and Baudry. We will also discuss the influence of this theory on feminism. In ensuing sections of the course we will review alternatives to the established film theory as found in the writings of Bordwell, Wilson, Brannigan, and Jarvie.]

**699 German Film Theory (also German Studies 699 and Comparative Literature 699)**
Spring. 4 credits.
R 1:25–3:20. D. Bathrick.
This course will examine critically the writings of major German film theories from the Weimar period to the present. Works by Bela Balazs, Rudolf Arnhelm, Siegfried Kracauer, Walter Benjamin, Theodor Adorno, Max Horkheimer, Alexander Kluge, H. J. Syberberg, Gertrud Koch, Thomas Elsaesser, and others will be read and discussed in light of the following considerations: What are the cultural and political contexts out of which these ideas emerge and how are these theories addressing these contexts? How do these theories relate to the work coming out of other national traditions at the same time or to current debates in feminist, formalist, postmodern, or poststructuralist film theory. There will be film showings.

## DANCE

**123 Ballet I (also Physical Education 423)**
Fall and spring. 0 credit.
Theatre Arts and Physical Education registration at Teagle Hall only. Fall: M W 3:10–4:40; Spring: T R 3:10–4:40.
P. Saul.
The fundamentals of classical ballet technique. Material covered includes all of the exercises at the barre, and elementary work in the areas of port de bras, adage and allegro. Satisfies the PE requirement.

**124 Modern Dance I (also Physical Education 424)**
Fall and spring. 0 credit. Theatre Arts and Physical Educaction registration at Teagle Hall only.
Sec. 13 M W 11:20–12:35. Staff ; Sec. 27 T R 3:10–4:25. Staff.
The fundamentals of modern dance technique. Elementary dance movement phrases, with attention to rhythm, placement, and vitality of performance. Satisfies the PE requirement.

**150 Writing About Dance**
Spring. 3 credits.
T R 10:10–11:25. S. Banes.
In this freshman writing seminar, dance is analyzed as a system of nonverbal communication. We will explore methods of categorizing and describing human behavior such as kinesics, proxemics, and choreometrics; examine the function of dance in society; and study specific dance styles. Although in class we will work from film or video recordings, attending live dance performances will be an integral part of the course.

**155 Rehearsal and Performance**
Fall and/or spring. 1–2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions or who are assigned assistant director positions after obtaining director's approval. Students should add this course only after they have been assigned roles. S-U grades only.
Staff.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

**200 Introduction to Dance**
Spring and summer. 3 credits.
T R 1:25–2:40. J. Morgenroth
Introduction to aesthetics and theoretical issues in Western theatrical dancing, with emphasis on the twentieth century. Viewing of films and videotapes and discussion of readings. Two papers.

**201 Dance Improvisation**
Fall. 3 credits. Limited to 12 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through department roster in the main office of the Center for Theatre Arts.
T R 4:50–6:20. J. Morgenroth
Exploration of movement invention and group composition through structured dance improvisation. Live musical accompaniment.

**206 Making Dances to Music**
Fall. 3 credits. Limited to 10 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Students are expected to attend campus dance activities for class discussion. Registration only through department roster in the main office of the Center for Theatre Arts.
M W 4:50–6:20. P. Saul.
An introduction to the world of expression through movement to music (no previous experience required). Experiments choreographing to various music styles. In-class improvisation will lead to composition

assignments using a variety of music. Studies will be performed at an end-of-semester informal studio showing. Films and videotapes will be viewed.

**209 Introduction to African Dance (also AS&RC 209)**
Fall. 3 credits.
T R 10:10–11:25. F. Ajayi.
An introduction to ancient African dance forms, origins, socio-economic and political significance; the state of the dances, changes and continuing relevance in contemporary times. This course will look at the evolution and significance of contemporary dance forms.

**210 Beginning Dance Composition and Music Resources**
Spring. 3 credits. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through the department roster in the main office of the Center for Theatre Arts.
MW 6:30–8:00. Staff.
Weekly assignments are designed to introduce students to basic elements of dance traditionally and currently used in the choreographic process. Problems are defined and explored through class improvisation as a way to encourage fresh, individual solutions. Students compose and present a series of short studies that are discussed and reworked before being performed at informal studio showings and outreach events. One additional hour per week will be arranged for music-related activities. The music resource faculty will introduce a new composer each week and orient the class regarding problems and possibilities with sound collaborations. Students are expected to attend campus dance activities for class discussion.

**231 Ballet II (also Physical Education 431)**
Fall and spring. 0 credit. Theatre Arts and Physical Education registration at Teagle Hall only. Prerequisite: Theatre Arts 123 (Ballet I) or permission of instructor.
Fall: T R 3:10–4:40; Spring: M W 3:10–4:40. P. Saul.
A continuation of Ballet I for students with at least a year of dance training. In addition to more advanced forms of port de bras, adage and allegro, work is done on the pirouette. Satisfies the PE requirement.

**232 Modern Dance II (also Physical Education 432)**
Fall and spring. 0 credit. Theatre Arts and Physical Education registration at Teagle Hall only. Prerequisite: Modern Dance I or permission of instructor.
Sec. 25: T R 1:30–3:00. J. Morgenroth; Sec. 19: M W 6:30–8:00. Staff.
A continuation of Modern Dance I, for students with at least a year of dance training. Practice of longer dance phrases, with attention to clarity of design, rhythm, and expression.

**272 Music and the Dance (also Music 272)**
Spring. 3 or 4 credits. Prerequisite: permission of instructor.
T R 11:15–12:30. R. Harris-Warrick.
This course will explore selected topics in the interrelations between music and dance in the Western tradition. Some of the areas to be examined include the influence of dance movement on musical composition, composer-choreographer relationships, and a comparison of music composed for dancing with dance music composed for listening. Examples will be drawn from the Renaissance, the baroque period, and a modern era. Students will be asked to pursue an independent project.

**[304 Ballet III (also Physical Education 434)**
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Ballet II or permission of instructor.
M W F 3:10–4:40. P. Saul. Not offered 1989–90.
Study and practice of traditional training exercises and the classical ballet vocabulary; work is done on strengthening the body and using it as an expressive instrument.]

**306 Modern Dance III (also Physical Education 436)**
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Modern Dance II or permission of instructor.
Fall: Sec. 17 M W F 3:10–4:40. J. Morgenroth; Sec. 18 M W F 4:50–6:20. Staff.
Advanced work with rhythm, placement, and phrasing for students who are prepared to refine technical skills of dancing. Students will be physically and mentally challenged by lengthy, complex phrases and will be expected to bring the instructor's material to life.

**[307 Asian Dance and Dance Drama (also Asian Studies 307)**
Fall. 3 credits. May be repeated for credit. Section 1: Indian Dance, Section 2: Japanese Noh Theatre, Section 3: Indonesian Dance Theatre.
Hours to be arranged. Staff. Not offered 1989–90.
Readings, lectures, and practice sessions. On Fridays there will be lectures, demonstrations, and discussions. Videotapes and films will be shown. The Monday and Wednesday classes will consist of learning basic movement vocabulary and dances. No previous experience in dance is necessary.]

**308 Modern Dance IV (also Physical Education 438)**
Fall and spring. 0 or 1 credit. May be repeated for up to 4 credits. Prerequisite: Modern Dance III or permission of instructor.
T R F 4:50–6:20. Staff.
A continuation of, and supplement to, Theatre Arts 306/Physical Education 436.

**309 African Dance Aesthetics (also AS&RC 309)**
Spring. 3 credits. Prerequisite: TA and AS&RC209 or permission of instructor.
T R 10:10–11:25. F. Ajayi.
An examination of African dance styles and forms within the cultural perspective of African peoples. Practical classes will consist of learning basic movement vocabulary, techniques, and dances, with lectures on the cultural world view of the people. Practical sessions will explore the dynamics of African dances as nonverbal artistic forms communicating a world view, with an end of semester studio showing. The course will concentrate particularly on West and East Africa.

**310 Intermediate Projects in Dance Composition I**
Fall and Spring. 3 credits. Prerequisite: Theatre Arts 210.
Hours to be arranged. Staff.
Biweekly meetings for students working on intermediate choreographic projects to be presented in various performance situations. Work in progress will be critiqued by faculty and peers. Design problems in costuming and lighting will be approached, and students with particular interests in collaboration will have a forum in which to develop their ideas.

**311 Intermediate Projects in Dance Composition II**
Fall and spring. 3 credits. Prerequisite: Theatre Arts 310.
Hours to be arranged. Staff.
A continuation of Theatre Arts 310.

**[312 Physical Analysis of Movement**
Fall. 3 credits.
T R 1:25–2:40. J. Morgenroth. Not offered 1989–90.
This course is an examination of human movement with particular attention to dance movement. Readings in Sweigard's *Human Movement Potential.* Guest lectures by experts in anatomy and health areas. Practical and laboratory work. Demonstration of dissection.]

**[314 Western Dance History I**
Fall. 4 credits.
T R 11:15–12:30. S. Banes. Not offered 1989–90.
A survey of the history of dance from the Renaissance to the end of the nineteenth century with emphasis on the development of theatrical forms in Western culture.]

**[315 Western Dance History II**
Spring. 4 credits.
T R 11:15–12:30. S. Banes. Not offered 1989–90.
A survey of the history of Western theatrical dance in the twentieth century.]

**[318 Historical Dances**
Spring. 2 credits. Prerequisite: Ballet II or Modern Dance II.
Staff. Not offered 1989–90.
A sampling of the social dances from the Renaissance to the present, with emphasis on pinpointing basic differences in movement styles and customs in the various periods. A major part of class time will be spent learning and performing the dances.]

**410 Advanced Dance Composition I.**
Fall and spring. 3 credits. Prerequisite: Theatre Arts 310 and 311.
Hours to be arranged. Staff.
Students work on advanced choreographic problems, to be presented in performance. Work in progress will be critiqued by faculty biweekly.

**411 Advanced Dance Composition II**
Fall and spring.
Hours to be arranged. Staff.
A continuation of Theatre Arts 410.

**418 Seminar in History of Dance**
Spring. 4 credits. Prerequisite: Theatre Arts 315 or permission of instructor.
R 2:30–4:25. S. Banes.
Postmodern dance, from the 1960s to the present.

**490 Senior Paper in Dance**
Spring. 4 credits. Prerequisite: Theatre Arts 418, senior standing.
Under faculty direction, the student will write a senior paper in dance history, criticism, or theory.

### Tracks toward selection into the advanced undergraduate training program

**Design, Technology, and Stage Management**

Required for **ALL** individuals interested in a **Design**, **Technology**, or **Stage Management** track:
**TA 151** and **251** Production Lab I and II (at least 2 combined credits)
**TA 250** Fundamentals of Design and Technology

Required for Scenic Design emphasis:
**TA 340** Theatrical Drafting and Technical Drawing Studio
**TA 351** Production Lab III (at least 1 credit)
**TA 354** Stagecraft Studio
**TA 364** Scene Design Studio I

Required for Costume Design emphasis:
**TA 351** Production Lab III (at least 1 credit)
**TA 356** Costume Construction Studio
**TA 358** Theatrical Make-up Studio
**TA 366** Costume Design Studio I

Required for Lighting Design emphasis:
**TA 252** Technical Production Studio I
**TA 340** Theatrical Drafting and Technical Drawing Studio
**TA 351** Production Lab III (at least 1 credit)
**TA 362** Lighting Design Studio I

Required for Sound Design emphasis:
**TA 252** Technical Production Studio I
**TA 351** Production Lab III (at least 1 credit)
**TA 354** Stagecraft Studio
**TA 368** Sound Design Studio

Required for Technical Direction emphasis:
**TA 252** Technical Production Studio I
**TA 340** Theatrical Drafting and Technical Drawing Studio
**TA 351** Production Lab III (at least 1 credit)
**TA 354** Stagecraft Studio

Required for Stage Management emphasis:
**TA 253** and TA 353 Stage Management Lab II and III
**TA 280** Introduction to Acting
**TA 370** Stage Management Studio
**TA 398** Fundamentals of Directing I

**Acting**

Required for ALL individuals interested in an acting track:
**TA 151 and TA 251** Production Lab I and II (at least 2 combined credits)
**TA 240/241** Introduction to Western Theatre (1 Semester ONLY)
**TA 250** Fundamentals of Design and Technology
**TA 280** Introduction to Acting

Required for Acting emphasis:
**TA 281** Acting I
**TA 282** Introduction to Voice and Speech for Performance
or
**TA 284** Speech and Dialects for Performance
**TA 380** Acting II
Be accepted into TA 381 Acting III

**Directing**

Required for ALL individuals interested in a directing track:
**TA 151 and TA 251** Production Lab I and II (at least 2 combined credits)
**TA 240/TA 241** Introduction to Western Theatre (1 Semester ONLY)
**TA 250** Fundamentals of Design and Technology
**TA 280** Introduction to Acting

Required for Directing emphasis:
**TA 398** Directing I
**TA 498** Directing II

**Playwriting**

Required for ALL individuals interested in a playwriting track:
**TA 240/TA 241** Introduction to Western Theatre (1 Semester ONLY)
**TA 250** Fundamentals of Design and Technology
**TA 280** Introduction to Acting

Required for Playwriting emphasis:
**TA 348** Playwriting
**TA 349** Advanced Playwriting

Students in the advanced undergraduate training program may also elect to take TA 485 (Undergraduate Internship) in addition to or in place of one production assignment.

## TURKISH

See Department of Near Eastern Studies.

## UKRAINIAN

See Department of Modern Languages and Linguistics.

## VIETNAMESE

See Department of Modern Languages and Linguistics.

## WRITING PROGRAM

See John S. Knight Writing Program, p. 21 and p. 319.

## YIDDISH

See Department of Near Eastern Studies.

## YORUBA

See Department of Modern Languages and Linguistics.

# SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES

### Africana Studies and Research Center

R. Harris, director (255-5218); A. Adams, F. Ajayi, A. Appiah, W. Branch, W. Cross, L. Edmondson, G. Fraser, H. Gates, A. Nanji, D. Ohadike, W. Soyinka, J. Turner, M. Williams. Offices: 310 Triphammer Road, 255-4625 or 255-4626.

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and Swahili language and literature.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and Afro-American), through the university's Graduate School.

A student may major in Africana studies; however, another attractive alternative is the center's joint major program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a major in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, such as freshman writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a lecture series, and houses its own library.

#### The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the Afro-American and African experiences. Because of the comprehensive nature of the program, it is to the students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:

1) a statement of why they want to be an Africana studies major;
2) a tentative outline of the area of study they are considering (African or Afro-American) for the undergraduate concentration; and
3) a full transcript of courses taken and grades received.

The center's undergraduate faculty representative will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center's courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: AS&RC 231, 290, 360, and 431. Beyond the core courses, the student must take 8 credits of center courses numbered 200 or above and 15 credits numbered 300 or above. Within this selection the student must take at least one of the following AS&RC courses: 203, 204, 283, or 301. The program of an undergraduate major may have a specifically Afro-American focus or a specifically African focus.

### Joint Majors

The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center's undergraduate faculty representative, Professor Adams, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require at least 16 credits be taken in Africana studies courses, including AS&RC 290.

### Double Majors

In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

**Honors.** The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B- cumulative average in all courses and a B+ cumulative average in the center's courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's adviser and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

## Distribution Requirement

Two Africana Studies and Research Center courses from the appropriate group may be used in fulfillment of the following distribution requirements:

Social sciences: AS&RC 171, 172, 190, 191, 208, 231, 280, 290, 301, 302, 344, 345, 346, 351, 352, 400, 410, 420, 460, 481, 484, 485, 495, 550, 551, 571.

History: AS&RC 203, 204, 208, 231, 283, 344, 350, 360, 361, 370, 381, 405, 460, 475, 483, 490, 510.

Humanities: AS&RC 211, 219, 422, 431, 432, 425, 455.

Expressive arts: AS&RC 285, 303, 425.

Freshman writing seminars: AS&RC 100.

## Language Requirement

Swahili fulfills the College of Arts and Sciences language requirement. Successful completion of AS&RC 131, 132, 133, and 134 provides qualification in Swahili. Successful completion of AS&RC 202 gives proficiency in Swahili. Africana majors are not required to take Swahili, but the center recommends the study of Swahili to complete the language requirement.

## Courses

**131 Swahili**
Fall. 4 credits.
W R 10:10–12:05; lab to be arranged. A. Nanji.
Beginner's Swahili. Part 1—Grammar. Requires no knowledge of language.

**132 Swahili**
Spring. 4 credits. Prerequisite: Swahili 131.
W R 10:10–12:05. A. Nanji.
Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills help develop the student's comprehension. Swahili tapes are highly used.

**133 Swahili**
Fall. 4 credits. Prerequisites: Swahili 131 and 132.
W R 12:20–2:15; language lab to be arranged. A. Nanji.
Advanced study in reading and composition.

**134 Swahili**
Spring. 4 credits. Prerequisite: Swahili 133.
W R, hours to be arranged. A. Nanji.
In this course of the sequence more emphasis is placed on the development of reading ability and the acquisition of writing skills. Students are expected to read and comprehend selected Swahili stories and write compositions on chosen topics. Ample consideration is given to oral practice in the classroom.

**171 Black Families and the Socialization of Black Children**
Fall. 4 credits.
T R 2:55–4:10. W. Cross.
Survey of key psychological dimensions of the Black experience, covering such issues as (1) race and intelligence; (2) Black identity; (3) Black family structure; (4) Black English; (5) Black middle class; and (6) nature of Black psychology.

**172 The Education of Black Americans: Historical and Contemporary Issues**
Spring. 4 credits.
T R 2:55–4:10. W. Cross.
This is a course designed for freshmen and sophomores that will be devoted to the history of Black education and contemporary issues in Black education, such as the struggle for Black studies, the development of independent Black schools, and problems of public schools in Black communities.

**190 Introduction to Modern African Political Systems**
Fall. 4 credits.
M W 3:35–5. L. Edmondson. Offered alternate years.
This course directs attention to the salient characteristics of Africa's political systems and assesses the way in which continental and global factors impinge on development efforts. It is especially concerned with the impact of colonialism and the ongoing efforts by Africans to overcome its political and socioeconomic legacies. Among the specific issues to be discussed are problems of ethnic fragmentation, boundary problems, levels of political institutionalization, challenges of continental unity, neocolonialism and dependency, and Africa within the Third World and in the world system.

**191 Africa: The Continent and Its People**
Spring. 3 credits.
T R 11:40–12:55. L. Edmondson.
An introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization will also be explored.

**202 Swahili Literature**
Fall. 4 credits. Prerequisite: Swahili 134. Offered on demand.
A. Nanji.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

**203 History and Politics of Racism and Segregation**
Fall. 4 credits.
M W 1:25–3:20. Staff.
A cross-cultural study in the historical context of the evolution of racist thought and practice in southern Africa and North America.

**204 History and Politics of Racism and Segregation**
Spring. 4 credits.
M W 1:25–3:20. Staff.
The course will deal with the historical patterns of racism and segregation using southern Africa and North America as case histories. The study will be undertaken within a theoretical framework that broadly defines racism and segregation and their implication.

**208 Gender, Race, and Medical "Science"**
Fall. 3 credits.
T R 11:40–12:55. G. Fraser.
The course will examine the social construction of race and gender in the medical sciences from the turn of the century to the present. Beginning with readings that propose a new view of scientific medicine as a system of signs and symbols and as culturally embedded, we will proceed to an examination of some of the following topics: racism and experimentation; the treatment of venereal disease and tuberculosis; the demise of social childbirth; the body as a medical product; menstruation as pathology; the monitored mind; women and psychiatry; the political economy of health care; medical authority; the training of medical students; political anatomy of the body; sites of resistance; alternative systems; and cross-cultural case studies.

**209 Introduction to African Dance (also Theatre Arts 209)**
Fall. 3 credits.
T R 10:10–11:25. F. Ajayi.
An introduction to ancient African dance forms, origins, socio-economic, and political significance; the state of the dances, changes, and continuing relevance in contemporary times. The course will also look at the evolution and significance of contemporary dance forms.

**211 West Indian Literature from Abroad**
Fall. 3 credits.
T R 10:10–11:25. A. Adams.
"Writing home": writing by West Indians who have emigrated to North America, Europe, or Africa, but whose cultural, social, psychological, spiritual center of gravity remains the Caribbean (or its transplanted manifestation in the new domicile). Whether experienced as "exile," as with Lamming, "loneliness," as with Selvon, or as a search for the diasporic connection with the continent of ancestry, as with Conde, the West Indian literary artist abroad is, in some form, "writing home."

**219 Issues in Black Literature**
Fall. 4 credits. Offered alternate years. An examination of literature written for Black children, including an analysis of the literature as it pertains to Black life from 1960 to the present. Students write a pamphlet containing their essays, fiction, and poetry and compile a bibliography of literature for Black children.

**231 Black Political Thought**
Fall. 3 credits.
T R 11:40–12:55. J. Turner. Offered in alternate years.
This is an introductory course that will review and analyze the major theoretical and ideological formulations developed and espoused by African-Americans in the struggle for liberation. This semester we will focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women will be discussed. Black political thought will be viewed in its development as responses to concrete conditions of oppression and expression.

**280 Racism in American Society**
Fall. 3 credits.
W 7:30–10 p.m. D. Barr and J. Turner.
This course will be a topical treatment of the history and theory of racism in the United States. The course will begin with an examination of basic concepts and theories of racism. From there we will examine the history of racial groups in America—African Americans, Native Americans, Asian Americans, and the Hispanic groups. Particular attention will be paid to the political economy of racism and the sociological and the psychological aspects of race relations in America, with specific reference to the differences and intersections of race, class, gender, and ethnicity.

**283 Black Resistance: South Africa and North America**
Fall. 4 credits. Offered alternate years.
Staff.
A study of Black political movements in South Africa and North America and their responses to the situations of race relations that formed the contexts of their operations.

**285 Black Theater and Dramatic Literature**
Fall. 3 credits.
T R 4:30–5:50. W. Branch.
This course is an introduction to the history of literature of Black drama. It also provides an opportunity for students to cultivate an interest in individual and group presentation of Black dramatic materials. Students who successfully complete this course will be granted preference for the limited enrollment in AS&RC 425 (Advanced Seminar in Black Theatre and Dramatic Literature), which produces a public performance in the spring.

**290 The Sociology of the Black Experience**
Fall. 3 credits.
T R 1:25–2:40. J. Turner.
An introductory course to the sociology of the Black experience and to the field of Afro-American studies. Required for all undergraduate students majoring at the Africana Center. The course surveys the early culture and development of Black people and their role in world civilization and concentrates on the cultural heritage and social experience of Black people in the United States in particular.

**301 Oppression and the Psychology of the Black Social Movement**
Spring. 4 credits.
R 10:10–12:05. W. Cross.
The focus of the course will be conversion experiences within the context of social movement. The development of political groups (for example, the Black Panther Party) and outstanding activist-intellectuals (such as Malcolm X) are used as reference points for discussion of social movement theory.

**302 Social and Psychological Effects of Colonialization and Racism**
Spring. 4 credits.
Offered alternate years. Staff.

**303 Blacks in Communication Media**
Spring. 3 credits.
W 2:30–5. W. Branch.
The focus is on the general theory of communications, the function of media in an industrialized society, and the social, racial, and class values implied in the communication process. There is a term paper and screenings of significant American and Third World films.

**309 African Dance Aesthetics: Practice and Theory**
Spring. 3 credits.
M W F 10:10–11:25. F. Ajayi.
An examination of the aesthetics of African dance styles and forms within the cultural perspectives of African peoples. Monday and Wednesday classes will consist of learning basic movement vocabulary and dances, with lectures and discussions on Fridays. Practical sessions will explore the dynamics of African dances as non-verbal artistic forms communicating a world view, with an end of semester studio showing. The course will concentrate particularly on West and East Africa.

**344 Neocolonialism and Government in Africa (The Politics of Public Administration)**
Fall. 4 credits. Offered alternate years.
T R 1:25–2:15.
The course is designed to explain why Africa's public administrations in the postcolonial era have generally failed to move from the colonialist ethos to becoming primary instruments for initiating and guiding the processes of development. The reality of colonialism was bureaucratic centralism—the closest approximation to the ideal type of a pure administrative state specializing in law and order. Colonial administrations resembled armies in their paramilitary formation and ethos and were, indeed in a number of cases, the instruments of military men. Much attention focuses on the internal characteristics of bureaucratic organizations in Africa and their relationship to their social and political environments

**345 Afro-American Perspectives in Experimental Psychology (also Psychology 345)**
Spring. 3 or 4 credits. Prerequisite: an introductory course in psychology or AS&RC 171. Offered alternate years.

**346 African Socialism and Nation Building**
Spring. 4 credits.
An exploration and critical analysis of the various theories of African socialism as propounded by theorists and practitioners. Those ideas, extending from Nyerere's Ujamaa (for example, traditional social and economic patterns of African society) to Nkrumah's scientific socialism (such as the desirability and practicality of the Marxian type of socialism in Africa) are compared.

**350 The Black Woman: Social and Political History**
Spring. 3 credits. Offered alternate years.
Hours to be arranged.
This course will address the social organizations, political protests, and political ideologies written by or about Black women in the United States, from the time of slavery to the 1980s. Topics will include the special role of Black women in slavery, the political-protest thought of Black women writers in the nineteenth and twentieth centuries (e.g., Ida B. Wells, Mary Church Terrell, Ella Baker, Mary McLeod Bethune, Eleanor Holmes Norton, Angela Davis), the emergence of Black feminism, and the various social-political controversies surrounding the relationship of Black women to both the civil rights and Black power movements.

**352 Pan-Africanism and Contemporary Black Ideologies**
Spring. 4 credits. Offered alternate years.
A historical study of pan-Africanism that reviews and analyzes the literature and activities of early Black pan-African theorists and movements.

**360 Ancient African Nations and Civilizations**
Fall. 3 credits. Offered alternate years.
M W F 1:25–3:20. Staff.
An introduction to African history beginning with early civilizations in pre-colonial Africa.

**361 Introduction to Afro-American History (from African Background to the Twentieth Century)**
Fall. 3 credits. Offered alternate years.
M W F 10:10–11. R. Harris.
Surveys the transition of Africans to America through the process of enslavement and their transformation into Afro-Americans. Explores the transition from slavery to freedom through the process of emancipation and the transformation of Afro-Americans from chattel slaves into rural peasants. Its purpose is to understand the internal dynamics of the Black experience from African origins to the age of segregation.

**370 Afro-American History: The Twentieth Century**
Spring. 3 credits. Offered alternate years.
M W F 12:20–1:10. R. Harris.
Examines the transition of Afro-Americans from countryside to city through the process of migration and urbanization and their transformation into industrial laborers. Probes the transition from segregation to civil rights through the process of protest and the transformation of Afro-Americans from second-class into first-class citizens. The purpose is to understand historical antecedents for the current socioeconomic, political, and cultural status of Afro-Americans.

**381 Contemporary African History**
Spring. 3 credits. Offered alternate years.
M W 12:20–1:25. Staff.
A survey of the current problems on the African continent as they have appeared from 1500 to the present time. Important topics include the impact of the Atlantic slave trade, the European scramble of 1884, various forms of African resistance to colonial occupation in 1914, and the prospects of protracted social unrest in Africa south of the Zambezi River.

**382 Comparative Slave Trade of Africans in the Americas**
Fall. 3 credits. Offered alternate years.
T R 1:25–2:30.
The focus is on eighteenth- and nineteenth-century slave societies in Virginia and South Carolina and the eighteenth-century slave societies in San Domingue or Haiti and to some extent in Jamaica. The slave society in Cuba during the latter part of the nineteenth century is studied.

**400 Political Economy of Ideology and Development in Africa**
Spring. 4 credits. Offered alternate years.
T R 11:15–12:40. L. Edmondson.
An exploration of the processes of African underdevelopment, ranging from historical foundations to contemporary international dynamics. Rival theories of underdevelopment, contending models of development, and competing ideologies will be explored. Common African postures as manifested in the "Lagos Plan of Action for the Economic Development of Africa, 1980–2000" and in the north-south dialogue will also be assessed.

**405 Political History of the Age of Booker T. Washington and W. E. B. DuBois**
Spring. 4 credits. Offered alternate years.
A review of the intellectual and political history of the Black experience in the United States from 1890 to the eve of World War II. Although the course concentrates on two of the outstanding Black historical figures of the period, Booker T. Washington and W. E. B. DuBois, other personalities and leaders within Black social and political history will be examined—including Marcus Garvey, T. Thomas Fortune, A. Philip Randolph, Charles S. Johnson, William Monroe Trotter, and James Weldon Johnson. Major Black issues, such as the intellectual debates between DuBois and Washington, and DuBois versus Garvey, will constitute a critical part of the discussion.

**410 Black Politics and the American Political System**
Fall. 4 credits.
W 2:30–4:25. J. Turner.
The central thesis of African American politics has been its movements for political change and democratic access and human rights. This development since the seventeenth century is a complex political legacy. This course will conduct a close study of African American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people will be analyzed. Critical historical stages in the process of Black politics will be examined. The development of electoral offices in federal and statewide politics, and the significant urban political power bases giving rise to African American mayorality politics in critical industrial centers, as well as rural hamlets will center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republicans/conservatives will constitute the emphasis on contemporary events. The course will review the development of the literature in African American politics.

**420 Social Policy and the Black Community:**
Spring. 4 credits.
W 2:30–4:30. J. Turner.
The socioeconomic conditions of the Black urban community will be the central focus of the course. Community development models will be explored in relationship to the social needs of the Black populations. The changing configuration of internal organization of the Black community nationally will be examined.

**422 African Literature**
Fall. 4 credits.
M 2:30–4:25. A. Adams.
Women writers of Africa will be the focus of attention in this course. Questions of gender as well as complementary issues of equal importance in the artistic vision and expression of the woman writer in Africa will be considered in the works of Mariama Ba, Ama Ata Aldoo, Buchi Emecheta, Aminata Sow Fall, Bessie Head, as well as some "newer" writers. All works will be read in English.

**425 Advanced Seminar in Black Theater and Dramatic Literature**
Spring. 4 credits. Enrollment limited.
T R 4:30–5:50. W. Branch.
This course will be devoted to the study, rehearsal, production, and public performance of a play or plays drawn from the annals of Black American dramatic literature. Students will participate in all the various phases and categories of theatrical production, from acting to production crews to theater group management. A field trip to a Black theater attraction in New York City will also be arranged if possible. Students who have successfully completed AS&RC 285 (Black Theater and Dramatic Literature) will be granted preference for the limited enrollment in this course.

**431 History of Afro-American Literature**
Fall. 4 credits. Offered alternate years.
An extensive examination of the impact that Afro-American literature has had on describing, explaining, and projecting the Afro-American experience from 1619 to the present.

**432 Modern Afro-American Literature**
Spring. 4 credits. Offered alternate years.
A study of fiction by Black writers, focusing on the political and sociological component that influenced the development and growth of Black writing in relationship to literary themes and attitudes current in specific periods and movements from post–World War I to the present.

**450 Body Aesthetics or Body Politics: Images of the Woman in West African Art Forms**
Fall. 3 credits.
W 12:20–2:15.
Examines the body image of the woman as represented in various West African art forms to determine the extent to which the art forms become mediums for: validating the prescribed status of the women in society, suppressing the actual perception of the woman, and re-evaluating the archetypal woman and presenting the woman from a different perspective.

**451 Politics and Social Change in the Caribbean**
Fall. 4 credits.
M W 10:10–12:05. L. Edmondson.
Offered alternate years.
A study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces bearing on the domestic and international experiences of Caribbean societies. Special attention will be given to conflicting definitions and perceptions of the Caribbean; contending theories of Caribbean social structure and models of development; the continuing salience of struggles for change and transformation; prospects of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States in the context of the East-West conflict and its position in the Third World in the context of the North-South cleavage.

**455 Modern Caribbean Literature**
Spring. 4 credits.
M 2:30–4:30. A. Adams.
This course will examine the prose literature of the Caribbean islands. Through the reading of several novels and short stories from the various languages and cultural strains that comprise the Caribbean societies, students will study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that have formed the multi-ethnic Caribbean peoples will be analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

**460 African Philosophy and the Origins of Major Western Religions**
Fall or spring. 4 credits.
M 3:35–6. Not offered in 1989–90.
The overall objective of this course is to develop in the student an understanding of the origins of the philosophical, theosophical, and magic-religious teachings that were responsible for producing what is today called Judaism, Christianity, and Islam. From this juncture the most basic works and teachings from the Nile Valley and the Great Africans Lakes, and African religions will be compared to the adoptions in Hebrew, Christian, and Moslem religions, as well as in what is today called Greek philosophy.

**475 Black Leaders and Movements in Afro-American History**
Spring. 4 credits.
T R 2:55–4:10. R. Harris.
Analyzes the personalities, ideas, and activities central to the struggle for Afro-American liberation from the eighteenth-century to the present. Examines theories of leadership and the structure of protest movements with the goal of understanding current leadership needs and trends among Afro-Americans.

**483 Themes in African History**
Fall. 4 credits.
M W 1:25–3:20, plus one hour to be arranged. Staff.
Designed to expose the student to what has been referred to as the particular aspects of African history. The survey approach will be adopted in the treatment of selected themes, and use will be made, when necessary, of the work done in auxiliary disciplines. The study will be along the following lines: (a) selected African heroines; (b) women in traditional African societies; and (c) African women in the twentieth-century industrial societies.

**484 Politics, Conflict, and Social Change in Southern Africa**
Fall or spring. 4 credits.
T 10:10–12:05. L. Edmondson.
The focus is on escalating conflicts and ongoing transformations in South Africa and the increasingly salient issue of U.S. relations with the *apartheid* regime. Topical emphases include the heightening contradictions of *apartheid*; the rising tide of Black resistance; women under and against *apartheid*; South Africa's relations with its neighbors; geopolitical, economic, and racial dimensions of the American connection; the disinvestment-divestment debate; and the Reagan administration's "constructive engagement" policy under challenge. Instructor's lectures will be supplemented by films, class discussion, and guest lectures.

**485 Racism, Social Structure, and Social Analysis Seminar**
Spring. 4 credits.
W 2–4:25. J. Turner.
An examination of the social structure of American society and the relationship of racial and class categories to social stratification. An analysis of power structures and the social salience of socioeconomic connections of government decision makers and the corporate structure is developed.

**490 Advanced Reading and Research Seminar in Black History**
Spring. 4 credits.
M W 1:25–2:15. Staff.
The seminar is designed to help students acquaint themselves with the available sources of information and materials in Black history, as well as make the maximum use of their own inclinations and interests in unearthing the material and creating a body of comprehensive conclusions and generalizations out of them.

**495 Political Economy of Black America**
Spring. 4 credits.
M W 10:30–12:05.
An examination of the role that Black labor has played in the historical development of U.S. monopoly, capitalism, and imperialism. Emphasis is on the theory and method of political economy and a concrete analysis of the exploitation of Black people as slave labor, agricultural labor, and proletarian labor.

**498–499 Independent Study**
498, fall; 499, spring.
Hours to be arranged. Africana Center faculty.
For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

**500 Political Theory, Planning, and Development in Africa**
Spring. 4 credits. Offered alternate years.
T R 11:15–12:45.
The course explores the processes of underdevelopment of Africa from the epoch of slavery through colonial and neocolonial phases of domination, drawing on the assumptions of "underdevelopment" theory à la G. Frank, Walter Rodney, and others. It then takes up the differential content and emphasis on socialistic and capitalistic strategies by highlighting the interaction of political and economic forces. Case studies are drawn from Ghana, Kenya, and Tanzania.

**505 Workshop in Teaching about Africa**
4 credits. Prerequisites: AS&RC 203 and 204 or AS&RC 360 and 361 or permission of instructor. Offered alternate years.

**[510 Historiography and Sources: The Development of Afro-American History**
Fall. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor. Not offered 1989–90.
T 9:30–12:05. R. Harris.
Studies the way Black historians in particular have explained the Afro-American past. Examines the development of writing on Afro-American history from the earliest writers to the present. Seeks to determine the principles for interpreting Afro-American history. Acquaints participants with the methodologies and sources central to understanding the Afro-American experience.]

**515 Comparative Political History of the African Diaspora**
4 credits. Prerequisite: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 283, 360, 361, 475, 484, 490. Offered alternate years.

**520 Historical Method, Sources, and Interpretation**
Fall. 4 credits. Prerequisite: upperclass or graduate standing or two of the following courses: AS&RC 203, 204, 361, 475, 484, 490. Offered alternate years.
J. C. Mbata.

**550 Transnational Corporations in Africa and Other Developing Countries**
Spring. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor. Offered alternate years.
Examines the role of transnational enterprises as an economic and political factor in the Third World, their relations with the host government, and their interaction with both the private and public sectors of the economy of the host country. Special emphasis on Africa and Latin America.

**571 Graduate Seminar in Black Psychology**
Fall. 4 credits. Prerequisite: permission of instructor.
R 9:05–12:05. W. Cross.
This is an upper-level undergraduate and graduate seminar devoted to psychological issues in the Afro-American experience. This seminar will examine the theoretical and empirical literature of Black family–kinship systems and Black self-concept.

**598–599 Independent Study**
598, fall; 599, spring. Variable credit. For all graduate students.

**698–699 Thesis**
698, fall; 699, spring. Limited to Africana Studies and Research Center graduate students. Africana Center faculty.

## Agriculture, Food, and Society Concentration

F. H. Buttel, A. G. Power, coordinators; G. Altschuler, M. M. Devine, M. J. Esman, J. Fessenden-Raden, C. C. Geisler, A. Gillespie, B. Ginsberg, C J. Greenhouse, D. J. Greenwood, S. L. Kaplan, D. R. Lee, T. J. Lowi, T. F. Lynch, T. A. Lyson, P. L. Marcus, V. Nee, D. I. Owen, D. Pimentel, N. T. Uphoff, D. Usher, M. W. Wachsberg. Office: 275 Clark Hall, 255-6042.

Agriculture, food, and society is an interdisciplinary concentration that is designed to introduce students to the study of agricultural and food issues from diverse perspectives within the liberal arts. The concentration seeks to make available to students a coherent program of study in which the role of agriculture in modern or prehistorical-historical and developed or developing societies can be understood in biological, social, scientific, and humanistic perspective. The concentration draws on courses in several colleges—in particular the Colleges of Arts and Sciences, Agriculture and Life Sciences, and Human Ecology.

Members of the concentration committee, which consists of faculty from each of the major colleges from which courses in the concentration are drawn, serve as advisers in the program. The committee is administered through the Biology and Society Major (office: 275 Clark Hall, 255-6042).

### Basic Requirements

The requirements for the agriculture, food, and society concentration are designed to ensure a broad background in the biological, socioeconomic, and humanistic dimensions of agricultural and food issues. These requirements include foundation courses in biology plus a minimum of six courses and 18 credits of electives.

Students enrolling in the concentration should take the following foundation courses in biology to prepare themselves for course work in agricultural science: a two-semester introductory biology sequence selected from Biological Sciences 109–110, 105–106, or 101–102 plus 102–104. (Advanced placement in biology with a score of 4 or 5, or Biological Sciences 100, offered during the six-week Cornell summer session for 7 credits, also satisfies the biological sciences requirement). These courses may be used to meet group 1 (physical or biological sciences) distribution sequence requirements in the College of Arts and Sciences.

It is recommended (but not required) that students in the agriculture, food, and society concentration elect one or more freshman writing seminars with agriculturally related content to meet basic college requirements for graduation. A list of agriculturally related freshman writing seminars to be offered in 1988–89 is available from the Biology and Society office.

For further information and a complete list of courses that can be used to fulfill the concentration requirements, students should contact the Biology and Society office, 275 Clark Hall, 255-6042.

## American Indian Program

R. LaFrance, acting director (300 Caldwell Hall, 255-6587)

The American Indian Program (AIP) is a multidisciplinary, intercollege program consisting of academic, student support, research, extension, and publications–public relations components.

**Academic component.** The AIP offers courses that increase all students' awareness of the unique heritage of American Indians. Students are challenged by such topics as the sovereign rights of Indian nations and the contemporary relevance of Indian attitudes

toward the environment. The program's instructional core consists of courses focusing on American Indian life with an emphasis on the Iroquois and other Indians of the Northeast. Core courses are supplemented by a variety of offerings from several departments.

The student support staff help Indian students complete an enriched Cornell education by coordinating academic tutoring, financial aid, personal counseling, and other student services.

**Research.** Research priorities include education, social and economic development, agriculture, wildlife management, and cultural preservation.

**Extension.** The AIP's cooperative extension unit seeks to develop solutions to problems identified by Indian people. In this way the AIP can stimulate the application of institutional expertise and resources to community needs.

**Publications and public relations.** AIP publishes its own multidisciplinary journal, *Northeast Indian Quarterly* and sponsors conferences, guest lectures, and forums on important national and local Indian issues, past and present. AIP also contributes articles and information to the national Indian press, including *Daybreak*.

### American Indian Studies Concentration

American Indian studies offers an interdisciplinary approach to the study of American Indian life. Course work in various colleges and departments of the university provides a broad base for understanding the past, present, and future of Indian people. Students selecting a concentration in American Indian studies must take five or more courses from those listed below. At least one course must be selected from each group. All course work must be approved by an adviser from the program.

For full descriptions of the following courses, consult the listings under individual departments.

#### The Indian Traditions

**ALS 100 American Indian Studies: An Introduction**

**ALS 318 An Ethnohistory of the Haudenosaunee: The Six Nations Iroquois Confederacy**

**Anthropology 230 Cultures of Native North America**

**Anthropology 242 American Indian Philosophies I: Power and World Views (also Rural Sociology 242)**

**Anthropology 354 The Peopling of America**

**Music 223 Music of the American Indian**

#### Indians in Transition

**Anthropology 318 Ethnohistory of the Iroquois**

**History 209 Political History of Indians in the United States**

**History 219 Freshman Writing Seminar: History of North American Indians**

**History 323–324 Native American History**

**History 381–382 Content and Form of Iroquois Diplomacy**

**Rural Sociology 442: North American Indian Philosophies**

**History 429 American Indians in Eastern North America**

**History 624 Graduate Seminar in American Indian History**

#### Contemporary Issues

**Anthropology 243 American Indian Philosophies II: Native Voices (also Rural Sociology 243)**

**Anthropology 442 American Indian Philosophies: Selected Topics**

**Rural Sociology 175: North American Indians From 1890 to the Present**

**Rural Sociology 440 Social Impact of Rapid Resource Development**

#### Independent Study

Independent study courses in departments; students must have approval of an American Indian studies faculty member.

## Center for Applied Mathematics

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, Sage Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center on pages 17–18.

## Asian American Studies Program

The Asian American Studies Program is a university-wide program within the College of Arts and Sciences. Its aim is to promote teaching, research, and cultural activities related to Americans of Asian heritage. The program functions as a teaching and resource center to serve the educational needs of the general Cornell community as well as those of the Asian American community. It is intercollegiate in nature with links to all the schools and colleges of the university. The teaching program offers a number of broad basic courses dealing with the Asian American experience that are offered in any of the participating colleges, depending on content and faculty affiliation. It encourages the incorporation of more specific Asian American content into the mainstream curriculum of the university by providing financial resources and substantive support to faculty members interested in developing new courses and adding pertinent materials to existing courses. The Course Development Grants Program has been established for this purpose. The staff in the program will work toward establishing one or more academic concentrations in the future.

#### Research

The research program encourages and stimulates research on Asian American topics by functioning as a resource and activity center for its affiliated members as well as the general Cornell community. It sponsors activities designed to facilitate dialogue and interchange among faculty from a variety of disciplines and strives to promote collaborative research among its members. To this end the Research Grants Program has been instituted to provide seed money to faculty and students for research on Asian American topics.

#### Art and Culture

The third dimension of the program is to foster and promote Asian American culture and art. The program functions as a resource center and a place for social interaction among Asian American students and members of the Cornell community. In this capacity the program sponsors events aimed not simply at enhancing Asian American students' sense of identity but also at developing an appreciation for the creative aspects of the heritage of Asian Americans among all members of the Cornell community.

#### Affiliated Faculty

Lee C. Lee, director (Human Development and Family Studies); R. Barker (Agricultural Economics, M. L. Barnett (Rural Sociology and Asian Studies), T. Chaloemtiarana (Southeast Asia Program), P. Chi (Consumer Economics and Housing), M. C. Chou (Asian Studies), B. de Bary (Asian Studies), D. Gold (Asian Studies), J. C. T. Huang (Modern Languages and Linguistics), K. A. R. Kennedy (Ecology and Systematics), J. V. Koschmann (History), L. C. Lee (Human Development and Family Studies), D. R. McCann (Asian Studies), K. March (Anthropology and Women's Studies), T. L. Mei (Asian Studies), V. Nee (Sociology), R. E. Ripple (Education), N. Sakai (Asian Studies), P. S. Sangren (Anthropology), C. L. Shih (Modern Languages and Linguistics), R. J. Smith (Anthropology), M. W. Young (History of Art)

#### Courses

**110 Introduction to Asian American Studies**

Fall. 3 credits.
T R 2:55–4:10. Staff.

This introductory course examines the historical roots of Asians in America—the causes and sources of Asian immigration to the United States, the experiences of these pioneers, and their major role in the development of the western states. It also examines the U.S. response to these Asian immigrants, and analyzes contemporary issues such as self-worth, identity, and the influences of mass media.

**262 Asian American Literature**
Spring. 3 credits.
Staff.
This course explores the diverse worlds of past and present Asian America through critical reading of selected works by Asian American writers. Emphasis is on helping students locate and develop their own points of view with regard to America as a pluralistic society with a diverse and evolving literary heritage. Topics covered include the oral tradition; the creative process for Asian American writers; incarceration and resistance; generation, gender, and community; and diversity and evolution. Students will keep a reading journal with entries focusing on connections among what is read, class discussion, and perceptions of life.

**435 Asian American Images and Stereotypes in Film**
Fall. 3 credits. Prerequisite: AAS 110 or permission of instructor.
Staff.
This course examines images of Asian Americans in domestically produced film and television and analyzes these images with a historical and socio-cultural framework. Within this context, film and media theory are used to assess the impact of these images on viewers. Students' projects will include the creation of a video or a paper using images that more realistically reflect Asian American life and issues.

**610 Asian Americans, Civil Rights, and the Law**
Spring. 3 credits. Prerequisite: Seniors may enroll with permission of instructor.
R. J. Chin.
This course examines major immigration and civil rights laws and Supreme Court cases which have impacted Asians in America. Topics include America's immigration policy; alien land laws and Asian American community development; Japanese American internment; the failure of the Constitution and the redress and reparation movement; Asian women and the law; Asian labor; voting rights and Asian empowerment; anti-Asian violence and the criminal justice system; equal education opportunity and contemporary legal issues in Asian American communities (from the "English only" initiative to new immigration bills). American laws and Supreme Court cases will be analyzed, and the treatment of Asian Americans and other minority groups within the American system will be contrasted.

## Biology and Society

F. H. Buttel, chair, biology and society (275 Clark Hall, 255-6042); R. Battistella, B. Bedford, A. Boehm, R. Boyd, U. Bronfenbrenner, emeritus, S. M. Brown Jr., emeritus, S. Ceci, C. C. Chu, J. Fessenden MacDonald, J. Ford, J. Fortune, C. Geisler, M. Gilliland, S. Gilman, D. Greenwood, J. Haas, M. A. Harwell, R. Howarth, H. C. Howland, S. Jasanoff, K. Kennedy, B. Knuth, A. Lemley, M. Lenzenweger, S. A. Levin, B. A. Lewis, K. S. March, C. McClintock, D. Nelkin, L. Palmer, A. Parrot, D. Pimentel, D. L. Poston, Jr., A. G. Power, W. Provine, H. Ricciuti, emeritus, S. Robertson, R. Root, M. Small, H. Stinson, N. Sturgeon, J. M. Stycos, V. Utermohlen, M. W. Wachsberg, S. White-Means

The biology and society major is offered to students enrolled in the College of Arts and Sciences and the College of Human Ecology. Undergraduates in the College of Agriculture and Life Sciences can develop an approved sequence of courses from the biology and society curriculum under general studies. The major is coordinated for students in all colleges through the biology and society office. Students can get information, specific course requirements, and application procedures for the major from the office in 275 Clark Hall.

Because the major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises. These include introductory courses in the fields of ethics, history or philosophy, biochemistry, ecology, genetics, evolutionary biology, and statistics. In addition, majors are required to take a core course and must develop a theme: a coherent and meaningful grouping of six courses representative of their special interest in biology and society. Students should develop the theme and select the courses in consultation with a member of the biology and society faculty.

There are student advisers and faculty available (according to posted office hours or by appointment) in the biology and society office, 275 Clark Hall or 278 Clark Hall (advising office), to answer questions and to provide assistance.

### Admission to the Major

#### Arts and Sciences and Agriculture and Life Sciences

Students should have completed a year of college-level biology and submit an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper division applicants should realize the difficulties of completing the major requirements in fewer than two years. The application includes (1) a one- to two-page statement explaining the student's intellectual interests in the biology and society major and why the major is consistent with the student's academic goals and interests; (2) a selected theme in the major; (3) a tentative plan of courses fulfilling biology and society requirements, including courses taken and those the student plans to take; and (4) a transcript of work taken at Cornell University and elsewhere if applicable, current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a *provisional* basis. It is the student's responsibility to assure that final acceptance is granted on satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably in the first semester.

#### Human Ecology

Human Ecology students should consult the current *Human Ecology Guide* and meet with the college advising coordinator, Virginia Utermohlen, N206a Martha Van Rensselaer Hall, 255-2136.

#### Major Requirements

1) Basic courses
   A. Biological sciences 101–104 or 105–106 or 107–108
   B. College calculus (one course): Math 106, 108, or 111 or any higher-level calculus course
   C. General chemistry (one-year sequence): Chem 103–104, 207–208, or 215–216.
2) Foundation courses (should be completed by the end of the junior year): one course in *each* subject area
   A. Ethics: Bio&Soc 205 (also Bio Sci 205 and Phil 245) or Bio&Soc 206 (also Bio Sci 206 and Phil 246)
   B. History *or* philosophy: Phil 381 or 389, or Bio&Soc 288 (also Hist 288 and Bio Sci 202), or Bio Sci 207 (also Hist 287), or Hist 282
   C. Biochemistry: Bio Sci 231, or 330, or 331
   D. Ecology: Bio Sci 261
   E. Genetics: Bio Sci 281 or 282 or Pl Br 225
   F. Evolutionary Biology: Bio Sci 378
   G. Statistics: Stat 200, ILR 210, Ag Ec 310, Ed 353, Soc 301, Psych 350, Math 372, Econ 319, OR&IE 370, or Stat 601
3) Core course
   A. Phil 286: Science and Human Nature
4) Themes (six courses above the 100 level)
   A. Biology issues (one course) and elective (one course)
   Note: Two biology electives are required for the class of 1990.
   B. Social sciences issues (one course) and elective (one course)
   C. Humanities issues or elective, or additional social sciences elective (one course)
   D. Senior seminar (one course in the senior year). Courses change yearly.

#### Themes in the Major

Students are encouraged to develop their own themes in a concentration area. Examples include biology, behavior, and society; biology and public policy; environment and society; food, agriculture, and society; and health and society. Sample theme areas are available in the biology and society office.

#### Independent Study

Projects under the direction of a biology and society faculty member are encouraged as part of the program of study in the student's theme area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1–4 credits in Biology and Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students from the colleges of Arts and Sciences and Agriculture and Life Sciences may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the biology and society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

#### Honors Program

The honors program is available to biology and society majors from the colleges of Arts and Sciences and Agriculture and Life Sciences and is designed to challenge the academically talented undergraduate student. Students who enroll in the honors program are given the opportunity to do independent study and to

develop the ability to evaluate research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding.

**Selection of Students:** During the first three weeks of the fall semester, senior biology and society majors are considered for entry into the honors program by the Honors Program Committee. Applications for the honors program are available at the biology and society office, 275 Clark Hall. To qualify for the honors program, students must explain how the honors work will fit into their overall program, must have an overall Cornell cumulative grade-point average of at least 3.00 and at least a 3.30 cumulative grade-point average in all courses used to meet the major requirements. Students in the College of Agriculture and Life Sciences must also meet the requirements of that college and be selected by one of the existing college committees.

If, after admission to the honors program, a student fails to maintain a high scholastic average, or if for any other reason(s) he or she is considered unsuited for honors work, the student reverts to candidacy for the regular bachelor's degree. The student who does not continue in the honors program receives credit for any work passed in the program but is not eligible for a degree with honors.

**Project Requirements:** The satisfactory completion of a special project and the writing and oral defense of an honors thesis are required. The project must include substantial research, and the completed work should be of wider scope and higher quality than the work normally required for an advanced course.

Initiative for formulation of ideas, developing the proposal, carrying out the study, and preparation of a suitable thesis all lie with the student. Honors projects will be under the direction of two advisers. Candidates must first find a biology and society faculty member willing to serve as the adviser and, together with the adviser, find a second adviser among the faculty at large. The purpose of the second adviser is to guarantee expertise in the subject matter covered by the thesis. Students in the College of Agriculture and Life Sciences must select this adviser from the area in which their thesis will be reviewed.

Students must enroll in Biology and Society 499 for one or both terms of their senior year after consultation with the biology and society thesis adviser. They take from 3 to 5 credits per term with up to a maximum of 8 credits in Biology and Society 499. Students are encouraged to enroll for both terms to give them time to develop a project properly for the thesis. If registering for a two-semester honors project, students must register for the total credits desired for the whole project each term (e.g., 8 credits for the fall term and 8 credits for the spring term). Students should note, however, that Biology and Society 499, because it is a special honors course, is to be taken in addition to those courses that meet the regular major requirements. Honors projects cannot be used to fulfill the senior seminar requirement.

**Honors Thesis:** Students and their advisers should meet regularly during the period of research and writing for the honors thesis. The responsibility for scheduling these meetings, and for carrying out the research agreed on, rests with the student. Advisers are expected to make themselves available for discussion at the scheduled times and to offer advice on the plan of research, as well as provide critical and constructive comments on the written work as it is completed. They are not expected, however, to have to pursue students either to arrange meetings or to ensure that the research and writing are being done on schedule.

There is no prescribed length for a thesis, since different topics may require longer or shorter treatment, but it should normally be no longer than seventy double-spaced, typed pages. When a thesis has been completed in a form satisfactory for purposes of evaluation, the candidate must meet with the thesis advisers and one member of the Honors Program Committee and formally defend the thesis. This should be no later than the last day of classes. Any student would be well advised, however, to provide reviewers with a polished draft at least four weeks prior to the last day of classes and defend his or her thesis well in advance of the end of classes to allow time for revisions. A public presentation of the honors work to faculty and students will be scheduled at the end of the student's last semester.

**Evaluation and Recommendation:** Two copies of the completed and defended thesis (suitably bound in a plastic or hard-backed cover), together with the advisers' recommendations, must be submitted to the Honors Program Committee by the first day of study period of the student's final term.

Following the formal defense of the thesis, the thesis advisers will each submit to the Honors Program Committee a recommendation that includes (1) an evaluation of the honors work and the thesis, (2) an evaluation of the student's academic record in the biology and society major, and (3) a recommendation for or against awarding honors. (For College of Arts and Sciences students, a justification for the level of honors proposed must be included.)

Copies of the thesis and recommendations will be circulated to the Honors Program Committee. As the committee may have little knowledge of the subject area of the thesis, letters of recommendation should be carefully prepared to help the committee ensure consistency in the honors program. Unless there is serious disagreement, the recommendation of the advisers should stand. If there is disagreement, the Honors Program Committee will make the decision after consultation with the interested parties.

## Freshman Writing Seminars

**103 In the Company of Animals**
Spring. 3 credits.
A. Boehm.

**[104 Ecosystems and Ego Systems**
Spring. 3 credits.
M. Gilliland.]

**108 Living on the Land**
Fall. 3 credits.
A. Boehm.

**[109 Women and Nature (also English 106.5)**
Spring. 3 credits.
A. Boehm.]

**[113 Writing as a Naturalist (also English 113)**
Fall. 3 credits.
M. Gilliland.]

**115 The American Way: Addiction and Consumption**
Spring. 3 credits.
M. Gilliland.
For up-to-date information consult the John S. Knight Writing Program brochure.

## Foundation Courses

**A. Ethics** (select one)

**205 Ethics and Healthcare (also Philosophy 245 and Biological Sciences 205)**
Fall. 4 credits. Limited to 80 students. Registered students not attending the first week will be dropped from the course. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.
Lecs, T R 10:10–11:25, disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which ethical problems associated with healthcare can be formulated and solutions evaluated. General topics (with sample issues in parentheses) include knowledge in ethics (ethical skepticism, ethical relativism); proper social allocation of resources for, and within, medicine (entitlement to health care, access to scarce medical resources, cost-benefit analysis); the proper account of basic concepts such as illness, death, autonomy, and personhood (abortion, euthanasia, procreative technologies); and the professional-patient relationship (informed consent, confidentiality, medical paternalism). *Note:* A more detailed description of this course is available in the biology and society office, 275 Clark Hall.

**206 Ethics and the Environment (also Philosophy 246 and Biological Sciences 206)**
Spring. 4 credits. Open to all undergraduates; permission of instructor required for graduate students.
Lecs, T R 10:10–11:25, disc, 1 hour each week to be arranged. M. Wachsberg.
Critical *philosophical* analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. An introductory section of the course discusses the nature of ethics and the possibility of knowledge in ethics. The first major substantive component of the course deals with the nature and extent of individual and social obligations to spatially distant people, future generations, nonhuman animals, and nonsentient things (e.g., the ecosystem). The second major component of the course deals with the appropriate analysis of the origin of environmental problems and the range of options for their solution. Topics include individual vs. collective goods, cost benefit analysis, and coordination problems. *Note:* A more detailed description of this course is available in the biology and society office, 275 Clark Hall.

**B. History or Philosophy** (select one)

**288 History of Biology (also History 288 and Biological Sciences 202)**
Spring. 3 credits. Prerequisite: one year of introductory biology.
Lecs, T R 10:10–11:30. W. Provine.
An examination of the history of biology, emphasizing the interaction of biology and culture. Original writings of biologists constitute the bulk of reading assignments. This course covers the period from classical antiquity to the present, but primary emphasis is on twentieth-century biology.

**History 282 Science in Western Civilization**
Spring. 3 credits.
P. Dear.

**History 287 Evolution (also Biological Sciences 207)**
Fall. 3 credits. (May not be taken for credit after Biological Sciences 378, Evolutionary Biology.)
W. Provine.

**Philosophy 381 Philosophy of Science: Knowledge and Objectivity**
Fall. 4 credits.
R. Boyd.

**[Philosophy 389 Philosophy of Science: Evidence and Explanation**
Spring. 4 credits.
R. Miller.]

**C. Biochemistry** (select one)

**Biological Sciences 231 General Biochemistry**
Fall. 3 credits.
J. M. Griffiths.

**Biological Sciences 330 Principles of Biochemistry, Individual Instruction**
Fall and spring. 4 credits.
M. Ferger.

**Biological Sciences 331 Principles of Biochemistry, Lectures**
Fall. 4 credits.
J. K. Moffat.

**D. Ecology**

**Biological Sciences 261 Principles of Ecology**
Fall. 4 credits.
R. Howarth, P. Marks, and D. Winkler.

**E. Genetics** (select one)

**Biological Sciences 281 Genetics**
Fall and spring. 5 credits.
T. Fox and M. L. Goldberg.

**Biological Sciences 282 Human Genetics**
Spring. 3 credits.
R. Calvo.

**Plant Breeding 225 Plant Genetics**
Spring. 4 credits.
M. A. Mutschler.

**F. Evolutionary Biology**

**Biological Sciences 378 Evolutionary Biology**
Spring. 4 credits. (2 credits if taken after History 287/Biological Sciences 207.)
R. G. Harrison.

**G. Statistics** (select one)

**Agricultural Economics 310 Introductory Statistics**
Spring. 4 credits.

**Economics 319 Introduction to Statistics and Probability**
Fall. 4 credits.
J. Park.

**Education 353 Introduction to Educational Statistics**
Spring. 3 credits.
J. Millman.

**Industrial and Labor Relations 210 Statistics: Statistical Reasoning**
Fall and spring. 4 credits.

**Mathematics 372 Elementary Statistics**
Fall. 4 credits.

**Operations Research and Industrial Engineering 370**
Fall and spring. 4 credits.

**Psychology 350 Statistics and Research Design**
Fall. 4 credits.
T. Gilovich.

**Sociology 301 Evaluating Statistical Evidence**
Fall. 4 credits.
R. Breiger.

**Statistics 200 Statistics and the World We Live In**
Spring. 3 credits.

**Statistics 601 Statistical Methods I**
Fall. 4 credits.
C. E. McCulloch.

## Core Course

**Philosophy 286 Science and Human Nature**
Spring. 4 credits.
Lecs, M W F 11:15, disc, to be announced. R. Boyd and N. Sturgeon.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena. Topics vary, and may include issues in psychology, such as behaviorism, Freudianism, and artificial intelligence, or issues in the foundations of historical theory, such as methodological individualism and economic determinism, as well as relevant issues in the biological sciences.

## Themes

**A. Issues - Natural Sciences**

**232 Recombinant DNA Technology and Its Applications (also Biological Sciences 232)**
Spring. 3 credits. Disc limited to 20 students. Prerequisite: one year of introductory biology. There is a possible fee for course reading material.
Lecs and discs, M W F 11:15. J. Calvo, J. Fessenden MacDonald, F. H. Buttel.
An introduction to molecular approaches to biology. Basic concepts underlying recombinant DNA technology together with strategies for cloning genes are discussed. Much of the course deals with applications of recombinant DNA technology to basic research and to biotechnology. Applications to be discussed include screening for genetic diseases, plant improvement, and production of insulin, interferon, blood-clotting factors, growth hormones, vaccines, and feedstock chemicals. Scientific, historical, regulatory, social, and ethical issues form the basis of the discussions. Recommended especially for sophomores desiring a firm background in recombinant DNA technology in preparation for taking genetics and biochemistry. Also appropriate for an intelligent layperson who wants to understand some new research discoveries and applications stemming from them.

**347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347 and Nutritional Sciences 347)**
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and Human Development and Family Studies 115 or Psychology 101. Offered alternate years.
Lecs M W F 1:25–2:15. J. Haas and S. Roberston.
A review of major patterns of physical growth from the fetal period through adolescence, with consideration of biological and socio-environmental determinants of growth as well as physical and psychological consequences of variations in growth patterns. An examination of normal patterns of growth is followed by an analysis of major sources of variations in growth (normal and atypical).

**469 Food, Agriculture, and Society (also Biological Sciences 469)**
Spring. 3 credits. Prerequisite: an introductory ecology course or permission of instructor. There is a possible fee for course reading material.
Lecs, T R 1:25–2:40 plus disc to be arranged. A. G. Power.
A multidisciplinary course that deals with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, farm labor, land reform, biotechnology, and international food policy.

**Biological Sciences 246 Plants and Civilization**
Spring. 3 credits.
D. Bates.

**Biological Sciences 275 Human Biology and Evolution (also Anthropology 275)**
Fall. 4 credits.
J. Haas and K. Kennedy.

**Natural Resources 201 Environmental Conservation**
Spring. 3 credits.
T. Fahey.

**[Nutritional Sciences 361 Biochemistry and Human Behavior (also Psychology 361)**
Fall. 3 credits.]

**Nutritional Sciences 650 Clinical and Public Health Nutrition**
Spring. 3 credits.
D. Roe.

**B. Issues - Social Sciences**

**[301 Biology and Society: The Biocultural Perspective (also Anthropology 301 and Biological Sciences 301)**
Fall. 3 or 4 credits (3 credits by arrangement with instructor). Biology and society majors are required to take the course for 4 credits. Prerequisite: one year of introductory biology.
Lecs, TBA, disc, TBA Not offered 1989–90.
In modern evolutionary theory, human biology, behavior, and institutions are understood as the ongoing products of interactions between human biological evolution and cultural change. Nevertheless, numerous attempts to examine the evolutionary processes in humans violate key tenets of evolutionary theory, unwittingly reproducing elements of pre-Darwinian views of human nature. After reviewing the pre-Darwinian context and reading *The Origin of Species*, the course explores attempted applications of evolutionary analysis to humans and develops a cultural explanation of the persistence of pre-Darwinian elements in many of them.]

**407 Law, Science, and Public Values (also Government 407)**
Spring. 4 credits.
Lec, M 2:30–4:30; disc, W 1:25 or 3:35.
S. Jasanoff.
This course explores the varied interactions between science and the legal process that have developed in recent years as a result of attempts to bring greater public accountability to the use of science and technology. It examines the activities of both legislatures and courts in controlling science and analyzes the values underlying these initiatives. Three major types of science-law interactions form the focus of the course: regulation of new technologies, judicial review of risk-management decisions, and legal control of professional standards in science and technology. Specific topics include the regulation of toxic chemicals and nuclear power, controversies about biotechnology, reproductive technologies and biomedical research, and science fraud.

**[426 Medicine and the Law**
Fall. 4 credits. Letter grades only. There is a possible fee for copying charges. Not offered 1989–90.
Lecs, M T W 2–2:50. L. Palmer.
The role of law in modern medicine (and the related biomedical sciences) will be examined from the perspective of the social functions of law and medicine. A number of policy and ethical issues will be considered, including the role of hospitals and other health organizations in doctor-patient interactions, the social aspects of physician-patient interactions, the effect of medical malpractice on health-care delivery, legal issues in the care of the newborn and health-care decisions for incompetents and terminally ill patients.]

**City and Regional Planning 480 Environmental Politics**
Spring. 3 credits.
R. Booth.

**City and Regional Planning 656 Land Resources Protection Law**
Fall. 3 credits.
R. Booth.

**[Civil and Environmental Engineering 525 Environmental Law I (also Toxicology 625)**
Fall. 4 credits.]

**[Consumer Economics and Housing 450 Economics of Health, Health-care Expenditures, and Health Policy**
Fall. 3 credits.
S. White-Means.]

**History 233 Agricultural Sciences in America: From Squanto to Biotechnology**
Spring. 4 credits.
M. Rossiter.

**Human Development and Family Studies 258 The Historical Development of Women as Professionals, 1800 to the Present (also Women's Studies 238)**
Spring. 3 credits.
J. Brumberg.

**Human Development and Family Studies 372 Typical and Atypical Intellectual Development**
Spring. 4 credits.
S. Ceci.

**Human Development and Family Studies 488 Development in Context (also Psychology 488)**
Spring. 4 credits.
U. Bronfenbrenner.

**Human Service Studies 315 Human Sexuality**
Spring. 3 credits.
A. Parrot.

**Human Service Studies 325 Health Care Services and the Consumer**
Fall. 3 credits.
A. Parrot.

**[Human Service Studies 330 Ecology and Epidemiology of Health**
Fall. 3 credits.
A. Parrot.]

**Human Service Studies 634 Health Services Organization and Financing**
Fall. 3 credits.
R. Buchanan.

**Human Service Studies 688 Alternative Health and Social Services Delivery Systems: Long-Term Care and the Aged**
Spring. 3 credits.
R. Battistella.

**Natural Resources 400 International Environmental Issues**
Fall. 3 credits.
R. McNeil.

**Nutritional Sciences 325 Sociocultural Aspects of Food and Nutrition**
Fall. 3 credits.
D. Sanjur.

**Nutritional Sciences 445 Community Nutrition and Health**
Spring. 3 credits.
C. Olson.

**Nutritional Sciences 457 National and International Food Economics**
Spring. 3 credits.
E. Thorbecke.

**Psychology 326 Evolution of Human Behavior**
Fall. 4 credits.
R. Johnson.

**Rural Sociology 205 Rural Sociology and International Development**
Spring. 3 credits.
P. McMichael.

**Rural Sociology 324 Environment and Society**
Fall. 3 credits.
F. Buttel.

**C. Issues - Humanities**

**322 Medicine and Civilization**
Spring. 4 credits. Offered alternate years.
Lecs T R 1:25–2:40. S. Gilman.
What is sickness? What is health? Who is the physician? Is a physical illness different from mental illness? Where is medicine practiced? Is being a patient or a doctor different from culture to culture and from age to age? This course will introduce the undergraduate student to the historical and cultural context of medicine. Our sources will range from the texts of ancient Greek medicine to contemporary films and novels dealing with medicine. We will examine the historical and social context of mental illness as well as physical illness from the standpoint of patient, physician, and "society." The class will consist of lecture and discussion. All of the primary readings are available in English.

**Natural Resources 407 Religion, Ethics, and the Environment**
Spring. 3 credits.
R. Baer.

**Philosophy 241 Ethics**
Fall. 4 credits.
T. H. Irwin.

**D. Senior Seminars**

**[401 The History of Biology (also History 447)**
Fall. 4 credits. Limited to 20 students. A Common Learning course. Not offered 1989–90.
Sec, T 2:30–4:30. W. Provine.]

**[402 The History of Biology (also History 448)**
Spring. 4 credits. Not offered 1989–90.
Sec, T 2:30–4:30. W. Provine.]

**404 Human Fertility in Developing Nations (also Rural Sociology 408)**
Fall. 3 credits. Prerequisite: a population course or permission of instructor. Offered alternate years.
Lecs, R 3–5:30. J. M. Stycos.
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

**406 Biotechnology and Law**
Fall. 4 credits. Limited to 20 students. Recommended: a course in genetics or rDNA, a course in American government or law, or permission of instructor. Fee for course reading materials.
Lec, R 2:30–4:25. S. Jasanoff.
Biotechnology, with its myriad applications in areas such as medicine and agriculture, is developing more rapidly than the social institutions that are capable of controlling it. This course explores the use and potential abuse of biotechnology in areas such as genetic screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents, and ownership of human tissue. Particular attention will be given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. A research paper is required.

**[414 Population Policies (also Rural Sociology 418)**
Fall. 3 credits. Prerequisite: a population course or permission of instructor. Offered alternate years. Next offered 1990–91.
Lecs, R 1:25–4:30. J. M. Stycos.
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to influence fertility.]

**415 The Politics of Technical Decisions I (also Sociology 515, City and Regional Planning 541, Government 628)**
Fall. 4 credits.
Lecs, TBA.
Political aspects of decision-making in technical areas. Drawing from recent risk disputes, we will examine the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system.

**428 Medical Service Issues in Health Administration (also Human Service Studies 628)**
Spring. 3 credits.
Sec, M W F 2:30–3:20. V. Utermohlen.
A survey of the issues that affect interactions between the health-care consumer and the health-care team, including disease processes (how disease occurs and progresses), the health-care team and illness, third-party payment and illness, and resource allocation.

**434 Biotechnology: Lab to Market (also Biological Sciences 434)**
Spring. 3 credits. Offered alternate years.
Sem, W 1:25–4:25.
J. Fessenden MacDonald.
Study of select cases of biotechnology transfer from scientific discoveries to medical products or processes. An examination of the scientific regulatory and social aspects of biotechnology transfer. Background is provided on the molecular biology and applied science aspects of the biotechnology under consideration. Possible topics include human growth hormone, tPA (tissue plasmenogen activator), gene probes, and gene therapy. Readings from various disciplines including scientific papers, government reports, and industrial and legal reports will provide background for class discussions. A research paper and oral prsentations are required.

**442 Social and Political Studies of Science (also Sociology 355 and City and Regional Planning 442)**
Spring. 3 credits.
Lecs, TBA.
A view of science less as an autonomous activity than as a social and political institution. We will discuss such issues as secrecy in science, ethical and value disputes, and the limits to scientific inquiry in the context of the changing relationships between science and the public.

**451 AIDS and Society**
Fall. 3 credits. Limited to 20 students who have been approved by Professor A. van Tienhoven, 102 Rice Hall. A Common Learning course.
W 2:30–4:30. A. van Tienhoven and others.
Discussions of the impact of acquired immune deficiency syndrome (AIDS) on society will consist of faculty seminars on the biology of the virus, the epidemiology of the disease, the legal aspects of controlling the spread of the disease, and the impact of the disease on the performing arts, especially theater. Students will be required to contribute their own seminar presentations.

**[459 Risk Management of Toxic Chemicals**
Fall. 3 credits. Limited to 12 students. Prerequisite: a course in biochemistry or toxicology or permission of instructor. Offered alternate years. Not offered 1989–90.
Sec, T 2:30–4:25.
J. Fessenden MacDonald.
Select cases of chemical-risk communication and risk management by government agencies, communities, industries, and individuals will be reviewed. Potential topics to be included are toxic wastes, groundwater contamination, chemical accidents, and community right-to-know. The roles of social, economic, political, legal, and ethical factors in decision making will be discussed. Readings from the various disciplines, including scientific papers and reports, will provide background for class discussions. A research paper and class presentation are required.]

**461 Environmental Policy (also Biological Sciences 661)**
Fall and spring. 6 credits. Prerequisite: permission of instructor. This is a two-semester course.
Sec, R 2:30–4:30. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

**[485 Human Development in Postindustrialized Societies (also Human Development and Family Studies 485)**
Spring. 4 credits. A Common Learning course. Not offered 1989–90.
T R 2:30–4:25. U. Bronfenbrenner.
The course analyzes the implications for human development of the profound economic, technical, and social changes that have been taking place in modern societies, with a special focus on the United States. Particular emphasis is placed on the consequences for human effectiveness of the powerful interplay between changes in family life, on the one hand, and the major institutions of society such as schools, communities, business and industry, and government on the other. The relations between these domains will be examined as they influence, and are influenced by, processes of biological and psychological development throughout the life course. The topic will be treated from the perspective of several relevant disciplines, including human biology, developmental psychology, sociology, anthropology, Japanese studies, economics, American history, and European history.]

### Other Courses

**[300 Biology and Society: Preparation for Research**
Fall. 1 credit. Prerequisite: Philosophy 286 or concurrent enrollment. S-U grades only.
Staff.
For all biology and society majors interested in doing independent study or honors work. Faculty presentations on their current research and the methodologies used in their individual areas. Preparation of project outlines and literature review. Recommended for biology and society juniors.]

**375 Independent Study**
Fall or spring. 1–4 credits. Prerequisite: written permission of faculty supervisor.
Staff.
Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1–4 credits in Biology and Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students may elect to do an independent study project as an alternative to, or in advance of, an Honors Project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

**400 Undergraduate Seminar**
Fall or spring. Variable credit. May be repeated for credit.
Staff.
From time to time different seminars on topics of interest to undergraduates are offered. Topics and instructors are listed in the biology and society supplement issued at the beginning of each semester.

**499 Honors Project**
Fall or spring; two-semester projects are acceptable. 3–5 credits each term with a maximum of 8 credits for the entire project. Open only to biology and society honors students in their senior year.
Staff.
Students enrolled in Biology and Society 499 will receive a letter grade at the end of their final term, whether or not they complete a thesis and whether or not they are recommended for honors. Students enrolled for the whole year in 499 may receive either a letter grade for both terms or a grade of "R" for the first term with a letter grade for both terms submitted at the end of the second term. When a student is enrolled for two terms, the student and the thesis adviser must reach a clear agreement at the outset as to which grade will be assigned for the first term and on the basis of what sort of work. Minimally an honors thesis outline and bibliography should be completed during the first term. Applications and information are available in the Biology and Society office, 275 Clark Hall.

## Cognitive Studies Program

F. Keil (psychology), S. McConnell-Ginet (linguistics), codirectors. G. Bilardi, K. Birman, R. Constable, B. Donald, D. Huttenlocher, D. McAllester, P. Panangaden, G. Salton, A. Segre, D. Subramanian, (computer science); J. Condry, B. Koslowski, B. Lust, M. Potts, G. Suci (human development and family studies); L. Babby, J. Bowers, G. Chierchia, G. N. Clements, J. Gair, W. Harbert, J. Huang, J. Kingston, A. Landman, S. McConnell-Ginet, C. Rosen, C. Shih, M. Suñer, L. Waugh, J. Whitman (linguistics); A. Nerode, R. Platek, R. Shore (mathematics); A. Appiah, R. Boyd, C. Ginet, H. Hodes, S. Shoemaker (philosophy); J. Cutting, B. Finlay, E. Gibson, B. Halpern, F. Keil, C. Krumhansl, H. Kurtzman, H. Levin, E. Spelke (psychology)

Cognitive studies is comprised of a number of disciplines that are linked by a major concern with such fundamental capacities of the mind as perception, memory, reasoning, language, and motor control. In the College of Arts and Sciences these disciplines are represented in the departments of Computer Science, Linguistics, Mathematics, Philosophy, and Psychology. Elsewhere in the university they are represented in the Department of Human Development and Family Studies (College of Human Ecology), the Section of Neurobiology and Behavior (Division of Biological Sciences), and the Department of Education (College of Agriculture and Life Sciences).

The issues addressed in cognitive studies arise at several levels. At the broadest level are problems of characterizing such basic notions as "mind," "knowledge," "information," and "meaning." At a more specific level are questions regarding the abstract operating principles of individual components of the mind, such as the components underlying visual perception, language ability, and understanding of concepts. These principles concern the organization and behavior of the components and also how the components develop and change. And at the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.

Important insights into issues of these kinds have been achieved in recent years as a result of the various cognitive studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term "cognitive studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

### Undergraduate Concentration

Professor H. Kurtzman (psychology), director of undergraduate studies (224 Uris Hall, 255-3835).

The undergraduate concentration in cognitive studies provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. It is considered crucial that students gain a strong background in an individual department, independent of their work in the concentration. This background provides both a foundation and a focus for the concentration work.

In light of the importance of a strong background in an individual department, it is required that a student seeking admission to the concentration have completed or plan to complete three courses in one department from among the list of courses below. (Such a student will typically be a major in the department, but being a major is not necessary. The Section of Neurobiology and Behavior counts as a department here.) These three courses are, however, the only requirement for admission. To enter the concentration formally, the student should consult with the concentration director, who will assign the student a concentration adviser (from among the faculty listed above) who has expertise in the student's main areas of interest.

The concentration requires that the student take five courses from departments other than the one from which the student takes the three courses needed for admission to the concentration. These five courses may not all be taken from a single department. The student must gain approval for the selection of five courses from the concentration adviser. The five courses will generally be chosen from among the list below, but other courses (including independent study) are permissible in individual cases.

In addition to assisting in and approving the student's selection of courses, the concentration adviser serves as a general source of information about the field of cognitive studies, relevant resources around the university, and job and graduate school opportunities.

### Graduate Minor

For information, consult the program office (225 Uris Hall, 255-6431).

### Courses

#### Computer Science

**211 Computers and Programming**
Fall or spring. 3 credits.

**212 Modes of Algorithmic Expression**
Fall. 4 credits.

**280 Discrete Structures**
Fall or spring. 4 credits.

**381 (or 481) Introduction to Theory of Computing**
Fall. 4 credits.

**410 Data Structures**
Fall or spring. 4 credits.

**411 Programming Languages and Logics**
Fall or spring. 4 credits.

**472 Introduction to Artificial Intelligence**
Fall. 4 credits.

**482 Introduction to Analysis of Algorithms**
Spring. 4 credits.

**486 Applied Logic (also Mathematics 486)**
Fall. 4 credits.

#### Education (College of Agriculture and Life Sciences)

**210 Introduction to Applied Psychology: Learning and Memory**
Fall. 3 credits.
J. A. Dunn.

#### Human Development and Family Studies (College of Human Ecology)

**333 Cognitive Processes in Development**
Fall. 3 credits.
Staff.

**431 Learning in Children**
Fall. 3 credits.
M. Potts.

**432 Cognitive Development and Education**
Spring. 3 credits.
M. Potts.

**434 The Growth of the Mind: A View from Piaget's Theory**
Spring. 4 credits.
B. Lust.

**436 Language Development (also Psychology 436 and Linguistics 436)**
Spring. 4 credits.
B. Lust.

**438 Thinking and Reasoning**
Fall. 3 credits.
B. Koslowski.

#### Linguistics

**101–102 Theory and Practice of Linguistics**
Fall and spring. 4 credits each term.
Staff.

**264 Language, Mind, and Brain**
Fall. 4 credits.
J. Bowers.

**301–302 Phonology I, II**
Fall and spring. 4 credits each term.
G. N. Clements.

**303–304 Syntax I, II**
Fall and spring. 4 credits each term.
J. Bowers.

**309–310 Morphology I, II**
Fall and spring. 4 credits each term.
Staff.

**316 Introduction to Mathematical Linguistics**
Spring. 4 credits.
F. Landman.

**319–320 Phonetics I, II**
Fall and spring. 3 credits each term.
J. Kingston.

**325 Pragmatics**
Fall. 4 credits.
S. McConnell-Ginet.

**370 Language and Cognition (also Psychology 370)**
Spring. 4 credits.
J. Bowers, H. Kurtzman.

**400 Semiotics and Language**
Spring. 4 credits.
L. Waugh.

**401 Language Typology**
Fall. 4 credits.
C. Rosen.

**412 Process and Knowledge in Speech Perception and Word Recognition**
Spring. 4 credits.
J. Kingston.

**418 Nonlinear Phonology**
Spring. 4 credits.
J. Kingston.

**420 Fundamentals of Speech Acoustics**
Spring. 4 credits.
J. Kingston.

**421–422 Semantics I, II**
Fall and spring. 4 credits each term.
G. Chierchia.

**436 Language Development (also Psychology 436 and HDFS 436)**
Spring. 4 credits.
B. Lust.

### Mathematics

**481 Mathematical Logic**
Spring. 4 credits.

**486 Applied Logic (also Computer Science 486)**
Fall. 4 credits.

**487 Applied Logic II**
Spring. 4 credits.

### Neurobiology and Behavior (Division of Biological Sciences)

**221 Neurobiology and Behavior I: Introduction to Behavior**
Fall. 3 or 4 credits.
T. Eisner and staff.

**222 Neurobiology and Behavior II: Introduction to Neurobiology**
Spring. 3 or 4 credits.
R. Harris-Warrick and staff.

**326 The Visual System**
Spring. 4 credits.
H. Howland.

**396 Introduction to Sensory Systems (also Psychology 396)**
Spring. 3 or 4 credits.
B. Halpern.

**424 Neuroethology**
Fall. 3 credits.
Staff.

**492 Sensory Function (also Psychology 492)**
Spring. 4 credits.
H. Howland, B. Halpern.

### Philosophy

**231 Introduction to Formal Logic**
Fall or spring. 4 credits.
Staff.

**261 Knowledge and Reality**
Fall. 4 credits.

**262 Philosophy of Mind**
Fall. 4 credits.
S. Shoemaker.

**318 Twentieth-Century Philosophy**
Spring. 4 credits.
C. Ginet.

**331 Formal Logic**
Spring. 4 credits.
H. Hodes.

**332 Philosophy of Language**
Spring. 4 credits.
M. Crimmins.

**361 Metaphysics and Epistemology**
Fall. 4 credits.
A. Appiah.

**381 Philosophy of Science: Knowledge and Objectivity**
Fall. 4 credits.
R. Boyd.

**382 Philosophy and Psychology**
4 credits.

**383 Philosophy of Choice and Decision**
4 credits.

**389 Philosophy of Science: Evidence and Explanation**
4 credits.

**431 Deductive Logic**
4 credits.

**433 Philosophy of Logic**
4 credits.

**436 Intensional Logic**
4 credits.

**437 Problems in the Philosophy of Language**
4 credits.

**461 Metaphysics**
Spring. 4 credits.
S. Shoemaker.

### Psychology

**205 Perception**
Spring. 3 credits.
J. Cutting.

**209 Development**
Spring. 4 credits.
Staff.

**214 Knowledge and Reasoning**
Spring. 3 credits.
C. Krumhansl.

**215 Psycholinguistics**
Fall. 3 or 4 credits.
H. Kurtzman.

**305 Visual Perception**
Fall. 4 credits.
J. Cutting.

**308 Perceptual Learning**
Fall. 3 credits.
Staff.

**309 Development of Perception**
Fall. 3 credits.
E. Spelke.

**313 Perceptual and Cognitive Processes**
Fall. 4 credits.
Staff.

**314 The Social Psychology of Language**
Spring. 4 credits.
H. Levin.

**316 Auditory Perception**
Spring. 3 or 4 credits.
Staff.

**332 Biopsychology of Learning and Memory**
Spring. 3 credits.
T. DeVoogd.

**370 Language and Cognition (also Linguistics 370)**
Spring. 4 credits.
J. Bowers, H. Kurtzman.

**396 Introduction to Sensory Systems (also Biological Sciences 396)**
Spring. 3 or 4 credits.
B. Halpern.

**412 Human Experimental Psychology Laboratory**
Spring. 4 credits.
Staff.

**415 Concepts, Categories, and Word Meanings**
Fall. 4 credits.
F. Keil.

**416 Psychology of Language**
Spring. 4 credits.
H. Kurtzman.

**417 The Origins of Thought and Knowledge**
Spring. 4 credits.
F. Keil.

**418 Psychology of Music**
Fall. 3 or 4 credits.
C. Krumhansl.

**425 Brain and Behavior**
Fall. 3 or 4 credits.
B. Finlay.

**436 Language Development (also Linguistics 436 and HDFS 436)**
Spring. 4 credits.
B. Lust.

**465 Mathematical Psychology**
Spring. 4 credits.

**490 History and Systems of Psychology**
Fall. 4 credits.
H. Levin.

**492 Sensory Function (also Biological Sciences 492)**
Spring. 4 credits.
H. Howland, B. Halpern.

### Graduate Courses and Seminars

The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the concentration must approve an undergraduate's use of any of these for satisfying the concentration requirements.

**Cog St 773 (also Philosophy 773 and Psychology 773) Proseminar in Cognitive Studies I**
Fall. 2 credits.

**Cog St 774 (also Computer Science 774 and Linguistics 774) Proseminar in Cognitive Studies II**
Spring. 2 credits.

**Cog St 600/700 Graduate Seminars**

**HDFS 600/700 Graduate Seminars**

**Ling 600/700 Graduate Seminars**

**Math 581 Logic**

**Math 655 Mathematical Foundations of Computer Modeling and Simulation**

**Math 684 Recursion Theory**

**Math 688 Automated Theorem Proving**

**Phil 700 Graduate Seminars**

**Psych 500–700 Graduate Seminars**

## College Scholar Program

Dean Lynne Abel, director, 55 Goldwin Smith Hall, 255-3386.

The College Scholar program is described in the introductory section, p. 137.

**397 Independent Study**
Fall or spring. 1–4 credits. Prerequisite: permission of program office.

**499 Honors Research**
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

## East Asia Program

140 Uris Hall

K. W. Brazell, director; R. Barker, M. G. Bernal, M. C. Chou, S. G. Cochran, T. Cullen, B. de Bary, E. M. Gunn, C. T. J. Huang, J. V. Koschmann, L. C. Lee, T. P. Lyons, D. R. McCann, J. R. McRae, T. L. Mei, V. Nee, T. J. Pempel, C. A. Peterson, J. R. Piggot, D. L. Poston, N. Sakai, P. S. Sangren, C. L. Shih, T. Shiraishi, V. B. Shue, R. J. Smith, R. J. Sukle, J. M. Swanberg, J. K. Wheatley, J. Whitman, M. W. Young, J. Zeitlin

East Asian studies at Cornell is led by thirty-two faculty members from six colleges, who participate in a program of research and teaching on the civilizations and cultures of East Asia. Courses are offered in most of the humanities and social science disciplines, as well as in the fields of business, city and regional planning, and hotel administration. Comprehensive language courses in Mandarin, Cantonese, and Japanese are taught, in addition to the Full-year Asian Language Concentration (FALCON) in Japanese and Mandarin. A new program has also been developed in Korean language instruction, which offers first- and second-year Korean. Undergraduates major in the Department of Asian Studies and concentrate on the language and culture of one East Asian country, while graduate students may work toward an M.A. in East Asian studies, a dual M.B.A./M.A. degree, or an M.A./Ph.D. degree in a discipline such as agricultural economics, anthropology, city and regional planning, government, history, history of art, linguistics, literature, rural sociology, or sociology. Several fellowships, travel grants, awards, and assistantships are available for graduate students in East Asian studies.

The formal program of study is enriched by a variety of extracurricular activities, including a Chinese language house, various film series, career workshops, art exhibits, and numerous lectures and performances related to East Asia. The Wason Collection in Olin Library is a comprehensive collection of books on East Asia in Western languages, Japanese, and Chinese. The Mary Rockwell Galleries of the Herbert F. Johnson Museum of Art have an excellent collection of East Asian art.

## Freshman Writing Seminars

For information about the requirements for freshman writing seminars, see p. 22. For descriptions of seminar offerings, see John S. Knight Writing Program, p. 319, and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in November for the spring term.

## Program in History and Philosophy of Science and Technology

The Program in History and Philosophy of Science and Technology (HPST) is an interdisciplinary program that provides a broadly based perspective on science and its place in modern society. The faculty is drawn from numerous science and humanities departments and includes specialists in philosophy, history, and communications. A considerable number of courses is offered each year at the undergraduate level, ranging from historical surveys of physical and biological sciences to the philosophy of science. The cultural and intellectual history of science and technology in particular periods and in both American and European settings, courses in science writing, and the philosophy of quantum physics all contribute to the establishment of a richly structured field of opportunity for those undergraduates who wish to supplement their majors with an integrated yet wide-ranging series of studies that will further their understanding of a powerful social and cultural force.

### The Concentration

The undergraduate concentration in HPST is an interdisciplinary offering granting recognition to students, regardless of major, who have successfully completed before graduation a sequence of courses selected from among a substantial number of offerings. Credit for the concentration is awarded for the completion of at least one course in each of four categories. Among the courses offered for 1989–90 under each category are the following (this listing is not exhaustive; furthermore, certain courses from previous years may also qualify retrospectively):

**History of Science**
- ** Hist. 281 or 282. Science in Western Civilization. Fall and spring. 281, fall; 282, spring. History 281 is not a prerequisite for 282.
- ** Hist. 288 (also Biological Sciences 202 and Biology and Society 288). History of Biology. Spring.

**History of Technology and Applied Science**
- ** EE 250. History of Technology and Engineering. Fall.
- ** EE 292. History of Electrotechnology. Spring.

**Philosophy of Science**
- ** Phil. 286. Science and Human Nature. Fall.
- ** Phil. 381. Philosophy of Science: Knowledge and Objectivity. Fall.
- ** Phil. 384. Philosophy of Physics. Spring.
- ** Phil. 681. Philosophy of Science (open to undergraduates with instructor's permission). Fall.

**Social Dimensions of Science**
- ** Comm. 352. Science Writing for the Mass Media. Fall.
- ** Government 407. Law, Science, and Public Values. Spring.
- ** Hist. 380. Social History of Western Technology. Fall.
- ** Hist. 444 (also Women's Studies 444). Historical Issues of Gender and Science. Spring.
- ** Comm. 666. Perspectives on Science Writing in America (open to undergraduates with instructor's permission). Spring.

Interested students should contact Pat Dean, Program in HPST, 425 Caldwell Hall (tel. 5-6234), for a full listing of courses and for information on available program advisers.

## Human Biology Program

J. Haas (nutritional sciences), director, N206 Martha Van Rensselaer Hall, 255-8001; R. Dyson-Hudson (anthropology), B. Finlay (psychology), J. Fortune (physiology/women's studies), R. Johnston (psychology), K.A.R. Kennedy (ecology and systematics/anthropology), M. LaVelle (ecology and systematics), D. Levitsky (nutrional sciences), D. McClearn (ecology and systematics), D. L. Pelletier (nutritional sciences), W. Provine (ecology and systematics/history), R. Robertshaw (physiology), S. Robertson (human development and family studies), R. Savin-Williams (human development and family studies), M. Small (anthropology)

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, physiology, psychology, demography, ecology, genetics, and paleontology, into a comprehensive study of biological diversity in *Homo sapiens.* A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The program of study seeks to educate future biological scientists to address the concerns of a society that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context. The human biology curriculum is of particular relevance to undergraduate students in premedical and predentistry programs, biological anthropology, nutrition, human development, ecology and systematics, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students with a common interest in humankind as defined from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution and biological diversity. Human biology is not a major but a curriculum of study that provides majors in various departments with a program for selecting elective courses that deal with the biology of the human species. Students in their junior year may develop a program of study in human biology while majoring in a number of different departmental fields.

### Basic Requirements

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and physical diversity of the human species. Adjustments may be made in these requirements, depending upon the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (Biological Sciences 101–103 plus 102–104 or 105–106 or Biological Sciences 100 offered during the six-week Cornell Summer Session); one year of general chemistry (Chemistry 103–104 or 207–208 or 215–216); one year of college mathematics, including at least one semester of calculus (Mathematics 111–112 or 105–106 or 111–105); at least one semester of organic chemistry lectures (Chemistry 253 or 357–358 or 359–360); one course in genetics (Biological Sciences 281 or 282); one course in biochemistry (Biological Sciences 330 or 331); two semesters of physics (Physics 207–208 or 112–213–214 or 101–102). It is recommended that students planning graduate careers in biological anthropology, psychology, and related fields in the medical and nutritional sciences take a course in statistics. Students should consult their faculty adviser in human biology for help in selecting appropriate courses.

Elective courses should be taken that will enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses or others that are listed in the brochure available to students upon request.

There is no foreign language requirement for human biology beyond what is dictated by specific departments and colleges. The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their own programs of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty adviser representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisers in human biology to be the principal adviser, or he or she may have an adviser in the department of the major and seek the advice of a human biology faculty adviser in matters pertaining to satisfaction of the requirements. In certain cases a faculty adviser may represent both the major and the curriculum of study in human biology.

## Courses

### Human Anatomy and Physiology

**Bio S 214 The Biological Basis of Sex Differences (also Women's Studies 214)**
Spring. 3 credits.

**Bio S 274 The Vertebrates**
Spring. 5 credits.

**Bio S 311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)**
Fall. 3 credits.

**Bio S 319 Introductory Animal Physiology Laboratory (also Veterinary Medicine 378)**
Fall. 3 credits.

**Bio S 414 Vertebrate Morphology (also Veterinary Medicine 700)**
Spring. 3 credits.

**Bio S 458 Mammalian Physiology**
Spring. 3 credits.

**Bio S 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)**
Spring. 4 credits.

**NS 115 Ecology of Human Nutrition and Food**
Fall or spring. 3 credits.

**NS 222 Maternal and Child Nutrition**
Spring. 3 credits.

**NS 331 Physiological and Biochemical Basis of Human Nutrition**
Spring. 3 credits.

**NS 361 Biochemistry and Human Behavior (also Psychology 361)**
Fall. 3 credits.

**NS 441 Nutrition and Disease**
Fall. 4 credits.

**Psych 322 Hormones and Behavior (also Biological Sciences 322)**
Spring. 3 or 4 credits.

**Psych 425 Brain and Behavior**
Fall. 3 or 4 credits.

**Vet M 331 Medical Parasitology**
Fall. 2 credits.

### Human Behavior

**Anthr 285 Monkeys, Apes, and People: The Comparative Behavior of Primates**
Spring. 3 credits.

**Anthr 476 Human Nature: An Evolutionary Perspective**
Fall. 4 credits.

**Bio S 301 Biology and Society I: The Biocultural Perspective (also Anthropology 301 and Biology and Society 301)**
Fall. 3 or 4 credits.

**Bio S 427 Vertebrate Social Behavior**
Fall. 3 credits.

**B&Soc 404 Human Fertility in Developing Nations (also Sociology 404)**
Fall. 4 credits.

**HDFS 344 Infant Behavior and Development**
Fall. 3 credits.

**HDFS 464 Developmental Theory and Research on Homosexuality**
Fall. 4 credits.

**HDFS 645 Seminar in Infancy: Newborn Behavioral Organization**
Spring. 3 credits.

**HSS 315 Human Sexuality: A Biosocial Perspective**
Fall, spring, or summer. 3 credits.

**NS 325 Sociocultural Aspects of Food and Nutrition**
Fall. 2 credits.

**NS 347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347)**
Spring. 3 credits.

**NS 445 Community Nutrition and Health**
Spring. 3 credits.

**Psych 326 Evolution of Human Behavior**
Fall. 4 credits.

**Psych 425 Brain and Behavior**
Fall. 3 or 4 credits.

**Soc 430 Social Demography**
Spring. 4 credits.

### Human Evolution and Ecology

**Anthr 101 Introduction to Physical Anthropology**
Fall. 3 credits.

**Anthr 203 Early People: The Archaeological and Fossil Record (also Archaeology 203)**
Fall. 3 credits.

**Anthr 214 Humankind: The Biological Background**
Spring. 3 credits.

**Anthr 290 Primate Behavior and Ecology**
Spring. 4 credits.

**Anthr 490 Primates and Evolution**
Spring. 4 credits.

**Bio S 207 Evolution**
Fall. 3 credits.

**Bio S 261 General Ecology**
Fall or spring. 3 credits.

**Bio S 262 Ecology, Environment, and Society**
Spring. 3 credits.

**Bio S 275 Human Biology and Evolution (also Anthropology 275)**
Fall. 3 credits.

**Bio S 301 Biology and Society I: The Biocultural Perspective**
Fall. 3 or 4 credits.

**Bio S 371 Human Paleontology (also Anthropology 371)**
Spring 4 credits.

**Bio S 378 Evolutionary Biology**
Spring. 4 credits.

**Bio S 468 Systems Ecology**
Fall. 4 credits.

**Bio S 481 Population Genetics**
Spring. 4 credits.

**Bio S 482 Genetics and Society**
Spring. 2 credits.

**Bio S 673 Human Evolution: Concepts, History and Theory (also Anthropology 673)**
Fall. 3 credits.

**B&Soc 404 Energy and Ecological Systems**
Fall. 3 credits.

**B&Soc 447 (also History 447) History of Biology–Evolution**
Fall. 4 credits.

**HSS 330 Ecology and Epidemiology of Health**
Fall. 3 credits.

**Psych 326 Evolution of Human Behavior**
Fall. 4 credits.

**Soc 430 Social Demography**
Spring. 4 credits.

**Soc 431 Techniques of Demographic Analysis**
Fall. 4 credits.

**Vet M 331 Medical Parasitology**
Fall. 2 credits.

**Vet M 664 Introduction to Epidemiology**
Fall. 3 credits.

## Independent Major Program

Dean Lynne Abel, director, 55 Goldwin Smith Hall, 255-3386.

The Independent Major Program is described in the introductory section, p. 137.

**351 Independent Study**
Fall or spring. 1–4 credits. Prerequisite: permission of the program office.

**499 Honors Research**
Fall or spring. 4–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

## Intensive English Program

E. J. Beukenkamp, director

This full-time, noncredit, nondegree program is designed to meet the requirements of foreign students who need to acquire proficiency in English to pursue university-level studies in the United States, as well as for visitors, businessmen, and others seeking competence in the language.

The intensive nature of the program leads to a command of the language in all its aspects—listening, speaking, reading, and writing—in the shortest possible time.

Integrated courses are offered both fall and spring semesters at three levels: beginning (Test of English as a Foreign Language [TOEFL] score below 370), intermediate (TOEFL score below 450), and advanced.

Students who have gained full admission to, or who already are registered in, degree-granting programs at Cornell should consult the section, Modern Languages and Linguistics, for information regarding courses in English as a second language.

The Intensive English Program is administered by the Department of Modern Languages and Linguistics, Cornell University, Morrill Hall, Ithaca, New York 14853-4701, U.S.A. Application materials and information are available directly from the program or by calling 607/ 255-4863.

## International Relations Concentration

Peter Katzenstein, faculty coordinator

Undergraduates interested in an international relations concentration should see Professor Katzenstein (160 Uris Hall).

One of the university's strongest, most diverse fields is international relations. Cornell offers dozens of courses, in many departments and several colleges, that provide a strong education in the field, including courses in government, economics, history, anthropology, rural sociology, nutrition, modern languages and literatures, international comparative labor relations, and many others too numerous to list and keep current.

The purpose of a concentration is to provide a structure for students who have a general interest in the field or who plan to specialize in careers in international law, economics, agriculture, foreign trade, international banking, government service, international organizations, or another cultural or scholarly activity. Some students will major in one of the traditional departments: history, government, economics, foreign literature, and so on. Others will design an independent major. Still others will major in a different discipline, perhaps altogether unrelated, but would like to have a basic understanding of international problems.

For students in any of these categories, the requirements for a *concentration in international relations* are the following six courses or options:

1) Government 181, Introduction to International Relations
2) One appropriate 300-level government course, either in international relations or in the foreign policy of a particular nation
*3) Economics 361, International Trade Theory
*4) Economics 362, International Monetary Theory
5) History 314, History of American Foreign Policy II
6) Any history course dealing with a modern nation, particularly History 379, War and Society: the Origins of the First World War, 1870–1919

*Numbers 3 and 4 can be replaced by choosing two courses from the following:

a) Economics 371, Public Policy and Economic Development
b) Economics 372, Applied Economic Development
c) Economics 373, International Specialization and Economic Development
d) Economics 374, National and International Food Economics

The typical choices among the sequences listed above would be to study European history and government with Economics 361–362 or Third World history and government with Economics 371–374. Reasonable substitutions can also be arranged.

Students are also urged as strongly as possible to acquire full proficiency in, not merely a passing acquaintance with, a modern foreign language. At least a semester of study abroad is advised.

## Center for International Studies

See Interdisciplinary Centers and Programs, p. 17.

## Program of Jewish Studies

S. L. Gilman, acting director and undergraduate adviser (Yiddish literature, German-Jewish history and literature), S. Bacharach (industrial and labor relations, sociology, Jewish thought and social theory), R. Brann (Hebrew and Arabic literatures), W. J. Dannhauser (Jews and Germans, contemporary Jewish thought, Gershom Scholem), S. T. Katz (Jewish history and religion), G. Korman (Holocaust studies, Jewish labor history), A. S. Lieberman (ecology of man and landscape in Israel and the Middle East), D. I. Owen (Near Eastern and ancient Jewish history), D. S. Powers (history of Jews in Islamic lands), G. Rendsburg (biblical studies), E. Rosenberg (Jews in modern European and Anglo-American literature), N. Scharf (Hebrew language), N. Sher (jurisprudence), M. Zamir (Dayan Visiting Professor)

The Program of Jewish Studies is an outgrowth of the Department of Near Eastern Studies. The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Hebrew language and literature have been considerably expanded, and courses in ancient, medieval, and modern Jewish history have been added to the program.

Although further expansion of the program is anticipated, it presently enables students to obtain basic instruction and specialization in the fields of Semitic languages; the Hebrew Bible; the apocryphal and Tannaitic literatures; medieval Hebrew literature; modern Jewish thought; modern Hebrew literature; ancient, medieval, and modern Jewish history; and Yiddish language and literature. In some of these fields students may take courses both on graduate and undergraduate levels. Faculty throughout the university provide breadth to the program by offering courses in related areas of study.

### Courses Offered

**Elementary Modern Hebrew I and II (Near Eastern Studies 101–102)**
Fall and spring.

**Elementary Modern Hebrew (Near Eastern Studies 103)**
Summer.

**Introduction to Near Eastern Civilization (Near Eastern Studies 198)**
Spring.

**Intermediate Modern Hebrew (Near Eastern Studies 201–202)**

**Exodus and Conquest (Near Eastern Studies 226)**
Spring.

**Genesis (Near Eastern Studies 228 and 628)**
Fall.

**Jurisprudence and the Holocaust (Near Eastern Studies 244)**
Fall.

**Seminar in Jewish Mysticism: From the Zohar to Hasidism (Near Eastern Studies 246)**
Spring.

**Introduction to Classical Jewish History (Near Eastern Studies 248)**
Fall.

**Introduction to Modern Jewish History (Near Eastern Studies 249)**
Spring.

**Agriculture and Society in the Ancient Near East (Near Eastern Studies 264)**
Spring.

**Modern History of the Middle East: Changing Politics, Society, and Ideas (Near Eastern Studies 294 and Government 358)**
Fall.

**Advanced Modern Hebrew I (Near Eastern Studies 301)**
Fall.

**Akkadian (Near Eastern Studies 333–334)**
Fall and spring.

**Ugaritic (Near Eastern Studies 337–338)**
Fall and spring.

**Introduction to Field Archaeology in Israel (Near Eastern Studies 364)**
Summer.

**Jews of Arab Lands (Near Eastern Studies 346)**
Fall.

**Anti-Semitism in Germany and the Jewish Response (also German Studies 349) (Near Eastern Studies 349)**
Fall.

**The History and Archaeology of Ancient Egypt (Near Eastern Studies 367)**
Fall.

**Topics in the Middle East: (Government 352 and Near Eastern Studies 397)**
Fall.

**Independent Study, Undergraduate Level (Near Eastern Studies 491–492)**

**Independent Study Honors Seminar (Near Eastern Studies 499)**

**Genesis (Near Eastern Studies 628 and 228)**

**Independent Study, Graduate Level (Near Eastern Studies 691–692)**

**Courses Not Offered 1989–90.**

**Elementary Classical Hebrew (Near Eastern Studies 121–122)**

**Modern Hebrew Literature in Translation (Near Eastern Studies 207)**

**Readings in Classical Hebrew Literature: The Art of Biblical Narrative (Near Eastern Studies 221)**

**Readings in Classical Hebrew Literature: The Art of Biblical Poetry (Near Eastern Studies 222)**

**Introduction to the Bible (Near Eastern Studies 223)**

**Judaic Literature in Late Antiquity (Near Eastern Studies 225)**

**Introduction to the Prophets (Near Eastern Studies 227)**

**Classics of Hebrew Literature, a Survey: The Hebrew Literary Tradition (Near Eastern Studies 231 and Comparative Literature 231)**
Fall.

**The Lyrics of Love and Death: Medieval Hebrew Poetry in Translation (Near Eastern Studies 233, Medieval Studies 233, and Comparative Literature 333)**
Spring.

**Muslim Spain: Literature and Society (Near Eastern Studies 234 and Comparative Literature 234)**
Spring.

**Aramaic (Near Eastern Studies 238)**

**The Holocaust: European Jewry, 1933–1945 (Near Eastern Studies 241)**
Spring.

**Israel: History and Geography (Near Eastern Studies 242)**
Summer.

**The History and Archaeology of Ancient Israel to 450 B.C.E. (Near Eastern Studies 243)**
Spring.

**The Emergence of the Modern Jew: 1648–1948 (Near Eastern Studies 245)**

**History of Jewish Textual Interpretation (Near Eastern Studies 247)**

**Ancient Seafaring (Near Eastern Studies 261 and Archaeology 275)**

**Introduction to Biblical Archaeology (Near Eastern Studies 263)**

**Agriculture and Society in the Ancient Near East (Near Eastern Studies 264)**

**Women in Jewish Literature: Tradition and the Literary Imagination (Near Eastern Studies 291 and Comparative Literature 291)**

**Women in the Hebrew Bible (Near Eastern Studies 292 and Women's Studies 292)**

**Judaism and Islam in Comparative Perspective (Near Eastern Studies and Medieval Studies 293)**

**Advanced Modern Hebrew II (Near Eastern Studies 302)**

**Seminar in Modern Hebrew Literature: The Short Story (Near Eastern Studies 303)**

**Seminar in Modern Hebrew Literature: The Novel (Near Eastern Studies 304)**

**The History and Archaeology of the Ancient Near East (Near Eastern Studies 366 and Archaeology 310)**

**Undergraduate Seminar in Biblical Literature: Prophecy in Ancient Israel (Near Eastern Studies 322)**

**Ancient Near Eastern Literature (Near Eastern Studies 332)**

**Readings in Akkadian Texts (Near Eastern Studies 335–336)**

**Special Topics in Near Eastern Studies (Near Eastern Studies 341–342)**

**The Jewish Community throughout History (Near Eastern Studies 343)**

**Age of the Patriarchs (Near Eastern Studies 344)**

**Anti-Semitism in Germany and the Jewish Response (Near Eastern Studies 349 and German Studies 349)**

**Yiddish Literature in Translation (Near Eastern Studies 373 and German Studies 350)**

**Interconnections in the Eastern Mediterranean World in Antiquity (Near Eastern Studies 361)**

**The History and Archaeology of Ebla (Near Eastern Studies 362)**

**The History and Culture of Ancient Mesopotamia (Near Eastern Studies 363)**

**The Divided Monarchy (Near Eastern Studies 365)**
Spring.

**The History and Archaeology of the Ancient Near East (Near Eastern Studies 366 and Archaeology 310)**

**The Shtetl in Modern Yiddish Fiction in English Translation (German Studies 375 and Near Eastern Studies 375)**

**The Yiddish Novel in English Translation (German Studies 377 and Near Eastern Studies 377)**

**Jewish Workers in Europe and America 1789–1948 (Industrial and Labor Relations 381 and Near Eastern Studies 381)**

**Advanced Hebrew (Near Eastern Studies 402)**

**The Double Identity Crisis: German Jewish Women from Rahal Varnhagen to Hannah Arendt (Near Eastern Studies 409, German Studies 409, Society for the Humanities 409, and Women's Studies 409)**

**Readings in Judeo-Arabic: Medieval Judeo-Arabic and Hebrew Poetics (Near Eastern Studies 432)**
Spring.

**The Holocaust Survivor as Author (Near Eastern Studies and German Studies 444/644) Seminar in Jewish Mysticism (Near Eastern Studies 693)**

## John S. Knight Writing Program

S. Davis, M. Gilliland, K. Gottschalk, K. Hjortshoj, N. Kaplan, B. LeGendre, J. Martin, J. Pierpont, S. Siskin, D. Williams

### Freshman Writing Seminar

**137–138 Workshops in English Composition**

137, fall; 138, spring. 3 credits each term. Each section limited to 12 students. S-U grades only.

Hours to be arranged. J. Martin and staff. An intensive writing experience, this course is designed for those whose composition skills need extra attention. In class discussion, students respond to each other's work and analyze brief additional readings. The average weekly syllabus includes small classes, a tutorial with the instructor, and a paper plus revision. Each section of this course is individually shaped to respond to the needs of students in that particular class.

### Advanced Writing Seminars

**201 Writing in the Humanities (also English 286)**

Fall or spring. 3 credits. Limited to 17 students. Registrants must have completed freshman writing requirements. S-U grades with permission of instructor. Carries distribution credit as English 286.

Fall: M W F 11:15–12:05.

Spring: T R 11:40–12:55. S. Davis.

Writing 201 helps students strengthen reading and writing skills valuable in all disciplines and particularly appropriate to the humanities. It also encourages them to reflect on what they do when they interpret and write about works of literature, philosophy, and visual art. Just what happens when we "read" such works—and what do we mean when we claim to understand them? What is interpretation, and how is it best presented in writing to an informed audience? How are conflicts of interpretation resolved? How do historical knowledge and theory affect our interpretations? What kinds of knowledge and self-awareness does study in the humanities yield? Works studied in the course challenge our understanding by their strangeness or their uncanny familiarity. They show Western reason in conflict with its real or supposed opposites—alien humanity, artistic inspiration, illusion, madness, the divine, and the will to power. Readings and viewings may include paintings by da Vinci and Velasquez; novels by Nabokov, Coetzee, and Achebe; Plato's *Gorgias* or *Protagoras*; Nietzsche's Birth of *Tragedy*; Euripides' *The Bacchae*; and Peter Weiss's *Marat/Sade*, the play and the film.

Students in the course write (and often rewrite) 30 pages of papers and confer frequently with the instructor.

**202 Writing in the Social Sciences (also Sociology 202)**

Fall or spring. 3 credits. Limited to 17 students. Prerequisite: at least one social-science course. Carries distribution credit as Sociology 202.

Fall: T R 11:40–12:55. Spring: M W F 11:15–12:05. K. Hjortshoj.

This course offers students the opportunity to strengthen their writing, become more aware of the diverse writing styles and strategies used in the social sciences, and experiment with new approaches to composition and revision. Students will benefit from detailed written comments on their work and from extensive discussion of student writing in class. Initial writing and reading assignments will explore styles of description, the ways in which writers adapt their work to different audiences, the differences between academic and popular writing in a particular field, and methods of revision. Subsequent assignments will include the interpretation of primary data, the review of a documentary film, and writing based on research literature in a field of the student's choice. The instructor will hold frequent individual conferences with students to discuss finished essays and work in progress. During the semester students will write, and often revise, 8 to 10 papers—about 40 pages of finished work.

**203 Writing for Readers/Reading for Writers (also English 283)**

Spring. 3 credits. Limited to 17 students. Prerequisite: permission of the instructor.

T R 10:10–11:25. J. Martin.

This course will develop students' writing abilities by teaching them to become skilled readers of their own work as well as that of others. By studying our own preconceptions about writing and through readings on language and rhetoric, we will work to develop a critical vocabulary for evaluating writing, focusing on such issues as the role of audience, patterns of organization, the varieties of language, and the recognition and manipulation of styles. The class will focus on how writers can respond to the work of others through informed evaluations and criticisms and on how writers can learn from the evaluations of their readers. In considering how a reader can help direct and influence subsequent drafts of an essay, the writer learns to strengthen writing skills by rewriting in response to the reader's critical evaluation. In classes, in editing groups, and in written responses, students will evaluate their own work and that of others to develop effective writing and revising strategies. Students will write and revise at least eight essays during the semester. Qualified students may have the opportunity to continue the practice of reading and responding by becoming tutors in the Writing Workshop's Walk-In Service.

## Latin American Studies

B. J. Isbell, director; L. Benería, R. Blake, D. Block, D. Castillo, T. Davis, G. Fields, M. Gaylord, W. Goldsmith, C. Greenhouse, J. Haas, J. Henderson, T. Holloway, S. Jackson, T. Jordan, E. Kenworthy, S. Kyle, T. Lynch, O. Mitchell, C. Morris, J. Piëdra, T. Poleman, A. Power, B. Rosen, D. Sanjur, D. Solá, J. M. Stycos, M. Suñer, H. D. Thurston, J. Tittler, A. VanWambeke, K. Vernon, L. Williams, F. Young

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Undergraduate students may arrange an independent major in Latin American studies, and graduate students may pursue a minor in Latin American studies while majoring in the graduate field of their choice. The College of Arts and Sciences offers Latin American studies courses in anthropology, economics, government, history, and sociology. In addition, there is a varied language, literature, and linguistics curriculum in Spanish, Portuguese, and Quechua. The student may also pursue Latin American studies in the College of Agriculture and Life Sciences; the College of Architecture, Art, and Planning; the College of Human Ecology; and the School of Industrial and Labor Relations.

For further information and a current course listing, students should contact the program office, 190 Uris Hall.

## Law and Society

D. Dunning, director, 240 Uris Hall, 255-6391, C. Bohmer (sociology), C. Carmichael (comparative literature), D. A. Dunning (psychology), C. Greenhouse (anthropology), G. Hay (economics), C. Holmes (history), S. Jasanoff (science, technology, and society), M. Katzenstein (government), D. B. Lyons (philosophy), R. Miller (philosophy), M. B. Norton (history), R. Polenberg (history), D. Powers (Near Eastern studies), J. Rabkin (government), L. Scheinman (government)

The Law and Society Program offers an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science, technology and society, and sociology. In addition, undergraduates in the College of Arts and Sciences can major in law and society through the Independent Major Program. Students who wish to graduate with a concentration in law and society should consult the director of the program or one of the advisers listed above to plan a coherent program of study. Such a program should ordinarily include at least four courses from the following list. Other courses may be substituted with the approval of the adviser.

**Anthropology 328 Law and Culture**

**Anthropology 329 Power and Culture**

**Anthropology 627 Legal Anthropology**

**Comparative Literature 326 Christianity and Judaism**

**Comparative Literature 427 Seminar on Biblical Law**

**Economics 304 Economics and the Law**

**Economics 354 Economics of Regulation**

**Government 313 The Nature, Functions, and Limits of Law**

**Government 323 The "Fourth" Branch**

**Government 327 Civil Liberties in the United States**

**Government 328 Constitutional Politics: The United States Supreme Court**

**Government 364 Liberty, Equality, and the Social Order**

**Government 389 International Law**

**Government 407 Law, Science, and Public Values**

**Government 414 The Administrative State**

**Government 428–429 Government and Public Policy: An Introduction to Analysis and Criticism**

**Government 457 Comparative Public Law: Legal Controls on Government in Europe and America**

**Government 489 International Law and Regime Development**

**History 275 Crime and Punishment: From the Puritans to Mickey Spillane**

**History 318 American Constitutional Development**

**History 367 Church and State during the Middle Ages**

**History 421 Constitutionalism as a Cultural Problem in America**

**History 430 Law and Authority in American Life**

**Near Eastern Studies 357 Islamic Law and Society**

**Philosophy 319 Philosophy of Marx**

**Philosophy 342 Law, Society, and Morality (also Law 666)**

**Philosophy 446 Topics in Social and Political Philosophy**

**Psychology 265 Psychology and Law**

**Sociology 207 Ideology and Social Concerns**

**Sociology 310 Sociology of War and Peace**

**Sociology 348 Sociology of Law**

**Sociology 372 Sex Discrimination: Law and Social Policy (also Government 306)**

**Sociology 409 Interpretation, Authority, and the Law (also Government 409)**

**Biology and Society 406 Biotechnology, Society, and Law**

**Biology and Society 426 The Social Functions of Law and Medicine**

**City and Regional Planning 480 Environmental Politics**

**City and Regional Planning 656 Land Resources Protection Law**

**Civil and Environmental Engineering 524 Contemporary Issues in Environmental Law and Policy**

**Civil and Environmental Engineering 525 Environmental Law I**

**Consumer Economics and Housing 465 Consumers and the Law**

**Industrial and Labor Relations 607 Arbitration and Public Policy**

**Industrial and Labor Relations 680 Problems in Union Democracy**

## Medieval Studies

Winthrop Wetherbee, director; B. B. Adams, F. M. Ahl, R. Brann, E. W. Browne, R. G. Calkins, A. M. Colby-Hall, R. T. Farrell, A. B. Groos, T. D. Hill, J. H. Jasanoff, J. J. John, R. E. Kaske, W. J. Kennedy, N. Kretzmann, S. Mehrez, G. M. Messing, M. Migiel, C. Morón-Arroyo, J. M. Najemy, J. Noblitt, D. S. Powers, D. M. Randel, S. Senderovich, B. Tierney, W. Wetherbee

Undergraduates interested in Medieval Studies have an opportunity to take courses in the following areas of instruction: medieval Hebrew, Arabic, and Latin; Old English, Middle English, and medieval Irish and Welsh; Old Provençal and medieval French; medieval Spanish and Italian; Old Saxon, Old High German, Middle High German, Gothic, Old Norse (Old Icelandic); Old Russian; comparative literature; medieval art and architecture; medieval history; Latin paleography; medieval philosophy; musicology; comparative Slavic linguistics, comparative Romance linguistics, and comparative Germanic linguistics.

Undergraduates who want to undertake an independent major or a concentration in Medieval Studies should consult the director of the program, 259 Goldwin Smith Hall.

Information for prospective graduate students is contained in the catalog of the Graduate School and in a brochure on Medieval Studies, which can be obtained from the director.

### Freshman Writing Seminars

**101 Aspects of Medieval Culture**
Fall or spring. 3 credits.
Staff.
Under this very general heading a variety of courses are offered each year. A course may center on a particular kind of writing (e.g., biography, narratives of crusades or pilgrimages) or on a particular theme (e.g., the status of the individual, women in medieval society, encounters with other cultures and with the supernatural). In most cases, in addition to exploring the distinctive features of the medieval world view, the course will compare medieval treatments of these forms or themes with the work of modern writers.

**102 The Literature of Chivalry**
Fall, spring, or summer. 3 credits.
Staff.
Romances of chivalry, especially those devoted to King Arthur and the knights of the Round Table, were not only the most popular literature of medieval Europe, but a vehicle for examination of social ideals. This course explores the development of chivalric culture in such works as the *Lais* of Marie de France, the romances of Chrétien de Troyes, French and German stories of Tristan and Perceval, *Sir Gawain and the Green Knight*, Malory's *Morte d'Arthur*, and modern works on related themes. Discussion will investigate fundamental problems raised by these works: the individual in society, the development of the hero, the nature of love, and the conflict of religious and secular ideals.

**103 Legend, Fantasy, and Vision**
Fall or spring. 3 credits.
Staff.
Re-creation of the legendary past, imaginary voyages to other worlds, and the invention of ideal societies are among the ways in which medieval writers attained a perspective on social, scientific, and religious questions. This course will survey examples of such writing from various medieval cultures (e.g., Icelandic sagas, the Irish *Voyage of St. Brendan*, the Anglo-Saxon epic *Beowulf*, French and German romances of King Arthur and his knights, Dante's *Divine Comedy*), and we will consider the continuity of these writings with selected works of modern fiction.

### Graduate Seminars

Courses in various aspects of medieval studies are offered each year in numerous cooperating departments, including Classics, Comparative Literature, English, History, History of Art, Modern Languages and Linguistics, German Literature, Romance Studies, Russian Literature, Music, Near Eastern Studies, and Philosophy, and by the Society for the Humanities. An up-to-date listing of the courses offered in each term will be made available at the Medieval Studies office as soon as the *Course and Time Roster* is published.

## Modern European Studies Concentration

Susan Tarrow, coordinator

Students from any college may choose an undergraduate concentration in modern European studies to complement any major in any college. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The concentration has two tracks:

**European culture** comprises courses in English and European literatures, comparative literature, semiotics, fine arts, music, architecture, film and theater arts, and women's studies.

**European society** comprises courses in European and comparative politics, social and political history, anthropology, sociology, philosophy, women's studies, and related courses in the School of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.

The requirements for completion of the concentration are

1) Completion of the European studies interdisciplinary core course (History 283/ Government 343/German 285)
2) Three additional courses in European studies with at least *one* from each of the two tracks. (No more than one of these courses may be used to satisfy requirements for the student's major.)
3) Competence in at least one modern Western European language (i.e., completion of a 300-level course or equivalent with a grade of at least B- or demonstration of an advanced level of competence in an oral proficiency interview test where available).

Students who want to take honors in the concentration must choose a senior seminar in the field and complete an honors essay. All concentrators are encouraged to spend a semester or more in a program of study in Europe and to participate in the Language House Program.

Undergraduates in the College of Arts and Sciences can major in European studies through the Independent Major or College Scholar programs.

For a list of relevant courses and seminars, departmental advisers, and any further information, contact Susan Tarrow, coordinator of the Modern European studies concentration, at the Western Societies Program, 130 Uris Hall (telephone: 255-7592).

## Religious Studies

N. Kretzmann, chairman; C. M. Arroyo, R. Baer, J. P. Bishop, J. Boon, R. Brann, R. Calkins, C. M. Carmichael, K. Clinton, D. Gold, J. Henderson, J. John, S. Katz, T. Kirsch, R. L. Moore, S. O'Connor, D. Owen, D. Powers, D. Randel, G. Rendsburg, H. D. Smith, C. Strout, B. Tierney, A. Wood.

Religious Studies is an interdisciplinary program reflecting a wide variety of academic interests and disciplines. The intention of the program is to provide a formal structure for the study of religions at the undergraduate level. A student may fulfill the requirement for a concentration in religious studies by completing a minimum of four courses that have been approved by an adviser in the area of concentration.

The program is administered by a committee. The chairman is Professor Kretzmann, 320 Goldwin Smith Hall.

Courses in religious studies currently offered include the following:

**Anthropology 343 Religion, Family and Community in China**
Fall. 4 credits.
P.S. Sangren.

**Anthropology 424 Myth, Ritual and Sign**
Fall. 4 credits.
J. T. Siegel.

**Anthropology 619 Anthropological Approaches to the Study of Buddhisms in Asia**
Fall. 4 credits.
A. T. Kirsch.

**Asian Studies 148 Myths, East and West**
Spring. 3 credits.

**Asian Studies 250 Introduction to Asian Religions**
Fall. 3 credits.

**Asian Studies 349 Myth and Literature in India**
Spring. 4 credits.
D. Gold, H. D. Smith.

**Asian Studies 351 The Religious Traditions of India**
Fall. 4 credits.
D. Gold.

**Asian Studies 355 Japanese Religions**
Spring. 4 credits.
Staff.

**Asian Studies 357 Chinese Religions**
Fall. 4 credits.
Staff.

**Asian Studies 440 Meditation Schools of East Asian Buddhism**
Spring. 4 credits.

**Asian Studies 460 Indian Meditation Texts**
Spring. 4 credits.
D. Gold.

**Asian Studies 650 Seminar on Asian Religions**
Spring. 2–4 credits.
Staff.

**Comparative Literature 359 Being, God, Mind: Humanistic Revolutions**
Spring. 4 credits.
C. Arroyo.

**History 346 Religion and Cultural Life of 19th Century Americans**
Spring. 4 credits.
R. L. Moore.

**History 427 Religion, Gender, and Family**
Spring. 4 credits.
M. B. Norton.

**History 438 Francis of Assisi and Franciscans**
Fall. 4 credits.
B. Tierney.

**History 442 Religion and Politics in the United States**
Fall. 4 credits.
R. L. Moore.

**Natural Resources 407 Religion, Ethics, and the Environment**
Spring. 3 credits.
R. Baer.

**Near Eastern Studies 226 Exodus and Conquest**
Spring. 3 credits.
G. Rendsburg.

**Near Eastern Studies 228 Genesis**
Fall. 3 credits.
G. Rendsburg.

**Near Eastern Studies 229 Introduction to the New Testament**
Fall. 3 credits.
P. Perkins.

**Near Eastern Studies 324 The History of the Early Church**
Spring. 4 credits.
P. Perkins.

**Near Eastern Studies 346 Jews of Arab Lands**
Fall. 4 credits.
D. S. Powers.

**Near Eastern Studies 351 Introduction to Islamic Law**
Spring. 4 credits.
D. S. Powers.

**Near Eastern Studies 352 Islam and the West**
Spring. 3 credits.

**Philosophy 263 Reason and Religion**
Spring. 4 credits.
N. Kretzmann.

**Religious Studies 101 Introduction to the Study of Religion**
Spring. 3 credits.
D. Gold and others.

## Russian and Soviet Studies Major

M. G. Clark (emeritus), G. J. Staller, J. Vanek (economics); M. Rush (government); W. M. Pintner (history); W. W. Austin (music); U. Bronfenbrenner (emeritus, psychology); P. Carden, G. Gibian, N. Pollak, M. Scammell, S. Senderovich, G. Shapiro (Russian literature); L. H. Babby, W. Browne, R. L. Leed (Slavic linguistics)

The major in Russian and Soviet studies has the following requirements:

1) Qualification in Russian.

2) At least one course relating to Russia, at the 200 level or above, in each of the following departments: Government, Economics, History, and Russian Literature. (A course in another department may be substituted for one of the above with the consent of the major adviser.)

3) At least three additional courses, at the 250 level or above, in one of the following departments: Government, History, Economics, or Russian Literature. These courses are selected in consultation with the student's adviser and are to be approved as appropriate for a major in Russian and Soviet studies.

Professor Pintner will serve as adviser for all majors, but each student should also designate an additional adviser in the department in which his or her work is concentrated.

### Courses

**[Economics 329 Eastern Europe Today: Economics, Government, Culture (also Government 326 and Russian Literature 329)**
Fall. 4 credits. Not offered 1988–89.
G. Staller, M. Rush, G. Gibian.]

**Economics 367/567 Comparative Economic Systems**
Fall. 4 credits.
G. Staller.

**Economics 381 Economics of Participation and Worker Management**
Fall. 4 credits.
J. Vanek.

**Economics 382 The Practice and Implementation of Self-Management**
Spring. 4 credits.
J. Vanek.

**Economics 681 Self-Management**
Fall. 4 credits.
J. Vanek.

**Economics 682 Seminar on Economics of Participation and Labor-Managed Systems**
Spring. 4 credits.
J. Vanek.

**[German Studies 376 Contemporary Soviet Latvian Literature**
Fall. 4 credits. Taught in Latvian. Not offered 1989–90.
I. Ezergailis.]

**Government 333 Government and Politics of the Soviet Union**
Fall. 4 credits.
M. Rush.

**[Government 446 Comparative Communism**
Fall. 4 credits. Not offered 1989–90.
M. Rush.]

**[Government 481 Foreign Policy of the U.S.S.R.**
Spring. 4 credits. Not offered 1989–90.
M. Rush.]

**History 252 Russian History to 1800**
Fall.
Staff.

**[History 253 Russian History since 1800**
Spring. 4 credits. Not offered 1989–90.
W. M. Pintner.]

**[History 471 Russian Social History**
Spring. 4 credits. Not offered 1989–90.
W. M. Pintner.]

**[History 486 The Formation of the Russian Intelligentsia, 1700–1850**
Fall. 4 credits. Not offered 1989–90.
W. M. Pintner.]

**[History 677 Seminar in Russian History**
Fall or spring. 4 credits. Not offered 1989–90.
W. M. Pintner.]

**Human Development and Family Studies 488 (also Psychology 488) Development in Context**
Spring. 4 credits.
U. Bronfenbrenner.

**[Music 668 Shostakovich**
Spring. 4 credits. Not offered 1989–90.
W. W. Austin.]

**[Polish 131–132 Elementary Course**
131, fall; 132, spring. 3 credits each term. Not offered 1989–90.
W. Browne.]

**Polish 133–134 Intermediate Course**
133, fall; 134, spring. 3 credits each term.
W. Browne.

**[Russian 101–102 Elementary Course**
101, fall; 102, spring. 6 credits each term. Not offered 1989–90.
R. L. Leed and staff.]

**Russian 103 Freshman Writing Seminar: Classics of Russian Thought and Literature**
Fall or spring. 3 credits.
Staff.

**Russian 104 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces**
Fall or spring. 3 credits.
Staff.

**Russian 105 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces**
Fall or spring. 3 credits.
Staff.

**[Russian 107 Freshman Writing Seminar: Writers on Writing**
Fall or spring. 3 credits. Not offered 1989–90.
Staff.]

**Russian 121–122 Elementary Course**
121, fall; 122, spring. 4 credits each term.
R. L. Leed and staff.

**Russian 123 Continuing Russian**
Fall or summer. 4 credits.
Staff.

**Russian 201–202 Readings in Russian Literature**
201, fall; 202, spring. 3 credits each term.
N. Pollak or G. Shapiro.

**Russian 203–204 Intermediate Composition and Conversation**
203, fall or spring; 204, spring. 3 credits each term.
L. Paperno and S. Paperno.

**Russian 205–206 Russian for Scientists**
205, fall; 206, spring. 2 credits each term.
S. Paperno, R. L. Leed.

**Russian 301–302 Advanced Russian Grammar and Reading**
L. H. Babby

**Russian 303–304 Advanced Composition and Conversation**
303, fall; 304, spring. 4 credits each term.
L. Paperno and S. Paperno.

**Russian 305–306 Directed Individual Study**
305, fall; 306, spring. 2 credits.
Staff.

**Russian 307 Themes from Russian Culture I**
Fall. 4 credits.
M W F 9:05. G. Shapiro.

**[Russian 308 Themes from Russian Culture II**
Spring. 4 credits. Not offered 1989–90.
G. Shapiro.]

**[Russian 329 Eastern Europe Today: Economics, Government, Culture (also Economics 329 and Government 326)**
Fall. 4 credits. Not offered 1989–90.
G. Gibian, M. Rush, G. Staller.]

**Russian 330 The Soviet Union: Politics, Economics, and Culture (also Economics 330 and Government 330)**
Spring. 4 credits.
T R 2:55–4:10. G. Gibian, M. Rush, G. Staller.

**Russian 331 Introduction to Russian Poetry**
Fall. 4 credits.
N. Pollak.

**Russian 333 Twentieth-Century Poetry**
Spring. 4 credits.
T R 11:40–12:55. N. Pollak.

**Russian 334 The Russian Short Story**
Spring. 4 credits.
S. Senderovich.

**[Russian 335 Gogol**
Spring. 4 credits. Not offered 1989–90.
Staff.]

**[Russian 350 Education and the Western Literary Tradition (also Comparative Literature 350 and College Scholar 350)**
Spring. 4 credits. Not offered 1989–90.
P. Carden.]

**Russian 367 The Russian Novel (also Comparative Literature 367)**
Fall. 4 credits.
T R 9:05 and one hour to be arranged.
G. Gibian.

**[Russian 371 Literature of the Third Wave**
Spring. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 373 Chekhov**
Fall. 4 credits. Not offered 1989–90.
S. Senderovich.]

**[Russian 375 Literature of the Soviet Period 1917–1945**
Fall. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 376 Literature of the Soviet Period 1945–1985**
Spring. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 380 Soviet Dissident Literature**
Fall. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 387 Teaching and Learning: Ideas of Education in the Western Tradition (also Comparative Literature 387)**
Spring. 4 credits. Not offered 1989–90.
P. Carden and guest lecturers.]

**[Russian 388 Ideas and Form in Novels of Social Inquiry (also Comparative Literature 388)**
Spring. 4 credits. Not offered 1989–90.
G. Gibian.]

**[Russian 390 The Power of Nationalism: Expressions of National Feelings in Politics, Literature, History, and the Arts (also Comparative Literature 390)**
Fall. 4 credits. Not offered 1989–90.
G. Gibian and others.]

**Russian 393 Honors Essay Tutorial**
Fall or spring. 4 credits each term.
Staff.

**[Russian 400 Reading the Great Tradition**
Fall. 4 credits. Prerequisite: Russian 202 or equivalent. Recommended: a course at the 300 or 400 level in which reading has been done in Russian. This course may be counted toward the 12 credits of Russian literature in the original language required for the Russian major. Not offered 1989–90.
T R 2:55–4:10. Staff.]

**[Russian 401–402 History of the Russian Language**
401, fall; 402, spring. 4 credits each term. Not offered 1989–90.
L. H. Babby.]

**[Russian 403–404 Linguistic Structure of Russian**
403, fall; 404, spring. 4 credits. Not offered 1989–90.
L. H. Babby.]

**[Russian 409 Russian Stylistics**
Fall. 4 credits. Not offered 1989–90.
S. Senderovich.]

**Russian 413–414 Advanced Conversation and Stylistics**
413, fall; 414, spring. 4 credits each term.
L. Paperno and S. Paperno.

**[Russian 418 Pedagogy and the Nineteenth Century Novel (also Comparative Literature 418)**
Fall. 4 credits. Not offered 1989–90.
P. Carden.]

**[Russian 431 Contemporary Russian Prose**
Fall. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 432 Pushkin**
Spring. 4 credits. Not offered 1989–90.
S. Senderovich.]

**Russian 491 Reading Course: Russian Literature in the Original Language**
Fall or spring. 1 credit.
Staff.

**Russian 492 Supervised Reading in Russian Literature**
Fall or spring. 1–4 credits each term.
Hours to be arranged. Staff.

**[Russian 600 Proseminar: Research Methodology in Russian Literature**
Fall. 4 credits. Not offered 1989–90.
P. Carden.]

**Russian 601 Old Church Slavic**
Fall. 4 credits.
E. W. Browne.

**Russian 602 Old Russian**
Fall. 4 credits.
L. H. Babby.

**Russian 611 Supervised Reading and Research**
Fall or spring. 2–4 credits.
Staff.

**[Russian 619 Seventeenth-Century Russian Literature**
Fall. 4 credits. Not offered 1989–90.
G. Shapiro.]

**[Russian 620 Twentieth-Century Russian Poetry**
Spring. 4 credits. Not offered 1989–90.
N. Pollak.]

**[Russian 621 Old Russian Literature**
Spring. 4 credits. Not offered 1989–90.
S. Senderovich.]

**[Russian 624 Russian Romanticism**
Fall. 4 credits. Not offered 1989–90.
S. Senderovich.]

**[Russian 625 Russian Realism**
Spring. 4 credits. Not offered 1989–90. Also open to advanced undergraduates with permission of instructor.
P. Carden.]

**Russian 633–634 Russian for Graduate Specialists**
633, fall; 634, spring. 4 credits each term.
L. Paperno and S. Paperno.

**Russian 651–652 Comparative Slavic Linguistics**
651, fall; 652, spring. 4 credits each term.
E. W. Browne.

**[Russian 669 Seminar: Dostoevsky**
Fall. 4 credits. Not offered 1989–90.
G. Gibian.]

**Russian 671 Seminar in Nineteenth-Century Russian Literature**
Fall. 4 credits.
T 4:15. S. Senderovich.

**[Russian 672 Seminar in Twentieth-Century Russian Literature**
Spring. 4 credits. Not offered 1989–90.
P. Carden.]

**Russian 673 The Russian Nabokov**
Fall. 4 credits. Also open to advanced undergraduates.
R 4:15–6:15. M. Scammell.

**[Russian 674 Solzhenitsyn**
Fall. 4 credits. Not offered 1989–90.
M. Scammell.]

**[Russian 702 Graduate Seminar: Neglected Masterpieces of Short Russian Prose**
Spring. 4 credits. Not offered 1989–90.
G. Gibian.]

**[Serbo-Croatian 131–132 Elementary Course**
131, fall; 132, spring. 3 credits each term. Not offered 1989–90.
W. Browne.]

**Serbo-Croatian 133–134 Intermediate Course**
133, fall; 134, spring. 3 credits each term.
W. Browne.

**[Ukrainian 131–132 Elementary Course**
131, fall; 132, spring. 3 credits each term. Not offered 1989–90.
W. Browne.]

## Concentration in Science, Technology and Society

The undergraduate concentration in Science, Technology and Society (STS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The concentration is intended for students with varied academic interests and career goals. It offers majors in the natural sciences and engineering an opportunity to explore the social, political, and ethical implications of their selected fields of specialization. At the same time it offers students majoring in the humanities and social sciences a chance to study the processes, products, and impacts of science and technology from varied disciplinary perspectives. Drawing on course offerings in several departments, programs, and colleges, the STS concentration permits students to develop an individualized program of study closely related to their major field. STS courses are organized under four major headings: social relations of science and technology; science, technology, and public policy; ethics and values in science and technology; and biology, medicine, and society.

To satisfy the requirements for the STS concentration, students must complete a minimum of four courses selected from the following list. At least one course should be chosen from the list of core courses. The remaining three course should be chosen in consultation with an STS faculty adviser and must be drawn from at least two of the areas described below.

Interested students may obtain further information about advisers and courses by contacting the STS main office, 632 Clark Hall, 255-3810. (This concentration is awaiting approval by the College of Arts and Sciences in fall 1989.)

**STS Core Courses**
Govt 407 Law, Science, and Public Values (also Bio & Soc 407)
Hist 281–282 Science in Western Civilization
Hist 380 Social History of Western Technology
Soc 355 Social and Political Studies of Science (also Soc 355, CRP 442)
Soc 515 The Politics of Technical Decisions (also CRP 541, Mgmt NBA 686, Bio & Soc 415, Govt 628)

**Social Relations of Science and Technology**
BioSci 202 History of Biology (also Hist 288, Bio & Soc 288)
Comm 360 Science Writing for Public Information
Comm 626 Impact of Communication Technologies
Engr 101 The Computer Age (also CS 101)
Engr 250 Technology in Western Society (also EE 250)
Engr 292 The Electrical and Electronic Revolutions (also EE 292)
Hist 287 Evolution (also BioSci 207)
Hist 686 Historiography of Science and Technology
Hist 481 History of Modern Physics (also Physics 481)
ILR 626 Science and Innovation in Industry
Nat Res 331 Beyond the Year 2000 (also Govt 331)
Physics 206 War and Peace in a Nuclear Age
Psyc 277 Psychology of Sex Roles (also Wms Stds 277, Soc 277)
Rur Soc 208 Appropriate Social Technologies
Rur Soc 324 Environment and Society

**Science, Technology, and Public Policy**
Bio&Soc 406 Biotechnology and Law
Bio&Soc 426 Medicine and the Law
CEE 598 Decision Making in Engineering Systems
Econ 302 The Impact and Control of Technological Change (also Govt 302, CRP 440)
Engr 400 Science, Risk, and Public Policy (also T&Am 400, Econ 358)
Govt 381 The Politics of Defense Spending
ILR 374 Technology and the Worker

**Ethics and Values in Science and Technology**
BioSci 205 Ethics and Medicine (also Phil 245, Bio&Soc 205)
BioSci 206 Environmental Ethics (also Phil 246, Bio&Soc 206)
Engr 360 Ethical Issues in Engineering
HSS 600.7 Professional Ethics and Public Policy
NatRes 407 Religion, Ethics and the Environment
Phil 381 Philosophy of Science: Knowledge and Objectivity

**Biology, Medicine, and Society**
Bio&Soc 232 Recombinant DNA Technology and Its Applications
Bio&Soc 322 Medicine and Civilization
BioSci 301 Biology and Society: The Biocultural Perspective
BioSci 469 Food, Agriculture, and Society
Bio&Sci 482 Human Genetics and Society
Entomol 370 Pesticides and the Environment
NatRes 401 Environmental and Natural Resources Policies
Psych 387 Health and Disease

## Social Relations Major

A. T. Kirsch, director of undergraduate studies, 200 McGraw Hall, 255-3505; C. Greenhouse, D. Hayes, B. J. Isbell, W. W. Lambert, V. Nee, L. Smith-Lovin, R. Williams

The major in social relations is offered jointly by the Department of Anthropology and the Department of Sociology. It provides the student with basic competence in cultural anthropology, social psychology, and sociology and gives particular emphasis to the common methods of research in these disciplines. The student is expected to obtain a grasp of the common interests and unique insights of the three disciplines, and in the senior Social Relations Seminar is expected to integrate aspects of their theory and data.

Students seeking admission to the program should have completed the following prerequisites: (a) Sociology 101 or Anthropology 212; (b) Psychology 101 or 280 or Sociology 280; and (c) Sociology 301 or Psychology 350 or an equivalent course in statistics.

The major calls for a minimum of 36 credits of course work as follows:

1) two related courses to be selected in consultation with the major adviser, in each of the three following disciplines: anthropology, social psychology, and sociology. Ordinarily these courses should be at the 300 level or above, but in special circumstances the adviser may approve one or two courses at the 200 level.
2) at least one course in methods, to be selected from the following: anthropological methods, techniques of experimentation (psychology), methods in sociology, philosophy of science or of social science, or advanced statistics
3) at least one course in theory related to social relations
4) the senior seminar in social relations (Sociology 497 or Anthropology 495)

A list of the courses that may be used to satisfy the requirements for a major in social relations is available from any of the major advisers.

## Society for the Humanities

Jonathan Culler, director

**Fellows for 1989–90**

**Ian Balfour** (York University)

**Fredric Bogel** (Cornell University)

**Ellen Burt** (University of California-Irvine)

**Geraldine Friedman** (Purdue University)

**Lynn Hunt** (University of Pennsylvania)

**Steven Kaplan** (Cornell University)

**Colin Lucas** (Oxford University)

**Ilja Luciak** (Virginia Polytechnic Institute)

**Maurice Meissner** (University of Wisconsin-Madison)

**Chantal Mouffe** (College Internationale de Philosophie)

**Mary Beth Norton** (Cornell University)

**Reeve Parker** (Cornell University)

**Andrew Ross** (Princeton University)

**David Stark** (University of Wisconsin-Madison)

**John Weiss** (Cornell University)

The Society annually awards fellowships for research in the humanities. The Fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary.

These seminars are open to graduate students, suitably qualified undergraduates, and interested auditors. Students who want credit for a seminar should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the Fellow.

The Society's theme during 1989–90 will be **Producing, Inventing, and Remembering Revolution**.

**409 Discontinuity, Revolution, and Satire, 1640–1790 (also English 433)**
Fall. 3 credits. Limited to 17 students.
T 12:20–2:15. F. Bogel.
How are accounts of revolutionary activity shaped by prevailing models of discontinuity and continuity, and how does revolutionary activity affect these models? Moving between the English and French Revolutions, this course explores such topics as: theories of causality, consciousness, and personal identity; models of historical development; theories of the sublime, the grotesque, and the fragmentary; and ideas of motion, force, and inertia in cosmological theory. Authors include Milton, Dryden, Hobbes, Locke, Leibniz, Newton, Swift, Hume, Bolingbroke, and Burke.

**410 Language, History, Criticism: The Writings of Walter Benjamin**
Spring. 3 credits. Limited to 17 students.
M 12:20–2:15. I. Balfour.
This course will address critical, philosophical, and autobiographical texts by Benjamin with special attention to theory of language, practical criticism, history, and their interrelation. The critical texts will include historical understanding as well as historical action. The seminar will take Benjamin texts as points of departure for a theory and practice of criticism generally. Seminar and written work may address other relevant authors and issues arising from the reading of Benjamin. Knowledge of German not required.

**411 Facing the Revolution: Chénier, Hugo, Baudelaire (also Romance Studies 479)**
Fall. 3 credits. Limited to 17 students.
T 2:30–4:25. E. Burt.
Readings in histories of the French Revolution and in selected poems will lead to questions concerning the relationship between revolutions in the political and poetical domains. Readings in Michelet, Kant, De Toccqueville, Chénier, Hugo, Baudelaire.

**412 Mechanism, Replication, Revolution, and Satire, 1640–1790 (also English 436)**
Spring. 3 credits. Limited to 17 students.
F 12:20–2:15. F. Bogel.
The late seventeenth and early eighteenth centuries in England were marked by a profound exploration of the phenomena of mechanism and replication. What forms does the imagination of revolutionary possibility—in politics, in literature, in philosophy, and elsewhere—take in such a context? We will ask such questions while investigating the fields of political theory; printing technology; acting and mimicry; literary imitation; forgery and counterfeiting; literary satire, parody, and mock-forms; and aesthetic theories of original and unmechanizable production. Authors include Descartes, Hobbes, Dryden, Newton, Swift, Pope, Diderot, Young, La Mettrie, Boswell, and Burke.

**413 The People of the French Revolution (also History 406)**
Fall. 4 credits.
T R 1:25–3:20. S. Kaplan, C. Lucas.
The Revolution was nothing if not a mass event. Mass action played a critical part in shaping its course. The "re-invention" of France affected the population down to each village and demanded decisions from virtually every adult. This course will focus on the people as actors: their collective memory, their ideologies, their repertoire of intervention, the formation of a popular political culture. It will examine the encounters between the people (in their multiple incarnations) and the revolutionary elites who sought to articulate and appropriate the Revolution. A major theme will be the tension between the ambitions to achieve liberty and equality.

**416 Romanticism and Revolution: The (Gender) Politics of Aesthetics (also Comparative Literature 416)**
Fall. 3 credits. Limited to 17 students. Knowledge of French required, knowledge of German desirable.
M 12:20–2:15. G. Friedman.
In order to rethink the received notion of Romanticism's relation to history, this interdisciplinary seminar will explore inscriptions, oblique as well as direct, of the French Revolution and the Revolution of 1848 in Western European writing. We will be concerned with how the vexed relations among history, politics, aesthetics, and gender both constitute and disarticulate textual strategies for representing revolutionary and counter-revolutionary force. Authors will include Edmund Burke, the Schlegels, Wordsworth, Coleridge, Baudelaire, Marx, Proudhon, and Keats.

**417 The Democratic Revolution and Modern Politics**
Fall and spring. 3 credits. This course will meet for nine weeks in the fall and five weeks in the spring. Limited to 17 students.
W 10:10–12. C. Mouffe.
Explorations of the nature and possibilities of modern democracy, focusing first on the nineteenth century articulation of liberalism and democracy and then on problems posed by the modern extension of the democratic revolution and the formulation of a project of radical and plural democracy. How can the "post-modern" critique of essentialism help elaborate a pluralistic conception of citizenship?

**418 The French Revolution as a Cultural Revolution**
Spring. 3 credits. Limited to 17 students.
W 10:10–12:00. L. Hunt.
This course will consider the impact of the French Revolution on various cultural forms, ranging from paintings and novels to weights and measures, and including theories of sexuality as well as political culture. We will be aiming to answer the question: Was the French Revolution a cultural revolution? At the same time, we will be asking what the French Revolution as an experience might tell us about modern and post-modern theories of culture.

**419 Politics and Gender in Seventeenth-Century Anglo-America (also History 410; Women's Studies 573)**
Fall. 3 credits. Limited to 17 students.
W 2:30–4:25. M. Norton.
An examination of the transition from the political world of Sir Robert Filmer (in which the family and the state were seen as analogous and the state was believed to have originated in the family) to the political world of John Locke (in which the family and the state were viewed as having had separate origins and were regarded as distinctly different in organization and rationale). Through readings in primary and secondary materials, the class will focus on the implications of this transition for both women and men. A major theme will be the development of the modern distinction between the "public" realm of men and the "private" realm of women.

**420 Revolutionary Theory and Practice in Central America**
Spring. 3 credits. Limited to 17 students.
R 2:30–4:25. I. Luciak.
This course examines the revolutionary reality of Central America. The main focus of the seminar will be on Nicaragua and El Salvador but we also discuss Guatemala and Honduras. We begin with an analysis of the major forces in the formation of Latin American revolutionary theory ranging from Marxism to Liberation Theology. The theoretical literature will then serve as a guide in the exploration of the practice of revolutionary movements in Central America.

**421 The Theatre of Revolution: The Politics and Poetics of Spectacle (also English 448)**
Fall. 3 credits. Limited to 17 students.
F 12:20–2:15. R. Parker.
Study of various writings on acting, theater, painting, public eloquence, and political spectacles by Rousseau, Diderot, Burke, Hume, Reynolds, Schiller, and Blake, in conjunction with plays composed or produced in the revolutionary climates of England and France, including Schiller's *The Robbers*, Beaumarchais' *The Marriage of Figaro*, Voltaire's *Brutus*, Shakespeare's *Macbeth*, Wordsworth's *The Borderers*, and Büchner's *Danton's Death*, and with paintings and *fêtes révolutionnaires* of David. The focus throughout will be the public, political role of theatrical art, eloquence, and spectacle in a period when the very notion of the "public" was ripe with the ferment of republican revolution. French and German texts will, where possible, be read in English translation.

**422 The Social Outcomes of Socialist Revolution**
Spring. 3 credits. Limited to 17 students.
M 2:30–4:25. M. Meisner.
The work of the seminar will center on an attempt to identify common or similar features in the socio-historical conditions which have produced politically successful socialist (i.e., Communist) revolutions and pursue a comparative inquiry into the nature of the bureaucratically dominated social formations they have yielded, societies which cannot easily be labeled either "socialist" or "capitalist." Countries which have experienced indigenous communist revolutions—especially Russia, China, Yugoslavia, and Cuba—will be the main areas of inquiry.

**423 Technoculture in the Age of Information**
Spring. 3 credits. Limited to 17 students.
T 12:20–2:15. A. Ross.
In this seminar we will be discussing the cultural practices which have been generated around new reproductive, information processing, knowledge, and media technologies. After a grounding in the social and cultural histories and theories associated with the information revolution, we shall try to make sense of the popular or counter-cultural responses to the new systems of surveillance that are increasingly a feature of the postindustrial order. We will also look at popular, mostly science fiction, texts in film, fiction, video, and television.

**425 Remaking Socialism: Contested Meanings in a Mixed Economy (also Sociology 363)**
Fall. 3 credits. Limited to 17 students.
R 12:20–2:15. D. Stark.
This course examines the problems and prospects of restructuring the socialist economies of Eastern Europe. It addresses obstacles to creating markets administratively from above and explores recent efforts from below to create social spheres autonomous from the state. Drawing especially on recent ethnographic studies, it analyzes conceptions of work, worth, and honor where diverse processes of evaluation and justification compete and co-exist.

**426 Religion, Gender, and the Family in Early Modern Anglo-America (also Women's Studies 574; History 422)**
Spring. 3 credits. Limited to 17 students.
W 2:30–4:25. M. Norton
Continues the themes developed in Soc Hum 419/Hist 410 (fall 1989), but with primary reference to religion and the family. The course will examine the role of Puritan ideas in shaping the "modern" concept of the family and women's and men's roles therein; the emerging notion of the family as "private" and separated from the broader society; the regulation of moral and sexual behavior by the state, and the reasons for such regulation; and the eventual severing of the theoretical connections among religion, the family, and the state by the time of the American Revolution.

**428 Writers of the Revolution (also English 430)**
Spring. 3 credits. Limited to 17
R 12:20–2:15. R. Parker.
Readings in polemical and poetical works by various English writers of the 1790s and after, such as Burke, Blake, Wollstonecraft, Paine, Godwin, Wordsworth, Coleridge, Shelley, and Carlyle, read in the context of the ongoing politics, national and international, of the French Revolution. A major interest will be to test the notion of the romantic poet as one whose power depends on the transcendence, through disillusionment, of intense political concerns. Students should have either some general (undergraduate) knowledge of the English Romantic period and the French Revolution or be ready to do collateral work.

**430 The Legacy of Resistance in Postwar Europe (also History 431)**
Spring. 3 credits. Limited to 17 students.
T 2:30–4:25. J. Weiss
For some of its participants, the antifascist Resistance became an attempt to carry out a revolution in European politics, society, and personal relations. The course will deal with how Resistance visions became articulated, how they were challenged, and how their reformulation in response to those challenges contributed to shaping postwar political culture. The course will examine contemporary films, literature, and political writings as well as later scholarship that examines the functioning of the collective memory and the process of commemoration.

## South Asia Program

N. Uphoff, director; R. Barker, R. Colle, E. W. Coward, E. Erickson, S. Feldman, J. W. Gair, A. Gold, D. Gold, D. Holmberg, J. Jasanoff, V. Kayastha, S. Jasanoff, M. Katzenstein, K. A. R. Kennedy, B. Lust, B. G. MacDougall, K. March, F. McCarthy, B. Miller, C. Minkowski, S. Mohanty, A. Nussbaum, S. O'Connor, B. Oja, S. Oja, P. Olpadwala, T. Poleman, D. Sisler, D. Sudan, M. Walter, S. White

The South Asia Program coordinates research, teaching, and special campus events relating to Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty includes members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, city and regional planning, communication, comparative religion, ecology and systematics, English, government, history of art, human ecology, international agriculture, linguistics, rural sociology, and science, technology, and society. Undergraduates with a special interest in the region may major in Asian studies with a South Asian concentration. The languages regularly offered are Bengali, Hindi, Nepali, Sinhala, Tamil, Telugu, Urdu, Sanskrit, and Pali. Cornell is a class A member of the American Institute of Indian Studies (AIIS), and undergraduates as well as graduate students are eligible for AIIS intensive language program fellowships in India. For courses available in South Asian studies and details on the major, see the Department of Asian Studies listing in this volume.

Students who want further information on courses and research opportunities should direct questions to the program office, 170 Uris Hall.

## Southeast Asia Program

R. Barker, director; B. R. Anderson, T. Chaloemtiarana, E. W. Coward, Jr., G. Diffloth, G. S. Fields, M. F. Hatch, H. K. Khanh, A. T. Kirsch, S. J. O'Connor, T. Shiraishi, J. T. Siegel, K. W. Taylor, J. U. Wolff, D. K. Wyatt

Southeast Asia studies at Cornell is included within the framework of the Department of Asian Studies. Fourteen full-time faculty members in the colleges of Arts and Sciences and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as agricultural economics, anthropology, Asian studies, government, history, history of art, linguistics, music, and rural sociology. Instruction is also offered in a wide variety of Southeast Asian languages: Burmese, Cambodian, Cebuano (Bisayan), Indonesian, Javanese, Tagalog, Thai, and Vietnamese, for which Foreign Language Area Studies Fellowships are available. Intensive instruction is offered in the Full-Year Asian Language Concentration (FALCON) in Indonesian at the beginning and intermediate levels. Intensive advanced Indonesian language programs are held from June through August in Indonesia each summer. The formal program of study at Cornell is enriched by a diverse range of extracurricular activities, including an informal weekly luncheon seminar, the concerts of the Gamelan Ensemble, a weekly Southeast Asia film series, and public lectures. The John M. Echols Collection on Southeast Asia, in Olin Library, is the most comprehensive collection on this subject in America.

Undergraduates may major in Asian studies with a focus on Southeast Asia and its languages, or they may elect to take a concentration in Southeast Asia studies by completing 15 credits of course work. Students interested in exploring these opportunities should consult the director, Southeast Asia Program, 120 Uris Hall.

## Statistics Center

The Cornell Statistics Center coordinates a university-wide program in statistics and probability. Students interested in graduate study in probability and statistics should apply to the Field of Statistics or to one of the other graduate fields of study that offer related course work. A list of courses in probability and statistics recommended for graduate students in the Field of Statistics can be found in the description of the Cornell Center for Statistics in the section "Interdisciplinary Centers and Programs." Further information can be obtained from the director of the Statistics Center in Caldwell Hall.

## Women's Studies Program

I. Hull, acting director; L. Abel, J. Allen, D. Bathrick, S. Bem, L. Beneria, J. Bernstock, J. Blackall, J. Brumberg, D. Castillo, A. Cook, I. DeVault, I. Ezergailis, J. Farley, S. Feldman, F. Firebaugh, J. Fortune, G. Fraser, N. Furman, J. Gerner, J. Ginsburg, M. Hite, D. Holmberg, B. J. Isbell, M. Jacobus, M. Katzenstein, J. Locey, S. McConnell-Ginet, K. March, B. Martin, H. Mullen, M. B. Norton, S. Samuels, R. Savin-Williams, M. Small, L. Smith-Lovin, L. Waugh

Women's Studies, a university program in the College of Arts and Sciences, has three goals: to encourage the development of teaching about women and sex roles for women and men; to examine assumptions about women in various disciplines and to develop, systematize, and integrate back into the disciplines new knowledge about women; and to cooperate in public service activities with the extension divisions of the university.

The program is guided by a board composed of faculty, staff, and students at Cornell and members of the Ithaca community who have an intellectual interest in women's studies. Program facilities in Uris Hall, including a reading room–lounge and a seminar room, are open to all interested students and faculty.

### Program Offerings

Undergraduate students in the College of Arts and Sciences who want to major in women's studies can design their own major through the College Scholar or Independent Major programs. Any graduate student in the university may elect a women's studies minor. Students interested in either the major or the minor should obtain further information from the Women's Studies Office, 332 Uris Hall.

The program typically sponsors a noncredit seminar/study group for graduate students and faculty to facilitate sharing of knowledge across disciplinary lines. During the academic year the program also sponsors frequent public lectures dealing with social, political, and intellectual issues in women's studies.

### The Concentration

Undergraduate students who wish to graduate with a concentration in women's studies should consult with the director of undergraduate studies in women's studies to select an adviser. In collaboration with that adviser, students will design a coherent program in women's studies to complement their major. Before graduation students will submit to their adviser a final summary on their completed work in women's studies. The concentration is open to students in all colleges of the university.

The concentration in women's studies consists of four courses. Typically, two courses are selected from the list of general courses and two from the list of specialized courses (see below). Freshman writing seminars, related courses, or independent study in women's studies may be substituted for specialized courses in the concentration with the prior approval of the adviser.

For further information or to meet with the director of undergraduate studies to select an adviser, students should contact the Women's Studies Office, 332 Uris Hall, 255-6480.

### Distribution Requirement

Distribution requirements are satisfied by any two women's studies courses in any of the following categories:

*Social sciences:* (a) any two of 208, 218, 238, 244, 277, 305, 321, 353, 363, 366, 406, 408, 425, 428, 450, 454, 480 or (b) any one of 210, 365, plus one from list a.

*History:* any two of 227, 238, 273, 307, 357, 426, 438.

*Humanities:* (a) any two of 248, 251, 281, 297, 348, 349, 363, 365, 366, 390, 402, 404, 445, 456, 460, 476, or (b) any one of 210, 365, 493, plus one from list a.

### Courses

Keeping in mind that women's studies is interdisciplinary, it is useful to distinguish six core areas, or foci, within the program: ideology and culture, institutions and society, history, literature and the arts, psychology and human development, and natural sciences.

The program offers undergraduate and graduate courses in all of the core areas, both independently and in cooperation with other departments. Women's studies courses are grouped into four categories to assist students in selecting the level or degree of specialization suited to their program:

I) Freshman writing seminars

II) General courses (which provide a general introduction to a broad subject area or core focus within women's studies)

III) Specialized courses and seminars (which have smaller enrollments and focus upon more specialized topics within each of the core areas)

IV) Related courses and seminars (which need not focus exclusively upon women's studies issues but include significant consideration of sex differences, feminist criticism, or gender)

### I. Freshman Writing Seminars

**105 Feminine and Masculine Ideals in Japanese Culture (also Asian Studies 105)**
Spring. 3 credits.
M W F. 10:10. Staff.
In its long history, Japanese culture has developed a large number of role models—the aristocrat, poet-priest, warrior, entertainer, "salary man," and "education mama"—and idealized them in its literature and art. Using these ideals as its subject matter, the seminar will give students practice in reading texts closely, analyzing ideas, and writing various types of papers. Through studying Japanese concepts of femininity and masculinity, the students will not only explore a new culture but will also gain new perspectives on their own cultures.

**106 Women and Writing (also English 105)**
Fall and spring. 3 credits.
Hours to be arranged. Staff.
What is a woman? How does she confront her personal experience? Does she play a special role in history, in our definition of society, or in our understanding of language and literature? This course will explore the relation between women and writing. We will discuss writings by and about women, debate our attitudes toward feminism, and analyze the relevance of these questions to our own written work. Individual sections will emphasize different aspects of the relation between women and writing. Which section to choose should depend on your own interest in exploring how women appear in private or autobiographical writings, historical contexts, and/or literary works. Further information on specific sections is available in the freshman writing seminar office. Textual overlap among the sections is kept to a minimum so that students can take more than one Women and Writing seminar during their time at Cornell.

**[107 The Family in American History (also History 107)**
3 credits. Not offered 1989–90.
M. B. Norton.]

### II. General Courses

**210 Introduction to Women's Studies**
Fall. 4 credits. Limited to 20 students. Permission of instructor required .
Lec, M 12:20–2:15; disc, W 12:20 or 1:25.
K. King.
This course introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention will be paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings will draw on work in various disciplines and will include literary texts and visual images.

**[214 Biological Basis of Sex Differences (also Biological Sciences 214)**
3 credits. Prerequisite: one year of introductory biology. Next offered fall 1990.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction. Where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, physical and mental capabilities) is discussed.

The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.]

**218 The Economics of Gender (also City and Regional Planning 218)**
Spring. 3 credits.
T R 3:30–5. L. Beneria.
An introduction to economic analysis of gender relations and women's work, with emphasis given to understanding different analytical approaches to these issues. Although the course focuses mostly on the United States, some basic questions regarding international development and women will be dealt with.

**[227 Modern American Sex Roles in Historical Perspective (also History 227)**
4 credits. Not offered 1989–90. Each section limited to 20 students. Intended primarily for sophomores.
M. B. Norton.
A reading and discussion course. The class will begin by examining sex roles in the United States in the 1980s, looking at a variety of sources like popular magazines and contemporary commentaries. We will then move backwards in time in an attempt to uncover the roots of current attitudes. The students will help to determine which topics the class will investigate in detail.]

**244 Language and the Sexes (also Linguistics 244)**
Spring. 4 credits.
Hours to be arranged.
S. McConnell-Ginet.
This course explores connections between language (use) and gender/sex systems, addressing such questions as the following. How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

**[273 Women in American Society, Past and Present (also History 273)**
Spring. 4 credits. Not offered 1989–90.
M. B. Norton.
A survey of women's experiences in America from the seventeenth century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, and contemporary feminism.]

**277 Psychology of Sex Roles (also Psychology 277 and Sociology 277)**
Spring. 3 credits. Limited to 200 students. Prerequisite: an introductory psychology course.
T R 2:55–4:25. S. Bem.
Addresses the question of why and how adult women and men come to differ in their overall life-styles, work and family roles, personality patterns, cognitive abilities, etc. This broad question is examined from five perspectives: (a) the psychoanalytic perspective; (b) the biological perspective; (c) the historical and cultural evolutionary perspective; (d) the child development perspective; and (e) the social-psychological and contemporaneous perspective. Each of these perspectives is also brought to bear on more specialized phenomena relating to the psychology of sex roles, including psychological androgyny, women's conflict over achievement, the male sex role, egalitarian marriage relationships, gender-liberated childrearing, female sexuality, homosexuality, and transsexualism.

**321 Sex and Gender in Cross-Cultural Perspective (also Anthropology 321)**
Fall. 4 credits.
Lec M F 12:20, Disc W 9:05, 10:10, 11:15, 12:20, 1:25, 2:30. K. S. March.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex role definition around the world.

**[353 Feminism: State and Public Policy (also Government 353)**
4 credits. Not offered 1989–90.
M. Katzenstein.
The course examines aims and strategies of the feminist movement in the United States and the response of both society and the state to feminist claims. It is thus a course about political protest and the capacity of American political institutions to promote and shape, as well as to counter social change. In examining the law and public policy on such issues as job discrimination, wife battery, rape, abortion, etc., the course explores the contradictions between, and the congruence of, the dual ideals of individual choice and group equality.]

**365 Directions in Feminist Theory (also Government 362)**
Spring. 4 credits. Limited to 25 students.
T R 1:25–2:40. C. A. Martin.
This course is designed to explore developments in contemporary feminist theory with particular attention to feminist critiques, reinterpretations, and uses of Marxist, psychoanalytic, and (post)structuralist thought. We will be concerned with the ways in which radical feminist questions converge with developments in these fields and the ways in which feminist analyses challenge some of the most basic assumptions embedded in these and other social theories. We will consider the approaches of a variety of feminist thinkers to the relations between a gender, race, class, and sexual divisions.

## III. Specialized Courses and Seminars

**208 Gender, Race, and Medical "Science" (also Africana Studies 208 and Anthropology 208)**
Fall. 3 credits.
T R 11:40–12:55. G. Fraser.
The course will examine the social construction of race and gender in the medical sciences from the turn of the century to the present. Beginning with readings that propose a new view of scientific medicine as a system of signs and symbols and as culturally embedded, we will proceed to an examination of some of the following topics: racism and experimentation: the treatment of venereal disease and tuberculosis; the demise of social childbirth; the body as a medical product; menstruation as pathology; the monitored mind: women and psychiatry; the political economy of health care; medical authority; the training of medical students; political anatomy of the body; sites of resistance; and alternative systems: cross-cultural case studies.

**238 The Historical Development of Women as Professionals, 1800–Present (also Human Development and Family Studies 258)**
Spring. 3 credits.
Hours to be arranged. J. Brumberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, the clergy, and the academy. Lectures, reading, films, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work and the particular historical circumstances that created these different work opportunities. The evolution of professionalism and the consequences of professionalism for women, family structure, and American society are also discussed.

**[248 Major Nineteenth-Century Women Novelists (also English 247)**
4 credits. Not offered 1989–90.
J. Blackall.
This course gives particular attention to the biographical and social circumstances surrounding the novels, their critical reception within their own time, and the themes and subject matter that women novelists elected to write about. The reading includes masterworks and certain other works that exerted a major imaginative impact on contemporary readers. Readings are Austen, *Persuasion*; C. Bronte, *Jane Eyre*, E. Bronte, *Wuthering Heights*, Gaskell, *Mary Barton*; Stowe, *Uncle Tom's Cabin*; Eliot, *The Mill on the Floss*; Gilman, *The Yellow Wallpaper*; Chopin, *The Awakening*. In addition, two twentieth-century works, Jean Rhys's *Wide Sargasso Sea* and Edith Wharton's *Ethan Frome*, will be approached as imaginative sequels to *Jane Eyre* and *Wuthering Heights* respectively.]

**251 Twentieth-Century Women Novelists (also English 251)**
Spring. 4 credits.
Hours to be arranged. S. Samuels.
This course will be particularly concerned with self-consciously experimental novels and with some of the questions about women's experience, perspective, and language raised by recent feminist criticism. We will read works by Virginia Woolf, Jean Rhys, Djuna Barnes, Doris Lessing, Toni Morrison, Margaret Atwood, Alice Walker, and others.

**281 Gender and Society in the Muslim Middle East (also Near Eastern Studies 281)**
Fall. 3 credits.
T R 1:25–2:40. L. Peirce.
This course examines conceptions of gender in traditional Muslim society and the ways in which they have affected the experiences of Muslim women. Topics to be covered include the position of women in the religious law of Islam, female seclusion and the harem, social hierarchies and family structure, sexuality, and the problem of Western perceptions of Muslim women. Although attention will be given to gender issues in the contemporary Middle East, the course focuses on the historical roots of the present-day situation of Muslim women. Readings include primary sources in translation; visual materials (slides, movies) form an integral part of the course.

**[297 Beyond the Stereotype: Images of Women in the Middle East (also Near Eastern Studies 297)**
Not offered 1989–90.
S. Mehrez.
We will be reading nonfictional works on women, as well as works of fiction on and by women, in an attempt to re-evaluate certain stereotypic functions and roles ascribed to Middle Eastern women throughout history. Our starting point will be the Koran, the text that continues to regulate the formation of the image of women. We will investigate the degree of acceptance or rejection of such an imposed image as it manifests itself in contemporary texts.]

**307 African-American Women from Slavery to Freedom (also History 303)**
Spring. 4 credits.
T R 11:40–12:55. M. Creel.
This course thematically explores the history of African-American women from a sociopolitical perspective. Topics include the images and depictions of Black women, how Black women have engaged in political struggle, race progress vs. feminism, the relationship between racism and sexism, and Black women in family life.

**[310 Feminist Constructions and Practices of Science Fiction**
Not offered 1989–90.
K. King.]

**312 Feminisms and Writing Technologies**
Spring. 3 credits.
Hours to be arranged. K. King.
This course concerns the stories feminists and others tell about the boundaries and distinctions between the oral and the written. In it we approach the entity "women's writing" by asking particular kinds of questions: How do we talk about women's writing in a world in which two-thirds of those who can't read and write are women? How do the writing technologies we use tie us into this world system? How are distinctions between the oral and written used to create political identities and encode race/class/sex? The point of the course is to allow us to become savy about the stories about the oral and the written and to make our own feminist interventions into this "field of production." Readings will be critically analyzed, and both analytical and creative writing will be used in response.

**348 The Female Literary Tradition: Wollstonecraft to Woolf (also English 348)**
Fall. 4 credits.
T R 11:40–12:55. M. Jacobus.
A survey of the (mainly British) female literary tradition from the French Revolution to early twentieth-century modernism. The course will trace the dual legacies of romanticism and revolution through their monstrous and gothic forms, exploring their repressed presence in Victorian women's fiction until they surface again in the writing of the 1848 revolution and after. As well as the social protest literature of the mid-nineteenth century, we will look at the literature of the (female) uncanny, through which Victorian women writers confront their inner worlds, before turning to the emergence of the "new woman" and Utopian women's fiction at the end of the nineteenth century and to the beginnings of the twentieth-century modernist experiment by women. Texts will include works by Wollstonecraft, Austen, Mary Shelley, Emily and Charlotte Bronte, Eliot, Barrett Browning, Gaskell, Gilman, Schreiner, and Woolf.

**[349 Women in Medieval Literature (also German Studies 348 and Comparative Literature 349)**
4 credits. Not offered 1989–90.
B. Buettner.
A study of women and their roles in the social order as portrayed in the literature of the Middle Ages. Readings will illustrate the range of attitudes toward women from asceticism and antifeminism to their idealization in courtly love lyric and romance. We will examine woman's putative influence in literature, both positive and negative, on man and society and the debates over woman's "proper" attitude and role. Works in English translation will include a play by Hroswitha of Gandersheim, *the Nibelungenlied*, selected Mariological and mystical poems, courtly love lyric, *Parzival, Tristan and Isolde*, and *The Book of the City of Ladies*.]

**363 Representations of Women in Ancient Greece and Rome (also Classics 363)**
Fall. 4 credits.
M W 2:30–3:45. L. S. Abel, J. Ginsburg.
Classical authors created and left behind powerful images of women and of what women ought and ought not to be. These writers also provide fleeting insights into the real lives of women in antiquity. In this course, we will examine the ancient evidence to trace the origin of some Western attitudes about women and to analyze the assumptions that underlie the representations of women in ancient Greece and Rome. How are these images constructed and how do they work? How can we use the ancient evidence to assess the real lives and social roles of women in antiquity?

**[366 Feminism, Sexuality, and the Politics of Identity (also Government 366)**
4 credits. Prerequisite: permission of instructor. Not offered 1989–90.
Hours to be arranged. C. A. Martin.
The purpose of this course is (1) to explore the theoretical and political significance within feminism of sexuality and sexual identity; (2) to examine attempts to define the construct "lesbianism"; (3) to consider the limitations of "identity politics"; and (4) to analyze the implications of class, race, and ethnicity for a "sexual politics."]

**[390 The Fiction of Modern Hispanic Women (also Spanish 390)**
Taught in Spanish. Not offered 1989–90.
D. Castillo.
This course will survey a representative sampler of novels and short stories by twentieth-century Hispanic women. We will be giving particular attention to typical themes and subject matter relating to women's experience and perspectives in the context of questions raised by recent feminist criticism. Readings will include works by Silvina Ocampo, Rosario Ferre, Susana Torres Molina, Carmen Martin Gaite, Carmen Gomez Ojea, Luisa Valenzuela, Cristina Peri Rossi, Mercedes Salisachs, and Albalucia Angel.]

**[402 Black Women and Their Fictions (also English 401, Comparative Literature 401)**
4 credits. Not offered 1989–90.
H. Gates.
This course intends to define the precise shape and contours of the tradition of Black women's writing in English. How do Black women use language to represent their experiences? How does their writing resemble or diverge from the Black male tradition? How does Black feminist theory differ from white feminist theory? These are the concerns of this class. Readings are by Harriet E. Wilson, Frances Harper, Anna Julia Cooper, Nelly Larsen, Zora Neale Hurston, Gwendolyn Brooks, Ann Petry, Paule Marshall, Toni Morrison, Toni Cade Bambara, Gayle Jones, Alice Walker, Gloria Naylor, and Jamaica Kincaid.]

**404 Women Artists (also History of Art 404)**
Fall. 4 credits. Prerequisite: permission of instructor. Auditing not permitted.
T 2:30–4:30. J. Bernstock.
This seminar will be devoted to a study of the work of women artists from antiquity to the present. The works of the most important women artists from each period will be studied in relation to the changing roles of women in society and to the art produced contemporaneously by men.

**406 The Culture of Lives (also Anthropology 406)**
Spring. 4 credits.
K. March.
This seminar explores the insights provided by biographical-autographical accounts into both the particularities of individual lives and into the wider social and cultural forms of those lives. We will look at the place of life histories within development of anthropology as a discipline from the earliest explorers' accounts, through the florescence of their importance in early American ethnographic description, and into the contemporary resurgence of interest in personal narratives as windows onto both the social or cultural construction of the person and the personal construction of the social or cultural. Course materials draw heavily upon women's lives and their representations, both to contrast women's and men's accounts and to underscore the special significance of women's narratives in anthropology.

**408 Gender Symbolism (also Anthropology 408)**
Spring. 4 credits.
K. March.
This seminar looks at how cultural meaning is constructed about biological sex differences. We begin from the presumption that sex difference and gender are culturally defined as a system of categories and meanings interacting with people's cognitive, intellectual, and affective experience of their worlds. The seminar has two primary conceptual objectives: (1) to analyze the relations among gender symbols and (2) to explore the relations between these symbols and the social worlds of the people who believe in them.

**[425 Gender Relations and Social Transformation (also Rural Sociology 425)**
3 credits. Students in the endowed colleges must register for Women's Studies 425. Not offered 1989–90.
S. Feldman.
A comparative analysis of women's contribution to domestic-household and agricultural labor as production practices change. The course emphasizes the configuration of various economic and social sectors and their realignments in and between countries. Changes occur in response to technology transfer, the transformation of the labor market, the international division of labor, and changing family relations.]

**[426 Undergraduate Seminar in Early American History (also History 426)**
4 credits. Not offered 1989–90.
M 1:25–3:20. M. B. Norton.
Topic for 1988: women and the family in early America. An intensive examination of women's experience in America before 1820. Whites, Blacks, and Indians will all be considered. Each student will write a research paper based on primary sources.]

**[428 Spirit Possession, Shamanism, Curing, and Witchcraft (also Anthropology 428)**
4 credits. Limited to 20 students. Prerequisite: background in anthropology or women's studies. Not offered 1989–90.
D. Holmberg.
An anthropological consideration of witchcraft, shamanisms, and cults of spirit possession, with special attention to the play of gender. Classic anthropological accounts of non-Western societies will be considered along with ethnographic and historical accounts of Western societies. The course also addresses general problems in the study of women and gender and the anthropology of myth, ritual, and symbolism.]

**438 Female Adolescence in Historical Perspective, 1815–1960 (also HDFS 415)**
Fall. 3 credits. Limited to 12 students. Permission of instructor required.
W 1–3:30. J. Brumberg.
The changing nature of female adolescence in the United States is explored using nineteenth-century primary sources available in the Department of Manuscripts and University Archives. Olin Library multidisciplinary readings and discussions are designed to uncover the nature of women's childhood, patterns of authority within the family, cultural attitudes toward sexuality, female friendships, courtship patterns, and rites of passage into adulthood.

**[445 Jane Austen, Elizabeth Gaskell, and George Eliot (also English 445)**
4 credits. Not offered 1989–90.
J. Blackall.
A close focus on five masterworks of the nineteenth century—Austen's *Pride and Prejudice* and *Emma*; Gaskell's *Life of Charlotte Bronte* and *Wives and Daughters*; and Eliot's *Middlemarch*—with particular regard for the circumstances, biographical and social, from which these works emerged. We will examine these writers' perception of the institution of marriage; their delineation of the problem of attaining self-fulfillment and self-expression within a domestic and rural community, especially for women; and their concepts of a "heroine" and a "hero." Emphasis will be on reading and discussion. Participants will keep journals reflecting their personal responses to the books and their pursuit of chosen topics, these notes leading to one final essay of moderate length.]

**450 Seminar in the Psychology of Gender (also Psychology 450)**
Fall. 4 credits. Limited to 15 junior and senior psychology majors. Prerequisite: Psychology/Sociology/Women's Studies 277 or permission of instructor.
W 2:30–5. S. Bem.
This seminar is designed primarily for advanced students in psychology who have a strong interest in empirical research. Each time the course is offered, a particular research topic will be selected by the instructor for consideration in depth. The topic will be announced at the first meeting of the course. All interested students should attend that meeting.

**[453 Victorians and Modernists: Literary Legends from Wilde to Woolf (also English 453)**
4 credits. Not offered 1989–90.
S. Siegel.]

**454 Women, Revolution, and Socialism (also Asian Studies 454)**
Spring. 4 credits.
Hours to be arranged. C. White.
The course will examine the theory and practice of revolution and socialist development from the viewpoint of women revolutionaries and socialist thinkers as well as male socialist writers on the "Woman Question." The theoretical focus will be on the articulation of revolution in gender relations with other revolutionary struggles against colonial, class, and ethnic domination. Case study material includes the Soviet Union, China, Vietnam, Mozambique, Central America (Nicaragua and Guatemala), and Malaysia. Issues include marriage law reform, land reform and cooperativization, military struggle, political mobilization and leadership, and nonrevolutionary forms of everyday resistance.

**[456 Edith Wharton, Willa Cather, and Eudora Welty (also English 456/656)**
4 credits. Not offered 1989–90.
J. F. Blackall.
A representative selection of the best fiction of three distinguished American women writers with particular regard for their representation of women in relation to environment, for their characteristic themes and materials, and for their practice of the craft of fiction. Readings: Wharton, *The House of Mirth*, Summer, *The Age of Innocence*, and selected short stories; Cather, *O, Pioneers!*, *A Lost Lady*, *The Professor's House*, and selected short stories; and Welty, *The Robber Bridegroom*, *The Golden Apples*, *The Optimist's Daughter*, and selected short stories. Discussion format with three essays.]

**[460 Gender in Nineteenth-Century America (also English 461/661)**
4 credits. Not offered 1989–90.
S. Samuels.
A study of the relation between historical experience and literary texts. We will examine from the perspectives of both historical and literary analysis the rise of women writers, the novel's preoccupation with conflicts between men and women, the cultural uses of feminism and antifeminism, and the impact of the new woman. Bringing traditional literary texts—novels and poetry—into dialogue with "nonliterary" writings like journalism, political treatise, social reform manifestos, and etiquette books, we will draw on the methods and theories of cultural history and literary criticism to ask how gender relations and the history of women bear on the plots, discourses, and images of literary texts. A tentative reading list would include Susannah Rowson's *Charlotte Temple*, Lydia Maria Child's *The Mother's Book*, Catherine Beecher's *A Treatise on Domesticity*, Nathaniel Hawthorne's *The Blithedale Romance*, works by Angelina and Sarah Grimke, Harriet Beecher Stowe's *Uncle Tom's Cabin*, poems by Emily Dickinson and Walt Whitman, Louisa May Alcott's *Little Women*, Edith Wharton's *House of Mirth*, William Dean Howells's *A Hazard of New Fortunes*, and Charlotte Perkins's *Gilman's Herland*.]

**[476 Women's Poetry (also English 476)**
4 credits. Limited to 25 students. Prerequisite: permission of instructor. Not offered 1989–90.
D. Mermin.
A historical survey of the female poetic tradition in Britain and America, including such writers as Bradstreet, Dickinson, Bronte, Barrett Browning, Bishop, Brooks, and Plath.]

**480 Toward an Anthropology of the Female Body (also Anthropology 480)**
Spring. 4 credits.
Hours to be arranged. G. Fraser.
The main purpose of this course is to create a context for the discussion of central issues in the cross-cultural literature on the relationship between the female self, her body-mind, and the wider social order(s). All too easily Western feminists acknowledge but neglect to incorporate into their theoretical framework the perspectives of women from non-Western societies, from different historical periods, and from divergent classes. Do the differences challenge or support our vision of gender as a unifying category? By focusing on women's embodied selves, the hope is that we will begin to develop a critical theory that will reshape the boundaries of our old assumptions.

**[493 French Feminisms (also French 493)**
Fall. 4 credits. Not offered 1989–90.
N. Furman.
This course will examine the political, theoretical, and literary concerns of contemporary French writers who have addressed "la question de la femme/la question du féminin." Readings will include representative texts by Simone de Beauvoir, Monique Wittig, Julia Kristeva, Jacques Lacan, Luce Irigaray, Jacques Derrida, and Helene Cixous. Taught in English.]

**499 Directed Study**
Fall or spring. Variable credit. Prerequisites: one course in women's studies and permission of a faculty member of the Women's Studies Program Board.
Hours to be arranged. Staff.

**513 The Political Economy of Women and Work I (also City and Regional Planning 513)**
Fall. 4 credits.
W 7–10 p.m. L. Beneria.
This course deals with the question of how to understand and analyze the economic condition of women, starting with some general issues about the "question of origins," reproduction and production, and the underestimation of women's economic activities. It focuses on different approaches to the analysis of women's work in the household and in the labor market (from an economic and feminist perspective). The empirical material concentrates mostly on the United States with some glances at other industrial countries and the international economy.

**514 The Political Economy of Women and Work II (also City and Regional Planning 514)**
Spring. 4 credits.
W 7–10 p.m. L. Beneria.
A continuation of Women's Studies 513. The focus here is on development issues and on how the development process has affected women in the Third World. The analysis is placed in the context of the global economy, including the connections between the Third World and the more industrialized countries.

**573 Politics and Gender in Seventeenth-Century Anglo-America (also History 410 and Society for the Humanities 419)**
Fall. 3 credits. Limited to 17 students.
W 2:30–4:30. M. B. Norton.
An examination of the transition from the political world of Sir Robert Filmer (in which the family and the state were seen as analogous and the state was believed to have originated in the family) to the political world of John Locke (in which the family and the state were viewed as having had separate origins and were regarded as distinctly different in organization and rationale). Through readings in primary and secondary materials, the class will focus on the implications of this transition for both women and men. A major theme will be the development of the modern distinction between the "public" realm of men and the "private" realm of women.

**574 Religion, Gender, and the Family in Early Modern Anglo-America (also History 422 and Society for the Humanities 426)**
3 credits.
W 2:30–4:25. M. B. Norton.
Continues the themes developed in Women's Studies 573/History 410/Society for the Humanities 419 (fall 1989), but with primary reference to religion and the family. The course will examine the role of Puritan ideas in shaping the "modern" concept of the family and women's and men's roles therein; the emerging notion of the family as "private" and separated from the broader society; the regulation of moral and sexual behavior by the state, and the reasons for such regulation; and the eventual severing of the theoretical connections among religion, the family, and the state by the time of the American Revolution.

**[626 Graduate Seminar in the History, of American Women (also History 626)**
4 credits. Limited to graduate students. Not offered 1989–90.
M. B. Norton.
A reading and research seminar intended for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.]

**[638 Contemporary German Women Writers (also German Literature 638)**
4 credits. Not offered 1989-90.
I. Ezergailis.]

**[660 Black Women and Their Fictions (also Women's Studies 402 and English 401)**
4 credits. Not offered 1989–90.
H. Gates.
This course intends to define the precise shape and contours of the tradition of black women's writing in English. How do black women use language to represent their experiences? How does their writing resemble or diverge from the black male tradition? How does black feminist theory differ from white feminist theory? These are the concerns of this class. Readings are by Harriet E. Wilson, Frances Harper, Anna Julia Cooper, Nelly Larsen, Zora Neale Hurston, Gwendolyn Brooks, Ann Petry, Paule Marshall, Toni Morrison, Toni Cade Bambara, Gayle Jones, Alice Walker, Gloria Naylor, and Jamaica Kincaid.]

**[685 Seminar in Sex Differences and Sex Roles (also Psychology 685 and Sociology 685)**
4 credits. Prerequisite: permission of instructor. Not offered 1989–90.
S. Bem.]

**690 German Feminist Criticism and Theory (also German Studies 690)**
Spring. 4 credits. Open to qualified undergraduates with permission of instructor. Reading knowledge of German recommended but not required.
W 1:25–3:25. C. A. Martin.
This course is designed to explore developments in feminist literary theory with particular attention to the field of German literature. We will consider competing critical strategies and their political implications by working through different readings of specific literary texts and by raising questions about the implications for feminism of competing critical strategies in the general field of literary theory; the relations between feminism and established critical schools; the tension in feminist *Germanistik* between critical attention to the "male canon" and the construction of a female literary tradition; the impact on West and East German feminism(s) of their translations of French and American work; the impact and treatment of the Nazi period; the effects of the East-West divide on development in both Germanys; the impact on feminist literature and criticism of Third World women in Germany; and approaches in West and East Germany to imperialism and racism.

**[692 Hispanic Feminisms (also Romance Studies 690)**
4 credits. Taught in Spanish. Not offered 1989–90.
D. Castillo.
This seminar is designed to explore the interrelationship of feminist literary theory and the narrative production of the Hispanic world. In this inquiry, we will be developing feminist critical methodologies (based on readings of essays by thinkers such as Barthes, Castellanos, Derrida, Freud, and Glantz) and defining strategies or possibilities for feminist criticism(s). Finally, we will study the ways in which feminist analyses of literature alter our readings of texts by men (Isaacs, Cortazar, Onetti, Garcia Lorca) as well as by women (Pardo Bazan, Tusquets, Valenzuela, Garro), and how they change our conception of criticism and the task of the critic.]

**699 Topics in Women's Studies**
Fall or spring. Variable credits.
Staff.
Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Women's Studies who has agreed to supervise the course work.

**[772 Advanced Topics on International Development and Women (also City and Regional Planning 772)**
4 credits. Not offered 1988–89; next offered 1989–90.
L. Beneria.
A seminar to explore theoretical and empirical issues of interest to master's and Ph.D. degree students working on topics related to gender and international development. The focus will be on a few narrow topics–such as the effect of the foreign debt crisis on women, the formal sector in women's work, and gender aspects in demographic change–to be explored in depth in preparation for research and thesis writing. Students will be encouraged to explore and exchange ideas as well as to provide mutual support and criticism.]

## IV. Related Courses and Seminars

**305 Emotion, Cognition, and Culture (also Anthropology 305)**
Fall. 4 credits.
T R 2:55–4:10. B. J. Isbell.
This course introduces students to the current anthropological perspective on the following topics: (1) cultural shaping of emotion, (2) acquisition and production of gender and sexuality, and (3) cognition and classification in cross-cultural context. It is appropriate for students majoring in anthropology, psychology, cognitive studies, and human development and family studies.

**[329 Race, Gender, and Politics (also Government 329)**
4 credits. Open to sophomores and juniors. Limited to 5 students. Not offered 1989–90.
M. Katzenstein.]

**357 American Families in Historical Perspective (also Sociology 359 and Human Development and Family Studies 359)**
Spring. 3 credits. Prerequisite: Human Development and Family Studies 150 or one 200-level social science or history course. Students in endowed units must register for Women's Studies 357 or Sociology 359.
T R 2:30–4. J. Brumberg.
An introduction to, and overview of, problems and issues in the historical literature on American families and the family life cycle. Reading and lectures will demonstrate the pattern of American family experience in past time, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family in past time will deal with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students will be

required to do a major research paper on the history of their family, covering at least two generations and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

**[463 The Repressed Feminine in the Writings of Marx (also Government 466)**
4 credits. Not offered 1989–90.
S. Buck-Morss.]

**[671 Readings in Contemporary Social Theory (also Government 670)**
4 credits. Not offered 1989–90.
S. Buck-Morss.
Issues raised by neo-Marxism, critical theory, poststructuralism, and feminism.]

**[759 Virginia Woolf (also English 759)**
5 credits. Prerequisite: permission of instructor. Not offered 1989–90.
S. Siegel.]

Diffloth, Gérard, Ph.D., U. of California at Los Angeles. Prof., Modern Languages and Linguistics
DiSalvo, Francis J., Ph.D., Stanford U. Prof., Chemistry
Donald, Bruce, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Dotson, Arch T., Ph.D., Harvard U. Prof., Government
Dotson, Esther G., Ph.D., New York U. Prof. Emeritus, History of Art
Drell, Persis, Ph.D., U. of California at Berkeley. Asst. Prof., Physics/LNS¶
Dunning, David, Ph.D., Stanford U. Asst. Prof., Psychology
Durrett, Richard T., Ph.D, Stanford U. Prof., Mathematics
Dynkin, Eugene B., Dr. of Sci., Moscow U. (USSR). Prof., Mathematics
Earle, Clifford J., Ph.D., Harvard U. Prof., Mathematics
Easley, David, Ph.D., Northwestern U. Prof., Economics
Eddy, Donald D., Ph.D., U. of Chicago. Prof., English/University Libraries
Edmondson, Locksley G., Ph.D., Queens U. Prof., Africana Studies and Research Center
Ehrenberg, Ronald, Ph.D., Northwestern U. Prof. Industrial and Labor Relations/ Economics
Einaudi, Mario, Ph.D., U. of Turin (Italy). Goldwin Smith Professor of Government Emeritus, Government
Elledge, Scott B., Ph.D., Cornell U. Goldwin Smith Professor of English Literature Emeritus, English
Elser, Veit, Ph.D., U. of California at Berkeley. Asst. Prof., Physics/LASSP*
Esman, Milton J., Ph.D., Princeton U. Prof., Government
Ezergailis, Inta M., Ph.D., Cornell U. Prof., German Literature
Ezra, Gregory S., Ph.D., Oxford U. Assoc. Prof., Chemistry
Farrell, Robert T., Ph.D., Fordham U. Prof., English/Medieval Studies/ Archaeology
Farrell, Roger H., Ph.D., U. of Illinois. Prof., Mathematics
Fay, Robert C., Ph.D., U. of Illinois. Prof., Chemistry
Feldshuh, David, Ph.D., U. of Minnesota. Prof., Theatre Arts
Fessenden-MacDonald, June, Ph.D., Tufts U. Assoc. Prof., Biology and Society
Field, David J., Ph.D., U. of Pennsylvania. Asst. Prof., Psychology
Finch, June, M. A., Sarah Lawrence Coll. Lecturer
Fine, Gail J., Ph.D., Harvard U. Assoc. Prof., Philosophy
Finlay, Barbara L., Ph.D., Massachusetts Inst. of Technology. Prof., Psychology
Fisher, Eric, Ph.D., U. of California at Berkeley. Asst. Prof., Economics
Fisher, Michael E., Ph.D., Kings Coll., London (England). Horace White Professor of Chemistry, Physics, and Mathematics, Chemistry/Physics/LASSP*
Fitchen, Douglas B., Ph.D., U. of Illinois. Prof., Physics/LASSP*
Fogel, Ephim G., Ph.D., Ohio State U. Prof., English
Fortune, Joanne E., Ph.D., Cornell U. Assoc. Prof., Physiology/Women's Studies
Franck, Carl P., Ph.D., Princeton U. Assoc. Prof., Physics/LASSP*
Frank, Robert H., Ph.D., U. of California at Berkeley. Prof., Economics
Fraser, Gertrude, M.A., Johns Hopkins U. Asst. Prof., Women's Studies/Africana Studies and Research Center
Fréchet, Jean M. J., Ph.D., SUNY Syracuse and Syracuse U. Prof., Chemistry
Fredericksen, Donald L., Ph.D., U. of Iowa. Assoc. Prof., Theatre Arts
Freed, Jack H., Ph.D., Columbia U. Prof., Chemistry
Freeman, John, Ph.D., U. of North Carolina at Chapel Hill. Prof., Organizational Behavior/ Sociology
Fried, Debra, Ph.D., Yale U. Asst. Prof., English
Fuchs, Wolfgang H., Ph.D., Cambridge U. (England). Prof. Emeritus, Mathematics
Furman, Nelly, Ph.D., Columbia U. Assoc. Prof., Romance Studies
Gainor, Ellen, Ph.D., Princeton U. Asst. Prof., Theatre Arts
Gair, James W., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Galenson, Walter, Ph.D, Columbia U. Jacob Gould Schurman Professor of Economics, Industrial and Labor Relations
Galik, Richard S., Ph.D., Cornell U. Assoc. Prof., Physics/LNS¶
Ganem, Bruce, Ph.D., Columbia U. Prof., Chemistry
Gates, Henry L., Ph.D., Clare Coll., Cambridge U. (England). Prof., English/Africana Studies/Comparative Literature
Gaylord, Mary G., Ph.D., Harvard U. Assoc. Prof., Romance Studies
Gibian, George, Ph.D., Harvard U. Goldwin Smith Professsor of Russian and Comparative Literature, Russian Literature
Gibson, Eleanor J., Ph.D, Yale U. Susan Linn Sage Professor of Psychology Emeritus, Psychology
Gierasch, Peter J., Ph.D., Harvard U. Prof., Astronomy/CRSR†
Gilbert, Roger S., Ph.D., Yale U. Asst. Prof., English
Gilman, Sander L., Ph.D., Tulane U. Goldwin Smith Professor, German Literature and Humane Studies/Near Eastern Studies/ Psychiatry (History), Cornell Medical College

Gilovich, Thomas, Ph.D., Stanford U. Assoc. Prof., Psychology
Ginet, Carl A., Ph.D., Cornell U. Prof., Philosophy
Ginsberg, Benjamin, Ph.D., U. of Chicago. Prof., Government
Ginsburg, Judith R., Ph.D., U. of California at Berkeley. Assoc. Prof., Classics
Giovanelli, Riccardo, Ph.D., Indiana U. Adj. Prof., Astronomy/NAIC‡
Gittelman, Bernard, Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LNS¶
Golay, Frank H., Ph.D, U. of Chicago. Prof. Emeritus, Economics
Gold, Daniel, Ph.D., U. of Chicago Divinity School. Asst. Prof., Asian Studies
Gold, Thomas, Ph.D., Cambridge U. (England). John L. Wetherill Professor of Astronomy Emeritus, Astronomy/CRSR†
Goldfield, Michael, Ph.D., U. of Chicago. Asst. Prof., Government
Gottfried, Kurt, Ph.D, Massachusetts Inst. of Technology. Prof., Physics/LNS¶
Greenhouse, Carol J., Ph.D., Harvard U. Assoc. Prof., Anthropology
Greenwood, Davydd J., Ph.D., U. of Pittsburgh. John S. Knight Professor, Anthropology Center for International Studies
Greisen, Kenneth I., Ph.D., Cornell U. Prof. Emeritus, Physics
Gries, David J., Ph.D., Technische Hoch., München (Germany). Prof., Computer Science
Grimes, Joseph E., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Groos, Arthur, Ph.D., Cornell U. Prof., German Literature/Medieval Studies
Gross, Leonard, Ph.D., U. of Chicago. Prof., Mathematics
Grossvogel, Anita V., Ph.D., Cornell U. Assoc. Prof., Romance Studies
Grossvogel, David I., Ph.D., Columbia U. Goldwin Smith Professor of Comparative Literature and Romance Studies, Romance Studies
Guckenheimer, John, Ph.D., U. of California at Berkeley. Prof., Mathematics
Gunn, Edward M., Jr., Ph.D., Columbia U. Assoc Prof., Chinese Literature (Asian Studies)
Hagfors, Tor, Ph.D., U. of Oslo (Norway). Prof., Astronomy/Engineering/NAIC‡
Halpern, Bruce P., Ph.D., Brown U. Prof., Psychology/ Biological Sciences
Hand, Louis N., Ph.D., Stanford U. Prof., Physics/LNS¶
Hannan, Michael T., Ph.D., U. of North Carolina. Henry Scarborough Professor of Social Sciences, Sociology
Harbert, Wayne E., Ph.D., U. of Illinois. Assoc. Prof., Modern Languages and Linguistics
Harris, Robert L., Ph.D., Northwestern U. Assoc. Prof., Africana Studies and Research Center
Hartill, Donald L., Ph.D., California Inst. of Technology. Prof., Physics/LNS¶
Hartman, Paul L., Ph.D., Cornell U. Prof. Emeritus, Physics/Applied and Engineering Physics/LASSP*
Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor of Engineering, Computer Science
Harwit, Martin O., Ph.D, Massachusetts Inst. of Technology. Prof. Emeritus, Astronomy/ CRSR†
Hatch, Martin, Ph.D., Cornell U. Assoc. Prof., Music
Hatcher, Allen, Ph.D., Stanford U. Prof., Mathematics
Hay, George A., Ph.D., Northwestern U. Prof., Economics/Law
Hayes, Donald P., Ph.D., U. of Washington. Prof., Sociology
Haynes, Martha P., Ph.D., Indiana U. Assoc. Prof., Astronomy/NAIC‡
Hays, Michael D., Ph.D., U. of Minnesota. Assoc. Prof., Theatre Arts
Henderson, David W., Ph.D., U. of Wisconsin. Prof., Mathematics
Henderson, John S., Ph.D., Yale U. Assoc. Prof., Anthropology
Herrin, W. Lamar, Ph.D., U. of Cincinnati. Assoc. Prof., English
Herter, Terry L., Ph.D., U. of Rochester. Asst. Prof., Astronomy/CRSR†
Hildebrand, George H., Ph.D., Cornell U. Maxwell M. Upson Professor of Economics and Industrial Relations Emeritus, Economics/Industrial and Labor Relations
Hill, Thomas D., Ph.D., Cornell U. Prof., English/Medieval Studies
Hite, Molly, Ph.D., U. of Washington. Assoc. Prof., English
Ho, Wilson, Ph.D., U. of Pennsylvania. Assoc. Prof., Physics/LASSP*
Hodes, Harold, Ph.D., Harvard U. Assoc. Prof., Philosophy
Hoffmann, Roald, Ph.D., Harvard U. John A. Newman Professor of Physical Science, Chemistry
Hohendahl, Peter U., Ph.D., Hamburg U. (Germany). Jacob Gould Schurman Professor, German Literature/Comparative Literature
Holcomb, Donald F., Ph.D., U. of Illinois. Prof., Physics/LASSP*
Holdheim, W. Wolfgang, Ph.D., Yale U. Frederic J. Whiton Professor of Liberal Studies, Comparative Literature/Romance Studies
Holloway, Thomas H., Ph.D., U. of Wisconsin. Assoc. Prof., History
Holmberg, David H., Ph.D., Cornell U. Assoc. Prof., Anthropology/Women's Studies
Holmes, Clive A., Ph.D., Cambridge U. (England). Prof., History
Holmes, Philip J., Ph.D., Southampton U. (England). Prof., Theoretical and Applied Mechanics/Mathematics
Hopcroft, John E., Ph.D., Stanford U. Joseph C. Ford Professor of Computer Science, Computer Science
Houck, James R., Ph.D., Cornell U. Prof., Astronomy/CRSR†
Houston, Paul L., Ph.D., Massachusetts Inst. of Technology. Prof., Chemistry
Hsu, John T. H., D. Music, New England Conservatory of Music. Old Dominion Foundation Professor of Humanities and Music, Music
Huang, C. T. James, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Modern Languages and Linguistics
Hubbard, John H., Doctorat d'Etat U. de Paris (France). Prof., Mathematics
Hull, Isabel V., Ph.D., Yale U. Assoc. Prof., History
Husa, Karel, Diploma, Paris Conservatory (France). Kappa Alpha Professor of Music, Music
Hwang, Jiunn, Ph.D., Purdue U. Assoc. Prof., Mathematics
Hyams, Paul R., D. Phil., Oxford University. Associate Professor, History
Irwin, Terence H., Ph.D., Princeton U. Prof., Philosophy
Isacks, Bryan L., Ph.D., Columbia U. William and Katherine Snee Professor of Geological Sciences, Geological Sciences
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, Economics
Isbell, Billie J., Ph.D., U. of Illinois. Assoc. Prof., Anthropology
Isen, Alice M., Ph.D., Stanford U. Prof., Johnson Graduate School of Management/ Psychology
Jacobus, Mary L., D. Phil, Oxford U. (England). Prof., English/Women's Studies
Janowitz, Phyllis, M.F.A., U. of Massachusetts. Assoc. Prof., English
Jarrett, John P., Ph.D., U. of Chicago. Asst. Prof., Philosophy
Jasanoff, Jay H., Ph.D., Harvard U. Prof., Modern Languages and Linguistics
Jasanoff, Sheila, Ph.D., J.D., Harvard U. Assoc. Prof., Science, Technology, and Society/ Government
Jeyifo, Biodun, Ph.D, New York U. Prof., English
John, James J., Ph.D., U. of Notre Dame. Professor of Paleography and Medieval History, History
Johnston, Robert E., Ph.D., Rockefeller U. Prof., Psychology
Jordan, Teresa E., Ph.D., Stanford U. Asst. Prof., Geological Sciences
Kahin, George McT., Ph.D., Johns Hopkins U. Aaron L. Binenkorb Professor of International Studies Emeritus, Government
Kahl, Joseph A., Ph.D., Harvard U. Prof. Emeritus, Sociology
Kahn, Alfred E., Ph.D., Yale U. Robert Julius Thorne Professor of Political Economy Emeritus, Economics
Kahn, H. Peter, M. A., New York U. Prof. Emeritus, History of Art
Kahn, Peter J., Ph.D., Princeton U. Prof., Mathematics
Kalos, Malvin H., Ph.D., U. of Illinois. Prof., Physics/LNS¶, Director, Theory Center
Kammen, Michael G., Ph.D., Harvard U. Newton C. Farr Professor of American History and Culture, History
Kaplan, Steven L., Ph.D., Yale U. Prof., History
Karig, Daniel E., Ph.D., U. of California at San Diego. Prof., Geological Sciences
Karplus, Kevin, Ph.D., Stanford U. Asst. Prof., Computer Science/Electrical Engineering
Kaske, Carol V., Ph.D., Johns Hopkins U. Assoc. Prof., English
Kaske, Robert E., Ph.D., U. of North Carolina. Avalon Foundation Professor in the Humanities, English
Katz, Steven T., Ph.D., Cambridge U. (England). Prof., History and Religion (Near Eastern Studies)
Katzenstein, Mary F., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Government
Katzenstein, Peter J., Ph.D., Harvard U. Walter S. Carpenter, Jr., Professor of International Studies, Government
Kaufman, Sidney, Ph.D., Cornell U. Acting Prof., Geological Sciences
Kay, Robert W., Ph.D., Columbia U. Prof., Geological Sciences
Keil, Frank C., Ph.D., U. of Pennsylvania. Prof., Psychology
Kelley, E. Wood, Ph.D., Indiana U. Assoc. Prof., Government
Kennedy, William J., Ph.D., Yale U. Prof., Comparative Literature
Kenworthy, Eldon G., Ph.D., Yale U. Assoc. Prof., Government
Kesten, Harry, Ph.D., Cornell U. Prof., Mathematics
Kiefer, Nicholas M., Ph.D., Princeton U. Prof., Economics
Kingston, John C., Ph.D., U. of California at Berkeley. Asst. Prof., Modern Languages and Linguistics

Kinoshita, Toichiro, Ph.D., Tokyo U. (Japan). Prof., Physics/LNS¶
Kirkwood, Gordon M., Ph.D., Johns Hopkins U. Frederick J. Whiton Professor of Classics Emeritus, Classics
Kirsch, A. Thomas, Ph.D., Harvard U. Prof., Anthropology
Klein, Richard J., Ph.D., Yale U. Assoc. Prof., Romance Studies
Knapp, Anthony W., Ph.D., Princeton U. Prof., Mathematics
Koschmann, J. Victor, Ph.D., U. of Chicago. Assoc. Prof., History
Kozen, Dexter, Ph.D., Cornell U. Assoc. Prof., Computer Science
Kramnick, Isaac, Ph.D., Harvard U. Richard J. Schwarz Professor of Government, Government
Kretzmann, Norman, Ph.D., Johns Hopkins U. Susan Linn Sage Professor of Philosophy, Philosophy
Kronik, John W., Ph.D., U. of Wisconsin. Prof., Romance Studies
Krumhansl, Carol L., Ph.D., Stanford U. Assoc. Prof., Psychology
Krumhansl, James A., Ph.D., Cornell U. Horace White Professor of Physics, Physics/LASSP*
Kufner, Herbert L., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
Kuki, Atsyo, Ph.D., Stanford U. Asst. Prof., Chemistry
Kurtzman, Howard S., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Psychology
LaCapra, Dominick C., Ph.D., Harvard U. Goldwin Smith Professor of European Intellectual History, History
LaFeber, Walter F., Ph.D., U. of Wisconsin. Marie Underhill Noll Professor of American History, History
Lambert, Bernd, Ph.D., U. of California at Berkeley. Prof., Anthropology
Lambert, William W., Ph.D., Harvard U. Prof. Emeritus, Psychology/Sociology/Anthropology
Landman, Alfred, Ph.D., U. of Amsterdam (Netherlands). Asst. Prof., Modern Languages and Linguistics
Lawler, Margaret, M. A., San Jose State Coll. Assoc. Prof., Theatre Arts
Lazzaro, Claudia, Ph.D., Princeton U. Assoc. Prof., History of Art
Leavitt, Thomas W., Ph.D., Harvard U. Prof., History of Art
Lebow, Richard N., Ph.D., City U. of New York. Prof., Government
Lee, David M., Ph.D., Yale U. Prof., Physics/LASSP*
Leed, Richard L., Ph.D., Cornell U. Prof., Modern Languages and Linguistics
LePage, G. Peter, Ph.D., Stanford U. Assoc. Prof., Physics/LNS¶
Levin, Harry, Ph.D., U. of Michigan. William R. Kenan, Jr. Professor of Psychology, Psychology
Levitsky, David A., Ph.D., Rutgers U. Prof., Nutritional Sciences/Psychology
Levitt, Bruce, Ph.D., U. of Michigan. Prof., Theatre Arts
Levy, Charles S., Ph.D., Cornell U. Prof., English
Lewis, Philip E., Ph.D, Yale U. Prof., Romance Studies
Lichtenbaum, Stephen, Ph.D., Harvard U. Prof., Mathematics
Littauer, Raphael M., Ph.D., Cambridge U. (England). Prof., Physics/LNS¶
Liu, Richard C., Ph.D., U. of California at Berkeley. Asst. Prof., Mathematics
Livesay, George R., Ph.D., U. of Illinois. Prof., Mathematics
Long, Franklin A., Ph.D., U. of California at Berkeley. Henry R. Luce Professor of Science and Society Emeritus, Chemistry/Science, Technology, and Society
Loring, Roger F., Ph.D., Stanford U. Asst. Prof., Chemistry
Lowi, Theodore J., Ph.D., Yale U. John L. Senior Professor of American Institutions, Government
Lurie, Alison, A. B., Radcliffe Coll. Prof., English
Lynch, Thomas F., Ph.D., U. of Chicago. Prof., Anthropology
Lyons, David B., Ph.D., Harvard U. Prof., Philosophy/Law
Lyons, Thomas, Ph.D., Cornell U. Asst. Prof., Economics
Maas, James B., Ph.D., Cornell U. Prof., Psychology
McAllester, David, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
McCall, Dan E., Ph.D., Columbia U. Prof., English
McClane, Kenneth A., M.F.A., Cornell U. Assoc. Prof., English
McClelland, Peter D., Ph.D., Harvard U. Prof., Economics
McConkey, James R., Ph.D., State U. of Iowa. Prof., English
McConnell-Ginet, Sally, Ph.D., U. of Rochester. Prof., Modern Languages and Linguistics
McCoy, Maureen, M.F.A., U. of Iowa. Asst. Prof., English
McDaniel, Boyce D., Ph.D., Cornell U. Floyd R. Newman Professor of Nuclear Studies Emeritus, Physics/LNS¶
McGinnis, Robert, Ph.D., Northwestern U. Prof., Sociology
Mack, Ronald D., Ph.D., Columbia U. Assoc. Prof., Psychology
McLafferty, Fred W., Ph.D., Cornell U. Prof., Chemistry
McMillin, H. Scott, Ph.D., Stanford U. Prof., English
McMurry, John E., Ph.D., Columbia U. Prof., Chemistry
McPherson, J. Miller, Ph.D, Vanderbilt U. Prof., Sociology
McRae, John R., Ph.D., Yale U. Asst. Prof., Asian Studies
McTighe, Sheila, Ph.D., Yale U. Asst. Prof., History of Art
Majumdar, Mukul K., Ph.D., U. of California at Berkeley. H. T. Warshow and Robert Irving Warshow Professor of Economics, Economics
Mankin, David P., Ph.D., U. of Virginia. Asst. Prof., Classics
March, Kathryn S., Ph.D., Cornell U. Asst. Prof., Anthropology/Women's Studies
Marcham, Frederick G., Ph.D., Cornell U. Goldwin Smith Professor of English History Emeritus, History
Marcus, Philip L., Ph.D., Harvard U. Prof., English
Marsden, Jerrold E., Ph.D., Princeton U. Prof., Mathematics
Martin, C. A., Ph.D., University of Wisconsin at Madison. Asst. Prof., German Literature/Women's Studies
Marzulla, Keith, Ph.D., Stanford U. Asst. Prof. Computer Science
Masson, Robert T., Ph.D., U. of California at Berkeley. Prof., Economics
Mebane, Walter, Ph.D., Yale U. Assoc. Prof., Government
Mehrez, Samia E., Ph.D., U. of California at Los Angeles. Asst. Prof., Arabic Language and Literature, Near Eastern Studies
Mei, Tsu-Lin, Ph.D., Yale U. Prof., Chinese Literature and Philosophy, Asian Studies
Meinwald, Jerrold, Ph.D., Harvard U. Goldwin Smith Professor of Chemistry, Chemistry
Meixner, Laura L., Ph.D., Ohio State U. Asst. Prof., History of Art
Meltzer, Leo, Ph.D., U. of Michigan. Assoc. Prof., Sociology
Mermin, Dorothy M., Ph.D., Harvard U. Prof., English
Mermin, N. David, Ph.D., Harvard U. Prof., Physics/LASSP*
Messing, Gordon M., Ph.D., Harvard U. Prof. Emeritus, Classics/Modern Languages and Linguistics
Migiel, Marilyn, Ph.D., Yale U. Asst. Prof., Romance Studies
Miller, Richard W., Ph.D., Harvard U. Prof., Philosophy
Minkowski, Christopher, Ph.D., Harvard U. Asst. Prof., Asian Studies/Classics
Mitchell, Janet, Ph.D., Northwestern U. Asst. Prof., Economics
Mitra, Tapan, Ph.D., U. of Rochester. Prof., Economics
Mitsis, Phillip, Ph.D., Cornell U. Assoc. Prof., Classics
Moen, Phyllis, Ph.D, U. of Minnesota. Assoc. Prof., Human Ecology and Sociology
Mohanty, S. P., Ph.D., U. of Illinois. Asst. Prof., English
Moitra, Abha, Ph.D., U. of Bombay (India). Asst. Prof., Computer Science
Monegal, Antonio, Ph.D., Harvard U. Asst. Prof., Romance Studies
Monosoff-Pancaldo, Sonya, Artists Diploma, Julliard School of Music. Prof., Music
Monroe, Jonathan B., Ph.D., U. of Oregon. Asst. Prof., Comparative Literature
Moon, Jill, M.F.A., U. of California at San Diego. Asst. Prof., Theatre Arts
Moore, R. Laurence, Ph.D., Yale U. Prof., History
Morgan, Robert R., M.F.A., U. of North Carolina. Prof., English
Morgenroth, Joyce, M.A., Johns Hopkins U. Asst. Prof., Theatre Arts
Morley, Michael D., Ph.D., U. of Chicago. Prof., Mathematics
Morrison, George H., Ph.D, Princeton U. Prof., Chemistry
Mullen, Harryette, Ph.D., U. of California at Santa Cruz. Asst. Prof., English
Murray, Edward, Ph.D., Yale Univ. Assoc. Prof., Music
Murray, Timothy, Ph.D., Johns Hopkins U. Assoc. Prof., English
Muus, Lars, U. of Aarhus (Denmark). Asst. Prof., Economics
Najemy, John M., Ph.D., Harvard U. Assoc. Prof., History
Nee, Victor, Ph.D., Harvard U. Prof., Sociology
Nelkin, Dorothy W., A.B., Cornell U. Prof., Science, Technology, and Society/Sociology
Nerode, Anil, Ph.D., U. of Chicago. Prof., Mathematics
Ngate, Jonathan, Ph.D., U. of Washington. Assoc. Prof., Romance Studies
Nicholson, Philip, Ph.D., California Inst. of Technology. Assoc. Prof., Astronomy/CRSR†
Nicolau, Alexandru, Ph.D., Yale U. Asst. Prof., Computer Science
Noblitt, James S., Ph.D., Harvard U. Prof., Modern Languages and Linguistics
Norton, Mary Beth, Ph.D., Harvard U. Mary Donlon Alger Professor of American History, History

Nussbaum, Alan, Ph.D., Harvard U. Assoc. Prof., Classics/Modern Languages and Linguistics
O'Connor, Stanley J., Ph.D., Cornell U. Prof., History of Art
Oliver, Jack E., Ph.D., Columbia U. Irving Porter Church Professor in Engineering, Geological Sciences
Olschner, Leonard M., Dr. Phil, Albert-Ludwigs-Universität, Freiburg i. Br. (West Germany). Asst. Prof., German Literature
Olzak, Susan, Ph.D. , Stanford U. Asst. Prof., Sociology
Orear, Jay, Ph.D., U. of Chicago. Prof., Physics/LNS¶
Owen, David I., Ph.D., Brandeis U. Prof., Ancient Near Eastern History and Archaeology (Near Eastern Studies)
Palmer, Robert M., M.M., Eastman School of Music. Given Foundation Professor of Music Composition Emeritus, Music
Panangaden, Prakash, Ph.D., U. of Wisconsin at Milwaukee. Asst. Prof., Computer Science
Park, Joon, Ph.D., Yale U. Asst. Prof., Economics
Parker, A. Reeve, Ph.D., Harvard U. Prof., English
Parker, Roger, Ph.D., King's Coll., U. of London (England). Assoc. Prof., Music
Parpia, Jeevak M., Ph.D., Cornell U. Assoc. Prof., Physics/LASSP*
Parratt, Lyman G., Ph.D., U. of Chicago. Prof. Emeritus, Physics
Parrish, Stephen M., Ph.D., Harvard U. Goldwin Smith Professor of English, English
Paterson, Donald R. M., M. M., U. of Michigan. Assoc. Prof., Music
Payne, Lawrence E., Ph.D., Iowa State U. Prof., Mathematics
Peirce, Leslie, Ph.D., Princeton U. Asst. Prof., Near Eastern Studies
Pelliccia, Hayden, Ph.D., Yale U. Asst. Prof., Classics
Pempel, T. John, Ph.D., Columbia U. Prof., Government
Peterson, Charles A., Ph.D., U. of Washington. Prof., History
Philips, Laura A., Ph.D., U. of California at Berkeley. Asst. Prof., Chemistry
Piedra, Jose, Ph.D., Yale U. Asst. Prof., Romance Studies
Piggott, Joan R., Ph.D., Stanford University. Asst. Prof., History
Pingali, Keshav K., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
Pintner, Walter M., Ph.D., Harvard U. Prof., History
Platek, Richard, Ph.D., Stanford U. Assoc. Prof., Mathematics
Pohl, Robert O., Doktor, U. Erlangen (Germany). Prof., Physics/LASSP*
Polenberg, Richard, Ph.D., Columbia U. Goldwin Smith Professor of American History, History
Pollak, Nancy, Ph.D., Yale U. Asst. Prof., Russian Literature
Pontusson, Jonas, Ph.D., U. of California at Berkeley. Asst. Prof., Government
Porte, Joel M., Ph.D., Harvard U. Frederic J. Whiton. Prof. of English, English
Porter, Richard F., Ph.D., U. of California at Berkeley. Prof., Chemistry
Possen, Uri M., Ph.D., Yale U. Prof., Economics
Powers, David S., Ph.D., Princeton U. Assoc. Prof., Arabic and Islamic Studies, Near Eastern Studies
Provine, William B., Ph.D., U. of Chicago. Prof., History/Biological Sciences
Pucci, Pietro, Ph.D., U. of Pisa (Italy). Prof., Classics
Rabkin, Jeremy A., Ph.D., Harvard U. Assoc. Prof., Government
Radzinowicz, Mary A., Ph.D., Columbia U. Prof., English
Ramage, Andrew, Ph.D., Harvard U. Prof., History of Art
Randel, Don M., Ph.D., Princeton U. Prof., Music
Regan, Dennis T., Ph.D., Stanford U. Assoc. Prof., Psychology
Regan, Elizabeth Adkins, Ph.D., U. of Pennsylvania. Assoc. Prof., Psychology/ Biological Sciences
Rendsburg, Gary, Ph.D., New York U. Assoc. Prof., Biblical Studies (Near Eastern Studies)
Reppy, John D., Ph.D., Yale U. John L. Wetherill Professor of Physics, Physics/ LASSP*
Rhodes, Frank H. T., Ph.D. , U. of Birmingham (England). Prof., Geological Sciences
Richardson, Robert C., Ph.D., Duke U. F. R. Newman Professor of Physics, Physics/ LASSP*
Rivchin, Marilyn, A.B., Barnard Coll. Lecturer, Filmmaking
Roe, Albert S., Ph.D., Harvard U. Prof. Emeritus, History of Art
Romm, James S., Ph.D., Princeton U. Asst. Prof., Classics
Rosen, Bernard C., Ph.D., Cornell U. Prof., Sociology
Rosen, Carol G., Ph.D., Harvard U. Assoc. Prof., Modern Languages and Linguistics
Rosen, David, Ph.D., U. of California at Berkeley. Assoc. Prof., Music
Rosenberg, Alex, Ph.D., U. of Chicago. Prof. Emeritus, Mathematics
Rosenberg, Edgar, Ph.D., Stanford U. Prof., English/Comparative Literature
Rothaus, Oscar S., Ph.D., Princeton U. Prof., Mathematics
Rubin, Beth A., Ph.D., Indiana U. Asst. Prof., Sociology
Rubin, David L., Ph.D., U. of Michigan. Asst. Prof., Physics/LNS¶
Rush, Myron, Ph.D., U. of Chicago. Prof., Government
Rusten, Jeffrey S., Ph.D., Harvard U. Assoc. Prof., Classics
Ryan, Thomas A., Ph.D., Cornell U. Prof., Emeritus, Psychology
Sabean, David, Ph.D., U. of Wisconsin. Prof., History
Saccamano, Neil, Ph.D., Johns Hopkins U. Asst. Prof., English
Sagan, Carl E., Ph.D., U. of Chicago. David C. Duncan Professor in the Physical Sciences, Astronomy/CRSR†
Sakai, Naoki, Ph.D., U. of Chicago. Asst. Prof., Asian Studies
Salpeter, Edwin E., Ph.D., Birmingham U. (England). James Gilbert White Distinguished Professor in the Physical Sciences, Physics/LNS¶/Astronomy/CRSR†
Salton, Gerard, Ph.D., Harvard U. Prof., Computer Science
Samuels, Shirley, Ph.D., U. of California at Berkeley. Asst. Prof., English
Sangren, P. Steven, Ph.D., Stanford U. Assoc. Prof., Anthropology
Saul, Peter. Senior Lecturer, Dance
Sawyer, Paul L., Ph.D., Columbia U. Prof., English
Scammell, Michael, Ph.D., Columbia U. Prof., Russian Literature
Schatz, Alfred H., Ph.D., New York U. Prof., Mathematics
Scheinman, Lawrence, Ph.D., U. of Michigan. Prof., Government
Scheraga, Harold A., Ph.D., Duke U. George W. and Grace L. Todd Professor of Chemistry, Chemistry
Schneider, Fred B., Ph.D., SUNY at Stony Brook. Assoc. Prof., Computer Science
Schuler, Richard E., Ph.D., Brown U. Prof., Economics/Engineering
Schwarz, Daniel R., Ph.D., Brown U. Prof., English
Segrè, Alberto M., Ph.D., U. of Illinois. Asst. Prof., Computer Science
Seltzer, Mark, Ph.D., U. of California at Berkeley. Assoc. Prof., English
Sen, Shankar, Ph.D., Harvard U. Prof., Mathematics
Senderovich, Savely, Ph.D., New York U. Assoc. Prof., Russian Literature
Sethna, James P., Ph.D., Princeton U. Asst. Prof., Physics/LAASP*
Seznec, Alain, D.E.S., U. of Paris-Sorbonne (France). Prof., Romance Studies
Shanzer, Danuta R., D.Phil., Oxford U. (England). Assoc. Prof., Classics
Shapiro, Gavriel, Ph.D., U. of Illinois at Urbana. Asst. Prof., Russian Literature
Shapiro, Stuart L., Ph.D., Princeton U. Prof., Astronomy/Physics CRSR†
Shaw, Harry E., Ph.D., U. of California at Berkeley. Assoc. Prof., English
Shefter, Martin A., Ph.D., Harvard U. Prof., Government
Shell, Karl, Ph.D. Stanford U. Robert Julius Thorne Professor of Economics, Economics
Shih, Chilin, Ph.D. U. of California at San Diego. Asst. Prof., Modern Languages and Linguistics
Shiraishi, Takashi, Ph.D., Cornell U. Asst. Prof., History
Shoemaker, Sydney S., Ph.D., Cornell U. Susan Linn Sage Professor of Philosophy, Philosophy
Shore, Richard A., Ph.D., Massachusetts Inst. of Technology. Prof., Mathematics
Shue, Vivienne B., Ph.D., Harvard U. Prof., Government
Siegel, James T., Ph.D., U. of California at Berkeley. Prof., Anthropology
Siegel, Sandra F., Ph.D., U. of Chicago. Assoc. Prof., English

# DIVISION OF BIOLOGICAL SCIENCES

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

## ORGANIZATION

The Division of Biological Sciences is composed of six major sections: Biochemistry, Molecular and Cell Biology; Ecology and Systematics; Genetics and Development; Neurobiology and Behavior; Physiology; Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

The offices, research laboratories, and classrooms of biology faculty members are located in many different buildings on the campus, primarily in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Veterinary Medicine.

Student services are provided by the division's Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner *Westward* or brigantine *Corwith Cramer.*

## FACULTY

P. J. Bruns, director; H. T. Stinson, associate director; K. K. Adler, C. F. Aquadro, W. J. Arion, R. Barker, A. H. Bass, D. M. Bates, B. L. Bedford, A. Bensadoun, E. N. Bergman, K. W. Beyenbach, A. W. Blackler, S. E. Bloom, R. Booker, A. C. Borror, A. P. Bretscher, W. J. Brown, W. L. Brown, W. R. Butler, J. M. Calvo, R. R. Capranica, B. F. Chabot, J. L. Cisne, R. A. Corradino, W. B. Currie, P. J. Davies, J. I. Davis, A. Dobson, J. J. Doyle, T. Eisner, S. T. Emlen, P. P. Feeny, G. W. Feigenson, R. H. Foote, J. E. Fortune, T. D. Fox, J. Gibson, Q. H. Gibson, R. F. Gilmour, M. L. Goldberg, N. G. Hairston, B. P. Halpern, O. P. Hamill, W. Hansel, M. R. Hanson, R. G. Harrison, R. M. Harris-Warrick, C. D. Harvell, L. A. Heppel, G. P. Hess, P. C. Hinkle, C. D. Hopkins, K. A. Houpt, T. R. Houpt, R. W. Howarth, S. H. Howell, H. C. Howland, R. R. Hoy, T. C. Huffaker, A. T. Jagendorf, P. A. Karplus, M. N. Kazarinoff, E. B. Keller, K. J. Kemphues, K. A. R. Kennedy, L. V. Kochian, R. P. Korf, T. A. LaRue, A. C. Leopold, S. A. Levin, G. E. Likens, J. T. Lis, E. R. Loew, M. A. Luckow, R. E. McCarty, D. K. McClearn, A. R. McCune, J. M. Fessenden MacDonald, R. J. MacIntyre, W. H. Mark, P. L. Marks, J. K. Moffat, J. B. Nasrallah, K. J. Niklas, K. C. Nixon, T. G. Owens, D. J. Paolillo, M. V. Parthasarathy, D. Pimentel, T. R. Podleski, F. H. Pough, A. G. Power, W. B. Provine, A. Quaroni, E. Racker, E. Adkins Regan, M. E. Richmond, J. W. Roberts, D. Robertshaw, R. B. Root, M. M. Salpeter, A. M. Schneiderman, T. D. Seeley, P. W. Sherman, R. F. Silver, R. M. Spanswick, I. A. Tamas, D. N. Tapper, J. F. Thompson, R. Turgeon, B.-K. Tye, S. Via, V. M. Vogt, C. Walcott, R. H. Wasserman, M. Watford, R. O. Wayne, W. W. Webb, N. F. Weeden, Q. D. Wheeler, D. B. Wilson, D. W. Winkler, M. F. Wolfner, J. F. Wootton, R. Wu, D. A. Young, S. A. Zahler, D. B. Zilversmit

### Other Teaching Personnel

G. Albrecht, R. R. Alexander, R. A. Calvo, C. Eberhard, P. R. Ecklund, M. F. Ferger, J. C. Glase, J. M. Griffiths, J. B. Heiser, C. H. McFadden, H. C. Reiss

## DISTRIBUTION REQUIREMENT

**In the College of Agriculture and Life Sciences**, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110,105–106, or 101 and 103 plus 102 and 104, or 107–108. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses except Biological Sciences 152, 200, 202, 205, 206, 301, or 367.

**In the College of Arts and Sciences**, the biological sciences distribution requirement is for a two-semester introductory biology sequence selected from Biological Sciences 109–110,105–106, or 101 and 103 plus 102 and 104, or 107–108. An Advanced Placement score of 4 or 5 fulfills one-half the distribution requirement. Students must taken an upper-level biology course to complete the distribution requirement in biological sciences.

**In the College of Human Ecology**, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

*Note:* Biological Sciences 101–102–103–104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may *not* be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

## THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 118 Stimson Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a concentration area and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1–3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a *provisional* basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless

performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

Students who matriculated *before* fall 1988 must complete the major by satisfying the requirements listed below. Students who matriculated fall 1988 and after see changes in the Requirements for the Major. These courses should be taken for a letter grade unless the course is offered for S-U grades only.

1) *Introductory biology for majors* (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105–106. Biological Sciences 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101 and 103, 102 and 104, or 103–104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (G20 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. Students in doubt are advised to take Biological Sciences 101 and 103. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).
2) **General chemistry** (one year): Chemistry 207–208,* or 215–216,* or 103–104.
3) **College mathematics** (one year, including at least one semester of calculus): Mathematics 111–112,* 105–106, or 111–105. Education 115 may *not* be used to fulfill any part of this requirement.
4) **Organic chemistry:** Chemistry 253 and 251, or 253 and 301, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.
5) **Physics:** Physics 207–208,* 112–213,* or 101–102. Those who take Physics 112–213 are advised to complete Physics 214 as well.
6) **Genetics:** Biological Sciences 281.
7) **Biochemistry:** Biological Sciences 330 or 331.
8) **A concentration area** selected from the outline below.
9) **Breadth in biology**, as described below.
10) **Foreign language:** students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but *all* courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

As an alternative to requirements 8 and 9 above, students may choose to complete the Program in General Biology, outlined below.

## Concentration Areas and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a concentration area or the Program in General Biology. The concentration requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible concentration areas are listed below.

1) *Animal Physiology and Anatomy:* Bio S 316, Cellular Physiology; Bio S 311 and 319, Introductory Animal Physiology, Lectures and Laboratory; and at least one additional course selected from the following: Bio S 313, Histology: The Biology of the Tissues; Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 458, Mammalian Physiology; Bio S 492, Sensory Function; An Sc 427, Fundamentals of Endocrinology.

*Note:* Bio S 313, Histology: The Biology of the Tissues, is recommended for those students who have not yet taken Bio S 274, The Vertebrates, as part of their concentration requirements in animal physiology and anatomy. Students should contact their adviser for other possible alternatives.

2) *Biochemistry:* Chemistry 300 or 215–216, Quantitative Chemistry, must be taken. One of the following organic chemistry laboratory sequences must also be taken: Chemistry 301–302 or 251–252 and 302 or 301 or 251–252. In addition, students must take a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2) and a biochemistry laboratory course (Bio S 638 or 430 or 630). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate. It is recommended that students take the more rigorous organic chemistry and physics sequences (Chemistry 357–358 or 359–360 and Physics 207–208) and a third semester of calculus.

   Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.
3) *Botany:* courses chosen with the aid of an adviser to meet the goal of exposing each student to plant structure, function, classification, ecology, and evolution. Three courses, one from each of the three following categories, fulfill the minimum requirements. Students are encouraged to begin the sequence of courses with Bio S 241 (see category b): (a) Bio S 242 and 244 or Bio S 341 and 349, Plant Physiology, Lectures and Laboratory; (b) Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 448, Plant Evolution and the Fossil Record; or Pl Pa 309, Introductory Mycology; and (c) Bio S 345, Plant Anatomy; or Pl Pa 301, Introductory Plant Pathology. Students interested in a broad background in botany are encouraged to take Bio S 346, Algal Physiology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; and additional courses in (b) and (c).
4) *Cell Biology:* Chemistry 300 or 215–216, Quantitative Chemistry; Bio S 630, Laboratory in Cell Biology (strongly recommended), Bio S 638, Intermediate Biochemical Methods, or Bio S 430, Basic Biochemical Methods; and one of the following two options:

Option 1: Bio S 432, Survey of Cell Biology, and 8 additional credits distributed between groups A and B and approved by the adviser.

Option 2: The two courses from Group A and 6 additional credits from Group B approved by the adviser.

Group A: Bio S 438, Cell Proliferation and Oncogenic Viruses; Bio S 483, Molecular Aspects of Development.

Group B: Bio S 222, Neurobiology and Behavior II: Introduction to Neurobiology; Bio S 305, Basic Immunology, Lectures; Bio S 307, Basic Immunology, Laboratory; Bio S 313, Histology: The Biology of the Tissues; Bio S 345, Plant Anatomy; Bio S 485, Microbial Genetics, Lectures; Bio S 486, Immunogenetics; An Sc 419, Animal Cytogenetics; Micro 290, General Microbiology Lectures; Micro 291, General Microbiology Laboratory; Micro 484, Cytology of Prokaryotes Lectures; Micro 485, Cytology of Prokaryotes Laboratory.

Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

Students anticipating graduate work in cell biology should consider taking a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate.

5) *Ecology, Systematics, and Evolution:* Bio S 261, Principles of Ecology; Bio S 378, Evolutionary Biology; and at least two of the following courses or one of the following courses and a 400–level, 4–credit course offered at Shoals Marine Laboratory: Bio S 248, Taxonomy of Vascular Plants; Bio S 373, The Invertebrates: Form, Function, and Evolution; Bio S 455, Insect Ecology; Bio S 457/459 (462/464), Limnology; Bio S 461, Population and Evolutionary Ecology; Bio S 462, Marine Ecology; Bio S 463/465, Plant Ecology; Bio S 464, Microevolution and Macroevolution; Bio S 471, Mammalogy; Bio S 472 (473), Herpetology; Bio S 475, Ornithology; Bio S 476, Biology of Fishes; Bio S 478, Ecosystem Biology; Bio S 479 Paleobiology; Bio S 481 Population

Genetics; Bio S 484, Molecular Evolution. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

6) *Genetics and Development:* 9 credits, usually selected from the following courses: Bio S 378, Evolutionary Biology; Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 481, Population Genetics; Bio S 482, Human Genetics and Society; Bio S 483, Molecular Aspects of Development; Bio S 484, Molecular Evolution; Bio S 485 and 487, Microbial Genetics; Bio S 486, Immunogenetics; Bio S 633, Biosynthesis of Macromolecules; Bio S 639, The Nucleus; Bio S 641, Laboratory in Plant Molecular Biology; Bio S 644, Plant Growth and Development; Bio S 653, Plant Molecular Genetics; Bio S 688, Yeast Genetics; An Sc 419, Animal Cytogenetics.

7) *Neurobiology and Behavior:* The two-semester introductory course sequence, Neurobiology and Behavior I and II (Bio S 221 and 222) with discussion section (4 credits per term), and 9 additional credits, among which must be a course from the neurobiology and behavior offerings. Bio S 420, 498, 499, and 720 may *not* be used as this neurobiology and behavior course. The remainder of the 9 credits may be in any course (such as physiology, developmental biology, cellular biology, ecology, vertebrate or invertebrate biology, or neurobiology and behavior) approved by the adviser. Courses used to fulfill the concentration requirements may *not* be counted toward fulfillment of the breadth requirement.

*Note:* Students who declare the concentration in neurobiology and behavior after taking Bio S 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W119 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

8) *Independent Option:* Special programs for students interested in biophysics, microbiology (College of Arts and Sciences students only), or nutrition are available under this option. In addition, students who want to undertake a course of study not covered by the seven existing concentration areas, special programs, or the Program in General Biology may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 118 Stimson Hall.

## Requirement for Breadth in Biology

To fulfill the requirement for breadth in biology, students must pass a total of two courses outside of their concentration area selected from two of the categories listed below.

Students should consult their faculty advisers, keeping in mind the following rules, when choosing the courses to meet this requirement. A course may not count for breadth if it *could* be used (even if it is not) to fulfill a concentration requirement (see note below). No course may be used to fulfill the breadth requirement if it is also used to fulfill a concentration requirement. Students may not count two courses for breadth credit if one course is a prerequisite to the other course. Students concentrating in animal physiology and anatomy; botany; cell biology; ecology, systematics, and evolution; or genetics and development should see the notes following the list of approved breadth courses.

1) *Animal Physiology and Anatomy:* Biological Sciences 214, 311, 313; Nutritional Sciences 331.

2) *Botany:* Biological Sciences 241, 242 and 244, 248, 341 and 349, 343, 345, 441, 448; Plant Pathology 309.

3) *Cellular Biology:* Biological Sciences 305, 316, 432; Microbiology 290.

4) *Developmental Biology:* Biological Sciences 385, 389, 483; Animal Science 220.

5) *Ecology, Systematics, and Evolution:* Biological Sciences 261, 378.

6) *Neurobiology and Behavior:* Biological Sciences 221, 222.

*Note:* Students concentrating in animal physiology and anatomy may not use Biological Sciences 316, 385, 389, or 432 to fulfill the breadth requirement.

Students concentrating in cell biology may not use Biological Sciences 222, 313, 345, or 483 to fulfill the breadth requirement.

Students concentrating in ecology, systematics, and evolution may not use Biological Sciences 248 to fulfill the breadth requirement.

Students concentrating in genetics and development may not use Biological Sciences 378 or any course in group 4 to fulfill the breadth requirement.

## Program in General Biology

As an alternative to the requirements for a concentration area and for breadth in biology, students may choose to complete the Program in General Biology. These students must fulfill *all* other requirements for the biological sciences major. In addition, students must complete the following:

1) Ecology (Bio S 261 or Bio S 262 [no longer offered]).

2) Neurobiology and Behavior I or II (Bio S 221 or 222).

3) A physiology course from the following: Bio S 242 and 244, or 341 and 349, Plant Physiology; Bio S 311, Introductory Animal Physiology, Lectures.

4) One course from the following: Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 274, Functional and Comparative Morphology of Vertebrates; Entom 212, Insect Biology; Micro 290 and 291, General Microbiology.

5) At least one course offered by the Division of Biological Sciences concentrating on plants. This may be satisfied by a course that also fulfills requirement 3 or 4.

6) At least one course offered by the Division of Biological Sciences with a laboratory. This may be satisfied by a course that also fulfills requirement 3, 4, or 5.

7) A biological sciences course offered for 2 or more credits having as a prerequisite one of the following: Bio S 221, Neurobiology and Behavior I; Bio S 222, Neurobiology and Behavior II; Bio S 241, Introductory Botany; Bio S 242 or 341, Plant Physiology; Bio S 261, Principles of Ecology; Bio S 274, Functional and Comparative Morphology of Vertebrates; Bio S 281, Genetics; Bio S 311, Introductory Animal Physiology, Lectures; Bio S 330 or 331, Principles of Biochemistry.

## Changes in the Requirements for the Major

*Beginning with students who matriculated in fall 1988, the requirements for the major in biological sciences have been modified as follows: (1) a course in evolutionary biology (Bio S 378) is required for all majors; (2) the biology breadth requirement is eliminated; (3) the present areas of concentration are now called programs of study (the requirements for each program of study allow completion of the program of study with 13–15 course credits); (4) the requirements for satisfying the program in general biology have been changed and now constitute a program of study in general biology. The specific descriptions of the programs of study are listed below. These courses should be taken for a letter grade unless the course is offered for S-U grades only.*

1) **Introductory biology for majors** (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105–106. Biological Sciences 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101 and 103, 102 and 104, or 103–104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (G20 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

2) **General chemistry** (one year): Chemistry 207–208,* or 215–216,* or 103–104.

3) **College mathematics** (one year, including at least one semester of calculus): Mathematics 111–112,* 105–106, or 111–105. Education 115 may not be used to fulfill any part of this requirement.

4) **Organic chemistry:** Chemistry 253 and 251, or 253 and 301, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

5) **Physics:** Physics 207–208,* 112–213,* or 101–102. Those who take Physics 112–213 are advised to complete Physics 214 as well.

6) **Genetics:** Biological Sciences 281.

7) **Biochemistry:** Biological Sciences 330 or 331.

8) **Evolutionary Biology:** Biological Sciences 378.

9) **A program of study** selected from the outline below.

10) **Foreign language:** students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but *all* courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

## Programs of Study Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) *Animal Physiology and Anatomy:* Bio S 311 and 319, Introductory Animal Physiology, Lectures and Laboratory; Bio S 313, Histology: The Biology of Tissues; and Bio S 316, Cellular Physiology.

2) *Biochemistry:* Chemistry 300 or 215–216, Quantitative Chemistry, must be taken. One of the following organic chemistry laboratory sequences must also be taken: Chemistry 301–302 or 251–252–302 or 301 or 251–252. In addition, students must take a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2) and a biochemistry laboratory course (Bio S 638 or 430 or 630). Note that Physical Chemistry 288.2 is designed for biologists, but either sequence is appropriate. It is recommended that students take the more rigorous organic chemistry and physics sequences (Chemistry 357–358 or 359–360 and Physics 207–208) and a third semester of calculus. Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

3) *Botany:* A minimum of 13 credits is required from courses chosen with the aid of an adviser to meet the goal of exposing each student to plant structure, function, classification, ecology, and evolution. Three courses, one from each of the three following categories, fulfill the minimum requirements. Students are encouraged to begin the sequence of courses with Bio S 241 (see category b): (a) Bio S 242 and 244 or Bio S 341 and 349, Plant Physiology, Lectures and Laboratory; (b) Bio S 241, Introductory Botany; Bio S 248, Taxonomy of Vascular Plants; Bio S 448, Plant Evolution and the Fossil Record; or Pl Pa 309, Introductory Mycology; and (c) Bio S 345, Plant Anatomy; or Pl Pa 301, Introductory Plant Pathology. Students interested in a broad background in botany are encouraged to take Bio S 346, Algal Physiology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; and additional courses in (b) and (c).

4) *Cell Biology:* Chemistry 300 or 215–216, Quantitative Chemistry; Bio S 432, Survey of Cell Biology; Bio S 630, Laboratory in Cell Biology (strongly recommended), **or** Bio S 638, Intermediate Biochemical Methods **or** Bio S 430, Basic Biochemical Methods; **and** at least 5 additional credits chosen from the following courses: Bio S 222, Neurobiology and Behavior II: Introduction to Neurobiology; Bio S 305, Basic Immunology; Bio S 313, Histology: The Biology of the Tissues; Bio S 345, Plant Anatomy; Bio S 435–436, Undergraduate Biochemistry Seminar; Bio S 438, Cell Proliferation and Oncogenic Viruses; Bio S 483, Molecular Aspects of Development; Bio S 444, Plant Cell Biology; Bio S 636, Current Topics in Cell Biology; Bio S 639, The Nucleus; An S 419, Animal Cytogenetics.

   Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year. If graduate work in cell biology is anticipated, students should consider taking a physical chemistry sequence (Chemistry 389–390 or 287–288.1 or 287–288.2).

5) *Ecology and Systematics:* Bio S 261, General Ecology, and 10 credits from the following course lists, including at least one course from each group:

   (a) Bio S 241, Introductory Botany; Bio S 274, Functional and Comparative Morphology of Vertebrates; Bio S 373, The Invertebrates: Form, Function, and Evolution; Bio S 471, Mammalogy; Bio S 472, Herpetology; Bio S 475, Ornithology; Bio S 476, Biology of Fishes; Entom 212, Insect Biology.

   (b) Bio S 263, Field Ecology; Bio S 272, Functional Ecology; Bio S 448, Plant Evolution and the Fossil Record; Bio S 455, Insect Ecology; Bio S 457 and 459, Limnology, Lectures and Laboratory, Bio S 461, Population and Evolutionary Ecology; Bio S 462, Marine Ecology; Bio S 463 and 465, Plant Ecology, Lectures and Laboratory; Bio S 464, Microevolution and Macroevolution; Bio Sci 470, Ecological Genetics; Bio S 478, Ecosystem Biology; Bio S 479, Paleobiology; Bio S 481, Population Genetics.

   One 400-level, 4-credit course offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

6) *General Biology:* The program of study in general biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences and may include Microbiology 290–291. These credits must include one course from the courses listed for at least three of the seven other programs of study, and must include a course with a laboratory and a minimum of two upper-level (300 and above) courses.

7) *Genetics and Development:* A minimum of 13 credits, usually chosen from the following courses: Bio S 385, Developmental Biology; Bio S 389, Embryology; Bio S 480, Seminar in Developmental Biology; Bio S 481, Population Genetics; Bio S 483, Molecular Aspects of Development; Bio S 484, Molecular Evolution; Bio S 485 and 487, Microbial Genetics; Bio S 486, Immunogenetics; Bio S 633 Biosynthesis of Macromolecules; Bio S 639, The Nucleus; Bio S 641, Laboratory in Plant Molecular Biology; Bio S 644, Plant Growth and Development; Bio S 653, Plant Molecular Genetics; Bio S 687, Developmental Genetics; Bio S 688, Yeast Genetics; Bio S 689, Advanced Topics in Population Genetics; An S 419, Animal Cytogenetics.

   Up to 3 credits for this program for study may be chosen from other biological sciences courses with approval of the faculty adviser.

8) *Neurobiology and Behavior:* The two-semester introductory course sequence, Neurobiology and Behavior I and II (Bio S 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings. Bio S 420, 498, 499, and 720 may not be used as this neurobiology and behavior course. However, these readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the program of study in neurobiology and behavior.

   *Note:* Students who declare the program of study in neurobiology and behavior after taking Bio S 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W119 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

9) *Independent Option:* Special programs for students interested in biophysics, microbiology (College of Arts and Sciences students only), or nutrition are available under this option. In addition, students who want to undertake a course of study not covered by the eight existing programs of study or one of the special

programs may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 118 Stimson Hall.

### Independent Research and Honors Program

**Individual research projects** under the direction of a faculty member are encouraged as an aspect of study within a concentration (programs of study). Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the availability of space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 118 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, G20 Stimson Hall.

Research credits may *not* be used in completion of the following concentration (program of study) areas: animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; and genetics and development. No more than 4 credits of research may be used in completion of the concentration area (program of study) in neurobiology and behavior.

**The honors program** in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the faculty. Applications for the honors program are available in the Office for Academic Affairs, 118 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the division to serve as cosigner of the research. The division cosigner must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors is the responsibility of the Honors Program Committee.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering a year abroad should consult with a member of the Honors Committee before beginning their year abroad. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 118 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, G20 Stimson Hall.

## CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, to concentration and breadth requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

## ADVISING

Students in need of academic advice are encouraged to consult their advisers, come to the Behrman Biology Center (G20 Stimson Hall), or contact the associate director for academic affairs (118 Stimson Hall).

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

## INDEX OF COURSES

The middle digits of biological sciences course numbers are used to denote courses in specific areas: 0, general; 1, animal physiology and anatomy; 2 and 9, neurobiology and behavior; 3, biochemistry and cell biology; 4, botany; 6 and 7, ecology, systematics, and evolution; 8, genetics and development. The middle digit 5 is used when all other course numbers in a particular area have already been assigned.

*Note:* Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

## GENERAL COURSES

**101–102 Biological Sciences, Lectures**
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless written permission is obtained from instructor. S-U grades optional, with permission of instructor. May not be taken for credit after Biological Sciences 105–106 or 109–110.

Lecs, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 28 and Nov. 9; spring, Feb. 22 and Apr. 3. K. K. Adler.

Designed both for students who intend to specialize in biological sciences and for those specializing in other subjects, such as the social sciences or humanities, who want to obtain a thorough knowledge of biology as part of their general education. Plant and animal materials are considered together rather than in separate units. The fall semester covers the chemical and cellular basis of life, energy transformations, anatomy, physiology, and behavior. The spring semester covers genetics, development, evolution, ecology, and the origin of life. Each topic is considered in the light of modern evolutionary theory.

**103–104 Biological Sciences, Laboratory**
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in Biological Sciences 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless written permission is obtained from instructor. S-U grades optional, with permission of instructor. No admittance after second week of classes.

Lab, M T W or R 1:25–4:25, M or W 7:30–10:30 p.m, or T R or S 8–11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund and staff.

Biological Sciences 103–104 is designed to give students laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester laboratory experience is provided in the areas of genetics, development, organismal diversity, population genetics and growth, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor.

**105–106 Introductory Biology**
105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. S-U grades optional, with written permission of instructor. May not be taken for credit after Biological Sciences 101–104 or 109–110. No admittance after first week of classes. Fee, $5.

Lec, T 9:05 (1st lec of fall term, R 8/31 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Four formal laboratory sessions are offered each semester. Written reports on experimental work are required in the fall; extensive dissections (both invertebrate and vertebrate) with practical exams constitute spring laboratories. The core units include additional laboratory work. Performance on the core units, the laboratories, and the final examination determine the final grade. Students who object to dissecting live invertebrates may want to take another biology course.

**107–108 General Biology**
8-week summer session (107, weeks 1–4; 108, weeks 5–8). 4 credits each. Prerequisite: Biological Sciences 101–103, 105, or 107 is a prerequisite for 108. Fee, $35.

Lecs, M-R 9–12; labs, M T & R 1:30–4:30, F 9–12. A. W. Blackler and staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. Topics covered in Biological Sciences 107 include physiology, biology, and metabolism. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. Topics covered in Biological Sciences 108 include genetics, developmental biology, the biology of populations, and evolution. The laboratory work is a continuation of the material covered in Biological Sciences 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. Biological Sciences 107–108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

**109–110 Biological Principles**
109, fall; 110, spring. 3 credits each term. Limited to 600 students. Prerequisite: 109 is prerequisite to 110 unless written permission is obtained from the instructor and student has at least 3 credits of college biology. Letter grades only. May not be taken for credit after Biological Sciences 101–104 or 105–106. This course may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may *not* be used as an introductory course for the major in biological sciences. *Note that this course may not always satisfy the prerequisite for second- and third-level courses in biology.*

Lecs, M W F 9:05 or 10:10; lab, M T W R or F 2–4:25 or T 10:10–12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 28 and Nov. 9; spring, Feb. 22 and Apr. 3. R. Turgeon, C. Eberhard.

Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology but addresses itself to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of preserved material.

**152 Special Topics in Biology**
Spring. 1 credit. Limited to 30 students. Prerequisites: superior performance in Biological Sciences 109 or equivalent and concurrent enrollment in Biological Sciences 102, 106, or 110, or written permission of instructor. S-U grades only. *This course may not be used in fulfillment of college distribution requirements.*

Lec, M 3:35: occasional field trips to be arranged. R. Turgeon, C. Eberhard, and guest lecturers.

A lecture course designed to complement introductory biology by providing an opportunity for deeper exploration of selected topics of interest. Class involvement and discussion are encouraged.

**200 Special Studies in Biology**
Fall or spring. 1–3 credits. Prerequisites: transfer or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 118. S-U grades optional, with permission of instructor.

Hours to be arranged. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. May not be substituted for 100–level courses and may not be used in fulfillment of college distribution requirements.

**202 History of Biology (also Biology and Society 288 and History 288)**
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional.

Lecs, T R 10:10–11:25. W. B. Provine.

An examination of the history of biology, emphasizing the interaction of biology and culture. Original writings of biologists constitute the bulk of reading assignments. Covers the period from classical antiquity to the present, but primary emphasis is on twentieth-century biology.

**205 Ethics and Healthcare (also Philosophy 245 and Biology and Society 205)**
Fall and summer. 4 credits. Limited to 80 students (25 under Biological Sciences 205, 25 under Biology and Society 205, and 30 under Philosophy 245). Registered students not attending during the first week will be dropped from the course. Open to sophomores, juniors, and seniors; permission of instructor required for graduate students.

Lecs, T R 10: 10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.

Critical *philosophical* analysis of the conceptual frameworks in which ethical problems associated with healthcare can be formulated and solutions evaluated. General topics (with sample issues in parentheses) include knowledge in ethics (ethical skepticism, ethical relativism); proper social allocation of resources for, and within, medicine (entitlement to health care, access to scarce medical resources, cost-benefit analysis); the proper account of basic concepts such as illness, death, autonomy, and personhood (abortion, euthanasia, procreative technologies); and the professional-patient relationship (informed consent, confidentiality, medical paternalism).

**206 Ethics and the Environment (also Philosophy 246 and Biology and Society 206)**
Spring. 4 credits. Open to all undergraduates. Permission of instructor required for graduate students.

Lecs, T R 10:10–11:25; disc, 1 hour each week to be arranged. M. Wachsberg.

Critical *philosophical* analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. An introductory section of the course discusses the nature of ethics and the possibility of knowledge in ethics. The first major substantive component of the course deals with the nature and extent of individual and social obligations to spatially distant people, future generations, nonhuman animals and nonsentient things (e.g., the ecosystem). The second major component of the course deals with the appropriate analysis of the origin of environmental problems and the range of options for their solution. Topics include individual vs. collective goods, cost-benefit analysis, and coordination problems.

**207 Evolution (also History 287)**
Fall. 3 credits. Intended for students with no background in college biology. May not be taken for credit after Biological Sciences 378. S-U grades optional.

Lecs, T R 10:10; disc, to be arranged. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology and exploring the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**[301 Biology and Society: The Biocultural Perspective (also Anthropology 301 and Biology and Society 301)**
Fall. 3 or 4 credits (4 credits by arrangement with instructor; 4–credit option required of Biology and Society majors). Prerequisite: one year of introductory biology. S-U grades optional. This is the core course for the Biology and Society major and is also open to other students who have fulfilled the prerequisite. Not offered 1989–90.

Lecs, T R 11:40–12:55. Staff.

Human biology, behavior, and institutions are understood in modern evolutionary theory as the ongoing products of interactions between human biological evolution and cultural change. Nevertheless, numerous attempts to examine evolutionary processes in humans violate key tenets of evolutionary theory, unwittingly reproducing elements of pre-Darwinian views of human nature. After reviewing the pre-Darwinian context and reading *The Origin of Species,* the course explores attempted applications of evolutionary analysis to humans and develops a cultural explanation of the persistence of pre-Darwinian elements in many of them.]

**305 Basic Immunology, Lectures (also Veterinary Medicine 315)**
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics.

Lecs, T R 8:30–9:55. Evening prelims: Oct. 12 and Nov. 9. A. J. Winter.

A survey of modern immunology, with emphasis on the biological functions of the immune response.

**307 Basic Immunology, Laboratory (also Veterinary Medicine 316)**
Fall. 2 credits. Prerequisite: a course in basic microbiology or permission of instructor. Recommended: concurrent enrollment in Biological Sciences 305.

Labs, T R 10:10–1:10. N. L. Norcross.

A series of laboratory exercises selected to illustrate immunological concepts presented in Biological Sciences 305. Exercises are designed to give students experience with the stimulation and measurement of an immune response in the rabbit. Techniques to familiarize students with both humoral and cellular immune phenomena are included, with the goal of offering hands-on experience in immunology. Among the methods and techniques offered are agglutination and precipitation methods, virus neutralization and phagocytosis, measurement of the biological activity of complement components, antibody-dependent cell-mediated cytotoxicity, T and B cell identification, monoclonal antibodies and the ELISA, antibody production by single cells, lymphocyte blastogenesis, and delayed hypersensitivity.

**308 Pathogenic Microbiology (also Veterinary Medicine 317)**
Spring. 2 or 4 credits (2 credits with lecture only). Limited to 20 students. Prerequisites: Microbiology 290 and 291. Recommended: Biological Sciences 307.

Lecs, T R 1:25; labs, T R 2:30–5. Evening prelim to be arranged. L. E. Winter and staff.

A course in medical microbiology. Lectures discuss the bacteria, fungi, and viruses that cause disease in humans. Emphasis is on the pathogenic mechanisms of the microbes and the interrelationships that exist between the host and the microbe. Laboratory sessions are involved with the isolation, culture, and identification of the microbes and the further study and demonstration of the disease process through use of laboratory animal models and tissue cultures. Dissection of small vertebrate animals (mice) is performed in several of the bacteriology laboratories.

**400 Undergraduate Seminar in Biology**
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional.

Sem to be arranged. Staff.

From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**401 Introduction to Scanning Electron Microscopy (formerly Biological Sciences 600)**
Fall or spring, weeks 1–6. 1 credit. Limited to 8 students (fall), 12 students (spring). Prerequisite: permission of instructor. S-U grades only.

Lec and lab to be arranged. M. V. Parthasarathy.

A general introduction to the principles and the proper use of the scanning electron microscope. Emphasis is on biological material.

**403 Transmission Electron Microscopy for Biologists (formerly Biological Sciences 603)**
Fall. 1 or 2 credits. 2 credits if student takes both sections. Limited to 12 students. Prerequisites: Biological Sciences 313, 345, 443, or written permission of instructor. S-U grades optional.
Lec, T 11:15; labs, M W or T R 1:25–4:25. Two sections: Sec 01, weeks 1–4; sec 02, weeks 5–8. Students may register for one or both sections. M. V. Parthasarathy.
Section 01, weeks 1–4, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using plant, animal, and microbe materials this section studies chemical fixations, ultrathin sectioning, negative staining, and metal shadowing techniques. Section 02, weeks 5–8, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Ultrathin sections as well as negatively stained material from samples prepared in Section 01 are used. Students have 2 additional weeks to complete laboratory assignments at the end of each section.

**405 Electron Microscopy in Molecular Biology**
Fall, weeks 9–12. 1 credit. Limited to 12 students. Prerequisites: Biological Sciences 403 or proficiency in transmission electron microscopy and written permission of instructor. S-U grades optional.
Lec, T 11:15; labs, M W or T R 1:25–4:25. M. V. Parthasarathy and M. Kyle.
An introductory course to electron microscopy (EM) for use as a tool in analyzing molecular structure, interactions, and processes. Methods considered to be most generally applicable to current studies in molecular biology are covered, including visualization of nucleic acids, heteroduplexes, protein molecules and filaments, and EM immunolabelling.

**469 Food, Agriculture, and Society (also Biology and Society 469)**
Spring. 3 credits. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Possible fee for course reading materials.
Lecs, T R 1:25–2:40. A. G. Power.
A multidisciplinary course dealing with the social and environmental impact of food production in the United States and in developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, farm labor, land reform, biotechnology, and international food policy.

**498 Teaching Experience**
Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. S-U grades optional, with permission of instructor. *Students in the College of Arts and Sciences may not count credits from this course toward the 120 credits required for graduation.*
Hours to be arranged. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include Biological Sciences 105–106, 231, 274, 311, 319, 330, 430, and 475.

**499 Undergraduate Research in Biology**
Fall or spring. Variable credit. *Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor.* Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office for Academic Affairs in Stimson 118. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices.) S-U grades optional. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as cosigner, taking full responsibility for the quality of the work.
Hours to be arranged. Staff.
Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may *not* be used in completion of the following concentration areas (programs of study): animal physiology and anatomy; biochemistry; botany; cell biology; ecology, systematics, and evolution; and genetics and development. No more than 4 credits of research may be used in completion of the concentration area (program of study) in neurobiology and behavior.

**606 Freeze-Fracture Technique**
Spring, weeks 7–12. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: Biological Sciences 403 or equivalent, and permission of instructor. S-U grades only.
Lec, T 11:15; disc to be arranged; labs, T R 1:25–4:25. M. V. Parthasarathy.
Principles of freeze-fracturing and freeze-substitution technique, freezing artifacts, and interpretation of images.

**608 Advanced Electron Microscopy for Biologists**
Spring, weeks 10–14. 1 credit. Primarily for graduate students. Limited to 6 students. Prerequisite: Biological Sciences 403 or equivalent. S-U grades only.
Hours to be arranged. M. V. Parthasarathy.
Project in biological ultrastructure.

**702 X-Ray Elemental Analysis in Biology**
Spring, weeks 7–14. 1 credit. Limited to 6 students. Prerequisites: Biological Sciences 403 or equivalent, and permission of instructor. S-U grades only. Offered alternate years.
Lec and lab to be arranged. M. V. Parthasarathy, C. Daugherty.
Principles of X-ray elemental analysis are discussed, with special reference to the energy-dispersive system. Emphasis is on qualitative elemental analysis of biological specimens and preparation of material for such analysis, including freeze-substitution technique. A brief introduction to quantitative elemental analysis is also given.

**Related Courses in Other Departments**

**Medicine and Civilization (Biology and Society 322)**

## ANIMAL PHYSIOLOGY AND ANATOMY

**[214 Biological Basis of Sex Differences (also Women's Studies 214)**
Fall. 3 credits. Prerequisite: one year of introductory biology. Limited to non-biology majors and freshman and sophomore biology majors. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lecs, T R 8:30–9:55; occasional disc to be arranged. J. E. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.]

**311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)**
Fall. 3 or 4 credits (4 credits with discussion section). 4–credit option required of students studying animal physiology and anatomy. Prerequisites: one year of college biology, chemistry, and mathematics. S-U grades optional with permission of instructor.
Lecs, M W F 11:15; disc to be arranged. Evening prelims: Sept. 21 and Nov. 2. E. R. Loew and staff.
A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

**313 Histology: The Biology of the Tissues**
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: background in vertebrate anatomy and organic chemistry or biochemistry.
Lecs, T R 11:15; labs, T R 2–4:25. R. B. Silver.
Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell

and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with invertebrate or vertebrate animals.

**316 Cellular Physiology**
Spring. 4 credits. Limited to 100 students, with preference given to students studying in animal physiology and anatomy. Each lab limited to 24 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 330 or 331.
Lecs, M W F 9:05; lab, M T W or R 1:25–5. A. Quaroni and staff.
Lectures introduce students to the most current information on the ways cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function *in vivo* and *in vitro*. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

**319 Animal Physiology Experimentation (also Veterinary Medicine 348)**
Fall. 3 credits. Enrollment limited to 80 students, with preference given to students studying in animal physiology and anatomy. Each of 4 afternoon laboratory sections limited to 20 students. Prerequisite: concurrent or previous enrollment in Biological Sciences 311 or permission of instructor based on previous meritorious performance in another introductory animal physiology course.
Lab, M T W or R 1:25–5; disc, R 1:25, F 12:20 or 1:25. Student do not choose disc sections during course enrollment; disc assignments are made during first day of classes. R. A. Corradino, P. W. Concannon.
A series of student-conducted *in vitro* and *in vivo* experimental exercises designed to illustrate basic physiological processes in animals and to introduce students to animal physiology research techniques, instrumentation, experimental design, and interpretation of results. Protocols include anesthesia, dissection, vivisection, physiographic recording, and computer simulations. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory and gastrointestinal function and control; and endocrine regulation of mineral metabolism and reproductive tissue activity. Experimental resources include live animals of several vertebrate species, including frogs, birds, rats, and rabbits, which are sacrificed in conjunction with the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports and on laboratory performance.

**410 Seminar in Anatomy and Physiology**
Fall or spring. 1 credit. May be repeated for credit only once. Limited to upperclass students. S-U grades only.
Sem to be arranged. Organizational meeting first W of each semester at 7:30 p.m. in Stimson 105. Staff (coordinator, D. Robertshaw).
Discussions and seminars on specialized topics in animal physiology and anatomy.

**458 Mammalian Physiology**
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed in lectures. Prerequisite: Biological Sciences 311 or equivalent with permission of instructor.
Lecs, M W F 10:10. K. W. Beyenbach and staff.
An in-depth treatment of selected topics in mammalian physiology and human physiology. Emphasis is on a conceptual and working knowledge of physiology rather than a factual, memorizing knowledge. Topics selected, in order of presentation, include recurrent themes in physiology; basic functional elements of biological systems; design of multicellular animals; mammalian fluid compartments; homeostasis; cardiovascular, respiratory, gastro-intestinal, and renal physiology; and energy metabolism. The course concludes with a discussion of integrative physiology by considering the multiple, parallel short-term responses of the human body to exercise. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

**[615 Nutrition and Physiology of Mineral Elements (also Veterinary Medicine 759 and Nutritional Sciences 659)**
Fall. 2 credits. Prerequisites: courses in basic physiology, intermediate biochemistry, and general nutrition. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10. R. H. Wasserman, R. Schwartz, D. R. Van Campen.
Lectures on nutritional aspects and physiological, biochemical, and hormonal relationships of the prominent macroelements and microelements, with emphasis on recent developments. Information on methodologies of mineral research and the requirements for and essentiality, transport, function, homeostasis, interrelationships, and toxicity of various mineral elements.]

**[618 Biological Membranes and Nutrient Transfer (also Veterinary Medicine 752)**
Spring. 2 credits. Prerequisites: courses in animal or plant physiology, quantitative and organic chemistry, and physics. Recommended: a course in cellular physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, T R 11:15. R. H. Wasserman.
An introduction to elementary biophysical properties of biological membranes; theoretical aspects of permeability and transport; mechanism of transfer of inorganic and organic substances primarily across epithelial membranes; and characteristics and properties of transporting macromolecules and ion channels.]

**619 Lipids (also Nutritional Sciences 602)**
Fall. 2 credits.
Lecs, T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

**658 Molecular Mechanisms of Hormone Action (also Veterinary Medicine 758)**
Spring. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years.
Lecs, T R 10:10. R. A. Corradino.
An advanced course developed from the current literature on endocrine mechanisms.

**710–718 Special Topics in Physiology**
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.
*Fall 1989:* one topic is offered.

**717 Structure and Function of Joints with Emphasis on Arthritis**
1 credit.
Lec, 1 hour each week to be arranged. G. Lust.
*Spring 1990:* two topics are offered.

**712 Plasma Lipoproteins**
1 credit.
Sem, hour each week to be arranged. A. Bensadoun.

**714 Physiology of Pregnancy**
2 credits.
Lab to be arranged. P. W. Nathanielsz.

**719 Graduate Research in Animal Physiology (also Veterinary Medicine 600)**
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 725. S-U grades optional.
Hours to be arranged. Staff.
Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

**753 Animal Biotechnology**
Fall. 3 credits. Prerequisites: two courses in physiology, two courses in biochemistry, and one course in endocrinology or nutrition.
Lec and disc, M 11:15; lab, M 1:25–4:20; additional hours to be arranged. W. Hansel and staff.
A course in animal biotechnology designed to prepare students for research in animal genetic engineering. Standard techniques for cloning DNA in bacteria are discussed. Development of expression systems in bacteria, yeast, and mammalian cells; DNA sequencing and analysis; and insertion of DNA into mammalian cells are carried out in the laboratory.

## BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY

**132 Orientation Lectures in Biochemistry**
Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance).
Lec, S 10:10–11:00, for first 3 S of semester. Section chair and staff.
Discussions by six professors about their research and promising areas for research in the future.

**231 General Biochemistry**
Fall. 3 credits. Intended for students who have not studied biochemistry previously and who do not expect to pursue it further. Not recommended for students who have taken organic chemistry. Prerequisite: Chemistry 104 or 208 or equivalent. S-U grades optional.
Lecs, M W F 12:20. J. M. Griffiths.
A brief introductory section relating organic chemistry to biochemistry is given, followed by the biochemical material in the usual one-semester introductory courses. Topics of general interest are also included.

**232 Recombinant DNA Technology and Its Applications (also Biology and Society 232)**
Spring. 3 credits. Prerequisite: one year of introductory biology. S-U grades optional.
Lecs, M W F 11:15. F. H. Buttel, J. M. Calvo, J. M. Fessenden MacDonald, and staff.
An introduction to molecular approaches to biology. Basic concepts underlying recombinant DNA technology together with strategies for cloning genes are discussed. Much of the course deals with applications of recombinant DNA technology to basic research and to biotechnology. Applications to be discussed include screening for genetic diseases, animal and plant improvement, and production of proteins useful in medicine, agriculture, and industry. Historical, regulatory, social, and ethical issues are presented and discussed. Recommended especially for freshman with AP biology credit and sophomores desiring a firm background in recombinant DNA technology in preparation for taking genetics and biochemistry. Also appropriate for nonmajors.

**330–331 Principles of Biochemistry**
Introductory biochemistry is offered in two formats: individualized instruction (330) and lectures (331). *Individualized instruction is offered to a maximum of approximately 150 students each semester. Lectures given fall semester only.*

**330 Principles of Biochemistry, Individualized Instruction**
Fall or spring. 4 credits (2 credits if taken after Biological Sciences 231). Prerequisite: Chemistry 253 or 358 or equivalent. May not be taken for credit after Biological Sciences 331. S-U grades optional for graduate students only.
Evening prelims: fall, Oct. 26; spring, Mar. 13. Fall: M. Ferger and staff; spring: M. Ferger, R. Wu, and staff.
The core material of the course includes protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. There are no formal lectures; the course has an autotutorial format. The core material is divided into twelve units of work that are outlined in a study guide written to accompany the textbook. Students prepare the work on their own, with help from the staff of the Study Center if desired.

Students must pass a quiz on each unit to obtain a grade of C+. Grades above C+ (to a maximum of B+) are determined by the amount of elective work satisfactorily completed by participation in optional discussion groups. Grades above B+ are earned by high grades on the midterm and final exams. The optional discussion groups are scheduled M W F 8 and 10:10 and at other hours. A student attends once a week at one of those times, for a maximum of 8 weeks during the semester. Missed deadlines or very poor exam scores result in grade penalties.

**331 Principles of Biochemistry, Lectures**
Fall or 6–week summer session. 4 credits (or 2 credits if taken after Biological Sciences 231). Enrollment may be limited to 400 students in fall. Prerequisite: Chemistry 253 or 358 or equivalent. May not be taken for credit after Biological Sciences 330. S-U grades optional for graduate students only.
Lecs, M W F S 10:10. J. K. Moffat, R. Barker, B.-K.Tye.
Chemistry of biological substances presented in lecture format. Course content is similar to that of Biological Sciences 330.

**430 Basic Biochemical Methods**
Fall or spring. 4 credits. Enrollment limited. Prerequisites: Biological Sciences 330 or 331, organic chemistry lectures and laboratory, and permission of instructor obtained by preregistering in Stimson 229. Concurrent registration in Biological Sciences 330 or 331 may be arranged in the fall term for graduate students.
Lec and disc, F 1:25; labs, M W or T R 12:20–4:25. R. R. Alexander, J. M. Griffiths, and staff.
A laboratory course designed to introduce students to the biochemical techniques commonly used in the study of biological materials. Students work in small groups, and each student may select two of three or four modules offered. Various assay methods, chromatography, electrophoresis, and use of the scintillation counter are taught. Protein isolation, purification, and enzyme characterization methods are included. Techniques used in the clinical laboratory are applied to analyses of blood and urine samples, and some nutritional analyses are done for protein and vitamin contents of foods. In the nucleic acids module, students are introduced to recombinant DNA methodology, isolating DNA, and studying the function of transfer RNA. A student may isolate and purify the lipids from a material of his/her choice and perform thin-layer chromatography and carry out cholesterol and phosphate analyses. Separation techniques are used to isolate cell components and experiments are conducted to illustrate basic biochemical methods.

**432 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. S-U grades optional for graduate students only.
Lecs, M W F 11:15. W. J . Brown and staff.
A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in Biological Sciences 438, 483, 632, 636, and 639.

**435–436 Undergraduate Biochemistry Seminar**
435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: Biological Sciences 330 or 331 or written permission of instructor. S-U grades only.
Sem to be arranged. Organizational meeting first W of each semester at 4 p.m. Fall: T. Huffaker; spring: B.-K. Tye.
Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

**438 Cell Proliferation and Oncogenic Viruses (also Toxicology 438)**
Spring. 3 credits. Prerequisite: Biological Sciences 330 or 331. Recommended: Biological Sciences 281.
Lecs, T R 12:20–1:35. V. M. Vogt.
A description of the growth properties of animal cells in culture, followed by discussions of the changes in cells that are induced by tumor viruses and carcinogens. Topics include immortalization of cells, the cell cycle, macromolecular growth factors, cell-surface properties, cell cytoskeleton, transcription and translation of retrovirus genes, and structure and function of viral and cellular *onc* genes.

**630 Laboratory in Cell Biology**
Spring. 4 credits. Enrollment limited. Prerequisites: a course in biochemistry or cell biology, and permission of instructor obtained by registering in 258 Biotechnology Building with J. Gibson.
Labs, M W 1:25–4:25 or R 9:05–4:25; disc to be arranged. J. Gibson and staff.
The course emphasizes techniques for handling and experimenting with cells of different kinds and provides experience in experimental design. Limited numbers of vertebrate animals are used for two experiments where no alternative approach exists.

**631 Protein Structure and Function**
Fall. 2 or 3 credits (3 credits with discussion). Prerequisites: introductory biochemistry, physical chemistry, and organic chemistry. Permission of instructor required for discussion. S-U grades optional for lecture; S-U grades only for discussion.
Lecs, M W 9:05; disc, F 9:05. P. A. Karplus.
Lectures on protein structure and the nature of enzymatic catalysis. Discussions cover some of these areas in more depth, through recent research papers.

**632 Membranes and Bioenergetics**
Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. Offered alternate years.
Lecs, T R 11:15. P. C. Hinkle, R. E. McCarty.
Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria.

**633 Biosynthesis of Macromolecules**
Fall. 2 credits. Prerequisite: Biological Sciences 330 or 331. Recommended: Biological Sciences 281.
Lecs, T R 9:05. J. W. Roberts, D. B. Wilson.
Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

**634 Biochemistry of the Vitamins and Coenzymes (also Nutritional Sciences 634)**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent and either Chemistry 358 or 360. Offered alternate years.
Lecs, T R 10:10. M. N. Kazarinoff.
Lectures on the chemistry, biochemistry, and physiology of vitamins and coenzymes. Emphasis is placed on the relationship of structure and function, and mechanisms are examined in detail. Readings from the current primary literature are assigned weekly.

**635 Mechanisms of Metabolic Regulation (also Nutritional Sciences 635)**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 and either Chemistry 358 or 360, or permission of instructor. Offered alternate years.
Lecs, T R 9:05. Staff.
Lectures on the identification and characterization of regulatory steps in metabolism, considered from both theoretical and practical aspects. The intracellular mechanisms of regulation are emphasized, with specific examples in mammalian metabolism examined in detail.

**636 Current Topics in Cell Biology**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331, and 432, or their equivalents.
Lecs, T R 10:10. A. P. Bretscher.
Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with Biological Sciences 632 and 639, this course provides broad coverage of the cell biology subject area.

**637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636)**
Fall. 3 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent.
Lecs, M W F 9:05. Evening prelims to be arranged. W. J. Arion.
The elements and dynamics of energy metabolism in higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in intact animals are analyzed in the contexts of selected physiologic and pathologic stresses.

**638 Intermediate Biochemical Methods**
Fall or spring. 4 credits. Primarily for graduate students minoring in biochemistry and undergraduates concentrating in biochemistry. Enrollment limited to 24 students in the fall and 48 students in the spring. Admission to the course is dependent upon the results of a personal interview with the teaching support specialist (x5-2435 or x5-5706), which must be held before the first day of classes. *There is no admission to the course without the interview.* Undergraduates are urged to interview during preregistration. May not be taken for credit after Biological Sciences 430.
Lab, T 9:05–4:25 (fall): lab, T or R 9:05–4:25 (spring). D. B. Wilson and staff.
Selected experiments on proteins, enzymes, DNA, and bioenergetics to illustrate basic biochemical properties. The course emphasizes quantitative aspects and techniques currently used in biochemical research.

**639 The Nucleus**
Spring. 2 credits. Prerequisite: Biological Sciences 330 or 331 or equivalent. Recommended: Biological Sciences 281.
Lec, M 8–9:55 p.m. J. T. Lis.
Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course and Biological Sciences 632 and 636 provide broad coverage of the cell biology subject area.

**[648 Plant Biochemistry**
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years. Not offered 1989–90.
Lecs, M W F 9:05. A. T. Jagendorf, R. E. McCarty, J. F. Thompson.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.]

**[650 Nitrogen Metabolism (also Nutritional Sciences 607)**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or 331 and Chemistry 358 or 360. Offered alternate years. Not offered 1989–90.
Lecs, T R 9:05. M. Watford.
A coverage of most aspects of nitrogen metabolism. The first section of the course deals with nitrogen fixation and assimilation, and the metabolism and biological importance of purines, pyrimidines, porphyrins, alkaloids, and amines. This is followed by discussion of the pathways of amino acid biosynthesis and degradation. The final section includes discussion of protein turnover and degradation, nitrogen excretion, and interorgan relationships in higher organisms. Emphasis throughout the course is on hormonal, developmental, and molecular biological aspects of metabolic regulation and evolutionary differences.]

**[659 Risk Management of Toxic Chemicals (also Biology and Society 459 and Toxicology 659)**
Fall. 2 or 3 credits (3 credits with major research paper). Prerequisite: concurrent enrollment in Toxicology 610 or permission of instructor. Limited to 12 students. S-U grades optional. Offered alternate years. Not offered 1989–90.
Sem, T 2:30–4:25. J. M. Fessenden MacDonald.
Selected cases of chemical risk communication and risk management by government agencies, communities, industries, and individuals are reviewed. Potential topics include toxic wastes, groundwater contamination, chemical accidents and occupational and community right-to-know. The roles of social, economic, political, legal, and ethical factors in decision making are discussed. Readings from the various disciplines, as well as scientific reports, provide background for class discussions.]

**731–736 Current Topics in Biochemistry**
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: Biological Sciences 330 or 331 or equivalent. S-U grades only.
Lectures and seminars on specialized topics.
*Fall 1989:* three topics are offered.

**731 Current Topics in Biochemistry**
1/2 credit.
T R 12:20 (6 lecs) Sept. 12–28. Staff.

**733 Microfilaments and the Regulation of Cell Structure**
1/2 credit.
T R 12:20 (6 lecs) Oct. 24–Nov. 9. A. P. Bretscher.

**735 Transport ATPase, with Emphasis on Plants**
1/2 credit.
T R 12:20 (6 lecs) Nov. 14–Dec. 5. R. E. McCarty.
*Spring 1990:* three topics are offered.

**732 Current Topics in Biochemistry**
1/2 credit.
T R 7:30–9:30 p.m. (6 lecs) Jan. 30–Feb. 15. C. Seeger.

**734 Current Topics in Biochemistry**
1/2 credit.
T R 12:20 (6 lecs) Feb. 20–Mar. 8. Staff.

**736 Molecular Membrane of Growth Factor Action**
1/2 credit.
T R 12:20 (6 lecs) Apr. 3–19. R. Cerione.

**737 Advanced Biotechnology Laboratory**
Summer (3–week session). 3 credits. Enrollment limited to 8 students. Prerequisites: Biological Sciences 630, 638, or equivalent laboratory experience and permission of instructor. S-U grades only.
Lecs, M–F 9–5. D. B. Wilson, J. E. Blankenship, and staff.
Experiments are designed to demonstrate advanced recombinant DNA techniques that are currently of interest. Students prepare intact yeast chromosomes and resolve them electrophoretically using field inversion electrophoresis. The DNA in the gel is transferred to nitrocellulose. The chromosomal location of specific genes is determined. Students end label DNA with 32P and perform DNase footprinting experiments. DNA sequences are determined by chemical modification and dideoxy strand termination methods.

**751 Professional Responsibilities of Toxicologists (also Toxicology 751)**
Fall. 2 credits. Prerequisites: advanced graduate standing and permission of instructor. S-U grades optional. Offered alternate years.
Sem, W 2:30–4:25. J. M. Fessenden MacDonald.
Case studies of professional responsibilities and dilemmas faced by toxicologists in academia, industry, and government, with discussions of possible approaches, alternatives, and outcomes. Readings of scientific, ethical, and general papers provide background for discussions. Topics for consideration include legal liabilities, chemical-safety issues, data presentation and partisanship, communicating with the public, conflicts of interest/commitment, peer review, and professional codes of ethics.

**752 Isotope Kinetics (also Nutritional Sciences 682)**
Spring. 2 credits. Prerequisite: calculus. S-U grades only. Offered alternate years.
Lec, T 7:30–9:30 p.m. D. B. Zilversmit.
Quantitative analysis of the transport and distribution of nutrients, metabolites, and drugs in multicompartmental systems. The material is presented as lectures, discussion groups, and problem sets.

**830 Biochemistry Seminar**
Fall or spring. No credit.
Sem, F 4:30. Staff.
Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

**831 Advanced Biochemical Methods I**
Fall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional.
Labs and discs, 12 hours each week to be arranged. Organizational meeting first R of semester at 10:10. D. B. Wilson and staff.
To learn the basic techniques of biochemical research, each student performs experiments on proteins, enzymes, DNA, and bioenergetics. First half of the fall term is an intensive lab course with defined experiments assigned to the students. Letter grades are assigned for this laboratory portion of the course. Second half of the fall term is devoted to a rotation project in different labs selected by the students. S-U grades only are assigned for the rotation portion of the course.

**832 Advanced Biochemical Methods II**
Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only.
Lab to be arranged. Staff (coordinator: graduate field representative).
Research in the laboratories of two or three different professors chosen by the student. Arrangements are made jointly between the graduate field representative and the research adviser.

**833 Research Seminar in Biochemistry**
Fall and spring. 1 credit each term. (Students must register for 2 credits each term, since an "R" grade is given at the end of the fall term.) May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only.
Sem, T 5–6:30 p.m. T. C. Huffaker, W. J. Brown, J. T. Lis.
Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**Related Courses in Other Departments**

**Lipids (Biological Sciences 619 and Nutritional Sciences 602)**

**Molecular Aspects of Development (Biological Sciences 483)**

**Molecular Mechanisms of Hormone Action (Biological Sciences 658 and Veterinary Medicine 758)**

**Teaching Experience (Biological Sciences 498)**

**Undergraduate Research in Biology (Biological Sciences 499)**

## BOTANY

**241 Introductory Botany**
Fall. 4 credits. Enrollment may be limited, with preference given to sophomores and juniors majoring in agronomy, botany, environmental education, floriculture, horticulture, natural resources, plant sciences, vegetable crops, and wildlife. Prerequisite: one year of introductory biology or permission of instructor.
Lecs, M W F 9:05; lab, M T W R or F 1:25–4:25, or M or W 7:30–10:30 p.m. K. J. Niklas.
Introductory botany for those who plan to specialize in or use some aspect of the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

**242 Plant Physiology, Lectures**
Spring. 3 credits. Primarily for undergraduates in agricultural sciences. Prerequisites: one year of introductory biology and introductory chemistry. Concurrent enrollment in Biological Sciences 244 required of undergraduates. May not be taken for credit after Biological Sciences 341 except by written permission of instructor.
Lecs, M W F 10:10. C. Reiss.
Plant physiology as applied to plants growing in communities. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress.

**244 Plant Physiology, Laboratory**
Spring. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 242. May not be taken for credit after Biological Sciences 349.
Disc and lab, M T W or R 12:20–4:25. C. Reiss.
Experiments exemplify concepts covered in Biological Sciences 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

**245 Plant Biology**
Summer (6-week session). 3 credits. Limited to 24 students.
Lecs, M–F 11:30–12:45; labs, M W 1:30–4:30. S. Williams.
Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of angiosperms. Seventy-five percent of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

**246 Plants and Civilization**
Spring. 3 credits.
Lecs, T R 11:15; disc, T W or R 12:20 or W 1:25. D. M. Bates.
A consideration of the role that plants have played and continue to play in the evolution of human cultures. Emphasis is on the interactions between humans and the plant environment, the nature of plants and manner in which humans use and integrate them into their cultures, and the problems and concerns related to contemporary and future use of plant resources.

**248 Taxonomy of Vascular Plants**
Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after Biological Sciences 342.
Lecs, M W F 9:05; labs, W or R 1:25–4:25. J. I. Davis.
An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and an overview of vascular plant diversity, with particular attention to the flowering plants.

**341 Plant Physiology, Lectures**
Fall. 3 credits. Prerequisites: one year of introductory biology, organic chemistry, and either concurrent enrollment in Biological Sciences 349 or written permission of instructor. May not be taken for credit after Biological Sciences 242 unless written permission is obtained from instructor.
Lecs, T R 10:10–11:25. D. M. Law.
The behavior, growth, transport processes, and environmental response of plants. Topics include membrane properties, solute and water transport, and function of osmotic forces; mineral and organic nutrition; stress resistance; growth and development controls; metabolism, including photosynthesis and respiration; and responses to environmental influences.

**[342 Taxonomy of Cultivated Plants (also Floriculture and Ornamental Horticulture 342)**
Spring. 4 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after Biological Sciences 248. Not offered 1989–90.
Lecs, M W 10:10; labs, M W 2–4:25. Bailey Hortorium staff.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.]

**345 Plant Anatomy**
Fall. 4 credits. Limited to 25 students. Prerequisite: one year of introductory biology or a semester of botany.
Lecs, M W 9:05; labs, M W 2–4:25. D. J. Paolillo.
A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**346 Algal Physiology**
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and Biological Sciences 242 or 341, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, T R 8:30–9:55. T. G. Owens.
A brief description of the algal classes, as well as classical and emerging criteria for taxonomic classification. Discussions include the interactions of algae with their physical and chemical environments, uptake of inorganic compounds, algal photosynthesis, and metabolic strategies of unicellular and macrophytic algae. Emphasis is placed upon physiological comparisons between algae and higher plants.

**349 Plant Physiology, Laboratory**
Fall. 2 credits. Prerequisite: concurrent enrollment in Biological Sciences 341. May not be taken for credit after Biological Sciences 244.
Lab, W or R 1:25–4:25; disc, W or R 12:20. Lab and disc must be on same day. C. Reiss.
Experiments exemplify concepts covered in Biological Sciences 341 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

**[359 Biology of Grasses**
Fall. 3 credits. Limited to 24 students. Prerequisite: one year of introductory biology or an introductory plant taxonomy course, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10; lab,T 1:25–4:25. J. I. Davis.
Systematics and ecology of the graminoid plant families (grasses, sedges, and rushes), with principal emphasis on grasses. Major topics include taxonomy, phylogenetics, physiology, reproductive biology, ecotypic variation, speciation, biogeography, and population biology. The role of graminoids as ecosystem dominants, weeds, and the origins of cultivated species are discussed. Laboratory concentrates on the diversity of grasses.]

**[440 Plant Geography**
Spring. 2 credits. Prerequisite: Biological Sciences 248 or equivalent. Recommended: Biological Sciences 378 or 463 or both. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10. Bailey Hortorium staff.
Patterns of distribution and variation of plant species and higher taxa, endemism and disjunction and their causes, influences of past continental movements and climatic change on plant distributions, geographical aspects of plant speciation, major biomes and floristic regions of the world, and methods of phytogeographic analysis.]

**[441 Crop Plant Evolution**
Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, T R 11:15. D. M. Bates.
An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.]

**[442 Biology of Plant Species**
Spring. 2 credits. Prerequisite: Biological Sciences 248 or equivalent. Recommended: Biological Sciences 378 and 463. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10. Bailey Hortorium staff.
A comprehensive introduction to the nature and origin of plant species, with coverage of plant evolutionary genetics, race formation and modes of speciation, evolution of reproductive isolating mechanisms, types of species complexes found in plants, cytogenetic aspects of plant speciation, natural hybridization and its consequences, and the origin and nature of higher taxa.]

**[443 Research Methods in Systematic Botany**
Fall. 2 credits. Limited to 10 students. Prerequisite: Biological Sciences 248 or equivalent. Offered alternate years. Not offered 1989–90.
Lab, F 1:25–4:25; additional hours to be arranged. Bailey Hortorium staff.
An introduction to the methodology of plant systematic research: field studies; sampling and collecting methods; preparation of taxonomic revisions and monographs; numerical methods of data analysis; and laboratory methods in cytogenetics, comparative anatomy, and comparative chemistry, as applied to problems in plant systematics.]

**444 Plant Cell Biology**
Fall. 4 credits. Limited to 24 students. Prerequisites: Biological Sciences 242 or 341, and 345, or permission of instructor.
Lecs, M W F 11:15; lab, M or W 1:25–4:25. R. O. Wayne.
Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**[445 Photosynthesis (also Applied and Engineering Physics 601)**
Fall. 3 credits. Prerequisites: Chemistry 104 or 208, Mathematics 105 or 111, and either Physics 102 or 208 or permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, M W F 10:10. T. G. Owens.
A detailed study of the processes by which plants utilize light energy to grow. Structure of the photosynthetic apparatus, light absorption, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.]

**[446 Plant Cytogenetics**
Fall. 3 credits. Limited to 18 students. Prerequisite: Biological Sciences 281 or equivalent. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lecs, M W 9:05; lab, R 2–4:25. J. I. Davis.
An analysis of the cellular mechanisms of heredity, particularly the behavior of chromosomes, and the role of chromosome structure and behavior in plant evolutionary processes. The application of chromosomal studies to analyses of plant species biology and phylogenetics is also covered.]

**447 Molecular Plant Systematics**
Fall. 3 credits. Prerequisites: Biological Sciences 248, 281, and 330 or 331, or written permission of instructor. Offered alternate years.
Lecs, T R 10 :10–11: 30. J. J. Doyle.
The study of variation at the molecular level and its application to the taxonomy and evolution of plants, primarily angiosperms. Both micromolecules—particularly flavonoids—and macromolecules are discussed. Topics include analysis of electrophoretic and sequence variation of proteins, the use of such variation as a phylogenetic tool, and genome organization and evolution. Major emphasis is placed on the impact of recombinant DNA technology on plant systematics, with comprehensive treatment of the methods involved. The nuclear, chloroplast, and mitochondrial genomes of plants are treated in detail, with discussion of the use of variation patterns discernible at the restriction-enzyme and DNA-sequence levels. Methods of phylogenetic analysis of molecular data are also covered.

**[448 Plant Evolution and the Fossil Record**
Spring. 3 credits. Prerequisite: Biological Sciences 241 or equivalent, or permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, T R 9:05; lab, R 12:20–2:15. K. J. Niklas.
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.]

**450 Optical Methods of Plant Biologists**
Spring. 3 credits. Limited to 12 students. Prerequisite: Biological Sciences 444 or permission of instructor.
Lecs, T R 1:25; lab R 2:15–4:30. R. O. Wayne.
Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, differential-interference-contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

**[640 Applied Plant Anatomy**
Spring. 3 credits. Prerequisites: Biological Sciences 345 or equivalent, and permission of instructor. Not offered 1989–90.
Lecs and discs, T R 9:05; lab, W 10:10–1:10 or by arrangement with instructor. N. W. Uhl.
The use of anatomy in vascular plants for diagnosis of structure, taxonomic relationships, evolutionary sequences, and ecological adaptions, with emphasis on recent research. The laboratory provides experience in techniques and interpretation.]

**641 Laboratory in Plant Molecular Biology**
Fall. 4 credits. Prerequisites: Biological Sciences 281 or equivalent, 330 or 331 or equivalent, and permission of instructor. S-U grades optional.
Lab to be arranged. J. B. Nasrallah, M. R. Hanson, S. D. Tanksley, P. Palukaitis.
Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems.

**[642 Plant Mineral Nutrition (also Agronomy 642)**
Spring. 3 credits. Prerequisite: Biological Sciences 341 or equivalent. Offered alternate years. Not offered 1989–90.
Lecs, M W F 10:10. L. V. Kochian, R. M. Welch.
A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., salinity). Specific mineral elements are emphasized to illustrate these topics.]

**643 Plant Physiology, Advanced Laboratory Techniques**
Fall. 4 credits. Primarily for graduate students in the plant sciences. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only.
Lab, T or W 8–5; disc, M 4:30–5:30. A. T. Jagendorf.
An introduction to some modern methods in experimental plant biology.

**644 Plant Growth and Development**
Spring. 3 credits. Prerequisites: Biological Sciences 345 and either 242 or 341 or their equivalents, or written permission of instructor. Offered alternate years.
Lecs, M W F 9:05. D. J. Paolillo and staff.
Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue differentiation, organ formation, embryo development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.

**[645 Families of Tropical Flowering Plants**
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1989–90.
Lec and disc, F 11:15. Bailey Hortorium staff.
The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families for the student venturing into the tropics.]

**[646 Families of Tropical Flowering Plants: Field Laboratory**
Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: Biological Sciences 342 or 248 or equivalent. Recommended: Biological Sciences 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered alternate years. Not offered 1989–90.
Bailey Hortorium staff.
An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.]

**647 Seminar in Systematic Botany**
Fall and spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional.
Sem to be arranged. Bailey Hortorium staff.
Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

**[648 Plant Biochemistry**
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years. Not offered 1989–90.
Lecs, M W F 9:05. A. T. Jagendorf, R. E. McCarty, J. F. Thompson.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.]

**649 Transport of Solutes and Water in Plants**
Fall. 3 credits. Prerequisite: Biological Sciences 341 or equivalent. Offered alternate years.
Lecs, M W F 10:10. R. M. Spanswick.
Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport; and water relations of single cells and whole plants.

**[651 Quantitative Whole-Plant Physiology**
Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10–11:30. R. M. Spanswick.
An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.]

**653 Plant Molecular Genetics (also Plant Breeding 653)**
Spring. 3 credits. Prerequisites: Biological Sciences 281, and 330 or 331, or their equivalents.
Lecs, T R 10:10–11:30. S. D. Tanksley, M. R. Hanson, J. B. Nasrallah.
A review of the organization, function, and evolution of genetic information in higher plants. An in-depth treatment of the organization of the chloroplast, mitochondrial, and nuclear genomes as well as their interactions. Current information on gene regulation in higher plants is also discussed.

**[654 Plant Nomenclature**
Spring. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lec and disc to be arranged. R. P. Korf.
An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.]

**656 Topics in Paleobotany**
Spring. 1 credit. Prerequisite: Biological Sciences 448 or equivalent background in evolution or written permission of instructor.
Lab and disc to be arranged. K. J. Niklas.
A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

**[657 Literature of Taxonomic Botany**
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lec and disc, R 10:10. Bailey Hortorium staff.
A survey of the basic reference works in taxonomy from the pre-Linnaean literature drawn on by Linnaeus to contemporary publications, with comments on the peculiarities of the books (when appropriate), publication dates, typographic devices, and intricacies of bibliographic citation.]

**740 Plant Biology Seminar**
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology.
Sem, F 11:15. Staff.
Lectures on current research in plant biology, presented by visitors and staff.

**742 Current Topics in Plant Molecular Biology**
Fall and spring. 1 credit. Limited to 20 students. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only.
Sem, 1 hour each week to be arranged. Staff.
A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

**749 Graduate Research in Botany**
Fall or spring. Variable credit. May be repeated for credit. S-U grades optional.
Hours to be arranged. Staff.
Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

**840 Current Topics in Plant Physiology**
Fall or spring. 2 credits. May be repeated for credit. S-U grades only.
Sem to be arranged. Staff.
Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

## ECOLOGY, SYSTEMATICS, AND EVOLUTION

**261 Principles of Ecology (formerly General Ecology)**
Fall. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional.
Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. R. W. Howarth, P. L. Marks, and D. W. Winkler.
An introduction to principles of ecology concerning the interactions between organisms and their environment. The course deals with both terrestrial and aquatic ecology, including phenomena that occur at the population, community, and ecosystem levels of organization. These principles are brought to bear on a number of current environmental problems.

**263 Field Ecology**
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in Biological Sciences 261. Limited to 16 students.
Lec, R 1:25; lab, F 12:20–5. One weekend field trip to the Hudson Valley. P. L. Marks.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

**272 Functional Ecology**
Spring. 4 credits. Prerequisite: one year of introductory biology for majors. Offered alternate years.
Lecs, M W F 9:05; lab, T or R 1:25–4:25. Evening prelims Feb. 20 and Apr. 3. F. H. Pough.
An introductory course for students interested in how animals work. The features of the physical environment that are important to insects and vertebrates are used to illustrate the interaction of physiological, behavioral, and morphological characteristics in organismal activity and homeostasis. Laboratories include a survey of the diversity of endothermal and ectothermal animals, ecophysiological measurements, and measurements of important environmental parameters in local habitats. This course uses live and preserved vertebrate animals for field observations and laboratory exercises.

**[274 Functional and Comparative Morphology of Vertebrates**
Spring. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years. Not offered 1989–90.
Lecs, T R 12:20; labs, T R 1:25–4:25. D. K. McClearn.
An exploration of the relations between form and function in biological systems with an emphasis on trends in vertebrate evolution. Lectures integrate data from topics such as locomotion, feeding, size, and scaling with issues of historical importance and current interest (e.g., correlation of body parts, adaptationist explanations, developmental constraints, criteria for determining biomechanical and energetic "efficiency"). Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations (motion analysis, surface electrode, and force-plate recordings).]

**275 Human Biology and Evolution (also Anthropology 275)**
Fall. 3 or 4 credits (4 credits with discussion). S-U grades optional, with permission of instructor.
Lecs, M W F 10:10; optional disc to be arranged. K. A. R. Kennedy, J. D. Haas.
An introduction to the biology of *Homo sapiens* through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

**371 Human Paleontology (also Anthropology 371)**
Fall. 4 credits. Prerequisite: one year of introductory biology or Anthropology 101 or permission of instructor. Offered alternate years.
Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of primate phylogeny.

**[373 The Invertebrates: Form, Function, and Evolution**
Fall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1989–90.
Lecs, M W F 10:10; lab, W 1:25–4:25; one optional weekend field trip to Shoals Marine Laboratory. Small fee for the field trip. C. D. Harvell.
An introduction to the evolution of form and function among the major invertebrate phyla. Strong emphasis is placed on the integration of evolutionary pasts and ecological presents to produce extant forms. Lectures draw heavily on original literature from the field of invertebrate functional morphology. Laboratory dissections and demonstrations often involve live marine and freshwater invertebrates.]

**378 Evolutionary Biology**
Spring. 4 credits (2 credits if taken after Biological Sciences 207). Prerequisite: one year of introductory biology or permission of instructor. S-U grades optional.
Lecs, M W F 10:10; disc, 1 hour each week to be arranged. R. G. Harrison.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction.

**455 Insect Ecology (also Entomology 455)**
Fall. 3 credits. Prerequisites: Biological Sciences 261 and Entomology 212 or their equivalents. Offered alternate years.
Lecs, W F 11:15; disc, 1 hour each week to be arranged. R. B. Root.
Ecological and evolutionary principles are integrated by thorough examination of outstanding investigations. Topics include the factors responsible for the great diversity of insects, adaptive syndromes associated with climate, natural history of arthropod guilds, impact of insects on terrestrial vegetation, population regulation, and the contrast between natural and managed ecosystems.

**457 Limnology, Lectures (formerly Biological Sciences 462)**
Fall. 3 credits. Prerequisite: Biological Sciences 261 or written permission of instructor. Recommended: introductory chemistry.
Lecs M W F 11:15. N. G. Hairston, Jr.
The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrients, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

**459 Limnology, Laboratory (formerly Biological Sciences 464)**
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in Biological Sciences 457.
Lab, T W or R 1:25–4:25; 1 weekend field trip. N. G. Hairston, Jr. and staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

**461 Population and Evolutionary Ecology**
Spring. 4 credits. Prerequisite: Biological Sciences 261 or 378. S-U grades optional. Offered alternate years. Offered spring 1990; next offered fall 1991 and alternate fall semesters thereafter.
Lecs, M W F 11:15; lab, M 1:25–4:25.
D. W. Winkler and S. A. Levin.
Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness definition by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

**462 Marine Ecology**
Spring. 3 credits. Prerequisite: Biological Sciences 261. Offered alternate years.
Lecs and disc, M W F 10:10.
C. D. Harvell and R. W. Howarth.
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology.

**463 Plant Ecology, Lectures**
Fall. 3 credits. Prerequisites: two advanced-level courses in biology, including Biological Sciences 261, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in Biological Sciences 465.
Lecs, M W F 11:15. Staff.
Principles of plant-environment and plant-plant interactions in relation to the evolution, distribution, structure, and functioning of plants and plant communities.

**464 Microevolution and Macroevolution (also Entomology 464)**
Spring. 4 credits. Limited to 25 students. Prerequisite: Biological Sciences 378 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years.
Lecs, T R 10:10–11:30; disc, one hour each week to be arranged.
A. R. McCune and S. Via.
An advanced course in evolutionary biology integrating macroevolutionary and microevolutionary approaches. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction in populations and higher taxa, the origins and fate of variation, and causes of major evolutionary transitions. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

**465 Plant Ecology, Laboratory**
Fall. 1 credit. Prerequisite: concurrent enrollment in Biological Sciences 463.
Lab, F 12:05–5. Staff.
Laboratory and field exercises designed to give firsthand experience with the ecology of plants. Emphasis is on making observations and measurements of plants in the field.

**[470 Ecological Genetics (also Entomology 470)**
Spring. 4 credits. Prerequisite: Biological Sciences 378 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10–11:25; disc, one hour each week to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.]

**471 Mammalogy**
Fall. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Fee, $15.
Lecs, M W F 9:05; lab, M or T 1:25–4:25; 1 weekend field trip required.
D. K. McClearn.
Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

**[472 Herpetology (formerly Biological Sciences 473)**
Spring. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90. Fee, $10.
Lecs and labs, T R 12:20–4:25; occasional field trips and special projects.
F. H. Pough.
Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

**[474 Laboratory and Field Methods in Human Biology (also Anthropology 474)**
Spring. 4 credits. Prerequisite: one year of introductory biology or Anthropology 101 or permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs and labs, T R 10:10–12:05; additional hours to be arranged. Independent research project required.
K. A. R. Kennedy.
Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, the human paleontological record, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist.]

**[475 Ornithology**
Fall or summer. 4 credits. Recommended: Biological Sciences 274. S-U grades optional, with permission of instructor. Limited to 30 students. Offered alternate years. Not offered 1989–90. Fee, $15.
Lecs and labs, T R 12:20–4:25; occasional field trips and special projects. Staff.
Lectures cover various aspects of the biology of birds, including anatomy, physiology systematics, evolution, behavior, ecology, and distribution and are fully integrated with laboratory studies. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.]

**[476 Biology of Fishes**
Fall. 4 credits. Prerequisite: Biological Sciences 274 or equivalent experience in vertebrate zoology with written permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs, M W F 9: 05: lab, M 1:25–4:25.
A. R. McCune.
An introduction to the study of fishes: their structure, evolution, distribution ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

**[478 Ecosystem Biology**
Spring. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Offered alternate years. Not offered 1989–90.

Lecs, T R 10:10–12:05. R. W. Howarth.
Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Discussion of the interactions between ecosystem processes and community structure.]

**[479 Paleobiology (also Geological Sciences 479)**
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either Biological Sciences 274, Geological Sciences 375, Biological Sciences 373, or permission of instructor. Offered alternate years. Not offered 1989–90.

Lecs, M W F 12:20. J. L. Cisne and staff.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geology backgrouds of biology students concerning the nature and significance of the fossil record for their respective studies.]

**660 Field Studies in Ecology and Systematics**
Spring. Variable credit. Prerequisites: Biological Sciences 261, a taxon-oriented course, and permission of instructor. Estimated cost of room and board (exclusive of transportation) to be announced.

Lecs and labs to be arranged.
P. L. Marks, R. B. Root.
This course provides students an opportunity to learn techniques and a new biota by participating in an intensive series of field exercises. An extended field trip is scheduled during either intersession or spring break. The region visited, trip objectives, and other details are announced by the instructor in charge in the division's catalog supplement issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**661 Environmental Policy (also ALS 661 and Biology and Society 461)**
Fall and spring. 2 or 3 credits each term. Limited to 12 students. Prerequisite: permission of instructor.

Sem, R 2:30–4:30. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*.

**[662 Mathematical Ecology (also Statistics and Biometry 662)**
Spring. 3 credits. Prerequisites: one year of calculus and a course in statistics. Recommended: a general ecology course. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.

Lecs, M W F 12:20. S. A. Levin, C. E. McCulloch.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis. Deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, simulation, and analytical techniques.]

**664 Seminar in Insect-Plant Interactions (also Entomology 664)**
Spring. 2 credits. Intended for seniors and graduate students. Limited to 15 students. Prerequisites: courses in entomology, ecology, evolution, and organic chemistry and written permission of instructor. S-U grades optional. Offered alternate years.

Sem, 1 evening each week to be arranged. P. P. Feeny.
Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.

**[665 Limnology Seminar**
Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1989–90.

Sem to be arranged. N. G. Hairston, Jr.
A seminar course on advanced limnological topics.]

**[668 Comparative Biogeochemistry**
Fall. 4 credits. Prerequisites: Solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1989–90. Next offered fall 1990, spring 1992, and alternate spring semesters thereafter.

Lecs and disc, T R 10:10–12:05. R. W. Howarth.
Lectures cover the biotic controls on the chemistry of the environment. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems, with slight emphasis on aquatic ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes.]

**669 Plant Ecology Seminar**
Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional.

Sem to be arranged. Staff.
Includes review of current literature, student research, and selected topics of interest to participants.

**670 Graduate Seminar in Vertebrate Biology**
Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only.

Sem to be arranged. Staff.
Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

**[673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)**
Fall. 3 credits. Prerequisite: one year of introductory biology, Anthropology 101, or permission of instructor. Offered alternate years. Not offered 1989–90.

Sem, W 7:30–9:30 p.m.; additional hours to be arranged. K. A. R. Kennedy.
The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed.]

**674 Principles of Systematics (also Entomology 674)**
Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Recommended: an introductory biological systematics course. Offered alternate years.

Lecs, discs, and labs, M W 1:25–4:25. Q. D. Wheeler and staff.
An introduction to modern theory and methods of systematic biology. Lectures are on theoretical systematics and include species concepts, classification, phylogenetics, and biogeography. Laboratories include modern methods of analysis of data, including cladistic hand and computer methods and numerical methods. Laboratory grade is based in part on a final paper.

**760 Special Topics in Evolution and Ecology**
Fall or spring. 1–3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor.

Hours to be arranged. Staff.
Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

**[765 Autecology/Population Ecology**
Fall. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Not offered 1989–90.

Lecs and discs, T R 10:10–12:05. Staff.
Comparison of the responses and adaptations of organisms to environments in selected ecosystems. Emphasis on similarities and differences in molecular and organismal mechanisms by which plants and animals cope with their environments. Critical examination of the properties and dynamics of populations. Emphasis on theories of adaptation, population structures, dynamics, and regulation.]

**[766 Communities and Ecosystems**
Spring. 4 credits. Prerequisite: Biological Sciences 261 or equivalent. S-U grades optional. Not offered 1989–90.

Lecs, T R 10:10–12:05. Staff.
Structure, dynamics, and evolution of natural communities; species diversity; niches and gradient relations; and succession, climax, and disturbance. Comparative aspects of terrestrial, marine, and freshwater communities. Analysis of ecosystems in terms of energy flow, biogeochemistry, and model systems. Emphasis on functional and structural properties of communities and ecosystems.]

**767 Current Topics in Ecology and Evolutionary Biology**
Fall. 4 credits. Prerequisites: Biological Sciences 261 and 378 or their equivalents. S-U grades optional.
Lecs and discs, T R 10:10–12:05. Staff.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

## GENETICS AND DEVELOPMENT

**281 Genetics**
Fall or spring. 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. Students who have taken Biological Sciences 282 may register only with written permission of instructor. No admittance after first week of classes.
Lecs, T R 10:10–12:05; lab, M T W or R 2:30–4:25; additional hours to be arranged. Labs may also be scheduled T or R 8–9:55, W or F 10:10–12:05, F 2:30–4:25, or S 10:10–12:05 if enrollment requires it. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. T. D. Fox, M. L. Goldberg, R. J. MacIntyre.
A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genetic aspects of differentiation, genes in populations, breeding systems, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in *Drosophila*.

**282 Human Genetics**
Spring. 2 or 3 credits (2 credits if taken after Biological Sciences 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent; written permission of instructor required for students who have taken Biological Sciences 281.
Lecs, M W 10:10; disc, R 10:10 or F 10:10 or 11:15. R. A. Calvo.
A course designed primarily for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

**385 Developmental Biology**
Fall. 3 credits. Prerequisite: Biological Sciences 281.
Lecs, M W F 11:15. A. W. Blackler.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**389 Embryology**
Spring. 4 credits. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Limited to seniors.
Lecs, T R 10:10; labs, T R 2–4:25. A. W. Blackler.
A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue level. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy. Preserved materials are used in the laboratory.

**480 Seminar in Developmental Biology**
Spring. 1 credit. May be repeated for credit. Limited to upperclass students. S-U grades only.
Sem to be arranged. Staff.

**481 Population Genetics**
Fall. 4 credits. Prerequisite: Biological Sciences 281 or equivalent.
Lecs, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro.
A study of factors that influence the genetic structure of Mendelian populations and that are involved in race formation and speciation. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. The interplay between theory and the data from experiments and natural populations are emphasized.

**482 Human Genetics and Society**
Fall. 2 credits. Prerequisites: Biological Sciences 281 and 330 or 331. Enrollment limited to senior biological sciences majors, with preference given to students studying genetics and development.
Disc, T 2:30–4:25. R. A. Calvo, H. T. Stinson.
Presentation of the technology and discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics that may be considered are new reproductive strategies, wrongful life and wrongful birth, eugenics, genetic counseling, genetic screening (prenatal, neonatal, presymptomatic, carrier, and workplace), genetic effects of abused substances, sociobiology, and gene therapy. Students lead most discussions.

**483 Molecular Aspects of Development**
Spring. 3 credits. Prerequisites: Biological Sciences 281, 330 or 331, and 385. Offered alternate years.
Lecs, T R 10:10–11:45. M. F. Wolfner.
An examination of the molecular biology of developing systems, with emphasis on the genomic, transcriptional, post-transcriptional, translational, and post-translational mechanisms involved in regulating development. Both prokaryotic and eukaryotic systems are considered, but emphasis is on the latter. Topics to be discussed include changes in chromatin structure, DNA rearrangements, control of RNA synthesis and processing, translational controls, nucleo-cytoplasmic interactions, and genetic responses to hormone treatment. The regulation of selected developmental systems is considered in detail.

**484 Molecular Evolution**
Spring. 3 credits. Prerequisites: Biological Sciences 281 and organic chemistry. Offered alternate years.
Lecs, T R 11:15. R. J. MacIntyre.
An analysis of evolutionary changes in proteins and nucleic acids, and gene-enzyme variability in natural populations. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.

**485 Microbial Genetics, Lectures**
Fall. 2 credits. Limited to upperclass and graduate students. Prerequisites: Biological Sciences 281 and Microbiology 290, or written permission of instructor. S-U grades optional.
Lec, W 7:30–9:25 p.m. S. A. Zahler.
Genetics of bacteria and their viruses, with emphasis on the mechanisms of genetic phenomena.

**486 Immunogenetics (also Animal Science 486)**
Fall. 3 credits. Limited to seniors and graduate students. Prerequisites: an introductory course in genetics, prior or concurrent enrollment in basic immunology, or written permission of instructor. Offered fall 1989; next offered fall 1991.
Lecs and discs, M W F 10:10. R. R. Dietert.
The genetic control of a variety of cellular antigens and their use in understanding biological and immunological functions. The genetics of antibody diversity, antigen recognition, immune response, transplantation, and disease resistance are discussed

**487 Microbial Genetics, Laboratory**
Fall. 3 credits. Primarily for upperclass students. Limited to 16 students. Prerequisites: concurrent or previous enrollment in Biological Sciences 485, Microbiology 291 or equivalent, and written permission of instructor.
Lab, T 1:25–4:25; additional hours to be arranged. S. A. Zahler.
Problem solving in bacterial genetics.

**686 Mammalian Development**
Spring. 2 credits. Limited to 25 students. Prerequisites: Biological Sciences 281 and 385 or their equivalents. S-U grades optional. Offered alternate years.
Lecs, W F 11:15. W. H. Mark.
An in-depth study of mammalian development using the mouse as the animal model. The course covers classical embryology beginning with gametogenesis followed by morphogenetic and biochemical anayses of pre- or post-implantation development. Current topics in experimental embryology, including genetic analysis of mutants, study of cell lineage with chimeras, in vitro culturing of embryonic stem cells, and molecular approaches to understanding development are examined.

**[687 Developmental Genetics**
Fall. 2 credits. Limited to 20 students. Prerequisites: Biological Sciences 281 or equivalent, Biological Sciences 385 or equivalent. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lec, M 7:30–9:30 p.m. K. J. Kemphues.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in *Drosophila, Caenorhabditis,* and Mouse. Other possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are given the opportunity to discuss each topic in class.]

**688 Yeast Genetics**
Spring. 2 credits. Prerequisites: Biological Sciences 281, 330 or 331, and 485, or written permission of instructor. S-U grades optional.
Lecs, W 7:30–9:25 p.m. T. D. Fox.
An advanced overview of genetic studies in yeast, primarily *Saccharomyces cerevisiae.* Both formal genetic and molecular approaches to selected problems of biological interest are discussed.

**[689 Advanced Topics in Population Genetics**
Fall. 2 credits. Limited to 20 students. Prerequisites: Biological Sciences 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lec, T 2:30–4:25. C. F. Aquadro.
An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics announced the previous spring and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.]

**780 Current Topics in Genetics**
Fall and spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor.
Sem to be arranged. Staff.
A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

**781 Problems in Genetics and Development**
Fall. 1 credit. Limited to first-year graduate students in the Field of Genetics.
Disc to be arranged. Staff.
An introduction to the research literature in selected areas through weekly problem sets and discussions.

**782–787 Current Genetics/Development Topics**
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only.
Lectures and seminars on specialized topics to be announced.

## NEUROBIOLOGY AND BEHAVIOR

**221 Neurobiology and Behavior I: Introduction to Behavior**
Fall. 3 or 4 credits (4 credits with discussion and written projects). 4–credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of Biological Sciences 222. S-U grades optional.
Lecs, M W F 12:20; disc to be arranged. P. W. Sherman and staff.
A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, neuroethology, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

**222 Neurobiology and Behavior II: Introduction to Neurobiology**
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4–credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year of introductory biology for majors and one year of chemistry. May be taken independently of Biological Sciences 221. S-U grades optional.
Lecs, M W F 12:20; disc to be arranged. A. H. Bass and staff.
A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory.

**322 Hormones and Behavior (also Psychology 322)**
Spring. 3 or 4 credits; the 4-credit option involves a one-hour section once a week, in which the students are expected to participate in discussion and read original papers in the field. *Because the 4-credit option has very limited enrollment, students should preregister for 3 credits only.* Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: one year of introductory biology plus a course in psychology or Biological Sciences 221 or 222. S-U grades optional.
Lecs, T R 10:10–11:30; disc to be arranged. E. Adkins Regan, R. E. Johnston.
The relationship between endocrine and neuroendocrine systems and the behavior of animals, including humans. Major emphasis is on sexual, parental, and aggressive behavior.

**324 Biopsychology Laboratory (also Psychology 324)**
Fall. 4 credits. Limited to 24 upperclass students. Prerequisites: laboratory experience in biology or psychology, Biological Sciences 221 and 222 or Psychology 123 and 222; and permission of instructor. S-U grades optional.
Labs, T R 1:25–4:25. T. DeVoogd.
Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

**[326 The Visual System**
Spring. 4 credits. Prerequisites: Biological Sciences 222 or 311, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90; next offered 1991–92.
Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland.
The visual systems of vertebrates and invertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, and structure and function of higher visual centers.]

**396 Introduction to Sensory Systems (also Psychology 396)**
Spring. 3 or 4 credits (4 credits with discussion and term paper). No auditors. Prerequisites: an introductory course in biology or biopsychology, and a second course in neurobiology or behavior or perception or cognition or biopsychology; students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. Permission of instructor required for 4-credit option. Offered alternate years.
Lecs, M W F 9:05. B. P. Halpern.
This course employs the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats or environments. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. At the level of *An Introduction to the Physiology of Hearing*, by J. O. Pickles; *Photoreceptors: Their Role in Vision*, by A. Fein and E. Z. Szuts; *Comparative Studies of Hearing in Vertebrates*, edited by A. N. Popper and R. R. Ray; and "Information Processing in Cutaneous Mechanoreceptors," Federation Proceedings 42:1983.

**420 Topics in Neurobiology and Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional.
To be arranged. Staff.
Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division's catalog supplement issued at the beginning of the semester.

**424 Neuroethology**
Fall. 3 credits. Prerequisites: Biological Sciences 221 and 222. S-U grades optional for graduate students only. Offered alternate years.
Lecs, M W 11:15; disc, F 11:15.
C. D. Hopkins.
The integrated study of neurobiology and animal behavior. Representative topics include acoustic communication in insects and amphibians, vocal mechanisms and plasticity of bird song, mammalian hearing, bat echolocation, prey detection by owls, electroproduction and electroreception in fish, neurophysiology and behavior of pheromone communication, neurobehavior of vision in anurans, mammalian visual processing, command neurons and decision networks, locomotion and motor-pattern generation, escape behavior in invertebrates, and neural correlates of learning. Assigned readings include original articles in the scientific literature. A term paper on the neural basis of animal behavior is required.

**[426 Electronics for Neurobiology**
Spring. 3 credits. Limited to 20 students. Prerequisites: Biological Sciences 222 and one year of introductory physics. Offered alternate years. Not offered 1989–90.
Lecs, T R 9:05; lab, 4 hours each week to be arranged. D. W. McBride.
Electronics as applied to electrophysiological instrumentation, data acquisition, and analysis. Topics include a review of basic electrical concepts, the cell as a circuit, design of amplifiers and pulse generators for biological use, and computer interfacing to an experiment.]

**[427 Animal Social Behavior**
Fall. 3 credits. Limited to 30 students. Prerequisites: Biological Sciences 221 and 261. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90.
Lecs and discs, T R 2:30–4:20.
S. T. Emlen.
An intensive course for upper-division students interested in the adaptive bases of social behavior. Lectures, discussions, and student presentations examine topics including spacing systems, mating systems, sexual selection, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.]

**[428 Mechanisms of Animal Behavior: Field and Laboratory Studies**
Spring. 3 credits. Limited to 15 students. Prerequisite: Biological Sciences 221. S-U grades optional, with permission of instructor. Not offered 1989–90; next offered 1991–92.
Lecs and discs, T R 2:30–4:20.
K. K. Adler.]

**[429 Olfaction and Taste: Structure and Function (also Psychology 429)**
Fall. 3 or 4 credits (4 credits with term paper on research project, which can, but need not, study nonhuman vertebrates). Prerequisite: a 300-level course in biopsychology or equivalent. Preference given to junior and senior psychology and biology majors and graduate students. S-U grades optional for graduate students only. Offered alternate years. Not offered 1989–90.
Lecs, T R 9:05. B. P. Halpern.
The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light- and electron-microscope levels, as well as at the molecular level. The neurophysiological and biochemical aspects of function are considered. The emphasis of the course is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms.]

**491 Principles of Neurophysiology**
Fall. 4 credits. Limited to 20 students. Prerequisite: Biological Sciences 222 or written permission of instructor. S-U grades optional.
Lecs, M W 10:10; lab, M W 12:20–4:25; additional hours to be arranged.
B. R. Johnson.
A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to present laboratory exercise results, to supplement laboratory topics, and to encourage discussion of primary research papers. Laboratory topics include electrical modeling of neurons; intracellular and extracellular recording, and analysis of neuronal properties such as nerve conduction velocities, resting potentials, electrical synaptic transmission; voltage-clamp analysis of ionic currents; and neuronal architecture. A variety of preparations, both invertebrate and vertebrate, are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

**[492 Sensory Function (also Psychology 492)**
Spring. 4 credits. Prerequisite: Biological Sciences 222 or 311 or an upper-level course in biopsychology, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90; next offered 1990–91.
Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland, B. P. Halpern.
Classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics, including sensory coding, location of stimulus sources in space, and the development of sensory systems. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated and the processing of this information is followed into the central nervous system. At the level of *The Senses*, edited by Barlow and Mollon, and *An Introduction to the Physiology of Hearing*, by Pickles.]

**[493 Developmental Neurobiology**
Fall. 3 credits. Prerequisite: Biological Sciences 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1989–90; next offered 1990–91.
Lecs, T R 9:05; disc to be arranged.
R. Booker.
Lectures covering the development of the nervous system taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development are discussed. Readings are taken from original journal articles.]

**[494 Comparative Vertebrate Neuroanatomy (formerly Biological Sciences 694)**
Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: Biological Sciences 222 or equivalent. S-U grades optional. Offered alternate years. Not offered 1989–90.
Lecs, T R 10:10–11:30. A. H. Bass.
Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into two major sections: principles of brain organization and vertebrate brain evolution.]

**495 Membrane Ion Channels**
Spring. 3 credits. Limited to 15 students. Prerequisites: Biological Sciences 222, college introductory physics, and calculus, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, M W F 10:10. O. P. Hamill.
The functional and mechanistic aspects of membrane ion channels, beginning with basic concepts and model systems. Theories of ion permeation and channel gating are discussed. Development of membrane ion channels during neuron differentiation and the role of membrane channels in disease states are also considered.

**497 Neurochemistry and Molecular Neurobiology**
Fall. 3 credits. Limited to 30 students. Prerequisites: Biological Sciences 222 and either 330 or 331, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, T R 9:05; disc, T 10:10.
T. R. Podleski.
This course focuses primarily on synaptic neurochemistry. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Second-messenger mechanisms are stressed. Readings are primarily from journal articles.

**623 Chemical Communication (also Chemistry 622)**
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and Chemistry 358 or equivalent. Offered alternate years.
Lecs, M W F 1:25. T. Eisner, J. Meinwald, W. L. Roelofs, and guest speakers.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

**[626 Sex Differences in Brain and Behavior (also Psychology 524)**
Spring. 2 credits. Limited to 12 students. Prerequisite: Biological Sciences 322 or permission of instructor. Not offered 1989–90.
Disc and sem, M W 3:35–5:30.
T. DeVoogd.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.]

**628 Computer Interfacing for Neurobiologists**
Spring. 3 credits. Limited to 20 students. Prerequisites: Biological Sciences 222 and 426, or permission of instructor. S-U grades optional. Offered alternate years.
Lecs, T R 9:05; lab, 4 hours each week to be arranged. D. W. McBride.
Lectures and laboratories deal with interfacing a computer with an experiment and doing data acquisition and computer control of the experiment. Topics include introduction to digital electronics, data acquisition and monitoring of an experiment (A/D conversions and digital input), some data analysis and decision making, computer control of an experiment (D/A conversions and digital output), communication (RS-232 and IEEE), assembler language programming, sampling theory and Fourier analysis, feedback control using computers, optimizing data through-put, and storage to disk. A Mac II computer is used in this course.

**720 Seminar in Advanced Topics in Neurobiology and Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.
Sem to be arranged. Staff and students.
Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

**721 Graduate Survey of Behavior**
Fall. 1 credit. Limited to graduate students. Concurrent registration in Biological Sciences 221 is *not* required. S-U grades optional.
Sem to be arranged. P. W. Sherman and staff.
A survey course involving readings of the original literature in behavior. A weekly seminar, primarily in the form of student-led discussions, is held to discuss readings linked to the material presented in Biological Sciences 221.

**722 Graduate Survey of Neurobiology**
Spring. 1 credit. Limited to graduate students. Concurrent registration in Biological Sciences 222 is *not* required. S-U grades optional.
Sem to be arranged. A. H. Bass and staff.
A survey course involving readings of the original literature in neurobiology. A weekly seminar, primarily in the form of student-led discussions, is held to discuss readings linked to the material presented in Biological Sciences 222.

**723 Advanced Topics in Animal Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.
Sem to be arranged. Staff.
A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

**724 Field Methods in Animal Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.
Sem and fieldwork to be arranged. Staff.
A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

**790 Advanced Topics in Cellular and Molecular Neurobiology**
Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: Biological Sciences 222. S-U grades optional.
Lecs and sem to be arranged. Staff.
A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

**792 Advanced Laboratory in Cellular and Molecular Neurobiology**
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: Biological Sciences 330 or 331 or equivalent, 491 or equivalent, and written permission of instructor. S-U grades optional.
Lab to be arranged. Staff.
A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

**793 Advanced Topics in Integrative Neurobiology**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.
Lecs and discs to be arranged. Staff.
A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

**794 Advanced Laboratory Techniques in Integrative Neurobiology**
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview.
Lab to be arranged. Staff.
A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

## COURSES IN MARINE SCIENCES

Although there is no concentration (program in study) in marine sciences offered to Cornell undergraduates, there is extensive opportunity at the undergraduate level to prepare for more advanced study. Students interested in the marine sciences may enroll in courses offered at Cornell's Shoals Marine Laboratory (SML), a seasonal field station located on ninety-five acre Appledore Island, six miles off the Maine and New Hampshire coasts.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association.

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

**204 Biological Illustration**
Summer. No credit or 1 credit. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, supplies, and ferry transportation), $500.

Daily sessions for 1 week. SML faculty.
General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

**306 Marine Microbial Ecology**
Summer. 2 credits. Prerequisites: one year of introductory college biology and chemistry. Recommended: an introductory course in microbiology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,100.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
Designed to provide a strong practical and theoretical understanding of the ecology, physiology, and systematics of marine microbes from diverse marine ecosystems. Intertidal zone, salt marsh, coastal water, open ocean, and hydrothermal vent communities are covered. Particular cellular arrangements, metabolic pathways, and biogeochemical cycles are covered in detail, as are general principles concerning microbial ecology and evolution.

**309 Bioclimatology: A Field Introduction**
Summer. 2 credits. Prerequisite: one year of college level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $975.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. In-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**329 Ecology of Animal Behavior**
Summer. 2 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, evolution, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N. H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,100.

Daily lecs and fieldwork for 2 weeks. SML faculty.
The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area. Dissection of vertebrate animals will be a part of one or more laboratory sessions.

**363 Marine Biology for Teachers**
Summer. 1 credit. Primarily for teachers, grades 6 through 12, but open to others. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $750.

Daily lecs, labs, and fieldwork for 10 days. SML faculty.
Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment. The core faculty of marine biologists is augmented by specialists in science and environmental education. Dissection of vertebrate animals will be a part of one or more laboratory sessions.

**364 Field Marine Science**
Summer. 6 credits. Prerequisite: one year of college biology or other supporting subject. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,975.

Daily lecs, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies, and commercial fishermen. SML faculty.
Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Dissection of vertebrate animals will be a part of one or more laboratory sessions.

**365 Underwater Research**
Summer. 2 credits. Prerequisites: one year of college-level biology or other supporting subject, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,250.

Daily lecs and fieldwork for 2 weeks. Team-taught by a diving-safety officer, two faculty members, and guest lecturers.
For competent divers only. Covers special problems of underwater research, including random sampling, use of dive tables, underwater instrumentation, special diving equipment, photographic techniques, integration with boat and shore facilities, and emergency procedures. Students are required to conduct a transect study on both soft and hard substrates.

**366–370 SEA Semester**
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory office offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. *This sequence is repeated approximately once every two months throughout the year.* Students spend the first half of SEA Semester (the six-week shore component) in Woods Hole, Massachusetts, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (the six-week sea component) is spent at sea aboard R/V *Westward* or the R/V *Corwith Cramer*. Applicants are interviewed in Ithaca before

admission. Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. *Cornell students enrolled in the SEA Semester must take the entire sequence.*

For more details and an application, consult the Shoals Marine Laboratory office, G14 Stimson Hall. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for entire 17-credit SEA Semester, about $6,200; room and board for sea component (six weeks) only, about $1,875.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

### Shore Component (six weeks)

**366 SEA Introduction to Oceanography**
3 credits. Prerequisites: a laboratory course in physical or biological science and concurrent enrollment in Biological Sciences 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**367 SEA Introduction to Maritime Studies**
3 credits. Prerequisite: concurrent enrollment in Biological Sciences 366 and 368.
An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**368 SEA Introduction to Nautical Science**
3 credits. Prerequisites: college algebra or equivalent, and concurrent enrollment in Biological Sciences 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

### Sea Component (six weeks)

Courses 369 and 370 take place aboard the R/V *Westward*, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V *Corwith Cramer*, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, two science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to twenty-five students round out the complement.

**369 SEA Practical Oceanography I**
4 credits. Prerequisite: Biological Sciences 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**370 SEA Practical Oceanography II**
4 credits. Prerequisite: Biological Sciences 368. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**372 An Introduction to the Ecology and Chemistry of Rock-Pool Environments**
Summer. 1 credit. Prerequisite: an introductory biology, chemistry, or marine science course at the college level or permission of instructor. S-U grades optional. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.
Daily lecs, labs, and fieldwork for 1 week. SML faculty.
A fundamental field-oriented introduction to the interrelationships of the chemistry and biology of both rock- and tide-pool ecosystems, using the numerous pools on Appledore Island as natural laboratories.

**413 Adaptations of Marine Organisms**
Summer. 4 credits. Prerequisite: Biological Sciences 364 or a course in physiological ecology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,550.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and *in vivo* functional analyses of metabolic phenomena. Dissection of vertebrate animals will be a part of one or more laboratory sessions.

**449 Marine Botany: Ecology of Marine Plants**
Summer. 2 credits. Prerequisite: Biological Sciences 364 or general familiarity with marine algae. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,100.
Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

**466 Ecology and Chemistry of Rock-Pool Environments**
Summer. 4 credits. Prerequisites: one year of introductory college chemistry and an introductory ecology course at the college level. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,550.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
A field-oriented course emphasizing the interrelationships of the chemistry and biology of both rock- and tide-pool ecosystems, using the numerous pools on the island as natural laboratories. Laboratory work includes organism identification; chemical analyses of pools for nutrients, pH, alkalinity, dissolved carbon dioxide and oxygen, salinity, plant pigments, and primary production; and determinations of lethal temperature, salinity, and oxygen level for different species and populations. Lectures and class research projects cover the effects of pool morphology and algal growth on pool temperature, chemistry, and stratification; salinity changes caused by evaporation, rainfall, and seawater splash; dissolved oxygen and pH changes associated with primary production; nutrient dynamics relative to rainfall, flow through, primary production, microbial activities, and proximity to nesting birds; primary production differences among pool types; and predation experiments with fish implantation. Food web and energy models for different rock-pool ecosystems are presented. The use of microcomputers for interpretation of data is emphasized.

**467 Chemical Oceanography of Coastal Waters**
Summer. 4 credits. Prerequisites: one year of introductory college chemistry and an introductory marine science course at the college level. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,550.
Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
A field-oriented course in the chemical oceanography of coastal waters. Lectures, frequent field trips, and laboratory sampling

and analysis; includes tests of salinity, temperature, pH, chlorophyll, alkalinity, total CO2, nutrients, organic material, and suspended materials in coastal waters, with some work on the analysis of coastal sediments.

**468 Marine Plankton Ecology**
Summer. 2 credits. Limited to 20 students. Prerequisites: one year of introductory college biology and Biological Sciences 364 or equivalent, or a course in invertebrate zoology or introductory oceanography. S-U grades optional. A special course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,100.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An introduction to the biology of plankton and their ecological role in representative marine environments, including estuaries, coastal areas, open ocean gyres, and polar seas. Includes an overview of morphology, life histories, and nutrition of planktonic bacteria, protozoans, algae, and metazoans (coelenterates, crustaceans, ctenophores, chaetognaths, and tunicates). The role of these groups in different ecosystems is related to the hydrography of the area, as well as the life cycles and trophic interactions of the dominant species. During several one-day cruises in the Gulf of Maine and Great Bay Estuary students use simple field techniques to address current research problems.

**477 Marine Vertebrates**
Summer. 4 credits. Prerequisite: Biological Sciences 364 or 274 or a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,550.

Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeletomuscular structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**488 Reproduction and Development of Marine Invertebrates**
Summer. 4 credits. Prerequisite: Biological Sciences 364 or a course in invertebrate zoology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,550.

Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

A laboratory-oriented course emphasizing processes of fertilization and early development through the metamorphosis of larvae in species selected from an extensive variety of local marine invertebrates. Practical experience includes collecting specimens intertidally and from the plankton, culturing embryos through metamorphosis, camera lucida and photomicrographic recording of embryonic development, and design and execution of basic experiments on eggs and embryos. Lectures complement laboratory work through phylogenetic examination of classical invertebrate embryology and modern experimental developmental biology.

**Archaeology of Maritime Communities (Archaeology 300: Individual Study in Archaeology)**
Summer. 1 credit. Prerequisite: Archaeology 319 or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

Fieldwork on various land sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.

**Coastal and Oceanic Law and Policy (Natural Resources 306)**
Summer. 1 credit. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.

Daily lecs and discs for 1 week. SML faculty.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**Marine Pollution (Agricultural Engineering 420)**
Summer 2 credits. Prerequisite: Biological Sciences 364 or permission of instructor. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $975.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

Dispersion modeling and the effects of pollutants (including oil, outfalls, solid wastes, sludge and dredge spoils, and radioactive wastes) are discussed from the perspectives of elementary physical oceanography and biological processes. Laboratories include basic methods for targeting and tracing wastewater; organic carbon determinations; and practical field projects.

**Marine and Coastal Geology (Geological Sciences 213)**
Summer. 1 credit. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.

Daily lecs, labs, and fieldwork for 1-week. SML faculty.

With "the New England coast" defined as beginning at the -200 meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area's bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macroscale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

**Marine Resources: Economic Modeling of Use and Regulation (Agricultural Economics 252)**
Summer. 1 credit. Prerequisite: an introductory course in economics or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.

Daily lecs and discs for 1 week. SML faculty.

Resource economics in general is concerned with the optimal allocations through time of renewable and nonrenewable resources. This course examines fisheries management, offshore oil and gas recovery, and ocean-minerals mining. Models of optimal resource use are developed and used to assess both the behavior of those harvesting marine resources and the adequacy of current governmental policy. An integral part of the course is the special opportunity to observe and interview those professionally involved in harvesting marine resources in the Gulf of Maine.

**Archaeology Underwater (Archaeology 319)**
Summer. 1 credit. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $700.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

**Wetland Resources (Natural Resources 417)**

Summer. 1 credit. Prerequisite: one year of college biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $675.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

## COURSES IN BIOPHYSICS

Biophysics is an interdisciplinary undergraduate and graduate program. A special program for undergraduate students interested in biophysics is offered as an independent concentration (program of study) in the biological sciences major (see option 8 under "Concentration Areas and Requirements" and option 9 under "Programs of Study"). Information on this independent option is available in the Office for Academic Affairs, 118 Stimson Hall. Students interested in graduate work in biophysics should inquire at the Program in Biophysics Office, 210 Clark Hall.

The following courses are available for students interested in biophysics:

**Biomechanical Systems—Analysis and Design (Mechanical and Aerospace Engineering 565)**

**Chemistry of Nucleic Acids (Chemistry 677)**

**Electron Microscopy for Biologists (Biological Sciences 401, 403, 405, 606, 608)**

**Enzyme Catalysis and Regulation (Chemistry 672)**

**Membrane Biophysics (Applied and Engineering Physics 615)**

**Membranes and Bioenergetics (Biological Sciences 632)**

**Neuroethology (Biological Sciences 424)**

**Photosynthesis (Biological Sciences 445)**

**Physical Chemistry of Proteins (Chemistry 686)**

**Principles of Neurophysiology (Biological Sciences 491)**

**Protein Structure and Function (Biological Sciences 631)**

**Special Topics in Biophysical and Bioorganic Chemistry (Chemistry 782)**

**Transport of Solutes and Water in Plants (Biological Sciences 649)**

## FACULTY ROSTER

### New York State College of Agriculture and Life Sciences

Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Bates, David M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorium

Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology†

Bruns, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development

Calvo, Joseph M., Ph.D., Washington State U. William T. Keeton Professor in Biological Sciences; Biochemistry, Molecular and Cell Biology

Davies, Peter J., Ph.D., U. of Reading (England). Prof., Plant Biology

Davis, Jerrold I., Ph.D., U. of Washington. Asst. Prof., Bailey Hortorium

Doyle, Jeffrey J., Ph.D., Indiana U. Asst. Prof., Bailey Hortorium

Eisner, Thomas, Ph.D., Harvard U. Jacob Gould Schurman Professor, Neurobiology and Behavior

Emlen, Stephen T., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Feeny, Paul P., Ph.D., Oxford U. (England). Prof., Ecology and Systematics/Entomology*

Fox, Thomas D., Ph.D., Harvard U. Assoc. Prof., Genetics and Development

Gibson, Jane, Ph.D., U. of London (England). Prof., Biochemistry, Molecular and Cell Biology

Goldberg, Michael L., Ph.D., Stanford U. Assoc. Prof., Genetics and Development

Hanson, Maureen R., Ph.D., Harvard U. Assoc. Prof., Genetics and Development

Harrison, Richard G., Ph.D., Cornell U. Assoc. Prof., Ecology and Systematics

Harris-Warrick, Ronald M., Ph.D., Stanford U. Assoc. Prof., Neurobiology and Behavior

Harvell, C. Drew, Ph.D., U. of Washington. Asst. Prof., Ecology and Systematics

Hopkins, Carl D., Ph.D., Rockefeller U. Prof., Neurobiology and Behavior

Jagendorf, Andre T., Ph.D., Yale U. Liberty Hyde Bailey Professor of Plant Physiology, Plant Biology*

Keller, Elizabeth B., Ph.D., Cornell U. Prof., Biochemistry, Molecular and Cell Biology

Kemphues, Kenneth J., Ph.D., Indiana U. Asst. Prof., Genetics and Development

Lis, John T., Ph.D., Brandeis U. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Loew, Ellis R., Ph.D., U. of California at Los Angeles. Assoc. Prof., Physiology/Veterinary Physiology†

Luckow, Melissa A., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium

McCarty, Richard E., Ph.D., Johns Hopkins U. Prof., Biochemistry, Molecular and Cell Biology

McCune, Amy R., Ph.D., Yale U. Asst. Prof., Ecology and Systematics

MacIntyre, Ross J., Ph.D., Johns Hopkins U. Prof., Genetics and Development*

Marks, Peter L., Ph.D., Yale U. Prof., Ecology and Systematics

Moffat, J. Keith, Ph.D., Cambridge U. (England). Prof., Biochemistry, Molecular and Cell Biology

Nasrallah, June B., Ph.D., Cornell U. Asst. Prof., Plant Biology

Niklas, Karl J., Ph.D., U. of Illinois. Prof., Plant Biology/Ecology and Systematics

Nixon, Kevin C., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium

Owens,Thomas G.,Ph.D., Cornell U. Asst. Prof., Plant Biology

Paolillo, Dominick J., Jr., Ph.D., U. of California at Davis. Prof., Plant Biology

Parthasarathy, Mandayam V., Ph.D., Cornell U. Prof., Plant Biology

Pough, F. Harvey, Ph.D., U. of California at Los Angeles. Prof., Ecology and Systematics/Physiology

Quaroni, Andrea, Ph.D., U. of Pavia (Italy). Asst. Prof., Physiology

Roberts, Jeffrey W., Ph.D., Harvard U. Prof., Biochemistry, Molecular and Cell Biology*

Root, Richard B., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics/Entomology

Spanswick, Roger M., Ph.D., U. of Edinburgh (Scotland). Prof., Plant Biology

Tye, Bik-Kwoon, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Vogt, Volker M., Ph.D., Harvard U. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Walcott, Charles, Ph.D., Cornell U. Prof., Neurobiology and Behavior/Laboratory of Ornithology

Wayne, Randy O., Ph.D., U. of Massachusetts. Asst. Prof., Plant Biology

Winkler, David W., Ph.D., U. of California at Berkeley. Asst. Prof., Ecology and Systematics

Wu, Ray, Ph.D., U. of Pennsylvania. Prof., Biochemistry, Molecular and Cell Biology

Zahler, Stanley A., Ph.D., U. of Chicago. Prof., Genetics and Development

### Other Teaching Personnel

Alexander, Renee R., Ph.D., Cornell U. Sr. Lecturer, Biochemistry, Molecular and Cell Biology

Calvo, Rita A., Ph.D., Cornell U. Lecturer, Genetics and Development

Ecklund, P. Richard, Ph.D., Oregon State U. Lecturer, Neurobiology and Behavior

Ferger, Martha F., Ph.D., Cornell U. Medical College. Sr. Lecturer, Biochemistry, Molecular and Cell Biology

Glase, Jon C., Ph.D., Cornell U. Sr. Lecturer, Neurobiology and Behavior

Griffiths, Joan M., Ph.D., Cornell U. Lecturer, Biochemistry, Molecular and Cell Biology

Heiser, John B., Ph.D., Cornell U. Sr. Lecturer, Ecology and Systematics

McFadden, Carol H., Ph.D., Cornell U. Sr. Lecturer, Physiology

Reiss, H. Carol, M.S., Cornell U. Lecturer, Plant Biology

### Joint Appointees

Barker, Robert, Prof., Provost's Office/Biochemistry, Molecular and Cell Biology

Bedford, Barbara L., Adjunct Asst. Prof., Ecosystems Research Center/Ecology and Systematics

Bloom, Stephen E., Assoc. Prof., Poultry and Avian Sciences/Biological Sciences
Borror, Arthur C., Adjunct Prof., U. of New Hampshire/Biological Sciences
Brown, William L., Jr., Prof., Entomology/Ecology and Systematics
Butler, Walter R., Assoc. Prof., Animal Science/Physiology
Currie, W. Bruce, Assoc. Prof., Animal Science/Physiology
Edelestein, Stuart M., Adjunct Prof., U. of Geneva (Switzerland)/Biochemistry, Molecular and Cell Biology
Foote, Robert H., Jacob Gould Schurman Professor, Animal Science/Physiology
Howell, Stephen H., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Kochian, Leon V., Adjunct Asst. Prof., USDA Science and Education Administration/Plant Biology
Korf, Richard P., Prof., Plant Pathology/Bailey Hortorium
LaRue, Thomas A., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Leopold, A. Carl, Adjunct Prof., Boyce Thompson Institute/Plant Biology
Pimentel, David, Prof., Entomology/Ecology and Systematics
Richmond, Milo E., Assoc. Prof., USDI Fish and Wildlife Service/Natural Resources/Ecology and Systematics
Tamas, Imre A., Adjunct Assoc. Prof., Ithaca College/Plant Biology
Thompson, John F., Adjunct Prof., USDA Science and Education Administration/Plant Biology
Via, Sara, Asst. Prof., Entomology/Ecology and Systematics
Weeden, Norman F., Asst. Prof., Horticultural Sciences/Bailey Hortorium
Wheeler, Quentin D., Assoc. Prof., Entomology/Bailey Hortorium

## College of Arts and Sciences

Aquadro, Charles F., Ph.D., U. of Georgia. Assoc. Prof., Genetics and Development/Ecology and Systematics
Bass, Andrew H., Ph.D., U. of Michigan. Asst. Prof., Neurobiology and Behavior
Blackler, Antonie W., Ph.D., U. of London (England). Prof., Genetics and Development
Booker, Ronald, Ph.D., Princeton U. Asst. Prof., Neurobiology and Behavior
Bretscher, Anthony P., Ph.D., Leeds U. (England). Assoc. Prof., Biochemistry, Molecular and Cell Biology
Brown, William J., Ph.D., U. of Texas Health Science Center at Dallas. Asst. Prof., Biochemistry, Molecular and Cell Biology
Capranica, Robert R., Sc.D., Massachusetts Inst. of Technology. Prof., Neurobiology and Behavior
Chabot, Brian F., Ph.D., Duke U. Prof., Ecology and Systematics‡
Feigenson, Gerald W., Ph.D., California Inst. of Technology. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Gibson, Quentin H., Ph.D./D.Sc., Queen's U. (Northern Ireland). Greater Philadelphia Professor in Biological Sciences; Biochemistry, Molecular and Cell Biology
Hairston, Nelson G., Jr., Ph.D., U. of Washington. Prof., Ecology and Systematics
Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology
Hamill, Owen P., Ph.D., U. of New South Wales (Australia). Asst. Prof., Neurobiology and Behavior
Heppel, Leon A., Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology
Hess, George P., Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology
Hinkle, Peter C., Ph.D., New York U. Prof., Biochemistry, Molecular and Cell Biology
Howarth, Robert W., Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. Assoc. Prof., Ecology and Systematics
Howland, Howard C., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Physiology
Hoy, Ronald R., Ph.D., Stanford U. Prof., Neurobiology and Behavior‡
Huffaker, Tim C., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Biochemistry, Molecular and Cell Biology
Karplus, Paul A., Ph.D., U. of Washington. Asst. Prof., Biochemistry, Molecular and Cell Biology
Kennedy, Kenneth A.R., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics
Levin, Simon A., Ph.D., U. of Maryland at College Park. Charles A. Alexander Professor of Biological Sciences; Ecology and Systematics‡
McClearn, Deedra K., Ph.D., Harvard U. Asst. Prof., Ecology and Systematics
MacDonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof., Biochemistry, Molecular and Cell Biology/Program on Science, Technology, and Society
Mark, Willie H., Ph.D., U. of Wisconsin—Madison. Asst. Prof., Genetics and Development
Podleski, Thomas R., Ph.D., Columbia U. Prof., Neurobiology and Behavior‡
Power, Alison G., Ph.D., U. of Washington. Asst. Prof., Ecology and Systematics/Program on Science, Technology, and Society

Salpeter, Miriam M., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Applied and Engineering Physics§
Schneiderman, Anne M., Ph.D., Harvard U. Asst. Prof. Neurobiology and Behavior
Seeley, Thomas D., Ph.D., Harvard U. Assoc. Prof., Neurobiology and Behavior
Sherman, Paul W., Ph.D., U. of Michigan. Assoc. Prof., Neurobiology and Behavior
Silver, Robert B., Ph.D., U. of California at Berkeley. Assoc. Prof., Physiology
Turgeon, Robert, Ph.D., Carleton U. (Canada). Assoc. Prof., Plant Biology
Wilson, David B., Ph.D., Stanford U. Prof., Biochemistry, Molecular and Cell Biology
Wolfner, Mariana F., Ph.D., Stanford U. Asst. Prof., Genetics and Development

### Other Teaching Personnel

Albrecht, Genia S., Ph.D., U. of Washington. Lecturer, Biochemistry, Molecular and Cell Biology
Eberhard, Carolyn, Ph.D., Boston U. Sr. Lecturer, Plant Biology

### Joint Appointees

Likens, Gene E., Adjunct Prof., New York Botanical Garden Institute of Ecosystem Studies, Cary Arboretum/Ecology and Systematics
Regan, Elizabeth Adkins, Prof., Psychology/Neurobiology and Behavior

## New York State College of Veterinary Medicine

Corradino, Robert A., Ph.D., Cornell U. Assoc. Prof., Physiology/Veterinary Physiology
Fortune, Joanne E., Ph.D., Cornell U. Assoc. Prof., Physiology/Veterinary Physiology
Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Physiology
Hansel, William, Ph.D., Cornell U. Liberty Hyde Bailey Professor of Animal Physiology, Physiology/Veterinary Physiology/Animal Science‡
Robertshaw, David, Ph.D., Glasgow U. (Scotland). Prof., Physiology
Tapper, Daniel N., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Wasserman, Robert H., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology/Nutritional Sciences*‡

### Joint Appointees

Bergman, Emmett N., Prof., Veterinary Physiology/Physiology
Dobson Alan, Prof., Veterinary Physiology/Physiology
Houpt, Katherine A., Prof., Veterinary Physiology/Physiology
Houpt, T. Richard, Prof., Veterinary Physiology/Physiology
Kallfelz, Francis A., Prof., Clinical Sciences/Veterinary Physiology/Physiology
Nathanielsz, Peter W., Leading Prof., Clinical Sciences/Veterinary Physiology/Physiology
Wootton, John F., Prof., Veterinary Physiology/Physiology

## College of Engineering

### Joint Appointee

Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences
Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

## Division of Biological Sciences

Stinson, Harry T., Jr., Ph.D., Indiana U. Prof., Biological Sciences/Genetics and Development*

## Division of Nutritional Sciences

### Joint Appointees

Arion, William J., Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Bensadoun, Andre, Prof., Nutritional Sciences/Physiology
Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Watford, Malcolm, Asst. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Zilversmit, Donald B., Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology

†Joint appointment with the College of Veterinary Medicine.
‡Joint appointment with the College of Agriculture and Life Sciences.
§Joint appointment with the College of Engineering.

# COLLEGE OF ENGINEERING

## ADMINISTRATION

William B. Streett, dean

K. Bingham Cady, associate dean for college affairs

S. Leigh Phoenix, associate dean for research and graduate studies

Christopher Pottle, associate dean for computing

Richard N. White, associate dean for undergraduate student affairs

Mary F. Berens, assistant dean and director of development and alumni affairs

Mary Thompson, assistant dean and director of minority programs

Richard Hale, director of admissions

Mark K. Spiro, director of administration, planning, and facilities

Richard K. Mosher, registrar

## FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Computing equipment, for example, is available through centers administered by the university and by the College of Engineering, as well as in laboratories run by schools, departments, or programs. The university facilities include personal computers for student use, terminals connected to the mainframe, computer-graphics equipment, and a supercomputer. The College of Engineering operates, in addition to several computing centers for student use, the Computer-Aided Design Instructional Facility, which provides advanced computer-graphics equipment used in course work throughout the college.

Cornell programs and centers of special interest in engineering include the following:

*Center for Applied Mathematics.* A cross-disciplinary center that administers a graduate program and incorporates the recently formed, federally sponsored Mathematical Sciences Institute.

*Center for Environmental Research.* A sponsor of interdisciplinary programs that are currently in the areas of environmental law and policy, ecosystem research, remote sensing, water resources, the global environment, biological resources, waste management, and solid waste combustion.

*Center for Radiophysics and Space Research.* An interdisciplinary unit that facilitates research in astronomy and the space sciences.

*Center for Theory and Simulation in Science and Engineering.* A national supercomputer facility used for advanced research in engineering and the physical and biological sciences.

*Cornell High Energy Synchrotron Source.* A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring.

*Cornell Manufacturing Engineering and Productivity Program.* A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

*Cornell Program in Power Systems Engineering.* A research and instructional program centered in a laboratory that has the most complete real-time model of an electric power system ever constructed.

*Earthquake Engineering Research Center.* A facility recently established by the National Science Foundation at a group of universities in New York State.

*Laboratory of Plasma Studies.* A center for interdisciplinary research in plasma physics and lasers.

*Materials Science Center.* An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated equipment.

*National Astronomy and Ionosphere Center.* The world's largest radio-radar telescope facility, operated by Cornell in Puerto Rico.

*National Nanofabrication Facility.* A center that provides equipment and services for research in the science, engineering, and technology of structures (including electronic components) with dimensions as small as the nanometer range.

*Program of Computer Graphics.* An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

*Program on Science, Technology, and Society.* A cross-disciplinary unit that sponsors courses and promotes research.

*SRC Center for the Program on Microscience and Technology.* A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

*Statistics Center.* Coordinates a university-wide program in statistics and probability.

*Ward Laboratory of Nuclear Engineering.* Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

Programs sponsored by College of Engineering units include several for industrial affiliates. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and submicrometer structures.

## DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science.* The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

## UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:*

Agricultural engineering†

Chemical engineering

Civil engineering

College program

Computer science

Electrical engineering

Engineering physics

Geological sciences

Materials science and engineering

Mechanical engineering

Operations research and engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the Common Curriculum Governing Board (CCGB) through the

associate dean for undergraduate programs and the Office of Advising. Subsequently most students enter *field* programs, which are described separately for each academic area. Alternatively students may enter the *College Program* (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum within one of the field programs or through the College Program. Information about these options is available in the Office of Advising, 167 Olin Hall.

*Agricultural engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural engineering students generally enroll in the College of Agriculture and Life Sciences for the first, second, and fourth years, and jointly in that college and the College of Engineering for the third year.

## Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. The Common Curriculum is composed of courses in eight categories.

| *Course Category* | *Credits* |
|---|---|
| 1) Mathematics | 16 |
| 2) Physics | 12 |
| 3) Chemistry | 4 |
| 4) Freshman writing seminar | 6 |
| 5) Computer programming | 4 |
| 6) Engineering distribution (4 courses) | 12 |
| 7) Humanities and social sciences (6 courses) | 18 |
| 8) Electives: | |
| Approved electives | 9 |
| Free electives | 6 |
| Technical electives | 6 |

One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement.

Credits for courses in the field program vary between 36 and 48, depending on which program is chosen. Because of this variation the credits needed for graduation range between 129 and 141. Two terms of physical education must be taken in the freshman year to satisfy a university requirement.

### Mathematics

The normal program in mathematics includes Mathematics 191,192, 293, and 294. Students who have little or no acquaintance with calculus take Mathematics 191.

### Physics

The normal program in physics includes Physics 112 or 116, 213 or 217, and 214 or 218. Students in the Field Programs in Civil Engineering or Operations Research and Industrial Engineering may substitute Chemistry 208 for Physics 214.

### Chemistry

Chemistry 207 or 211 is required for all students. Chemistry 207 is normally taken in the first freshman semester; 211 may be taken either in the fall or spring of the freshman year.

Chemistry 211 is a course designed for students who do not intend any further study in chemistry. Therefore students who intend to take more chemistry should register for Chemistry 207 in the fall of their freshman year.

In general, students in the following departments and schools should consider taking Chemistry 211: electrical engineering, operations research and industrial engineering, computer science, mechanical and aerospace engineering, applied and engineering physics (applied and engineering physics students should discuss this option with the field consultant), and civil engineering (not students in environmental engineering). Students in environmental engineering, materials science and engineering, geology and chemical engineering must take Chemistry 207 in the fall of their freshman year.

All students considering a health-related career, for example in medicine, should take Chemistry 207 in their first term.

### Freshman Writing Seminars

Each semester of their freshman year, students choose a freshman writing seminar from among more than seventy courses offered by over twenty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

### Computing

In either the first or second term of their freshman year, students take Engr 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 475, CS 212, Engr 211, Engr 222, Engr 241, Engr 264, EE 424, M&AE 389, M&AE 489, M&AE 575, and M&AE 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is Engr 264; in Chemical Engineering, Engr 222 or 241; in Computer Science, Engr 222; in Electrical Engineering, Engr 211; in Civil Engineering, Engr 241; in Mechanical Engineering, M&AE 389, M&AE 489, M&AE 575, or M&AE 670; and in Operations Research and Engineering, Engr 211.

### Engineering Distribution

Four engineering distribution courses (12 credits) are required. These courses must be selected from four of the eight areas listed below. A student may use only one of the possible substitutions described.

*1) Scientific computing*

Engr 211, Computers and Programming
Engr 222, Introduction to Scientific Computing
Engr 241, Engineering Computation

Students in the Field Program in Computer Science may substitute CS 212 for Engr 211 (also CS 211).

*2) Materials science*

Engr 261, Introduction to Mechanical Properties of Materials
Engr 262, Introduction to Electrical Properties of Materials

*3) Mechanics*

Engr 202, Mechanics of Solids
Engr 203, Dynamics

Students in the Field Program in Engineering Physics may substitute A&EP 333 for Engr 203.

*4) Probability and statistics*

Engr 260, Introduction to Engineering Probability
Engr 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute EE 310 for Engr 260. Students in the Field Program in Engineering Physics may substitute EE 310 or Mathematics 471 for Engr 260. Students in the Field Programs in Civil Engineering and Agricultural Engineering may substitute CEE 304 for Engr 270.

*5) Electrical sciences*

Engr 210, Introduction to Electrical Systems
Engr 264, Computerized-Instrumentation Design

*6) Thermodynamics and energy balances*

Engr 219, Mass and Energy Balances
Engr 221, Thermodynamics

Students in the Field Program in Electrical Engineering may substitute EE 480 for Engr 221.

*7) Earth and life sciences*

Engr 201, Introduction to the Physics and Chemistry of the Earth

*8) Introduction to engineering*

Several courses are offered to introduce freshmen to the various fields of engineering. Some of these courses, which begin with Engr 110, may not be included in this announcement. A full listing will be available in the Course and Room Roster at the time of registration.

### Humanities and Social Sciences

The six required courses in the humanities and social sciences (totaling at least 18 credits) must be chosen from approved courses in three categories: (a) humanities or history, (b) social sciences, and (c) expressive or language arts.

Restrictions:* At least three courses and a minimum of 9 credits must be chosen from category (a), and no more than 4 credits may be chosen from category (c). One-credit courses are acceptable only in category (c). Furthermore, in satisfying the humanities and social sciences requirement, the courses selected must provide both breadth and depth, and not be limited to a selection of unrelated introductory courses. This means inclusion of: at least two courses from the same field, one of which is the explicit prerequisite for the other; **or** two related courses in the same field, at least one of which is numbered 300 or above (e.g., one of the history department prerequisites—History 151, 152, 190 or 191—together with a 300-level history course.)

*These restrictions apply to those students matriculating in fall of 1989 or later. Others should refer to earlier editions of this catalog.

#### a) Humanities or History

This category includes all courses designated by the College of Arts and Sciences as humanities and history (see Distribution Requirement section, group 2b and group 3a; disregard the phrase "Any two") as well as the following:

*College of Agriculture and Life Sciences*: Education 472, 473

*College of Architecture, Art, and Planning*: any course in architectural history except freshman seminars

*College of Arts and Sciences*: Economics 315, 326; History of Art, all courses numbered 200 and above; Music, all courses listed as introductory (except 122), music theory, and music history; Theatre Arts, only history, literature, and theory courses (performance courses are not acceptable)

*College of Engineering*: Engineering 250, 292

*School of Industrial and Labor Relations*: 100, 101, 140, 304, 305, 381, 382, 384, 406, 430, 502

#### b) Social Sciences

This category includes all courses designated by the College of Arts and Sciences as social sciences (see Distribution Requirement section, group 2a; disregard the phrase "Any two") as well as the following:

*College of Agriculture and Life Sciences*: Agricultural Economics 150, 252, 332; Communication 116, 120, 314, 416; Education 271, 317, 378; Natural Resources 201, 407; Rural Sociology, all courses

*College of Architecture, Art, and Planning*: Architecture 342; City and Regional Planning 400, 404, 413, 414

*College of Arts and Sciences*: Economics, all courses except 105, 315, 317, 318, 319, 320, 326

*College of Engineering*: Engineering 305, 321, 322, 360, 400

*College of Human Ecology*: Consumer Economics and Housing 110, 111, 148, 247, 310, 355, 356, 430; Design and Environmental Analysis 250; Human Development and Family Study, all courses except 242, 243; Human Service Studies, all courses

*School of Industrial and Labor Relations*: All courses except: courses listed under category a); all courses in Economic and Social Statistics; Personnel and Human Resource Management 266; Interdepartmental Course 452

#### c) Expressive or Language Arts

This category includes all courses defined by the College of Arts and Sciences as expressive arts (see Distribution Requirement, group 3b) as well as the following:

*College of Agriculture and Life Sciences*: Communication, all courses; Floriculture, any course in freehand drawing and scientific illustration

*College of Architecture, Art, and Planning*: Art, all courses

*College of Arts and Sciences*: all nonliterature language courses and all music and theater arts courses that emphasize performance, acting, producing, or directing

*College of Human Ecology*: Design and Environmental Analysis 101, 111, 115

*College of Engineering*: Engineering 301, 350

*School of Industrial and Labor Relations*: Interdepartmental Course 452

### Electives

There are three kinds of electives: approved, free, and technical. Approved electives must be an appropriate part of an overall educational plan or objective.* This constraint allows flexibility for individual goals while maintaining a coordinated, nontrivial program. A free elective may be any course in the university,† although all course selections must be approved by the student's faculty adviser. Technical electives are generally taken in the junior and senior years. They are usually upper-level courses in engineering, mathematics, or the physical sciences, but they also may be courses in other areas as designated by the student's field program.

*No ROTC courses may be used as approved electives unless they are colisted by an academic department.

†Except supplementary courses and ROTC courses at the 100 and 200 level not colisted by an academic department. Up to 6 credits of ROTC courses at the 300 level or above may be used as free electives.

Additional ROTC courses not colisted by an academic department may not be used to meet graduation requirements.

### Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, approved electives, and free electives, students are urged to consider courses listed within the "Science, Technology, and Society" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

## Office of Advising

From the time that students enter the college as freshmen until they become affiliated with a major field or the College Program, they are under the administration of the Office of Advising, which implements the academic policies of the Common Curriculum Governing Board. The office also offers general advising and counseling services, publishes a college newsletter, maintains files on scholarships, and provides support for all students in the college. The Office of Minority Programs provides additional specialized services.

To remain in good standing, students in the College of Engineering must affiliate with a field by the end of their sophomore year, but some fields permit (and encourage) affiliation at the *beginning* of the sophomore year. Transfer students automatically affiliate with a field of study on matriculation.

Engineering courses taken at the freshman and sophomore levels are listed under "Engineering Common Courses." Additional engineering courses of general interest are also listed in this section.

Following is a typical curriculum for freshmen who have not received advanced placement in mathematics. Many variations are possible, depending on the individual student's background, advanced placement credit, and career goals. Those receiving advanced placement for first term calculus may take Physics 112 in term one. Students with an interest in bioengineering may take biology in terms one and two as approved electives. Students preparing to study medicine should take one year of biology and Chemistry 208 in the first year.

| *Term 1* | *Credits* |
|---|---|
| Math 191, Calculus for Engineers | 4 |
| Chem 207 or Chem 211, * General Chemistry | 4 |
| Engr 100, Introduction to Computer Programming | 4 |
| Introduction to Engineering, a humanities or social science course, or an approved elective | 3 |
| Freshman writing seminar | 3 |

*Chem 211 may be postponed until term 2 with adviser approval.

| *Term 2* | *Credits* |
|---|---|
| Math 192, Calculus for Engineers | 4 |
| Phys 112, Mechanics and Heat | 4 |
| Two electives | 6 to 8 |
| Freshman writing seminar | 3 |

## Field Program

The specific program for each field is described in the following pages. Students with a grade-point average of at least 2.0 who are making normal progress toward their degree may apply to enroll in a field program at the beginning or end of their sophomore year. Students who intend to enter the Field Program in Chemical Engineering should take Chemistry 208 and Chemistry 287–289 as approved electives in terms two and three, and Chemistry 288–290 as a field course in term four. Students intending to major in mechanical engineering must take Engr 203, and students in agricultural engineering must take Engr 221 as a field course in term three or four.

Students intending to major in computer science must take CS280 as a field course in term three or four. Mechanical engineering students should also complete Engr 221 in their sophomore year. Students who intend to enter the Field Program in Electrical Engineering must earn grades of at least C in Math 293 and 294, at least C in Physics 213 and 214, and at least C+ in Engr 210.

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Chemical Engineering: Engr 219

Civil Engineering: Engr 202

Computer Science: Engr 211

Electrical Engineering: Engr 210

Engineering Physics: Engr 221

Materials Science and Engineering: Engr 261

Mechanical Engineering: Engr 202

Operations Research and Engineering: Engr 260

### College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program early in the second term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Generally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 42 credits in the major and minor subjects, including at least 21 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and free electives.

Further information about the College Program may be obtained from Professor R. N. White, 252 Carpenter Hall, or from a counselor in the Office of Advising, 167 Olin Hall.

### Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and a Bachelor of Arts degrees can be earned in five years. Students registered in the College of Engineering, the College of Arts and Sciences, or other undergraduate divisions of the university may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact Professor R. N. White in 252 Carpenter Hall or see a counselor in the Office of Advising, 167 Olin Hall.

### Double Major in Engineering

Another program that is attractive to many students is the double major. This option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field in the normal way and then apply for entrance into a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Office of Advising, 167 Olin Hall, and the individual field consultant offices.

### Writing Program in Engineering

The Writing Program in Engineering offers instruction in written, oral, and visual communication. Engineering Communications 350, a three-credit seminar course, is for students who desire intensive work in these areas. Enrollment is limited to seventeen students per section. Course assignments involve engineering materials and contexts, and students work individually and in teams. A second course, Engineering 301, is offered only in conjunction with particular writing-intensive engineering courses. This one-credit class prepares students for the writing assignments in those courses.

The Writing Program consults with faculty in engineering who wish to stress writing in their courses; maintains a writing-resource library; advises the staff of the *Cornell Engineer*; offers help with essays submitted for competition; and arranges discussions of communications with students and alumni.

### Engineering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. (Students in computer science and agricultural engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Cooperative Program office, 105 Hollister Hall.

## MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in twelve fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The twelve M.Eng. degrees and the academic fields under which they are described are listed below.

**M.Eng.(Aerospace):** Mechanical and aerospace engineering

**M.Eng.(Agricultural):** Agricultural engineering

**M.Eng.(Chemical):** Chemical engineering

**M.Eng.(Civil):** Civil and environmental engineering

**M.Eng.(Computer Science):** Computer sciences

**M.Eng.(Electrical):** Electrical engineering

**M.Eng.(Engineering Physics):** Applied and engineering physics

**M.Eng.(Geology):** Geological sciences

**M.Eng.(Materials):** Materials science and engineering

**M.Eng.(Mechanical):** Mechanical and aerospace engineering

**M.Eng.(Nuclear):** Nuclear science and engineering

**M.Eng.(OR&IE):** Operations research and industrial engineering

A new program allows candidates for a professional master's degree to specialize in manufacturing systems engineering. This specialization, which is attested to by a Dean's Certificate in addition to a diploma at the time of graduation, may be centered in any one of the fields listed above.

An M.Eng. option of potential interest to engineers from all fields is the program in engineering management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng.(Civil) degree.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a

college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S. Industry-sponsored internships, which extend the program to two years, are also available to residents of the United States. Application forms and further information are available from the Master of Engineering Office, 113 Hollister Hall.

### Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The other program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students interested in the six-year program should seek advice and information from the department with whose field they intend to affiliate during their upperclass years. Information about admission to either program and about special scholarship aid may be obtained from the Master of Engineering Office, 113 Hollister Hall.

## ACADEMIC PROCEDURES AND POLICIES

### Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students may qualify for AP credit in one of two ways:

1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or

2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before fall-term classes begin. Advanced placement is granted only to first-term freshmen, and the placement examinations are scored before the students begin classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

1) They may enroll in a more advanced course in the same subject right away.

2) They may substitute an elective course from a different area.

3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

A detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet *Advanced Placement and Transfer Credit for First-Year Engineering Students*, which may be obtained at the Office of Advising, 167 Olin Hall.

### Transfer Credit

Entering freshmen and entering transfer students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

College courses completed under the auspices of cooperative college and high school programs may be considered for advanced standing as follows. Credit for such courses is not granted unless students demonstrate academic proficiency by taking the appropriate CEEB or Cornell departmental placement examination, as described above.

After matriculation no more than 9 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses at Cornell are the only exception to this rule.

A more detailed description of the college's regulations governing transfer credit may be found in the for *Engineering Student Handbook*, available from the Office of Advising, 167 Olin Hall.

### Academic Standing

The requirements for good standing in the college vary slightly among the different divisions. First-term freshmen must have a grade point average of 1.7 or higher with no failing, unsatisfactory, or *incomplete* grades and must be making adequate progress toward the four-year degree. Second-term freshman and sophomore requirements are the same, except that the grade-point average must be at least 2.0. Upperclass requirements for good standing and for satisfactory performance in courses that are prerequisite for field courses vary slightly for different fields of study, as specified in the following sections or the *Engineering Student Handbook*.

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 or higher with no failing, unsatisfactory, or incomplete grades (even in physical education) and 12 credits or more of **letter grades**. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

### Standard of Performance for Mathematics

Every student must attain a grade of at least C– in Mathematics 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

### S-U Grades

The option of receiving a grade of "satisfactory" or "unsatisfactory" (S-U) in a particular course, rather than a grade on a graduated scale, may be selected only in the following circumstances. Students who want to take a course on an S-U basis must have completed at least one full semester of study at Cornell, and they may take only one course per semester on an S-U basis. Only courses in the humanities and social sciences, approved electives, and free electives may be taken as S-U courses. Students may preregister for the S-U option. To change a grading option, a properly completed and approved add/drop form must be filed with the registrar of the College of Engineering by the end of the first three weeks of the semester. After this, the grading option *may not be changed under any circumstances.*

The S-U policy does not apply to courses in physical education and other courses that are not taken to fulfill degree requirements. When a particular course is offered **only** on an S-U basis, a student may petition to take a second S-U course in the same term.

### Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses through the Extramural Division. Students who have been asked to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 9 credits earned through study in the Extramural Division or acquired as transfer credit may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Such students must register for study in absentia and pay a fee. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall.

Programs should be planned in consultation with Professor Richard Lance, 219 Kimball Hall, or with the staff of the Office of Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

### Leave of Absence and Withdrawal

Students may interrupt their studies for a period of time by taking a leave of absence. A formal petition must be filed, an exit interview conducted, and written approval granted. Leaves of absence for more than two years are not generally granted. Credit earned while on leave of absence is subject to the limitation placed on extramural and transfer credit.

Students who voluntarily *withdraw* from the engineering degree program sever all connection with the college, and if they subsequently want to return, they must make a formal application for readmission. Students who fail to register in the first three weeks of the semester, without having received a leave of absence or permission for study in absentia, may be classified, by action of the faculty, as having withdrawn.

## ENGINEERING CAREER SERVICES

Advising is available for students who desire assistance in career and job-search matters. Also, interviews are arranged between students and company representatives who visit the campus to recruit employees. This service, which is available to both undergraduates and graduates, can be used to find permanent or summer employment. A résumé and referral service is available to engineering alumni. Further information on all services is available from the Office of Engineering Placement, 201 Carpenter Hall.

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

G. E. Rehkugler, chair; L. D. Albright, D. J. Aneshansley, J. A. Bartsch, J. R. Cooke, A. K. Datta, R. C. Derksen, R. B. Furry, K. G. Gebremedhin, W. W. Gunkel, D. A. Haith, J. B. Hunter, L. H. Irwin, W. J. Jewell, D. C. Ludington, J.-Y. Parlange, R. E. Pitt, N. R. Scott, T. S. Steenhuis, M. B. Timmons, L. P. Walker, M. F. Walter

### Bachelor of Science Curriculum

The Field Program in Agricultural Engineering prepares students for engineering practice in agriculture, its support industries and agencies, and biological systems. Engineering is applied to production, storage processing, distribution, and use of plant and animal products and biomass. Issues of environmental quality and safety and preservation of soil and water resources are studied. Emerging areas of study include engineering aspects of the development of biotechnology. Biological, social, and agricultural sciences are integrated into the field program along with the engineering design and science studies. Areas of concentration include biological engineering, food engineering, international agriculture, machinery, power and energy, local roads, soil and water, structures and their environments, and waste management.

This program is jointly administered by the College of Engineering and the College of Agriculture and Life Sciences. Students are enrolled in the College of Agriculture and Life Sciences in the first four semesters and jointly in the College of Engineering in the remaining semesters. Engineering college tuition is paid in the fifth and sixth semesters of study.

Graduates find employment not only in agricultural and food related industries but also in environmentally related firms and agencies. Professional education is also the choice of many of the graduates. Agricultural engineers are employed throughout the entire spectrum of private industry, consulting firms, government agencies, utility companies, and educational institutions. The unique blend of engineering and the biological sciences in the education of the agricultural engineer is often attractive to employers.

For further details see the department's undergraduate programs brochure, available at 106 Riley-Robb Hall.

The field program requirements are outlined below.

| *Basic Subjects* | *Credits* |
|---|---|
| Math 191, 192, 293, 294, Calculus for Engineers and Engineering Mathematics | 16 |
| Chem 207, General Chemistry | 4 |
| Phys 112, 213, 214, Physics I, II, and III | 12 |
| Introductory biological sciences | 6 to 8 |
| ABEN 151, computer programming and introduction to field | 4 to 6 |
| Engineering distribution (four courses, including Mechanics of Solids and Thermodynamics) | 12 |
| Humanities and social sciences (eight courses, including two in written expression, one in oral expression, and a minimum of 9 credits in humanities) | 24 |
| *Advanced and Applied Subjects* | |
| Engineering sciences (must include fluid mechanics and dynamics), ABEN 250, and a minimum of four agricultural and biological engineering courses (at least 12 credits) chosen from courses 350 to 399 and/or above 450 but excluding seminars and special-problems courses | 33 |
| Biological or agricultural sciences (3 credits of biological sciences required) | 12 |
| Free electives | 6 |

### Master of Engineering (Agricultural) Degree Program

The program for the M.Eng.(Agricultural) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of the Cornell undergraduate program in agricultural engineering but can accommodate graduates of other engineering programs. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. Six of the required 30 credits are earned for an engineering design project that culminates in a professional-level report.

A candidate for the M.Eng.(Agricultural) degree may choose to concentrate in one of the subareas of agricultural engineering or take a broad program without specialization. The subareas are (a) power and machinery, (b) soils and water engineering, (c) agricultural structures and associated systems, (d) electric power and processing, (e) energy management, (f) agricultural waste management, (g) bioengineering, (h) secondary-road design and construction, and (i) food engineering. Engineering electives are chosen from among subject areas relevant to agricultural engineering, such as thermal engineering, mechanical design and analysis, theoretical and applied mechanics, structural engineering, hydraulics, environmental engineering, soil engineering, waste management, and electronics.

## APPLIED AND ENGINEERING PHYSICS

R. A. Buhrman, director; M. S. Isaacson, associate director; B. W. Batterman, J. D. Brock, K. B. Cady, D. D. Clark, T. A. Cool, H. G. Craighead, H. H. Fleischmann, V. O. Kostroun, J. A. Krumhansl, B. R. Kusse, R. L. Liboff, R. V. E. Lovelace, M. S. Nelkin, T. N. Rhodin, M. M. Salpeter, J. Silcox, R. N. Sudan, W. W. Webb, F. W. Wise, G. J. Wolga

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit design, energy conversion, geological analysis, laser technology, microwave technology, nuclear technology, power engineering, and solid-state-device development. A number of our graduates go on for advanced study in all areas of basic physics, as well as in a diverse range of areas in advanced science and engineering. Examples include astrophysics, atmospheric sciences, biophysics, computer engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, medicine, nuclear engineering, oceanography, physics, and software engineering. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The engineering physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are A&EP 110, The Laser and Its Applications in Science, Technology, and

Medicine (a freshman course); A&EP 264, Computerized-Instrumentation Design (a sophomore course); A&EP 363, Electronic Circuits (a junior course); Physics 410, Advanced Experimental Physics, and A&EP 436, Physical and Integrated Optics (senior courses).

Undergraduates who plan to enter the Field Program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. However, they are required to take Engr 221, Thermodynamics, as an engineering distribution course. Students are also encouraged to take Physics 112 during their first semester (if their advanced placement credits permit) and to satisfy the computing applications requirement with an engineering distribution course, e.g., A&EP 264. Engineering physics students need to take only three engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a fourth member of this category.

The upperclass course requirements of the field program are as follows:

| *Course* | *Credits* |
|---|---|
| A&EP 333, Mechanics of Particles and Solid Bodies | 4 |
| A&EP 355, Intermediate Electromagnetism | 4 |
| A&EP 356, Intermediate Electrodynamics | 4 |
| A&EP 361, Introductory Quantum Mechanics | 4 |
| A&EP 363, Electronic Circuits | 4 |
| A&EP 423, Statistical Thermodynamics | 4 |
| A&EP 434, Continuum Physics | 4 |
| Physics 410, Advanced Experimental Physics | 4 |
| A&EP 321, Mathematical Physics I; Mathematics 421; or T&AM 610 (applied mathematics) | 4 |
| A&EP 322, Mathematical Physics II; Mathematics 422; or T&AM 611 (applied mathematics) | 4 |
| Applications of quantum mechanics* | 3 or 4 |
| A third technical elective (in addition to the two required by the Common Curriculum)† | 3 |

*Courses that will satisfy this requirement are Physics 444, Nuclear and High-Energy Particle Physics; Physics 454, Introductory Solid-State Physics; A&EP 609, Low-Energy Nuclear Physics; EE 430, Lasers and Optical Electronics; and EE 531, Quantum Electronics I.

†If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Areas of concentration**. With a total of five electives in the junior and senior years, students are encouraged to develop areas of concentration in accordance with their individual career goals and interests. For those who look toward an industrial position after graduation, these electives should be chosen to widen the necessary background in a specific area of practical engineering. A different set of electives could be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in such programs are advised to consult with a professor active in their area or with the associate director of the school, Professor Michael S. Issacson.

Electives need not be all formal course work: Qualified students may undertake informal study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active. While free electives may be selected (with the permission of the faculty adviser) from among almost all the courses offered at the university, the student is encouraged to select those that will provide further preparation in the area of technical interest. The minimum requirement is two courses or six credits.

The variety of course offerings provide a sizable flexibility in scheduling. In addition, if scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses: Physics 325–326 is similar to A&EP 355–356; Physics 318 (offered in the spring) and T&AM 570 are similar to A&EP 333; Physics 443 (offered in the fall), is similar to A&EP 361; and advanced courses in fluid mechanics or elasticity are similar to A&EP 434.

The engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each term an overall grade point average of at least 2.3.

### Master of Engineering (Engineering Physics) Degree Program

The M.Eng.(Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser technology, microstructure science, device physics, or materials characterization. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to microstructure science. Core courses in this specialty include the microcharacterization of electronic materials and the fabrication of microstructures and devices. The design project may focus on semiconductor materials, device physics, or microstructure science.

Each individual program is planned by the student in consultation with the program chair. The object is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)

2) an integrated program of graduate-level courses, as discussed below (14 to 20 credits)

3) a required special-topics seminar course (4 credits)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in electrical engineering, materials science, computer science, mechanical engineering, physical geology, or bioengineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng.(Engineering Physics) degree program should contact Professor R. V. E. Lovelace.

## APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, Sage Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

## CHEMICAL ENGINEERING

K. E. Gubbins, director; G. F. Scheele, associate director; A. B. Anton, P. Clancy, P. Clark, C. Cohen, R. K. Finn, D. A. Hammer, P. Harriott, D. L. Koch, R. P. Merrill, W. L. Olbricht, A. Panagiotopoulos, F. Rodriguez, M. L. Shuler, P. H. Steen, W. B. Streett, J. A. Zollweg

### Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 as an approved elective during the freshman year. The program for the last three years, for students who have taken two engineering distribution courses during the first year, is as follows:

| *Term 3* | *Credits* |
|---|---|
| Math 293, Engineering Mathematics | 4 |
| Phys 213, Electricity and Magnetism | 4 |
| Chem 287–289, Physical Chemistry (approved elective) | 5 |
| Chem E 219 (engineering distribution course) | 3 |
| Humanities or social sciences course | 3 |
| *Term 4* | |
| Math 294, Engineering Mathematics | 4 |
| Phys 214, Optics, Waves, and Particles | 4 |
| Chem 288–290, Physical Chemistry | 5 |
| Engineering distribution course | 3 |
| Humanities or social sciences course | 3 |
| *Term 5* | |
| Chem 357, Organic Chemistry† | 3 |
| Chem 251, Organic Chemistry Laboratory | 2 |
| Chem E 313, Chemical Engineering Thermodynamics | 4 |
| Chem E 323, Fluid Mechanics | 3 |
| Humanities or social sciences course | 3 |
| *Term 6* | |
| Chem 358, Organic Chemistry† | 3 |
| Chem E 101, Nonresident Lectures | 0 |
| Chem E 324, Heat and Mass Transfer | 3 |
| Chem E 332, Analysis of Separation Processes | 4 |
| Chem E 390, Reaction Kinetics and Reactor Design | 3 |
| Humanities or social sciences course | 3 |
| *Term 7* | |
| Chem E 432, Chemical Engineering Laboratory | 4 |
| Electives* | 9 |
| Humanities or social sciences course | 3 |
| Term 8 | |
| Chem E 462, Chemical Process Design | 4 |
| Chem E 472, Process Control | 3 |
| Electives* | 6 |
| Humanities or social sciences course | 3 |

*The electives in terms seven and eight comprise 6 credits of technical electives, 6 credits of free electives, and 3 credits of Chem E process or systems elective. Chem E process or systems electives include Chem E 566, Computer-aided Process Design; Chem E 640, Polymeric Materials; Chem E 643, Introduction to Bioprocess Engineering.

†Chemistry 253 plus an applied science elective may be substituted for Chem 357–358. Applied science electives include Biological Sciences 330 and 331, Principles of Biochemistry; Chem E 640, Polymeric Materials; Chem E 673, Adsorption and Catalysis; MS&E 331, Structural Chracterization and Properties of Materials; MS&E 332, Electrical and Magnetic Properties of Materials; MS&E 441, Microprocessing of Materials; MS&E 442, Macroprocessing of Materials; Microbiology 290, General Microbiology Lectures; any A&EP course numbered 333 or above; any Chemistry course numbered 301 or above; any Physics course numbered 300 or above.

### Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng.(Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include

1) two courses in advanced chemical engineering fundamentals chosen from Chem E 711, 713, 731, 732, and 751

2) two courses in applied chemical engineering science chosen from Chem E 564, 566, 640, and 643

3) a minimum of 3 credits of a design project, Chem E 565

## CIVIL AND ENVIRONMENTAL ENGINEERING

A. H. Meyburg, director; J. M. Gossett, associate director; J. F. Abel, J. J. Bisogni, Jr., W. H. Brutsaert, G. G. Deierlein, R. I. Dick, G. P. Fisher, P. Gergely, M. D. Grigoriu, K. C. Hover, A. R. Ingraffea, G. H. Jirka, F. H. Kulhawy, J. A. Liggett, L. W. Lion, P. L-F. Liu, D. P. Loucks, W. R. Lynn, A. H. Nilson, T. D. O'Rourke, T. Pekoz, W. R. Philipson, W. D. Philpot, M. J. Sansalone, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, M. A. Turnquist, R. N. White.

### Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering. The civil engineering curriculum is designed to ensure adequate depth and breadth in each of the subdisciplines of civil engineering. For students who want to specialize in a particular subdiscipline, illustrative sets of courses are available in the school office (220 Hollister Hall). Concentrations are offered in structural engineering; civil engineering materials; geotechnical engineering; water quality engineering; environmental and hazardous-waste engineering; environmental management and planning; fluid mechanics, hydraulics, and hydrology; transportation systems planning; and remote sensing.

Students planning to enter the Field Program in Civil Engineering are required to take Mechanics of Solids (Engr 202) during the sophomore year.* Prospective majors are strongly encouraged to obtain a "typical course schedule" from the school office.

For the Field Program in Civil Engineering the following courses are required in addition to those required for the Common Curriculum:†

| *Courses* | *Credits* |
|---|---|
| Engr 202, Mechanics of Solids* | 3 |
| Engr 203, Dynamics | 3 |
| Engr 261, Introduction to Mechanical Properties of Materials* | 3 |
| Engr 241, Engineering Computation†† | 3 |
| CEE 304, Uncertainty Analysis in Engineering** | 4 |
| CEE 323, Engineering Economics and Management | 3 |
| CEE 331, Fluid Mechanics | 4 |
| CEE 341, Introductory Soil Mechanics | 3 |
| CEE 351, Environmental Quality Engineering | 3 |
| CEE 361, Introduction to Transportation Engineering | 3 |
| CEE 371, Structural Behavior | 4 |
| Civil engineering distribution courses (four courses selected from four different catagories of approved civil engineering distribution courses: the list is available at the school office, 220 Hollister Hall) | 12 |

Civil engineering design course (at least one course from an approved list. This is not intended to be the requirement of an additional course; students may—and usually will—satisfy the civil engineering design-course requirement through appropriate selection of civil engineering distribution, approved elective, technical elective, or free elective courses. The list of currently approved CE design courses is available at the school office, 220 Hollister Hall).

*These courses can also be used to satisfy the Common Curriculum requirements for engineering distribution courses.

†Chem 208 can be substituted for Phys 214.

††Engr 241 can be used to satisfy both the computer application requirement and an engineering distribution requirement of the Common Curriculum.

**Students in Civil Engineering may use CEE 304 as a substitute for Engr 270, applying it toward the engineering distribution requirement. If this is done, the technical elective requirement is increased by 3 credits. Alternatively, Engr 270 may be accepted (on petition) as a substitute for CEE 304 in the field program, but only if Engr 270 is taken before entry into the field.

### Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, full-time, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, two in professional engineering practice (CEE 503) and one design project (CEE 501 and 502)

2) Specialization in a major—three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering

3) Two courses in a single related or minor area

4) Technical electives (up to two courses)

Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Four courses: Management Practice (CEE 590), Engineering Management Methods (CEE 593), and the Management Project (CEE 591 and 592)

2) Two courses from a list of engineering management electives

3) Two elective courses in general management from outside the school, including accounting, finance, law and regulation, marketing, and organizational behavior

4) Two engineering and/or technical elective courses

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

## COMPUTER SCIENCE

G. Bilardi, K. Birman, T. Coleman, R. L. Constable, B. Donald, D. Gries, J. Hartmanis, J. E. Hopcroft, D. Huttenlocher, D. Kozen, K. Marzullo, P. Panangaden, K. Pingali, G. Salton, F. B. Schneider, A. Segre, D. Subramanian, R. Teitelbaum, S. Toueg, C. Van Loan, S. Vavasis, V. Vazirani

### Bachelor of Science Curriculum

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process. Those interested in the application of computers in some particular area are ordinarily advised to major in the area of application and take elective course work in computer science.

A student entering the Field Program in Computer Science must take CS 211 or 212 and CS 280 before beginning the upperclass sequence. Students who do not earn a grade of B– or better in both CS 211 or 212 and CS 280 are strongly advised against attempting the computer science field program. Students who have not maintained an average of at least 3.0 in the mathematics courses required by the Common Curriculum are also discouraged from entering the program. Apart from these requisites and those of the college, the courses required for the Field Program in Computer Science are:

| *Course Work* | *Credits* |
|---|---|
| Systems sequence | 8 |
| CS 314, Systems and Organization | |
| CS 410, Data Structures | |
| Theory sequence | 8 |
| CS 381 or 481, Theory of Computing | |
| CS 482, Analysis of Algorithms | |
| Numerical Analysis | 3–4 |
| CS 222, Scientific Computation, or | |
| CS 421, Numerical Solutions of Algebraic Equations | |
| Electrical Engineering | 4 |
| EE 230, Digital Systems* | |
| Computer science electives | 7–9 |
| Two nonrequired computer science courses numbered 400 or above.† One must be a course or course-laboratory combination that includes a substantial programming project—for example, CS 412, 414–415, 417–418, 432–433, or 472. | |
| Related electives | 14–16 |
| One mathematically oriented course plus three courses forming a coherent sequence in mathematics, operations research, electrical engineering, or another technical area. | |

*EE 230 also counts as an approved elective.

†Except CS 415, 418, 433, 600, 601, and seminar courses.

For more information, refer to the *Computer Science Undergraduate Handbook*, available from 303 Upson Hall.

The performance of students in the Field of Computer Science is reviewed each term. To remain in good standing with the department, they must have an overall term average of at least 2.3 with no courses failed and a term average for field program courses of at least 2.7 with no course grade less than C–, and they must be making satisfactory progress in the field.

### Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng.(Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details, application forms, and assistance in planning a curriculum, students should contact the computer science undergraduate coordinator in Upson Hall.

### Master of Engineering (Computer Science) Degree Program

The one-year program leading to the degree of M.Eng.(Computer Science) admits approximately ten students a year. Admission standards are the same as those applied to doctoral candidates. A good undergraduate background in mathematics or computer science is required.

In the curriculum the emphasis can be on programming languages and systems, on theory of algorithms and theory of computation, on numerical analysis, on artificial intelligence, or on information processing, which includes databases and information organization and retrieval. (Students who are interested in logical design or computer architecture will find it more appropriate to apply for admission to a graduate program in electrical engineering.) The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language.

## ELECTRICAL ENGINEERING

N. C. MacDonald, director; V. Anantharam, J. M. Ballantyne, T. Berger, A. W. Bojanczyk, R. Bolgiano, Jr., G. M. Brown, R. R. Capranica, H.-D. Chiang, R. C. Compton, H. G. Craighead, D. F. Delchamps, L. F. Eastman, D. T. Farley, T. L. Fine, L. K. Grover, T. Hagfors, M. W. Hauser, C. Heegard, L. W. Hillman, C. R. Johnson, Jr., M. C. Kelley, P. M. Kintner, R. Kline, J. P. Krusius, C. A. Lee, S.-Y. Lee, M. E. Leeser, R. L. Liboff, F. T.-C. Luk, P. R. McIsaac, J. A. Nation, N. F. Otani, T. W. Parks, C. R. Pollock, C. Pottle, A. P. Reeves, C. E. Seyler, Jr., J. R. Shealy, A. O. Steinhardt, R. N. Sudan, C. L. Tang, R. J. Thomas, J. S. Thorp, H. C. Torng, N. M. Vrana, C. B. Wharton, E. D. Wolf, G. J. Wolga

### Bachelor of Science Curriculum

Reflecting the large scope of this engineering discipline, the undergraduate Field Program in Electrical Engineering provides a broad foundation in a number of important and fundamental areas.

Areas of concentration include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

Students planning to enter the Field Program in Electrical Engineering must take EE 210, Introduction to Electrical Systems, as an engineering distribution course. In addition, the field program requires twelve courses, as shown below. Many of these courses are taught only once a year, either spring or fall, as indicated in the course descriptions.

| *Course* | *Credits* |
|---|---|
| EE 230, Introduction to Digital Systems | 4 |
| EE 301, Electrical Signals and Systems I | 4 |
| EE 303, Electromagnetic Waves and Fields I | 4 |
| EE 315, Electrical Laboratory I | 4 |
| A choice of three courses from among: | 12 |
| EE 302, Electrical Signals and Systems II | |
| EE 304, Electromagnetic Waves and Fields II | |
| EE 306, Fundamentals of Quantum and Solid State Electronics | |
| EE 308, Fundamentals of Computer Engineering | |
| EE 310, Probability and Random Signals | |
| EE electives with laboratory (3 courses) | 12 |
| EE electives (2 courses) | 6 |
| Total | 46* |

*Credits in excess of 46 may be used to fill approved-, technical-, or free-elective requirements of the Common Curriculum.

EE electives may be selected from all courses taught in electrical engineering. At least one of the required EE electives with laboratory must be selected from a list including EE 316, 425, 431, 435, 437, and 475. The other two may be selected from the above list or from among EE 424, 425, 432, 451, 452, 471, 476, 526, 533, 534, 535, 536, 539, and 572. (If EE 539 is taken for 6 credits, it counts as two courses.)

Specialization is achieved through the five electrical engineering elective courses, as well as other courses in electrical engineering or related subjects taken as technical, approved, or free electives. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates. Students with advanced standing frequently take one or more graduate-level courses prior to graduation.

Students majoring in electrical engineering are expected to meet the following academic standards:

1) Students must achieve a grade-point average of at least 2.3 every semester.

2) No course with a grade of less than C– may be used to satisfy degree requirements in the field program or technical elective categories, or serve as a prerequisite for an electrical engineering course.

3) Students must complete EE 301, 303, and 315 by the end of the first semester of the junior year, and accumulate at least 10 credits each semester toward the remaining degree requirements in the field program and technical elective categories.

### Master of Engineering (Electrical) Degree Program

The M.Eng.(Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the M.S. mainly in its emphasis on design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work, including a minimum of two two-term course sequences in electrical engineering. (A list of approved course sequences is available from the Master of Electrical Engineering Program Office.) All but 8 credits of course work applied toward degree requirements must be at the graduate level (courses numbered 500 or above). An engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum. Students with special career goals, such as engineering management, may apply to use up to 8 credits of courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Admission to the M.Eng.(Electrical) program is highly competitive, although well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

## GEOLOGICAL SCIENCES

D. L. Turcotte, chair; R. W. Allmendinger, M. Barazangi, W. A. Bassett, J. M. Bird, A. L. Bloom, L. D. Brown, L. M. Cathles, J. L. Cisne, B. L. Isacks, T. E. Jordan, D. E. Karig, S. Kaufman, R. W. Kay, J. E. Oliver, F. H. T. Rhodes, W. B. Travers, W. M. White

### Bachelor of Science Curriculum

Study in geological sciences is offered for students who are preparing for careers in solid earth science, for those who want a broad background in the geological sciences as preparation for careers in other fields, and for those who want to combine geological training with other sciences such as agronomy, astronomy and space science, biological sciences, chemistry, economics, mathematics, physics, or various fields of engineering. The Department of Geological Sciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.

Students in the College of Engineering who plan to enter the Field Program in Geological Sciences are required to take Geol 201 (Engr 201) during their freshman or sophomore year. Those interested in geobiology should also take Biological Sciences 101–103 and 102–104.

Geological Sciences requires the following courses for the major: Geol 326, 355, 356, 375, 388, and one other 300- or 400-level course. A summer field geology course is also required.

Core courses may be taken in any reasonable sequence, except that Geol 355, which is offered in the fall, should be taken before Geol 356, which is offered in the spring. Geol 326 and 375 should be taken relatively early in the major program as preparation for the summer field camp, which usually follows the junior year. Students with adequate preparation may attend field camp at an earlier time.

It is recommended that students intending to specialize in *geophysics* select most of their approved and technical electives from the following courses or their equivalents:

A&EP 333, Mechanics of Particles and Solid Bodies

A&EP 355, Intermediate Electromagnetism

A&EP 356, Intermediate Electrodynamics

A&EP 434, Continuum Physics

Phys 410, Advanced Experimental Physics

T&AM 310–311, Advanced Engineering Analysis I and II

It is recommended that students intending to specialize in *geochemistry* (including petrology and mineralogy) select most of their approved and technical electives from the following courses or their equivalents:

Chem 208, General Chemistry

Chem 287–288, Introductory Physical Chemistry

Chem 300, Quantitative Chemistry

Chem 301, Experimental Chemistry I

Chem 302, Experimental Chemistry II

Chem 303, Experimental Chemistry III

Chem 357–358, Introductory Organic Chemistry

Chem 389–390, Physical Chemistry I and II

MS&E 331, Structural Characterization and Properties of Materials

MS&E 335, Thermodynamics of Condensed Systems

It is recommended that students intending to specialize in *geobiology* select most of their approved and technical electives from the following courses or their equivalents:

Bio S 241, Introductory Botany

Bio S 274, The Vertebrates

Bio S 371, Human Paleontology

Bio S 373, The Invertebrates

Bio S 261, General Ecology

Bio S 448, Plant Evolution and the Fossil Record

Bio S 378, Organic Evolution

Chem 253, Elementary Organic Chemistry

It is recommended that students who want to pursue further training or immediate employment in *applied geology* (environmental and engineering geology, geohydrology, petroleum geology, or geological engineering) select most of their approved and technical electives from the following courses or their equivalents, with two of the four from the same field:

Agron 361, Genesis, Classification, and Geography of Soils

Agron 667, Soil Physics

Agron 366, Soil Chemistry

CEE 341, Introductory Soil Mechanics

CEE 611, Remote Sensing Applications

CEE 612, Physical Environment Evaluation

CEE 615, Digital Image Processing

CEE 640, Foundation Engineering

MS&E 331, Structural Characterization and Properties of Materials

MS&E 445, Mechanical Properties of Materials

CEE 331, Fluid Mechanics

CEE 332, Hydraulic Engineering

CEE 351, Environmental Quality Engineering

CEE 633, Flow in Porous Media and Groundwater

OR&IE 260, Introductory Engineering Probability

OR&IE 370, Introduction to Statistical Theory with Engineering Applications

Students intending to specialize in *economic geology* or pursue careers in the mining industries or mineral exploration should consider including economics courses among their humanities and social sciences electives and should select most of their approved and technical electives from the groups of courses listed above for geochemistry and applied geology plus the following additional courses:

CEE 654, Aquatic Chemistry

CEE 741, Rock Engineering

Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their three approved electives from the same field, at a level comparable to the courses listed above. The technical electives may be chosen from offerings in geological sciences or in other science or engineering fields and should be at the 300 level or above. Outstanding students may request substitution of Geol 491 and 492, Undergraduate Research, for a fourth-year technical elective.

Students intending to pursue graduate study in geology are reminded that some graduate schools require proficiency in reading the scientific literature in one or two of the three languages, French, German, and Russian. Undergraduate preparation in at least one of these languages is therefore advantageous.

### Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) degree is intended to provide future professional geologists with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Students may choose a program from one of several options, or tailor a program to meet their special interests with the help of a faculty adviser.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.

## MATERIALS SCIENCE AND ENGINEERING

J. M. Blakely, director; D. G. Ast, C. B. Carter, R. Dieckmann, E. Gianellis, D. T. Grubb, E. W. Hart, H. H. Johnson, D. L. Kohlstedt, E. J. Kramer, C. Y. Li, J. W. Mayer, C. Ober, R. Raj, A. L. Ruoff, S. L. Sass, M. O. Thompson, Y. K. Vohra

### Bachelor of Science Curriculum

Students who major in materials science and engineering are required to take MS&E 261, Introduction to Mechanical Properties of Materials, before the end of their junior year. They are strongly urged to take it as an engineering distribution course during their freshman or sophomore year. Students may enter the field after taking MS&E 262, Introduction to Electrical Properties of Materials, but they must still take MS&E 261 in order to graduate. Students who choose to major in materials science and engineering can concentrate in any one of the following areas of specialization: materials science, solid state, metallurgy, ceramic materials, polymeric materials, or electrical materials. Specialization is achieved through the selection of technical electives in the junior and senior years. The materials science and engineering field program leading to the Bachelor of Science degree consists of

| *Courses* | *Credits* |
|---|---|
| MS&E 331, Structural Characterization and Properties of Materials | 4 |
| MS&E 332, Electrical and Magnetic Properties of Materials | 3 |
| MS&E 333, Research Involvement I, or a field-approved elective* | 3 |
| MS&E 334, Research Involvement II, or a field-approved elective* | 3 |
| MS&E 335 Thermodynamics of Condensed Systems | 3 |
| MS&E 336, Kinetics, Diffusion, and Phase Transformations | 3 |
| MS&E 441, Microprocessing of Materials | 3 |
| MS&E 442, Macroprocessing of Materials | 3 |
| MS&E 443/435, Senior Materials Laboratory I or Senior Thesis I | 3/4 |
| MS&E 444/436, Senior Materials Laboratory II or Senior Thesis II | 3/4 |
| MS&E 445, Mechanical Properties of Materials | 3 |
| MS&E 447, Materials Design Concepts I | 1 |
| MS&E 448, Materials Design Concepts II | 2 |
| | 37/39 |

*These courses serve as two of the four required specialization courses. The other specialization courses are technical electives. The optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their resesearch groups on current projects.

To continue in good standing in the Field of Materials Science and Engineering, students must

1) Maintain an overall 2.0 term average

2) Maintain an average of 2.3, with no grade below C, in the department's basic curriculum. The department's basic curriculum consists of all the required MS&E courses including MS&E 261 and the four courses comprising the student's area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved. Students are urged to plan such curricula as early as possible.

### Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences may be considered for admission to the M.Eng.(Materials) program, which includes a project and course work. The project, which must require individual effort and initiative, is worth 12 credits. It is carried out under the supervision of a member of the faculty, and is usually experimental, although it can also be analytical.

Courses, worth an additional 18 credits, may be selected from graduate-level courses in materials science and engineering or other courses approved by the faculty. These courses should be half MS&E courses and half technical electives. One 3-credit technical elective must be in advanced mathematics (modeling, computer applications, or computer modeling), beyond the MS&E undergraduate requirements. Other electives may be in MS&E or allied fields.

# MECHANICAL AND AEROSPACE ENGINEERING

F. C. Moon, director; P. L. Auer, C. T. Avedisian, D. L. Bartel, J. F. Booker, A. H. Burstein, D. A. Caughey, B. J. Conta, P. R. Dawson, P. C. T. deBoer, A. R. George, F. C. Gouldin, S. E. Landsberger, S. Leibovich, M. Y. Louge, J. L. Lumley, F. K. Moore, S. L. Phoenix, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., S. F. Shen, D. G. Shepherd, D. L. Taylor, K. E. Torrance, H. B. Voelcker, K. K. Wang, Z. Warhaft, G. G. Weber, R. L. Wehe

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical Engineering are listed in the *Announcement of the Graduate School.*

## Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. Two main areas of concentration, corresponding to the two major streams of mechanical engineering technology, are offered in the field program.

*Mechanical systems, design, and manufacturing* is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration include mechanical design and analysis, computer-aided design, vehicle engineering, composite materials, vibrations and control systems, biomechanics, and manufacturing engineering.

*Engineering of fluids, energy, and heat-transfer systems* has as its main concerns the experimental and theoretical aspects of fluid flow and heat transfer; the development of fossil, solar, and other energy sources for uses such as electric-power generation; industrial heating; terrestrial and aerospace transportation; and the use of heating, air conditioning, refrigeration, and noise- and pollution-control techniques to modify the human environment.

The undergraduate field program is a coordinated sequence of courses beginning in the sophomore year. During that year students who plan to enter the field of mechanical engineering take Engr 202 (also T&AM 202) as an engineering distribution course. They also take Engr 203 (also T&AM 203) which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an approved (or free) elective. Both of these courses are prerequisites for courses to be taken during the junior year. During either the sophomore or junior year students take Engr 221 (also M&AE 221) and Engr 261 (also MS&E 261).

The requirements for the degree of Bachelor of Science in mechanical engineering are as follows:

1) Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for two technical electives, one approved elective, two free electives, and three humanities or social sciences courses.

2) Completion of the field requirements, which consist of ten required courses (beyond Engr 202 and 203, already mentioned), and three elective courses (9 credits). The ten additional required courses are

Engr 210, Introduction to Electrical Systems

Engr 221, Introduction to Thermodynamics

Engr 261, Introduction to Mechanical Properties of Materials

M&AE 312, Fundamentals of Manufacturing Processes

M&AE 323, Introduction to Fluid Mechanics

M&AE 324, Heat Transfer

M&AE 325, Mechanical Design and Analysis

M&AE 326, Systems Dynamics

M&AE 427, Mechanical Engineering Laboratory

M&AE 428, Engineering Design (required starting with the class of 1989)

If Engr 210 or 221 or 261 is taken as an engineering distribution course, the corresponding field requirement is replaced by an alternate technical elective. The three elective courses consist of one mathematics elective (3 credits), a field elective (3 credits), and a field design elective (3 credits). These electives are chosen from lists approved by the faculty of the Sibley School of Mechanical and Aerospace Engineering.

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. This proof may be given in a number of ways, including satisfactory completion of

*a)* a technical drawing course in high school or in a community college

*b)* Engineering 102, Drawing and Engineering Design

*c)* another technical drawing course at Cornell, or

*d)* a departmental examination.

The proof is expected before completion of M&AE 325, Mechanical Design and Analysis.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 489, 575, and 670.

The requirements listed are those currently in effect. Requirements for classes earlier than 1989 differ somewhat from the ones listed.

Introduction to Electrical Systems (EE 210) may be replaced or supplemented by Introductory Electronics (Physics 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More-detailed materials describing the field program and possible concentrations may be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

## Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking a number of aerospace engineering electives such as M&AE 405, 506, 507, 530, 531, and 536. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

## Master of Engineering (Aerospace) Degree Program

The M.Eng.(Aerospace) degree program provides a one-year course of study for those who want to develop a high level of competence in current technology and engineering design. This degree requires 30 credits of course work and is subject to the rules adopted by the Graduate Professional Program Committee. Because aerospace engineering is continually engaged in new areas, an essential guideline for the program is to reach beyond present-day practices and techniques. This is achieved by supplying the student with the fundamental background and the analytical techniques that will remain useful in all modern engineering developments. Aerospace students register for 1 credit a term on an S-U basis in M&AE Colloquium (M&AE 799). All other courses must have letter grades. To fulfill the design project requirement, students register for M&AE 592, Seminar and Design Project in Aerospace Engineering, for 2 credits a term. Other requirements are four aerospace core courses (minimum of 12 credits), two math courses (6 credits), and two technical electives (6 credits).

*Aerospace Core Courses*

3 credits:

M&AE 506, Aerospace Propulsion Systems

M&AE 507, Dynamics of Flight Vehicles

M&AE 530, Fluid Dynamics

M&AE 531, Boundary Layers

M&AE 536, Turbomachinery and Applications

M&AE 543, Combustion Processes

M&AE 559, Introduction to Controlled Fusion

M&AE 569, Mechanical and Aerospace Structures I

4 credits:

M&AE 601, Foundations of Fluid Dynamics and Aerodynamics

M&AE 602, Incompressible Aerodynamics

M&AE 603, Compressible Aerodynamics

M&AE 608, Physics of Fluids

M&AE 630, Atmospheric Turbulence and Micrometeorology

M&AE 648, Seminar on Combustion

M&AE 651, Advanced Heat Transfer

M&AE 652, Thermodynamics and Phase Change Heat Transfer

M&AE 653, Experimental Methods in Fluid Mechanics, Heat Transfer, and Combustion

M&AE 670, Mechanical and Aerospace Structures II

M&AE 704, Theory of Viscous Flows

M&AE 732, Analysis of Turbulent Flows

M&AE 733, Stability of Fluid Flow

M&AE 734, Turbulence and Turbulent Flow

M&AE 736, Computational Aerodynamics

M&AE 737, Computational Heat Transfer and Fluid Mechanics

Nominations of Special Committee chair (adviser) must be filed with the Graduate School within three weeks of the start of classes. A formal selection of course work for the term must be filed within three weeks of the start of classes. A program of courses must be submitted for committee approval by the end of the first week of classes.

The school has particular strengths in the areas of fluid dynamics, aerodynamics, high-temperature gasdynamics, turbulence, chemical kinetics, aerodynamic noise, sonic boom, nonlinear waves, atmospheric flows, combustion processes in low-pollution engines, and solution of flow problems by numerical methods. Professional design projects may be arranged in any of these areas.

### Master of Engineering (Mechanical) Degree Program

The M.Eng.(Mechanical) degree program provides a one-year course of study for those who want to develop a high level of competence in current technology and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These areas include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, and CAD/CAM (computer-aided design/computer-aided manufacturing). An individual student's curriculum includes a 4-credit design course, a major consisting of a minimum of 12 credits, and sufficient technical electives to meet the degree requirement of 30 credits. Students register for 1 credit per term on an S–U basis in M&AE Colloquium (M&AE 799). The design course (M&AE 590) is a formal consideration of the complete design process, including planning, cost analysis, and analytical methods. Students conduct one or more specific projects during the course. These projects may arise from individual faculty interests or from collaboration with industry. In special cases a student may petition the Master of Engineering Committee of the Sibley School of Mechanical and Aerospace Engineering to replace the design course with an independent design project. Such a project must have a mechanical engineering design focus and have the close supervision of a faculty member.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of overall objectives and a statement of purpose for the major, is submitted for approval to the Master of Engineering Committee at matriculation. Any subsequent changes must also be approved by this committee.

The courses that constitute the major must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. At least 24 credits of the total for the degree must be in mechanical engineering or related areas, and in general all courses must be beyond the level of those required in the undergraduate program in mechanical engineering. Credit may be granted for an undergraduate, upper-level first course in some subject area if the student has done little or no previous work in that area, but such courses must have the special approval of the Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students enrolled in the M.Eng.(Mechanical) program may take courses that also satisfy the requirements of the Cornell Manufacturing Engineering and Productivity Program (COMEPP), leading to a special dean's certificate in manufacturing engineering.

## NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include D. D. Clark (faculty representative), K. B. Cady, H. H. Fleischmann, D. A. Hammer, and V. O. Kostroun.

### Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

### Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the *Announcement of the Graduate School.*

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

*Fall term*

A&EP 609, Low-Energy Nuclear Physics

A&EP 612, Nuclear Reactor Theory

A&EP 633, Nuclear Engineering

Technical elective

*Spring term*

A&EP 651, Nuclear Measurements Laboratory

Technical elective

Engineering design project

Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

M&AE 651, Advanced Heat Transfer

EE 581, Introduction to Plasma Physics

EE 582, Advanced Plasma Physics

EE 589 Magnetohydrodynamics

EE 471, Feedback Control Systems

EE 572, Digital Control Systems

A&EP 636, Seminar on Thermonuclear Fusion Reactors

A&EP 638, Intense Pulsed Electron and Ion Beams: Physics and Technology

NS&E 484, Introduction to Controlled Fusion: Principles and Technology

MS&E 459, Physics of Modern Materials Analysis

## OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

J. A. Muckstadt, director; R. G. Bland, L. I. Weiss, associate directors; E. Arkin, R. R. Barton, R. E. Bechhofer, L. J. Billera, D. C. Heath, P. L. Jackson, W. L. Maxwell, J. S. B. Mitchell, N. U. Prabhu, J. Renegar, S. Resnick, R. Roundy, D. Ruppert, G. Samorodnitsky, T. J. Santner, L. W. Schruben, D. B. Shmoys, E. Tardos, M. J. Todd, L. E. Trotter, Jr., B. W. Turnbull

### Bachelor of Science Curriculum

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and

design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. An accelerated honors program is available for exceptional students interested in pursuing graduate studies.

A student who plans to enter the Field Program in Operations Research and Engineering should take Introductory Engineering Probability (Engr 260). For a student who has not taken Engr 260, entry into the field program in OR&E is possible only by permission of the associate director for undergraduate studies. In addition, it is recommended that Computers and Programming (CS 211 or Engr 211) be taken before entry into the OR&E field program. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&E field program and the typical terms in which they are taken are as follows:

| *Term 5* | *Credits* |
|---|---|
| OR&IE 320, Optimization I | 4 |
| OR&IE 350, Cost Accounting, Analysis, and Control | 4 |
| OR&IE 361, Introductory Engineering Stochastic Processes | 4 |
| CS 211, Computers and Programming* | 3 |
| Course in humanities and social sciences | 3 |

*If CS 211 has already been taken, an appropriate 3- or 4-credit technical elective must be substituted.

| *Term 6* | |
|---|---|
| OR&IE 321, Optimization II | 4 |
| OR&IE 370, Introduction to Statistical Theory with Engineering Applications | 4 |
| OR&IE 410, Industrial Systems Analysis | 4 |
| Behavioral science† | 3 |
| Course in humanities and social sciences | 3 |

†The behavioral science requirement can be satisfied by any one of several courses of an advanced nature, including Graduate School of Management (GSM) NCC 504 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and Industrial and Labor Relations 120, 121, 151, and 320. The adviser must approve the selection in all cases.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

| *Minimum credits* | |
|---|---|
| OR&IE 580, Digital Systems Simulation | 4 |
| Three upperclass OR&IE electives as described below | 9 |
| Two technical electives | 6 |
| Two courses in humanities and social sciences | 6 |
| Two free electives | 6 |

Available OR&E electives are as follows:

Industrial systems: OR&IE 416, 417, 421, 451, 525, and 562 and GSM NBA 601 and 641*

Optimization methods: OR&IE 431, 432, and 435

Applied probability and statistics: OR&IE 462, 471, 472, 561, 563, 565, and 577

*No more than one course in the Graduate School of Management may be taken as an OR&E elective.

Scholastic requirements for the field are a passing grade in every course, an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

## Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng.(OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. Also welcome are requests for admission from Cornell undergraduates in engineering programs other than OR&E or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in probability theory and basic probabilistic models and in computer programming and should have acquired some fundamental knowledge of economic concepts required for decision making. Students interested in the manufacturing systems engineering option and the manufacturing internship program should obtain further information regarding program requirements from the office of the Cornell Manufacturing Engineering and Productivity Program, 319 Upson Hall.

*I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering:*

| *Fall term* | *Credits* |
|---|---|
| OR&IE 516, Case Studies | 4 |
| OR&IE 893, Applied OR&IE Colloquium | 1 |
| OR&IE 599, Project | 1 |
| Three technical electives | 9 |
| *Spring term* | |
| OR&IE 894, Applied OR&IE Colloquium | 1 |
| OR&IE 599, Project | minimum of 4 |
| Three technical electives | 9 |

The electives specified above will normally be chosen from graduate courses offered by the School of Operations Research and Industrial Engineering. A minimum of 30 credits must be taken to complete the program.

*II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 370, 520, and 523 will take technical electives in their place):*

| *Fall term* | *Credits* |
|---|---|
| OR&IE 370, Introduction to Statistical Theory with Engineering Applications | 4 |
| OR&IE 520, Operations Research I | 4 |
| OR&IE 516, Case Studies | 4 |
| OR&IE 580, Digital Systems Simulation | 4 |
| OR&IE 893, Applied OR&IE Colloquium | 1 |
| OR&IE 599, Project | 1 |
| *Spring term* | *Credits* |
| OR&IE 523, Introduction to Stochastic Modeling | 4 |
| OR&IE 894, Applied OR&IE Colloquium | 1 |
| OR&IE 599, Project | minimum of 4 |
| Two technical electives | 6 |

Students fulfill the project requirement by working as part of a group of no more than four students on an operational systems problem that actually exists in some organization. Appropriate problems are suggested by manufacturing firms, retailing organizations, service organizations, government agencies, and educational institutions.

## Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng./M.B.A. program can be completed in six years.

An advantage for OR&E majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the M.Eng.(OR&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.

In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Upson Hall, and at the admissions office of the Johnson Graduate School of Management.

## STATISTICS CENTER

The Cornell Statistics Center coordinates a university-wide program in statistics and probability. Students interested in graduate study in probability and statistics should apply to the Field of Statistics or to one of the other graduate fields that offer related coursework.

A list of courses in probability and statistics recommended for graduate students in the Field of Statistics can be found in the description of the Cornell Center for Statistics in the section "Interdisciplinary Centers and Programs." Further information can be obtained from the director of the Statistics Center, George Casella, 272 Caldwell Hall.

## THEORETICAL AND APPLIED MECHANICS

J. A. Burns, chair; H. D. Conway, J. M. Guckenheimer, E. W. Hart, T. J. Healey, P. J. Holmes, C. Y. Hui, J. T. Jenkins, R. H. Lance, S. Mukherjee, Y. H. Pao, R. H. Rand, P. Rosakis, A. L. Ruina, W. H. Sachse, A. Zehnder

### Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

### College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

## ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

| | |
|---|---|
| Engineering Common Courses | Engr |
| Agricultural Engineering | ABEN |
| Applied and Engineering Physics | A&EP |
| Chemical Engineering | Chem E |
| Civil and Environmental Engineering | CEE |
| Computer Science | CS |
| Electrical Engineering | EE |
| Geological Sciences | Geol |
| Materials Science and Engineering | MS&E |
| Mechanical and Aerospace Engineering | M&AE |
| Nuclear Science and Engineering | NS&E |
| Operations Research and Industrial Engineering | OR&IE |
| Theoretical and Applied Mechanics | T&AM |

## ENGINEERING COMMON COURSES

### Courses of General Interest

**100 Introduction to Computer Programming (also CS 100)**
Fall, spring, summer. 4 credits. The course content is the same as that of CS 100.
2 lecs, 1 rec (optional), 3 evening exams.
An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and algorithm and program development. The subject of the course is programming, not a particular programming language. The principal programming language is Pascal. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

**101 The Computer Age (also CS 101)**
Fall, summer. 3 credits. Credit is granted for both CS 100 and 101 only if 101 is taken first.
2 lecs, 1 rec, 1 evening exam.
An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students become acquainted with the notion of an algorithm by writing several programs in Pascal or LISP and testing them on microcomputers. The amount of programming is about half that taught in Engr 100. Each student writes a term paper on some aspect of computing.

**102 Drawing and Engineering Design (also M&AE 102)**
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
2 lecs, 1 lab.
Introduction to drawing and graphic techniques useful in design, analysis, and presentation of ideas. Use of computer-aided drafting software is introduced in the final design project.

**250 Technology in Western Society (also EE 250)**
Fall. 3 credits. Meets humanities distribution requirement.
R. Kline.
A survey of the history of technology and engineering in Western society from the earliest times to the present. We will also compare Chinese and European technology prior to the Renaissance and will focus on American technology after 1800. The lectures and readings will address such themes as the relationship between science and technology, the development of the engineering profession, and the role of the government in supporting and regulating technological change. Special attention is given to the origins of the factory system, the microelectronics revolution, and the social responsibility of the engineer.

**292 The Electrical and Electronic Revolutions (also EE 292)**
Spring. 3 credits. Approved for humanities distribution, not for EE or as a technical elective.
R. Kline.
A survey of the history of electricity in society from the telegraph to the personal computer. The course considers both the technical and social history of telecommunication, the electric power industry, microelectronics, and computers. Emphasis is placed on the changing relationship between science and technology, the institutional context of research and development, and the electrical engineer and society.

**301 Writing in Engineering**
Fall and spring. Can be used to satisfy requirements in expressive arts or as a free or approved elective.
Offered only in conjunction with "writing-intensive" engineering courses. Faculty from the college's Writing Program prepare students for writing assignments and guide them through composing, drafting, editing, and revising. Strengthens understanding of the course materials and communication skills. Work is discussed in class and in individual conferences. May be taken more than once, with different engineering courses, but may not be taken independently.

**305 Social Issues in Computing (also CS 305)**
Spring. 3 credits. Prerequisite: CS 100 or 101 or permission of instructor. Not offered every year.
2 lecs.
Economic, political, legal, and cultural impact of computers and computer-related technology; the role of computers in coordinating diversity and reducing disorder; the effect of computers on the individual; data banks and privacy; machine creativity and machine intelligence.

**321 Microeconomic Analysis (also CEE 321 and Economics 313, section 5)**
Fall. 4 credits. Prerequisite: one semester of calculus. A social science elective for engineering students.
R. E. Schuler.
Intermediate microeconomic analysis similar to Economics 313 but emphasizing mathematical techniques and engineering-design implications. Theory of consumer choice and efficient production; analysis of monopoly and competitive markets; theories of distribution, market equilibrium, and welfare economics.

**322 Economic Analysis of Government (also CEE 322 and Economics 308)**
Spring. 4 credits. Prerequisites: one semester of calculus, plus CEE 321 or Economics 313. A social science elective for engineering students.
R. E. Schuler.
Analysis of government intervention in a market economy and implications for engineering planning and design. Market imperfections, public goods and public decision making, public finance, cost-benefit analysis of government projects, environmental regulation, risk management, and macroeconomic topics.

**323 Engineering Economics and Management (also CEE 323)**
Spring. 3 credits. Primarily for juniors and seniors.
D. P. Loucks.
Introduction to engineering and business economics and to methods of operations research. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. Project management, inflation, taxation, depreciation, financial planning, and basic operations-research techniques of simulation and optimization are discussed.

**350 Engineering Communications**
Fall and spring. 3 credits. Limited to 17 students.
Instruction and practice in written, oral, and visual presentation. Communications in real-life engineering contexts are analyzed; assignments include case studies or problems which resemble actual engineering work. The class also considers the social and ethical implications of communications. By composing letters, memoranda, summaries, instructions, explanations, proposals, and reports, students learn to address audiences having different levels of technical expertise. Some assignments include oral or graphic presentation. The goal throughout is clear, well-organized, responsible, and graceful professional communication.

**360 Ethical Issues in Engineering**
Spring. 3 credits. A social-science elective for engineering students. Open to juniors and seniors.
3 lecs.
A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for harmful actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Use of codes of ethics of professional engineering societies and ethical theory to help sort conflicting obligations the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class, along the lines of the Space-Shuttle Challenger disaster, the Kansas City Hyatt-Regency Hotel walkway failure, or the Ford Pinto gas-tank design.

**[400 Science, Risk, and Public Policy (also T&AM 400 and Economics 358)**
Fall. 3 credits. Not offered 1989–90.
The scientific and humanistic bases of risk assessment and management, examined from a variety of perspectives. Emphasis on the measurement of natural and social phenomena; the psychological and political components in assessing the human and economic costs of risk; and the policies that individuals, institutions, and governments establish to manage risks.]

**454 Introduction to Solar Energy**
Summer. 3 credits. No prerequisites. Not accepted as a technical or field elective for mechanical engineers.
B. Conta.
The elements of thermodynamics and heat transfer necessary for the study of solar energy utilization. Fundamentals of solar radiation. Direct solar radiation as a source of heat and electrical energy. The direct use of solar radiation; water, wind, and biomass. Applications to solar architecture and environmental control by both active and passive means.

## Introduction to Engineering Courses

**110 The Laser and Its Applications in Technology, Science, and Medicine (also A&EP 110)**
Fall, spring. 3 credits.
2 lecs, 1 lab.
The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser-induced chemistry, Raman spectroscopy, frequency doubling, and interferometry. Guest lectures by prominent medical and industrial scientists introduce students to current fields of laser application and research.

**111 Elements of Materials Science and Engineering (also MS&E 201)**
Fall, spring. 3 credits.
Autotutorial.
Relations between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, and polymers. Properties discussed include magnetism, superconductivity, insulation, semiconductivity, mechanical strength, and plasticity. Design problems involving microelectronics, desalinization by reverse osmosis, superconducting power transmission lines, synthetic bones and joints, etc.

**112 Introduction to Chemical Engineering (also Chem E 112)**
Fall, spring. 3 credits. Limited to freshmen.
2 lecs, 1 rec. F. Rodriguez and staff.
This course is designed to acquaint students with the scope of chemical engineering. Topics such as polymers, fluid flow, and plant design will be introduced at an elementary level. Quantitative discussions buttressed by lecture demonstrations will show how the engineering approach differs from a purely scientific one. The rapid solving of numerical problems is emphasized in homework and on tests.

**[113 Computer-aided Design in Environmental Systems (also CEE 113)**
Fall. 3 credits. Not offered 1989–90.
3 lecs. A. H. Meyburg.
Planning, design, and management of environmental systems. Emphasis on use of computer-aided techniques, including interactive computer graphics. Sample problems will include transportation network design and water quality management. The objective of the course is to provide students with an opportunity to experiment with alternative design and management strategies in several areas of environmental engineering.]

**115 Engineering Application of Operations Research (also OR&IE 115)**
Fall, spring. 3 credits.
2 lecs, 1 lab.
Techniques for optimal decision making and engineering design. Computer graphics and mathematical modeling. Allocation of scarce resources, simulation of complex systems, design and analysis of networks, strategies in competitive games. Engineering applications and problem solving will be stressed.

**116 Modern Structures (also CEE 116)**
Spring. 3 credits.
2 lecs, 1 sec. G. G. Deierlein.
An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures are discussed. The Computer-Aided Design Instructional Facility (CADIF) and the Craig Miller Laboratory for Structural Modeling in Hollister Hall are used to demonstrate how engineering materials and structures behave under load. A semester project involves the design and construction of a small balsa-wood bridge.

**117 Introduction to Mechanical Engineering (also M&AE 117)**
Fall. 3 credits. Consists of two half-term minicourses chosen from a list of three. Two of these minicourses alternate; the third (Drawing and Engineering Design) is offered every half term but has limited enrollment.
2 lecs, 1 lab.
Drawing and Engineering Design (see Engr 102) will enable students without prior mechanical drawing experience to understand and create basic engineering graphics. The other two minicourses provide an introduction to topics of current interest typifying two broad areas within mechanical engineering: energy conversion, and mechanical design and manufacturing.

**119 Introduction to Manufacturing Engineering (also M&AE 119 and OR&IE 119)**
Spring. 3 credits.
2 lecs, 1 lab.
Engineering considerations in the design, manufacturing, distribution, and service of products. Transformation from functional requirements to material and processing techniques. Engineering problems in the design and management of a manufacturing facility and distribution channels. Visits may be made to local industries.

**121 Fission, Fusion, and Radiation (also NS&E 121)**
Spring. 3 credits.
2 lecs, 1 lab demonstration.
A lecture, demonstration, and laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) the benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) the uses of nuclear radiation in physical and biological research. The laboratory work and demonstrations involve criticality and the control of Cornell's two research reactors; detection of, and protection against, nuclear radiation; neutron activation analysis using gamma-ray spectroscopy; and plasma sources and devices.

**123 Sensors and Actuators**
Fall. 3 credits.
2 lecs, 1 lab.
A sensor or an actuator is the element by which information is converted from one form of energy to another. It is the key component in all measurement and control systems. This course will focus on the operational features of a wide variety of sensors and actuators that are used in scientific and engineering metrology, in industrial process control applications, and in consumer products. The devices may be based on electrical, mechanical, acoustical, optical, and thermal phenomena. Students will measure the parameters of various thermo-mechanical sensors and actuators and they will be expected to design, fabricate, and verify the operation of a sensor meeting specific design objectives.

## Engineering Distribution Courses

**201 Introduction to the Physics and Chemistry of the Earth (also Geol 201)**
Spring. 3 credits. Prerequisites: Mathematics 191, Physics 112, and Chemistry 207.
2 lecs; 1 rec, lab, or field trip. L. M. Cathles.
Formation of the solar system, accretion and evolution of the earth, radioactive isotopes and the geological time scale, rocks and minerals, the continents and the oceans, erosion and sedimentation, weathering processes, the earth as a heat engine, volcanism, seismology, gravity, magnetism, plate tectonics, deformation of the earth's crust, comparative planetology.

**202 Mechanics of Solids**
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 293.
2 lecs, 1 rec, 4 labs each semester, evening exams.
Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

**203 Dynamics**
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 294.
2 lecs, 1 rec, 4 labs each semester, evening exams.
Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

**210 Introduction to Electrical Systems (also EE 210)**
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 293 and Physics 213.
3 lecs and optional tutorial secs.
Circuit elements and laws, analysis techniques, operational amplifiers. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, pole-zero concepts, and the frequency spectrum. Terminal characteristics of diodes and transistors, linear models, bias circuits, and frequency response of small-signal amplifiers.

**211 Computers and Programming (also CS 211)**
Fall, spring, summer. 3 credits. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 1 rec, 2 evening exams.
Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, data structures, and analysis of algorithms. Pascal is the principal programming language.

**219, 220 Mass and Energy Balances (also Chem E 219, 220)**
219, fall; 220, spring, summer. 3 credits. Corequisite: physical or organic chemistry; 220 is intended for transfer students who cannot take 219 and requires permission of instructor.
G. F. Scheele.
Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Humidification processes. Chem E 220 differs from 219 in that it uses *only self-paced audiovisual instruction at the convenience of the student.* A minimum of seventy clock hours of audiovisual instruction is required to master the subject matter. Student performance in 220 is evaluated by nine tests, two preliminary examinations, and a final examination; superior students may earn exemption from the final examination.

**221 Thermodynamics**
Fall, spring. 3 credits. Prerequisites: Mathematics 192 and Physics 112.
3 lecs.
The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, multiphase pure substances, gaseous reactions. Heat-engine and heat-pump cycles, with an introduction to energy-conversion systems.

**222 Introduction to Scientific Computation (also CS 222)**
Spring. 3 credits. Prerequisites: CS 100 and Mathematics 112, 122, or 192.
2 lecs, 3 evening exams.
Students write FORTRAN programs to solve representative problems from elementary calculus. Emphasis is on the design of numerical software that is efficient, reliable, stable, and portable. Special topics include supercomputing and parallel computation.

**241 Engineering Computation (also CEE 241)**
Fall, spring. 3 credits. Prerequisites: CS 100 and Mathematics 293. Corequisite: Mathematics 294.
J. R. Stedinger, J. F. Abel.
This course develops FORTRAN programming proficiency and provides exposure to engineering computation. Numerical methods for solving engineering problems covered in the course address Taylor-series approximations, truncation and roundoff errors, roots of functions, solution of simultaneous linear equations, interpolation, numerical differentiation and integration, and solution of ordinary and of some partial differential equations. Applications are drawn from different areas of engineering.

**260 Introductory Engineering Probability (also OR&IE 260)**
Fall, spring. 3 credits. Prerequisite: first-year calculus.
3 lecs.
The basic tools of probability and their use in engineering. This may be the last course in probability for some students, or it may be followed by OR&IE 361, Introductory Engineering, Stochastic Processes I, or by OR&IE 370, Introduction to Statistical Theory with Engineering Applications. Definition of probability; random variables; probability distributions, density functions, expected values; jointly distributed random variables; distributions such as the binomial, Poisson, and exponential that are important in engineering and how they arise in practice; limit theorems.

**261 Introduction to Mechanical Properties of Materials**
Fall, spring. 3 credits.
2 lecs, 1 rec or lab.
The relation of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

**262 Introduction to Electrical Properties of Materials**
Spring. 3 credits.
2 lecs, 1 rec or lab.
Electrical and structural properties of semiconductors, the operation of p-n junctions and transistors, and the processing methods used to form modern integrated circuits. Electrical conduction in metal films, semiconductors, bipolar and field-effect transistors and light-emitting diodes. Diffusion, ion implantation, oxidation, metallization, and other process steps in fabricating semiconductor devices. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.

**264 Computerized-Instrumentation Design (also A&EP 264)**
Fall, spring. 3 credits. Prerequisites: Engr 100 or CS 100.
1 lec, 1 lab.
Design techniques for incorporating small computers into experimental apparatus. Experiments in elementary physics are performed with appropriate sensors wired to computer interfaces, under program control that employs routines written in BASIC and ASSEMBLY languages. Analog-to-digital converters, digital-to-analog converters, optical encoders, and stepping motors are used. Graphic display of data and theoretical fit are emphasized.

**270 Basic Engineering Probability and Statistics**
Fall, spring. 3 credits. Students who intend to enter the upperclass Field Program in Operations Research and Industrial Engineering should take Engr 260 instead of this course. Prerequisite: first-year calculus.
3 lecs, evening prelims.
At the end of this course a student should command a working knowledge of basic probability and statistics as they apply to engineering work. For students who want to have greater depth in probability and statistics, a course in probability (OR&IE 260) followed by a course in statistics (OR&IE 370) is recommended.

**285 Art, Isotopes, and Analysis (also MS&E 285)**
Spring. 3 credits.
J. W. Mayer, S. Taft, D. Eddy.
The analysis of paintings and rare books and the physical concepts underlying modern analytical techniques. Each week a work of art will be discussed, focusing on the historical and technical aspects of its creation and modern analysis of it. Visual, infra-red, and x-ray examinations provide insight into the physical properties. Pigments are identified by the radiation emitted in electronic transitions. The ratio of isotopes can be used to identify the geographical origin of a particular pigment as well as a dating method. Examples will be given of authentification and conservation.

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences.

## APPLIED AND ENGINEERING PHYSICS

**110 The Laser and Its Applications in Science, Technology, and Medicine (also Engr 110)**
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**264 Computerized-Instrumentation Design (also Engr 264) Fall, spring. 3 credits. Prerequisites: Engr 100 or CS 100.**
1 lec, 1 lab.
For description see Engineering Common Courses.

**303 Introduction to Nuclear Science and Engineering I (also NS&E 303)**
Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294.
3 lecs. V. O. Kostroun.
For description see NS&E 303.

**321 Mathematical Physics I**
Fall. 4 credits. Prerequisite: Math 294. Intended for upper-level undergraduates in the physical sciences.
4 lecs.
Review of vector analysis; complex variable theory, Cauchy-Rieman conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations, Green's functions, Bessel functions. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

**322 Mathematical Physics II**
Spring. 4 credits. Prerequisite: A&EP 321. Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
4 lecs.
Partial differential equations, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernals; complex variables, theory, branch points and cuts, Rieman sheets, method of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists*, by Arfken; *Mathematical Physics*, by Butkov.

**333 Mechanics of Particles and Solid Bodies**
Fall. 4 credits. Prerequisites: Physics 112 and coregistration in A&EP 321 or equivalent or permission of instructor.
3 lecs, 1 rec.
Newton's mechanics; linear oscillations; Lagrangian and Hamiltonian formalism for generalized coordinates and constrained motion; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on physical concepts and applications. (On the level of *Classical Dynamics*, by Marion).

**355 Intermediate Electromagnetism**
Fall. 4 credits. Prerequisites: Physics 214 and coregistration in A&EP 321 or equivalent, or permission of instructor.
3 lecs, 1 rec.
Topics: vector calculus, electrostatics, magnetostatics, and induction phenomena; solutions to Laplace's equation in various geometries, electric and magnetic materials, electric and magnetic forces, energy storage, skin effect, quasistatics. Emphasis on physical concepts and applications to design of high-voltage generators, electron guns, and particle accelerators.

**356 Intermediate Electrodynamics**
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.
3 lecs, 1 rec.
Topics: electromagnetic wave phenomena, transmission lines, waveguides, dispersive media, scattering, radiation, reciprocity, physical optics, special relativity. Emphasis on physical concepts and their application to the design of microwave circuits, antenna arrays, and optically coupled systems.

**361 Introductory Quantum Mechanics**
Spring. 4 credits. Prerequisites: A&EP 333 or Physics 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or Physics 326.
3 lecs, 1 rec.
A first course in the systematic theory of quantum phenomena. Topics include the harmonic oscillator, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory. Analytical solutions of the Schroedinger equation are supplemented with numerical solutions on a microcomputer.

**363 Electronic Circuits (also Physics 360)**
Fall, spring. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor; no previous experience with electronics is assumed. Fall term is generally less crowded.
1 lec, 2 labs.
This laboratory course focuses on designing, building, and testing analog, digital, and microprocessor-based circuits that are useful in electronic instrumentation. Analog topics include basic circuit concepts, applications of operational amplifiers in linear circuits, oscillators and comparators, transistor circuits and diodes in power supplies, waveform-shaping circuits, and protective circuits. Students also design and build digital circuits that incorporate Schmidt triggers, comparators, and combinatorial and sequential logic using meduim-scale integrated circuits. The above circuits are also interfaced to a microprocessor whose architecture, machine instruction set, and programming principles are studied. At the level of *Art of Electronics*, by Horowitz and Hill.

**423 Statistical Thermodynamics**
Spring. 4 credits. Prerequisite: Engr 221 for engineering physics seniors; others by permission of instructor.
3 lecs, 1 rec.
Quantum statistical basis for equilibrium thermodynamics, canonical and grand canonical ensembles, and partition functions. Quantum and classical ideal gases and paramagnetic systems. Fermi-Dirac, Bose-Einstein, and Maxwell-Boltzmann statistics. Introduction to systems of interacting particles. At the level of *Thermal Physics*, by Kittel, and *Statistical Physics*, by Mandl.

**434 Continuum Physics**
Fall. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.
3 lecs, 1 rec.
Local conservation laws; stress, strain, and rate-of-strain tensors; equations of motion for elastic and viscous response; waves in solids and fluids; dislocations; ideal fluids, potential flow, Bernouli's equation, vorticity and circulation, lift; viscous incompressible flow and the Navier-Stokes equations, Reynolds number, Poiseuille flow in a pipe, Stokes drag on a sphere; boundary layers, Blasius equations; flow instabilities, Rayleigh-Benard convection and the onset of chaotic flow. Introduction to turbulent flow.

**436 Physical and Integrated Optics**
Spring. 4 credits. Prerequisite: A&EP 355.
3 lecs, 1 lab.
The fundamentals of optics: diffraction, polarization, interference, birefringence, scattering, Fourier optics. Applications to optical waveguides, nonlinear optics, integrated optics, optical storage, coherent detection, optical communications. Emphasis on hands-on experimental laboratory demonstrations and computer synthesis of optical phenomena.

**490 Informal Study in Engineering Physics**
Credit to be arranged.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the staff. The study can take a number for forms; for example, design of laboratory apparatus, performance of laboratory measurements, or theoretical design or analysis. Details to be arranged with respective staff member.

**606 Introduction to Plasma Physics (also EE 581)**
Fall. 4 credits. Prerequisites: A&EP 355 or 356 or equivalent. Open to fourth-year students with permission of instructor.
3 lecs.
Motion of charged particles in fields, collisions, plasma waves, Boltzmann equation, microinstabilities, Landau damping, introduction to kinetic theory, introduction to M.H.D., single-fluid equations, Tokamak equilibrium, and stability.

**607 Advanced Plasma Physics (also EE 582)**
Spring. 4 credits. Prerequisite: A&EP 606.
3 lecs.
Boltzmann and Vlasov equations; waves in hot plasmas; Landau damping, microinstabilities; drift waves, low-frequency stability, collisional effects; method of dressed test particles; high-frequency conductivity and fluctuations; neoclassical toroidal diffusion, high-powered beams.

**608 Plasma Astrophysics (also Astronomy 660)**
Spring. 2 credits.
Selected topics discussed in detail: (a) the solar corona and the solar wind, (b) hydrodynamic and magnetohydrodynamic flows around compact objects in galactic nuclei, (c) global electrodynamics of double radio sources.

**609 Low-Energy Nuclear Physics**
Fall. 4 credits. Prerequisite: an introductory course in modern physics, including quantum mechanics.
3 lecs.
The nuclear interaction. Properties of ground and excited states of nuclei; models of nuclear structure; alpha, beta, gamma radioactivity; low-energy nuclear reactions—resonant and nonresonant scattering, absorption, and fission. At the level of *Introduction to Nuclear Physics*, by Enge.

**612 Nuclear Reactor Theory**
Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics.
3 lecs.
Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron flux distribution in nuclear reactors. Reactor kinetics. At the level of *Nuclear Reactor Theory*, by Lamarsh.

**614 Special Topics in Biophysics**
Topics, credits, and schedule to be announced. Seminars on selected topics of current interest in biophysics research.

**615 Membrane Biophysics**
Fall. 3 credits.
Molecular structure and supramolecular organization of cell membranes. Model membranes and membrane models. Molecular mechanisms of membrane transport, electrophysiology and cell-cell interaction, molecular channels. Physical probes of membrane processes. Dynamics of membrane processes, lateral mobility, diffusion, and flow. Some current problems in cell-surface function and organization of specialized membrane macrostructures.

**[622 Electron Optics**
Spring. 3 credits. Offered alternate years. Not offered 1989–90.
Basic electron optics with emphasis on the fundamental principles of the production and focusing of charged-particle beams. Special consideration is given to the optics appropriate for beam transport and probe forming systems and systems useful in materials characterization. Included are discussions of the calculation of trajectories in multicomponent optical systems, comprehensive treatments of optical aberrations, and practical considerations of electron optical design.]

**633 Nuclear Engineering**
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, and radiation protection.

**634 Nuclear Engineering Design Seminar**
Spring. 4 credits. Prerequisite: A&EP 633.
A group design study of a selected nuclear system. Emphasis is on safety, siting, and radiation protection in the design of nuclear systems.

**636 Seminar on Thermonuclear Fusion Reactors**
Fall. 3 credits. Prerequisite: basic course in plasma physics or nuclear reactor engineering, or permission of instructor. Offered alternate years.
Analysis of various technological and engineering problems in design and construction of fusion reactors. Topics include basic reactor schemes, materials, mechanical and heat-transfer problems, radiation and safety, superconducting magnets, energy conversion, plasma impurities, and economics.

**638 Intense Pulsed Electron and Ion Beams: Physics and Technology**
Spring. 2 credits. Prerequisites: A&EP 606 (EE 581) and 607 (EE 582) or equivalent, or permission of instructor. Offered alternate years.
D. A. Hammer.
Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibria and stability; (2) technology of intense beam production, such as pulsed-power generator principles, and electron and ion diode operation; and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

**651 Nuclear Measurements Laboratory**
Spring. 4 credits. Prerequisite: A&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS&E 551, which has the same lecture but has only one lab period, is intended for students in non-nuclear fields in which nuclear methods are used
One 2-hour lecture and two 1/2 hour labs. D. D. Clark.
Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods. About fifteen experiments are available in radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; neutron radiography; neutron moderation and reactor physics; neutron diffraction; and low-energy nuclear physics with neutron beams. The TRIGA reactor and the Zero Power Reactor critical facility are used. The student selects seven or eight experiments to meet his interests and needs. At the level of Radiation Detection and Measurement, by Knoll.

**661 Microcharacterization**
Fall. 3 credits. Prerequisites: Physics 112, 213, and 214, or an introductory course in modern physics.
The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterizatation is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

**662 Microprocessing of Materials**
Spring. 3 credits.
Several field trips.
An introduction to the fundamentals of fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes.

**681–689 Special Topics in Applied Physics**
Topics, instructors, and credits to be announced each term. Typical topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuators, biophysical processes, molecular fluorescence.

**711 Principles of Diffraction (also MS&E 610)**
Fall. 3 credits.
B. W. Batterman.
Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers and the effect of thermal vibrations. Diffraction from almost periodic structures, surface layers, gases, and amorphous materials. Survey of dynamical diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

**751, 752 Project**
751, fall; 752, spring. Credit to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree.
Informal study under the direction of a member of the university staff. Students are offered research experience through work on a special problem related to their field of interest.

**753 Special Topics Seminar in Applied Physics**
Fall. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected areas of atomic, plasma, biological, and solid-state physics, as suggested by the students and coordinated by the instructor.

**761 Kinetic Theory (also EE 681)**
Fall. 3 credits. Prerequisite: EE 407, Physics 561, or permission of instructor. Offered alternate years.
2 lecs.
For description see EE 681.

**762 Physics of Solid Surfaces and Interfaces**
Fall. 3 or 4 credits. Lecture course primarily for graduate and qualified senior students. Primarily for beginning graduate students and seniors. Similar to MS&E 703. Offered alternate years.
T. N. Rhodin.
An experimental approach connecting the basic physics and chemistry of electron and atomic structure with processes at surfaces and interfaces. A critical perspective on principles, with an emphasis on applications and devices from an applied-physics viewpoint. Principles involved in characterization will be discussed more than techniques and equipment. Specific concepts and phenomena will be emphasized, and only those theories and models required for their analysis will be covered. Topics include ultrahigh vacuum, surface crystallography, measurement concepts, gas-solid surfaces, solid-solid interfaces, atomic structure, surface reconstruction, electronic processes, chemical bonding, physical and chemical adsorption, nucleation and growth, particle-solid phenomena, and radiation–solid interface phenomena. Typical text could be *Physics at Surfaces* by Zangwill.

## CHEMICAL ENGINEERING

**101 Nonresident Lectures**
Spring. No credit.
1 lec. G. F. Scheele.
Given by lecturers invited from industry and from selected departments of the university to assist students in their transition from college to industrial life.

**112 Introduction to Chemical Engineering (also Engr 112)**
Fall, spring. 3 credits. Limited to freshmen.
2 lecs, 1 rec. F. Rodriguez and staff.
For description see Engineering Common Courses.

**219 Mass and Energy Balances (also Engr 219)**
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor.
3 lecs. 1 computing session. Staff.
For description see Engineering Common Courses.

**220 Mass and Energy Balances (also Engr 220)**
Spring, summer. 3 credits. Corequisite: physical or organic chemistry and permission of instructor. Intended for students who cannot take Chem E 219.
G. F. Scheele.
Self-paced audiovisual instruction in the material of Chem E 219. For description see Engineering Common Courses.

**313 Chemical Engineering Thermodynamics**
Fall. 4 credits. Corequisite: physical chemistry.
4 lecs, 1 computing session. P. Clancy.
A study of the first and second laws, with application to batch and flow processes. Thermodynamic properties of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; thermodynamic analysis of processes. Thermodynamics of mixtures, phase equilibria and phase diagrams. Estimation methods. Heat effects, chemical equilibria.

**323 Fluid Mechanics**
Fall. 3 credits. Prerequisites: Chem E 219 and engineering mathematics sequence.
3 lecs, 1 computing session. P. H. Steen.
Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

**324 Heat and Mass Transfer**
Spring. 3 credits. Prerequisite: Chem E 323.
3 lecs, 1 computing session.
D. A. Hammer.
Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

**332 Analysis of Separation Processes**
Spring. 4 credits. Prerequisites: Chem E 313 and 323.
3 lecs, 1 computing session.
G. F. Scheele.
Analysis of separation processes involving phase equilibria and rate of mass transfer; some use of the digital computer. Phase equilibria; binary, multicomponent, and extractive distillation; liquid-liquid extraction; gas absorption.

**390 Reaction Kinetics and Reactor Design**
Spring. 3 credits. Prerequisites: Chem E 313 and 323.
3 lecs. A. B. Anton.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

**432 Chemical Engineering Laboratory**
Fall. 4 credits. Prerequisites: Chem E 323, 324, 332, and 390.
2 lecs, 1 lab. Staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, other operations. Correlation and interpretation of data. Technical report writing.

**462 Chemical Process Design**
Spring. 4 credits. Prerequisite: Chem E 432.
Staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

**472 Process Control**
Spring. 3 credits. Prerequisites: Chem E 324 and 390.
3 lecs, 1 lab. P. Clark.
Analysis of the dynamics of chemical processes and design of feedback control systems with emphasis on control of chemical reactors and separation systems.

**490 Undergraduate Projects in Chemical Engineering**
Variable credit.
Research or studies on special problems in chemical engineering.

**564 Design of Chemical Reactors**
Fall. 3 credits. Prerequisite: Chem E 390 or equivalent.
3 lecs. P. Harriott.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of data for gas-solid, gas-liquid, and three-phase reaction systems.

**565 Design Project**
Spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program.
Staff.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

**566 Computer-aided Process Design**
Spring. 3 credits. Prerequisite: Chem E 332 or equivalent.
3 lecs. P. Clark.
An introduction to the synthesis and use of computer systems for steady-state simulation and optimization of chemical processes. Synthesis of heat exchanger networks and separation systems.

**590 Special Projects in Chemical Engineering**
Variable credit. Limited to graduate students.
Non-thesis research or studies on special problems in chemical engineering.

**640 Polymeric Materials**
Fall. 3 credits.
3 lecs. F. Rodriguez.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

**642 Polymeric Materials Laboratory**
Spring. 2 or 3 credits. Prerequisite: Chem E 640.
F. Rodriguez.
Experiments in the formation, characterization, fabrication, and testing of polymers.

**643 Introduction to Bioprocess Engineering**
Fall. 3 credits. Prerequisite: Chem E 390 or permission of instructor. No prior background in the biological sciences required.
3 lecs. M. L. Shuler.
A discussion of principles involved in using microorganisms and enzymes for processing. Application to food and fermentation industries and to biological waste treatment.

**645 Advanced Concepts in Biological Engineering**
Spring. 3 credits. Prerequisite: Chem E 643 or equivalent or permission of instructor.
3 lecs. D. A. Hammer.
Fundamentals of biochemical engineering science with emphasis on enzyme processing, mathematical models of cell growth, bioreactors, product recovery, bioseparations, the use of tissue culture, and genetically modified organisms.

**646 Controlled Cultivation of Microbial Cells**
Spring (January intersession). 3 credits. Prerequisite: Microbiology 291 or equivalent.
Staff.
A projects course. Use of batch- and continuous-stirred jars to explore the physiology of microorganisms under conditions simulating industrial practice.

**648 Polymers in Electronics and Related Areas**
Spring. 3 credits. Prerequisite: 640 or permission of instructor.
3 lecs. F. Rodriguez.
Applications of polymers as resists for microlithography, as insulators, and as conductors. Radiation effects, polymer synthesis, and surface characterization. Additional special topics may be covered.

**661 Air Pollution Control**
Spring. 3 credits.
3 lecs. P. Harriott.
Origin of air pollutants. Design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

**[673 Adsorption and Catalysis**
Fall. 2 credits. Not offered 1989–90.
R. P. Merrill.
The physics and chemistry of adsorption on reactive surfaces and catalysis. Emphasis on the use of modern spectroscopic techniques to determine the geometric structure, electronic structure, and reaction sequences on well-defined surfaces. Discussion of several catalytic systems.]

**675 Synthetic Polymer Chemistry (also MS&E 671 and Chemistry 671)**
Fall. 3 credits. Prerequisites: Chem 359–360 or equivalent or permission of instructor. MS&E 620 is recommended.
3 lecs. J. M. J.Frechet.
Modern concepts in chain-growth polymerization reactions. Synthetic strategies for step-growth polymerizations. Polymer architecture and its control. Reactions of polymers, polymer-supported chemistry. Microenvironment effects in polymer media.

**711 Advanced Chemical Engineering Thermodynamics**
Fall. 3 credits. Prerequisite: Chem E 313 or equivalent.
3 lecs. A. Panagiotopoulos.
Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

**713 Applied Chemical Kinetics**
Fall. 3 credits. Prerequisite: Chem E 390 or equivalent.
3 lecs. R. P. Merrill.
Stoichiometry of multiple reactions, complex monomolecular kinetics, lumping analysis in monomolecular and continuous reaction mixtures, nonideal reactors, kinetics of catalyzed reactions, multiple steady states in chemical reactors, principles of heterogeneous catalysis, selected topics in biochemical engineering kinetics.

**721 Thermodynamics and Phase Change Heat Transfer (also M&AE 652)**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
C. T. Avedisian.
Thermodynamics of phase change. Superheated liquids and supersaturated vapors. Thermodynamic stability criteria for metastable liquids and homogeneous nucleation theory. Dynamics of bubble growth and collapse. Pool boiling and the critical heat flux. Hydrodynamics of one-dimensional two-phase flows. Convective boiling and condensation.

**731 Advanced Fluid Mechanics and Heat Transfer**
Fall. 3 credits. Prerequisite: Chem E 323 and 324 or equivalent.
3 lecs. D. L. Koch.
Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

**732 Diffusion and Mass Transfer**
Spring. 2 credits. Prerequisite: Chem E 731 or equivalent.
C. Cohen.
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition.

**[734 Fluid Mechanics of Suspensions**
Spring. 3 credits. Prerequisite: Chem E 731, M&AE 601, or equivalent. Offered alternate years. Not offered 1989–90.
D. L. Koch.
Relationship between macroscopically observed transport and rheological behavior of suspensions and composites, and underlying transport processes occurring on the particle-length scale. Methods of treating interparticle hydrodynamic interactions. Derivation of macroscopic properties using ensemble averages, renormalization, and dynamic simulations. Applications will include free suspensions of solid spheres, fibers, and bubbles; composite solids; and porous media.]

**741 Selected Topics in Biochemical Engineering**
Fall, spring. 1 credit (may be repeated for credit). Prerequisite: Chem E 643 or permission of instructor.
D. A. Hammer, M. L. Shuler.
Discussion of current topics and research in biochemical engineering for graduate students.

**[745 Physical Polymer Science I**
Fall. 3 credits. Prerequisite: Chem E 711 or equivalent. Offered alternate years. Not offered 1989–90.
C. Cohen.
Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomena.]

**746 Physical Polymer Science II**
Fall. 3 credits. Prerequisite: Chem E 731 or equivalent. Offered alternate years.
C. Cohen.
Rheology and processing. Applications and limitations of various rheometers. Linear viscoelasticity; nonlinear continuum models; kinetic theory of polymeric liquids. Pressurization, pumping, and the modelling of processing machines. Injection and compression molding: mold filling, simulations, structure, and orientation.

**751 Mathematical Methods of Chemical Engineering Analysis**
Spring. 4 credits.
3 lecs. D. L. Koch.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbation, multiple scales, asymptotic analysis. Linear and nonlinear ordinary differential equations, partial differential equations.

**[753 Analysis of Nonlinear Engineering Systems: Stability, Bifurcation, and Continuation**
Fall. 3 credits. Prerequisite: Chem E 751 or equivalent. Offered alternate years. Not offered 1989–90.
3 lecs. P. H. Steen.
Elements of bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to population-dynamics, reaction-diffusion, and hydrodynamic systems using software for continuation problems.]

**[772 Theory of Molecular Liquids**
Spring. 3 credits. Prerequisite: Chem E 711 or equivalent. Offered alternate years. Not offered 1989–90.
K. E. Gubbins.
Theory of intermolecular forces, and equilibrium statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.]

**774 Atomistic Simulation of Materials**
Spring. 3 credits. Prerequisite: Competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful.
2 lecs, 1 computer lab. P. Clancy.
The statistical mechanical theory behind Monte-Carlo and molecular-dynamics computer-simulation techniques. Strong emphasis is placed on students writing their own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle forces and application of atomistic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.

**790 Seminar**
Fall, spring. 1 credit each term.
General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

**792 Advanced Seminar in Thermodynamics**
Fall, spring. 1 credit.
K. E. Gubbins, A. Panagiotopoulos.
A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

**890 Thesis Research**
Variable credit.
Thesis research for the M.S. degree in chemical engineering.

**990 Thesis Research Variable credit.**
Thesis research for the Ph.D. degree in chemical engineering.

# CIVIL AND ENVIRONMENTAL ENGINEERING

## General

**[113 Computer-aided Design in Environmental Systems (also Engr 113)**
Fall. 3 credits. Not offered 1989–90.
3 lecs. A. H. Meyburg.
For description see Engineering Common Courses.]

**116 Modern Structures (also Engr 116)**
Fall, spring. 3 credits.
2 lecs, 1 sec. G. G. Deierlein.
For description see Engineering Common Courses.

**241 Engineering Computation (also Engr 241)**
Fall, spring. 3 credits. Prerequisites: CS 100 and Mathematics 293. Corequisite: Mathematics 294.
J. F. Abel, J. R. Stedinger.
For description see Engineering Common Courses.

**304 Uncertainty Analysis in Engineering**
Fall. 4 credits. Prerequisite: first-year calculus.
J. R. Stedinger.
An introduction to probability theory, statistical techniques, and uncertainty analysis, with examples drawn from civil, environmental, agricultural, and related engineering disciplines. The course covers data presentation, probability theory, commonly used probability distributions, parameter estimation, goodness-of-fit tests, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, models of vehicle arrivals, analysis of return-period calculations, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties.

**309 Special Topics in Civil and Environmental Engineering**
Fall, spring. 1–6 credits.
Staff.
Supervised study by individuals or groups of upper-division students on one or more specialized topics not covered in regular courses.

**501 Civil and Environmental Engineering Design Project I**
Fall. 3 credits. Required for students in the M.Eng.(Civil) program.
School faculty and visiting engineers.
Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

**502 Civil and Environmental Engineering Design Project II**
Spring (work done during January intersession). 3 credits. Required for students in the M.Eng.(Civil) program. Prerequisite: CEE 501.
School faculty and visiting engineers.
A continuation of CEE 501.

**503 Professional Practice in Engineering**
Spring. 3 credits. Required for and limited to students in the M.Eng.(Civil) program.
W. R. Lynn.
Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

**701 Environmental Engineering Department Seminar**
Fall, spring. 1 credit.
Staff.
Presentation of topics of current interest in environmental engineering.

## Remote Sensing

**610 Remote Sensing Fundamentals (also Agronomy 660)**
Fall. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data aquisition; data analysis and interpretation; and project design.

**611 Remote Sensing: Environmental Applications (also Agronomy 661)**
Spring. 3 credits. Prerequisite: permission of instructor.
2 lecs, 1 lab. W. R. Philipson.
A survey of how remote sensing is applied in various environmental disciplines. Laboratory emphasis is on using aircraft and satellite imagery for inventorying and monitoring surface features in engineering, planning, agriculture, and natural resource assessments.

**[612 Physical Environment Evaluation**
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1989–90.
2 lecs, 1 lab. Staff.
Physical environmental factors affecting engineering planning decisions: climate, soil and rock conditions, water sources. Evaluation methods: interpretation of meteorological, topographic, geologic, and soil maps, aerial photographs, and subsurface exploration records.]

**[613 Image Analysis I: Landforms**
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1989–90.
2 lecs, 1 lab. Staff.
Analysis and interpretation of aerial photographs for a broad spectrum of soil, rock, and drainage conditions. Specific fields of application are emphasized.]

**[614 Image Analysis II: Physical Environments**
Fall. 3 credits. Prerequisite: CEE 612 or 613. Not offered 1989–90.
2 lecs, 1 lab. Staff.
Study of physical environments using aerial photographs and other remote sensing methods. Conventional photography; spectral, space, and sequential photography; thermal and radar imageries. Arctic, tropic, arid, and humid climate regions. Project applications.]

**615 Digital Image Processing**
Fall. 3 credits. Prerequisites: facility with algebra (Mathematics 109) and statistics (Engr 206 or Agricultural Economics 310), or permission of instructor.
W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on techniques used in remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

**616 Digital Image Analysis**
Spring. 3 credits. Prerequisites: calculus (Mathematics 192), statistics (Engr 206 or Agricultural Economics 310), and computer programming (FORTRAN or C), or permission of instructor.
W. D. Philpot.
Pattern recognition, feature extraction, and classification of digital images as used in remote-sensing applications. Both spectral and spatial patterns will be considered. Assignments will require the development of computer programs and will make use of existing image-processing software and graphics.

**617 Project—Remote Sensing**
On demand. 1–6 credits.
Staff.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

**618 Special Topics—Remote Sensing**
On demand. 1–6 credits.
Staff.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

**619 Seminar in Remote Sensing (also Agronomy 662)**
Spring. 1 credit. S-U grades only.
W. R. Philipson.
Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry, Cornell, or other research or academic institutions.

**710 Research—Remote Sensing**
On demand. 1–6 credits.
Staff.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

**810 Thesis—Remote Sensing**
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Environmental and Public Systems

**321 Microeconomic Analysis (also Engr 321 and Economics 313, section 5)**
Fall. 4 credits. Prerequisite: one semester of calculus. A social science elective for engineering students.
R. E. Schuler.
For description see Engineering Common Courses.

**322 Economic Analysis of Government (also Engr 322 and Economics 308)**
Spring. 4 credits. Prerequisites: one semester of calculus, plus CEE 321 or Economics 313. A social science elective for engineering students.
R. E. Schuler.
For description see Engineering Common Courses.

**323 Engineering Economics and Management (also Engr 323)**
Spring. 3 credits. Primarily for juniors and seniors.
D. P. Loucks.
For description see Engineering Common Courses.

**325 System Perspectives on Solid Waste Management**
Fall. 3 credits. Open to juniors and seniors from all colleges who have had a scientific and calculus course.
W. R. Lynn, R. E. Schuler.
An introduction to alternative technological solutions to society's solid waste problems with the interdisciplinary perspective of how those proposals interact with a broad range of public, environmental, and economic concerns. Using engineering, economic, legal, and political professionals, an integrated systems approach to problem solving will be emphasized and will culminate in a term project analogous to an environmental impact assessment process.

**528 Interactive Modeling with Microcomputer Graphics**
Spring. 3 credits. Prerequisite: Engr 241 or Engr 222, and permission of instructor.
D. P. Loucks.
Principles of interactive modeling and its application to the design and management of environmental and water-resources engineering systems. Topics will include tablet and video digitizing, image processing (including editing and overlaying pictures and maps), contouring, opaque and transparent coloring, generating 2-D and 3-D colored graphs, and developing pre- and postprocessors to permit the interactive use of various models for synthesizing designs and operating policies and for predicting system performance. Microcomputers with high-quality color-graphics capabilities will be available together with numerous interactive graphics subroutines.

**529 Water and Environmental Resources Problems and Policies**
Fall. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor.
Lec-disc. L. B. Dworsky.
Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

**620 Water-Resources Systems I**
Fall. 3 credits. Prerequisite: CEE 323 or equivalent.
D. P. Loucks.
Development and application of techniques for deterministic and stochastic optimization and simulation in water-resources planning. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality models.

**621 Water-Resources Systems II**
Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor.
J. R. Stedinger, D. P. Loucks.
Advanced topics in the development and use of optimization and simulation models for water-resources planning. Stochastic hydrologic modeling and stochastic river-basin and reservoir models. Incorporates material in CEE 622.

**622 Stochastic Hydrologic Modeling**
On demand. 2–3 credits. Prerequisite: OR&IE 370 or CEE 304.
J. R. Stedinger.
Develops statistical techniques used to analyze and model stochastic processes. Examination of Box-Jenkins, fractional-Brownian noise, and other single- and multiple-site stream-flow models; review of flood-frequency estimation issues; analysis of simulation output; parameter estimation and Bayesian inference.

**623 Water Quality Systems Analysis**
Spring. 3 credits. Prerequisites: Math 294 and optimization (CEE 323, Ag En 475, or OR&IE 320/520).
C. A. Shoemaker.
Applications of optimization and simulation methods to the design and operation of facilities for managing the quality of surface- and groundwater. Applications include location of wastewater and hazardous-waste facilities, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated aquifers. Optimization techniques include separable convex (linear) programming, integer programming, and nonlinear programming.

**626 Modeling Managed Ecosystems**
Fall, on demand. 3 credits. Prerequisites: Mathematics 294, statistics, and population ecology.
C. A. Shoemaker.
The use of optimization and statistical estimation procedures to develop strategies for managing populations and ecosystems. Primary focus will be on pest management, poikilotherm populations, and mitigation of potential pollution from pesticides.

**721 Environmental and Water Resources Systems Analysis Design Project**
On demand. Variable credit. Prerequisite: permission of instructor. May extend over two semesters.
Staff.
Design or feasibility study of environmental or water resources sytems, supervised and assisted by one or more faculty advisers; individual or group participation. Final report required.

**722 Environmental and Water Resources Systems Analysis Research**
On demand. Variable credit. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken.
Staff.
Investigations of particular environmental or water resources systems problems.

**728 Environmental and Water Resources Systems Analysis Colloquium**
Fall, spring. 1 credit.
Staff.
Lectures in various topics related to environmental or water resources systems planning and analysis.

**729 Special Topics in Environmental or Water Resources Systems Analysis**
On demand. Variable credit.
Staff.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

## Fluid Mechanics and Hydrology

**331 Fluid Mechanics**
Fall. 4 credits. Prerequisite: Engr 203 (may be taken concurrently).
3 lecs, 1 rec, evening exams. Staff.
Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

**332 Hydraulic Engineering**
Spring. 4 credits. Prerequisite: CEE 331.
2 lecs, 1 lab, field trip. Staff.
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

**430 Descriptive Hydrology**
On demand. 2 credits. Intended for non-engineering majors. Prerequisite: permission of instructor.
W. H. Brutsaert.
Introduction to hydrology as a description of the hydrologic cycle and the role of water in the natural environment. Topics include precipitation, infiltration, evaporation, groundwater, surface runoff, floods, and droughts.

**431 Geohydrology (also ABEN 471 and Geol 445)**
Fall. 3 credits. Prerequisite: permission of instructor.
W. H. Brutsaert with J.-Y. Parlange and T. S. Steenhuis (in ABEN) and A. L. Bloom and L. Cathles (in Geol).
An intermediate course in aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**[630 Advanced Fluid Mechanics**
Fall. 3 credits. Prerequisite: CEE 331.
Offered alternate years. Not offered 1989–90.
3 lecs. Staff.
Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.]

**631 Flow and Contaminant Transport Modeling in Groundwater**
Spring. 3 credits. Prerequisites: Mathematics 294 or equivalent, Engr 241 or experience in numerical methods and programming, and elementary fluid mechanics.
J. A. Liggett.
Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

**[632 Analytical Hydrology**
Spring. 3 credits. Prerequisite: CEE 331. Not offered 1989–90.
W. H. Brutsaert.
Physical and statistical prediction methods for design related to hydrologic processes. Hydrometeorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.]

**633 Flow in Porous Media and Groundwater**
Spring. 3 credits. Prerequisite: CEE 331.
W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.

**634 Engineering Micrometeorology**
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor.
3 lecs. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

**635 Coastal Engineering I**
Fall. 3 credits. Prerequisite: CEE 331.
3 lecs. P. L.-F. Liu.
Linear wave theory, wave generation by wind, analysis of fluid forces on floating and fixed coastal structures and modification of waves and currents by these structures, coastal processes, and coastal sediment motion.

**636 Environmental Fluid Mechanics**
Spring. 3 credits. Prerequisite: CEE 655.
Offered alternate years.
G. H. Jirka.
Mass- and heat-transport processes in the environment and their interaction with pollutant discharges. Mechanics of discretely and continuously stratified fluids, internal waves, density currents, selective withdrawal, and baroclinic motions. Flow stability, mixing, and turbulence. Turbulent diffusion and shear flow dispersion, including effects of buoyancy. Convective instabilities and mixed-layer dynamics. Concentrated sources of momentum and buoyancy: jets and plumes and their behavior in the environment. Applications to mixing processes in rivers, lakes, the ocean, and the atmosphere.

**637 Project—Hydraulics**
On demand. Variable credit.
Hours to be arranged. Staff.
The student may elect a design problem or undertake the design and construction of special equipment in the fields of fluid mechanics, hydraulic engineering, or hydrology.

**638 Hydraulics Seminar**
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering.
Staff.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

**639 Special Topics in Hydraulics**
On demand. Variable credit.
Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

**730 Coastal Engineering II**
Spring. 3 credits. Prerequisite: CEE 635.
3 lecs. P. L.-F. Liu.
Review of linear and nonlinear theories for ocean waves, applicability of different wave theories to engineering problems, wave-energy transmission, tsunamis, behavior of submerged and floating bodies, harbor agitations, ship waves.

**[732 Unsteady Hydraulics**
Spring. 3 credits. Prerequisite: CEE 332 or permission of instructor. Offered alternate years. Not offered 1989–90.
J. A. Liggett.
The physical and mathematical basis for unsteady processes in hydraulic engineering, especially unsteady open-channel flow. Water hammer, unsteady sediment transport, long waves on large bodies of water, circulation. Numerical methods of solution.]

**734 Experimental Methods in Hydraulics**
On demand. 2 credits. Prerequisite: CEE 331.
G. H. Jirka.
Methods used in planning and conducting laboratory and field experiments in hydraulics and fluid mechanics. Dynamic similarity, modeling laws, and applications. General operating principles and performance characteristics of measurement instruments. Specific devices for measurement of fluid properties, pressure, and flow. Data acquisition, processing, and signal analysis. Laboratory demonstrations.

**735 Research in Hydraulics**
On demand. Variable credit.
Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

## Geotechnical Engineering

**341 Introductory Soil Mechanics**
Spring. 3 credits.
2 lecs, 1 lab-tutorial. Staff.
Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability and earth pressure. Introduction to laboratory testing. Synthesis of soil analysis and laboratory-test results for the design of engineering structures.

**640 Foundation Engineering**
Fall. 3 credits. Prerequisite: CEE 341.
3 lecs, optional tutorial. Staff.
Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

**641 Retaining Structures and Slopes**
Spring. 3 credits. Prerequisite: CEE 341.
3 lecs, optional tutorial. Staff.
Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced earth walls. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

**642 Highway Engineering (also Ag and Bio En 491)**
Spring. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).
2 lecs, 1 lab. L. H. Irwin.
For description see Ag En 491.

**643 Pavement Engineering (also ABEN 692)**
Fall. 4 credits. Limited to engineering seniors and graduate students. Prerequisites: CEE 341 and 642. Offered alternate years.
3 lecs, 1 lab. L. H. Irwin.
For description see Ag Bio and En 692.

**647 Design Project in Geotechnical Engineering**
On demand. 1–6 credits.
Students may elect to undertake a design project in geotechnical engineering. The work is supervised by a professor in the subject area.

**648 Seminar in Geotechnical Engineering**
Fall, spring.
Staff.
Presentation and discussion of topics in current research and practice in geotechnical engineering.

**649 Special Topics in Geotechnical Engineering**
On demand. 1–6 credits.
Staff.
Supervised study of special topics not covered in the formal courses.

**740 Engineering Behavior of Soils**
Fall. 3 credits. Prerequisite: CEE 341.
3 lecs. Staff.
Detailed study of physiochemical nature of soil. Stress states and stress-strain-time behavior. In-depth evaluation of the strength, compressibility, and permeability of natural soils. Appropriate methods for laboratory and in-situ strength and property testing.

**741 Rock Engineering**
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology.
2 lecs, 1 lab. Staff.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

**744 Advanced Foundation Engineering**
Spring. 2 credits. Prerequisite: CEE 640.
2 lecs. Staff.
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, pile-driving dynamics, foundations for special structures.

**745 Soil Dynamics**
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs. Staff.
Study of soil behavior under dynamic loadings. Laboratory and field techniques for determining dynamic soil properties and strength liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions.

**[746 Embankment Dam Engineering**
Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor. Not offered 1989–90.
2 lecs. Staff.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.]

**[747 Case Studies in Geotechnical Engineering**
Spring. 3 credits. Prerequisites: CEE 641 and 741. Not offered 1989–90.
Staff.
Study of case histories in geotechnical engineering. Critical evaluation of successful and unsuccessful projects. Oral presentations and engineering report evaluation of each case.]

**[748 Tunnel Engineering**
Spring. 2 credits. Prerequisites: CEE 641 and 741. Not offered 1989–90.
2 lecs. Staff.
Principles of analysis and design for earth and rock tunnels. Materials, construction methods, stability and support systems, deformations, and performance monitoring.]

**749 Research in Geotechnical Engineering**
On demand. 1–6 credits.
Staff.
For the student who wants to pursue a particular geotechnical topic in considerable depth.

## Environmental Quality Engineering

**351 Environmental Quality Engineering**
Spring. 3 credits.
3 lecs. L. W. Lion.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Emphasis on water-quality control concepts, theory, and methods. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

**352 Water Supply Engineering**
Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor.
3 lecs. R. I. Dick.
Analysis of contemporary threats to human health by public-water supply systems. Criteria and standards for potable-water quality. Water-quality control theory. Design of facilities for obtaining, treating, storing, and distributing water.

**651 Microbiology of Water and Wastewater**
Fall. 2 credits. Prerequisite: one semester of college chemistry.
2 lecs. L. W. Lion.
A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

**653 Chemistry of Water and Wastewater**
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor.
3 lec-recs. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

**654 Aquatic Chemistry**
Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 287–288.
3 lecs. J. J. Bisogni.
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination chemistry, redox reactions, adsorption phenomena and chemical-equilibria computer programs. In depth coverage of topics covered in CEE 653.

**655 Pollutant Transport and Transformation in the Environment**
Fall. 3 credits. Prerequisite: CEE 331.
J. J. Bisogni, G. H. Jirka.
An introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment. Advective and diffusive mass transport, turbulent diffusion and shear-flow dispersion in water or atmosphere, dispersion in groundwater flow, homogeneous and heterogeneous chemical reactions and their effects on transport phenomena, air-water-soil interface transfer processes. Emphasis on physical mechanisms, with some applications to surface water, groundwater, and atmospheric transport and quality models.

**656 Environmental Quality Management**
Fall; spring on demand. 3 credits (4 with approval of instructor). For upperclass or graduate students. May not be offered 1989–90.
2 lec-discs. L. B. Dworsky.
An introduction to environmental quality management; nature, cause, and control of environmental problems; interaction of physical, social, and cultural environments. Emphasis on the interdependent social, economic, developmental, and environmental issues confronting society.

**658 Sludge Treatment, Utilization, and Disposal**
Spring. 3 credits. Prerequisite: CEE 351 or permission of instructor.
3 lecs. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities as a function of process design and operational variables; alternatives for reclaiming or disposing of hazardous and nonhazardous residues with assessment of potential environmental impacts and factors influencing the magnitude of those impacts; fundamental factors influencing performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal; and considerations in selection and integration of sludge-management processes to approach optimal design.

**659 Environmental Quality Engineering Seminar**
Spring. 1 credit. Intended for all graduate students in environmental engineering; open to others with permission of instructor.
R. I. Dick.
Presentation and discussion of current research and design projects in environmental engineering.

**755 Environmental Engineering Processes I**
Fall. 3 credits. Prerequisite: Previous or concurrent enrollment in CEE 653 or permission of instructor.
3 lecs. J. J. Bisogni.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

**756 Environmental Engineering Processes II**
Spring. 3 credits. Prerequisites: CEE 651 and 755, or permission of instructor.
3 lecs. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment process.

**757 Environmental Engineering Processes Laboratory I**
Fall. 1 credit. Prerequisite: concurrent enrollment in CEE 653 and CEE 755.
1 lab. J. J. Bisogni.
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

**758 Environmental Engineering Processes Laboratory II**
Spring. 1 credit. Prerequisite: CEE 651 and concurrent enrollment in CEE 756.
1 lab. J. M. Gossett.
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; enzymatic assays for microbial inhibition; disinfection; aerobic and anaerobic biological treatability studies; enumeration of bacteria.

**759 Special Topics in Environmental Engineering**
On demand. Variable credit.
Hours to be arranged. Staff.
Supervised study in special topics not covered in formal courses.

**851 Thesis—Environmental Engineering**
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Transportation

**361 Introduction to Transportation Engineering**
Spring. 3 credits.
A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Vehicle and system technology; traffic flow and control; supply-demand interactions; system planning, design, and management. Institutional and energy issues; environmental impact.

**[660 Transportation Planning and Policy**
Fall. 3 credits. Not offered 1989–90.
A. H. Meyburg.
Public-sector planning and decision making for transportation. Problems of urban transportation and their implications. A systems-analysis approach to formulation of transportation policy at the local, regional, state, and federal levels. Consideration of urban-transportation planning models.]

**[663 Routing and Scheduling in Transportation Networks**
Fall. 3 credits. Prerequisite: OR&IE 320 or equivalent. Not offered 1989–90.
M. A. Turnquist.
Design of vehicle routes and schedules in transportation systems. Network flow algorithms. Fleet utilization problems. Routing and scheduling under time constraints, multiobjective routing problems, with applications to both passenger and freight systems.]

**[664 Transportation Systems Design**
Spring. 3 credits. Prerequisite: CEE 361 or 663. Not offered 1989–90.
G. P. Fisher.
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.]

**[668 Transportation System Operations and Management**
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. Not offered 1989–90.
G. P. Fisher.
Planning and management problems in urban transportation systems and their solution. Transit operations planning. Demand forecasting. Consideration and evaluation of transportation system management alternatives such as high-occupancy vehicle lanes, parking prohibitions, auto-free zones, and pricing. Traffic implications of land-use development (site planning).]

**761 Transportation Design Project**
On demand. Variable credit.
Staff.
Design or feasibility study of transportation systems, supervised by one or more faculty advisers. Individual or group participation.

**762 Transportation Research**
On demand. Variable credit.
Staff.
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

**[763 Transportation Colloquium**
Fall, spring. 1 credit. Not offered 1989–90.
Lectures in various topics related to transportation planning and analysis.]

**[764 Special Topics in Transportation**
Spring. 3 credits. Not offered 1989–90.
Staff.
Advanced subject matter not covered in depth in other regular courses.]

## Structural Engineering

**371 Structural Behavior**
Fall. 4 credits. Prerequisite: Engr 202.
3 lecs, one 2-hour lab, evening exams.
M. Sansalone.
Fundamental concepts of structural engineering. Behavior, analysis, and design. Loads, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of behavior and design of steel and concrete members.

**372 Structural Analysis**
Spring. 4 credits. Prerequisite: CEE 371.
3 lecs, one 2-hour lab, evening exams.
Staff.
Fundamentals of statically indeterminate structures. Moment-area and virtual-work methods of displacement computation. Matrix force and stiffness methods. Moment distribution analysis. Influence lines. Computer applications to practical structures.

**373 Design of Concrete Structures**
Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor. Prerequisites or corequisites: CEE 376 and Engr 261.
2 lecs, one 2-hour lab, design project. A. H. Nilson.
Behavior and design of reinforced concrete, prestressed concrete, and composite structures.

**374 Design of Steel Structures**
Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. Prerequisites or corequisites: CEE 376 and Engr 261.
3 lecs, one 2-hour sec, evening exams, design project. G. G. Deierlein.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

**[375 Structural Behavior Laboratory**
Spring. 2 credits. Prerequisite or corequisite: CEE 372. Not offered 1989–90.
R. N. White.
A laboratory course on behavior of structures, utilizing small-scale models. Elastic, inelastic, and nonlinear behavior of structural components and systems. Experimental design and projects.]

**376 Civil Engineering Materials**
Fall. 3 credits.
2 lecs, 1 lab. K. C. Hover.
Engineering properties of concrete, steel, wood, and other structural materials. Design characteristics and significance of test results of materials used in engineering works. Developing QA/QC programs and writing specifications. Extensive laboratory testing and report writing.

**[670 Timber Engineering**
Spring. 1 credit. Prerequisite: CEE 373. Not offered 1989–90.
R. N. White.
Timber properties. Design of timber tension members, beams, and beam-columns. Glued-laminated timber design. Connection behavior and design. Special timber structural systems.]

**671 Random Vibration**
Fall. 3 credits. Prerequisites: M&AE 326, CEE 779, and OR&IE 260; or equivalent and permission of instructor. Offered alternate years.
M. D. Grigoriu.
Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

**672 Fundamentals of Structural Mechanics**
Fall. 3 credits. Prerequisite or corequisite: CEE 373.
M. D. Grigoriu.
Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, energy principles, introduction to finite-element method.

**673 Advanced Structural Analysis**
Fall. 3 credits. Prerequisites: CEE 372 and computer programming.
Evening exams, programming project. Staff.
Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis.

**[674 Structural Model Analysis and Experimental Methods**
Spring. 3 credits. Not offered 1989–90.
2 lecs, 1 lab. R. N. White.
Dimensional analysis and similitude. Model materials, fabrication, loading, instrumentation techniques, and use of models in design. Experimental stress analysis. Models project.]

**675 Concrete Materials and Construction**
Spring. 3 credits. Prerequisite: CEE 376 or equivalent.
2 lecs, 1 lab. K. C. Hover.
Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior. Lab assignments.

**678 Low-Cost Housing Primarily for Developing Countries (also Architecture 614)**
Fall. 3 credits. May not be offered 1989–90.
2 lecs, conferences. H. Richardson.
A broad, multidisciplinary approach covering technology, architecture, planning, sociology, economy, and cultural aspects. Students work in teams on a term project, applying their own discipline while being introduced to the problems and approaches of other disciplines. For example, engineering students investigate the technological aspects of the subject but also learn about other matters that influence technological decisions, such as cultural and economic factors.

**680 Structural Engineering Seminar**
Fall, spring. 1 credit. Limited to qualified seniors and graduate students.
Staff.
Presentation of topics of current interest in the field of structures.

**770 Engineering Fracture Mechanics**
Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years.
2 lecs, 1 lab. A. R. Ingraffea.
Fundamentals of fracture-mechanics theory. Energy and stress-intensity approaches to fracture. Mixed-mode fracture. Fatigue-crack propagation. Finite- and boundary-element methods in fracture mechanics. Introduction to elastic-plastic fracture mechanics. Interactive computer graphics for fracture simulation. Laboratory techniques for fracture-toughness testing of metals, concrete, and rock.

**772 Finite-Element Analysis**
Spring. 3 credits. Prerequisites: CEE 672 and 673, or permission of instructor.
Staff.
Conceptual, theoretical, and practical bases for finite-element analysis in structural mechanics and other disciplines. Development and evaluation of formulations for one-, two-, and three-dimensional elements. Introduction to boundary-element analysis. Interactive computer graphics for finite- and boundary-element analysis.

**773 Structural Reliability**
Spring. 3 credits.
M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.

**774 Prestressed Concrete Structures**
Spring. 3 credits. Prerequisites: CEE 373 and 376 or equivalent. Recommended: CEE 775.
3 lecs. R. N. White.
Behavior, analysis, design of pretensioned and posttensioned prestressed concrete structures. Flexure, shear, bond, anchorage zone design, cracking, losses. Partial prestressing. Strength, serviceability, structural efficiency of beams, slabs, tension and compression members, frameworks, bridges.

**775 Advanced Reinforced Concrete**
Fall. 3 credits. Prerequisites: CEE 373 and 376 or equivalent.
3 lecs. A. H. Nilson.
General flexural analysis, deflection analysis, columns with uniaxial and biaxial bending, beam-supported slabs, flat-plate slabs, composite steel-deck slabs, ground-supported slabs, yield-line theory, limit-state analysis, footings, retaining walls, deep beams, tall buildings, and seismic design.

**776 Advanced Design of Metal Structures**
Fall. 3 credits. Prerequisite: CEE 374 or equivalent.
T. Pekoz.
Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

**777 Advanced Behavior of Metal Structures**
Spring. 3 credits. Prerequisite: CEE 374 or equivalent.
T. Pekoz.
Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and cold-rolled steel and aluminum members, elements, and frames. Critical review of design specifications.

**[778 Shell Theory and Design**
Fall. 3 credits. Offered alternate years. Not offered 1989–90.
P. Gergely.
Fundamentals of practical shell theory. Differential geometry of surfaces; membrane and bending theory of shells; analysis and design of cylindrical shells, polygonal domes, and paraboloids.]

**779 Structural Dynamics and Earthquake Engineering**
Spring. 3 credits.
P. Gergely.
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

**780 Advanced Concrete Material Science**
Fall. 3 credits. Prerequisites: CEE 376 or equivalent and CEE 675.
K. C. Hover.
Advanced study of the chemistry, physics, and microstructure of cement and concrete. Investigation of cement manufacture and chemistry, hydration reactions and effect of admixtures. Study of microstructure with scanning electron microscopy, and porosimetry. Engineering properties and behavior include failure mechanisms and elastic and viscoelastic behavior. Durability. Student presentations.

**782 Advanced Topics in Finite-Element Analysis**
Fall. 3 credits. Prerequisite: CEE 772.
Offered alternate years.
J. F. Abel, A. R. Ingraffea.
Lectures and colloquia on selected advanced topics and research in progress, including dynamics, nonlinear analysis, shells, fracture mechanics, fluid dynamics, and computer graphics.

**783 Civil and Environmental Engineering Materials Project**
On demand. 1–3 credits.
Staff.
Individual projects or reading and study assignments involving engineering materials.

**784 Design Project in Structural Engineering**
Fall, spring. Variable credit.
Students may elect to undertake a design project in structural engineering. The work is supervised by a professor in this subject area.

**785 Research in Structural Engineering**
On demand. Variable credit.
Hours to be arranged. Staff.
Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

**786 Special Topics in Structural Engineering**
On demand. Variable credit.
Hours to be arranged. Staff.
Individually supervised study or independent design or research in specialized topics not covered in regular courses.

**880 Thesis—Structural Engineering**
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Geotechnical engineering: section 01; structural engineering: section 02. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Engineering Management

**590 Engineering Management Practice**
Spring. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist.
What an engineering manager does in practice, including the planning, organizing, integrating, and measuring. A series of expository lectures is complemented by an integrated seminar series presented by practicing engineering managers.

**591 Engineering Management Project**
Fall. 3 credits. Prerequisite: permission of instructor.
K. C. Hover.
An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

**592 Engineering Management Project**
Spring. 3 credits. Prerequisite: permission of instructor.
K. C. Hover.
A continuation of CEE 591.

**593 Engineering Management Methods I**
Fall. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist.
Engineering management methods with an emphasis on modern interactive-software tools. Case studies are used extensively to illustrate the application of these methods to engineering management problems. Methods covered include spreadsheets, database managers, statistical-analysis software, project scheduling and optimization, and network flow algorithms.

**594 Engineering Management Methods II**
Spring. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist.
An extension of CEE 593. The use of interactive graphics and geographic information systems, distributed databases, simulation of complex systems, and the use of expert systems in engineering management. As with CEE 593, extensive use will be made of case studies to illustrate the application of these methods.

**595 Construction Planning and Operations**
Fall. 3 credits. Prerequisite: permission of instructor.
3 lecs. K. C. Hover.
A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, design of falsework and shoring systems, construction loadings, materials handling for construction, optimization of construction processes, applications of expert systems.

**596 Building Systems Integration**
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs. Staff.
Emphasizes the engineering design and construction process as a total systems problem: overall structural planning and the sequence of assembly, impact of assembly details on construction procedures, review of designs for constructability, integration of engineering services, introduction to value engineering, construction documents, and contract administration.

**597 Risk Analysis and Management**
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent.
2 lecs, 1 sec. M. A. Turnquist, J. R. Stedinger.
The analysis and management of risks in technological systems, including energy production, waste disposal, engineering construction, and transportation. Probability models of failure, exposure, and consequences. Public-sector decsion making and regulation of risks.

**598 Decision Making in Engineering Systems**
Fall. 3 credits. Prerequisite: permission of instructor.
3 lecs. Staff.
An examination of the decision-making behavior of managers and users of engineering systems. Such behavior will be addressed from various perspectives, including economic theories of choice, psychological theories of perception and choice, and consumer theories from marketing research.

# COMPUTER SCIENCE

The Department of Computer Science is in both the College of Arts and Sciences and the College of Engineering.

**100 Introduction to Computer Programming (also Engr 100)**
Fall, spring, summer. 4 credits. Students who plan to take CS 101 or 102 and also 100 must take 101 or 102 first.
2 lecs, 1 rec (optional), 3 evening exams.
An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and algorithm and program development. The subject of the course is programming, not a particular programming language. The principal programming language is Pascal. The course does not presume previous programming experience. An introduction to numerical computing is included, although no college-level mathematics is presumed. Programming assignments are tested and run on interactive, stand-alone microcomputers.

**101 The Computer Age (also Engr 101)**
Fall, summer. 3 credits. Credit is granted for both CS 100 and 101 only if 101 is taken first.
An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students become acquainted with the notion of an algorithm by writing several programs in Pascal or LISP and testing them on microcomputers. The amount of programming is about half that taught in CS 100. Each student writes a term paper on some aspect of computing.

**102 Introduction to Microcomputer Applications (also Ag Engr 102)**
Fall. 3 credits. Each lab section limited to 16 students. Not open to engineering students or students who have taken any prior computer courses at Cornell. Students in statutory colleges must enroll in Ag Engr 102.
2 lecs, 1 lab, 2 evening exams.
An introduction to the use of application packages on microcomputers. An attempt will be made to assess and demonstrate the capability and limitations of the current generation of personal computers through software for word processing, spreadsheets, databases, and other applications. The course will involve very little programming with high-level languages.

**211 Computers and Programming (also Engr 211)**
Fall, spring, summer. 3 credits. Credit will not be granted for both CS 211 and 212. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 1 rec, 2 evening exams.
Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, data structures, and analysis of algorithms. Pascal is the principal programming language.

**212 Modes of Algorithmic Expression**
Fall. 4 credits. Credit will not be granted for both CS 211 and 212. Prerequisite: CS 100 or equivalent programming experience.
2 lecs, 2 recs, 2 evening exams.
A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme, a dialect of LISP.

CS 212 emphasizes a varied collection of advanced programming concepts and techniques available in a modern functional programming language. In contrast, CS 211 focuses on perfecting programming skills in a conventional imperative programming language. Corrective transfers between CS 211 and 212 (in either direction) are encouraged during the first few weeks of instruction.

**222 Introduction to Scientific Computation (also Engr 222)**
Spring. 3 credits. Prerequisites: CS 100 and Mathematics 112, 122, or 192.
2 lecs, 1 rec, 2 evening exams.
An introduction to elementary numerical analysis and scientific computation. Students write FORTRAN programs and use high-quality numerical software packages to solve representative problems. Emphasis is on efficient, reliable, and stable methods for the basic problems of computational mathematics. Special topics include supercomputing and parallel computation.

**280 Discrete Structures**
Fall, spring. 4 credits. Prerequisite: CS 211, 212 or permission of instructor.
3 lecs.
Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs.

**305 Social Issues in Computing (also Engr 305)**
Spring. 3 credits. Prerequisite: CS 100 or 101 or permission of instructor. Not offered every year.
2 lecs.
Economic, political, legal, and cultural impact of computers and computer-related technology; the role of computers in coordinating diversity and reducing disorder; the effect of computers on the individual; data banks and privacy; machine creativity and machine intelligence.

**314 Introduction to Computer Systems and Organization**
Fall, spring, summer. 4 credits. Prerequisite: CS 211 or equivalent.
2 lecs, 1 sec, 2 evening exams.
Introduction to the logical structure of digital computers. Topics include representation of information, machine-assembly language, the input-output channel, hierarchical storage systems, and microprogramming.

**381 Introduction to Theory of Computing**
Fall. 4 credits. Prerequisite: CS 280 or permission of instructor.
3 lecs.
An introduction to modern theory of computing: automata theory, formal languages, and effective computability.

**400 The Science of Programming**
Spring. 4 credits. Prerequisite: CS 280 or equivalent.
3 lecs. D. Gries.
The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

**410 (310) Data Structures**
Fall, spring, summer. 4 credits. Prerequisite: CS 280 or permission of instructor.
2 lecs, 2 evening exams.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

**411 Programming Languages and Logics**
Spring. 4 credits. Prerequisite: CS 410 or permission of instructor. Not offered every year.
2 lecs.
A study of major programming paradigms. Basic l-calculus. Functional programming. Programming in ML. Typed l-calculi. Polymorphism, type systems. Object-oriented programming and inheritance. Logic programming. Introduction to formal semantics.

**412 Introduction to Compilers and Translators**
Spring. 4 credits. Prerequisites: CS 314, 381, 410. Not offered every year.
3 lecs.
Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

**414 Systems Programming and Operating Systems**
Fall. 3 credits. Prerequisite: CS 314 or permission of instructor.
2 lecs, 2 evening exams.
An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

**415 Practicum in Operating Systems**
Fall. 2 credits. Prerequisite: CS 410. Corequisite: CS 414.
1 lec.
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

**417 Computer Graphics (also Architecture 374)**
Spring. 3 credits. Prerequisite: CS 211 or 212.
2 lecs, 1 lab.
An introduction to the principles of interactive computer graphics, including input techniques, display devices, display files, interactive graphic techniques, two- and three-dimensional computer graphics, perspective transformations, hidden-line and hidden-surface algorithms, parametric surfaces, light reflection models, and realistic image synthesis.

**418 Practicum in Computer Graphics (also Architecture 375)**
Spring. 2 credits. Prerequisite: CS 211 or 212. Recommended: CS 314. Corequisite: CS 417.
1 lab.
Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid image generation or raster graphics displays.

**421 Numerical Solution of Algebraic Equations**
Fall. 4 credits. Prerequisites: Mathematics 222 or 294, one additional mathematics course numbered 300 or above, and knowledge of FORTRAN at the CS 222 level.
3 lecs.
Modern algorithms for systems of linear equations, systems of nonlinear equations, and multidimensional optimization. Some discussion of methods that are suitable for parallel computation.

**432 Introduction to Database Systems**
Spring. 3 credits. Prerequisites: Either CS 211or 212, and 410, or permission of instructor. Recommended: CS 314.
2 lecs, 1 rec.
Introduction to modern database management systems. Concepts in data modeling and query processing. Database models and query languages. Storage structures and access methods. Concurrency control.

**433 Practicum in Database Systems**
Spring. 2 credits. Corequisite: CS 432.
1 lab.
Issues related to the design and implementation of database-management systems will be addressed. Students will implement a simplified relational database system, including a file-access method and query-processing algorithms.

**472 Introduction to Artificial Intelligence**
Fall. 4 credits. Prerequisite: CS 410. Open to juniors, seniors, and graduate students.
2 lecs, 1 sec.
An introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, search, problem-solving, natural-language processing, logic and deduction, planning, and machine learning.

**481 Introduction to Theory of Computing**
Spring. 4 credits. Prerequisite: CS 280 or permission of instructor. Credit will not be granted for both CS 381 and CS 481. Corrective transfers between CS 481 and CS 381 (in either direction) are encouraged during the first few weeks of instruction.
3 lecs.
A faster-moving and deeper version of CS 381.

**482 (382) Introduction to Analysis of Algorithms**
Spring. 4 credits. Prerequisites: CS 410 and either 381 or 481, or permission of instructor.
3 lecs.
Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

**486 Applied Logic (also Mathematics 486)**
Spring. 4 credits. Prerequisites: Mathematics 222 or 294, CS 100, and some additional course in mathematics or theoretical computer science.
2 lecs, 1 lab to be arranged.
Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and l-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

**490 Independent Reading and Research**
Fall, spring. 1–4 credits.
Independent reading and research for undergraduates.

**600 Computer Science and Programming**
Fall. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.
An introduction to practical, modern ideas in programming methodology. Covers style and organization of programs, basic techniques for presenting proofs of correctness of programs, and the use of a "calculus" for the derivation of programs.

**601 Introduction to Programming Logics**
Spring. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor.
1 lec.
Exploration of logics for reasoning about programs, with special emphasis on data types and type theory. Comparison with domain theory and logics of computable functions. The Cornell proof development system Nuprl may be used.

**611 Advanced Programming Languages**
Fall. 4 credits. Prerequisites: CS 410 and 381 or 481, or permission of instructor.
3 lecs.
A survey of programming paradigms; functional, imperative, and logic programming. The untyped lambda-calculus. The typed lambda-calculus, type systems, polymorphism, type inference. Formal semantics of programming languages. Elements of domain theory.

**612 Compiler Design for High-Performance Architectures**
Spring. 4 credits. Prerequisites: CS 314, 410, and 412, or permission of instructor.
3 lecs.
Compiler design techniques for sequential and parallel machines. Principles of optimizing compilers: dataflow analysis, optimizing transformations, code generation. Code generation for pipelined computers: code reorganization to minimize interlock. Principles of vectorization: dependency analysis, solving Diophantine equations, transformations to enhance vector content in programs. Code generation for VLIW machines: trace scheduling. Compiling functional and logic programming languages for dataflow architectures.

**613 Concurrent Programming**
Spring. 4 credits. Prerequisites: CS 414 and 600, or permission of instructor.
3 lecs.
Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

**614 Advanced Systems**
Spring. 4 credits. Prerequisite: CS 414 or permission of instructor.
2 lecs.
An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**[615 Machine Organization**
Spring. 4 credits. Prerequisite: CS 314 or permission of instructor. Not offered 1989–90.
3 lecs.]

**616 VLSI Algorithms**
Spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
2 lecs.
This course focuses on the area-time performance of VLSI computing systems. After a review of technology, a model of computation for VLSI is defined. General area-time lower-bound techniques are presented and applied to specific problems such as integer arithmetic, matrix operations, signal processing, sorting, and graph problems. Design of parallel algorithms and architectures is then discussed for the same class of problems. Selected topics on computer-aided design for VLSI, such as layout and testing, will also be covered.

**621 Matrix Computations**
Fall. 4 credits. Prerequisites: Mathematics 411 and 431, or permission of instructor.
3 lecs.
Numerical matrix algorithms. Stable and efficient methods for solving systems of linear equations: Gaussian elimination, Cholesky decomposition, bounded and structured systems, the QR factorization, and least-squares methods. The symmetric and unsymmetric eigenvalue problems and related computational problems. The singular value decomposition.

**622 Numerical Optimization and Nonlinear Algebraic Equations**
Spring. 4 credits. Prerequisite: CS 621.
3 lecs.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**632 Database Systems**
Fall. 4 credits. Prerequisites: CS 410 and 432, or permission of instructor.
2 lecs.
Discussion of data models and the implementation of database systems, with an emphasis on current areas of research. Topics include the relational model, data-dependency theory, semantic modeling, query optimization, transaction management, and advanced issues in distributed databases.

**635 Automatic Text Processing and Information Retrieval**
Spring. 4 credits. Prerequisite: CS 410 or permission of instructor.
2 lecs.
Modern methods for natural language text processing. Topics include text analysis, storage and retrieval, automatic spelling aids, text compression and encryption, language understanding systems, automatic abstracting, and text generation and translation.

**643 Design and Analysis of Computer Networks**
Fall. 4 credits. Prerequisite: CS 414 or permission of instructor. Not offered every year.
2 lecs.
A course in computer networks and layered protocols. The following topics are presented: network topology design; data transmission within the physical layer; data-link sliding-window protocols; network layer in point-to-point long-haul networks, satellite and packet radio networks and local networks; transport and session layer protocols; internetworking. Selected topics from distributed computing will also be discussed.

**655 Mathematical Foundations of Computer Modeling and Simulation (also Mathematics 655)**
Fall. 4 credits. Prerequisites: Mathematics 431 and 432, or the equivalent in both content and level of mathematical sophistication, or permission of instructor. Not offered every year.
3 lecs.
This course has two parts, one purely mathematical and the other emphasizing applications. The first part is intended to introduce students to theoretical tools that are relevant to the study of robotics, solid modeling, and simulation. These tools will be drawn from the areas of real and complex algebraic geometry, topology, differential geometry, and differential equations. The second part of the course will provide applications that illustrate uses of the mathematics and point the way to needed further developments.

**661 Robotics**
Fall. 4 credits. Prerequisites: CS 482 and permission of instructor. Not offered every year.
3 lecs.
State-of-the-art in theoretical and experimental robotics, with an emphasis on robot-motion planning. Topics include: Task-level robot planning, collision-free path planning, grasp synthesis, modeling and propagating uncertainty, planning compliant motions for precision assembly, geometrical planning theories, motion planning with dynamics (and dynamic constraints), computational complexity of robot-motion planning, computational theories of friction, impact, and the physics of manipulation, and error detection and recovery in robotics.

**662 Robotics Laboratory**
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. Not offered every year.
1 lab.
Introduction to the use of equipment and techniques in a modern robotics laboratory. Includes VAL programming, force sensing, compliant motion, and mechanical assembly.

**671 Introduction to Automated Reasoning**
Fall. 4 credits. Prerequisites: CS 611 and 681 and Mathematics 581. Not offered every year.
3 lecs.
Methods to automate reasoning in mathematics, including decision procedures, theorem provers, and formal proof tactics. Various implemented systems such as Edinburgh LCF, Cornell's Nuprl, and the Boyer and Moore theorem prover may be studied.

**672 Artificial Intelligence Programming**
Spring. 4 credits. Prerequisite: CS 472 or permission of instructor.
3 lecs.
Review of Common LISP programming and an overview of AI programming techniques. Discussion focuses on practical issues faced by implementors of large LISP systems. Topics may include discrimination nets, agendas, deductive retrievers, slot and filler databases, backtracking problem solvers, and truth-maintenance systems. Students will be expected to implement several of the systems discussed in class.

**681 Analysis of Algorithms**
Fall. 4 credits. Prerequisite: CS 381 or 481, or permission of instructor.
3 lecs.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

**682 Theory of Computing**
Spring. 4 credits. Prerequisite: CS 381 or 481, or permission of instructor.
3 lecs.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

**709 Computer Science Graduate Seminar**
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.
A weekly meeting for the discussion and study of important topics in the field.

**711 Topics in Programming Languages and Systems**
Spring. 4 credits. Prerequisites: CS 381 or 481, and 611, or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**712 Topics in Programming Languages and Systems**
Spring. 4 credits. Prerequisite: CS 612 or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**713 Seminar in Systems and Methodology**
Fall, spring. 4 credits. Prerequisites: CS 414 and an advanced Systems course such as CS 613, 614, 632, or 643, or permission of instructor. Not offered every year.
Discussion of contemporary issues in systems and methodology.

**714 Distributed Computing**
Spring. 4 credits. Prerequisites: CS 414 and an advanced systems course such as CS 613, 614, 632, or 643, or permission of instructor. Not offered every year.
2 lecs.
Principles of distributed computing and their application to fundamental problems. Considerable time will be devoted to modeling distributed computations, the theory of concurrency control, security and protection, and issues in fault tolerance (including consensus problems). Other topics may be optimal resource placement, cache management, the specification of distributed programs, and randomized protocols.

**715 Seminar in Programming Refinement Logics**
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

**719 Seminar in Programming Languages**
Fall, spring. 4 credits. Prerequisite: CS 611 or permission of instructor. S-U grades only.

**721 Topics in Numerical Analysis**
Fall. 4 credits. Prerequisite: CS 621 or 622, or permission of instructor. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**722 Topics in Numerical Analysis**
Spring. 4 credits. Prerequisite: CS 621 or 622. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**729 Seminar in Numerical Analysis**
Fall, spring. 1–4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

**[733 Topics in Information Processing**
Not offered 1989–90.
2 lecs.
Topics are chosen at instructor's discretion.]

**[734 Seminar in File Processing**
Fall. Credit to be arranged. Prerequisite: CS 733 or permission of instructor. Not offered 1989–90.]

**739 Seminar in Text Processing and Information Retrieval**
Fall, spring. Credit to be arranged. Prerequisite: CS 635 or permission of instructor. S-U grades only.

**[743 Topics in Fault-Tolerant Distributed Computing**
Prerequisites: CS 614, 643, or 714. Not offered 1989–90.
1 lec.
A study of the latest results and an exploration of open questions in the area of fault-tolerant distributed computing. Topics may include failure models, reliable broadcasts, synchronization, knowledge, and network partitioning. This course is particularly suited to students interested in pursuing research in this area.]

**747 Seminar in Program Logic and Semantics**
4 credits. Prerequisite: permission of instructor. S-U grades only. Not offered every year.

**749 Seminar in Systems Modeling and Analysis**
Fall, spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Discussion of advanced topics in modeling and analysis of computer systems and networks, with emphasis on performance.

**771 Topics in Artificial Intelligence**
4 credits. Prerequisite: permission of instructor. Not offered every year.

**772 Robotics Seminar**
4 credits. Prerequisite: permission of instructor. Not offered every year.

**774 Proseminar in Cognitive Studies II (also Cognitive Studies 774 and Linguistics 774)**
Spring. 4 credits. Prerequisite: permission of instructor.

**779 Seminar in Artificial Intelligence**
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades only.

**781 Topics in Analysis of Algorithms and Theory of Computing**
Fall. 4 credits. Prerequisites: CS 681 and 682, or permission of instructor. S-U grades only. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**782 Topics in Analysis of Algorithms and Theory of Computing**
Spring. 4 credits. Prerequisites: CS 681 and 682, or permission of instructor. S-U grades only. Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

**789 Seminar in Theory of Algorithms and Computing**
Fall, spring. 2–4 credits. Prerequisite: permission of instructor. S-U grades only.

**790 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

**890 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

**990 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

# ELECTRICAL ENGINEERING

## Core Courses

**210 Introduction to Electrical Systems (also Engr 210)**
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 293 and Physics 213.
3 lecs and optional tutorial sections.
For description see Engineering Common Courses.

**230 Introduction to Digital Systems**
Fall, spring. 4 credits.
2 lecs, 5 lab experiments.
Introduction to basic analysis, design techniques, and methodology of digital systems. Boolean algebra, integrated circuit components used in digital-system implementation, codes and number systems, logic design of combinational circuits, and sequential circuits, register transfer systems, and machine organization. Laboratory experiments are performed on a Macintosh computer using a logic simulator.

**301 Electrical Signals and Systems I**
Fall. 4 credits. Prerequisites: a grade of at least C+ in Engr 210 and C in Mathematics 293 and 294.
3 lecs, 1 rec-computing session.
Linear time-invariant systems as models for active and passive networks, nodal analysis, convolution, unilateral Laplace transforms, relationships between steady-state system response and dynamical behavior; introduction to state variable analysis.

**302 Electrical Signals and Systems II**
Spring. 4 credits. Prerequisite: EE 301.
3 lecs, 1 rec-computing session.
Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and $z$ transforms; applications of complex function theory and contour integration to system analysis; FFTs and DFTs; applications to modulation, filtering, and sampling.

**303–304 Electromagnetic Waves and Fields I and II**
303, fall; 304, spring. 4 credits each term. Prerequisites: grades of C or better in Physics 213 and 214, and Mathematics 294. Corequisite: (for 304) EE 302.
3 lecs, 1 rec-computing session.
Foundation and applications of electromagnetic theory, with emphasis on wave propagation, radiation, and the effects of the medium on wave transmission. Maxwell's equations, boundary conditions, electrostatics, Poynting theorem, electromagnetic basis of material properties and of circuits, plane waves in isotropic media, impedance concept and reflection, transmission lines, simple waveguides, resonant cavities, radiation and antenna systems, wave propagation in inhomogeneous and anisotropic media, and plasma and magnetic field effects. At the level of *Fields and Waves in Communication Electronics,* by Ramo, Whinnery, and Van Duzer, second edition.

**306 Fundamentals of Quantum and Solid-State Electronics**
Spring. 4 credits. Prerequisites: Physics 214, Mathematics 294, and EE 303.
3 lecs, 1 rec-computing session.
Introductory quantum mechanics and solid-state physics necessary for understanding lasers and modern solid-state electronic devices. Quantum mechanics is presented in terms of wave functions, operators, and solutions of Schroedinger's equation. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications studied include a simple metal, thermionic emission, and the p-n junction.

**308 Fundamentals of Computer Engineering**
Spring. 4 credits. Prerequisites: CS 100 and EE 230.
3 lecs, 1 rec-computing session.
An introduction to theoretical topics basic to computer engineering: discrete mathematics; structured computer organization; data structures and algorithms; and computer arithmetic. Practical applications of these concepts.

**310 Introduction to Probability and Random Signals**
Spring. 4 credits. Prerequisite: Mathematics 294.
3 lecs, 1 rec-computing session.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems incorporating these models, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications of these models will be given in such areas as communications, control, and device modeling. Specific topics include the basic concept of probability and its presentations through densities, cumulative distribution functions, and characteristic functions; conditional probability; independence; scalar and vector random variables and nonlinear transformations of data; expectation, conditional expectation, moments, correlation; laws of large numbers and central limit theorem; linear least mean square estimation; Bayes decision making.

**315 Electrical Laboratory I**
Fall. 4 credits. Prerequisite: a grade of at least C+ in Engr 210. Corequisite: EE 301.
2 lecs, 2 labs.
Basic electrical and electronic instrumentation and measurements involving circuits and fields of both active and passive elements; an experimental introduction to solid-state theory and devices. Introduction of the personal computer as a laboratory aid.

**316 High-Frequency and Microwave Fundamentals**
Spring. 4 credits. Prerequisites: EE 301, 303, and 315.
3 lecs, 1 lab.
Laboratory and design studies in high-frequency and fast-pulse circuits, microwaves and electro-optics. Technical report writing. Eight experiments and two design projects.

## Computer Engineering

**230 Introduction to Digital Systems**
Fall, spring. 4 credits.
For description see Core Courses.

**424 Computer Methods in Electrical Engineering**
Fall. 4 credits. Prerequisite: EE 301.
3 lecs, 1 rec.
Numerical techniques every electrical engineer should know, presented in the context of circuit simulation. Solution of linear and nonlinear algebraic equations; integration; solution of ordinary differential equations; introduction to sparse-matrix methods; alternative forms of circuit-equation formulation. Starting from a program to simulate simple, linear passive, steady-state circuits, the instructor will add, and the students improve on, procedures that will finally result in a nonlinear transient integrated-circuit simulator that involves most of the techniques discussed in the lectures.

**475 Computer Structures**
Fall. 4 credits. Prerequisite: EE 230.
3 lecs, 1 lab.
Organization and design of digital computers. Hard-wired and microprogrammed control sequencers, arithmetic hardware, and I/O systems, interrupt hardware, and memory organization. Each four- to six-person laboratory group will design and construct a small digital computer. User-programmable logic devices will be employed in the laboratory for circuit implementation.

**476 Microprocessor Systems**
Spring. 4 credits. Prerequisite: EE 475.
3 lecs, 1 lab.
System design using microprocessors. Hardware and software techniques employed for logic design, interfacing, instrumentation, and control. The use of development systems. User-programmable logic devices will be employed in the laboratory for interfacing the microcomputer to hardware.

**539 VLSI Digital-System Design**
Fall and spring. 6 credits (must be taken both semesters). Prerequisite: EE 475 or equivalent.
Fall: 3 lecs, 1 computing sec; spring: 1 lec, 1 lab.
Custom VLSI design as seen by a system designer. Switches as logic devices, MOS transistor, MOS logic design, two-phase clocking, stick diagrams, cell layout, regular control structures, simulation, performance analysis, RC timing model, system design for performance, design for testing, semicustom design, systolic arrays, CAD design tools. A chip design project and design report are required for fall semester. CAD tools are used extensively. Chips are tested for functionality and performance, and the design report is revised during the spring semester.

**541 Advanced Computer Architectures**
Fall. 3 credits. Prerequisite: EE 476 or permission of instructor.
Design and evaluation of processor architectures are examined in the light of actual implementations of both large-scale and small-scale systems. Topics include microprogramming, parallel and pipelined architectures, interleaved memories, cache and virtual memories, I/0 processors, vector and array processors, protection mechanisms, and RISC architectures.

**542 Parallel Processing**
Spring. 3 credits. Prerequisite: EE 541 or permission of instructor.
3 lecs.
Computer architecture for parallel processors that are designed to provide a high computation rate for large scientific problems; primary emphasis on image processing and highly parallel VLSI-based systems. Other applications considered include signal processing and the solution of PDEs. Performance, processor interconnections, algorithms, programming techniques, and fault tolerance will be discussed. Architecture types to be considered include binary-array processors, pipeline processors, inner-product computers, systolic arrays, and MIMD systems.

**543 VLSI Architectures and Algorithms**
Spring. 3 credits. Prerequisite: EE 476 or permission of instructor.
3 lecs.
Since the advent of VLSI, the cost of processing logic is no longer a fundamental constraint on the design of computer architectures. Problems that once were computationally intractable can now be solved on arrays of thousands or even tens of thousands of processors. This course addresses the important question: What are the optimal VLSI structures and algorithms for specific classes of problems? The architectures we will examine include systolic arrays, mesh-connected processors, and data-flow computers; special attention will be given to problems that arise in real-time signal processing.

**545 Computer Networks and Telecommunications I**
Fall. 3 credits. Prerequisites: EE 476, a course in probability, and programming at the level of CS 211.
3 lecs.
Methods and approaches in the design, analysis, and implementation of local area networks and public data networks; circuit switching, packet switching; carrier-sense multiple access with collision detection, token passing; ethernets, busses, and rings; roles and functions of protocols; layering and ISO models.

**546 Computer Networks and Telecommunications II**
Spring. 3 credits. Prerequisite: EE 545 or permission of instructor.
3 lecs.
Introduction to Integrated Service Digital Network (ISDN); circuit switching fundamentals; time division architectures; packet switching architectures; integration of circuit and packet switching; evolution from ISDN to Broadband ISDN.

**547 Computer Vision**
Fall. 3 credits. Prerequisites: EE 302 and 475 or 425, or permission of instructor.
3 lecs.
Computer acquisition and analysis of image data with emphasis on techniques for robot vision. Computer vision is the construction of explicit meaningful descriptions of physical objects from images. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

**548 Image Processing**
Spring. 4 credits. Prerequisite: EE 302, 425, or permission of instructor.
3 lecs.
Image formation and perception; digitization, image coding, image enhancement, image restoration, computerized tomography, optical processing, image analysis. The programming of several image-processing algorithms will be required.

**563 Communication Networks**
Fall. 4 credits.
For description see Communication and Information Systems.

**593 RISC Microprocessor Design (also CS 616)**
4 credits over two semesters. Prerequisite: EE 539 or consent of instructors.
L. K. Grover and K. K. Pingali.
RISC (Reduced Instruction Set Computers) is the newest trend in microprocessor architecture—every leading microprocessor manufacturer including Motorola and Intel has announced RISC microprocessors. In this course, we will design and fabricate CAYUGA, a pipelined RISC microprocessor on a VLSI chip. Students will be given the instruction-set specification of the CAYUGA processor. During the course, they will perform the VLSI layout and simulation of the design. The processor will then be fabricated by MOSIS, after which it will be tested to verify that it meets design goals.

**644 Fault-Tolerant Computing**
Spring. 3 credits. Prerequisites: EE 541 and 543.
The discipline of fault-tolerant computing deals with digital systems that operate in applications where the cost of failure is high. Effective and efficient techniques are required for tolerating failures in complex digital systems. The real-time needs of many signal processing problems have led to the development of special-purpose systolic arrays. This course covers general fault-tolerance techniques such as masking redundancy and error detecting and correcting codes, with particular emphasis on those suitable for systolic computing.

## Circuits, Systems, and Signal Processing

**210 Introduction to Electrical Systems**
Fall, spring. 3 credits.
For description see Engineering Common Courses.

**230 Introduction to Digital Systems**
Fall, spring. 4 credits.
For description see Core Courses.

**301 Electrical Signals and Systems I**
Fall. 4 credits.
For description see Core Courses.

**302 Electrical Signals and Systems II**
Spring. 4 credits.
For description see Core Courses.

**424 Computer Methods in Electrical Engineering**
Fall. 4 credits.
For description see Computer Engineering.

**425 Digital Signal Processing**
Fall. 4 credits. Prerequisite: EE 302.
3 lecs, 1 lab.
Fundamentals of signal analysis, review of Fourier, Laplace, and Z transforms. Sampling theory. Discrete Fourier transform properties and computation (FFT). Digital filter design; the approximation problem for FIR and IIR filters, the realization problem–finite word-length limitations and filter structures.

**426 Applications of Signal Processing**
Spring. 3 or 4 credits. Prerequisite: EE 425.
1 lec, 2 labs.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented and emphasizes individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design (principally digital filtering) and spectral analysis as well as speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**521 Theory of Linear Systems**
Fall. 4 credits. Prerequisite: EE 302 or permission of instructor. Recommended: a good background in linear algebra and differential equations.
3 lecs.
State-space and input-output linear systems. Transition matrices, matrix exponential functions, the Cayley-Hamilton theorem, and the Jordan form. Controllability, observability, stability, realizability. At the level of *Linear Systems,* by T. Kailath.

**522 Theory of Nonlinear Systems**
Spring. 4 credits. Prerequisites: EE 521 or a solid background in linear algebra strongly recommended but not required.
A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations (existence and uniqueness theorems); flows; stability of equilibria and periodic orbits; Lyapunov functions; the Circle Criterion and Popov's Criterion; the Poincaré-Bendixson Theorem.

**[526 Advanced Signal Processing**
Spring. 4 credits. Prerequisites: EE 411 and EE 425. Not offered 1989–90.
3 lecs, 1 lab.
Sampling and signal reconstruction. Approximation theory with 1 [sub p] and Chebyshev norms. Linear inversion theory. Exponential signal modeling. Spectral estimation. Radon transform.]

**528 Multisensor Digital Signal Processing**
Spring. 4 credits. Prerequisite: EE 302, 411.
Addresses signal processing techniques for the coordinated use of data derived from an array of sensors. Application areas for sensor arrays include radar, geophysics, speech enhancement, and satellite comunications. We will discuss propagation and sensor models, beamforming, sidelobe cancellers, source location and direction finding, adaptive detection and estimation, computational approaches (RLS, LMS, and square root) and architectures (systolic arrays and other concurrent schemes). Assignments will involve computer simulations.

**547 Image Processing**
Fall. 3 credits.
For description see Computer Engineering.

**580 Practical Computer Simulation of Partial Differential Equations**
Spring. 3 credits.
For description see Plasmas and Large-Scale Fluids.

**674 Adaptive Parameter Estimation Theory**
3 credits.
For description see Power and Control Systems.

**679 Advanced Topics in Systems and Control**
1–3 credits.
For description see Power and Control Systems.

## Communication and Information Systems

**310 Probability and Random Signals Spring. 4 credits.**
For description see Core Courses.

**411 Random Signals in Communications and Signal Processing**
Fall. 3 credits. Prerequisite: EE 302 and 310 or equivalent.
3 lecs.
Introduction to probability models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, wide-sense stationary processes and power spectral densities, Gaussian random process, including the narrowband case. Electrical engineering phenomena described by such models (e.g., communications channel noise, queues that form in multiple-access telecommunications systems). Response of linear and nonlinear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems (e.g., problems of extraction of signals from noise via Wiener filtering, power spectral density estimation).

**468 Communications and Signal Processing**
Spring. 4 credits. Prerequisite: EE 302 or 521, and 411 or equivalent.
3 lecs, 1 rec.
Analog signal representation and filtering using Fourier and Hilbert transform techniques. Varieties of amplitude modulation (AM, DSBSC, SSB, VSB, QAM) and their demodulators. Frequency modulation and demodulation. Demodulation of AM and FM in the presence of noise. Sampling theorems and aliasing. Pulse amplitude modulation. Quantization for A/D conversion. Pulse code modulation. Elements of optimal signal parameter estimation. Application to commercial broadcasting and data transmission.

**545 Computer Networks and Telecommunications I**
Fall. 3 credits.
For description see Computer Engineering.

**546 Computer Networks and Telecommunications II**
Spring. 3 credits.
For description see Computer Engineering.

**561 Error-Control Codes**
Fall. 3 credits. Prerequisite: EE 302 or EE 521 or equivalent. A strong familiarity with linear algebra is assumed.
3 lecs.
An introduction to the theory of error-control codes: linear block codes, convolutional and other trellis codes. Hamming codes, minimum distance, standard array, minimum-distance decoding, cyclic codes. The dual of a code. Methods of shortening and combining codes. Hamming and Singleton bounds for error-correcting codes. Algebra: groups, rings, and fields with special emphasis on Galois or finite field theory. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Algebraic description of binary convolutional codes. Decoding algorithms and construction of Euclidean distance trellis codes.

**562 Fundamental Information Theory**
Spring. 3 credits. Prerequisite: EE 310 or equivalent.
3 lecs.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**563 Communication Networks**
Fall. 4 credits. Prerequisite: EE 310 or permission of instructor.
3 lecs.
Classical line-switched communication networks: point process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local and wide area communication networks: TDMA, FDMA, ALOHA, slotted ALOHA, Ethernet, reservation, tree, and interval-searched contention resolution protocols. Flow control and capacity assignment algorithms for wideband, robust networks. Examples drawn from packet radio, T1 networks, and satellite communications.

**564 Decision Making and Estimation**
Spring. 4 credits. Prerequisite: EE 411.
An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, and statistical signal processing. Topics covered are drawn from utility theory and rational preferences; Bayes, minimax, and Neyman-Pearson decision theories; Bayes and maximum likelihood point estimation; Cramer-Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

**566 Queuing Networks**
Spring. 4 credits. Prerequisite: EE 411 or equivalent.
Single-class and multiclass queuing network models of communication networks and computer networks. Little's formula. Jackson networks. Quasi-reversibility. Product-form networks. Output theorem. Analysis of sojourn times. Insensitivity. Server allocation and optimal routing problems. Bandit problem. Fluid approximation. Light traffic approximation. Heavy traffic approximation. Static and dynamic control of queuing networks. Regenerative simulation of performance measures. Fast simulation techniques. Perturbation analysis.

**567 Communication Systems II**
Fall. 4 credits. Prerequisites: EE 411, 468.
This course presents the fundamental principles of the theory of digital communication. Analytical and computational tools required to understand the principles of modern data conversion, transmission, and storage systems are presented. While examples of systems from the "real" world are described, the emphasis of the course is on the fundamental theory involved in the design of digital communication systems.

**664 Foundations of Inference and Decision Making**
Spring. 3 credits. Prerequisite: a course in probability and some statistics, or permission of instructor. Not offered every year.
3 lecs.
An examination of methods for characterizing uncertainty and chance phenomena and for transforming information into decisions and optimal systems. Discussion of the foundations of inference includes topics drawn from comparative probability, interval-valued probability, quantitative probability, relative frequency interpretations, computational complexity, randomness, classical probability and invariance, induction, and subjective probability.

**668–669 Random Processes in Electrical Systems**
668, fall; 669, spring. 3 credits each term.
Advanced topics in the general area of randomness and uncertainty and their relevance to the analysis and design of electrical systems.

## Power and Control Systems

**451–452 Computer-Aided Analysis of Electric Power Systems I and II**
451, fall; 452, spring. 4 credits each term. Prerequisite: EE 302.
3 lec-recs, 1 lab-computing session.
The so-called second-generation and third-generation simulation tools and their computer implementation for large-scale circuits and systems. Modeling of electric power systems for load-flow, stability, economic-dispatch, control, and optimal-power-flow studies. Special properties of electric power systems that enhance the efficiency of simulation tools used for their analysis. The Kettering Power System Laboratory's digital computer is used as a dynamic "laboratory."

**471 Feedback Control Systems**
Fall. 4 credits. Prerequisite: EE 302 or M&AE 326, or permission of instructor.
3 lecs, open lab.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include PID, root-locus, frequency response, and algebraic pole placement. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic industrial process.

**[555 Advanced Power Systems Analysis I**
Fall. 3 credits. Prerequisites: EE 302 and concurrent registration in 451, or permission of instructor. Not offered 1989–90.
Analysis of power-system components. These components include rotating machines and systems for excitation control, automatic voltage regulation, boiler-turbine control, and speed regulation, as well as ancillary three-phase networks. Emphasis on derivation of mathematical models from first principles; development of algorithms for the formation of applicable network matrices.]

**[556 Advanced Power Systems Analysis II**
Spring. 3 credits. Prerequisite: EE 555 or permission of instructor. Not offered 1988–89.
Computer methods in power systems applied to short-circuit studies, load-flow studies, transient-stability studies, economic dispatch, and security load flows. Use of sparse-matrix techniques. Comparison of algorithms for digital relaying. State-estimation algorithms. Emphasis on the use of the digital computer in the planning and operation of large-scale power systems. At the level of *Computer Methods in Power System Analysis*, by Stagg and El-Abiad.]

**564 Decision Making and Estimation**
Spring. 4 credits.
For description see Communication and Information Systems.

**572 Digital Control Systems**
Spring. 4 credits. Prerequisite: EE 471 or permission of instructor.
3 lecs, open lab.
Analysis and design of feedback control systems using digital devices to implement compensation. Z transforms and linear algebra are the major mathematical tools. Design techniques include PID, root-locus, deadbeat, state-variable feedback, and combined observer-controller. Quantization and sample-rate effects in sampled-data control systems will be considered. Assignments will consist of reports on computer-aided controller design and digitally simulated evaluation.

**573 Estimation and Control in Discrete Linear Systems**
Fall. 4 credits. Prerequisites: EE 302 and 411, or permission of instructor.
3 lecs.
Optimal control, filtering, and prediction for discrete-time linear systems. Approximation on discrete point sets. The principle of optimality. Kalman filtering. Stochastic optimal control.

**574 Optimal Control and Estimation for Continuous Systems**
Spring. 4 credits. Prerequisite: EE 573 or permission of instructor. Not offered every year.
3 lecs.
Control system design through parameter optimization, with and without constraints. The minimum principle; linear regulations, minimum-time and minimal-fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.

**664 Foundations of Inference and Decision Making**
Spring. 3 credits. For description see Communication and Information Systems.

**674 Adaptive Parameter Estimation Theory**
3 credits. Prerequisites: EE 521 and either 526 or 572, or permission of instructor. Recommended: EE 522. Not offered every year.
3 lecs.
Fundamental concepts of adaptive parameter estimation theory as applicable to adaptive filtering, adaptive control, and system identification. Analytical tools are drawn primarily from nonlinear, time-varying feedback-system stability theory. Applications considered include noise cancelling, differential pulse code modulation, channel equalization, model-following control, and pole placement. Assignments will consist of reports on analysis and simulation studies of adaptive parameter-estimator behavior.

**679 Advanced Topics in Systems and Control**
1–3 credits. Prerequisite: permission of instructor. Not offered every year.
Topics include robotics, nonlinear feedback system stability, multivariable control, and qualitative theory on nonlinear systems.

## Solid-State Electronics

**306 Fundamentals of Quantum and Solid-State Electronics**
Spring. 4 credits.
For description see Required Courses.

**431–432 Analysis and Design of Integrated Circuits**
431, fall; 432, spring. 4 credits each term. Prerequisites: EE 301 and 315. Concurrent registration in EE 435 is encouraged.
3 lecs, 1 lab.
Analysis and design of analog and digital circuits using semiconductor devices, with emphasis on integrated circuits in bipolar and MOS technologies. Device models for circuit analysis; common circuit configurations; DC analysis, frequency response and speed limitations; feedback and noise sources. Case studies such as design of high-frequency or operational amplifiers and semiconductor memory, reinforced by laboratory and design projects. At the level of *Analysis and Design of Analog Integrated Circuits*, by Gray and Meyer, and *Analysis and Design of Digital Integrated Circuits*, by Hodges and Jackson.

**435–436 Semiconductor Electronics**
435, fall; 436, spring. 4 credits each term; may be taken for 3 credits without laboratory only with permission of instructor. Prerequisites: EE 306 and 316, or equivalent.
3 lecs, 1 lab.
Semiconductor electronics from point contact transistor to VLSI and beyond. Fall term: electronic characteristics of semiconductors, carrier transport, band diagrams, semiconductor interfaces; pn-junction diode, Si bipolar transistor (BJT), Si MOS transistor (MOSFET). Spring term: advanced MOS topics, Schottky diode, GaAs metal-semiconductor FET (MESFET), AlGaAs/GaAS modulation doped FET (MODFET), heterojunction bipolar transistor (HBT); integrated Si structures such as inverters (NMOS, CMOS, ECL) and memory cells (DRAM, SRAM); integrated GaAs structures; computer simulation of devices; limits and future of semiconductor electronic systems.

**533 Solid-State Microwave Devices and Circuits I**
Fall. 4 credits.
For description see Fields, Waves, and Antennas.

**534 Solid-State Microwave Devices and Circuits II**
Spring. 4 credits.
For description see Fields, Waves, and Antennas.

**535 Semiconductor Physics**
Fall. 4 credits. Prerequisites: EE 304 and 407, or permission of instructor.
3 lecs.
Foundations of semiconductor physics for the description of carrier transport and optical characteristics of semiconductor materials and structures. Crystal structure and symmetry, energy-band structures, statistics, effective mass theorem, classical transport, scattering, high-field transport, quantum transport, optical absorption and reflection, photoconductivity, light generation, deep levels, and surface and interface phenomena. On or above the level of *Semiconductor Physics*, by K. Seeger.

**536 VLSI Technology**
Spring. 4 credits. Prerequisite: EE 435 or permission of instructor.
3 lecs, 1 lab.
Processing technology for silicon MOS and bipolar integrated circuits, especially VLSI. Lithography, crystal growth, diffusion, ion implantation, oxidation, chemical-vapor deposition, evaporation, sputtering, epitaxy, etching, process integrations, and process simulations. At the level of *VLSI Technology*, edited by S. M. Sze.

**538 Introduction to III–V Compound Semiconductor Materials**
Spring. 3 credits. Prerequisites: EE 407 and 436.
J. R. Shealy.
An introduction to III–V compound semiconductor materials and their crystal growth technologies. Topics include the modern epitaxial growth technologies, Molecular Beam Epitaxy and Organometallic Vapor Phase Epitaxy; common methods used for the evaluation of compound semiconductor materials, including Raman spectroscopy. Emphasis is placed on the materials' properties and the related growth and characterization techniques that currently support a variety of research topics in new semiconductor devices.

**539 VLSI Digital-System Design**
Fall and spring. 6 credits.
For description see Computer Engineering.

**580 Practical Computer Simulation of Partial Differential Equations**
Spring. 3 credits.
For description see Plasmas and Large-Scale Fluids.

**636 Advanced Solid-State Devices**
Spring. 3 credits. Prerequisite: EE 535 or equivalent.
3 lecs.
A fundamental analysis of device operation, with emphasis on operational limits. Effects of band structure, low- and high-field transport characteristics, secondary ionization, transferred electron effects, and the details of junction and contact technology relevant to devices at the limits of microfabrication technology. Applications to microwave amplification, generation, and broadband optical detection, including stability, nonlinearity, and noise.

**638 Advanced Semiconductor Devices and Processes**
Fall. 4 credits. Prerequisite: EE 535, EE 636, or permission of instructor. Not offered every year.
3 lecs, special project or term paper.
Advanced topics in solid-state electronic-device physics, fabrication methods, and materials for high-density silicon VLSI and high-speed compound semiconductor technologies. Concepts developed in EE 535 and 636 are applied to current state-of-the-art topics. On the level of *IEEE Transactions on Electron Devices, Journal of Applied Physics,* and current conference proceedings.

## Quantum and Opto-Electronics

**306 Fundamentals of Quantum and Solid-State Electronics**
Spring. 4 credits.
For description see Core Courses.

**407 Quantum Mechanics and Applications**
Fall. 4 credits. Prerequisite: EE 306.
3 lecs, 1 rec.
Fundamentals of quantum mechanics: theory of angular momentum, time-independent and time-dependent perturbation theory, and interaction of radiation with matter. Elementary considerations of the structure of atoms, molecules, and solids. Applications to semiconductors, spectroscopy of atoms and molecules, and lasers.

**430 Lasers and Optical Electronics**
Fall. 3 credits. Prerequisite: EE 306 or equivalent.
3 lecs.
An introduction to the operation of stimulated-emission devices such as lasers and devices based on linear and nonlinear optics. Material covered includes diffraction-limited optics, propagation of laser beams, optical cavities, interaction of radiation with matter, physics of laser operation, laser design, and application of coherent radiation to nonlinear optics, communication, and research.

**437 Fiber and Integrated Optics**
Spring. 4 credits. Prerequisite: EE 306. EE 304 and 430 or equivalents are strongly recommended.
3 lecs, 1 lab–computing session.
The physical principles of fiber optics, integrated optics, and optical applications to communication and sensing. Topics include propagation through lossy waveguides, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in fibers, and optical sensors. Laboratory includes experiments relevant to lasers and fiber optics.

**531 Quantum Electronics I**
Fall. 4 credits. Prerequisites: EE 306 and 407, or Physics 443.
3 lecs, 1 computing session.
A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and macroscopic material properties; theory of the laser, including methods of achieving population inversions, output power of amplifiers and oscillators, dispersive effects, and laser oscillation spectrum.

**532 Quantum Electronics II**
Spring. 4 credits. Prerequisite: EE 531 or permission of instructor.
3 lecs, 1 lec–computing session.
A continuation of EE 531. Topics include spectroscopy of atoms, molecules, and ions in crystals as examples of laser media; density matrix; nonlinear optics and optical processes; theory of coherence; integrated optics and optical communication.

**535 Semiconductor Physics**
Fall. 4 credits.
For description see Solid-State Electronics.

## Plasmas and Large-Scale Fluids

**[481 Experimental Plasma Physics and Gas Discharges**
Fall. 4 credits. Prerequisite: EE 304 or A&EP 356 or equivalent. Fulfills electrical engineering laboratory requirement and constitutes an M.Eng.(Electrical) course pair with EE 480 or 484. Not offered 1989–90.
2 lecs, 1 lab.
Theory and practice of generation, control, and diagnostics of plasmas and intense particle beams. Coordinated lectures and nine experiments and a field trip. Plasma breakdown, collisions, diffusion, sheaths. Discussion of macroscopic and microscopic measurements. Reflex discharge, vacuum technology, plasma probing. Electromagnetic and space-charge-wave propagation and scattering. Microwave and optical radiation. Intense particle beams. Methods for data collection and analysis.]

**484 Introduction to Controlled Fusion: Principles and Technology (also M&AE 559 and NS&E 484)**
Spring. 3 credits. Prerequisites: EE 301 and 303, or permission of instructor. Intended for seniors and graduate students.
3 lecs.
For description see NS&E 484.

**487 Antennas and Propagation**
Fall. 3 credits.
For description see Fields, Waves, and Antennas.

**580 Practical Computer Simulation of Partial Differential Equations**
Spring. 3 credits. Prerequisites: T&AM 310 or equivalent recommended; familiarity with a scientific computer language such as Fortran required
3 lecs.
A pragmatic approach toward techniques for computer simulation of partial-differential equations. The aim is to allow students to begin doing simulations of topics of their own interest as quickly as possible. Basic stability analysis and accuracy issues will be discussed and applied to standard finite-difference techniques for solving elliptic, parabolic, and hyperbolic equations. Finite-element methods will be introduced. The fast Fourier transform is described and applied to spectral and pseudospectral methods. Particle-in-cell simulation techniques are discussed. The method of characteristics, the semi-implicit method, and various implicit methods are covered. Examples will be taken from fusion and solar plasma physics applications, semiconductor device physics, fluid dynamics, and mathematical biology. Hands-on experience with the various simulation methods described and a simulation project.

**581 Introduction to Plasma Physics (also A&EP 606)**
Fall. 4 credits. First-year graduate-level course; open also to *exceptional* fourth-year students with permission of instructor. Prerequisites: EE 303 and 304, or equivalent.
3 lecs.
Plasma state; motion of charged particles in fields; collisions, coulomb scattering; transport coefficients, ambipolar diffusion, plasma oscillations and waves; hydromagnetic equations; hydromagnetic stability and microscopic instabilities; test particle in a plasma; elementary applications. At the level of *Plasma Physics for Nuclear Fusion,* by Miyamoto.

**582 Advanced Plasma Physics (also A&EP 607)**
Spring. 4 credits. Prerequisite: EE 581.
3 lecs.
For description see A&EP 607.

**583 Electrodynamics**
Fall. 4 credits.
For description see Fields, Waves, and Antennas.

**585 Atmospheric and Ionospheric Physics (also Astronomy 575)**
Fall. 3 credits. Offered alternate years.
Energy-balance and thermal structure of neutral atmospheres. Elements of circulation theory. Waves and instabilities. Coupling of lower atmospheres to upper atmospheres. Observations of the terrestrial atmosphere and of the other planets. Physical processes in the earth's ionosphere and magnetosphere.

Production, loss, and transport of charged particles. Electric fields. Coupling of neutral-atmosphere dynamics with electric fields and charged-particle transport. Diagnostic techniques, including radar and in situ observations. The equatorial electrojet. Observations of ionospheres on the other planets.

**586 Solar Terrestrial Physics (also Astronomy 576)**
Spring. 3 credits. Offered alternate years.
High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.

**588 Electromagnetic Wave Propagation II**
Spring. 3 credits. Prerequisites: EE 487 and 581, or permission of instructor.
3 lecs.
For description see Fields, Waves, and Antennas.

**589 Magnetohydrodynamics**
3 credits. Prerequisite: EE 581. Offered upon sufficient demand.
The theory of ideal and nonideal magnetohydrodynamical equations with emphasis on application to controlled thermonuclear fusion. Topics: derivation and domain of applicability; invariants; waves, equilibrium and normal-mode stability analysis; continuous spectrum; energy principle and applications to confinement geometries; nonideal effects, resistivity, finite Larmor radius stabilization. Selected additional topics such as dynamo theory or MHD turbulence.

**681 Kinetic Theory (also A&EP 761)**
Fall. 3 credits. Prerequisite: EE 407, Physics 561, or permission of instructor.
3 lecs.
Classical, quantum, and relativistic kinetic theory, Liouville equation, Prigogine and Bogoliubov analysis of the BBKGY sequence. Master equation, density matrix, Wigner distribution. Derivation of fluid dynamics. Transport coefficients. Boltzmann, Krook, Fokker-Planck, Landau, and Balescu-Lenard equations. Properties and theory of the linear Boltzmann collision operator. The relativistic Maxwellian. At the level of *Introduction to the Theory of Kinetic Equations*, by Liboff.

**[682 Nonlinear Phenomena in Plasma Physics**
Fall. 3 credits. Prerequisite: EE 582. Offered alternate years. Not offered 1989–90.
Single-particle motion, multiple-time-scale analysis and ponderomotive effects, weakly nonlinear waves and solitons, nonlinear Vlasov phenomena, quasilinear theory, resonance broadening and resonant mode-mode coupling, statistical theories of plasma turbulence, recent developments in stochasticity and chaos in plasma physics.]

**[685 Solar Plasma Physics**
Fall. 3 credits. Not offered 1989–90.
This course will be coordinated with the two courses on upper atmospheric physics, EE 585 and 586, to provide an integrated view of solar-terrestrial physics for the graduate student intending a research career in space plasma physics. A thorough understanding of electromagnetic theory and some knowledge of fluid mechanics and plasma physics at the level of EE 581 and 582 are assumed. Offered alternate years beginning 1988–89.]

## Fields, Waves, and Antennas

**303–304 Electromagnetic Fields and Waves**
303, fall; 304, spring. 4 credits each semester.
For description see Core Courses.

**487 Antennas and Propagation**
Fall. 3 credits. Prerequisite: EE 304 or equivalent.
3 lecs.
Fundamentals of antenna theory, including thin wire, aperture, and horn antennas, antenna arrays, and aperture synthesis concepts; diffraction, refraction, and ducting in the troposphere; propagation of radio waves and cold plasma waves in the ionosphere and magnetosphere (magnetoionic theory).

**533 Solid-State Microwave Devices and Circuits I**
Fall. 4 credits. Prerequisite: EE 304.
2 lecs, 1 lab.
State-of-the-art microwave integrated circuit technology. Topics discussed include introductory microwave concepts, computer-aided design and measurement, passive microwave circuits, couplers, microstrip antennas, resonators, and filters. Laboratory covers design of microstrip circuits using CAD tools *Puff* and *Touchstone*, mask generation, circuit fabrication in a clean-room environment, and accurate measurement techniques featuring the Hewlett Packard 8510A network analyzer.

**534 Solid-State Microwave Devices and Circuits II**
Spring. 4 credits. Prerequisites: EE 435 and 533.
2 lecs, 1 lab.
Basic theories of operation of solid-state microwave and millimeter-wave devices: FET, HEMT, Schottky, IMPATT, Gunn, PIN, and tunnel devices. Emphasis on how to integrate these devices into practical circuits—switches, limiters, phase shifters, and satellite communications. Also covered are superconductors, measurement of s-parameters and noise, millimeter-wave quasi-optical curcuits. Oscillators, amplifiers, and mixers will be fabricated and measured in the laboratory.

**580 Practical Computer Simulation of Partial Differential Equations**
Spring. 3 credits.
For description see Plasmas and Large-Scale Fluids.

**583 Electrodynamics**
Fall. 4 credits. Prerequisite: EE 304 or equivalent.
3 lecs.
Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of *Classical Electrodynamics*, by Jackson.

**584 Microwave Theory**
Spring. 4 credits. Prerequisites: EE 302 and 304 or equivalent.
3 lecs, 1 rec.
Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.

**[588 Advanced Electromagnetic Wave Propagation and Scattering**
Spring. 3 credits. Prerequisite: EE 487 or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs.
Full-wave solutions of the wave equations, interactions between particles and waves, scattering of radio waves from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.]

## General

**250 Technology in Western Society (also Engr 250)**
Fall. 3 credits. Approved for humanities distribution.
For description see Engineering Common Courses.

**292 The Electrical and Electronic Revolutions (also Engr 292)**
Spring. 3 credits.
For description see Engineering Common Courses.

**360 Ethical Issues in Engineering**
Spring. 3 credits. A social science elective for engineering students. Open to juniors and seniors.
3 lecs.
For description see Engineering Common Courses.

**480 Thermal, Fluid, and Statistical Physics for Engineers**
Spring. 3 credits. Prerequisite: Physics 214.
Extensive review of thermodynamic principles. Elementary theory of transport coefficients. Elements of fluid dynamics. Shock waves. Central-limit theorem. Random walk. Electrical noise. Fluctuation-dissipation theorem. Quantum and classical statistics. Black-body radiation. Thermal properties of solids. Kramers-Kronig relation. Elementary descriptions of the p-n junction. Shockley equation, superfluidity, superconductivity, and the laser.

**491–492 Senior Project**
491, fall; 492, spring. 1–8 credits.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required.

**493–494 Senior Seminar**
493, fall; 494, spring. 1–3 credits. Prerequisite: Senior standing in EE and permission of instructor.
These limited-enrollment, four-week, one-credit courses provide condensed examination of specialized topics not found in other EE senior electives. Senior seminars meet for three lecture hours per week but only for four consecutive weeks. Three such courses canbe taken in sequence in one semester (if available) for a total of 3 credits. Instructors will typically set specific participation requirements intended to limit enrollment to a small group of the most interested and qualified students. Proposed topics for 1989–90 include: stochastic simulation, wave interactions in fluid media, and electric machines and drives.

**495–496 Special Topics in Electrical Engineering**
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

**591–599 Graduate Topics in Electrical Engineering**
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

**691–692 Electrical Engineering Colloquium**
691, fall; 692, spring. 1 credit each term. For students enrolled in the graduate Field of Electrical Engineering.
Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Report required.

**693–694 Electrical Engineering Design**
693, fall; 694, spring. 1–10 credits each term. For students enrolled in the M.Eng.(Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design.

**695–699 Graduate Topics in Electrical Engineering**
1–6 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

**791–792 Thesis Research**
791, fall; 792, spring. 1–15 credits. For students enrolled in the master's or doctoral program.

# GEOLOGICAL SCIENCES

## Freshman and Sophomore Courses

**101 Introductory Geological Sciences**
Fall, spring. 3 credits.
2 lecs, 1 lab, field trips, evening exams in the fall term. Fall, J. M. Bird, D. L. Turcotte; spring, W. B. Travers.
To better harmonize human endeavor with the natural earth we need to know what is natural *on* earth. This course teaches observation and understanding of landscape, including coasts, rivers, valleys, and glaciated regions; the genesis of earthquakes, volcanoes, and mountains; evidence for the drifting of continents and its consequences; and the origin, discovery, and development of mineral and water resources. The lab teaches use of topographic and geologic maps and recognition of minerals and rocks and includes field trips to Cascadilla Gorge, Fall Creek, and Enfield Glen.

**102 Introduction to Historical Geology**
Spring. 3 credits. Prerequisite: Geol 101 or permission of instructor.
2 lecs, 1 lab, evening exams. J. L. Cisne.
A continuation of Geol 101. History of the earth and life in terms of evolutionary processes. The geologic record, its formation, and interpretation of earth history. Introduction to the evolution of life and to fossils and their use in reconstructing past environments and dating rocks.

**103 Geology in the Field**
Fall. 3 credits. Limited to 35 students.
1 lec, 1 field trip or lab, 1 rec. A. L. Bloom.
The subject matter of Geol 101, taught as much as possible by field trips on campus and in the vicinity, on foot and by bus. Weekly field trips until November introduce most of the major topics of the course, supplemented by lectures, recitations, and labs (later in the term).

**104 Introduction to Oceanography**
Spring. 3 credits. Prerequisites: high school physics, chemistry, biology, and earth science or permission of the instructor.
2 lecs, 1 lab. W. M. White.
The oceans remain one of the last frontiers, yet they affect our everyday lives in many subtle ways. A survey of what is known of the physics, chemistry, geology, and biology of the oceans, intended for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics; geology and biology of mid-ocean ridges; biological and geological controls on the chemisry of seawater; ocean currents and circulation; the oceans and climate, including El Niño, the greenhouse effect, and the Ice Ages; ecology of open ocean, ocean bottom, and near-shore communities; coastal processes; marine pollution and waste disposal; mineral and biological resources of the sea; Law of the Sea. At the level of *Scientific American.*

**107 Frontiers of Geology I**
Fall. 1 credit. May be taken concurrently with or after Geol 101.
1 lec. J. L. Cisne and staff.
Lectures by members of the department on selected fundamental topics of current interest, such as continental drift and related tectonic processes, volcanoes, earthquake prediction, natural energy sources, and mineral resources.

**108 Frontiers of Geology II**
Spring. 1 credit. May be taken concurrently with or after Geol 101 or 102.
1 lec. J. L.Cisne and staff.
Lectures by members of the department on selected fundamental topics of current interest, such as plate tectonics, the evolution of mountain belts and island arcs, the deep structure of continents, ecology and evolution of fossil organisms, sea-level changes, and fossil fuels.

**111 To Know the Earth**
Fall. 3 credits.
2 lecs, 1 lab, and field trips. J. E. Oliver.
Acquaints the non-scientist with the earth. Geology as an intellectual challenge, a provider of resources, an environment, a danger, a base for culture, and a science among sciences. The story behind landscapes, mountains, earthquakes, volcanoes, oceans, gold, petroleum, and icecaps. The record of the past, the context of the present, the forecast for the future.

**201 Introduction to the Physics and Chemistry of the Earth (also Engr 201)**
Spring. 3 credits. Prerequisites: Mathematics 191, Physics 112, and Chemistry 207.
2 lecs; 1 rec, lab, or field trip.
L. M. Cathles.
For description see Engineering Common Courses.

**202 Environmental Geology**
Spring. 3 credits.
2 lecs; 1 rec, lab, or field trip.
D. E. Karig, A. L. Bloom.
In-depth introduction to geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass-wasting, and volcanic hazards. This material provides an application of geology to engineering, natural resources, and land-use planning. Local examples will be discussed and visited on short field trips. The course can be taken as an introduction to geology, but also serves as a continuation of Geol 101.

**210 Introduction to Field Methods in Geological Sciences**
Fall. 2 credits. Prerequisite: Geol 101 or coregistration. Weekly field sessions. A weekend field trip.
D. E. Karig.
An introduction to the methods by which rocks are used as a geological database. Students will be introduced to the field methods used in the construction of geologic maps and cross sections and to systematic description of stratigraphic sections. Field and laboratory sessions are held on Saturday mornings until Thanksgiving; during most of these weeks there will also be one additional lecture. One weekend will be devoted to a field trip to eastern New York.

**212 Special Field Trip**
Fall. 1 credit. Prerequisites: Geol 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced.
1 lec, field trip. Staff.
A trip of one week to ten days during January intersession in an area of interesting geology in the lower latitudes. Interested students should contact the instructor during the early part of the fall semester.

**214 Western Adirondack Field Course**
Spring, one week at the end of the semester. 1 credit. Prerequisite: Geol 101 or 102 or equivalent. Students should be prepared for overnight camping and will have to pay for their own meals.
W. A. Bassett.
Field mapping methods, mineral and rock identification, examination of Precambrian metamorphic rocks and lower Paleozoic sediments, talc and zinc mines.

## Junior, Senior, and Graduate Courses

Of the following, the core courses Geol 326, 355, 356, 375, and 388 may be taken by those who have successfully completed Geol 201 or the equivalent or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

**326 Structural Geology**
Spring. 4 credits. Prerequisite: Geol 101 or 201, or permission of instructor.
3 lecs, 1 lab, field trips.
R. W. Allmendinger.
Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics.

**355 Mineralogy**
Fall. 4 credits. Prerequisite: Geol 101 or 201 and Chem 207 or permission of instructor.
2 lecs, 2 labs; assigned problems and readings. W. A. Bassett.
Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals are studied. X-ray diffraction is introduced.

**356 Petrology and Geochemistry**
Spring. 4 credits. Prerequisite: Geol 355.
2 lecs, 2 labs, 1 field trip; assigned problems and readings. Staff.
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

**375 Sedimentology and Stratigraphy**
Fall. 4 credits. Recommended: Geol 102 or 201.
3 lecs, 2 labs, field trips. J. L. Cisne, T. E. Jordan.
Formation of sedimentary rocks. Depositional processes. Depositional environments and their recognition in the stratigraphic record. Correlation of strata in relation to time and environment. Seismic stratigraphy. Geological age determination. Reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence.

**388 Geophysics and Geotectonics**
Spring. 4 credits. Prerequisites: Mathematics 192 and Physics 208, 213, or equivalent.
3 lecs, 1 lab. B. L. Isacks.
Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

**401 Field Geology**
Summer. 4 credits. Prerequisites: Geol 210, 214, and 326, or permission of instructor. Four weeks at research sites in the western United States or Canada. Fee, approximately $1,200.
Staff.
Field mapping techniques in igneous, metamorphic, and sedimentary rock, using topographic maps and air photos. The structural geology, petrology, geomorphology, and sedimentology of selected areas in the Rocky Mountains will be included. An independent project and report will be done during the last week.

**412 Experiments and Techniques in Earth Sciences**
Spring. 2 credits. Prerequisites: Physics 213 and Mathematics 192 or equivalents, or permission of instructor.
S. Kaufman.
Laboratory and field experiments chosen in accordance with students' interests. Familiarization with instruments and techniques used in earth sciences. Independent work is stressed.

**424 Petroleum Geology**
Spring. 3 credits. Recommended: Geol 326.
2 lecs, 1 lab. W. B. Travers.
Introduction to hydrocarbon exploration and development. Exploration techniques, including geologic use of well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling and production, and estimates of petroleum reserves, including tar sands and oil shales.

**431 The Earth's Crust: Structure, Composition, and Evolution**
Fall. 3 credits. Prerequisites: Geol 356 and 388. Offered alternate years.
3 lecs. L. D. Brown.
Structure and composition of the crust from geophysical observations, analysis of xenoliths, and extrapolation of petrological laboratory data. Radioisotopic considerations. The nature of the crust-mantle boundary. Thermal and rheological structure of the crust. Oceanic versus continental crust. Origin and evolution of oceanic and continental crust.

**432 Digital Processing and Analysis of Geophysical Data**
Spring. 3 credits. Prerequisite: Geol 487 or equivalent. Offered alternate years.
3 lecs. L. D. Brown.
Sampling theory. Fourier, Laplace, and Z-transform techniques. Spectral analysis. Temporal and spatial filtering. Seismic processing theory: signal enhancement and imaging. Deconvolution, statics, migration, modeling.

**[433 Exploration Seismology I: Data Acquisition and Processing**
Fall. 3 credits. Prerequisite or corequisite: Geol 487 or equivalent. Offered alternate years. Not offered 1989–90.
3 lecs. L. D. Brown.
Planning seismic reflection and refraction surveys. Array design. Source characteristics and ground coupling. Land and marine operations. 2-D and 3-D surveys. Convolutional seismic model. Applied seismic processing: FK filtering, deconvolution, velocity analysis, stacking, migration, display. True amplitude processing.]

**[434 Exploration Seismology II: Analysis and Interpretation**
Spring. 3 credits. Prerequisite: Geol 487 or equivalent. Offered alternate years. Not offered 1989–90.
3 lecs. L. D. Brown.
Techniques for inferring geologic structure and lithology from multichannel seismic reflection data and crustal refraction data. Migration. Velocity and amplitude interpretation, correlation criteria, resolution wave-form analysis, seismic structure, and stratigraphy. Seismic modeling. 3-D and VSP. Attribute and tau-p analysis.]

**441 Geomorphology**
Fall. 3 credits. Prerequisite: Geol 102 or 201, or permission of instructor.
2 lecs, 1 lab. A. L. Bloom.
Systematic analysis of landforms constructed by tectonic and volcanic processes and their subsequent progressive destruction by climate-controlled erosional processes.

**442 Glacial and Quaternary Geology**
Spring. 3 credits. Prerequisite: Geol 441 or permission of instructor. Offered alternate years.
2 lecs, 1 lab; several field trips.
A. L. Bloom.
Glacial processes and deposits and the chronology of the Quaternary Period.

**445 Geohydrology (also Ag Eng 471 and C&EE 431)**
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202.
3 lecs. A. L. Bloom, W. H. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**452 X-ray Diffraction Techniques**
Spring. 3 credits.
1 lec, 2 labs. W. A. Bassett and staff.
Automated X-ray diffractometer, Debye-Scherrer, real-time Laue, high-temperature diffraction, high-pressure diffraction, and pole-figure analysis. Applications in materials science and geological sciences. Labs will be held in the new Materials Science X-Ray Facility.

**[453 Modern Petrology**
Fall. 3 credits. Prerequisite: Geol 356. Offered alternate years. Not offered 1989–90.
2–1/2 lecs, 1/2 lab. R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems. Reading from the literature and petrographic examination of pertinent examples.]

**454 Advanced Mineralogy**
Spring. 3 credits. Prerequisite: Geol 355 or equivalent.
2 lecs, 1 lab. W. A. Bassett.
Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding of Earth's interior.

**[455 Isotope Geochemistry**
Fall. 3 credits. Prerequisite: Geol 356 or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs. W. M. White.
Nucleosynthetic processes and the isotopic abundance of the elements. Dating by Pb, Ar, Sr, and Nd isotope variations. Theories of crustal and mantle evolution. Pleistocene chronology using U-series and $^{14}C$ dating. Time constants for geochemical cycles. The use of O and H isotopes as tracers in the earth's hydrosphere, and hydrothermal circulation systems.]

**456 Geochemistry**
Spring. 3 credits. Prerequisites: Chemistry 207 or 211, Geol 101 or 201 or equivalent, and Mathematics 112 or 192. Recommended: Geol 355 and 356.
3 lecs. W. M. White.
Thermodynamics applied to geology. Principles of trace-element and isotope geochemistry and their application to the study of igneous and metaporphic rocks. Overview of nucleosynthesis, cosmochemistry, and formation and chemical evolution of the earth. Introduction to the chemistry of the oceans and marine sediments.

**[474 Modern Depositional Systems**
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs. T. E. Jordan.
Compositions, textures, sedimentary structures, and facies variations of sediments in modern depositional environments. Clastic and carbonate environments; fluvial, alluvial-fan, delta, intertidal, submarine-fan, carbonate-bank, and sabkha systems. Required field trip during spring recess to region of modern examples and/or rock sequences demonstrating ancient examples.]

**[476 Sedimentary Basins: Tectonics and Mechanics**
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs. T. E. Jordan.
Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Framework of active-margin, passive-margin, and cratonic basins; and stratigraphy. Topics include sedimentary petrology, geophysical and stratigraphic modeling, sequence stratigraphy and the role of sea-level fluctuations. Modern and ancient examples.]

**478 Advanced Stratigraphy**
Spring. 3 credits. Prerequisite: Geol 375 or permission of instructor. Offered alternate years.
2 lecs, 1 lab, possible spring break field trip. T. E. Jordan.
Survey of modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Depositional systems. Physical controls on the stratigraphic record and numerical modeling.

**[479 Paleobiology (also Bio Sci 479)**
Fall. 3 credits. Prerequisites: Biological Sciences 101–102 and 103–104 or equivalent, and either Geol 375, Biological Sciences 274, Biological Sciences 373, or permission of instructor. Offered alternate years. Not offered 1989–90.
3 lecs. J. L. Cisne and staff.
Survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]

**487 Geophysical Prospecting**
Fall. 3 credits. Prerequisites: Physics 213 and Mathematics 192 or equivalents, or permission of instructor.
2 lecs. S. Kaufman.
Physical principles, instrumentation, operational procedures, and interpretation techniques in geophysical exploration for oil, gas, and minerals. Seismic reflection, seismic refraction, gravity, and magnetic and electrical methods of exploration.

**489 Earthquakes and Tectonics**
Fall. 3 credits. Prerequisites: Geol 101 or 201, Mathematics 192, Physics 213, or permission of instructor. Offered alternate years.
3 lecs. B. L. Isacks.
The mechanisms of earthquakes revealed by seismic-wave radiation and by near-source studies of faulting and surface deformation; relationships to regional tectonics; earthquake hazard and prediction.

**490 Honors Thesis (B.A. degree candidates)**
Fall, spring. 2 credits.
Staff.
Thesis proposal to be discussed with director of undergraduate studies during the junior year. Participation requires acceptance of a thesis proposal by the faculty committee.

**491–492 Undergraduate Research**
Fall, spring. 1 credit.
Staff (D. E. Karig and A. L. Bloom, coordinators).
An introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

**500 Design Project in Geohydrology**
Fall, spring 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.
L. M. Cathles.
The project may address one of many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented in GS 501, Geohydrology Design Project Seminar.

**501 Geohydrology Design Project Seminar**
Fall, spring. 1 credit. Required for the M.Eng. degree, geohydrology option.
1 rec., hours to be arranged.
L. M. Cathles.
In fall, the weekly seminar provides a forum for discussion of courses and development of design projects (see GS 500). In spring, it provides an opportunity to present and discuss design projects.

**502 Case Histories in Groundwater Analysis**
Spring. 4 credits.
L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. For the remainder of the semester, the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report, whose results are presented in a half-day seminar at end of term.

**600–699 Seminars and Special Work**
Fall, spring. 1–3 credits. Prerequisite: permission of instructor.
Advanced work on original investigations in geological sciences. Topics change from term to term.

**621 Tectonic and Stratigraphic Evolution of Sedimentary Basins**
W. B. Travers.

**622 Advanced Topics in Structural Geology**
R. W. Allmendinger.

**625 Rock and Sediment Deformation**
D. E. Karig.

**631 Plate Tectonics and Geology**
J. M. Bird.

**641 Advanced Geomorphology Topics**
A. L. Bloom.

**651 Petrology and Geochemistry**
R. W. Kay.

**653 Mineralogy and Crystallography, X-Ray Diffraction, Microscopy, High-Pressure–Temperature Experiments**
W. A. Bassett.

**655 Advanced Topics in Petrology and Tectonics**
J. M. Bird, W. A. Bassett.

**657 Current Research in Petrology**
R. W. Kay.

**662 Advanced Topics in Petroleum Exploration**
W. B. Travers.

**671 Advanced Topics in Sedimentology and Stratigraphy**
T. E. Jordan.

**673 Paleobiology**
J. L. Cisne.

**680 Seismic Record Reading**
M. Barazangi, B. L. Isacks.

**681 Geophysics, Exploration Seismology**
L. D. Brown.

**683 Advanced Topics in Seismology**
B. L. Isacks.

**685 Exploration Seismology, Gravity, Magnetics**
S. Kaufman.

**687 Geophysics, Seismology, and Geotectonics**
Fall. 2 credits. Offered alternate years.
J. E. Oliver.
The past, present, and future of deep seismic reflection profiling as applied to study of the structure, evolution, and large-scale tectonics of the continents.

**689 Research on Seismic-Reflection Profiling of the Continental Crust**
J. E. Oliver, L. D. Brown, S. Kaufman.

**693 Andes Seminar**
B. L. Isacks, T. E. Jordan, A. L. Bloom, R. W. Allmendinger.

**695 Computer Methods in Geological Sciences**
L. D. Brown, B. L. Isacks.
This course is intended to familiarize students with the growing importance of computers in geological and geophysical research. Students will be required to develop, debug, implement, and document a program relevant to current research in the Department of Geological Sciences. Available facilities include the department's VAX 11/750 and MEGASEIS seismic computers, DI–3000 graphics software, IIS image processor, and numerous graphics and I/O peripherals. The Cornell National Supercomputer Facility may also be used.

**696 Geochemistry of the Solid Earth**
Fall.
W. M. White.

**697 Fluid-Rock Interactions**
L. M. Cathles.

**[721 Marine Tectonics**
Fall. 3 credits. Prerequisites: Geol 326 and a course in geophysics. Offered alternate years. Not offered 1989–90.
3 lecs. D. E. Karig.
Study of geophysical and geological characteristics of the earth's crust beneath the oceans. Emphasis on recent geologic data concerning plate margins in the oceans; island-arc systems, spreading systems, and transforms. Techniques for determining instantaneous and finite plate rotations. Lectures and reviews of recent papers. Term project and paper required.]

**[722 Advanced Structural Geology I**
Spring. 3 credits. Prerequisites: Geol 326 and permission of instructor. Offered alternate years. Not offered 1989–90.
2 lecs, 1 lab, possible weekend field trips. D. E. Karig, R. W. Allmendinger.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

**724 Advanced Structural Geology II**
Spring. 3 credits. Prerequisites: Geol 326 and permission of instructor. Offered alternate years.
2 lecs, 1 lab, spring-recess trip. R. W. Allmendinger, D. E. Karig.
Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.

**728 Geology of Orogenic Belts**
Spring. 4 credits. Prerequisite: permission of instructor.
T R 10:10–12:05. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement Geol 781.

**735 Advanced Geophysics I: Quantitative Geodynamics**
Fall. 3 credits. Prerequisite: Geol 388.
3 lecs. D. L. Turcotte.
Stress and strain, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, and flow in porous media.

**737 Advanced Geophysics II: Fundamentals of Mantle Convection**
Spring. 3 credits. Prerequisite: Geol 388.
3 lecs. D. L. Turcotte.
Geological and geophysical evidence, structure of the mantle, material properties, heat sources, basic equations, linear stability analysis, approximate solutions, numerical solutions, plumes, laboratory experiments, geochemistry, early thermal history, terrestrial planets and satellites.

**781 Geotectonics**
Fall. 4 credits. Prerequisite: permission of instructor.
2 lecs. J. M. Bird.
Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates. Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-space reconstructions of specific regions. Problems of dynamic mechanisms—corollaries and evidence from crustal features.

**[787 Seismology**
Fall. 3 credits. Prerequisite: T&AM 611 or equivalent. Offered alternate years. Not offered 1989–90.
3 lec-recs. B. L. Isacks.
Generation and propagation of elastic waves in the earth. Derivation of the structure of the earth and the mechanism of earthquakes from seismological observations.]

# MATERIALS SCIENCE AND ENGINEERING

## Undergraduate Courses

**201 Elements of Materials Science and Engineering (also Engr 111)**
Fall, spring. 3 credits.
Autotutorial.
For description see Engineering Common Courses.

**261 Introduction to Mechanical Properties of Materials (also Engr 261)**
Fall, spring. 3 credits.
2 lecs, 1 rec or lab.
For description see Engineering Common Courses.

**262 Introduction to Electrical Properties of Materials (also Engr 262)**
Spring. 3 credits.
2 lecs, 1 rec or lab.
For description see Engineering Common Courses.

**285 Art, Isotopes, and Analysis (also Engr 285)**
Spring. 3 credits.
J. W. Mayer, S. Taft, D. Eddy.
For description see Engineering Common Courses.

**331 Structural Characterization of Materials**
Fall. 4 credits.
3 lecs, 1 lab.
Crystal structures and crystal defects, stereographic projection methods. Techniques for materials analysis: X-ray and electron diffraction, optical and electron microscopy. Design of experimental systems for the structural characterization of materials.

**332 Electrical and Magnetic Properties of Materials**
Spring. 3 credits. Prerequisite: MSE 331 or permission of instructor.
3 lecs.
Electrical and magnetic properties of metals and semiconductors as affected by microstructure. Design of semiconductor properties by doping. Carrier drift, diffusion, and recombination. Depletion layers in p-n junctions. Design of semiconductor devices. Principles and design of ferromagnetic materials for transformers, permanent magnets, and bubble memories. Fundamentals and design of superconducting materials for high-field magnets and Josephson junctions.

**333 Research Involvement I**
Fall. 3 credits. Prerequisite: approval of department.
Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Typical projects have involved hot isostatic compaction, sputter etching, and mechanical testing of polymer films.

**334 Research Involvement II**
Spring. 3 credits. Prerequisite: approval of department.
May be a continuation of MS&E 333 or a one-term affiliation with a research group.

**335 Thermodynamics of Condensed Systems**
Fall. 3 credits.
3 lecs.
The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. One-third of the course involves examples of design and control of materials processing and microstructure.

**336 Kinetics, Diffusion, and Phase Transformations**
Spring. 3 credits. Prerequisite: MS&E 335 or permission of instructor.
3 lecs.
Introduction of absolute rate theory, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, oxidation and corrosion, radiation damage, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties.

**345 Materials and Manufacturing Processes (also M&AE 312)**
Spring. 3 credits. Prerequisite: T&AM 202 or permission of instructor.
2 lecs, 1 lab.
For description see M&AE 312.

**435–436 Senior Thesis I & II**
435, fall; 436, spring. 4 credits.
Staff.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required.

**441 Microprocessing of Materials**
Fall. 3 credits.
3 lecs, occasional lab.
Materials and processing steps involved in the production of large-scale integrated circuits. Design of processes to give a specific device, e.g., a MOSFET is described, not circuit design. Emphasis is on silicon devices, with mention of Gallium Arsenide. All steps in fabrication of circuits are considered, starting with purification of silicon, single-crystal growth, zone refining, and wager slicing. Thin-film growth by epitaxy, by chemical or physical vapor deposition, or by thermal oxidation of silicon to $SiO_2$. Doping of layers by diffusion and by ion implantation. Principles and practice of lithography; comparison of near and far UV, electrons and X-rays for resolution, output, and cost. Photoresists. Wet and dry etching. Characterization and testing, yield. Electromigration and other device failure modes.

**442 Macroprocessing (also M&AE 512)**
Spring. 3 credits.
3 lecs.
Deformation processing of materials, including superplastic forming, sheet-metal forming, massive forming, and powder processing. Time, temperature, and strain-rate effects in warm-forming and hot-forming. Characterization of powder-compaction mechanisms and their use in process design. Forming-limit diagrams. Development of microstructure-based criteria for fracture in large deformations. Optimization and design of forming processes. Development of constitutive equations for superplastic flow. Design of a superplastic forming process starting from basic mechanisms. The course includes a comprehensive experimental project in which the constitutive equations for superplastic flow are measured and computer-aided techniques are used to design a superplastic forming process. The forming experiment is carried out, and the results are compared with the predictions from the numerical analysis.

**443–444 Senior Materials Laboratory**
443, fall; 444, spring. 3 credits.
Projects are available in plasticity of metals and ceramics, mechanical and chemical processing, phase transformations, electrical and ionic conductivity, analysis of defects by electron microscopy, sintering, crystal growth, thin-film fabrication, electronic materials, etc. Emphasis is placed on design of experimental equipment for analysis and evaluation of a material's properties and performance in terms of its processing history and microstructure.

**445 Mechanical Properties of Materials**
Fall. 3 credits. Prerequisites: MS&E 331 and 336, or permission of instructor.
3 lecs.
Relation between stress, strain, and the concept of equivalent stresses and strains; failure criteria for metals, polymers, and ceramics. Applications of fracture mechanics to fail-safe design. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture and their variation with temperature in terms of the interaction of the microstructure with lattice defects. Application of these principles to the design of improved materials.

**447 Materials Design Concepts I**
Fall. 1 credit.
Speakers from industry and other institutions will give case studies of design problems. Students will write a proposal for a design-study project, which will be approved by the instructor. At the level of *Engineering Design*, by Dieter.

**448 Materials Design Concepts II**
Spring. 2 credits. Prerequisite: MS&E 447.
Each student is expected to complete an extensive design-study project and give a thirty-minute video-taped talk on a materials-design problem that includes a discussion of economic factors as well as the design of processes and the selection of materials. At the level of *Engineering Design*, by Dieter.

**449 Introduction to Ceramics**
Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor.
3 lecs.
Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

**450 Physical Metallurgy**
Spring. 3 credits.
The service and design requirements of engineering alloys and their testing and characterization. The properties of important alloy systems. The selection and design of alloys for various engineering requirements, such as ASME design codes.

**452 Properties of Solid Polymers**
Spring. 3 credits. Prerequisite: Engr 261 or permission of instructor.
3 lecs.
Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Gelation and networks, rubber elasticity, elastomers and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Molecular-weight measurement. Design of high-impact-strength polymers.

**454 Processing of Glass, Ceramic, and Glass-Ceramic Materials**
Spring. 3 credits. Offered alternate years.
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught with two scientists from the research and development laboratory of Corning Glass Works.

**455 Analysis of Manufacturing Processes (also M&AE 512)**
Spring. 3 credits. Prerequisite: M&AE 312.
3 recs.
For description see M&AE 512.

**459 Physics of Modern Materials Analysis**
Fall. 3 credits.
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are necessary for understanding techniques of modern materials analysis, such as Auger electron spectroscopy, ion scattering, and secondary ion mass spectroscopy. Design of experiments for near-surface analysis.

**463 Principles of Electronic Packaging**
Fall. 3 credits.
Design and materials needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

## Graduate-Level Professional Courses

**510 Optical Methods and Materials**
Fall. 3 credits.
Principles of geometric and Gaussian optics, instrumentation required for optical experiments, and methods in optical spectroscopy. Fundamental aspects of the interaction between optical waves and crystalline solids. Materials aspects of optical devices such as optical films and coatings, light-modulation devices, displays, lasers and detectors, optical waveguides, electro-optic devices, optical recording, and applications of high-intensity light beams.

**512 Chemical Thermodynamics of Materials**
Fall. 3 credits.
Thermodynamic principles. Chemical potentials, fugacities, and activities. Closed and open systems. Stability of single- and multicomponent systems. Reactions. Binary and multi-component systems and phase diagrams. Compounds. Surfaces, surface tension, and adsorption. Special topics such as electrochemistry, corrosion, and chemical-vapor deposition.

**514 Chemical Processing of Ceramics**
Spring. 3 credits.
Ultrastructure processing of ceramics, glasses, and composites. Chemical approaches in designing and controlling the surfaces and interfaces of materials, devices, and structures at the molecular level. Topics: organometallic routes to ceramics; sol-gel processing, chemical vapor deposition, and pyrolysis techniques; design, synthesis, and chemical properties of inorganic/organometallic precursors; preparation, surface chemistry, and micromechanics of controlled powders; characterization of chemically processed ceramics; application of sol-gel derived materials; advanced structural ceramics.

**516 Thin-Film Materials Science**
Fall. 3 credits.
This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

**518 Introduction to Electron Microscopy**
Spring. 3 credits. Prerequisite: MS&E 331 or permission of instructor.
3 lecs.
Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam diffraction contrast. Analytical microscopy; comparison of EDS, WDS, and EELS. X-ray imaging. Overview of specimen preparation and in-situ microscopy.

**520 Practical Electron Microscopy**
Spring. 3 credits. Corequisite: MS&E 518–520. Limited to 12 students. A fee will be charged for instrument usage.
Lab.
Students will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the instrument to presentation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis.

**553–554 Special Project**
553, fall; 554, spring. 6 credits each term.
Research on a specific problem in the materials area.

## Graduate Core Courses

**601 Thermodynamics of Materials**
Fall. 3 credits.
Basic statistical thermodynamics. Partition function and thermodynamic state functions. Distributions. Laws of thermodynamics. Free-energy functions and conditions of equilibrium. Chemical reactions. Statistics of electrons in crystals. Heat capacity. Heterogeneous systems and phase transitions. Lattice models of 1–, 2–, 3–dimensional interacting systems. Statistical thermodynamics of alloys. Free-energy and phase diagrams. Order-disorder phenomena. Point defects in crystals. Statistical thermodynamics of interfaces. Nucleation phenomena.

**602 Elasticity and Physical Properties of Crystals**
Fall. 3 credits.
Cartesian tensors, elastic stress and strain, constitutive relations between stress and strain, symmetry of crystals, generalized tensor representation of elasticity and other reversible and irreversible properties of crystals; mathematical theory of infinitesimal elasticity with applications, including wave propagation and stress fields of dislocations; mathematical theory of yield stress and plasticity; origin of elastic behavior. At the level of Physical Properties of Crystals, by Nye.

**603 Structural Defects in Solids**
Spring. 3 credits. Prerequisites: MS&E 601 and 602, or equivalent.
Binding energies in perfect crystals. Structure and energetics of point, line, and planar defects in crystalline materials, including metals, ionic solids, covalent solids, and polymers. Interactions between defects. Bonding and random packing in amorphous materials. Observation of defects in crystalline materials. Structural analysis of amorphous materials.

**604 Kinetics of Solid-State Reactions**
Spring. 3 credits.
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, interfaces, transport in solids (definition and different kinds of diffusion coefficients, reference frames, electrical conduction, diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes), point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation, behavior of materials in potential gradients, selected solid-state processes (sintering, solid-state galvanic cells, etc.).

**605 Plastic Flow and Fracture of Materials**
Fall. 3 credits.
R. Raj.
Topics in the mechanical behavior of materials from a fundamental standpoint. Atomistic aspects of elastic properties, plastic flow in single crystals and polycrystals, rate-dependent deformation at elevated temperature, mapping of various mechanisms of plastic flow over a wide range of temperature, shear stress and grain size, and superplastic deformation. Fracture is discussed from a thermodynamic as well as an atomistic standpoint. Fracture criteria are developed in terms of crack-tip processes. Cleavage, ductile brittle transition, and intergranular cavitation failure at high temperatures. Emphasis on micromechanical modeling of mechanical behavior. A materials-science approach to modeling that combines concepts from continuum mechanics, thermodynamics, kinetics, and atomic structure.

### Related Course in Another Department

Introductory Solid-State Physics (Physics 454)

### Further Graduate Courses

**610 Principles of Diffraction (also A&EP 711)**
Fall. 3 credits. Offered alternate years.
For description see A&EP 711.

**612 Phase Transformations**
3 credits. Prerequisites: MS&E 601 and 604, or equivalent preparation.
Compositional and structural transitions in condensed systems, including spinoidal decomposition, cellular transformations, and diffusionless transformations; clustering and ordering in solid solutions; radiation-induced precipitation; condensation and evaporation phenomena; order-disorder transformations; transitions in magnetic, ferroelectric, and superconducting materials; phase equilibria and transitions in surface and grain-boundary layers. Phase transformations in metallic, ceramic, semiconducting, and polymeric systems. Thermodynamic, statistical thermodynamic, structural, and kinetic aspects of the transitions. Modern methods of observation. At the level of *The Theory of Transformations in Metals and Alloys*, by Christian; *Critical Phenomena in Alloys, Magnets and Superconductors*, edited by Mills, Ascher, and Jaffee; and current review articles.

**616 Electrical and Magnetic Properties of Materials**
3 credits. Prerequisite: Physics 454 or equivalent.
Electronic transport properties of metals and semiconductors, semiconductor devices, optical and dielectric properties of insulators and semiconductors, laser materials, dielectric breakdown, structural aspects of superconducting materials, ferromagnetism, and magnetic materials. At the level of *Physics of Semiconductor Devices*, by Sze; *Ferromagnetism*, by Bozworth; and current review articles.

**618 Laser Processing of Materials**
3 credits. Offered on demand.
Use of high-intensity lasers in the processing of materials to achieve unique microstructures and metastable phases. Topics: fundamentals of the interaction of E&M fields with metals, semiconductors and ceramics, transfer of energy between electronic and phonon systems, kinetics of rapid solidification, metastable phase transformations, microstructure of rapidly solidified materials, and current industrial applications.

**620 Synthesis of Polymeric Materials**
3 credits. Prerequisite: MS&E 452 or permission of instructor.
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Topics will also include liquid crystalline polymers, polymers for photoresists, and adhesive-binder polymers. At the level of *Principles of Polymerization*, by Odian, and current literature.

**622 X-Ray Diffraction in Materials Science**
Fall. 3 credits. Offered on demand.
X-ray scattering and absorption by materials. Reciprocal lattice and brillouin zones. Space groups and various crystal structures. Diffraction from two- or three-dimensional periodic lattices and effect of thermal vibrations. Experimental techniques in X-ray diffraction with particular emphasis on the use of synchrotron sources. Determination of crystal structure by powder and single-crystal diffraction. Use of X-ray diffraction techniques in materials science in studying phase transformation and texture in materials. Diffraction from surface layers and amorphous materials.

**671 Synthetic Polymer Chemistry (also Chem 671 and Chem E 675)**
Fall. 3 credits. Offered on demand. Prerequisites: Chem 359–360 or equivalent, or permission of instructor. Recommended: M&SE 620.
For description see Chem E 675.

## Specialty Courses

**707 Solar Energy Materials**
3 credits. Offered on demand.
3 lecs.
Photovoltaic energy conversion: (1) theory (on the level of Hovel); (2) the role of crystal defects and grain boundaries on the conversion efficiency, and schemes to passivate these defects; (3) current investigations in the DOE program to produce large quantities of solar-grade semiconducting Si; (4) theory and materials for amorphous silicon solar cells.

**714 Advanced Transmission Electron Microscopy**
Fall. 3 credits. Prerequisites: MS&E 518 and 520. Offered on demand.
3 lecs.
Kinematic and dynamic diffraction, dispersion surfaces, and Bloch waves. Anomalous absorption, Kikuchi band theory, and energy selected images. Contrast transfer function theory of phase constrast. Lattice imaging and image modeling. Calculation of multibeam defect images in theory and practice. Weak-beam images. Image processing. High-resolution SEM and STEM images. Convergent beam patterns.

**716 Transition Metal Oxides (also Chem 716)**
Fall. 3 credits. Offered on demand.
For description see Chem 716.

**779 Special Studies in Materials Sciences**
Fall, spring. Variable credit. Offered on demand.
Supervised studies of special topics in materials science.

**798 Materials Science and Engineering Colloquium**
Fall, spring. 1 credit each term. Credit limited to graduate students.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**799 Materials Science Research Seminars**
Fall, spring. 2 credits each term. For graduate students involved in research projects.
Short presentations on research in progress by students and staff.

**800 Research in Materials Science**
Fall, spring. Credit to be arranged. Prerequisite: candidacy for Ph.D. in materials science. Independent research in materials science under the guidance of a member of the staff.

**801 Research in Materials Science**
Fall, spring. Credit to be arranged. Prerequisite: candidacy for M.S. in materials science. Independent research in materials science under the guidance of a member of the staff.

# MECHANICAL AND AEROSPACE ENGINEERING

## General and Required Courses

**101 Naval Ship Systems (also Naval Science 102)**
Spring. 3 credits. Limited to freshmen and sophomores. A free elective for engineering students.
M. Y. Louge.
An introduction to primary ship systems and their interrelation. Basic principles of ship construction. Stability, propulsion, control, internal communications, and other marine systems.

**102 Drawing and Engineering Design (also Engr 102)**
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**117 Introduction to Mechanical Engineering (also Engr 117)**
Fall. 3 credits.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**119 Introduction to Manufacturing Engineering (also Engr 119)**
Spring. 3 credits.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**221 Thermodynamics (also Engr 221)**
Fall, spring. 3 credits. Prerequisites: Mathematics 191 and 192 and Physics 112.
For description see Engineering Common Courses.

**312 Fundamentals of Manufacturing Processes (also MS&E 345)**
Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisites: Engr 202 and 261, or permission of instructor.
2 lecs, 1 lab; evening exams and prelims may be given.
Yield criteria and plastic flow. Manufacturing processes for engineering materials, including metals, polymers, ceramics, and composites. Casting, forming, material removal, and joining processes.

**323 Introductory Fluid Mechanics**
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203 and coregistration in 221, or permission of instructor.
4 lecs, evening prelims.
Statics, kinematics, potential flow, dynamics, momentum, and energy relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena, laminar and turbulent motion, boundary layer; lift and drag; supersonic flow and shock waves.

**324 Heat Transfer**
Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323.
3 lecs, evening prelims.
Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces. Introduction to boiling and phase change.

**325 Mechanical Design and Analysis**
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203.
3 lecs, 1 lab. Evening prelims may be given.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

**326 Systems Dynamics**
Spring; may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: M&AE 325.
3 lecs, 1 lab, evening prelims.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; linear control systems, PDF control, stability analysis. Computer simulation (CADIF) and experimental studies of vibration and control systems.

**427 Mechanical Engineering Laboratory**
Fall. 4 credits. Prerequisites: M&AE 324 and 326.
1 lec, 2 labs.
Laboratory exercises in methods, techniques, and instrumentation used in mechanical engineering. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, shock wave phenomena, and engine performance.

**428 Engineering Design**
Fall. 1 credit. Prerequisite: completion of six semesters in mechanical engineering or equivalent.
1 lec.
General principles of design, relevant to both the fluids, energy, and heat transfer stem and the mechanical systems and manufacturing stem of mechanical engineering.

## Mechanical Systems and Design and Manufacturing

**389 Computer-Aided Design**
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: A course in programming. May be taken either before or in conjunction with a numerical-methods course. Fulfills computer applications requirement.
2 lecs, 1 sec of computational assignments at CADIF. D. L. Taylor.
A first course in CAD, introducing the use of software and computer methods in mechanical engineering. Topics include simulation, optimization, solution of field equations (finite elements, finite differences), least-square function approximation, geometry (space curves, splines, patches), and computer graphics.

**464 Design for Manufacture**
Spring. 3 credits. Prerequisites: M&AE 312 and 428 and senior standing. Enrollment limited. Fulfills field design requirement.
K. K. Wang.
Principles and methodologies for conceptual design; elimination procedures for selecting design alternatives; emphasis on design for manufacturability, quality, and cost considerations; team design projects from concept, analysis, and computer-aided drafting to manufacturing methods.

**465 Biomechanical Systems—Analysis and Design**
Spring. 3 credits. Prerequisites: Engr 202 and 203.
2 lecs, 1 lab. D. L. Bartel.
Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

**478 Feedback Control Systems (also EE 471)**
Fall. 4 credits. Prerequisite: EE 302, M&AE 326, or permission of instructor.
3 lecs. Open computer lab. M. L. Psiaki.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root locus, frequency response, and algebraic pole placement. Feedback architectures include PID, PDF, and lead/lag compensation. Applications include robotics, aerospace vehicles, and industrial processes. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic system.

**486 Automotive Engineering**
Spring. 3 credits. Prerequisite: M&AE 428 and senior standing. Fulfills field design requirement.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis is on automobiles, trucks, and related vehicles. Power plant, driveline, brakes, suspension, and structure. Other vehicle types may be considered.

**489 Computer-Aided Design Project**
Spring. 4 credits. Prerequisite: M&AE 428; limited to seniors in mechanical engineering. A project-oriented design course. Fulfills both field design and computer applications requirements.
2 lecs, 1 sec of computational assignments at CADIF. D. L. Taylor.
Students will undertake a complete design of a complex system based on specification of performance and functionality. Evaluation will be on how well the design submitted satisfies objective. Topics vary annually, but typical topics include sailboat or aircraft design. Students will be expected to utilize CAD techniques and commercial software (drafting, solid modeling, finite-element analysis, simulation) as appropriate. Attendance in lectures and completion of interim projects will be mandatory.

**512 Analysis of Materials Processing (also MS&E 442)**
Spring. 3 credits. Prerequisite: M&AE 312.
3 lecs. P. Dawson, R. Raj.
Review of the basic principles governing the behavior of crystalline solids. Application of slab models, bound theorems, and slipline theory to problems of forging, extrusion, and rolling. Analysis of sheet-metal forming, including forming limits and springback. Discussion of defect initiation during forming processes.

**514 Numerical Control in Manufacturing**
Fall. 3 credits. Prerequisite: upperclass standing in engineering.
3 lecs. K. K. Wang.
Principles and the state of the art of numerical control (NC) technology; design considerations for control systems and programming methods for NC and computerized NC (CNC) machine tools; modeling of surfaces and solid objects for machining; NC code generation and verification; computer-aided manufacturing (CAM) systems.

**517 Introduction to Robotics**
Fall. 3 credits. Enrollment limited; intended for graduate students but open to seniors. Prerequisites: computer programming and calculus. May be offered 1989–90.
1 lec, 2 labs.
Application of industrial robots in the manufacturing environment. Robot language and programming methods. Sensors and vision. Interfacing and real-time control. Coordinate transformations for manipulator kinematics. World modeling, task-level programming, and task planning.

**569 Mechanical and Aerospace Structures I**
Fall. 3 credits. Prerequisite: M&AE 325 or permission of instructor.
A study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to the analysis and design of mechanical and aerospace systems. Fundamentals of the theory for deformations of elastic bodies are reviewed and applied to classical problems of solid and structural mechanics.

**575 Microprocessor Applications**
Fall. 3 credits. Enrollment limited; intended for graduate students with limited background in digital circuitry; open to undergraduates with permission of instructor. Prerequisite: background in basic laboratory electronics. Fulfills computer applications requirement.
2 lecs, 1 lab.
Introduction to digital circuitry, microprocessors, and microprocessor-based data acquisition and control systems. Basic concepts of data representation, microprocessor and microcomputer structure, parallel and serial input/output, analog-to-digital conversion, and hardware and software requirements for interfacing. Emphasis on applications of the 8088 microprocessor and assembly language programming. Independent laboratory work on several applications projects, including the process control procedures.

**577 Mechanical Vibrations**
Fall. 3 credits. Open to qualified undergraduates. Prerequisite: M&AE 326 or equivalent. May be offered 1989–90.
2 lecs, 1 lab (occasional).
Further development of vibration phenomena in single– and multiple–degree-of-freedom linear and nonlinear systems, with emphasis on engineering problems involving analysis and design.

**578 Feedback Control Systems Design and Implementation**
Spring. 3 credits. Open to qualified undergraduates. Prerequisite: M&AE 478 or EE 471, or permission of instructor.
1 lec, 2 labs.
Further development of the theory, design, and implementation of feedback control systems with particular emphasis on applications, modeling and system identification, and hardware implementation. Digital control is covered briefly. Labs include real-time microprocessor-based control of a D.C.-motor positioning system, a two-link robot arm, and a two-tank level-control system.

**589 Computer-aided Research, Design, and Development**
Fall. 3 credits. Prerequisite: M&AE 489 or equivalent. May be offered 1989–90.
2 lecs, computational assignments at CADIF. D. L. Taylor.
Introduction to a wide range of topics and programming techniques that are useful in the development of engineering models for computer analysis. Emphasis on data structure and integration of existing packages.
Extensive use of computer graphics. Intended to prepare students to take an active role in the development of CAD software. Topics include computer graphics, data structures, 3-D modeling, role of new languages (LISP, PROLOG, etc.), and program development and debugging.

**590 Mechanical Engineering Design**
Spring. 4 credits. Intended for students in M.Eng.(Mechanical) program.
Formal consideration of the complete design process (including creativity, planning, scheduling, cost analysis, management, and analytical methods) in the context of one or more specific projects carried out by the students. Projects may arise from department research interests or industrial collaboration.

**610 Solid Modeling**
Fall. 4 credits. Prerequisites: graduate standing and two years of engineering mathematics (through linear algebra and Pascal), or similar programming experience.
H. Voelcker.
Development of mathematical and computational models for rectilinear solids (flat-faced polyhedra) from basic principles of geometry, topology, and representation theory; generic algorithms; algorithms for generating graphic displays and calculating mass properties; other applications in design and manufacturing; modeling systems.

**611 Applications of Solid Modeling**
Spring. 2–4 credits to be arranged. Prerequisite: M&AE 610 or permission of instructor.
H. Voelcker.
A study of algorithms based on set-membership classification that provide utilities for operating on representations of solids, and their use in programs and systems for engineering design, analysis, and manufacturing. Topics include: functions and algorithms, set-membership classification, representation conversion, numerical geometry, graphic display and interaction, mass-property calculation, finite-element mesh generation, machine-process modeling, and CAD/CAM systems.

**[612 Motional-Process Modeling: Manipulation and Machining**
Spring. 4 credits. Prerequisites: M&AE 610 and B.S.-level knowledge of mechanical dynamics and control theory. Not offered 1989–90.
H. Voelcker.
Classification of machining and manipulatory processes and host machines; spatial and dynamical modeling of motional machines and processes; low-level motional planning; control of motion; CNC machines and industrial robots; programming hierarchies.]

**615 Composite Materials (also T&AM 555 and MS&E 615)**
Spring. 4 credits. Prerequisites: Engr 202 and 261, graduate standing, or permission of instructor.
Brief history of composite materials; types, geometries, fiber types, and structures; polymer matrices and deformation properties; orthotropic elasticity; stress-strain analysis of lamina and laminates; micromechanics of deformation and stress transfer, effective moduli, theories of strength and fatigue, nondestructive testing and inspection, applications of composites, environmental effects.

**665 Advanced Topics in Orthopaedic Biomechanics**
Spring. 4 credits. Prerequisites: graduate standing, prior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Offered alternate years.
3 lecs. D. L. Bartel.
Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.

**670 Mechanical and Aerospace Structures II (Finite-Element Method)**
Spring. 4 credits. Prerequisite: M&AE 569 or permission of instructor. Fulfills computer applications requirement.
Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as conductive heat transfer). Primary emphasis on underlying mechanics and mathematics of solving boundary-value problems numerically. Secondary consideration of inherent capabilities and limitations of large-scale, general-purpose structural mechanics programs. Introduction to computational aspects through development of small finite-element programs or the application of existing multipurpose larger programs. Computing assignments.

**678 Optimal Control and Estimation**
Fall. 3 credits. Prerequisite: M&AE 478, EE 471, or permission of instructor; programming ability in FORTRAN, Pascal, or C. Corequisite: EE 521. May be offered 1989–90.
3 lecs. M. L. Psiaki.
Develops the theory of the design of modern multi-input–multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQE compensator design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.

**679 Digital Simulation of Dynamic Systems**
Fall, on demand. 4 credits. Open to qualified undergraduates with permission of instructor. Prerequisite: previous exposure to systems dynamics and digital programming.
J. F. Booker.
Modeling and representation of physical systems by systems of linear and nonlinear ordinary differential equations in state vector form. Selected applications from diverse fields. Simulation by numerical integration. Components and organization of general-purpose, digital-simulation languages (such as DSL and CSMP). Special techniques for large linear systems. Term project.

**680 Random Vibration (also CEE 671)**
Fall, on demand. 4 credits. Prerequisite: Engr 260 or M&AE 326 or equivalent, graduate standing, or permission of instructor.
Basic concepts of probability theory and stochastic processes; time and frequency domain methods for finding second-moment characteristics of linear-system responses; and solutions of nonlinear random-vibration problems including equivalent linearization, perturbation, Fokker-Planck and Kolmogorov equations, and Itô's calculus. Emphasis on engineering applications and estimation of system performance.

**682 Hydrodynamic Lubrication: Fluid-Film Bearings**
Fall, on demand. 4 credits.
J. F. Booker.
Theory of hydrodynamic lubrication and its application to the analysis and design of fluid-film bearings. General topics include viscous flow in thin films, self-acting and externally pressurized bearings with liquid and gas lubricant films, bearing-system dynamics, and computational methods. Also selected special topics such as elastohydrodynamic lubrication.

**[685 Optimum Design of Mechanical Systems**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1989–90.
D. L. Bartel.
The formulation of design problems frequently encountered in mechanical systems as optimization problems. Theory and application of methods of mathematical programming for the solution of optimum design problems.]

**715 Theory and Practice in Inelastic Deformation**
Fall. 4 credits. Prerequisites: graduate standing and introductory finite-element course, or permission fo instructor.
G. G. Weber.
Topics in finite-deformation inelasticity in the framework of modern continuum mechanics. Material and geometric non-linear formulations on theoretical as well as practical grounds. Emphasis is on developing the underlying principles for proper formulation of engineering boundary-value problems with inelastic constitutive equations. Introductory small-scale simulations to illustrate the principles are also developed. Applications include inelastic design, metal forming, polymer processing, ice mechanics, and powder consolidation. Familiarity with compact tensor notation is recommended but not required.

**716 Advanced Deformation Process Simulation**
Spring. 4 credits. Prerequisites: graduate standing and M&AE 715, or permission of instructor.
P. R. Dawson.
Application of advanced mechanics theories to the simulation of the deformations of solids, with special attention toward materials processing and other severe-loading environments. The selection of model equations based on dominant features of the material behavior and kinematics of a particular application is stressed. The use of state-variable constitutive models are discussed, including micromechanical models such as those of polycrystal plasticity. Assignments consist of simulation projects that assume a working knowledge of the finite-element method.

## Energy, Fluids, and Aerospace Engineering

**405 Introduction to Aeronautics**
Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor.
Introduction to atmospheric-flight vehicles. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Propulsion system characteristics. Static aircraft performance; range and endurance. Elements of stability and control.

**[439 Acoustics and Noise**
Spring. 3 credits. Prerequisite: some knowledge of fluid mechanics or permission of instructor. Not offered 1989–90.
Sound propagation, transmission, and absorption. Sound radiation by surfaces and flow. Loudspeakers. Room acoustics and noise-control techniques. Hearing, music, noise, and noise-control criteria.

**441 Advanced Thermodynamics with Energy Applications**
Spring. 3 credits. Prerequisites: M&AE 221 and 323, or permission of instructor. May not be offered 1989–90.
Review of thermodynamics. Applications to phase changes, heat engines, and combustion and refrigeration cycles. Statistical basis of thermodynamic laws and applications to lasers and semiconductors.

**449 Combustion Engines**
Spring. 3 credits. Prerequisites: Engr 221 and M&AE 323.
Introduction to combustion engines, with emphasis on application of thermodynamics and fluid dynamics. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes. Combustion knock. Formation and control of undesirable exhaust emissions.

**506 Aerospace Propulsion Systems**
Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor.
3 lecs.
Application of thermodynamics and fluid mechanics to design and performance of thermal-jet and rocket engines. Mission analysis in space. Auxiliary power supply.

**[507 Dynamics of Flight Vehicles**
Spring. 3 credits. Prerequisites: M&AE 405 and Engr 203, or permission of instructor. Offered alternate years. Not offered 1989–90.
Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability and transient control response. At the level of *Dynamics of Flight: Stability and Control*, by Etkin.]

**530 Fluid Dynamics**
Fall. 3 credits. Prerequisites: M&AE 323 and senior or graduate standing, or permission of instructor.
F. K. Moore.
Inviscid fluid dynamics and aerodynamics, including imcompressible and supersonic flows, flow over bodies, lift, and drag. Shock waves. Courses 530 and 531 are of interest primarily to seniors and M.Eng. students; however, incoming M.S. or Ph.D. students who will not major in fluid mechanics but need competence in problem solving and basic problem formulation should be interested also. The courses may be taken independently or as a sequence.

**531 Boundary Layers**
Spring. 3 credits. Prerequisites: M&AE 323 and senior or graduate standing, or permission of instructor. Recommended: M&AE 530 or equivalent.
Derivation of the Navier-Stokes equation, simple exact solutions, concept of scaling. Classical laminar boundary layer theory. The role of boundary layers in an overall velocity field past solid objects. Heuristic derivation of Prandtl's boundary layer approximation, physical mechanisms of boundary layer formation; flat plate boundary layer. The method of matched asymptotic expansions for singular perturbation problems of boundary layer type. Similarity solutions. Blasius series for boundary layer flow past an arbitrary two-dimensional body. Behavior of boundary layer flows near a separation point. Interactive boundary layer theory. Turbulent boundary layers: origin of turbulence, concepts of stability and transition to turbulence. Deterministic chaos. Some results of stability theory for boundary layers. Effects of pressure gradient. Fully developed turbulence, turbulent wall layer structure, turbulent boundary layers.

**536 Turbomachinery and Applications**
Spring. 3 credits. Prerequisite: M&AE 323 or equivalent.
3 lecs. F. K. Moore.
Aerothermodynamic design of turbomachines in general, energy transfer between fluid and rotor in specific types, axial and radial devices, compressible flow. Three-dimensional effects, surging.

**543 Combustion Processes**
Spring. 3 credits. Prerequisites: M&AE 323 and 324.
3 lecs.
An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, combustion of solids.

**554 Solar Engineering Design**
Fall. 3 credits. Corequisites: M&AE 428 and senior standing in M&AE. Fulfills field design requirement. Enrollment limited to 30.
B. Conta.
A broad coverage of solar-energy utilization by humankind. Fundamentals of solar radiation. Direct radiation as a source of heat and work. Indirect radiation utilization or natural collection; water power, windpower, and biomass. The production of liquid and gaseous fuels. Solar architecture and environmental control by both active and passive means. Each student will execute a design project in solar engineering. Course grade will be based on the design project; presentation of a design proposal, an oral presentation on progress of project, and submission of a final design report.

**556 Power Systems**
Fall. 3 credits. Corequisites: M&AE 428 and senior standing. Fulfills field design requirement.
P. L. Auer.
A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power-industry, economic, and environmental factors. Trends and projections.

**559 Introduction to Controlled Fusion: Principles and Technology (also EE 484 and NS&E 484)**
Spring. 3 credits. Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics with permission of instructor. Intended for seniors and graduate students.
3 lecs. D. A. Hammer or P. L. Auer.
This course is intended to give engineering and physical science students an introduction to the physical basis and technological requirements for generating useful power by nuclear fusion. For complete description see NS&E 484.

**601 Foundations of Fluid Dynamics and Aerodynamics**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

**602 Incompressible Aerodynamics**
Spring. 4 credits. Prerequisite: M&AE 601 or equivalent. Open to qualified undergraduates with permission of instructor.
J. L. Lumley.
Basic equations for inviscid fluid motion. Vorticity dynamics. General results for irrotational flows. Integral representations via Green's theorem. Solution methods based on singularities. Complex variable technique for two-dimensional flows. Airfoil, wing, and slender-body theories. Unsteady phenomena. Three-dimensional boundary layers and separation.

**603 Compressible Aerodynamics**
Spring. 4 credits. Prerequisite: M&AE 601 or equivalent, or permission of instructor.
S. F. Shen.
Basic conservation laws and fundamental theorems of compressible fluid flow. The accoustic approximation. One-dimensional unsteady flows. Characteristics and shock waves. Exact solutions of steady flows. General methods for two-dimensional and axisymmetric steady flows and Bateman principles. Hodograph method. Characteristics method for steady supersonic flows. Approximate methods, series expansion, and perturbation theories; transonic and hypersonic flows.

**608 Physics of Fluids**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
F. C. Gouldin.
Kinetic theory of gases: collisions; transport properties; derivation of the macroscopic equations of mass, momentum, and energy. Statistical mechanics of gases: microcanonical ensemble; partition functions; calculation of thermodynamic properties. Introduction to wave mechanics: harmonic oscillator, rigid rotator, one-electron atom. Atomic and molecular structure: building-up principle, Born-Oppenheimer approximation.

**[630 Atmospheric Turbulence and Micrometeorology**
Spring. 4 credits. Open to qualified undergraduates with permission of instructor. Offered alternate years. Not offered 1989–90.
Z. Warhaft.
Basic problems associated with our understanding of the structure of the velocity field and the transport of scalars such as temperature and moisture in the lower atmosphere from both theoretical and experimental viewpoints. Topics include the second-order turbulence equations and their closure; Monin-Obukhov theory; diffusion of scalars; spectral characteristics of atmospheric variables; experimental techniques, including remote sensing; and the analysis of random-time series.]

**[648 Seminar on Combustion**
Fall. 2 or 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1989–90.
S. B. Pope, C. T. Avedisian.
Discussion of contemporary problems in combustion research, with emphasis on applications of modern experimental and analytical techniques. Typical problems have included formation and removal of pollutants in combustion systems, combustion of alternative fuels, coal combustion, combustion in turbulent flow, and droplet combustion.]

**651 Advanced Heat Transfer**
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
M. Y. Louge.
Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

**[652 Thermodynamics and Phase-Change Heat Transfer (also Chem E 721)**
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1989–90.
C. T. Avedisian.
Thermodynamics of phase change. Superheated liquids and supersaturated vapors. Thermodynamic stability criteria for metastable liquids and homogeneous nucleation theory. Dynamics of bubble growth and collapse. Pool boiling and the critical heat flux. Hydrodynamics of one-dimensional two-phase flows.]

**653 Experimental Methods in Fluid Mechanics, Heat Transfer, and Combustion**
Fall. 4 credits.
2 lecs, 1 lab. Z. Warhaft.
Study of experimental techniques for measuring pressure, temperature, velocity, and composition of gases, with emphasis on experimental capabilities and physical principles. Topics include laser velocimetry, hot-wire anemometry, spectroscopy, and laser scattering.

**704 Viscous Flows**
Fall. 4 credits. Prerequisite: M&AE 601 or permission of instructor.
S. F. Shen.
A systematic study of laminar-flow phenomena (including compressibility and heat transfer) and methods of analysis. Exact solutions of the Navier-Stokes equations. Linearized problems; flow at small Reynolds numbers, laminar instability. The boundary-layer approximation; general properties. Transformations for compressibility and axisymmetric effects. Approximate methods of calculation. Separation and unsteady problems. Stability of laminar flows.

**732 Analysis of Turbulent Flows**
Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years. May be offered 1989–90.
S. B. Pope.
Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations, large-eddy simulations, and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdf's): definitions and properties, transport equations, relationship to second-order closures, stochastic modeling, Langevin equation, and Monte Carlo solutions. The course emphasizes comparison of theory with experiment.

**[733 Stability of Fluid Flow**
Fall. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1989–90.
S. Leibovich.
Introduction to stability and bifurcation of fluid flow. Energy stability theory. Convective instability, the Benard problem. Taylor instability of rotating couette flow. Stability of parallel flows. Critical-layer singularities and methods of resolution. Boundary layers, slight departures from parallel flow. Stratified flows and the Taylor-Goldstein equation; swirling flows. Destabilization by "stabilizing" body forces. Nonlinear effects: amplitude equations of the Stuart-Watson type. Modulated nonlinear effects and amplitude equations of the Newell-Whitehead type. Nonlinear critical-layer dynamics.]

**734 Turbulence and Turbulent Flow**
Fall. 4 credits. Prerequisite: M&AE 601 or permission of instructor.
J. L. Lumley.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

**[736 Computational Aerodynamics**
Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Not offered 1989–90.
D. A. Caughey.
Numerical methods for hyperbolic partial differential equations and those arising in inviscid and high–Reynolds-number fluid-flow problems. Finite difference and finite volume methods. Accuracy, convergence, and stability of explicit and implicit methods, including treatment of boundary conditions and grid generation for complex geometries. General procedures for solving the Euler equations, with a critical survey of current methods for problems of aerodynamic interest, including those that are dominantly hyperbolic (such as unsteady flows with shock waves) or are mixed elliptic-hyperbolic (such as steady transonic flows). Assigned problems are solved using a digital computer.]

**[737 Computational Fluid Mechanics and Heat Transfer**
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN programming experience. Not offered 1989–90.
K. E. Torrance.
Numerical methods for elliptic and parabolic partial differential equations arising in flow problems involving convection and diffusion. Finite-difference, finite-volume, and spectral methods. Accuracy, stability, convergence, and conservation. Review of current methods. Emphasis on steady and unsteady incompressible flows. Assigned problems are solved on a digital computer and at CADIF.]

### Special Offerings

**001 Introduction to Mechanical Technology**
Fall, spring. 1 credit. Enrollment limited. S-U grades only. Does not meet any graduation requirements.
1 sec.
Offered to students lacking a background in basic understanding of mechanical devices and technology. Hands-on experience with various typical devices such as engines, refrigeration units, heat pumps, etc.

**490 Special Investigations in Mechanical and Aerospace Engineering**
Fall, spring. Credit to be arranged. Limited to undergraduate students. Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

**491 Design Projects in Mechanical and Aerospace Engineering**
Fall, spring. 3–6 credits, to be arranged. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

**520 Introduction to Mechanical Tolerancing and Dimensional Metrology**
Spring. 1 credit. Prerequisites: Math 294, Engr 102, and Engr 100, or equivalent; knowledge of manufacturing processes is advantageous. Intended for graduate students; others by permission of instructor.
H. B. Voelcker.
A short course. Introduction to the theory and practice of dimensional tolerancing and "gaging" as used in mechanical design and manufacturing; historical evolution, limit tolerances, geometric tolerances, manual and functional gaging, coordinate measuring machines; limitations and open issues.

**592 Seminar and Design Project in Aerospace Engineering**
Fall, spring. 2 credits each term. Intended for students in M.Eng.(Aerospace) program. Study and discussion of topics of current research interest in aerospace engineering. Individual design projects supervised by separate faculty members.

**594 Manufacturing Engineering Seminar (also OR&IE 894)**
Fall, spring. 1 credit. S-U grades optional. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

**690 Special Investigations in Mechanical and Aerospace Engineering**
Fall, spring. Credit to be arranged. Limited to graduate students.

**695 Special Topics *in* Mechanical and Aerospace Engineering: Chaotic Vibrations**
Spring. 3 credits. Prerequisite: permission of instructor.
F. C. Moon.
Review of classical nonlinear vibration theory. Maps and flows. Routes to chaos. Mathematical models of chaotic physical systems. Experimental Poincaré maps. Theoretical predictive phenomena. Lyapunov exponents. Measures of fractal dimensions. Fractal basin boundaries.

**791 Mechanical and Aerospace Research Conference**
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.
Presentations on research in progress by faculty and students.

**799 Mechanical and Aerospace Engineering Colloquium**
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

**890 Research in Mechanical and Aerospace Engineering**
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

**990 Research in Mechanical and Aerospace Engineering**
Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of the director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

## NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A&EP 609, 612, 633, 634, 636, 638, and 651).

**121 Fission, Fusion, and Radiation (also Engr 121)**
Spring. 3 credits.
2 lecs, 1 lab demonstration.
This is a course in the Introduction to Engineering series. For description see Engineering Common Courses.

**303 Introduction to Nuclear Science and Engineering I (also A&EP 303)**
Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field.
3 lecs. V. O. Kostroun.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of *Introduction to Nuclear Engineering,* by Lamarsh.

**484 Introduction to Controlled Fusion: Principles and Technology (also EE 484 and M&AE 559)**
Spring. 3 credits. Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students.
3 lecs. D. A. Hammer.
Introduction to the physical principles and technology underlying controlled-fusion power. Topics include fundamental aspects of the physics of ionized gases at high temperature (thermonuclear plasmas), requirements (in principle) for achievement of net power from fusion, technological problems of an actual fusion reactor, and progress of the fusion program toward overcoming these problems. Both magnetic and inertial confinement fusion are discussed, and comparisons are made between fusion and fission.

**551 Nuclear Methods in Non-Nuclear Research Fields**
Spring. 3 credits. Prerequisite: Physics 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A&EP 651, which has the same lecture but has an additional lab period, is intended for nuclear specialists.
One 2-hour lecture and one 2-1/2-hour lab. D. D. Clark.
Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods including data reduction. About ten experiments are available on radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on those nuclear methods, particularly instrumental ones using neutrons, that are used in, or are being adapted for, non-nuclear fields, but tracer and other chemical techniques are not included. Students each select seven or eight experiments to meet their interests and needs. At the level of *Nuclear Analytical Chemistry,* by Brune, Forkman, and Persson.

## OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

**115 Engineering Application of Operations Research (also Engr 115)**
Fall, spring. 3 credits. Enrollment not open to OR&IE upperclass majors.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**119 Introduction to Manufacturing Engineering (also Engr 119)**
Spring. 3 credits. Enrollment not open to OR&IE upperclass majors.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**230 Discrete Mathematics**
Spring. 3 credits. Prerequisite: one year of calculus or permission of instructor.
3 lecs.
A broad but thorough introduction to topics of discrete mathematics of use in a variety of fields of science and engineering. Topics include basic combinatorics and counting techniques, recurrence relations and generating functions, introduction to modular arithmetic with application to coding theory and experimental designs, and basic notions of graph theory with applications in optimization such as maximum flow in a network and project planning.

**260 Introductory Engineering Probability (also Engr 260)**
Fall, spring, summer. 3 credits. Prerequisite: first-year calculus. Corequisite: Math 293.
3 lecs.
For description see Engineering Common Courses.

**270 Basic Engineering Probability and Statistics**
Fall; also spring, summer if staffing permits. 3 credits. Prerequisite: first-year calculus. Enrollment not open to OR&IE upperclass majors.
3 lecs. Evening prelims.
For description see Engineering Common Courses.

**320 Optimization I**
Fall. 4 credits. Prerequisite: Mathematics 221 or 294.
3 lecs, 1 rec.
Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

**321 Optimization II**
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.
3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

**350 Cost Accounting, Analysis, and Control**
Fall; also spring if staffing permits. 4 credits.
3 lecs, 1 computing-disc.
Principles of accounting, financial reports; job-order and process cost systems—historical and standard costs; cost characteristics and concepts for control, analysis, and decision making.

**361 Introductory Engineering Stochastic Processes I**
Fall, spring. 4 credits. Prerequisite: OR&IE 260 or equivalent.
3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queueing and reliability.

**370 Introduction to Statistical Theory with Engineering Applications**
Fall, spring. 4 credits. Prerequisite: OR&IE 260 or equivalent.
3 lecs, 1 rec.
Provides a working knowledge of basic statistics as it is most often applied in engineering and a basis in statistical theory for continued study. Topics include a review of distributions of special interest in statistics; testing simple and composite hypotheses; point and interval estimation; correlation; linear regression.

**410 Industrial Systems Analysis**
Spring. 4 credits. Corequisite: OR&IE 270 or 370.
3 lecs, 1 computing session.
Design of production facilities, including engineering economy, taxation effects, materials handling, process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

**416 Design of Manufacturing Systems**
Spring (last 4 weeks). 2 credits. Corequisites: at least one of the following courses: OR&IE 417, 451, 525, and 562.
2 lecs.
Project course in which students, working in teams, design a manufacturing and/or logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for most lectures.

**417 Layout and Material Handling Systems**
Spring. 3 credits. Prerequisite: OR&IE 361.
2 lecs, 1 rec.
Design of the layout of processes and storage areas and the material- handling system for movement of items. Typical equipment used. The functions of identification control, storage, movement, batching, merging, and dispersion. Introduction to new technologies.

**421 Production Planning and Control**
Fall. 4 credits. Prerequisites: OR&IE 320 and 361, or permission of instructor.
3 lecs, 1 rec.
Introduction to the design, planning, and control of production and distribution systems. Decision making in manufacturing systems is stressed. Topics include inventory planning, work-cell design, work-load smoothing, production planning, and scheduling.

**[431 Discrete Models**
Spring. 4 credits. Prerequisites: OR&IE 320 and CS 100, or permission of instructor. Not offered 1989–90.
3 lecs, 1 rec.
Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific models studied include flows in networks, network synthesis, sequencing, partitioning, and fair allocation.]

**432 Applied Linear Algebra and Introductory Nonlinear Programming**
Fall. 3 credits. Prerequisite: Math 294 or 221.
Emphasis is on the ideas and theory of linear algebra that are especially important in optimization applications. Linear techniques are developed in the context of basic nonlinear programming to illustrate how linear algebra is used to study nonlinear systems. Some assignments provide exposure to existing software; other assignments require careful mathematical thought and exposition.

**435 Introduction to Game Theory**
Spring. 3 credits.
3 lecs.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**451 Economic Analysis of Engineering Systems**
Spring. 3 credits. Prerequisites: OR&IE 320 and OR&IE 350.
2 lecs, 1 computing session.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

**462 Introductory Engineering Stochastic Processes II**
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.
3 lecs, 1 rec.
A selection of topics from the following: martingales, Markov and semi-Markov processes, optimal stopping. Examples and applications are drawn from several areas.

**472 Statistical Decision Theory**
Fall. 3 credits. Prerequisite: OR&IE 370 or equivalent.
3 lecs.
Decision rules, admissible decision rules, Bayes decision rules, minimax decision rules. Using regret instead of loss. Criteria for choosing a decision rule and relation to theory of games. Use of linear programming to construct minimax decision rules. Building cost of collecting information into the loss function. Decision problems requiring a sequence of decisions over time and relation to dynamic programming. Use of the empirical cumulative distribution function and applications to inventory problems. Classical statistical theory as special cases of statistical decision theory.

**475 Regression**
Spring. Second half of term. 2 credits. Prerequisite: OR&IE 370.
3 lecs, 1 rec.
Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

**476 Experimental Design I**
Spring. First half of term. 2 credits. Prerequisite: OR&IE 370.
3 lecs, 1 rec.
One- and two-way ANOVA; blocking with one or two factors; replication and sample-size determination; multiple comparison; selection of best population(s).

**499 OR&IE Project**
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

**516 Case Studies**
Fall. 4 credits. Only for M.Eng. students in OR&IE.
3 rec-labs.
Students are presented with unstructured problems that resemble real-world situations. Students work in project groups on the formulation of mathematical models, computer analysis of the data and models, and presentation of oral and written reports.

**520 Operations Research I: Optimization I**
Fall. 4 credits. Prerequisite: Mathematics 221 or 294. Intended for graduate students minoring in operations research. The same course as OR&IE 320, but on the graduate level.
3 lecs, 1 rec.
For description see OR&IE 320.

**521 Optimization II**
Spring. 4 credits. Prerequisite: OR&IE 320 or 520 or equivalent. Intended for graduate students in other fields. Lectures concurrent with OR&IE 321.
3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed, as well as numerous applications.

**523 Operations Research II: Introduction to Stochastic Modeling**
Spring. 4 credits. Prerequisite: OR&IE 260 or equivalent. Intended for graduate students in other fields. Lectures concurrent with OR&IE 361.
3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

**525 Scheduling Theory**
Spring. 3 credits. Prerequisite: OR&IE 320.
3 lecs.
Scheduling and sequencing problems. Single-resource scheduling, parallel processing, flow-shop scheduling. Methodology is drawn from dynamic and integer programming, simulation techniques, and heuristic methods.

**[561 Queuing Theory and Its Applications**
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor. Not offered 1989–90.
3 lecs.
Basic queuing models. Delay and loss systems. Finite source, finite capacity, balking, reneging. Systems in series and in parallel. Various queue disciplines. Busy-period problems. Design and control problems. Statistical inference from queuing processes. Priority systems. Queuing networks. Applications to equipment maintenance, telephone traffic, and computer operations.]

**562 Inventory Theory**
Spring. 3 credits. Prerequisite: OR&IE 421 or permission of instructor.
3 lecs, 1 rec.
Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-item and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Distribution problems are analyzed. Applications are stressed.

**563 Applied Time-Series Analysis**
Fall. 3 credits. Prerequisites: OR&IE 361 and 370 and CS 211, or permission of instructor.
3 lecs.
Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. As time permits other topics, such as spectral analysis, filtering and long-range dependence are discussed. Analysis of real data is carried out. Assignments require computer work.

**570 Introduction to Statistical Theory with Engineering Applications**
Fall, spring. 4 credits. Prerequisite: OR&IE 260 or equivalent. The same course as OR&IE 370, but on the graduate level.
3 lecs, 1 rec.
For description see OR&IE 370.

**[575 Experimental Design II**
Spring. Half of term. 2 credits. Prerequisite: OR&IE 475. Not offered 1989–90.
3 lecs, 1 rec.
$2^N$ factorials; confounding; $2^{N-P}$ and $3^{N-P}$ fractional factorials.]

**[576 Statistics for Manufacturing**
Spring. Half of term. 2 credits. Prerequisite: OR&IE 475. Not offered 1989–90.
3 lecs, 1 rec.
Use of linear regression and variance components analysis to identify sources of variability in process-control data; modeling a controlled process.]

**[577 Quality Control**
Spring. Half of term. 2 credits. Prerequisites: OR&IE 270 or 370. Not offered 1989–90.
3 lecs, 1 rec.
Control concepts and methods for attributes and variables; process capability analysis; acceptance sampling plans; elementary procedures for variables; acceptance-rectification procedures.]

**580 Digital Systems Simulation**
Fall. 4 credits. Prerequisites: CS 211 and OR&IE 370, or permission of instructor.
3 lecs, 1 rec.
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo–random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

**599 Project**
Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**626 Advanced Production and Inventory Planning**
Spring. 3 credits.
3 lecs.
Introduction to a variety of production and distribution planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.

**[627 Dynamic Programming**
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1989–90.
3 lecs.
Optimization of sequential decision processes. Deterministic and stochastic models, infinite-horizon Markov decision models, policy iterations. Contraction mapping methods. Applications drawn from inventory theory, production control.]

**630–631 Mathematical Programming I and II**
630, fall; 631, spring. 3 credits each term. Prerequisites: advanced calculus and elementary linear algebra.
3 lecs.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions. Formulation, duality theory, simplex, and dual simplex methods. Sensitivity analysis. Network flow problems and algorithms. Theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma. Introduction to new algorithms (ellipsoid, Karmarkar). Exploiting special structure in the simplex method, computational implementation. Decomposition Principle. Introduction to integer and nonlinear programming and game theory.

**632 Nonlinear Programming**
Fall. 3 credits. Prerequisite: OR&IE 630.
3 lecs.
Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.

**633 Graph Theory and Network Flows**
Fall. 3 credits. Prerequisite: permission of instructor.
3 lecs.
Directed and undirected graphs. Bipartite graphs. Hamilton cycles and Euler tours. Connectedness, matching, and coloring. Flows in capacity-constrained networks. Maximum flow and minimum cost flow problems.

**634 Combinatorial Optimization**
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

**[636 Integer Programming**
Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 1989–90.
3 lecs.
Discrete optimization. Linear programming in which the values are restricted to integers. Theory, algorithms, and applications. Cutting-plane methods, enumerative methods, and group-theoretic methods; additional topics are drawn from recent research in this area.]

**639 Convex Analysis**
Spring. 3 credits. Prerequisite: Mathematics 411 and 431, or permission of instructor.
3 lecs.
The theory of finite dimensional convex sets is developed through the study of real-valued convex functions and Fenchel duality. Separation of convex sets, polarity correspondences, recession cones, theorems of Helly and Caratheodory.

**[645 Game Theory**
Spring. 3 credits. Prerequisite: Mathematics 411 or 431, or permission of instructor. Not offered 1989–90.
3 lecs.
Noncooperative n-person games; Nash equilibrium points. Cooperative n-person games; the core, stable sets, Shapley value, bargaining set, kernel, nucleolus. Selected applications.]

**660 Applied Probability**
Fall. 4 credits. Prerequisite: advanced calculus.
3 lecs, 1 rec.
Introduction to basic probability. The sample space; events; probability. Conditional probability. Independence. Product spaces. Random variables. Expectation. Important distributions. Characteristic functions. Convergence concepts. Limit theorems.

**661 Applied Stochastic Processes**
Spring. 4 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs, 1 rec.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, point processes.

**[662 Advanced Stochastic Processes**
Spring. 3 credits. Prerequisite: OR&IE 661 or equivalent. Not offered 1989–90.
3 lecs.
A selection of topics from the following: stationary processes, Levy processes, diffusion processes, point processes, martingales, regenerative phenomena, random walks, stochastic calculus, weak convergence.]

**[663 Time-Series Analysis**
Fall. 3 credits. Prerequisite: OR&IE 660 or equivalent. Not offered 1989–90.
3 lecs.
Representations of stationary time series. The ARIMA models. Spectral analysis. Long-range dependence. Problems of estimation. Multivariate time series.]

**[664 Deterministic and Stochastic Control**
Fall. 3 credits. Prerequisite: OR&IE 661 or equivalent. Not offered 1989–90.
3 lecs.
Topics include elements of calculus of variations, Pontryagin's maximum principle, Markov decision processes, dynamic programming. Problems in filtering and prediction, production planning and inventory control, congestion phenomena, storage models, and environmental management are discussed.]

**665 Advanced Queuing Theory**
Fall. 3 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs.
A study of stochastic processes arising in a class of problems including congestion, storage, dams, and insurance. The treatment is self-contained. Transient behavior of the processes is emphasized. Heavy-traffic situations are investigated.

**670 Statistical Principles**
Spring. 4 credits. Prerequisite: OR&IE 660 or equivalent.
3 lecs, 1 rec.
Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

**671 Intermediate Applied Statistics**
Fall. 3 credits. Prerequisite: OR&IE 670 or equivalent.
3 lecs.
Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

**[672 Statistical Decision Theory**
Fall. 3 credits. Prerequisite: OR&IE 471 or 670 or equivalent. Not offered 1989–90.
3 lecs.
The general problem of statistical decision theory and its applications. Comparison of decision rules; Bayes, admissible, and minimax rules. Problems involving sequences of decisions over time. Use of the sample cdf and other simple nonparametric methods. Applications.]

**[673 Nonparametric Statistical Analysis**
Fall. 3 credits. Prerequisite: OR&IE 670 or permission of instructor. Not offered 1989–90.
3 lecs.
Estimation of quantiles, cdf's and pdf's. Properties of order statistics and rank-order statistics. Hypothesis testing in one- and several-sample situations; sign tests; use of ranks for tests and estimation. Small and large sample properties of tests. Asymptotic distributions of test statistics. Testing goodness of fit.]

**[674 Design of Experiments**
Spring. 3 credits. Prerequisite: OR&IE 671 or permission of instructor. Not offered 1989–90.
3 lecs.
Use and analysis of experimental designs such as randomized blocks, balanced incomplete blocks, and Latin squares; analysis of variance and covariance, factorial experiments; statistical problems associated with finding best operating conditions; response-surface analysis.]

**[675 Statistical Analysis of Discrete Data**
Spring. 3 credits. Prerequisite: OR&IE 671. Not offered 1989–90.
Varieties of categorical data; cross classifications and contingency tables; simultaneous estimation of parameters; tests for independence; multidimensional tables and log-linear models; maximum likelihood and weighted least-squares estimation; logistic regression.]

**[676 Statistical Analysis of Life Data**
Spring. 3 credits. Prerequisite: OR&IE 671 or equivalent. Not offered 1989–90.
Analysis of data from reliability, fatigue, and life-testing studies in engineering; biomedical applications. Survival distributions, hazard rate, censoring. Life tables. Estimation and hypothesis testing. Standards. Goodness of fit, hazard plotting. Covariance analysis, accelerated life testing. Multiple decrement models, competing risks. Sample-size determination. Adaptive sampling.]

**[677 Statistical Selection and Ranking Procedures**
Fall. 3 credits. Prerequisite: OR&IE 674 or permission of instructor. Not offered 1989–90.
3 lecs.
A study of multiple-decision problems, in which a choice must be made among two or more courses of action. Major emphasis is on selection and ranking problems involving choosing the "best" category where goodness is measured in terms of a particular parameter of interest. Statistical formulations of such problems; indifference-zone, subset, and other approaches. Single-stage, two-stage, and sequential procedures. Applications. Recent developments.]

**[678 Asymptotic Methods in Statistics**
Spring. 3 credits. Prerequisite: OR&IE 670 or Mathematics 574. Not offered 1989–90.
Large-sample behavior of MLEs and other estimates; chi-square, likelihood ratio, and related tests; Pitman and Bahadur efficiency; LAN families and LAM estimates; statistical applications of Edgeworth expansions; adaptive estimation and semiparametric inference.]

**680 Simulation**
Spring. 3 credits. Prerequisite: permission of instructor.
3 lecs.
An advanced version of OR&IE 580, intended for Ph.D.-level students.

**728–729 Selected Topics in Applied Operations Research**
Fall, spring. Credit to be arranged.
Current research topics dealing with applications of operations research.

**738–739 Selected Topics in Mathematical Programming**
Fall, spring. Credit to be arranged.
Current research topics in mathematical programming.

**768–769 Selected Topics in Applied Probability**
Fall, spring. Credit to be arranged.
Topics are chosen from current literature and research areas of the staff.

**778–779 Selected Topics in Applied Statistics**
Fall, spring. Credit to be arranged.
Topics chosen from current literature and research of the staff.

**790 Special Investigations**
Fall, spring. Credit to be arranged.
For individuals or small groups. Study of special topics or problems.

**799 Thesis Research**
Fall, spring. Credit to be arranged.
For individuals doing thesis research for master's or doctoral degrees.

**891 Operations Research Graduate Colloquium**
Fall, spring. 1 credit.
A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

**893–894 Applied OR&IE Colloquium (894 also M&AE 594)**
893, fall; 894, spring. 1 credit each term.
A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

# THEORETICAL AND APPLIED MECHANICS

## Basics in Engineering Mathematics and Mechanics

**123 Sensors and Actuators (also Engr 123)**
Fall. 3 credits.
2 lecs, 1 lab.
For description see Engineering Common Courses.

**202 Mechanics of Solids (also Engr 202)**
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 293.
2 lecs, 1 rec, 4 labs each semester, evening exams.
For description see Engineering Common Courses.

**203 Dynamics (also Engr 203)**
Fall, spring. 3 credits. Prerequisite: coregistration in Mathematics 294.
2 lecs, 1 rec, 4 labs each semester, evening exams.
For description see Engineering Common Courses.

**293 Engineering Mathematics**
Fall, spring. 4 credits. Prerequisite: Mathematics 192 or 194.
2 lecs, 1 rec, 4 labs during semester, evening exams.
Partial derivatives and multiple integrals; first- and second-order ordinary differential equations with applications in the physical and engineering sciences. Includes microcomputer experiments using computer algebra to solve problems.

**294 Engineering Mathematics**
Fall, spring. 4 credits. Prerequisite: Mathematics 293.
2 lecs, 1 rec, 4 labs during semester, evening exams.
Vector spaces and linear algebra, matrices, eigenvalue problems, and applications to systems of linear differential equations. Vector calculus. Boundary-value problems and introduction to Fourier series. Includes microcomputer experiments using computer algebra to solve problems.

## Engineering Mathematics

**310 Advanced Engineering Analysis I**
Fall, spring. 3 credits. Prerequisite: Mathematics 294 or equivalent.
2 lecs, 1 rec.
Ordinary differential equations as applied in engineering context. Analytical and numerical methods. Special functions, initial value, boundary value, and eigenvalue problems in linear partial differential equations; introduction to nonlinear ordinary differential equations. Use of computer algebra and MACSYMA to solve problems.

**311 Advanced Engineering Analysis II**
Spring. 3 credits. Prerequisite: T&AM 310 or equivalent.
Functions of several variables, introduction to complex variables, analytic functions, conformal mapping, method of residues. Application to the solution of Laplace's equation, and transform inversion techniques. Examples drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

**610 Methods of Applied Mathematics I**
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates with permission of instructor.
3 lecs.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

**611 Methods of Applied Mathematics II**
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
3 lecs.
Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

**612 Methods of Applied Mathematics III**
Fall. 3 credits. Prerequisite: T&AM 610 or 611 or equivalent. First of a 6-credit sequence (T&AM 612 and 613) that develops advanced mathematical techniques for engineers and applied physicists.
Review of complex variable theory, conformal mapping, special functions, integral transform, Wiener-Hopf technique, and singular integral equations. Problems drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

**613 Methods of Applied Mathematics IV**
Spring. 3 credits. Prerequisite: T&AM 612 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer algebra (MACSYMA) exercises at the option of the instructor.

## Continuum Mechanics

**555 Composite Materials (also M&AE 615 and MS&E 615)**
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
3 lecs. S. L. Phoenix.
Brief history of composite materials; types, geometries, fiber types, and structures; polymer matrices and deformation properties; orthotropic elasticity; stress-strain analysis of lamina and laminates; micromechanics of deformation and stress transfer, effective moduli, theories of strength and fatigue, nondestructive testing and inspection, applications of composites, environmental effects.

**[569 Sensors**
Fall. 3 credits. Not offered 1989–90.
3 lecs a week, 4 labs a semester.
This course deals with the general properties of sensors and actuators used in measurement and process-control applications involving thermal and mechanical quantities. Considered are sensors and actuators based on a broad range of physical transduction phenomena. Attention is given to the development of sensor models and criteria for evaluating the general performance characteristics of a sensor, including its transduction characteristics and its measurement field. Also studied are algorithms for processing sensor signals to recover the characteristics of the sensor or to remove its effect in a specific measurement application. An integral part of the course is the Sensors Laboratory, which provides students with hands-on opportunities for measuring the characteristics and operational parameters of a broad range of thermo-mechanical sensors.]

**[640 Experimental Mechanics**
Fall. 3 credits. Not offered 1989–90.
1 lec, 1 rec, 1 lab.
This course introduces students to the principles of measurement and experimentation in mechanics, acquaints them with some of the techniques for measuring fundamental mechanical quantities, and permits them to explore experimental topics such as the elastic, viscoelastic, and plastic response of materials; the linear and nonlinear vibration of discrete and continuous systems; and acoustic and elastic wave propagation and scattering phenomena.]

**663 Solid Mechanics I**
Fall. 4 credits. Corequisite: Mathematics 610.
3 lecs, 1 lab. J. T. Jenkins, W. Sachse.
Rigorous introduction to small-strain solid mechanics with emphasis on linear elasticity: stress, strain, tensors, balance laws, energy principles, general theory of linear elasticity, solutions of elementary boundary value problems.

**664 Solid Mechanics II**
Spring. 4 credits. Prerequisites: Mathematics 610 and T&AM 663, or equivalent.
3 lecs, 1 lab.
Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity, large deformations, nonlinear elasticity, linear visco-elasticity, mechanics of defects (cracks and dislocations), classical plasticity, and constitutive relations.

**[666 Fundamentals of Acoustics**
Spring. 3 credits. Not offered 1988–89.
3 lecs, biweekly labs.
Introduction to the principles and theories of acoustics. The vibrations of strings, bars, membranes, and plates; plane and spherical acoustic waves; transmission phenomena; resonators and filters; waves in solids and fluids. Application is made to sonic and ultrasonic transducers, music and noise, and architectural acoustics, and an introduction is given to the digital processing of acoustic signals. Laboratory work is required. At the level of *Fundamentals of Acoustics*, by Kinsler, Frey, Coppens, and Sanders.]

**751 Continuum Mechanics and Thermodynamics**
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years.
3 lecs. T. Healey.
Kinematics, conservation laws, the entropy inequality, constitutive equations, frame indifference, material symmetry. Rate-dependent materials and materials with internal variables.

**[752 Nonlinear Elasticity**
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs. T. Healey.
Review of kinematics and constitutive theory appropriate for large deformations of nonlinearly elastic bodies. The basic field equations of nonlinear elastostatics and elastodynamics. Exact solutions of special problems. Linearization and stability. Nonlinear theories of thin structural members and their relationship to the three-dimensional theory. Introduction to static bifurcation theory with applications to strings, rods, plates, and shells.]

**[753 Fracture**
Spring. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs.
Topics will be selected from (1) elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems; (2) nonlinear rate-independent, small-deformation fracture mechanics: plastic fracture, J-integral, small-scale yielding; (3) rate-dependent fracture mechanics: dynamic fracture, creep fracture; (4) mechanics of failure in polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing.]

**757 Inelasticity**
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years.
3 lecs.
Inelasticity; plasticity, visco-elasticity, and modern nonlinear theories. Plasticity: general principles, limit analysis, and boundary value problems. Visco-elasticity: general principles and solution of boundary value problems. Modern state variable theories: their relation to classical theories, their phenomenology, and use in solving boundary value problems.

**[759 Computational Methods**
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1989–90.
3 lecs. S. Mukherjee.
The aim of this course is to survey a wide range of applications of the boundary element method (BEM) and finite element method (FEM) in solid mechanics. The boundary element method will be introduced and then be used in problems in linear elasticity, diffusion, wave propagation, and problems with material and/or geometric nonlinearities. Finite-element applications will emphasize nonlinear problems in solid mechanics.]

**768 Elastic Waves**
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 574 or equivalents. Offered alternate years.
3 lecs.
An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics. Waves in isotropic and anisotropic media. Reflection and refraction. Surface waves and waves in layered media. Transient waves and methods of Lamb-Cagniard-Pakeris. Thick-plate theories. Vibration of spheres. Scattering of waves and dynamic stress concentration.

**770 Research Topics in Solid Mechanics**
Spring. 1–3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents.
3 lecs. 1–3 faculty members.
Three topics of current research interest to faculty will be presented. The topics for each year will be posted in the late fall. Students may register for one, two, or three credits.

## Dynamics and Space Mechanics

**570 Intermediate Dynamics**
Fall. 3 credits.
Two 1 1/4-hour lecs.
Vector and matrix methods for kinematics, Lagrangian and Newtonian mechanics for particles and rigid bodies, Euler's equations for rotating bodies, central-force motion. Small vibrations and stability. Application to robotics, gyroscopes, orbital and spacecraft dynamics.

**574 Vibrations and Waves in Elastic Systems**
Spring. 4 credits. Prerequisites: T&AM 570 and 610.
3 lecs, 1 lab.
Dynamics of elastic continua, including strings, membranes, and beams. Hamilton's principle, balance laws, characteristics, dispersion, phase, and group velocities.

**[671 Advanced Dynamics**
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Not offered 1989–90.
Review of Lagrangian mechanics; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory.]

**[672 Celestial Mechanics (also Astronomy 579)**
Spring. 3 credits. Offered alternate years. Not offered 1989–90.
Two 1 1/4-hour lecs.
Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; virial theorem. Osculating elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.]

**[673 Mechanics of the Solar System (also Astronomy 571)**
Spring. 3 credits. Prerequisite: an undergraduate course in dynamics. Offered alternate years. Not offered 1989–90.
Two 1 1/4-hour lecs.
Gravitational potentials, planetary gravity fields. Free and forced rotations. Chandler wobble, polar wander, damping of nutation. Equilibrium tidal theory, tidal heating. Orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states. Long-term variations in planetary orbits. Dust dynamics. Dynamics of ring systems. Physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.]

**675 Nonlinear Vibrations**
Fall. 3 credits. Prerequisite: T&AM 574 or equivalent. Offered alternate years.
Review of linear systems, free and forced vibrations. Nonlinear systems, phase plane methods, method of isoclines. Conservative systems. General autonomous systems, equilibrium and periodic solutions, linearization and Lyapunov stability criteria, Poincaré-Bendixson theorem. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, Krylov-Bogoliubov method. Applications to problems in mechanics.

**776 Qualitative Theory of Dynamical Systems**
Spring. 3 credits. Suggested prerequisite: T&AM 675, Mathematics 517, or equivalent. Offered alternate years.
Review of planar (single–degree-of-freedom) systems. Local and global analysis. Structural stability and bifurcations in planar systems. Center manifolds and normal forms. The averaging theorem and perturbation methods. Melnikov's method. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Global bifurcations, strange attractors and chaos in free and forced oscillator equations. Applications to problems in solid and fluid mechanics.

## Special Courses, Projects, and Thesis Research

**[400 Science, Risk, and Public Policy (also Engr 400 and Economics 358)**
Fall. 3 credits. Not offered 1989–90.
For description see Engineering Common Courses.]

**491–492 Project in Engineering Science**
491, fall; 492, spring. 1–4 credits, as arranged.
Projects for undergraduates under the guidance of a faculty member.

**796–800 Topics in Theoretical and Applied Mechanics**
Fall, spring. 1–3 credits, as arranged.
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

**890 Master's Degree Research in Theoretical and Applied Mechanics**
Fall, spring. 1–6 credits, as arranged. S-U grades optional.
Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

**990 Doctoral Research in Theoretical and Applied Mechanics**
Fall, spring. 1–9 credits, as arranged. S-U grades optional.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

## FACULTY ROSTER

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Albright, Louis D., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Allmendinger, Richard, Ph.D., Stanford U. Asst. Prof., Geological Sciences
Anantharam, Venkatachalam, Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Auer, Peter L., Ph.D., California Inst. of Technology. Prof., Mechanical and Aerospace Engineering
Avedisian, C. Thomas, Ph.D., Princeton U. Assoc. Prof., Mechanical and Aerospace Engineering
Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering
Barazangi, Muawia, Ph.D., Columbia U. Senior Scientist, Geological Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
Bartsch, James A., Ph.D., Purdue U. Asst. Prof., Agricultural and Biological Engineering
Bassett, William A., Ph.D., Columbia U. Prof., Geological Sciences
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Berger, Toby, Ph.D., Harvard U. J. Preston Levis Professor of Engineering, Electrical Engineering
Bilardi, Gianfranco, Ph.D., U. of Illinois. Asst. Prof., Computer Science
Billera, Louis J., Ph.D., City U. of New York. Prof., Operations Research and Industrial Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Geological Sciences
Birman, Kenneth P., Ph.D., U. of California at Berkeley. Asst. Prof., Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (Scotland). Prof., Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof., Geological Sciences
Bojanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Asst. Prof., Electrical Engineering.
Bolgiano, Ralph, Jr., Ph.D., Cornell U. Prof., Electrical Engineering
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Brock, Joel D. Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics
Brown, Geoffrey M., Ph.D., U. of Texas. Asst. Prof., Electrical Engineering
Brown, Larry D., Ph.D., Cornell U. Assoc. Prof., Geological Sciences
Brutsaert, Wilfried H., Ph.D., U. of California at Davis. Prof., Civil and Environmental Engineering
Buhrman, Robert A., Ph.D., Johns Hopkins U. Prof., Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Prof., Theoretical and Applied Mechanics
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Nuclear Science and Engineering
Capranica, Robert R., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering.
Carter, C. Barry, Ph.D., Oxford U. (England). Prof., Materials Science and Engineering
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Geological Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chiang, Hsiao-Dong, Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Geological Sciences
Clancy, Paulette, Ph.D., Oxford U. (England). Asst. Prof., Chemical Engineering
Clark, David D., Ph.D., U. of California at Berkeley. Prof., Nuclear Science and Engineering
Clark, Peter A., Ph.D., Carnegie-Mellon U. Asst. Prof., Chemical Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical Engineering
Coleman, Thomas F., Ph.D., U. of Waterloo. Assoc. Prof., Computer Science
Compton, Richard C., Ph.D., California Inst. of Technology. Asst. Prof., Electrical Engineering
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Cooke, J. Robert, Ph.D., North Carolina State U. Prof., Agricultural and Biological Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
Craighead, Harold G., Ph.D., Cornell U. Prof., Applied and Engineering Physics, and Electrical Engineering
Datta, Ashim K., Ph.D., U. of Florida. Asst. Prof., Agricultural and Biological Engineering
Dawson, Paul R., Ph.D., Colorado State U. Assoc. Prof., Mechanical and Aerospace Engineering
deBoer, P. Tobias, Ph.D., U. of Maryland. Prof., Mechanical and Aerospace Engineering
Deierlein, Gregory G., Ph.D., U. of Texas at Austin. Asst. Prof., Civil and Environmental Engineering
Delchamps, David F., Ph.D., Harvard U. Asst. Prof., Electrical Engineering
Derksen, Richard C., Ph.D., U. of Illinois. Asst. Prof., Agricultural and Biological Engineering
Dick, Richard I., Ph.D., U. of Illinois. Joseph P. Ripley Professor of Engineering, Civil and Environmental Engineering
Dieckmann, Rudiger, Ph.D., Technical U. of Clausthal. Prof., Materials Science and Engineering
Donald, Bruce, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Eastman, Lester F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical Engineering
Farley, Donald T., Ph.D., Cornell U. Prof., Electrical Engineering
Fine, Terrence L., Ph.D., Harvard U. Prof., Electrical Engineering
Finn, Robert K., Ph.D., U. of Minnesota. Prof., Chemical Engineering
Fisher, Gordon P., Dr.E., Johns Hopkins U. Prof., Civil and Environmental Engineering
Fleischmann, Hans H., Ph.D., Technische Hoch., München (Germany). Prof., Applied and Engineering Physics
Furry, Ronald B., Ph.D., Iowa State U. Prof., Agricultural and Biological Engineering
Gebremedhin, Kifle G., Ph.D., U. of Wisconsin. Asst. Prof., Agricultural and Biological Engineering
George, Albert R., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Gergely, Peter, Ph.D., U. of Illinois. Prof., Civil and Environmental Engineering
Giannelis, Emmanuel, Ph.D., Michigan State U. Asst. Prof., Materials Science and Engineering
Gossett, James M., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Greenberg, Donald P., Ph.D., Cornell U. Professor at Large, Engineering
Gries, David J., Ph.D., Technische Hoch., München (Germany). Prof., Computer Science
Grigoriu, Mircea D., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Grover, Lov K., Ph. D., Stanford U. Asst. Prof., Electrical Engineering
Grubb, David T., Ph.D., Oxford U. (England). Assoc. Prof., Materials Science and Engineering
Gubbins, Keith E., Ph.D., U. of London (England). Thomas R. Briggs Professor of Engineering, Chemical Engineering
Gunkel, Wesley W., Ph.D., Michigan State U. Prof., Agricultural and Biological Engineering
Hagfors, Tor, Ph.D., U. of Oslo (Norway). Prof., Electrical Engineering
Haith, Douglas A., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Hammer, Daniel A., Ph.D., U. of Pennsylvania. Asst. Prof., Chemical Engineering
Hammer, David A., Ph.D., Cornell U. Prof., Nuclear Science and Engineering
Harriott, Peter, Sc.D., Massachusetts Inst. of Technology. Fred H. Rhodes Professor of Chemical Engineering
Hartmanis, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor of Computer Science
Hauser, Max W., Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Healey, Timothy J., Ph.D., U. of Maryland. Asst. Prof., Theoretical and Applied Mechanics
Heath, David C., Ph.D., U. of Illinois. Prof., Operations Research and Industrial Engineering
Heegard, Chris, Ph.D., Stanford U. Assoc. Prof., Electrical Engineering
Hillman, Lloyd W., Ph.D., U. of Rochester. Asst. Prof., Electrical Engineering
Holmes, Philip J., Ph.D., Southampton U. (England). Prof., Theoretical and Applied Mechanics
Hopcroft, John E., Ph.D., Stanford U. Prof., Computer Science
Hover, Kenneth C., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Howe, Douglas J., Ph.D. Cornell U. Asst. Prof., Computer Science
Hui, Chung Y., Ph.D., Harvard U. Assoc. Prof., Theoretical and Applied Mechanics

Hunter, Jean B., Ph.D., Columbia U. Asst. Prof., Agricultural and Biological Engineering
Huttenlocher, Daniel, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Ingraffea, Anthony R., Ph.D., U. of Colorado. Prof., Civil and Environmental Engineering
Irwin, Lynne H., Ph.D., Texas A & M U. Assoc. Prof., Agricultural and Biological Engineering
Isaacson, Michael S., Ph.D., U. of Chicago. Prof., Applied and Engineering Physics
Isacks, Bryan L., Ph.D., Columbia U. Prof., Geological Sciences
Jackson, Peter L., Ph.D., Stanford U. Assoc. Prof., Operations Research and Industrial Engineering
Jenkins, James T., Ph.D., Johns Hopkins U. Prof., Theoretical and Applied Mechanics
Jewell, William J., Ph.D., Stanford U. Prof., Agricultural and Biological Engineering
Jirka, Gerhard H., Ph.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Johnson, C. Richard, Jr., Ph.D., Stanford U. Assoc. Prof., Electrical Engineering
Johnson, Herbert H., Ph.D., Case Inst. of Technology. Prof., Materials Science and Engineering
Jordan, Teresa, Ph.D., Stanford U. Asst. Prof., Geological Sciences
Karig, Daniel E., Ph.D., U. of California at San Diego. Prof., Geological Sciences
Kaufman, Sidney, Ph.D., Cornell U. Acting Prof., Geological Sciences
Kay, Robert W., Ph.D., Columbia U. Prof., Geological Sciences
Kelley, Michael C., Ph.D., U. of California at Berkeley. Prof., Electrical Engineering
Kintner, Paul M., Ph.D., U. of Minnesota. Assoc. Prof., Electrical Engineering
Kline, Ronald R., Ph.D., U. of Wisconsin. Asst. Prof., Electrical Engineering (History of Technology)
Koch, Donald L., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Chemical Engineering
Kohlstedt, David, Ph.D., U. of Illinois. Prof., Materials Science and Engineering
Kostroun, Vaclav O., Ph.D., U. of Oregon. Assoc. Prof., Nuclear Science and Engineering
Kozen, Dexter, Ph.D., Cornell U. Assoc. Prof., Computer Science
Kramer, Edward J., Ph.D., Carnegie Inst. of Technology. Prof., Materials Science and Engineering
Krusius, J. Peter, Ph.D., Helsinki U. of Technology (Finland). Prof., Electrical Engineering
Kulhawy, Fred H., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Lance, Richard H., Ph.D., Brown U. Prof., Theoretical and Applied Mechanics
Landsberger, Samuel E., Sc.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering
Lee, Charles A., Ph.D., Columbia U. Prof., Electrical Engineering
Lee, Soo-Young, Ph.D., U. of Texas. Asst. Prof., Electrical Engineering
Leeser, Miriam E., Ph.D., U. of Cambridge, England. Asst. Prof., Electrical Engineering
Leibovich, Sidney, Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Li, Che-Yu, Ph.D., Cornell U. Prof., Materials Science and Engineering
Liboff, Richard L., Ph.D., New York U. Prof., Electrical Engineering
Liggett, James A., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Lion, Leonard W., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Liu, Philip L.-F., Sc.D., Massachusetts Inst. of Technology. Prof., Civil and Environmental Engineering
Loucks, Daniel P., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Louge, Michel Y., Ph.D., Stanford U. Asst. Prof., Mechanical and Aerospace Engineering
Lovelace, Richard V. E., Ph.D., Cornell U. Prof., Applied and Engineering Physics
Ludington, David C., Ph.D., Purdue U. Prof., Agricultural and Biological Engineering
Luk, Franklin T.-C., Ph.D., Stanford U. Prof., Electrical Engineering
Lumley, John L., Ph.D., Johns Hopkins U. Willis H. Carrier Professor of Engineering, Mechanical and Aerospace Engineering
Lynn, Walter R., Ph.D., Northwestern U. Prof., Civil and Environmental Engineering
MacDonald, Noel C., Ph.D., U. of California at Berkeley. Prof., Electrical Engineering
McIsaac, Paul R., Ph.D., U. of Michigan. Prof., Electrical Engineering
MacMillan, Ernest H., Ph.D., U. of Minnesota. Asst. Prof., Theoretical and Applied Mechanics
Marzullo, Keith A., Ph.D., Stanford U. Asst. Prof., Computer Science
Maxwell, William L., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Mayer, James W., Ph.D., Purdue U. Francis Norwood Bard Professor of Materials Science and Engineering
Merrill, Robert P., Sc.D., Massachusetts Inst. of Technology. Herbert Fisk Johnson Professor of Industrial Chemistry, Chemical Engineering
Meyburg, Arnim H., Ph.D., Northwestern U. Prof., Civil and Environmental Engineering
Mitchell, Joseph S., Ph.D., Stanford U. Asst. Prof., Operations Research and Industrial Engineering
Moon, Francis C., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Moore, Franklin K., Ph.D., Cornell U. John C. Ford Professor of Mechanical Engineering, Mechanical and Aerospace Engineering
Muckstadt, John A., Ph.D., U. of Michigan. Prof., Operations Research and Industrial Engineering
Mukherjee, Subrata, Ph.D., Stanford U. Prof., Theoretical and Applied Mechanics
Nation, John A., Ph.D., U. of London (England). Prof., Electrical Engineering
Nelkin, Mark S., Ph.D., Cornell U. Prof., Applied and Engineering Physics
Nilson, Arthur H., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Ober, Christopher K., Ph.D., U. of Massachusetts. Asst. Prof., Materials Science and Engineering
Olbricht, William L., Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Oliver, Jack E., Ph.D., Columbia U. Irving Porter Church Professor of Engineering, Geological Sciences
Orloff, Neil, J.D., Columbia U. Prof., Civil and Environmental Engineering/Program on Science, Technology, and Society
O'Rourke, Thomas D., Ph.D., U. of Illinois. Prof., Civil and Environmental Engineering
Otani, Niels F., Ph.D., U. of California at Berkeley. Asst. Prof., Electrical Engineering
Panagiotopoulos, Athanassios, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Chemical Engineering
Panangaden, Prakash, Ph.D., U. of Wisconsin at Milwaukee. Asst. Prof., Computer Science
Pao, Yih-Hsing, Ph.D., Columbia U. Prof., Theoretical and Applied Mechanics
Parks, Thomas W., Ph.D., Cornell U. Prof., Electrical Engineering
Parlange, Jean-Yves, Ph.D., Brown U. Prof., Agricultural and Biological Engineering
Peköz, Teoman, Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Philipson, Warren R., Ph.D., Cornell U. Prof., Civil and Environmental Engineering and Agronomy
Philpot, William D., Ph.D., U. of Delaware. Asst. Prof., Civil and Environmental Engineering
Phoenix, S. Leigh, Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Pingali, Keshav K., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Pitt, Ronald E., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Pollock, Clifford R., Ph.D., Rice U. Assoc. Prof., Electrical Engineering
Pope, Stephen B., Ph.D., Imperial College of Science and Technology (England). Prof., Mechanical and Aerospace Engineering
Pottle, Christopher, Ph.D., U. of Illinois. Prof., Electrical Engineering
Prabhu, Narahari U., M.Sc., Manchester U. (England). Prof., Operations Research and Industrial Engineering
Psiaki, Mark L., M.A., Princeton U. Asst. Prof., Mechanical and Aerospace Engineering
Raj, Rishi, Ph.D., Harvard U. Prof., Materials Science and Engineering
Rand, Richard H., Sc.D., Columbia U. Prof., Theoretical and Applied Mechanics
Reeves, Anthony P., Ph.D., U. of Kent at Canterbury (England). Assoc. Prof., Electrical Engineering
Rehkugler, Gerald E., Ph.D., Iowa State U. Prof., Agricultural and Biological Engineering
Renegar, James, Ph.D., U. of California at Berkeley. Asst. Prof., Operations Research and Industrial Engineering
Resler, Edwin L., Jr., Ph.D., Cornell U. Joseph Newton Pew, Jr., Professor of Engineering, Mechanical and Aerospace Engineering
Resnick, Sidney, Ph.D., Purdue U. Prof., Operations Research and Industrial Engineering
Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof., Geological Sciences
Rhodin, Thor N., Ph.D., Princeton U. Prof., Applied and Engineering Physics
Rodriguez, Ferdinand, Ph.D., Cornell U. Prof., Chemical Engineering
Rosakis, Phoebus, Ph.D., California Inst. of Technology. Asst. Prof., Theoretical and Applied Mechanics
Roundy, Robin, Ph.D., Stanford U. Asst. Prof., Operations Research and Industrial Engineering
Ruina, Andy L., Ph.D., Brown U. Assoc. Prof., Theoretical and Applied Mechanics
Ruoff, Arthur L., Ph.D., U. of Utah. Class of 1912 Professor, Materials Science and Engineering

Ruppert, David, Ph.D., Michigan State U. Prof., Operations Research and Industrial Engineering
Sachse, Wolfgang H., Ph.D., Johns Hopkins U. Prof., Theoretical and Applied Mechanics
Salton, Gerard, Ph.D., Harvard U. Prof., Computer Science
Samorodnitsky, Gennady, D.S., Technion-Israel Inst. of Technology. Asst. Prof., Operations Research and Industrial Engineering
Sansalone, Mary J., Ph.D., Cornell U. Asst. Prof., Civil and Environmental Engineering
Santner, Thomas J., Ph.D., Purdue U. Prof., Operations Research and Industrial Engineering
Sass, Stephen L., Ph.D., Northwestern U. Prof., Materials Science and Engineering
Scheele, George F., Ph.D., U. of Illinois. Prof., Chemical Engineering
Schneider, Fred B., Ph.D., SUNY at Stony Brook. Assoc. Prof., Computer Science
Schruben, Lee W., Ph.D., Yale U. Assoc. Prof., Operations Research and Industrial Engineering
Schuler, Richard E., Ph.D., Brown U. Prof., Civil and Environmental Engineering/Economics
Scott, Norman R., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Segre, Alberto M., Ph.D., U. of Illinois. Asst. Prof., Computer Science
Seyler, Charles E., Jr., Ph.D., U. of Iowa. Assoc. Prof., Electrical Engineering
Shealy, J. Richard, Ph.D., Cornell U. Asst. Prof., Electrical Engineering
Shen, Shan-Fu, Sc.D., Massachusetts Inst. of Technology. John Edson Sweet Professor of Engineering, Mechanical and Aerospace Engineering
Shmoys, David B., Ph.D., U. of California at Berkeley. Asst. Prof., Operations Research and Industrial Engineering
Shoemaker, Christine A., Ph.D., U. of Southern California. Prof., Civil and Environmental Engineering
Shuler, Michael L., Ph.D., U. of Minnesota. Prof., Chemical Engineering
Silcox, John, Ph.D., Cambridge U. (England). Prof., Applied and Engineering Physics

Vavasis, Stephen A., Ph.D., Bombay U. (India). Asst. Prof., Computer Science
Vazirani, Vijay, Ph.D., U. of California at Berkeley. Asst. Prof., Computer Science.
Voelcker, Herbert B., Ph.D., Imperial College of Science and Technology (England). Prof., Mechanical and Aerospace Engineering
Vrana, Norman M., M.E.E., Cornell U. Prof., Electrical Engineering
Walker, Larry P., Ph.D., Michigan State U. Assoc. Prof., Agricultural and Biological Engineering
Walter, Michael F., Ph.D., U. of Wisconsin. Prof., Agricultural and Biological Engineering
Wang, Kuo-King, Ph.D., U. of Wisconsin. Prof., Mechanical and Aerospace Engineering
Warhaft, Zellman, Ph.D., U. of London (England). Assoc. Prof., Mechanical and Aerospace Engineering
Webb, Watt W., Sc.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Weber, G. Gustavo, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Mechanical and Aerospace Engineering
Wehe, Robert L., M.S., U. of Illinois. Assoc. Prof., Mechanical and Aerospace Engineering
Weiss, Lionel I., Ph.D., Columbia U. Prof., Operations Research and Industrial Engineering
Wharton, Charles B., M.S., U. of California at Berkeley. Prof., Electrical Engineering
White, Richard N., Ph.D., U. of Wisconsin. James A. Friend Family Distinguished Professor of Engineering, Civil and Environmental Engineering
White, William M., Ph.D., U. of Rhode Island. Assoc. Prof., Geological Sciences
Wise, Frank W., Ph.D. Cornell U. Asst. Prof., Applied and Engineering Physics
Wolf, Edward D., Ph.D., Iowa State U. Prof., Electrical Engineering
Wolga, George J., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical Engineering
Zehnder, Alan, Ph.D., California Inst. of Technology. Asst. Prof., Theoretical and Applied Mechanics
Zollweg, John A., Ph.D., Cornell U. Assoc. Prof., Chemical Engineering

# GRADUATE SCHOOL

## ADMINISTRATION

Alison P. Casarett, dean

Eleanor M. Cox, assistant dean

Benjamin Ginsberg, secretary of the graduate faculty

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.

## GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student's thesis research.

Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as non-degree students.

## REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher;
2) a degree from a college or university in a country where the native language is English; or
3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08540, U.S.A.

Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications by January 15.

Applicants who are also applying for Cornell Graduate School fellowship consideration *must* submit their completed applications and supporting credentials by January 15.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Sage Graduate Center, Ithaca, New York 14853-6201.

Information concerning admission requirements and courses of study for degrees not administered by the Graduate School may be obtained from the several schools and colleges that administer them (see "Administration," above).

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.

More detailed information may be obtained from the following publications: the catalog *Cornell University Graduate School*, available from Cornell University Catalogs, Building 7, Research Park, Ithaca, NY 14850-1247, and the application *Graduate Study at Cornell University*, available from the Graduate School, Cornell University, Sage Graduate Center, Ithaca, New York 14853-6201.

# SCHOOL OF HOTEL ADMINISTRATION

## ADMINISTRATION

John J. Clark, Jr., dean

David C. Dunn, associate dean for academic affairs

Normand L. Peckenpaugh, assistant dean for finance and administration

William N. Chernish, assistant dean for executive education

John E. H. Sherry, graduate faculty representative

Melinda Codd, director of the M.P.S. program

Cheryl S. Farrell, director of admissions and financial aid

Hans P. Weishaupt, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center

Harry R. Keller, director of alumni affairs

Fred H. Antil, director of placement and corporate relations

Jim Dunston, director of the Binenkorb Video and Computer Center

Mary K. Milks, registrar

Katherine S. Laurence, librarian

Shelley S. Semmler, director of development

Glenn Withiam, executive editor of the *Cornell Hotel and Restaurant Administration Quarterly*

## DEGREE PROGRAMS

| | *Degree* |
|---|---|
| Hotel and Restaurant Administration | |
| | B.S. |
| | M.P.S. |
| | M.S. |
| | Ph.D. |

## FACILITIES

**Statler Hall.** Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The totally renovated building, which serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a video and computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. The improved Statler Hall and new Statler Hotel were designed expressly for the school's revamped academic and executive-education programs, and provide students with training and work experience in facilities similar to those in which they will work after graduation.

**The School of Hotel Administration Library,** the largest of its kind, provides a comprehensive collection of publications on hotel and restaurant operation, business, and related subjects. The library's resources allow students to search numerous computerized bibliographic databases, including the hospitality industry's most extensive database containing current bibliographic information on the periodical literature of the industry. Among the library's special features are the Herndon and Vehling collections, which contain numerous rare materials.

**Statler Hotel and J. Willard Marriott Executive Education Center.** The all-new hotel comprises 150 guest rooms, an executive-education center, restaurants, lounges, and the university's faculty and staff club. It is an industry showcase, one that demonstrates the very finest in hospitality and hospitality-education practices. The Statler Hotel is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the Statler Hotel is a practice-management facility for certain classes, internships, and for independent-study projects. It offers part-time jobs to approximately 200 students each semester; preference is given to students in the hotel school.

## CURRICULUM

The School of Hotel Administration offers training in the numerous disciplines required for modern management, including accounting, finance, marketing, operations, communication, properties management, MIS/computers, law, and human-resources management. The school's graduates hold executive positions in a variety of industries, but are especially well represented in the management of hospitality-related enterprises, including the lodging, food-service, and travel industries.

Students are encouraged to pursue a broad range of courses, including those in the humanities, as preparation for assuming positions in the business community. Included in the basic curriculum are courses in financial management, food and beverage operations, administration, and physical-plant management.

To satisfy degree requirements, every undergraduate enrolled in the School of Hotel Administration must complete a minimum of two periods of ten weeks each (or the equivalent) of full-time, supervised, relevant employment and file acceptable reports for each work period. Most students complete this requirement during the summer.

The basic program leading to the undergraduate degree in hotel administration, as set forth below, is enriched by a broad selection of free and distributive elective courses offered by the school and elsewhere in the university.

The school's programs for advanced degrees include those of Master of Professional Studies, Master of Science, and Doctor of Philosophy. For more complete information about undergraduate program requirements, see the school's admissions catalog (available in room 174 Statler Hall). For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact Professor John E. H. Sherry, the school's graduate faculty representative; or see the university's *Announcement of the Graduate School.*

### Requirements for Graduation

The requirements for graduation outlined below are the result of an extensive revision of the school's curricula that was completed in 1988. Regularly enrolled students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence;*†
2) completion, with a minimum average of 2.0, of 120 required and elective credits, as set forth in the table below;

*Students who plan to attend summer school at Cornell or elsewhere should keep in mind the degree requirement of a minimum of two periods of ten weeks each (or the equivalent) of full-time, supervised, relevant employment.

†Students transferring from other colleges and universities may be allowed appropriate credit against the residence requirement at the time of admission. Transfer students must complete a minimum of five semesters in the program.

3) completion of two units of practice credit prior to the last term of residence, as defined below;
4) completion of the university requirement in physical education during the first two terms of residence;
5) attainment of a grade-point average of at least 2.0 in the final semester.

*Suggested* course programs also appear on the following pages. The core courses account for 67 of the 120 credits needed for graduation, the selected subject concentration accounts for 12 credits, and 18 credits are allotted for distributive electives. The remaining 23 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or elsewhere or who propose to attend any other university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 23-credit group of free electives.

All students are required by the university to take two courses in physical education, but no credit toward the academic degree is allowed for these courses.

### Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. To graduate, a cumulative average of 2.0 and a final-term average of 2.0 are required as minimums. Of the *free*-elective courses, a maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

### Practice-Credit Requirement

As part of degree requirements, each undergraduate enrolled in the School of Hotel Administration must complete a specific set of practice-credit requirements. These requirements are set forth in the Practice Credit Work Handbook for Undergraduates in the School of Hotel Administration. The school registrar distributes copies of this document upon request to enrolled students.

A limited number of upperclass students are encouraged to enroll in management-intern programs that entail six to eight months of on-the-job managerial instruction and experience. For the details on these programs, see the section "Directed Study" on the following pages.

### Course Requirements for Graduation

| *Required courses* | *Credits* |
|---|---|
| Organization Management: Hotel Administration 103, 303, 403 | 9 |
| Human-Resources Management: Hotel Administration 211, 212 | 6 |

| *Free electives* | 23 |
| **Total credits required for graduation** | **120** |

## UNDERGRADUATE PROGRAM OF STUDY

*The undergraduate curriculum of the School of Hotel Administration is continually being revised and expanded. In some cases, the numbers of old and new courses overlap. Students are reminded that the most accurate information regarding courses offered during any given semester—including meeting times—may be found in the supplement issued for that semester by the school's registrar (255-4990).*

### Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

#### Freshman Year

Typically, a freshman schedule will consist of 14 to 16 credits each term, to include the following:

| *Required courses* | *Credits* |
|---|---|
| H Adm 103, Principles of Management | 3 |
| H Adm 135, Culinary Theory and Practice | 4 |
| H Adm 165, Managerial Communication: Writing Principles and Process | 3 |
| H Adm 174, Information Systems | 3 |
| H Adm 191, Quantitative Methods | 3 |
| Econ 101, Microeconomics | 3 |
| Econ 102, Macroeconomics | 3 |
| Distributive electives | 6 |
| Free electives | 0–4 |
| | 28–32 |

#### Sophomore Year

| *Required courses* | *Credits* |
|---|---|
| H Adm 211, The Management of Personnel | 3 |
| H Adm 212, Human Relations | 3 |
| H Adm 225, Financial Accounting | 3 |
| H Adm 226, Financial Management | 4 |
| H Adm 235, Food and Beverage Management | 4 |
| H Adm 243, Principles of Marketing | 3 |
| H Adm 255, Facilities Development and Planning | 3 |
| Distributive electives | 3–6 |
| Free electives | 3–6 |
| | 29–35 |

#### Junior Year

| *Required courses* | *Credits* |
|---|---|
| H Adm 303, Organizational Management | 3 |
| H Adm 325, Hospitality Financial Management | 3 |
| H Adm 335, Restaurant Management | 4 |
| H Adm 355, Hospitality Facilities Construction and Operation | 3 |
| H Adm 365, Managerial Communication: Interpersonal Relationships in Organizations | 3 |
| H Adm 387, Business and Hospitality Law | 3 |
| Concentration | 6 |
| Free electives | 3–6 |
| | 28–31 |

#### Senior Year

| *Required courses* | *Credits* |
|---|---|
| H Adm 403, Integrative Senior Requirement | 3 |
| Concentration | 6 |
| Free electives | 15–26 |
| | 24–35 |

### Programs in Special Areas

While completing the required courses leading to the bachelor's degree, undergraduates in the school must also select a concentration: 12 elective credits in a major area of instruction. These include organization management, human-resources management, financial management, food and beverage management, marketing, and properties management.

When the student selects one of these major fields of concentration, he or she should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of elective courses that will best fit his or her program.

A list of elective courses offered in the school's special areas of instruction is provided below.

### Elective Courses in Hotel Administration

The following is a list of courses currently offered within the School of Hotel Administration that may, as appropriate, be used in partial or full satisfaction of the free-elective allocation or the requirements for the specified area of concentration.

The first digit of the course number is in general indicative of the level of the course; the second digit indicates the curricular area, according to the following scheme:

*First digit*

1—freshman/introductory

2—sophomore

3—junior

4—senior

5—provisional course offering

6—undergraduate independent study

7—graduate

*Second digit*

0—organization management

1—human-resources management

2—financial management

3—food and beverage management

4—marketing and tourism

5—properties management

6—communication

7— MIS/computers

8—law

9—other

| *Organization Management* | *Credits* |

### Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hotel or restaurant industries. Foreign language study at Cornell is characterized by small classes and emphasis on the spoken language. Students supplement their course work with study in a well-equipped language laboratory.

Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

## GRADUATE CURRICULUM

Candidates for the Master of Science or Doctor of Philosophy degrees should refer to the admission and degree requirements set forth in the *Announcement of the Graduate School*. The student's program is developed with the aid and direction of a special committee chosen by the student from members of the Graduate Faculty. This committee also approves the thesis project.

Candidates for the Master of Professional Studies (M.P.S.) degree pursue one of four tracks in their graduate studies. Students whose undergraduate degrees are in areas other than hotel administration follow track I, for which the required two-year program is set forth below.

The curricula for M .P.S. tracks II and III are specifically designed for each student, based on previous experience and career goals. Students who hold four-year degrees in hotel administration from an institution other than Cornell qualify for the track II curriculum. A minimum of three residence units and 48 credits is required to complete track II . Track II students must take 12 credits in a concentration, 6 credits of monograph, 16 elective credits, and any required courses not yet completed prior to their arrival.

Track III is for students who hold a Bachelor of Science degree in hotel administration from Cornell. Two residence units and 32 credits are required to complete track III. Track III students must take 12 credits in a concentration, 6 credits of monograph, and 14 elective credits.

Track IV is for students who hold a master's degree and have no prior degrees in hotel administration. Three residence units and a minimum of 48 credits are required (if no required courses are exempted, 50 credits may be necessary to complete the program). Track IV students must take 12 credits in a concentration, 6 credits of monograph, prerequisites, and any required courses not yet completed.

All students are required to designate an area of concentration before their next-to-last term.

Each student also writes an investigative report or monograph, under the guidance of an adviser, to meet requirements for the M.P.S degree.

### Required Program for M.P.S. Track I Students

| *Required courses* | *Credit* |
|---|---|
| H Adm 705, Business Policy | 3 |
| H Adm 718, Advanced Human-Resources Management | 3 |
| H Adm 725, Graduate Managerial Accounting in the Hospitality Industry | 3 |
| H Adm 726, Graduate Corporate Finance | 3 |
| H Adm 731, Graduate Food and Beverage Management | 3 |
| H Adm 732, Graduate Operational Food-Production Systems | 3 |
| H Adm 741, Marketing Management | 3 |
| H Adm 751, Project Development and Construction | 3 |
| H Adm 774, Information Systems for Hospitality Managers | 3 |
| H Adm 791, Quantitative Methods | 3 |
| H Adm 805, M.P.S. Monograph 1 | 3 |
| H Adm 806, M.P.S. Monograph 2 | 3 |
| *Specifically required credits* | 36 |
| *Concentration credits* | 12 |
| *Free elective credits* | 16 |
| **Total credits required for M.P.S. Track I students** | **64** |

## DIRECTED STUDY

### Independent Research

Students may conduct independent research (directed study) projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. Only the first 3 credits of directed study may be credited against concentration credits during the undergraduate years. Additional directed study is credited against free electives. To enroll in an independent research project, students must obtain written permission from the school before course registration.

### Management-Intern Program

This program is open only to upperclass students. Students accepted into the program earn 12 credits, which can be applied as hotel electives or as free electives. With faculty approval some credits might be applied toward a concentration. Students enrolled in this program have an opportunity to combine managerial readings and previous course work with challenging work experience. Application for admission should be made one semester in advance. Guidance is provided by school staff members under the direction of a faculty committee. Management-intern positions are available at many locations worldwide, including several on the Cornell campus. Students receive both academic credit and practice credit, and appropriate financial remuneration for the period of the program. The student is charged reduced tuition.

### Study Abroad

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, and England. Information on the many study-abroad programs operating during the summer and academic year is available at the University Career Center (in Sage Hall).

Students should discuss their plans with the school's study-abroad representative, Professor William Kaven, so that all petition and credit-evaluation procedures are followed.

# ORGANIZATION MANAGEMENT COURSES

**102 Distinguished Management Lectures**
Fall. 1 credit. Limited to hotel school students except by written permission. Elective.
Lec 01. F 1:25. Dean J. J. Clark.
A series of lectures given by nonresident speakers prominent in the hotel and restaurant industries and allied fields. Topics include career ladders, company profiles, and business-policy formulation.

**103 Principles of Management**
Fall. 3 credits. Limited to hotel school freshmen. Required.
Lec 01. T R 9:05; labs TBA. T. Cullen.
A systems approach to understanding the nature of management in the hotel and restaurant industry.

**103S Principles of Management**
Fall. 3 credits. Limited to DUS students, non-hotel school students, and transfer students. Required for transfer students.
Lec 01. T R 9:05; labs TBA. R. M. Chase.
A systems approach to understanding the nature of management in the hotel and restaurant industry.

**203 Club Management**
Fall, 7 weeks only. 2 credits. Elective.
Lec 01. M 2:30–6. R. James.
The private-membership club and how it differs from other forms of business in the hospitality industry. Topics include constitution and by-laws issues, administration and interface with board of directors and committees, recreation management, labor management, and marketing of major tournaments.

**303 Organizational Management**
Fall or spring. 3 credits. Limited to 65 students. Required.
C. Lundberg.
This course focuses on the design, development, and appropriateness of organizational systems, processes, and structures from a managerial perspective. Students will become familiar with alternative hospitality organizations through readings, case studies, and field experiences.

**304 Rooms-Division Management—Front Office and Reservations**
Fall, second 7 weeks only. 2 credits. Elective.
Lec 01. F 1:25–5. S. Weisz and visiting lecturers.
An introductory course concentrating on the fundamentals of rooms-division management. Areas of concentration include front-desk operations and the reservations, housekeeping, and telephone departments. Particular emphasis on selling strategies, forecasting, rate efficiencies, labor management, and guest relations.

**305 Resort and Condominium Management**
Fall. 3 credits. Not open to freshmen. Elective.
Lec 01. T R 10:10–11:25. M. A. Noden.
A lecture course in the operation of resort hotels and condominiums. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and noncontract relationships with the travel industry are reviewed. Terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed. Tax implications of both condominium ownership and management are fully considered.

**306 Franchising in the Hospitality Industry**
Spring, weeks 1–7. 2 credits. Elective.
Lec 01. M 1:25–5. D. E. Whitehead.
Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading motor-inn and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

**401 Seminar in Management Principles**
On demand (see the registrar at the hotel school). 2 credits. Limited to 20 seniors and graduate students. Elective.
Faculty.
This course uses the case-study approach, and each student prepares a comprehensive analytical report, based on previous work, for class discussion and analysis. Sufficient time is given during the first few weeks of the course to review management principles and concepts and thus give the student an understanding of the type of report he or she is to prepare and of the analysis required during the discussion period.

**402 Hospitality-Management Seminar**
Fall. 1 credit. Limited to 20 seniors and graduate students. Elective.
Dean J. J. Clark and guest speakers.
A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the area of expertise of the speaker. The class is relatively unstructured, and students are expected to ask questions and enter into discussion.

**403 Integrative Senior Requirement**
Fall or spring. Required.
Faculty.
The Integrative Senior Requirement ensures that hotel students have an interdisciplinary overview of hospitality-industry operations prior to graduation. Courses 404, 405, 406, 407, and 431 provide this overview, and any one of them will satisfy the course requirement. The credit earned by the student is the credit assigned to the course selected.

**404 Management Organization of the Small Business**
Fall or spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 325 or equivalent. Elective.
Lec 01. T 2:30–4:25, R 2:30.
P. Rainsford.
The course focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be one major term project, which will require the application of the course material to a field consulting project that will result in written and oral reports to the owner of the business and the Small Business Administration.

**405 Management Planning for the Hospitality Industry**
Spring. 3 credits. Limited to 25 hotel school students. Prerequisites: all required undergraduate courses at the 100, 200, and 300 levels. Elective.
Lec 01. T R 10:10–11:25. T. Cullen.
The integration and application of management concepts, theories, and practices to actual business situations. The focus is on management planning in a competitive hotel-industry environment.

**406 Integrated Studies in the Hospitality Industry**
Fall or spring, weeks 1–7. 3 credits. Limited to 18 seniors and graduate students. Elective.
Lec 01. T R 10:10, W 7–9 p.m.
R. M. Chase.
Analysis of case studies involving issues of business strategy, human relations, administration, marketing, and finance. Students will apply course principles through participation in a restaurant-management simulation exercise. Student groups will make presentations to guest critics.

**407 Seminar in Hotel Operations**
Spring. 2 credits. Limited to 30 seniors and graduate students. Estimated cost of field trip, $100. Elective.
Lec 01. W 11:15, F 11:15–1:10.
L. Weaver, D. Jameson.
Management theory and practice of hotel operations. How to inquire carefully into real hotel situations will be a major focus of this course. Students will be actively involved in writing and discussing cases on current operations issues.

**408 Casino Management**
Fall or spring, weeks 1–7. 2 credits. Limited to 45 hotel school students. Prerequisite: H Adm 325. Estimated cost of field trip, $150. Elective.
Lec 01. M 7:30–10 p.m. D. Whitehead.
Topics include the importance of casino operations with a casino hotel and the communication network between the casino and all other departments of the hotel. A field trip to an Atlantic City casino is required.

**[501 Creative Management for Organizational Change**
Spring. 3 credits. Limited to 24 students. Not offered 1989–90. Elective.
Faculty.
Through lectures, exercises, and group problem-solving sessions participants will analyze the characteristics of creative people and organizations, obtain an inventory of their own creative ability, examine blocks to creativity and ways to overcome them, discuss methods for leading creative problem-solving meetings, analyze strategies for producing organizational change, and apply creativity techniques to actual work problems.]

**[502 Airline Management**
Spring. 3 credits. Prerequisites: H Adm 211 and 212 or written permission of instructor. Not offered 1989–90. Elective.
M. Noden.
This course focuses on the airline industry and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include business organization, comparative corporate strategies, marketing and distribution networks, operation and service management, union relations, finance, government regulation, and air transport. Case studies will be used and guest lecturers will provide additional insights into the dynamics of airline management. Using the computer-based management simulation called AIRLINE, student teams will manage a regional carrier.]

**601 Management Intern Program I—Operations**
Fall, spring, or summer. 6 credits. Must be taken in conjunction with H Adm 602. Independent research. Elective.

**602 Management Intern Program II—Academic**
Fall, spring, or summer. 6 credits. Must be taken in conjunction with H Adm 601. Independent research. Elective.

**603 Hotel Ezra Cornell**
Fall or spring. Variable credit (maximum, 3). Prerequisite: written permission. Independent research. Elective.
Faculty.
Elected board members of Hotel Ezra Cornell may receive credit for developing, organizing, and managing the April "hotel-for-a-weekend."

**705 Business Policy**
Spring. 3 credits. M.P.S. requirement.
Lec 01. T R 1–2:15. T. Cullen.
The integration and application of management concepts, theories, and practices to actual business situations. The course focuses on strategic planning and on strategy and policy implementation in the hotel and restaurant industry.

## HUMAN-RESOURCES MANAGEMENT COURSES

**211 Human-Resources Management**
Fall or spring. 3 credits. Limited to 100 hotel school students, no freshmen or graduate students. Labs limited to 18 students each. Prerequisite: H Adm 103. Required.
Lec 01. M W 10:10–11:25. R. Eder.
An introduction to and survey of the personnel function and the human-resources-management function. How organizations plan, staff, motivate, evaluate, and develop employees to enhance productivity, advance the quality of work life, and ensure legal compliance in the management of employee relations. Topics include human-resource planning, job analysis, recruitment, selection, administration, and labor relations.

**211S Human-Resources Management**
Fall or spring. 3 credits. Limited to 100 non-hotel school students, no freshmen. Elective.
Lec 01. M W 8:40–9:55; labs TBA.
M. Eller.
An introduction to and survey of the personnel function and the human-resources management function. How organizations plan, staff, motivate, evaluate, and develop employees to enhance productivity, advance the quality of work life, and ensure legal compliance in the management of employee relations. Topics include human-resource planning, job analysis, recruitment, selection, administration, and labor relations.

**212 Human-Relations Skills**
Fall or spring. 3 credits. Limited to 100 students, no freshmen. Required.
Lec 01. M 7–10 p.m. H. Kramer.
Discussion and practice of human-relations skills necessary for managing people. Topics include supervising, motivating, and communicating with employees; leading effective meetings; conducting creative problem-solving sessions; and time and stress management. Analysis of individual leadership skills and interpersonal and intergroup process skills will be emphasized.

**313 Training for the Hospitality Industry**
Spring. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective.
Lec 01. T R 8:40–9:55. Faculty.
Training is a fundamental responsibility of hospitality managers and a primary solution to human-resource management problems. The training function within the hospitality industry will be analyzed, and a training and employee development model will be presented. Related subjects such as learning theories, task analysis, the writing of objectives, training methods, and program evaluation will be covered at both the conceptual and experiential levels. Students will gain experience designing and implementing a training program for a hospitality organization.

**414 Organizational Behavior and Small-Group Processes**
Fall or spring. 3 credits. Limited to 30 hotel school juniors, seniors, and graduate students by written permission of the instructor. Elective.
Lec 01. 7–10 p.m. R. Morano.
Applications of organizational behavior principles will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential laboratories aimed at enhancing their effectiveness as members or leaders of groups. Topics that will be studied include leadership, decision making, motivation, power, and organizational change.

**416 Special Studies in the Management of Human Resources**
Spring. 3 credits. Limited to seniors and graduate students, and others with permission of instructor. Prerequisite: H Adm 211. Elective.
Lec 01. T 2:30–5. Faculty.
This course surveys broad, comprehensive human-resources management policy areas (employee relations, staffing, reward systems, and work-system design) from the strategic perspective of the general manager. Case studies and industry guest speakers are utilized. In addition to diagnosing and formulating strategic management-action plans, current trends, essential competencies, and related research developments are examined.

**511 Contemporary Employee Management Issues**
Fall. 2 credits. Elective.
Lec 01. W 12:20–5:30. A. Formicola.
A seminar course addressing issues affecting industry in general, but with particular emphasis on the service industry. Topics range from wage systems to sexual harassment. The course is for undergraduate students with management career goals who wish to understand the issues facing management in a constantly changing work force and environment.

**512 Managing Organizational Change and Productivity**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective.
C. Lundberg.
The critical issue facing managers today is how to cope with the endless barrage of socio-technological changes that confront them daily. Effective leaders must be able to plan and implement strategies that will enable changes to be realized in organizational development processes. This course will emphasize managerial and consulting techniques to identify and bring about changes in organizations and will provide hands-on practice in the design of an improvement program as a mechanism for organizational development.

**513 Situational Leadership and Organizational Behavior**
Spring. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
Faculty.
How managers can successfully accomplish the goals of the organization through the efforts of employees. Emphasis will be on recent theories of motivation, behavior, and leadership, with direct application to the hospitality industry. Students will learn the basics of situational leadership and be able to apply this knowledge to managerial positions.

**711 Negotiations in the Service Industry**
Fall or spring. 3 credits. Limited to 40 juniors, seniors, and graduate students. Elective.
Lec 01. T R 8:40–9:55. E. Brooks.
The course examines the roles of managers as negotiators, both within the organization and for the organization. There will be discussion of planning and preparations, tactics, strategies, trends, power, timing, persuasion, the win-win concept, and developing alternatives. Cases are used and there will be opportunity for participation in both individual and team negotiations.

**718 Advanced Human-Resources Management**
Fall. 3 credits. Limited to 30 hotel school students, and non-hotel school graduate students as space permits, or by permission of instructor. Prerequisite: H Adm 211, an I/O psychology course, or equivalent. Required.
Lec 01. M W 1–2:15. C. Lundberg, R. Eder.
The focus will be on development of human-resource management skills and exploration of the dilemmas and responsibilities of leadership. Students will gain insight into their patterns of management behavior by integrating conceptual material with management games and simulations, interaction analysis, and constructive feedback. Industry executives will evaluate students' management skills in a student-designed assessment center.

## FINANCIAL MANAGEMENT COURSES

**120 Survey of Financial Management**
Fall or spring. 2 credits. Limited to students outside the hotel school. Elective..
Lec 01. 2:30–4:25. Faculty.
A survey of accounting principles, financial statements, cash forecasting, and cash budgeting, and an introduction to financial analysis. Intended for students who desire a general knowledge of the language of business and finance.

**123 Financial Accounting Principles**
Fall or spring. 3 credits. Limited to students outside the hotel school. Elective.
Lec 01. T R 2:30–4:25. Faculty.
An introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

**125 Finance**
Fall or spring. 3 credits. Limited to students outside the hotel school.
Lec 01. M W 1:25. Faculty.
An objective study of the financial function in a profit-oriented enterprise. Important concepts include cash flow, the time value of money, and capital budgeting. Emphasis is on the analysis of accounting information, problem solving, and decision making.

**225 Financial Accounting**
Fall. 3 credits. Limited to hotel school students. Required.
Lec 01. T R 12:20; labs TBA.
D. H. Ferguson.
The basic principles of accounting, including transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

**226 Financial Management**
Spring. 4 credits. Limited to hotel school undergraduates. Limited to 50 students per lab. Prerequisite: H Adm 225 or equivalent. Required.
Lec 01. T R 2:30–4:25; labs TBA.
S. A. Carvell, A. N. Geller.
The course will facilitate a broad understanding of both managerial accounting and finance. The overall objective is to develop skill in using accounting information for managerial planning, control, and evaluation and to learn to incorporate accounting knowledge into a framework for short-term and long-term financial decision making. Topics will include budgeting, current asset management, financing, capital budgeting, cost of capital, and problems in international finance and accounting.

**321 Hospitality Management Contracts**
Spring, last 7 weeks. 1 credit. Elective.
Lec 01. R 10:10–12:05. J. Eyster and guest lecturers.
The negotiation and administration of hospitality management contracts are discussed with major emphasis on contract concerns of owners and operators, financial assessment of owner and operator returns, development of negotiation strategies, and alternative forms of operating agreements.

**322 Investment Management**
Fall or spring. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
Lec 01. R 2:30–4:25. A. Arbel.
The course covers institutional and analytical aspects of security analysis and investment management: securities markets, sources of investment information, bonds and stocks valuation, risk-return analysis, behavior of security prices, portfolio analysis, and portfolio management. The course also covers the capital asset pricing theory, the generic stock investment strategy, and the screen-to-profile approach and their practical implications for security analysis and investment management. Computer-assisted analysis is discussed and applied in a realistic manner, using large databases and interactive screening computer packages. No previous knowledge of computers is required. Students are required to participate in an investment game in which they select and manage large portfolios under real-life conditions.

**323 Real-Estate Finance**
Spring. 3 credits. Prerequisite: H Adm 325 or equivalent. Elective.
Lec 01. M W 12:20–2:15. J. Eyster.
Methods of analyzing real-estate returns for both owners and lenders and various equity and debt structures, to include: joint ventures; limited partnerships; syndications; construction mortgages; "permanent" debt financing vehicles, to include participating, convertible, seller-financial, and government-assisted loans and mortgages; work-out strategies for distressed properties; and analysis of various forms of operating agreements, to include management contracts, leases, franchises, and referral agreements. Presentations by hospitality-industry real estate practitioners will tie course material to current industry practices.

**325 Hospitality Financial Management**
Fall. 3 credits. Required.
Lec 01. T R 8:40–9:55. J. Eyster.
The course integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Specific topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, capital budgeting decision making, equity and debt-financing structures, and operating agreement forms. Students analyze hospitality operations and projects using the above techniques and present their findings in management report form.

**326 Corporate Finance**
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 222 or equivalent. Elective (concentration requirement).
S. A. Carvell.
In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working-capital management.

**328 Advanced Hospitality Managerial Accounting**
Spring. 3 credits. Prerequisite: H Adm 225 and 226 or equivalent. Elective.
Lec 01. M W 10:10–11:25.
D. H. Ferguson.
Emphasis is on the use of accounting information for managerial planning, control, analysis, and evaluation. The coverage will include the principles of managerial accounting, cost allocation, management control, models for decision making, and the special topics of joint products and by-products, transfer pricing, responsibility accounting, and performance measurement. The course explores the application of managerial accounting concepts to the hospitality industry. Case studies will be used.

**421 Internal Control in Hotels**
Spring. 2 credits. Limited to 30 juniors, seniors, graduate students, and others who have permission of the instructor. Prerequisite: H Adm 325 or 725, or equivalent. Elective.
Lec 01. T R 12:20. A. N. Geller.
Discussion of problems encountered in distributing the accounting and clerical work in hotels and restaurants so as to provide a good system of internal control. Study of many actual cases of the failure of internal control and the analysis of the causes of the failure. Practical problems and actual techniques of functioning systems of internal control are examined.

**422 Taxation and Management Decisions**
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective.
A. J. Sciarabba.
An introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and Subchapter S corporations; financial-information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

**724 Analysis and Interpretation of Financial Statements**
Fall. 3 credits. Limited to seniors and M.P.S. students. Elective.
A. N. Geller.
The course covers the financial accounting issues that are encountered in reporting the results of operations for corporate enterprises. Accounting principles as well as future extensions will be explored and discussed. Emphasis will be on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. The underlying objective of the financial statement expertise will be to analyze a firm as a whole and interpret that analysis. Emphasis will be on both outsiders' views of the company and decision making through interpretation of the statements.

**725 Graduate Managerial Accounting in the Hospitality Industry**
Fall. 3 credits. M.P.S. requirement.
A. N. Geller.
Hotel and restaurant accounting systems that provide decision-making information to management are reviewed. Methods of operational analysis for hospitality properties are evaluated and utilized to include ratio, comparative, and cost-volume-profit analyses. Other topics include internal control, operational budgeting, and the use of feasibility studies in long-term capital-budgeting decisions. The student's ability to communicate analytical results through the use of management letters is emphasized.

**726 Graduate Corporate Finance**
Spring. 3 credits. Limited to graduate students. Prerequisite: H Adm 726. Recommended: knowledge of algebraic techniques and elementary statistics (students who have not recently had a statistics course are urged to study review books in mathematics and elementary statistics). M.P.S. requirement.
Lec 01. T R 10:10–12:05. A. Arbel.
An introduction to the principles and practices of business finance, including the development of theory and its application in real-life projects. Topics include risk analysis, valuation concepts, capital budgeting, cost of capital, capital structure, dividend policy, long-term financing, financial planning, short- and intermediate-term financial management, and mergers and consolidations. Computer-assisted decision support models are applied in a realistic manner using interactive packages. The course assumes knowledge of quantitative techniques and basic statistics.

**729 Hospitality Revenue Management**
Fall. 3 credits. Limited to graduate students and a limited number of undergraduates with written permission of instructor. Prerequisite: a background in economics and marketing or finance. Elective.
A. Arbel.
New techniques in hotel and restaurant pricing policies, which include pricing theory as applied to the service industry, the ideal pricing system, and the concept of revenue management. Also included is the implementation of revenue management: the diagnostic system, the cost side, the demand side, the simultaneous solution, multi-pricing systems, market segmentation, product differentiation, price discrimination, the feedback mechanism, and update and control. New computer programs for revenue and yield management will be critically evaluated.

## FOOD AND BEVERAGE MANAGEMENT COURSES

**135 Culinary Theory and Practice**
Fall or spring. 4 credits. Required.
Lec 01. M 2:30–3:45, F 8:40–9:55; labs TBA. T. Neuhaus, T. O'Connor, B. Richmond.
This course is designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food-service sanitation. Students will research recipes, prepare menus and production schedules, and evaluate the quality of final products. The course also presents food and beverage operation types, their associated menus, and dishes and preparation techniques that distinguish them.

**235 Food and Beverage Management**
Fall or spring. 4 credits. Limited to hotel school students. Prerequisite: H Adm 135. Required.
Lec 01. W F 10:10–12:05; secs TBA. D. Romm.
An introduction to the principles of food and beverage management, beginning with an overview of the food and beverage industry at large. Attention is focused on major industry segments and current trends. The applicability of service management concepts is examined. Subsequently, detailed consideration is given to the components of the food-service delivery system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout.

**335 Restaurant Management**
Fall or spring. 4 credits. Prerequisites: H Adm 135 and 235. Approximate cost of utensils and manual, $60. Required.
Lec 01. M 10:10–12:05; labs TBA. T. Kelly, R. White, G. Pezzotti.
A restaurant-management course in which each student participates as a manager of a fine-dining operation. Lectures cover the general management function of restaurant operations, including such topics as restaurant analysis, the consumer's view of the dining experience, and computer applications in the restaurant environment. Case studies dealing with actual restaurant issues will require the student to draw on the materials learned in previous courses. All aspects of production and service in a fine-dining setting will be demonstrated, discussed, and, to a great extent, experienced. The laboratory includes an extensive hands-on managerial experience as well as providing an opportunity for the student to become familiar with the various line positions in the restaurant. As manager, the student is required to prepare a complete planning and summary report. Students are required to provide their own French knife, paring knife, corkscrew (screwpull or captain's), and meat thermometer, as well as portions of the service-production uniforms.

**336 Principles of Nutrition**
Fall. 3 credits. Prerequisites: H Adm 135 and 235, and corequisite 337, or permission of instructor. Elective.
M. Tabacchi.
Designed especially for students interested in the nutritional aspects of the restaurant industry, particularly health spas and hotels that emphasize nutrition and fitness. The nutrient composition of fresh and processed foods, nutrient handbooks, recommended daily allowances, dietary goals as related to restaurants, nutrition labeling, additives, special diets, fad diets, and weight control are studied. The laboratory sessions emphasize creative production of high-quality, nutritious food. The uses of nutrients and nutrient interactions are emphasized. An excellent elective for upper class and graduate students.

**337 Food Composition and Properties: Chemical and Microbiological Aspects**
Fall or spring. 4 credits. Prerequisites: H Adm 135 and 235 (may be taken as a corequisite). Elective.
T. Neuhaus, B. Richmond.
A study of the chemical and microbial properties of raw and cooked foods used and served in the food-service industry. Lectures cover the chemistry of water, carbohydrates, fats, and proteins in relation to food groups. Labs provide the opportunity to produce menu items and to relate food-production techniques to material presented during lectures. Emphasis is placed on development of the student's sensitivity to flavor, texture, aroma, and appearance, and on awareness of food safety. The course ends with a study of convenience foods and the additives used to prolong shelf life and improve handling.

**338 Nutrition and Fitness in the Resort, Hotel, and Spa Industry**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. A previous course in nutrition or food science is helpful but not required. Elective.
Lec 01. M W 9:05; labs TBA.
M. Tabacchi.
Especially designed for students who are interested in the fitness and nutrition trend in private restaurants, resorts, and hotels. This course will also include the benefits of exercise, fitness, and nutrition as they affect the individual. Nutritious menu design and the design of fitness programs, equipment, and facilities will be emphasized. Personnel required and legal, medical, and managerial implications will be discussed. Guest speakers from various spas, wellness centers, and fitness centers will be included.

**339 Airline Food-Service Management**
Fall. 3 credits. Prerequisite: H Adm 235, or coregistration in H Adm 235 and 437, or permission of instructor. Field trip expenses, $250 maximum. Elective.
M. Tabacchi.
This course provides students with industry-specific information for career-planning purposes. Case studies are included. A field trip to an airline's hub city enables students to visit a flight kitchen, a vendor, an airline company, and a distributor. Guest speakers representing various sectors of the industry (airline food and beverage managers, entrepreneurs who provide goods and services to the industry, and in-flight feeding and catering companies) are included.

**430 Introduction to Wine and Spirits**
Fall or spring. 2 credits. Limited to hotel school juniors and seniors, and seniors and graduate students in all other colleges. All students must be 21 years old. S-U grades only. Elective.
Lec 01. W 2:30–4:25. S. A. Mutkoski, C. Muller, B. Lang.
An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wine, spirits, and beers at retail outlets and in a restaurant setting. Lecture topics will include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards will be evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary of their absence are automatically dropped from the instructors' records. The student must then follow the normal drop procedure in his or her school.)

**431 Seminar in Independent Restaurant Operations Management**
Fall or spring. 3 credits. Limited to 12 students. Prerequisite: written permission of instructor. Five field trips required; maximum total cost, $250. Elective.
T. J. Kelly.
The course is designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor, and using student-developed case studies, the students will visit and analyze various independently owned restaurant operations. Analysis will cover, but will not be limited to, the restaurant's concept and market, organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry will be required. Classes will alternate weekly between field trips and seminar/case presentations.

**433 Food-Service Management in Business, Industry, and Health Care Facilities**
Spring. 3 credits. Limited to 25 students. Prerequisite: H Adm 235 or equivalent. Elective.
Lec 01. W F 10:10–11:40. T. O'Connor.
This course is designed to explore and analyze the food-service management in business, industry, and health-care facilities, such as in office and industrial complexes, airline catering, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of organizational structures, human-resource needs, controls, systems design, specialty equipment, and government regulations will be presented. Course work involves readings, small investigative projects, discussions, and local site visits.

**434 Dessert Merchandising**
Spring. 3 credits. Prerequisite: H Adm 135. Elective.
Lec 01. R 9:05; lab R 12:20–5:30.
T. Neuhaus.
A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. The student develops production skills and an appreciation of quality and, by the end of the course, should be able to estimate the resources and time required for producing a particular recipe.

**435 Selection, Procurement, and Supply Management**
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: H Adm 235 or 731. Elective.
Lec 01. T 10:10–12:05; lab 01 R 10:10–12:05; lab 02 W 2:30–4:25.
G. Norkus, R. Spies.
The objectives of this course are to assist the student in developing, understanding, and applying concepts of purchasing and supply management, and to show how to establish and professionally manage such a system.

**436 Beverage Management**
Spring. 2 credits. Limited to 30 hotel school students. Prerequisite: H Adm 430. Elective (concentration requirement).
Lec 01. W 10:10–12:05. S. A. Mutkoski, C. Muller, B. Lang.
This course is designed to meet the needs of upperclass students interested in food and beverage management, specifically dealing with the current responsibilities of the service of alcoholic beverages. Lectures will develop skills and awareness of Dram shop; staff training and responsible customer control; beverage pricing; food and wine pairings; wine-list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Numerous guest lecturers will highlight industry trends and outlooks. Advanced tastings will be conducted during class.

**437 Cultural Cuisines**
Fall. 3 credits. Limited to 20 students. Prerequisite: H Adm 135, 165, or equivalent. Elective.
T. O'Connor.
This seminar will explore various cuisines in terms of history, life-style, and foods peculiar to a culture. Through readings, research, and meal preparation, students will explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among foods of different cultures. Each student will be involved in research reports, oral presentations, and designing and orchestrating the preparation of menus.

**530 Seminar on the Restaurant in Society**
Spring. 3 credits. Elective.
Lec 01. M W 10:10–11:25. D. Romm.
This seminar looks at the restaurant from a broad social perspective. Topics addressed will be the historical development of the restaurant; cultural, social, and psychological factors affecting the customer and server; the social world of the restaurant; and the place of the restaurant in contemporary society. Relevant implications for both management and consumer are also discussed. Students will undertake research projects as part of their participation in the course.

**532 Seminar on Chain-Restaurant Operations**
Fall. 3 credits. Prerequisite: H Adm 235 or permission of instructor. Additional cost for field trips. Elective.
D. Romm.
Chain restaurants account for 40 percent of food-service industry sales and 50 percent of customer traffic. After reviewing the history and development of chain restaurants, the course will concentrate on service and operations-management issues. Strategies of marketing, expansion, and diversification are discussed. Chains from different industry segments will be compared. Topics include corporate versus unit-level priorities and responsibilities, marketing, site selection, menu planning, product development, production planning, facility and equipment design, and recruitment and training. Students will conduct research projects on individual chains and report back to the class. The course will include field trips.

**533 Current Issues in Food Safety and Sanitation**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H Adm 135, 235, 731, 173, or permission of instructor. Elective.
Lec 01. W 12:20, F 11:15–1:10.
B. Richmond.
A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, and equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam is offered with this course. The exam is optional.

**538 Gastronomy—Understanding Food-and-Wine-Pairing Principles**
Spring. 2 credits. Limited to 20 hotel school seniors and graduate students. Elective.
Lec 01. T 7–9 p.m. B. Lang.
A hands-on class enabling students to study and taste regional varietal wines and to understand wine-and-food-pairing principles. Topics include an overview of the present wine industry's response to current and pending legislation, the necessity of marketing wine (via wine lists) through its relationship with food, creative theme dinners, and on-premise merchandising. Students design, organize, and present a wine and food tasting; develop wine and food promotional events; and critique a restaurant's wine list and menu.

**539 Development and Management of Wellness in Business Organizations**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective.
Lec 01. T R 8:40–9:55. M. Tabacchi.
The course encourages future business professionals to emphasize and manage wellness and preventive medicine in the work place. Students learn how to design, implement, and evaluate a comprehensive wellness program in an organization. Case studies and guest speakers from the industry address the issues of diagnosing the employee population, sustaining employee participation, evaluating the cost/benefit aspects of a wellness program, and choosing alternative health-insurance strategies. The stressors that may cause illness in the work place, as well as lifestyle factors affecting health, are also examined.

**731 Graduate Food and Beverage Management**
Fall. 3 credits. Limited to hotel school graduate students. Estimated cost of field trip, $150. M.P.S. requirement.
S. A. Mutkoski, C. Muller.
The technical, managerial, and human-resources skills needed to be successful in food-service management. Topics such as market analysis, concept development, menu planning, operations management, and marketing are addressed in a seminar format.

**732 Graduate Operational Food-Production Systems**
Fall or spring. 3 credits. Limited to hotel school students. Prerequisite: H Adm 731. Estimated expense for clothing and utensils, $95. M.P.S. requirement.
Prod. lab F 2:30–closing; Tech. lab R 2:30–5:30. D. Romm, R. Spies.
A food and beverage management course in which the class operates a fine-dining restaurant. The production lab allows students to rotate through the various line positions of a restaurant operation. In turn, each student serves as the manager with responsibilities for menu planning, marketing, pricing, scheduling, and profit-and-loss analysis. In the techniques lab, students are introduced to selected topics in applied food and beverage management. These include wines and wine service; basic culinary procedures; handling and carving meats and fowl; seafood; pasta; and pizza.

## MARKETING AND TOURISM COURSES

**243 Principles of Marketing**
Fall or spring. 3 credits. Not open to freshmen. Required.
Lec 01. T R 10:10–11:25. W. H. Kaven.
This course is intended to provide the undergraduate hotel administration student with an overview of the discipline of marketing as it applies to the hospitality industry. The primary aim is to understand how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, and the external operating environment. A second aim is to show how the special nature of services affects the development of marketing strategies in the hospitality industry.

**244 Tourism I**
Fall. 3 credits. Not open to freshmen. Elective.
M. A. Noden.
An introductory course in the study of tourism. The origins and evolution of contemporary tourism will be carefully examined. Students will be familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand upon destination development will be explored through the use of selected limited case studies. A series of guest lectures by well-known experts from the travel industry will highlight the economic operations and effects of tourism in both the public and private sectors. This course is open to all students in the university and will serve as the principal prerequisite for the advanced course.

**245 Hotel Sales Management**
Fall or spring. 2 credits. Elective.
Lec 01. F 1–5. Faculty.
The course emphasizes understanding and managing the sales function in hotels. Topics include market-plan development, sales strategies, market purchase behavior, allocation of resources, and evaluation of results.

**441 Advertising Strategies**
Spring, weeks 1–7. 3 credits. Limited to 50 seniors and graduate students. Prerequisites: 3 credits each of psychology and marketing, or permission of instructor. Elective.
P. Yesawich.
The development of effective advertising strategies for consumer goods and hospitality services. Lectures will focus on principles drawn from psychology, communication theory, and marketing.

**444 Tourism II**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 244 plus six credits in economics and/or marketing, or equivalents, or written permission of instructor. Elective.
Lec 01. T R 11:55–1:10. M. A. Noden.
An advanced course in the study of tourism. Emphasis will be placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions will be examined and analyzed. Students will be expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies of various tourism-generating areas will be used. Occasional guest lectures will be given by experts in both public and private sectors.

**449 International Marketing in the Hospitality Industry**
Fall. 3 credits. Prerequisites: H Adm 281 and 282. Elective.
W. H. Kaven.
This course will develop students' understanding of international marketing with emphasis on hospitality-industry applications. It will focus on (1) the similarities and differences that exist between domestic and international marketing and (2) the conduct of international marketing in various segments of the world.

**541 Marketing Communications Strategy**
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a previous marketing course. Elective.
W. H. Kaven.
Students will learn about the key variables in marketing communication and their proper application in situation analysis; determination of objectives and budgets; analysis of media resources; message creation; and organization, coordination, and evaluation of the promotional program. The course will use text material, case studies, readings, lectures, and key speakers. Upon completion of the course the student should be able to develop, organize, and produce a credible promotion strategy and plan of action.

**542 Marketing Communications Media**
Spring. 3 credits. Elective.
Lec 01. M 1:25–4, W 1:25–2:15. C. Dev.
The management of external communication programs for firms in the hospitality industry. Topics include advertising, public relations, sales promotion, direct mail, and telemarketing.

**543 Marketing Research**
Fall or spring. 3 credits. Limited to 35 students. Limited to hotel school graduate students. Prerequisites: previous marketing course and 3 credits of statistics or H Adm 791. Elective.
Lec 01. M W 11:55–1:10.
L. M. Renaghan.
The nature and use of marketing research in the hospitality industry. The emphasis is on the management of the process rather than technical aspects of research methodology. Students will have extensive opportunity to critique methodology, analyze data, present results, and make management recommendations.

**544 Services Marketing**
Spring. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course. Elective.
Lec 01. M W 8:40–9:55. L. M. Renaghan.
Marketing principles applicable across the entire service sector. The marketing strategies of many service-industry firms are evaluated . New marketing approaches uniquely applicable to services are considered, as well as the reformulation of traditional principles from consumer- and industrial-goods marketing.

**548 Marketing Practices in the Casino Industry**
Fall. 2 credits. Limited to 25 juniors, seniors, and graduate students. Prerequisite: H Adm 243. Elective.
Lec 01. M 1:25–5. D. Whitehead.
An overview of the history and scope of casino marketing practices and the behavior patterns of casino players. All market segments are analyzed to determine specific marketing mixes, and appropriate strategies for individual casinos will be evaluated. During a field trip to Atlantic City students analyze the market and determine each hotel's market position. Students research an assigned casino to formulate data for a marketing plan.

**741 Marketing Management**
Fall. 3 credits. M.P.S. requirement.
C. Dev.
The management of the corporate marketing function, with emphasis on firms in the hospitality industry. The emphasis is on developing the student's organizational, analytical, and decision-making capabilities through involvement in case experiences. No prior marketing knowledge is assumed.

**742 Strategic Market Planning in the Hospitality Industry**
Spring. 3 credits. Elective.
Lec 01. T R 8:40–9:55. C. Dev.
The application of strategic management concepts and principles to marketing in the hospitality industry through lectures, discussions, and the development of case studies.

## PROPERTIES MANAGEMENT COURSES

**255 Hospitality-Facilities Development and Planning**
Spring. 3 credits. Required.
Lec 01. M W F 12:20; labs TBA.
M. H. Redlin.
An introduction to and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Course components include the project-development sequence; conceptual and space planning; architectural, engineering, and construction criteria; and the interpretation of architectural and consultant drawings. The emphasis is on setting appropriate requirements, understanding industry practice, and implementing decisions within a balanced design, operations, and financial framework.

**256 Insurance and Risk Management**
Fall. 3 credits. Elective.
Lec 01. M 7–9:30 p.m. D. Ferris.
A comprehensive look at risk management within a general business or institutional environment. Topics to be reviewed include the risk-management process; the role of loss-exposure identification; loss-control options, including insurance and non-insurance solutions; and the general legal environment that creates a potential for loss. Students will analyze and discuss business situations from a risk-management viewpoint.

**350 Principles of Real Estate**
Fall or spring. 3 credits. Elective.
Lec 01. T R 2:30–3:45. J. Corgel.
An introduction to real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment decisions, to use real-estate resources wisely, to understand public-policy issues, and to be prepared for advanced courses in real-estate investment, finance, and development.

**351 Hospitality Facilities Design and Analysis**
Fall. 3 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective (concentration requirement).
Lec 01. F 11:15; labs TBA. M. H. Redlin.
A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of restaurant and hotel plans. Students learn basic graphics techniques and apply them to planning problems for hospitality facilities. The course features one-day field trips to nearby hotels and restaurants, some under construction, and includes a final project dealing with the design or analysis of a lodging or restaurant facility.

**[352 Hotel Planning and Interior Design**
Spring. 3 credits. Prerequisite: H Adm 351. Minimum cost of required field trip, $200. Elective.
R. H. Penner.
A project course concerned with hotel planning, interior design, and renovation. Students will establish the operator's criteria for the design of hotel guest rooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation at the end of the term. Drawing ability is essential.]

**353 Introductory Food-Service Facilities Design**
Spring. 3 credits. Limited to 15 students. Prerequisites: H Adm 351 and 335 for undergraduate students, H Adm 732 for graduate students; coregistration in H Adm 335 or 732 is acceptable; all others by written permission of instructor. Elective.
Lec 01. M W 9:05; lab 01 R 10:10–12:05; lab 02 R 2:30–4:25. M. H. Redlin.
The course reviews basic concepts of food-service facilities design and planning, including space allocation, work flow, and equipment selection. Students plan, design, prepare drawings, and write specifications for a medium-size restaurant kitchen.

**355 Hospitality Facilities Construction and Operation**
Fall. 3 credits. Required.
Lec 01. M W F 12:20; labs TBA.
D. M. Stipanuk.
The construction process, including costs, project management, scheduling, and contracts. An overview of building mechanical and electrical systems and the responsibilities of the engineering-maintenance department. Will also review the renovation process for hospitality facilities.

**356 Hospitality Risk Management**
Spring. 3 credits. Elective.
Lec 01. M 7–9 p.m., labs TBA.
D. M. Stipanuk.
The identification and management of risk associated with fire, security, and safety problems. Topics include design, equipment, staffing, employee training, emergency preparedness, and basic elements of insurance coverage.

**358 Hospitality-Industry Real Estate**
Spring. 3 credits. Prerequisite: H Adm 350. Elective.
Lec 01. M W 2:30–4:25. J. Corgel.
Real estate as a capital investment in the hospitality industry. Lectures will cover the relationship of real estate to the marketing strategy of a company and its investment decisions, the marketing and merchandising of real estate, the financing of real estate, and the effects of existing real-estate financing on a company's overall corporate financial structure and on its ability to raise funds for future expansion. A field trip and case studies will deal with the application of these topics to existing situations.

**451 Seminar in Properties Management**
Fall. 1 credit. Elective (concentration requirement).
Lec 01. F 2:30. Faculty.
A course in which faculty, graduate students, and invited speakers present and discuss issues in facilities design, development, and operation.

**453 Advanced Food-Service Facilities Planning and Design**
Fall. 3 credits. Limited to 12 students. Prerequisite: H Adm 353. Elective.
M. H. Redlin.
The course reviews the application of basic concepts of food-service facilities design and planning for a hotel project. Emphasis is on preparing a program, developing equipment layouts, and making presentations to clients.

**454 Restaurant Planning**
Spring. 3 credits. Prerequisite: H Adm 355 or 751. Elective.
J. deRoos.
Development, design, and construction of restaurants. Topics include market analysis, site selection, menu development, space allocation, trade practices, regulations, equipment and furnishings, cost estimations, financial analysis, and management responsibilities.

**456 Hospitality Facilities Management**
Spring. 3 credits. Elective.
Lec 01. T R 10:10–11:25.
D. M. Stipanuk.
Management of the physical plant of hospitality buildings. Basic building-systems design and operation, physical-plant maintenance, planning, and budget development; and management of energy programs. Case studies of hospitality facilities.

**457 Advanced Development and Construction**
Fall. 3 credits. Prerequisite: H Adm 355 or 751. Elective.
Lec 01. T R 8:40–9:55; labs TBA.
J. deRoos.
The treatment of development as a process, as viewed from the perspective of the owner. Topics include feasibility-study analysis, budgeting, scheduling, construction administration, value engineering, and issues related to site zoning and codes.

**[554 Mixed-Use Development**
Fall. 2 credits. Prerequisite: a course in finance, real estate, or development. Anticipated cost of field trip, $200. Not offered 1989–90. Elective.
Faculty.
The basic characteristics of mixed-use developments, including their design, financing, marketing, and operational management. The role of hotels and food-service facilities in such developments is emphasized. Guest lecturers, case studies, and field trip will supplement lectures.]

**751 Project Development and Construction**
Fall. 3 credits. Minimum cost of field trip, $200. M.P.S. requirement.
Lec 01. W F 8:40–9:55; lab 01 W 10:10; lab 02 W 11:15. M. H. Redlin.
The major elements of the project-development, hotel-planning, and construction process. Topics include the role of the development team, feasibility studies, functional planning and design, architectural and engineering criteria, construction contracts, project scheduling, interpretation of architectural drawings, and building construction. A group project is included and a field trip is required.

## COMMUNICATION COURSES

**165 Managerial Communication: Writing Principles and Process**
Fall or spring. 3 credits. Each lecture limited to 20 students. (Because of the strict class-size limitation, a student who chooses to drop this course should notify the instructor no later than the end of the first week of class so another student can fill the opening.) Must be completed in the student's first or second semester after registering in the hotel school or upon being sponsored by the hotel school to the Division of Unclassified Students. Required.
Lec 01. M W F 10:10; lec 02 M W F 10:10; lec 03 M W F 11:15, lec 04 M W F 1:25; lec 05 M W F 1:25; lec 06 T R 8:25–9:55. D. Jameson, D. Flash, J. Lumley, J. Brownell, E. Huettman, S. Kiner.
An introduction to written communication within a business context. Students learn how to conceive, plan, and develop those written materials that provide much of the information that people in business need to form judgments and make decisions. Focusing on the specific principles, needs, and responsibilities of business communication, the course introduces students to the writing process: analyzing; organizing; using research sources; developing substance; and writing in a clear, precise style. Students write a variety of reports requiring different analytical approaches.

**266 Intermediate French: Le Français de l'Hôtellerie**
Spring. 3 credits. Limited to 12 students in each recitation section. Prerequisite: French 123 or equivalent or written permission of instructor. Elective.
Lec 01. M W F 12:20, plus 1 hour TBA. A. Grandjean-Levy.
This course offers continuing study of the French language, in the context of business affairs, with specific emphasis on the hospitality industry. Presentation of material will consider cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course will be conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary will be used in building general competence in practical usage. Students with a special interest in the hospitality industry will be given priority for admission to the course.

**267 Intermediate Spanish: Español de Hotelería**
Spring. 3 credits. Prerequisite: Spanish 123 or equivalent (CPT score of 560 or above) or permission of instructor. Limited to 12 students. Elective.
Lec 01. M W F 12:20. E. Dozier.
An intermediate-level Spanish course with emphasis on vocabulary related to the hospitality industry. Oral practice will take place in specific context dialogues and by presentations on cultural, geographic, historic, economic, political, and touristic characteristics of Latin American countries and Spain. The written part of the course will consist of practice in correspondence relating to diverse aspects of the industry. Students with a special interest in the hospitality industry will be given priority for admission to the course.

**364 Advanced Business Writing**
Fall or spring. 2 credits. Limited to 15 juniors, seniors, and graduate students. Prerequisite for undergraduates: H Adm 165 or completion of student's freshman writing requirement. Elective.
Lec 01. W 2:30–4:25; lec 02 T 12:20–2:15. Faculty.
This course focuses on the written communications that demand special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. One major topic covered is the planning and executing of a job-hunting campaign, for which students prepare résumés, letters of application, and follow-up messages adapted to their individual needs.

**365 Managerial Communication: Interpersonal Relationships in Organizations**
Fall or spring. 3 credits. Limited to 24 juniors and seniors per lecture. (Because of the strict class-size limitation, a student who chooses to drop this course should notify the instructor no later than the end of the first week of class so another student can fill the opening.) Prerequisite: H Adm 165 or completion of student's freshman writing requirement. Required.
Lec 01. T R 10:10–11:40; lec 02 T R 12:20–1:50; lec 03 T R 10:10–11:40; lec 04 2:30–4. J. Brownell, A. Simon, D. Jameson.
A broad study of communication in a management context. This course emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective interpersonal interaction. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

**562 Seminar in Management Communication**
Fall or spring. Variable (1–3) credits. Limited to juniors, seniors, and graduate students. Elective.
Lec 01. T R 2:30–4. D. Jameson, A. Simon, J. Brownell.
A "special topics" course, with the theme selected each semester on the basis of student and industry needs as well as faculty expertise. Most recent offering: "Intercultural Communication in Business" (3 credits). See school registrar or communication-area faculty coordinator for details about current topic.

**761 Organizational Communication for Managers**
Fall or spring. 3 credits. Limited to 15 graduate students; recommended for second- or third-semester M.P.S. students. Elective.
D. Jameson, J. Brownell.
A course in organizational communication focusing on the complex interactions that occur when people communicate in corporations and other organizations. Using business cases and examples, the course highlights such topics as the political, sociological, ethical, and psychological dimensions of business communication; analysis of communication problems and barriers; and design of organizational strategies to communicate effectively, whether one-to-one, in small groups, or with larger audiences. Each case is linked with an application exercise that helps students perfect their abilities to write, give oral presentations, or interact effectively with others in a professional, managerial context.

## MIS/COMPUTERS COURSES

**170 Macintosh Tools**
Spring. 3 credits. Limited to 25 students outside the hotel school. Elective.
Lec 01. M W F 9:05. B. David.
An introduction to business information systems and computer tools. Students learn basic business computing concepts such as system integrity and the user interface. Finally, the course introduces the student to the personal computer, using electronic spreadsheet, graphics, and word-processing applications. Work is carried out on a Macintosh computer using Microsoft Word and Microsoft Excel.

**171 Keyboarding on the Macintosh**
Fall, spring, or summer. 2 credits. Limited to 25 students per section. Elective.
Lec 01. M W F 10:10; lec 02 M W F 11:15; lec 03 M W F 12:20. B. David.
An introduction to the Macintosh computer and a beginning course in alphanumeric and numeric keyboarding. Students will learn word-processing skills during the second half of the course.

**174 Information Systems**
Fall. 3 credits. Limited to hotel school freshmen or others with permission of the instructors. Required.
Lec 01 M W F 8; lec 02 M W F 9:05; lec 03 M W F 10:10; lec 04 11:15; lec 05 12:20. R. Alvarez, B. David.
An introduction to micro-computing to develop functional computer fluency. Students will develop their skills in five generic areas: text, graphics, spreadsheet, list, and communications processing. The course is entirely lab oriented and students work on Macintosh personal computers.

**274 Hotel Computing Applications**
Fall or spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
Lec 01. M W 11:15; lab TBA. R. Moore.
An introduction to management information systems as they are currently used in the hospitality industry. Specific topics include property management systems, reservation systems, communication networks, database structures, point-of-sale systems, methods of system selection, and cost justification. Computer laboratories provide hands-on experience with systems widely used in the hospitality industry and help to develop IBM PC/DOS skills.

**374 End-User Business Computing Tools**
Fall or spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
Lec 01. T R 10:10–11; lec 02 T R 11:15–12:05; labs TBA. R. Alvarez.
This course explores the personal computer as a managerial tool for the hospitality industry. Concepts of modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on the IBM PC.

**571 Analysis and Design of Information Systems**
Fall. 3 credits. Limited to 15 students. Elective.
Lec 01. M W F 10:10; lab TBA. R. Alvarez.
For students who may become involved with the analysis and design of computer-based information systems (CBIS). The course is intended to develop competence and confidence in the participants' ability to plan for CBIS, specify their functional design, manage a systems adoption project, deal with system vendors, and function as organizational consultants on CBIS. The course assumes an elementary working knowledge of MIS and basic business. The course is pragmatic and requires participant teams to analyze and design (and possibly build and test) a software application system.

**572 Development of Decision Support Systems**
Spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective.
Lec 01. M W 12:20–2:15; lab F 1:25–3:05. R. Alvarez.
The use of computer-based systems to assist human decision makers by supporting their information requirements. The design, implementation, and use of such systems is one of today's fastest growing areas within information systems. The course's perspective is one of design—effective design both requires and enhances understanding. All work will be done on a Macintosh personal computer using Hypercard.

**774 Information Systems for Hospitality Managers**
Spring. 3 credits. Limited to 35 students. M.P.S. Requirement.
Lec 01. T R F 9:05. R. Moore.
The physical and technical computing environments in a multi-unit hospitality corporation. Information systems (IS) are viewed from various perspectives, i.e., as data-processing systems (DP), management information systems (MIS), and decision support systems (DSS). The role of IS in a strategic planning framework is explored. Organizational and infrastructural issues that enhance or detract from system success are explained.

## LAW COURSES

**283 Law of Securities Regulation**
Fall, weeks 1–7. 1 credit. Elective.
Faculty.
For students interested in the financing of new or expanding hotel and restaurant businesses through the sale of stocks and bonds, and the obligations of publicly owned hospitality companies and their officers and directors. The course covers fundamental aspects of the federal securities laws as applicable to the hospitality industry. Problems will be drawn from hotels, restaurants, and related businesses.

**385 Law of Business**
Fall. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel school students with permission of instructor. Elective.
J. Sherry.
This course is designed to enable the student to acquire a basic understanding of law and legal relationships in a business context. A variety of subjects are covered, all intended to aid a person in making decisions as an executive charged with managerial responsibilities.

**387 Business and Hospitality Law**
Fall or spring. 3 credits. Limited to juniors, seniors, and graduate students. Required.
Lec 01. M W 9:05; lab 01 F 9:05; lab 02 F 10:10. J. Sherry.
An integrated chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials will be examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

**486 Historical Development of the Right to Travel and Its Impact on American Society**
Summer. 3 credits. Elective.
J. Sherry.
An overview of the development of the legal rights of persons to travel and to have access to public accommodations. Historical sources focus upon the English common law, the United States Constitution, and federal and state civil rights legislation. The aim of the course is to review and examine changing American social attitudes toward travel and public accommodations and their influence upon travelers' legal rights and responsibilities. Comparative international legal developments will be noted.

**487 Real-Estate Law**
Offered on demand. 2 credits. Limited to juniors, seniors, and graduate students. Elective.
J. Sherry.
Laws governing the acquisition, ownership, and transfer of real estate, beginning with the purchase and sale of a family residence and leading to more-complex transactions involving hotels, motels, condominiums, cooperatives, syndications, and real-estate trusts. Financing aspects, including construction and building loans, mortgages, and mortgage foreclosures are treated from the viewpoint of lender and borrower. The legal relations of landlord and tenant are given special attention, and typical hotel and motel leases are dissected and scrutinized. Applicable tax considerations are focused on all transactions.

## OTHER COMMUNICATION, MIS, AND LAW COURSES

**191 Quantitative Methods**
Spring. 3 credits. Required.
Lec 01. T R 10:10; lec 02 M W 1:25. S. Kimes.
Procedures for collecting, classifying, summarizing, and presenting quantitative facts. Students should get an intuitive grasp of descriptive and inferential statistics. The how, when, and why of statistical applications in a variety of managerial situations, with emphasis on interpretation, not mathematical proofs.

**490 Housing and Feeding the Homeless**
Fall or spring. 4 credits. Limited to 21 students. Prerequisites: H Adm 325 and 303, or HSS 292 and HSS 375, or permission of instructor. Estimated cost of field work, $50. Elective.
Lec 01. T R 8:40–9:55. Faculty.
The course explores the economic, social, and political issues of our country's growing problem of homelessness, as well as the existing and proposed housing and feeding policies and delivery systems that attempt to deal with the issue. Students study the history of homelessness and strategies to alleviate the problem and spend approximately six days at a housing or feeding project (within a one-hour drive from Ithaca) to analyze the project and resolve a managerial problem.

**791 Graduate Quantitative Methods**
Fall. 3 credits. M.P.S. requirement.
Lec 01. M W 10:10–11:25. S. Kimes.
An introduction to management-science models and statistical techniques applicable to the hospitality industry. The application of specific quantitative methods to decision making in the hospitality industry. Topics include forecasting, decision analysis, linear programming, probability, and queuing. Computer software packages will be used to facilitate the decision-making process.

## INDEPENDENT RESEARCH COURSES

**600-690 Undergraduate Independent Study**
Fall or spring. Variable credit. Prerequisite: written permission. Only the first three credits of directed study may count as hotel school electives during a student's undergraduate academic career. Additional directed study, if taken, is applied toward free electives, except for the Management Intern Program (12 credits). *Permission in writing is required before course enrollment. Students should obtain a permission form from the hotel school's registrar.* (Occasionally an independent research project can be added after the three-week deadline with support of the faculty sponsor *and* by formal petition.) Elective.
Faculty.
Students pursue independent research projects under the direction of a faculty member.

**600 Organization Management**

**601 Management Intern Program I—Operations**
6 credits.

**602 Management Intern Program II—Academic**
6 credits.

**603 Hotel Ezra Cornell**

**610 Human-Resources Management**

**620 Financial Management**

**630 Food and Beverage Management**

**640 Marketing and Tourism**

**650 Properties Management**

**660 Communication**

**670 MIS/Computers**

**680 Law**

**690 Other**

**700–900 Graduate Independent Research**
Fall or spring. Variable credit. Limited to graduate students. Prerequisite: written permission of instructor. *Students should obtain a permission form from the hotel school's graduate office.*
Faculty.
As appropriate, graduate students enroll in these courses for thesis or monograph research or for other independent directed study. Students must have in mind a project and obtain agreement from a faculty member to oversee and direct the study.

**700 Organization Management**

**710 Human-Resources Management**

**720 Financial Management**

**730 Food and Beverage Management**

**740 Marketing and Tourism**

**750 Properties Management**

**760 Communication**

**770 MIS/Computers**

**780 Law**

**790 Other**

**802 Master of Science Thesis Research**

**803 Graduate Teaching Internship**

**805 M.P.S. Monograph I**

**806 M.P.S. Monograph II**

**900 Doctoral Thesis Research**

## FACULTY ROSTER

### Professorial

Arbel, Avner, Ph.D., New York U. Prof.
Berger, Florence, Ph.D., Cornell U. Assoc. Prof.
Brownell, Judith, Ph.D., Syracuse U. Asst. Prof.
Carvell, Stephen A., Ph.D., SUNY Binghamton. Asst. Prof.
Chase, Robert M., M.B.A., Cornell U. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Dean and E. M. Statler Professor
Corgel, John B., Ph.D., U. of Georgia. Assoc. Prof.
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof.
deRoos, Jan A., M.S., Cornell U. Asst. Prof.
Dev, Chekitan S., Ph.D., Virginia Polytechnic. Asst. Prof.
Dunn, David C., Ph.D., Cornell U. Assoc. Dean and Assoc. Prof.
Eder, Robert W., D.B.A., U. of Colorado. Assoc. Prof.
Eyster, James J., Ph.D., Cornell U. Prof.
Ferguson, Dennis H., Ph.D., Cornell U. Assoc. Prof.
Geller, A. Neal, Ph.D., Syracuse U. Prof.
Jameson, Daphne A., Ph.D., U. of Illinois. Assoc. Prof.
Kaven, William H., Ph.D., Cornell U. Prof.
Kelly, Thomas J., M.S., Cornell U. Assoc. Prof.
Kimes, Sheryl E., Ph.D., U. of Texas. Asst. Prof.
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management
Moore, Richard G., M.B.A., Cornell U. Assoc. Prof.
Mutkoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management
Penner, Richard H., M.S., Cornell U. Prof.
Rainsford, Peter, Ph.D., Cornell U. Assoc. Prof.
Redlin, Michael H., Ph.D., Cornell U. Prof.
Renaghan, Leo M., Ph.D., Pennsylvania State U. Assoc. Prof
Romm, David L., M.P.S., Cornell U. Asst. Prof.
Sherry, John E. H., LL. M ., New York U. Prof. and Graduate Faculty Representative
Simon, Augusta, Ph.D., Ohio State U. Asst. Prof.
Stipanuk, David M., M.S., U. of Wisconsin. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.

### Adjunct, Visiting, and Other Teaching Staff

Alvarez, Roy, M.Ed., Lecturer
Blanchard, Kenneth, Ph.D., Visiting Assoc. Prof.
Bley, Jane S., B.A., Teaching Support Specialist
Brooks, Earl, M.A., Professor Emeritus
D'Aprix, David, B. A., Lecturer
David, Betty B., Lecturer
Ferris, J. David, M.A., Visiting Lecturer
Flash, Dora G., A.B., Senior Lecturer
Hales, E. Ann, Ph.D., Lecturer
Huettman, Elizabeth, M.A., Visiting Lecturer
James, Robert, M.B.A., Visiting Lecturer
Kiner, Susan W., M.A., Lecturer
Lang, Barbara, B.S., Visiting Lecturer
Lumley, Jane, M.A., Senior Lecturer
Mathew, Mary E., B.S., Teaching Support Specialist
Morano, Richard A., D.Ed., Visiting Lecturer
Muller, Christopher C., M.P.S., Lecturer
Neuhaus, Thomas W., M.S., Lecturer
Noden, Malcolm A., Senior Lecturer
Norkus, Gregory X., M.S., Senior Lecturer
O'Connor, Therese A., M.S., Senior Lecturer
Pezzotti, Giuseppe G. B., B.S., Lecturer
Richmond, Bonnie S., M.S., Senior Lecturer
Sciarabba, Andrew, B.B.A., Visiting Lecturer
Spies, Rupert, Studienassessor, Lecturer
Weaver, Loren E., B.S., Teaching Support Specialist
Weishaupt, Hans P., B.S., Robert A. Beck Chair of Applied Hotel Management
Weisz, Stephen, B.S., Visiting Lecturer
White, Robert, A.O.S., Teaching Support Specialist
Whitehead, Donald E., B.S., Visiting Lecturer
Yesawich, Peter C., Ph.D., Visiting Assoc. Prof.

# NEW YORK STATE COLLEGE OF HUMAN ECOLOGY

## ADMINISTRATION

Francille Firebaugh, dean

Jean Robinson, associate dean; assistant director, Cornell University Agricultural Experiment Station

Lucinda A. Noble, associate dean; director of Cornell Cooperative Extension

Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension

Brenda Bricker, director, admissions

Joyce McAllister, registrar

Lynne M. Wiley, director, student services

## FACILITIES

The College of Human Ecology, through its teaching, research, and extension programs, seeks to understand and improve the relations of people to their environments, especially to those settings most critical for growth and development—home, school, work, and leisure. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by this college and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning and academic study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an experimental nursery school.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

## DEGREE PROGRAMS

| | *Degree* |
|---|---|
| Biology and Society | B.S. |
| Consumer Economics and Housing | B.S. |
| Design and Environmental Analysis | B.S. |
| Human Development and Family Studies | B.S. |
| Human Service Studies | B.S. |
| Nutritional Sciences | B.S. |
| Policy Analysis | B.S. |
| Textiles and Apparel | B.S. |
| Individual Curriculum | B.S. |

## DIVISION OF STUDENT SERVICES

B. Bricker, director of admissions

W. Graham, director of institutional studies

J. McAllister, college registrar

L. Wiley, director of student services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 172 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed on subsequent pages at the beginning of the course descriptions for each department.

Matriculated students can find assistance with matters of academic credit and graduation requirements in the Office of the College Registrar, 146 Martha Van Rensselaer Hall Assistance with academic advising, career planning and placement, and personal counseling may be obtained from the Office of Student Services, N101 Martha Van Rensselaer Hall.

### The Students

The College of Human Ecology undergraduate enrollment is 1,286 with 54 percent in the upper division. About 320 students are graduated each year, and last year 239 freshmen and 144 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective. In 1988 three out of four freshman were in the top 10 percent of their high school graduating classes. Fifty-five percent had verbal Scholastic Aptitude Test (SAT) scores over 600 and 80 percent had math scores of 600 or better.

Approximately 75 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Eighteen percent were identified as members of minority groups in 1988.

Approximately 185 graduate students have members of the college's faculty chairing their special committees. The college awards 41 master's degrees and 20 doctorates each year.

## ACADEMIC PROGRAMS

### Majors

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

*Consumer Economics and Housing (CEH):* The department supervises the department major and the policy analysis major.

*Design and Environmental Analysis (DEA):* interior design facility planning and management. human environment relations.

*Human Development and Family Studies (HDFS):* does not have separate options. Courses focus on cognitive, personality, and social development; infant through adult development; atypical development; and family studies.

*Human Service Studies (HSS):* does not have separate options. Courses focus on three content clusters: human-service environments, programs, and processes. A professional internship and senior seminar are required. Students may meet the requirements of an accredited bachelor's degree program in social work.

*Nutritional Sciences (NS):* experimental and consumer food studies, nutrition, nutritional biochemistry, clinical nutrition, community nutrition. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.)

*Textiles and Apparel (TXA):* apparel design, apparel-textile management, textile science.

*Interdepartmental Major in Biology and Society (ID-BS).*

*Interdepartmental Major in Policy Analysis.*

*Individual Curriculum.* It is possible to develop an individual program of study if none of the above programs fits particular educational and career objectives.

### Changing Majors

Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. When a declared major no longer seems to meet a student's educational goals, a counselor or faculty adviser may be able to point out alternatives. If the student decides to make a change, a change-of-major form (available from the Office of the College Registrar, 146 Van Rensselaer Hall) ensures that the change is sent to the department in which the student wishes to major, so an adviser can be assigned to the student.

### Students of Mature Status

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of the average undergraduate. To facilitate the education of mature students, defined as those twenty-four years old or older at matriculation, the college has adopted certain procedures specifically for that group.

Mature students are permitted to enroll for as few as 6 credits without petitioning and are also permitted to extend their residency beyond the normal eight terms.

It is highly recommended that mature students contact Judith Eger, the director of the Continuing Education Information Center, B12 Ives Hall, for information on services available through that office.

### Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree preparing for graduate study or jobs and careers in human ecology–related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree.

### Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs, B12 Ives Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

## CONSUMER ECONOMICS AND HOUSING

The behavior of people as consumers and family members and their interactions with the private and public sectors of the economy have become increasingly important as the United States shifts to a service-based economy. One result has been an increasing demand from business and government for trained individuals who understand consumers and families, how they interact with private markets, and how public policies affect those markets, and through them, consumers. The demand has been sufficient to elevate salaries for well-trained individuals.

The consumer economics and housing (CEH) major provides such training. The major combines economics with statistics, sociology, and political science. CEH majors study how consumer markets work; how firms and consumers behave; what role government plays in protecting consumers; how functions shift between household and marketplace as prices, incomes, social values, and legislation change; and how changes in the family impact on consumer markets. Students interact with the faculty and with each other both in the classroom and in field-based learning experiences in the Ithaca area, New York City, Washington, and elsewhere. Students can specialize within the major in a number of areas, including consumer affairs and policy, housing, and financial advising.

Graduates in CEH are prepared for a wide variety of consumer-related positions in business and in government. The major also provides an excellent foundation for further studies in economics, law, business administration, and policy analysis.

## DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and materials samples for student use.

### Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER).

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

#### Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

#### Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, and the health-care industry. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

#### Option III: Human-Environment Relations

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Human-environment relations is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

### Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by advising coordinator Michael Boyd, in E410 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college to meet special needs helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

### Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

## HUMAN DEVELOPMENT AND FAMILY STUDIES

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life course. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspective—the person in interaction with complex biological, situational, and environmental conditions of everyday life—is featured in many departmental courses.

Major social science disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in medicine, law, counseling, clinical psychology, special education, or university teaching and research, which require some graduate study. Others may take bachelor's-level positions as youth counselors, day-care workers, personnel assistants, research technicians, social program assistants, etc.

### Academic Advising

Every HDFS major is assigned a faculty adviser from the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and can also help students find special opportunities for individual study or for experience outside the classroom. Although advisers must sign green course schedule cards, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers to match changing academic interests should check with the department office, in NG14 Martha Van Rensselaer Hall.

### Curriculum

HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with specialized work in an area outside the department, such as communication arts, nutrition, business, or government.

During their first two years, students are expected to combine a variety of liberal arts courses with HDFS core courses HDFS 115 (Human Development: Infancy and Childhood); HDFS 150 (Families in Modern Society); HDFS 216 (Human Development: Adolescence and Youth); and HDFS 218 (Human Development: Adulthood and Aging). This encourages diversity yet ensures a common base for upper-level courses in the major. Courses within the department vary from lectures and discussions to research and independent study.

All students are encouraged to participate in an experiential learning course in their particular area of interest. The course may focus on a naturalistic or laboratory setting (e.g., nursery school, youth detention center, retirement home) or on a research setting (e.g., interviewing, administering tests, observing behavior).

An HDFS major also takes upper-level courses in areas to be selected. Additional information is available in the HDFS Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

### Teaching Certification Option

The cooperative Cornell HDFS–State University of New York at Cortland education program is designed to meet New York State certification requirements for teaching grades N–6 and grades N–9. The program requires that the student spend three years at Cornell and the senior year and part of two summers registered in absentia at SUNY Cortland.

This highly selective undergraduate program offers an alternative to the option of seeking a master's degree in early education after the undergraduate studies at Cornell have been completed. Students interested in the program should discuss the merits of each option with their advisers.

Course work at Cornell must be carefully planned. Elective options will be somewhat limited because it will be necessary to consider thirty-seven Cortland credits and an additional five to nine education courses at Cornell as electives. More information is available in the HDFS Office, NG14 Martha Van Rensselaer Hall.

### Honors Program

The honors program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should notify the coordinator of the honors program as early as possible in their academic career, preferably before their junior year.

A grade-point average of 3.3 is recommended for entry into the program, although promising students who lack the grade-point average also may apply if they can otherwise demonstrate their potential for honors work. Honors students must take a course in research design, preferably in the sophomore or junior year.

Students spend part of their junior and senior year working on a thesis under faculty supervision, completing the project before March 15 of the senior year, when the student's oral examination is held. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

### Foreign Language Requirement

The Department of Human Development and Family Studies begins this year a two-year phasing in of the foreign language requirement described below. Students entering in fall semester, 1989, or spring semester, 1990, are strongly encouraged, but not required, to complete the language requirement. Students entering in fall semester, 1990, and thereafter will be required to complete the language requirement prior to graduation.

#### Language Requirement

The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. Work toward the foreign language requirement should be undertaken in the freshman and sophomore years.

The following departments teach foreign languages or literature or both in the College of Art and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one or two ways:

1) by attaining PROFICIENCY in one language or
2) by attaining QUALIFICATION in two languages.

### Proficiency

PROFICIENCY is attained by passing a 200-level course at Cornell (or Chinese or Japanese 161) or by equivalent achievement, to be determined by examination; see below under "Advanced Standing Credit."

### Qualification

QUALIFICATION may be attained in any of the following four ways:

1) Three credits of secondary school study or passing NYS Regents Exam in any one language give QUALIFICATION in that language. This route to QUALIFICATION does not guarantee entrance into a 200-level course. The students who want to continue in this language to seek PROFICIENCY must be placed by examination.
2) Passing the requisite course: 102, 123, or 134 in languages taught by the Department of Modern Languages and Linguistics; Chinese or Japanese 160; Near Eastern Studies 102 or 122 in Hebrew, 112 in elementary classical Arabic, or 114 in Egyptian Arabic; Classics 103 or 104 in Greek; Classics 106 or 107 in Latin; Classics 112 in modern Greek; AS & RC 134 in Swahili.
3) A score of 560 or better on the College Placement Test (CPT).
4) Placement in a 200-level course by special examination (in cases where no CPT is available).

A student may submit a 560 CPT score at the end of a course numbered 122, thus attaining qualification without taking 123. This procedure is optional; the student with a score of 560 or better may want to take 123 to be better prepared for the 200-level courses.

Note: Completion of 131–132 language course sequence does not constitute QUALIFICATION.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFICIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFICIENCY in their native language and for studying English as a second language at Cornell.

### Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor can transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends on the language course and the level of achievement:

1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee of $10.
2) Latin (all courses except 105 and 107): departmental examination.
3) Greek (all courses except 101, 104, and 111): departmental examination.
4) Arabic: departmental examination.
5) Hebrew: departmental examination.
6) Other languages: special examinations: see the professor in charge.
7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE); even if the student does not want to do any further work in the language, the CASE may provide proficiency status for the language requirement and it may provide up to 6 hours of advanced standing credit. Students who do not have high achievement scores are eligible for the courses listed in the charts below, depending on their scores. For other languages, or for special problems, student should see the professor in charge.

### French

| *CPT Reading Scores* | *Language Courses* | *Literature Courses* |
|---|---|---|
| Below 450 | 121 | |
| 450-559 | 123 | |

| 650 and above AP 4 or 5 in language | Apply for the Cornell Advanced Standing Examination (CASE) | |

### Latin

Placement by departmental examination.

### Arabic

Placement by departmental examination.

### Hebrew

Placement by departmental examination.

### Advanced Standing Credit

Advanced standing credit may be entered on a student's record as follows.

Credit may be granted for high school work for the equivalent of language courses numbered 203, 204. The amount of credit is based on performance of one or more of the following examinations:

a) CPT Advanced Placement Examination. French, Spanish, and German: A score of 4 or 5 yields 3 credits on the French, Spanish, or German language examinations and literature examinations.

**Hebrew:** Up to 6 credits may be granted, depending on the student's score on the departmental examination.

**Latin:** Students should consult the Department of Classics, 120A Goldwin Smith Hall. Students must take the department's own placement examination during orientation week. A student who is permitted to register in a 300-level course will be given 6 advanced standing credits.

**Greek:** For information concerning advanced placement, students should consult the chairman of the Department of Classics, 120A Goldwin Smith Hall.

b) Cornell Advanced Standing Examination (CASE). To be eligible for this examination the student must have achieved a score of 650 on the CPT. For details on registration, see "Language Course Placement and Credit" above. The maximum amount of credit is 6 hours.

c) Special examinations are given for languages where no CPT exists.

## HUMAN SERVICE STUDIES

Faculty in the Department of Human Service Studies (HSS) prepare students for a variety of careers in programs that serve individuals, families, and the community. HSS graduates work in schools, social services, Cooperative Extension, health and mental health programs, and community development agencies.

They are employed in such positions as counselors, school teachers, social workers, community educators, planners, and researchers. Many HSS graduates pursue graduate study in law, education, medicine, social work, health, and a variety of social sciences. HSS majors come from diverse backgrounds, but they share a common goal of wanting to serve the needs of others.

HSS is unique in that it integrates a broad spectrum of courses offered by several departments and colleges and focuses them for professional practice in the human services. All HSS students take courses that provide a knowledge base in three content clusters:

1. Human service environments – course choices provide students with knowledge about the working context within which the human service provider functions, including a base in social psychology, group and organizational behavior, social system perspectives, power and leadership.
2. Human service programs – courses for this requirement are selected to provide the student an introduction to historical and current program models, barriers to service delivery, developments in health, education and social welfare—all in the context of both the client and the work done by the human service professional.
3. Human service processes – courses for this requirement are designed to provide students with methods to work effectively in human service programs and environments. Courses include planning and development content, program delivery modes, decision-making processes, basic social planning methods, and program evaluation.

All students take a professional internship and an integrative senior seminar. Regardless of their specific career goals, students acquire a broad understanding of human services and the ways they can collaborate to improve the human condition. In addition, students specialize in an area of concentration such as health, education, social welfare, policy, planning, or evaluation.

### Academic Advising

It is important for a student who is interested in majoring in Human Service Studies to declare that major as early as possible. Once that is done, students work with their assigned faculty advisers to plan course work and related educational activities. Students are free to change advisers. Although faculty advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of courses and make sure that the program meets graduation requirements of the major and the college.

### Social Work Program

The undergraduate social work major at Cornell has as its principal educational objective the preparation of students for beginning professional social work practice. In addition, the major prepares students for graduate education in social work and contributes to the enrichment of a college education by helping students understand social welfare needs, services, and issues.

The social work major is accredited by the Council on Social Work Education. Students who complete all requirements are eligible to apply for advanced standing in a graduate school of social work or for beginning-level employment as professional social workers.

## TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological development.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

### Academic Advising

All TXA majors are matched with a faculty adviser by the advising coordinator, S. Kay Obendorf (208 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

### Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for loss or theft of student work.

### Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

### Options

Students may select options in apparel design, apparel-textile management, or textile science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

#### Option I: Apparel Design

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

#### Option II: Apparel-Textile Management

Apparel and textile management combines the fields of apparel and textile with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication arts, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Textile Science).

#### Option III: Textile Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The textile science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

### Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

## INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the human ecology *Student Guide.*

## INTERDEPARTMENTAL MAJOR IN POLICY ANALYSIS

Advanced technology, increased wealth, and other social changes have caused interactions between government and individuals and between government and business to become more numerous and complex. This phenomenon has occurred at all levels of government and has generated a pronounced need—in both the public and private sectors—for specialists skilled in developing and analyzing public policy. Organized and managed by the Department of Consumer Economics and Housing, the policy analysis major uses the resources of the college and the rest of the university to build the knowledge and the analytical skills required to understand the process by which public policies are developed and to evaluate the impacts and desirability of these policies.

The policy analysis major gives students a basic understanding of the economic and political roles governments play along with the program-analysis and evaluation skills necessary to comprehend the quantitative and qualitative importance of governmental influence. In addition, students make in-depth studies of two policy areas (e.g., health policy, consumer policy, environmental policy, and foreign policy) of their choice. Because experience in legislative, regulatory, and public administration activities is very helpful, involvement in field study, Cornell-in-Washington, and Cornell Abroad programs is encouraged. The specific requirements for the policy analysis major are listed under the interdepartmental majors.

Graduates in policy analysis are attractive to businesses and industries as well as to governmental agencies because of their economics and political science background and their analytical skills. Students also use the major to prepare for further work in policy studies, law, and business administration.

The policy analysis major is flexible and allows individual program planning. All students majoring in policy analysis are assigned a faculty adviser by the advising coordinator. The earlier a student decides to major in the department, the greater the opportunity to develop a program that will meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible.

An appointment to talk with either an adviser or the advising coordinator, James Reschovsky, may be made directly.

## INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, Patti Papapietro, in the Office of Student Services, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

## SPECIAL OPPORTUNITIES

Several special programs allow students to receive academic credit for fieldwork and internship experience, to study in absentia, or to enter particular graduate programs after the junior year.

### Teacher Certification in Home Economics

Students can combine any major in the college with additional course work that leads to a certificate of qualification for teaching home economics (kindergarten through twelfth grade) in New York State and a number of other states.

### Human Ecology Field and International Study

#### Field Study

Field study enables students to learn from participation in a community and organizational setting and from reflection on that experience through discussion, reading, and writing. This process of integrating theory with practice distinguishes field study from work experience and provides the rationale for granting academic credit.

The Human Ecology Field and International Study Office, 159 Martha Van Rensselaer Hall, offers interdepartmental, prefield preparation and field-based courses with an interdisciplinary problem-solving approach to social issues. Field placements are located in the Ithaca area, New York City, Albany, Washington, D.C., Boston, and elsewhere. Courses are open to registration by all Cornell students.

#### International Study

Study abroad provides students with an opportunity to add an international dimension to their human ecology program through course work focusing on international problems and intercultural understanding and through sponsored programs of study abroad for which credit is available. Course work in a foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology.

Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. In each case, students will remain registered at Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Applications for study abroad should be submitted to the study-abroad adviser in the Field and International Study Office.

### University Programs

#### Africana Studies and Research Center

Courses taken in the Africana Studies and Research Center (ASRC) may be used to meet some of the distribution requirements of the college. Up to two courses or 8 credits of such courses may be applied toward the 12 additional credits in natural and social sciences (section I-C of the graduation requirements) or toward the 9 additional credits in communication, analysis, and the humanities (section II-B). This allowance is in addition to the freshman writing seminar credits that may be taken in ASRC. Other courses taken in the center count as endowed division electives.

A list of ASRC courses approved to meet distribution requirements or as electives is available in the Office of Student Services and in the Office of the College Registrar.

### Double-Registration Programs

#### Johnson Graduate School of Management

A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by

the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students should be aware that if the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

#### Law School

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Since students accepted to this program will be spending their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

#### Cornell Medical College

A limited number of highly qualified students from three Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 203 Barnes Hall.

### Off-Campus Programs

#### New York State Assembly Internships

A limited number of session internships with the New York State Assembly are available in spring semester to students of sophomore status and above who are enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Field and International Study Office, 170 Martha Van Rensselaer Hall.

#### Ithaca College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, 146 Martha Van Rensselaer Hall.

## PLANNING A PROGRAM OF STUDY

### Academic Advising

When students decide to major in a particular department, they are assigned to a faculty adviser by the advising coordinator in that department. The advising coordinator can help match the student's needs with the special interests of a faculty member. Students are free to change advisers as their own interests change and should see the advising coordinator to discuss such a change. Faculty advisers and counselors in the Office of Student Services are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the course enrollment schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Advising coordinators in each department are happy to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

### Completing Graduation Requirements

A summary of record is kept for each student in the Office of the College Registrar. At fall registration each continuing student receives a copy showing which major and graduation requirements have already been met. It is important to check this summary and to bring any questions to the attention of staff members in the Office of the College Registrar. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.

### Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and department advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

### Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or overseas often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section "Advanced Placement of Freshmen."

## GRADUATION REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

### General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to

1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C–) or better,
4) fulfill residency requirements, and
5) complete two terms of physical education within the first two semesters.

### College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

**I. Natural and Social Sciences** (24 credits)

A. *Natural sciences* (6 credits) selected from Biological Sciences 101–103,102–104,105–106, 109–110; Chemistry 103–104, 207–208, 215–216; and Physics 101–102,112, 201 or 202, 207–208. Biological sciences courses must be taken sequentially.

B. *Social sciences* (6 credits) selected from economics (including CEH 110,111 but excluding Agricultural Economics 221 and 310); psychology (including Education 110, 311, 317; DEA 150; HDFS 115, 216, 217, 218, 219); sociology (including rural sociology, CEH 148, and HDFS 150). Do not take both Economics 101 *and* CEH 110; Economics 102 *and* CEH 111; Psychology 275 *and* HDFS 360; Rural Sociology 101 *and* Sociology 101; or Sociology 243 *and* HDFS 150; they are equivalent courses.

C. *Additional credits* (12 credits) selected from any subjects listed above or from courses in anthropology (except archaeology); Astronomy 101 or 102; biochemistry; microbiology; genetics and development; Geological Sciences 101; and government.

**II. Communication, Analysis, and the Humanities** (15 credits)

A. *Freshman writing seminars* (6 credits) selected from courses listed in the freshman writing seminar brochure.

B. *Additional credits* (9 credits) selected from art; communication; comparative literature; computer science; drawing; English; ancient or modern foreign languages; history; history of art; history of architecture; mathematics; music; Natural Resources 407; philosophy; statistics (students should not take both Industrial and Labor Relations 210 and Agricultural Economics 310, since the courses are substantially the same); theatre arts; DEA 101,111, or 115; HSS 292; TXA 125, 375; and selected ASRC courses (list available in the Counseling Office, N101 Martha Van Rensselaer Hall).

**III. Human Ecology** (40 credits)

A. *Requirements for the major* (the number of credits required varies by major and option).

B. *Fifteen credits to include course work in at least two departments outside the major* with two courses totaling 6 credits minimum in one department and one 3-credit course in a second department. Not more than 3 credits of the15 may be in special studies 400, 401, 402, either departmental or FIS (Field and International Study). HE 100 cannot be used to fulfill this requirement, nor can an undergraduate teaching assistantship designated "403."

**IV. Additional Credits** (41 credits)

A. *Requirements for the major* (number of credits varies from 0 to 15 credits).

B. *Electives* (number of credits varies from 26 to 41 credits).

Credit requirements in this section are met through courses in the *state divisions of Cornell:*

- College of Human Ecology (in addition to courses in sections I, II, and III)
- College of Agriculture and Life Sciences
- School of Industrial and Labor Relations
- College of Veterinary Medicine

and through courses in the *endowed divisions of Cornell:*

- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

*Courses in the endowed divisions in this section may not exceed a total of 21 credits.*

**V. Physical Education** (2 credits)

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

### Related Policies

**College course requirement.** Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology a semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

**Section II.** Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. In addition, students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

**In sections I, II, and III**, the required credits listed are the minimums; credits taken in excess of those minimums (section I, 24 credits; section II 15 credits and section III, 40 credits) count toward electives (section IV, 41 credits).

**In sections I and II**, courses specified by the major to meet the requirements in the sections may either be used as meeting the credit requirements in those sections or be applied toward the additional credits in section IV.

**Section IV.** *There is no limit to the number of credits that may be taken in the state divisions of Cornell,* and therefore students may choose to take additional state credits and graduate with *more than* 120 credits.

*Credits in the endowed divisions in this section may not exceed 21.* Any course taken in an endowed division for which a grade of F or U is received will be counted *against* the 21 endowed credits allowed.

Elective credits earned in Cornell's endowed divisions during summer session, in absentia credits, and transfer credits are counted as credits earned in the state divisions and therefore do not count against the 21 credits allowed in the endowed divisions in meeting the requirements of this section.

Not more than 21 credits in section IV may be taken in the endowed divisions of the university except under *both* of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);

2) Payment must be made for each credit taken in excess of the 21 allowed, *whether or not the courses are passed*. For the precise fee per credit, students should call the Office of the Bursar.

### Related Policies for Transfer Students

**Section I-A.** Transfers who are entering human ecology programs in consumer economics and housing, design and environmental analysis, human service studies (with the exception of the social work program), and policy analysis can satisfy the College of Human Ecology's natural science graduation requirements with any course(s) taken to meet a former college's natural science requirements as long as the course(s) transferred dealt with matter, energy, and their interrelationships and transformations. Courses in areas such as psychology and mathematics are not included, even though courses in these areas may have been taken to meet a former institution's natural science requirement.

**Section II-A.** Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshmen writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.

**Section III-B.** External transfer students can meet the requirement for course work outside the major in the College of Human Ecology by completion of:

1) 15 credits of work, outside their department, comprised of transfer credit and credit earned in the college,

or

2) credits all taken in this college (no transfer credit is allowed to meet this requirement), on the basis of the status of the student's matriculation and prorated as follows:

| *Status at Matriculation* | *Cornell Human Ecology Credits to Satisfy Work outside the Major* |
|---|---|
| Freshman (1-25 transfer credits) | 15 |
| Sophomore (26-55 transfer credits) | 12 |
| Junior (56-85 transfer credits) | 9 |
| Senior (86-120 transfer credits) | 9 |

In both options, the courses must be in at least two departments outside the major with two courses comprising 6 credits in one department and at least one 3-credit course in a second department. Transfer students from other Cornell divisions are required to take the full 15 credits outside the major.

Note that transfer students are still responsible for completing a total of 40 human ecology credits under section III.

**Section IV.** Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C– will not transfer to meet human ecology degree requirements.

**Section V.** Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Cornell, regardless of whether they took physical education at their first college. Exemption or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the college registrar, Joyce McAllister, in 146 Martha Van Rensselaer Hall.

#### Related Policies for Freshmen

**Section V.** Freshmen are required to take two semesters of physical education during their freshman year. Freshman transfer students entering with 12 or more credits have their physical education requirement reduced to one term.

#### Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements—for the major, for distribution, for total credits, and for cumulative average—in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the registrar at the beginning of the semester so that their names can be placed on the list of degree candidates.

Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a petition to the college registrar. The petition should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such requests are usually granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

**Mature students** (those at least twenty-four years old at the time of matriculation) are not required to petition the college registrar for approval to study beyond the usual eight semesters.

### Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the human ecology *Student Guide*. Petition forms are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

## PROCEDURES

### Course Enrollment

Students are expected to complete course enrollment during a designated period each semester. Failure to do so carries a $10 penalty, which can be waived only if circumstances are completely beyond the student's control. It is the student's responsibility to find out the dates of course enrollment.

Before or during course enrollment, students talk to a department adviser or college counselor, or both about their program plans. Students must have their course enrollment schedule signed by their departmental major faculty adviser or by a college counselor if they have not declared a major. A listing of course changes plus directions for course enrollment is issued by the Office of the College Registrar before the start of course enrollment. Last-minute course changes are posted in that office as well as in the Counseling Office, N101 Martha Van Rensselaer Hall. Students will also need the *Course and Time Roster*, issued by the Office of the University Registrar each semester before course enrollment.

Since new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. A specified time for enrolling in such courses is listed on the orientation schedule given to all new students. For the first three weeks of the term, new students have an opportunity to add courses in other divisions of the university as well as in human ecology.

Freshmen and transfer students registering for the first time in the university in the fall term enroll in their courses during the summer before they arrive on campus.

Continuing students enroll for courses for fall semester in March or April; for spring semester in October or November preceding the beginning of the term. Course enrollment materials are mailed to each new student; continuing students are notified of course enrollment dates by posters and notices in the Cornell Daily Sun. Course enrollment materials are available from the Office of Student Services and must be completed and filed in the Office of the College Registrar by the announced deadline.

#### Permission of the Instructor

Certain courses may be taken only with the permission of the instructor, as indicated in the course descriptions. The instructor's permission must be obtained before the student enrolls in the course. After giving permission, the instructor initials the course-enrollment schedule or signs the course-enrollment form, which can be obtained from the Office of the College Registrar or the Office of Student Services.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in 312 Malott Hall.

#### Special Studies Courses

Each department in the College of Human Ecology (CEH, DEA, HDFS, HSS, DNS, and TXA as well as the Field and International Study Program) offers special studies courses that provide an opportunity for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Those courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important to enroll in the appropriate course number (300,400,401, or 402) for a special project.

Students who want to take a special studies course must talk with the faculty member under whose supervision the study would be done and then prepare a plan of work. If the faculty member agrees to supervise the study, a multicopy special studies form must be filled out, describing the study to be pursued. Signatures of the instructor and the department chair as well as the student's departmental adviser must be on the form before it is taken to the Office of the College Registrar, where the student will officially register for the course by filling out a course-registration form. Forms and instructions are available in the Office of Student Services.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

#### Course Loads

The normal course load in the college ranges from 12 to 18 credits. *During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater, without special permission from the college registrar.* To receive permission, a student attaches a note to the green course schedule, citing reason(s) for carrying a heavier load, before handing it in to the Office of the College Registrar.

*Credits beyond 15 may be added during the change-of-registration period at the beginning of the semester without special permission.*

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. *Courses cannot be dropped after the seventh week of classes without petitioning,* so students should try to avoid the need to drop courses.

Except for those with mature-student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Student Services.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)

Students of mature status may carry 6 to 12 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of the College Registrar, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

#### Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority. Student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list and will find a note to that effect attached to the course enrollment printout.

#### Late Course Enrollment

Students who fail to enroll in courses by a deadline must normally wait until the beginning of a semester to enroll and must pay a $10 fee. Extensions are sometimes granted if requested from the college registrar before the end of course enrollment. In general, such extensions are only granted for medical reasons supported by a doctor's statement. Students who fail to meet the deadline for any reason should see the college registrar as soon as possible. In some cases, if the delay was absolutely unavoidable, the student may be allowed to enroll in courses late, and it is sometimes possible to have the fee waived.

## University Registration

The time and place of university registration is announced by the Office of the University Registrar. At registration, students fill out and return materials that are given to them, and their IDs are validated.

Students also receive a printout of courses for which they are officially enrolled. It is the student's responsibility to check the listing for accuracy of course numbers, credits, and other data. If there are errors, they should be corrected immediately. Procedures for making changes because of errors in the printout, as well as for other reasons, are described below.

During university registration for the fall semester, each continuing student receives a copy of his or her summary of record from the Office of the College Registrar. The summary shows which graduation and major requirements have been completed. Students who have any questions about the summary's accuracy should see an appropriate person in the Office of the College Registrar.

**Late university registration.** A student who fails to pay his bursar's bill by the announced time will have finance charges added to that bill during the first three weeks of the term. Starting with the fourth week of the term there will be an $85 late charge, which will increase by $10 a week for weeks five and six. Starting with the seventh week of the term an additional $25-a week charge is added until the end of the term. After completing late university registration, students must take their college registration cards to the Office of the College Registrar, where they will then receive computer printouts of the courses for which they are officially registered. Students who fail to register by the seventh week of the term will be withdrawn from the university by the Office of the College Registrar. Students who want to return must reapply through the Admissions Committee.

## Course Enrollment Changes

#### Deadlines

- During the first three weeks of the term, courses may be added or dropped without charge.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor and payment of a $10 processing fee.
- After the seventh week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- Also, a student submitting a petition after the seventh week of the term requesting permission to drop a course must have his or her faculty advisor write a statement to accompany that petition indicating whether or not the advisor supports the request.
- After the eighth week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.
- After the third week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

#### Procedures

Students who need to make course enrollment changes should make them as soon as possible. It is to the student's advantage to add the desired courses as soon as possible, and it is helpful to other students if unwanted courses are dropped promptly. Students should assess their work loads carefully at the beginning of each term. If in the first week or two the instructors do not discuss the amount of material to be covered and the extent of assignments, students are advised to ask about course requirements.

Some of the same procedures are required for course enrollment changes as were necessary for course enrollment—for example, permission of the instructor must be obtained for a course requiring it, and the same forms must be filled out for special studies courses. In addition to the procedures listed below for course enrollment changes, all course change forms for nutritional sciences majors must be signed by the departmental faculty adviser.

Specific procedures for making course changes during the change-of-enrollment period (first three weeks of classes) are listed below. The student should:

1) Obtain a course-change form from the Office of the College Registrar or from the Office of Student Services.
2) Fill the form out and take it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of the College Registrar; for courses outside the college, the forms should be taken to the appropriate departmental offices.
3) Ask the person handling the class lists to add the student's name to the list of enrolled students for a course being added or to remove his or her name from the class list for a course being dropped. That person should sign the course-change form in the appropriate place.
4) Turn all signed forms in to the Office of the College Registrar, including the forms for out-of-college courses. Enrollment cannot be officially changed until the signed forms are filed in the registrar's office. For example, students who fail to "cancel" a course they are no longer attending are in danger of receiving an F in the course, because they are still officially enrolled. There is no charge for course changes during the first three weeks of classes.
5) Receive carbon copies of each course-change form at the time it is turned in. These copies are stamped with the date of receipt. It is important to keep these copies in case they are needed to verify later that the forms were filed.

A student who wants to have his or her name placed on a waiting list for a human ecology course should be aware that such lists are compiled during the change-of-course-enrollment period on a first-come–first served basis, without regard to seniority or other factors. Students must check their status on the waiting lists in person every forty-eight hours, and if space has not opened up, request that their names be kept on the list. Names are automatically dropped if they are not updated.

If a student is enrolled in a human ecology course with a limited enrollment and has not attended the first two class sessions, he or she will be dropped from the course unless circumstances have prevented him or her from attending class and the instructor has been notified.

After the third week and through the seventh week of a term, the procedures outlined above for changes made during the first three weeks of a semester are followed, except that the instructor must sign the course-change form for human ecology courses, and a $10 fee must be paid.

After the seventh week of classes, a student may not make course changes without petitioning for approval. Students should realize that they are expected to attend classes and do assigned work until a petition has been formally approved.

## Study In Absentia

Under certain conditions, credit toward a Cornell degree may be given for study in absentia, that is, study a student undertakes at an accredited institution away from Cornell, after entering the College of Human Ecology. To be eligible for credit for such study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they return to good standing.

In absentia petition forms are available in the Office of Student Services. The petition form should be filled out and catalog descriptions attached for the courses the student wants to take, and then it should be filed in the Office of the College Registrar.

Students whose petitions are granted receive a letter giving them permission from the college registrar to study in absentia. Credit may be granted for study in absentia after the work has been done, but there is no guarantee that such credit will be awarded if permission has not been obtained in advance.

A $15 fee is charged to bind a student's in absentia registration. If the in absentia study is undertaken during the summer, the $15 fee is charged only if the summer study is for more than 8 credits. A form is included with the letter sent to the student, giving permission to study. This form must be completed and returned to the Office of the College Registrar, 146 Martha Van Rensselaer Hall, along with a check for $15, before the student is officially registered in absentia.

Up to 15 credits may be taken in absentia as long as the work done does not duplicate courses already taken and the study is relevant to the student's program and the requirements of the college. More than 15 credits of work in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) that goal is consistent with the focus of the college. To take more than 15 credits in absentia, a student must also have the petition approved by the college registrar, who will evaluate the proposed program. (Forms are available in the Office of Student Services.)

If part of the work for which credit is sought is to be applied to requirements of the major, the petition will be sent to the appropriate department for approval. If credit is sought for work to be done in a modern foreign language that the student has previously studied, the approval of the Department of Modern Languages and Linguistics in the College of Arts and Sciences must be obtained.

Students are responsible for having the registrar of the institution where they study in absentia send transcripts of grades to the Office of the College Registrar at the College of Human Ecology. Credit can then be officially assessed and applied toward the Cornell degree. Only credits (not course names and grades) for study in absentia appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

### Leaves of Absence

Students may request a leave of absence before the beginning of the semester for which a leave is desired or during the first seven weeks of the semester. A leave may be extended for a second semester by requesting an extension in writing from the Office of the College Registrar. Students who are contemplating taking a leave of absence are urged to discuss plans with a counselor. If the student decides to take a leave of absence, a counselor will provide the necessary forms to complete, which should be taken to the Office of the College Registrar, where the official leave will be processed.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

If a leave of absence is requested after the first seven weeks, students are advised to attend classes until action is taken on their petitions. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

### Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor and the Office of the College Registrar. Students contemplating such an action are urged to discuss their plans with a counselor.

There are instances in which a student may be given a withdrawal by the Office of the College Registrar. If a student leaves the college without an approved leave of absence or does not return after the leave has expired, the student will be given a withdrawal after the seventh week of the term in which he or she failed to register.

A student who has withdrawn from the college or who has been given a withdrawal by the Office of the College Registrar and who wishes to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

### Petition Process

There are two kinds of petition forms: the general petition form, which is multicopied, and the in absentia petition form, which is a single sheet and has no copies attached. Both types of forms are available from the Office of Student Services, N101 Martha Van Rensselaer Hall.

**The use of the general petition form is described** in the human ecology *Student Guide*. After completing them, students should file general petition forms in 146 Martha Van Rensselaer Hall. They will find out if a petition has been granted or denied by checking their mail folders in the foyer.

**The in absentia petition form is** used when a student wishes to study at another institution. (See the human ecology *Student Guide* for regulations concerning in absentia study.) Catalog descriptions of the courses the student wishes to take at the other institution must be attached to the petition form. After completing the petition, the student should file the in absentia petition form in 146 Martha Van Rensselaer Hall. A letter in the mail will inform the student of the decision.

It should be noted that although many kinds of requests are petitionable in the college, some kinds of situations are governed by college faculty legislation and cannot be altered by filing a petition. If a student is in doubt about whether a request could be considered by petition, he or she may discuss the problem with the college registrar.

## GRADES

See the "Grading Guidelines" section for information on the official university grading policies.

### S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the course description. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C– or better; for work below that level, a U must be given. No grade-point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits for the usual A–F grades.

Only juniors and seniors may take an S-U grade in courses in which the grade of S or U is optional; however, sophomores may take courses in which *only* the grade of S or U is offered. A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course can be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.

To take a course for an S or U, a student must first make sure, by checking the course description, that the course is offered on that basis, then obtain the permission of the instructor and file a special S-U form with the instructor's signature and the add/drop/change form in the Office of the College

Registrar before the end of the third week of the term. After the third week of the term, students must petition the college registrar to change S-U grading status, but such petitions may not be granted. Forms are available in the Office of the College Registrar and in the Office of Student Services.

### Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete will be automatically converted to an F.

When a student wants to receive a grade of incomplete, a conference should be arranged with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called *explanation for reporting a final grade of* **F** *or incomplete,* which has been signed by both the instructor and the student, must be submitted by the instructor. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Office of the College Registrar with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of the College Registrar to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript, with an asterisk and the final grade received, for the semester in which the student was registered for the course.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of the College Registrar (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

## ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.

**Dean's List.** Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade-point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

**Omicron Nu** seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

**Bachelor of Science with honors** recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division.

**Bachelor of Science with distinction** recognizes outstanding scholastic achievement. Consideration will be given to seniors whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade-point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.

To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, previous work taken at another institution is included in the computation of the student's academic average. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

## NONDEPARTMENTAL COURSE

**100 Critical Reading and Thinking**
Fall, spring, or summer. 2 credits. Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. S-U grades only.

Fall and spring: sec, T R 10:10 or 11:15, plus two 1-hour labs to be arranged. H. Selco.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

## INTERDEPARTMENTAL COURSES

### Field and International Study Program

S. Beck, director; R. Bounous, D. Giles, J. Kugelmass, F. McCarthy, K. Reardon

#### Field Study

Field study enables students to learn from participation in a community and organizational setting and from critical reflection on that experience through discussion, reading, and writing. This process of integrating theory with practice distinguishes experiential education. Students earn credit by participating in internships and community-based research.

The Field and International Study Program (159 Martha Van Rensselaer Hall) offers courses in pre-field preparation and field-based courses with an interdisciplinary problem-solving approach to social issues. Field study programs are located in the Ithaca area, New York City, and Washington, D.C., with other opportunities possible through arrangements with Field and International Study Program faculty. Courses are open to registration by all Cornell students.

#### International Study

Study abroad provides students with an opportunity to add an international dimension to their human ecology program through course work focusing on international problems and intercultural understanding and through sponsored programs of study abroad for which credit may be earned. Course work in a foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situtions of the country concerned and in an area related to individual student interest in human ecology.

Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. Information and applications for study abroad are available in the Field and International Study Program office (MVR 159).

**100 Skills for Learning in the Field**
Fall or spring. 2 credits. Prerequisite: permission of instructor.

First 7 weeks of semester; W 1:30–4:25. J. Kugelmass, fall; D. Giles, spring.

This course trains students to become more effective field learners and enables them to understand and cope with the complex demands of a field placement. Topics include experiential learning, cross-cultural communication, ethnocentricism and cultural relativism, participant observation, investigative interviewing, critical thinking, understanding nonverbal communication, identifying sources of information in the community, and analyzing verbal presentations. All of the concepts are applied through work assignments.

**200 Preparation for Fieldwork: Perspectives in Human Ecology**
Fall or spring. 4 credits. Limited to 25 students per section. Prerequisite: permission of instructor. Required of all students planning to do FIS 400-level field study or research.

T R 10:10–12:05 or 2:30–4:25. D. Giles, fall; J. Kugelmass, spring.

Introduces students to skills essential for field study, internships, community research, and other experiential learning courses. This course focuses on the structures and processes that generate and change sociocultural structures and relations, small groups, organizational productions, and communities, that students will encounter during field study. Through a cycle of active learning and reflection, students gain experience in analysis of assumptions and biases, participant observation and interviewing skills, self-directed learning skills, effective verbal and nonverbal communication, and group dynamics. Working in small task groups, students apply and synthesize these skills in real-world community-based projects. Previous semesters' projects included "Collegetown Redevelopment," "Human Services and Ithaca's African American Community," "The Culture of Ithaca," and "Long-Term Health Care." FIS 210 may be substituted for FIS 200 with permission of instructor.

**210 Preparation for International and Cross-Cultural Experience**
Fall or spring. 3 credits. Not open to freshmen. Prerequisite: permission of instructor; preference given to students planning to study abroad or participate in international internships.

T R 12:20–1:40. F. McCarthy.

The course has two main objectives. One is to prepare students for international and cross-cultural experience through the application of observation and interviewing skills, analysis of social and cultural factors in selected countries, and consideration of key issues such as poverty, inequality, industrialization, and class and gender exploitation; the second is to link social factors to the use and distribution of natural resources and provide a framework for understanding the social control of resources and its effects on the life chances and experience of people. Class activities include discussion, lectures, field experiences, skill development, and a small-group presentation. Students will develop interviewing and observation skills through projects that will focus on the countries in which they intend to study or intern. Strongly recommended for students planning to study abroad, to do international internships, or to take FIS 410. FIS 210 may be substituted for FIS 200 with permission of instructor.

**400 Directed Readings**
For study that predominantly involves library research and independent reading.

**401 Empirical Research**
For study that predominantly involves data collection and analysis.

**402 Supervised Fieldwork**
Fall, spring, or summer. 3–15 credits. Limited to 20 students. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period.

Hours to be arranged. Staff.

Supervised field study involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice. Credit is variable to allow for combined departmental and interdepartmental sponsorship and supervision.

Information on placement opportunities is available in the Field Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study.

**403 Teaching Apprenticeship**
For study that includes assisting faculty with instruction.

**406 Sponsored Field Learning or Internships**
Fall or spring. 6–15 credits. Limited to 15 students; intended for juniors and seniors. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications are due in the Field and International Study Office during the preceding semester's course enrollment period.

Hours to be arranged. Staff.

A course for students seeking interdepartmental sponsorship and supervision of participation in structured, off-campus field experiences or internships operated by non-Cornell or non-credit-granting institutions or agencies. Completion of course requirements is signified by a formal presentation to the college community upon return to Cornell (graduating seniors may make special arrangements). Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on course enrollment and internship opportunities is available in the Field Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning more than one full semester before leaving campus for an internship.

**407 Field Experience in Community Problem Solving**
Fall or spring. 6–15 credits. Limited to 25 students; intended for juniors or seniors. Prerequisite: FIS 200. Enrollment by permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period.

Sem, R 1:30–4:25; hours in the field to be arranged. J. Kugelmass, fall; D. Giles, spring.

A course designed to provide students with a structured, closely supervised field experience encompassing an ecological approach to human problem solving. Interdepartmental teams of up to fifteen students will contract with community businesses, agencies, and organizations as special-projects staff members delegated primary responsibility for problem solving in a designated area of agency need. Students spend twenty hours each week working directly on the projects, three hours each week in seminar, and additional time completing seminar readings and assignments. The seminar is aimed at assisting students in systematically analyzing the complex factors that affect the implementation of new programs, policies, or projects in upstate community settings. Set in this context, the field placement is viewed as a case study in the ecology of organizational decision making.

Supervision of all projects is provided jointly by the course instructor and appropriate agency personnel. In addition, each project is subject to review twice during the semester by an oversight committee composed of community and faculty representatives with relevant expertise. Completion of the course is signified by formal presentation of project results to the contracting organization's staff, board of directors, or other appropriate administrative units and to members of the oversight committee, together with submission of an academic analysis of the implementation process to the course instructor.

Credit is variable to allow students to arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on projects is available during course enrollment in the Field and International Study Office, 159 Martha Van Rensselaer Hall. Students may assist in the planning and project-identification process by making their interests known to the office a full semester before intended enrollment in the course.

**408 The Ecology of Urban Organizations: New York City Field Experience**
Fall or spring. 9–15 credits. Limited to 25 students; intended for juniors and first-semester seniors. Prerequisites: FIS 200 and permission of instructor. Applications due in the Field and International Study Office during the preceding semester's course enrollment period. Students may enroll in FIS 408 for up to 11 FIS credits and for 0 to 4 CEH 402 credits, depending on departmental regulations. Information on these policies and on placements is available in 159 Martha Van Rensselaer Hall. Students should begin planning at least one semester before they apply to this course.

K. Reardon/R. Avery—CEH.

A course designed to enhance students' understanding of organizational behavior and decision making through a program that integrates internship experience with classroom learning. Students, participating as interns in a variety of New York City agencies and firms, are challenged to examine interpersonal, institutional, interorganizational, and environmental factors that shape professional practice and human problem solving in formal organizations. From an ecological perspective, students explore how such factors as employee motivation, organizational culture, formal structure, communication patterns, leadership style, technology, demographics, politics, and regional economics influence patterns of staff interactions, management policy, and organizational initiatives. Student placements

exist in advertising, communication, fashion design, financial services, government, health care, human services, retailing, and many other fields. Weekly seminars include lectures, discussions, simulations, speakers, cultural events, and field trips to neighborhoods and organizations throughout the New York metropolitan area.

**409 The Ecology of Organizations in the Upstate Region: Ithaca-Area Field Experience**

Fall or spring. 4–15 credits. Limited to 25 students. Prerequisites: FIS 200 and permission of instructor. Applications are due in the Field and International Study Office during the preceding semester's course enrollment period.

Sem, T 1:30–4:25; hours in the field to be arranged. J. Kugelmass.

A variable-credit course designed to give students an in-depth understanding of contemporary organizations and the forces that shape and influence them. The course combines participation in a community setting within commuting distance of the Cornell campus with a weekly seminar that provides the skills, concepts, and theories necessary for understanding organizations and the critical issues they face. Students can arrange for combined interdepartmental and departmental sponsorship and supervision.

Information on placement opportunities is available in the Field and International Study Office, 159 Martha Van Rensselaer Hall. Students should begin planning at least a semester in advance for field study.

**410 Advanced Seminar: Analysis of International Experience**

Fall or spring. 3 credits. Prerequisites: experience abroad and permission of instructor.

T R 2:30–4. F. McCarthy.

This course provides a context for the integration and interpretation of cross-cultural experience for students returning to the United States after extended periods abroad. Building on an understanding of international processes shaping and directing an interdependent world, the course relates personal experience to socioeconomic factors structuring living situations at home and abroad. Among the issues to be pursued are reentry and (re)acculturation, patterns and conditions of work, relationships and patterns of exchange, ideology and social explanation, personal autonomy and institutional contexts, power and authority, gender exploitation and oppression, and forms of response. The course will feature readings, special projects, presentations, and discussions encouraging and facilitating the analysis and understanding of individual cross-cultural experience. The purpose of the course is to encourage the analysis and integration of cross-cultural experience in relation to international processes, academic interests, and personal concerns of students.

## CONSUMER ECONOMICS AND HOUSING COURSES

W. K. Bryant, chair; R. Heck, graduate faculty representative; P. Chi, J. Reschovsky, undergraduate advising coordinators; R. Avery, H. B. Biesdorf, W. K. Bryant, P. Chi, M. Coughlan, J. Gerner, L. Gosse, R. Heck, J. Hogarth, L. Jacobsen, R. Key, E. S. Maynes, D. Mont, P. Pollak, J. Reschovsky, N. C. Saltford, J. Swanson, E. Trzcinski, S. White-Means, P. Zorn.

**110 Introduction to Consumer Economics**

Fall. 3 credits. S-U grades optional. Students who have taken Economics 101 or another introductory microeconomics course should not register for this course.

M W F 9:05; sec. to be arranged. P. Zorn.

Principles of microeconomics with an emphasis on applicability to consumers. The course acquaints students with the basic economic models of household and firm behavior and their interaction in markets. The goal is to provide students with the ability to analyze the economic implications of consumer decisions and public policies.

**111 Introduction to Consumer Economics II**

Spring. 3 credits. S-U grades optional. Students who have taken Economics 102 or another introductory macroeconomics course should not register for this course.

M W F 11:15. Two evening prelims. Staff.

Principles of macroeconomics with an emphasis on the relevance of economic policies to consumers and households. Topics include national income accounting, aggregate demand and aggregate supply, the role of monetary and fiscal policy in confronting the problems of inflation and unemployment, and international economics.

**148 Sociological Perspectives on Households**

Fall. 3 credits. S-U grades optional.

T R 10:10–11:25; sec. to be arranged. L. Jacobsen.

An introductory sociology course analyzing the composition and distribution of families and households in the United States. Students focus on the social, economic, and demographic processes underlying changes in family and household structure as well as on the effects of those changes on basic social institutions. Topics include trends in marriage, divorce, and childbearing; the interactions between household structure and labor supply, living arrangements, and housing consumption; social stratification and inequality; poverty; population growth and geographic distribution; and trends in the age and sex structure of U.S. society.

**233 Marketing and the Consumer**

Spring. 3 credits. Prerequisite: CEH 110 or equivalent.

T R 8:40–9:55. E. S. Maynes.

This course introduces students to marketing—the processes and institutions by which products are conceived, tested, priced, advertised, distributed, and evaluated. Case studies and outside lecturers are used to impart reality to the course. Emphasis is given to the viewpoint of both the seller and the consumer. Students are required to undertake a paper involving a marketing problem.

**247 Housing and Society**

Spring. 3 credits. S-U grades optional.

M W F 11:15. Two evening prelims. P. Chi.

A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

**300 Special Studies for Undergraduates**

Fall or spring. Credits to be arranged.

Hours to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

**301 Special Studies for Undergraduates**

Fall or spring. 1 credit. Prerequisite: a course in introductory microeconomics and coregistration in a CEH 300- or higher-level course. S-U grades only.

Six 1-1/2 hour lecs, weeks 2–4 of term. Hours to be arranged. Staff.

Topics covered will be utility maximization, marginal analyses, derivation of demand curves, price and income effects, present value, and other relevant topics.

**310 Intermediate Microeconomics**

Fall. 4 credits. Prerequisite: CEH 110 or equivalent. Class notes for sale at Campus Store.

Lecs, M W F 10:10 or 11:15; disc, W 2:30 or 3:35 or R 2:30 or 3:35. Two evening prelims. L. Gosse.

Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

**312 Family Resource Management**

Spring. 3 credits. Not open to freshmen. S-U grades optional. Class notes for sale at Kinko's.

M W F 2:30. R. Key.

An introduction to management concepts and theories of efficient resource utilization from a social systems perspective. The focus is on the family's use of resources to attain goals and meet demands. A systems framework is used to analyze family managerial behavior throughout the life-cycle and specific situations such as single-parent, blended, and low-income families.

**315 Personal Financial Management**
Fall or spring. 3 credits. Preference given to human ecology students; limit 200; not open to freshmen. S-U grades optional.
M W F 10:10. Evening prelim. Fall: J. Robinson; spring: R. Heck.
The study of personal financial management at various income levels and during different stages of the family life cycle. Topics include the use of budgets and record keeping in achieving family economic goals, the role of credit and the need for financial counseling, economic risks and available protection, and alternative forms of saving and investment.

**325 Economic Organization of the Household**
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. Class notes for sale at the Campus Store.
M W F 9:05. Evening prelims.
W. K. Bryant.
Theories and empirical evidence about how households spend their resources are used to investigate the ways they alter the amounts and proportions of time and money spent in various activities, their size, and their form in response to changing economic forces.

**332 Consumer Decision Making**
Fall. 3 credits. Prerequisite: CEH 110 or permission of instructor.
M W F 10:10. E. S. Maynes.
This course is designed to help individuals make more effective choices as consumers. In pursuit of this goal, the course introduces the student to relevant concepts, theories, and research from economics, consumer economics, marketing, and statistics. Topics covered include informationally imperfect markets, assessing consumer information, seeking redress, bargaining, dealing with inflation, decision-making rules, the concept and measurement of quality, and consumerism. Students prepare price-quality maps of local consumer markets. A second part of the course introduces the student to the concept of consumer sovereignty and assesses the performance of markets as critiqued by economists and consumerists.

**341 Fundamentals of Housing Economics**
Fall. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
T R 1–2:15. P. Zorn.
This course is designed to provide students with the economic skills required to understand housing markets, problems, and policies. Microeconomic theory will be used to develop a model of household and firm behavior. This model provides the framework for an analysis of empirical studies by housing economists. Topics will include the tenure-mobility decision, estimation of the supply and demand for housing, the effects of inflation and the income tax system on the housing market, and the treatment of housing as a heterogeneous durable good.

**355 Wealth and Income**
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under CEH 600. Prerequisites: CEH 110–111 or equivalent. S-U grades optional.
T R 9:05; sec. J. Gerner.
The wealth and income positions of American households are defined and described and their economic determinants discussed along with the impacts of tax and expenditure policies and the economics of the political positions for and against such policies.

**356 The Economics of Welfare Policy**
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 9:05. D. Mont.
Using the tools of economics, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.

**400–401–402 Special Studies for Undergraduates**
Fall and spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

**400 Directed Readings**
For study that predominantly involves library research and independent reading.

**401 Empirical Research**
For study that predominantly involves data collection and analysis.

**402 Supervised Fieldwork**
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**411 Time as a Human Resource**
Spring. 3 credits. Prerequisite: one course in sociology. Recommended: one course in microeconomics. S-U grades optional. Class notes for sale at Kinko's.
T R 10:10–11:25. R. Key.
A set of historical and contemporary readings examining time management concepts and applications. Investigates changes in time use of family members in relation to social change. Explores meanings of market work, household work, and leisure in the context of family choices at different stages of the life cycle. Investigates current research concerning time allocations made by family members to household and market work. Examines use of time as a measure of household production.

**415 Financial and Human Capital Investments**
Spring. 3 credits. Prerequisites: CEH 110 or 111; CEH 315.
T R 10:10–11:25. R. Heck.
This course approaches investment decisions from the viewpoint of the individual consumer and/or household. Investigates a broad array of investment choices including: human capital investments in one's self and other family members; real estate investments; small businesses; and the traditional financial investments such as bonds, stocks, and mutual funds. Analyzes each investment choice within a general cost/benefit framework using basic economic principles or concepts of imputed values/costs; time costs; after-tax values; expected values (risk); present and future values, and in light of the goals and financial plan of the household.

**430 The Economics of Consumer Policy**
Fall. 3 credits. Open to juniors, seniors, and graduate students. Prerequisites: CEH 110–111 or permission of instructor. Class packets on sale at Campus Store.
T R 10:10–11:25. W. Putsis.
Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "Natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to submit a research paper focusing on one specific area of policy intervention discussed in class.

**431 Consumer Behavior**
Fall. 3 credits. Open to seniors and graduate students. Prerequisite: CEH 110 or equivalent.
T R 12:20–2:15. E. S. Maynes.
This course applies the concepts, models, and research techniques of the behavioral sciences to the explanation and prediction of consumer behavior. The student is exposed to representative theories, models, problems, and research techniques. Special efforts are made to ensure that students encounter problems approached from both seller and consumer viewpoints as well as from the disciplines of economics and social psychology. Once a week graduate students and undergraduates meet in separate sessions to review and appraise representative pieces of consumer behavior research.

**433 Consumerism and the Consumer Affairs Professional**
Fall. 3 credits. Prerequisite: junior or senior status. Offered alternate years.
T R 2:30–3:45. S. Brobeck
This course is intended for students who in the future might become part of or come into contact with (1) consumerism, (2) the consumer movement, and (3) the consumer affairs profession. The course analyzes interactions among consumers, the consumer movement, and consumer representatives in business and government. The history, present state, and probable future and function of consumerism and the field of consumer affairs will be treated. Extensive use will be made of presentations by consumer affairs professionals from corporations, consumer organizations, and government.

**434 Financial and Credit Markets and Policy**
Spring. 3 credits. Prerequisite: CEH 111. S-U grades optional.
T R 8:40–9:55. R. Avery.
This course will look at the structure of financial markets in the United States. A number of different markets and institutions will be examined including: banks, savings and loans, insurance companies, pension funds, government bond markets, credit unions, and finance companies. The

principles underlying government regulation of these institutions will be explored, as well as management problems and concerns. The emphasis will be on learning the institutional environment, not on personal finance.

**438 Demographic Analysis in Consumer Economics and Housing**
Spring. 3 credits. Not open to freshmen: open to sophomores with permission of the instructor. S-U grades optional.
T R 12:20–1:35. L. Jacobsen.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations, with applications to consumer demand and market trends. Topics include demographic rates, standardization and decomposition of differences in rates, life-table analysis, cohort analysis, sources and quality of demographic data, population estimation and projection, and stable population models. Special data sources and methodological issues pertaining to population dynamics and to changes in families and households are also considered.

**[444 Housing for the Elderly**
Spring. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90. Next offered 1990–91.
T R 2:30–3:45. P. Chi.
This course focuses on the housing needs of the elderly, their current housing conditions—living arrangements, tenure patterns, housing quality and housing expense burden—and socioeconomic and psychological aspects of the housing environment of the elderly. Attention is also given to government housing programs for the elderly, integrating housing and related social service activities, and options for alternative housing.]

**445 Housing, Neighborhood, and Community**
Spring. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. Offered alternate years.
T R 2:30–3:45. P. Chi.
A study of interrelationships between housing conditions, neighborhood transition, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community power will be examined. Special attention is also given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

**448 Housing Programs and Policy**
Fall. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W F 9:05. J. Reschovsky.
An analysis of government tax, regulatory, and expenditure programs that affect the housing market. Programs and policies at the federal, state, and local levels will be investigated. Detailed consideration will be given to assisted housing programs, community development activities, tax policies, housing finance, fair housing, zoning, and other governmental activities that deal with housing. Economic theory will be used to evaluate these policies.

**[450 Economics of Health, Health-care Expenditures, and Health Policy**
Fall. 3 credits. Prerequisite: CEH 110 or equivalent. Not offered 1989–90.
T R 1–2:15. S. White-Means.
A study of the health-care market as distinguished from other markets by consumers' relative information disadvantage. Topics include a theoretical and institutional analysis of the health-care system and its role in the consumer decision-making process, conflicts of interest between institutional objectives of health-care providers and public and private health-care insurers as they relate to inefficient provision of medical services, and the role of government intervention and alternative systems of medical care provision in reducing medical costs and increasing accessibility.]

**465 Economics of Consumer Law**
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.
M W 1:25; sec to be arranged. J. Gerner.
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, and accident law, as well as of the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

**485 Evaluation of Public Policies**
Fall. 3 credits. Prerequisites: CEH 110 or equivalent and an introductory statistics course. Recommended: CEH 310 or equivalent.
M W F 10:10. J. Reschovsky.
This course provides an introduction to the techniques used to evaluate public policies and programs. It will begin with a review of basic concepts in evaluative research: causal inference, validity, and experimental and quasi-experimental designs. The remainder of the course will concentrate on the tools of cost benefit analysis as a device for evaluating the effectiveness of government programs. Discussions of the techniques, issues, and problems of cost benefit analysis will be highlighted by examples of its use in a variety of public policy areas. Economic analysis and statistical techniques will be emphasized.

**600 Special Problems for Graduate Students**
Fall and spring. S-U grades optional.
Hours to be arranged. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the head of the department and the instructor.

**601 Research Workshop in Consumer Economics and Housing**
Fall and spring. 1–3 credits. S-U grades only.
W 12:20. Staff.
Research seminar designed to provide a forum for graduate students in consumer economics and housing to present their own thesis research at an early stage and to provide critical input for other graduate students.

**602 Family Resource Management Concepts**
Fall. 3 credits. Prerequisite: graduate standing. Class notes for sale at Kinko's.
T R 2:30–3:45. R. Key.
Introduction at the graduate level to theories and empirical research on family resource allocation behavior. Particular attention is paid to problems associated with the modeling and measurement of theoretical concepts.

**603 Economics of Consumer Demand**
Spring. 3 credits. Prerequisite: CEH 310, or Economics 311 or 313 or concurrent enrollment in one of the three. S-U grades optional.
T R 10:10–11:25. J. Gerner.
Introduction at the graduate level to theory and empirical research on household demand, consumption, and savings. Particular attention is paid to problems associated with the demand for consumer durables, with applications to housing.

**604 Economics of Household Behavior**
Fall. 3 credits. Prerequisite: Economics 311. S-U grades optional.
M W F 1:25. W. K. Bryant.
Examination of theoretical and empirical literature concerning market work, human capital formation, household production, and family formation.

**605 Information and Regulation**
Spring. 3 credits. Prerequisite: CEH 603. Class packets on sale at Campus Store.
T R 12:20–1:35. W. Putsis
A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, of producers, of consumers, and of prices is examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public interest or to serve special interests. Economic analysis, rather than institutional structure, is emphasized.

**606 Teaching Seminar**
Fall or spring. 1 credit. Required of and limited to graduate students in the Field of Consumer Economics and Housing during their first semester of a teaching assistantship.
Hours to be arranged. J. Gerner, N. Yaglian.
A series of workshops focusing on development of teaching skills for guiding classroom learning in lecture and discussion settings. Preparation of content, presentation techniques, interaction strategies, and evaluation methods are emphasized in relation to the student's specific teaching assignment. Videotape simulations provide opportunity for practice, analysis, and improvement of teaching behaviors.

**607 Econometric Topics**
Fall. 3 credits. S-U grades only. Prerequisite: Ag Econ 710 or equivalent.
M W 2:30–3:45. R. Avery.
An advanced econometric course consisting of two separate modules. The first module will cover household survey methodology including sample design, questionnaire development, data weighing, and imputation. The second module will focus on limited dependent variable models. Linear probability, logistic probit, and tobit models will be examined as well as problems of sample section bias.

**[640 Fundamentals of Housing**
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90. Next offered 1990–91.
M W 2:30–3:45. P. Chi.
An introductory survey of housing as a field of graduate study. Consideration of the spatial context and institutional setting of housing, the structure and performance of the housing market, housing finance, the house-building

industry, the nature and impact of government housing programs, and the social and economic effects of housing regulations.]

**[714 Readings in Family Decision Making**
Fall and spring. 3 credits. Recommended: a course in family management (preferably CEH 602) and a course in family sociology. S-U grades only. Not offered 1989–90.
Hours to be arranged. Staff.
Family decision making is studied from the perspective of decision processes, behavior of decision makers, and decision context. The relationship of decision making to family management is also explored.]

**715 Family Financial Management**
Spring. 3 credits. Prerequisites: an introductory statistics course, CEH 315 or equivalent, and CEH 602. S-U grades optional. Offered alternate years.
W 2–4:25. R. Heck.
The study of management theory applied to the financial dimension of the household. Resource use is examined, emphasizing financial resources such as income, expenditures, savings, credit, and investments. A critical examination of current theories in the area of management and a survey of literature in the fields are included.

**726 Consumption and Demand Analysis**
Spring. 3 credits. Prerequisite: intermediate microeconomics, CEH 603, and CEH 604; or permission of instructor. S-U grades optional. Offered alternate years.
T R 10:10–11:25. P. Zorn.
Major developments in the theory of household behavior with applications to consumption, saving, demand, and expenditure behavior of households. Complete demand systems are surveyed along with theoretically justified specifications of price, income, and demographic variables. The empirical implications of household production for demand are examined. If time permits empirical implications for demand of bargaining models of the household are discussed.

**727 Family Economics**
Fall. 3 credits. Prerequisite: permission of instructor. Recommended but not required: CEH 411. S-U grades optional. Offered alternate years.
Hours to be arranged. D. Mont.
This course examines the public sector policies that influence family time-allocation decisions. Particular attention will be given to the time allocated by female family members to non-household activities and how these activities are influenced by outside economic forces and by internal family characteristics. Family demography is also examined.

**730 Consumer Policy**
Fall. 3 credits. Prerequisite: intermediate microeconomics. S-U grades optional. Offered alternate years.
W 1:25–4:25. J. Reschovsky.
An examination of consumer policy in the United States. An interdisciplinary approach will be used in which the theoretical rationale for consumer protection laws, the political processes that mold the shape of current consumer policy, and the administrative, legal, and organizational constraints under which consumer policies operate are explored. In addition, techniques for the economic evaluation of government programs and regulations will be taught and applied to current consumer-protection policies.

**748 Household and Family Demography**
Spring. 3 credits. Prerequisite: CEH 438 or equivalent. S-U grades optional. Offered alternate years.
T 3–5:25. L. Jacobsen.
This course examines the size and composition of households and families in the United States, variations in family and household structure among major subgroups, and changes in family and household structure over time and over the life cycle. The demographic processes underlying changes in families and households are examined separately, including marriage, fertility, mortality, and divorce. The determinants of changes in these underlying processes and in family and household structure are analyzed, along with the consequences of these changes for housing demand and consumption, women's labor force participation, household divisions of labor, living arrangements, and economic well-being and poverty.

**899 Master's Thesis and Research**
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.
Graduate faculty.

**999 Doctoral Thesis and Research**
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.
Graduate faculty.

## DESIGN AND ENVIRONMENTAL ANALYSIS COURSES

W. R. Sims, chair; F. D. Becker, graduate faculty representative; M. Boyd, undergraduate advising coordinator; A. Basinger, R. Beckman, A. Bushnell, S. Danko, P. Eshelman, C. E. Garner, A. Hedge, J. Laquatra, J. A. McCarty, G. C. Millican, E. R. Ostrander

**101 Design I: Fundamentals**
Fall or spring. 3 credits. Each section limited to 18 students. Permission of instructor required. Priority given to interior design majors. Option I majors must take DEA 101 in fall. Approximate cost of materials, $60.
Fall: M W 1:25–4:25, T R 10:10–1:10; spring: M W 1:25–4:25. M. Boyd.
A studio course introducing the fundamental vocabulary and principles of two-dimensional design. Students experiment with the development of form through problem-solving approaches.

**102 Design II: Fundamentals**
Spring. 3 credits. Each section limited to 18 students. Permission of instructor required. Priority given to Option I DEA majors. B– or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $125; shop fee, $10.
T R 10:10–1:10. A. Bushnell.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

**111 Introduction to Design**
Spring. 3 credits.
M W F 12:20. R. Beckman.
Introduction to the field of design for students in any academic area. The course reviews the spectrum of design activities, examining various movements in the visual arts and differences among designers in philosophical premises, social and functional roles, and cultural positions. Also examined are how requirements in the built environment are affected by the interaction of people, design, and materials. Lectures and visual material are presented by DEA faculty members and visiting design professionals.

**114 Drawing**
Fall. 3 credits. Each section limited to 18 students. Priority given to DEA majors. Minimum cost of materials, $50.
M W 10:10–1:10. M. Boyd.
A studio drawing course open to students without previous drawing experience. Focus is on descriptive, design-oriented drawing to improve abilities of visual analysis, develop visual communication skills, and enhance general visual awareness.

**115 Drawing for Interior Design**
Spring. 3 credits. Priority given to DEA majors. Option I majors must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $50.
T R 1:25–4:25. A. Bushnell.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

**117 Drawing the Clothed Figure**
Spring. 3 credits. Enrollment limited to 18 students. A basic drawing course is highly recommended. Priority given to TXA Option I students. S-U grades optional. Approximate cost of textbook, $30; minimum cost of supplies, $40.
M W 10:10–1:10. C. Garner.
To improve the student's ability to illustrate two-dimensionally the interaction of draped fabric and the human form and to develop awareness of clothing as a design medium. Emphasis is on development of techniques and skills in selected media necessary for the communication of design ideas.

**150 Introduction to Human-Environment Relations**
Fall. 3 credits.
M W F 12:20–1:10. F. Becker, A. Hedge, W. Sims.
Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design programming; and post occupancy evaluation.

**201 Design III: Basic Interior Design**
Fall. 5 credits. Each section limited to 18 students. Prerequisites: DEA 101,102, and 115 (minimum grades of B–.) Recommended: DEA 111 and 150. Coregistration in DEA 203 is required. Minimum cost of materials, $120; shop fee, $10; optional field trip, approximately $60; diazo machine fee, $8.
M 1:25–3:20, W 1:25–4:25, and T R 10:10–1:10. A. Bushnell.
Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

**202 Design IV: Basic Interior Design**
Spring. 5 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $120; diazo machine fee, $8.
M 1:25–3:20 and T W R 1:25–4:25. P. Eshelman.
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior and interior-product design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

**203 Design Communications**
Fall. 1 credit. Priority given to DEA majors.
M 3:20–5:25. S. Danko.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

**204 Introduction to Building Technology**
Spring. 1 credit.
M 3:20–5:20. W. Sims.
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

**210 Responsive Design for the Elderly**
Spring. 2 credits. 7-week course. Prerequisite: DEA 150
T 1:25–2:15. E. Ostrander.
The course deals with the rationale, database, and design requirements for creating responsive designs that address elderly user's needs. The literature on conceptual models, theories, and research approaches used to create data-based design requirements and guidelines are investigated. This information should be understood by anyone who intends to design, plan, or manage physical environments that meet the needs of "old" people.

**250 The Environment and Social Behavior**
Fall. 3 credits. Prerequisite: DEA 150 or permission of instructor.
T R 3:35–5. F. Becker.
A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

**251 Historic Design I: Furniture and Interior Design**
Spring. 3 credits. Prerequisites: DEA 101 and 111. Recommended sequence: DEA 251, 252, and 353.
M W F 9:05. G. C. Millican.
A study of the patterns of historical development and change in architecture, furniture, and interiors from people's earliest expressions to mid–eighteenth century as they reflect the changing cultural framework of Western civilization, excluding America.

**[252 Historic Design II: Furniture and Interior Design**
Fall. 3 credits. Prerequisite: DEA 101. Corequisite: DEA 111. Recommended sequence: DEA 251, 252, and 353. Not offered 1989–90.
M W F 9:05. G. C. Millican.
A study of the patterns of historical development and change as revealed through American architecture, furniture, and interiors, 1650–1885. Design forms are considered individually, collectively, and in their historical context as they express the efforts, values, and ideals of American civilization.]

**[261 Fundamentals of Interior Design**
Fall. 3 credits. Enrollment limited to 20 students. Intended for nonmajors but open to DEA majors. Minimum cost of materials, $30. Not offered 1989–90.
T R 1:25–4:25. G. C. Millican.
A studio course that emphasizes the fundamental principles of design applied to the planning of residential interiors and coordinated with family and individual needs. Studio problems explore choices of materials, space planning, and selection and arrangement of furniture, lighting, and color. Illustrated lectures, readings, and introductory drafting and rendering techniques are presented.]

**300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

**301 Design V: Intermediate Interior Design**
Fall. 5 credits. Prerequisites: DEA 111,150, 201, 202, 203, and 204. Corequisite: DEA 303. Recommended: DEA 459. Minimum cost of materials, $120; shop fee, $10; optional field trip, approximately $60; diazo machine fee, $8.
T R 10:10–1:10, M 1:25–3:20, or W 1:25–4:25. R. Beckman.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

**302 Design VI: Intermediate Interior Design**
Spring. 5 credits. Prerequisites: DEA 301 and 303. Corequisite: DEA 304. Minimum cost of materials, $120; shop fee, $10; diazo machine fee, $8.
T R 10:10–1:10, M 1:25–4:25, and W 1:25–3:25. S. Danko.
Second-semester, intermediate-level interior design studio. Continued emphasis on development of design skills and exposure to generic problem types with an emphasis on communication and construction detailing. National design competitions form the basis for studio projects.

**303 Introduction to Furnishings, Materials, and Finishes**
Fall. 1 credit.
W 3:30–5:25. P. Eshelman.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings materials and finishes for typical interior design and facility management problems.

**304 Introduction to Professional Practice of Interior Design**
Spring. 1 credit.
W 3:30–5:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, legal responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

**325 Human Factors: Ergonomics–Anthropometrics**
Spring. 3 credits. Recommended: A 3-credit statistics course and DEA 150.
T R 10:10–11:30. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

**[348 Environmental Graphics and Signing**
Spring. 3 credits. Recommended: design background. Limited to 20 students. Approximate cost of materials $50. Not offered 1989–90. Next offered 1990–91.
M W 10:10–1:10. M. Boyd.
A studio course dealing with both the functional and decorative aspects of environmental graphics. Includes projects in interior and exterior graphics, signing, and directional systems.]

**349 Graphic Design**
Spring. 3 credits. Enrollment limited to 20 students. Recommended: design background. Priority given to DEA majors. Approximate cost of materials, $50.
M W 10:10–1:10. M. Boyd.
The fundamentals of lettering, typography, layout, and presentation techniques. Printing processes and the application of photography and illustration are also covered. A series of projects explores problems typical of the graphic design field.

**350 Human Factors: The Ambient Environment**
Fall. 3 credits. Recommended: DEA 150.
T R 1:25–3. A. Hedge.
An introduction to human-factors considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

**353 Historic Design III: Contemporary Design**
Spring. 3 credits. Recommended sequence: DEA 251, 252, and 353.
M W F 11:15–12:05. G. C. Millican.
A historical study of the emergence and development of contemporary design, 1885 to the present. Examines the social, economic, technical, and stylistic forces that shape the design forms of the present and includes a critical analysis of selected examples of architecture, interiors, and furniture.

**361 Residential Design**
Spring. 3 credits. Approximate cost of materials, $30.
T R 8–11. G. C. Millican.
An introduction to residential architectural design. While designing a solution for specific occupant needs, students consider site, orientation, climate, and materials. Drafting work consists of plans, elevations, perspectives, and presentation of solutions. Lectures, discussions, and required readings.

**400–401–402–403 Special Studies for Undergraduates**
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

**400 Directed Readings**
For study that predominantly involves library research and independent reading.

**401 Empirical Research**
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

**402 Supervised Fieldwork**
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**403 Teaching Apprenticeship**
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

**454 Facility Planning and Management Studio**
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $100.
T R 2:30–5:30. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, space forecasting, space allocation policies, programming, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

**455 Research Methods in Human–Environment Relations**
Spring. 3 credits. Prerequisites: DEA 150 or permission of instructor, and a statistics course.
M W F 9:05. E. Ostrander.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

**[459 Programming Methods in Design**
Fall. 3 credits. Not offered 1989–90.
M W F 11:15. E. Ostrander.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized.]

**499 Design VII: Advanced Interior Design**
Fall and spring. 6 credits. Option I majors must take 6 credits of DEA 499. They are strongly encouraged to satisfy the basic 6-hour DEA 499 requirement in the fall semester and to continue with an additional studio in the spring semester. Prerequisites: DEA 301, 302, 303, and 304. DEA 302 and 499 may not be taken concurrently. Minimum cost of materials, $120; diazo machine fee, $8 per semester.
M T W R 1:25–4:25. Department faculty.
A comprehensive design–problem-solving experience involving completion of an advanced interior design problem selected by the student and approved by the instructor. The course consists of five phases of three to four weeks each: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional quality design presentation.

**600 Special Problems for Graduate Students**
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
Independent advanced work by graduate students recommended by their chair and approved by the head of the department and instructor.

**645 Design Process and Methods**
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor.
T R 8:30–9:55. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Design methodologies of famous designers such as da Vinci, Ben Franklin, and Charles Eames will be examined through discussions and applications to short studio problems by the students. Topics include a historical overview of the design process and methods in both professional practice and education, creative problem solving in management and design, perceptual blocks to creativity, and the inherent merits and pitfalls in the four realms of thinking: analytical, intuitive, synthetic, and evaluative.

**648 Computer-Aided Space Planning and Design**
Fall. 3 credits. Limited to 12 graduate and advanced undergraduate students. Prerequisites for undergraduates: DEA 201 and 202 or permission of instructor.
Lec, T R 9:05; lab 1, T R 10:10–12:05; lab 2, TR 12:20–2:15. P. Eshelman.
Familiarizes students with computer applications in the planning and design of spaces. Lectures and readings cover needs assessment, furniture and equipment inventory, affinity diagramming, block diagramming, space layout, and specification and schedule preparation for furniture, equipment, and finishes. Laboratories involve the application of computer-aided processes in planning and designing a variety of spaces.

**[650 Programming Methods in Design**
Fall. 4 credits. Recommended: DEA 325, 350, and 455. Not offered 1989–90.
M W F 11:15 and an hour to be arranged. E. Ostrander.
A course intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.]

**651 Human Factors: Ergonomics-Anthropometrics**
Spring. 4 credits. Recommended: DEA 150.
T R 10:10–11:30 and an hour to be arranged. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.

**652 Human Factors: The Ambient Environment**
Fall. 4 credits. Recommended: A 3-credit statistics course and DEA 150.
T R 2:30–4 and one hour to be arranged. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects.

**653 Psychology of Workplace Design**
Spring. 3 credits. Prerequisite: DEA 250/660 or permission of instructor.
M 7–10 p.m. F. Becker.
Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including furniture and equipment and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

**654 Facility Planning and Management Studio**
Spring. 4 credits. Prerequisite: permission of instructor. Letter grades only. Minimum cost of materials, $100.
T R 2:30–5:30 and a one-hour seminar to be arranged. W. Sims.
For graduates in facility planning and management. The purpose of the course is to provide basic tools, techniques, and concepts useful in the planning, design, and management of complex facilities. Covers strategic and tactical planning for facilities, space forecasting, space allocation policies, programming, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

**656 Research Methods in Human-Environment Relations**
Spring. 4 credits. Prerequisites: DEA 150 or permission of instructor, and a statistics course. Letter grades only.
M W F 9:05, and an hour to be arranged. E. Ostrander.
The course develops the graduate student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Students attend DEA 455 lectures but have more extensive readings and projects and meet an additional hour each week.

**659 Seminar on Facility Planning and Management**
Fall. 1 credit. For graduate students and advanced undergraduates interested in careers in facility planning and management. S-U grades only.
M 4:30–5:45. F. Becker.
Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic space planning, space standards, office automation, project management, energy conservation, building systems, wire management, lighting, and acoustics.

**660 The Environment and Social Behavior**
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor.
T R 3:35–5, plus an hour to be arranged. F. Becker.
A combination seminar-and-lecture course for graduate students with interests in social sciences, facility management, or design. Graduate students attend DEA 250 lectures but have more-extensive readings and meet an additional hour each week.

**668 Design Theory Seminar**
Fall. 3 credits. Enrollment limited to 15 students.
T R 10:10–12:20. R. Beckman.
Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions.

**899 Master's Thesis and Research**
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty

## HUMAN DEVELOPMENT AND FAMILY STUDIES COURSES

G. Suci, chair; S. Cornelius, graduate faculty representative; P. Schoggen, undergraduate advising coordinator; H. T. M. Bayer, U. Bronfenbrenner, J. Brumberg, S. Ceci, M. Cochran, J. Condry, J. Doris, J. Eckenrode, S. Hamilton, C. Hazan, B. Koslowski, L. C. Lee, M. Lenzenweger, K. Lisseck, B. Lust, P. Moen, M. Potts, H. Ricciuti, S. Robertson, R. Savin-Williams, S. West, E. Wethington

**111 Observation**
Spring. 3 credits.
M W F 10:10. P. Schoggen.
An overview of methods of observing people and the settings in which they behave, in order to develop observational skills, increase understanding of behavior and its development, and acquaint students with basic methodological concepts underlying the scientific study of behavioral development with emphasis on children. Direct experience in applying observational methods in laboratory and real-life settings is emphasized. Discussion groups may accompany the observation experience.

**115 Human Development: Infancy and Childhood**
Fall or summer. 3 credits. S-U grades optional.
M W F 11:15. Staff.
Provides a broad overview of theories, research methods, and the status of scientific knowledge about human development from infancy through childhood. Attention is focused on the interplay of psychological factors in changing behavior and shaping individuals' perceptual, linguistic, neurophysiological, social, and cognitive development.

**150 Families in Modern Society**
Spring or summer. 3 credits. S-U grades optional. Students cannot receive credit for both HDFS 150 and Sociology 243.
M W F 1:25. Staff.
Contemporary family roles and functions are considered as they appear in U.S. history, as they change over the life course, and as they are influenced by cultural and economic forces that impinge on them.

**216 Human Development: Adolescence and Youth**
Spring or summer. 3 credits. Prerequisite: HDFS 115. S–U grades optional.
M W F 12:20. Staff.
Provides a broad overview of theories, issues, and research in the study of human development from early adolescence to early adulthood (youth). Attention is focused on the interplay of biological and cognitive factors, interpersonal relationships, social structure, and cultural values in shaping the individual's development. The role of adolescence in both the individual's life course and the evolution of the culture as a whole is also considered. Familial, peer group, educational, and work contexts for development are discussed.

**218 Human Development: Adulthood and Aging**
Fall. 3 credits: Prerequisite: HDFS 115. S-U grades optional.
M W F 2:30. Staff.
Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

**242 Participation with Groups of Children in the Early Years**
Fall or spring. 4 credits (3 credits possible, but not recommended). Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HDFS 115 and permission of instructor. Recommended: HDFS 111 or Interdepartmental 100. S-U grades optional.
W 10:10–12:05, plus 2 half-days of field work (for 4 credits) or 1 half-day of fieldwork (for 3 credits). In morning or afternoon. S. West.
A field-based course designed to combine experience in child-care centers with theory and supervision, intended to develop the student's ability to understand and relate effectively to young children. Course structure integrates lectures and discussions, workshops, films, projects, reading, writing, and sharing of field experiences. Students are placed in local nursery schools, day-care centers, Head Start programs, and kindergartens.

**[243 Participation with Groups of Children Ages Six through Twelve**
Fall. 4 credits. Limited to 20 students (limit depends on availability of placements). Permission of instructor required. Prerequisites: HDFS 115. Recommended: HDFS 111. Not offered 1989–90.
R 10:10–12:05, plus 2 half-days of fieldwork. Staff.
A field-study course structured to integrate knowledge from practicum, lectures, discussions, and readings to provide a better understanding of child development in school settings. Each student will work in one classroom with an experienced teacher.]

**258 Historical Development of Women as Professionals, 1800–1980 (also Women's Studies 238 and Sociology 238)**
Spring. 3 credits. S-U grades optional. Human ecology students must register for HDFS 258.
T R 10:10–11:40. J. Brumberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, the clergy, and the academy. Consideration of history of women in medicine, broadcasting, and journalism as well. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

**270 Abnormal Development**
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HDFS 115, Psychology 101, or Education 110; a course in statistics (e.g., Psych 350, Soc 301, Educ 352 or 353, Ag Ec 310 or equivalent); and an introductory biology course.
M W F 11:15. M. Lenzenweger.
An introduction to the cognitive, emotional, and biological aspects of abnormal development across the life span. The major mental illnesses will be covered, including schizophrenia, affective disorders, and personality disorders. The course also addresses problems in adjustment, such as delinquency, and abnormalities in intellectual development (e.g., mental retardation, attention deficit disorder, and learning disabilities). Emphasis will be placed on the developmental antecedents of maladaptation, current theories of etiology, and intervention strategies.

**300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of registration period.

**[313 Problematic Behavior in Adolescence**
Fall. 3 credits. Prerequisite: HDFS 216. Offered alternate years. Not offered 1989–90.
M W F 9:05. Staff.
This course focuses on (1) various biological, psychological, and sociological theories that attempt to explain deviant behavior among adolescents; (2) research that addresses issues of problematic behavior; and (3) presentations by human services personnel and agencies concerning their programs and policies toward problematic adolescents. These will be integrated during class discussions.]

**[333 Cognitive Processes in Development**
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. Not offered 1989–90.
M W F 11:15. Staff.
A survey of theories and problems in the development of selected cognitive processes: attention, perception, mediation processes, and language. The focus is on the first two years of life.]

**344 Infant Behavior and Development**
Fall. 3 credits. Prerequisites: HDFS 115, a biology course, and a statistics course. Not open to freshmen.
T R 1:00–2:15. S. Robertson.
Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, the role of the environment in development). Conditions which put infants at risk for poor development (e.g., premature birth, exposure to environment toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights, surrogate motherhood) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

**346 The Role and Meaning of Play**
Spring. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HDFS 115. Recommended: HDFS 111.
W 7:30–9 p.m. K. Lisseck.
The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

**347 Human Growth and Development: Biological and Social Psychological Considerations (also Biology and Society 347 and Nutritional Sciences 347)**
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HDFS 115 or Psychology 101. Offered alternate years.
M W F 1:25. J. Haas, S. Robertson.
A review of major patterns of physical growth from the fetal period through adolescence, with consideration given to biological and socioenvironmental determinants of growth, as well as to physical and psychological consequences of variations in growth patterns. Normal patterns of growth are examined; an analysis of major sources of variations in growth (normal and atypical) follows.

**348 Advanced Participation in Preschool Settings**
Fall or spring. 3 or 4 credits. Prerequisites: HDFS 242 and permission of instructor. Recommended: HDFS 346.
Two or 3 half-days' participation (morning or afternoon) and an hour group conference each week. Staff.
An advanced, supervised fieldwork experience with a focus on helping children build relationships to support learning and personal development. Students are expected to define their own goals and assess progress with supervising teacher and instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children in a variety of curriculum areas.

**[352 Afro-American and Asian-American Families**
Fall. 3 credits. Limited to 25 students. Prerequisite: a sociology or a family-studies course. Not offered 1989–90.
M W F 1:25. Staff.
This course provides an introductory survey to the study of Afro-American and Asian-American family life. During the semester we will review and evaluate theories, methods, and findings commonly cited in discussions of minority family organization and functions.]

**[354 Families in Cross-cultural Perspective**
Fall. 3 credits. Prerequisites: HDFS 115 and HDFS 150 or Rural Sociology 100, or equivalent. S-U grades optional. Not offered 1989–90.
M W F 11:15. Staff.
The sociological study of families from a comparative perspective, looking at similarities and differences across cultures and across ethnic groups. A major focus is on the interdependence of the family system and social institutions.]

**359 American Families in Historical Perspective (also Sociology 359 and Women's Studies 357)**
Spring. 3 credits. Prerequisite: HDFS 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HDFS 359.
TR 2:30–4. J. Brumberg.
This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

**360 Personality Development in Childhood**
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101, plus one other course in HDFS or psychology. Students cannot receive credit for both HDFS 360 and Psychology 275.
T R 12:20–2. C. Hazan.
Study of relevant theoretical approaches to, and empirical findings regarding, the development of the child's personality. The influence of parents and other environmental factors on the child are examined. Topics covered include attachment, autonomy, identification, moral development, and social behavior.

**[361 The Development of Social Behavior**
Spring. 3 credits. Limited to 100 students. Prerequisite: HDFS 115 or Psychology 128. Offered alternate years. Not offered 1989–90.
M W F 12:20. Staff.
Issues in the development of social behavior are viewed from the perspective of theory and research. An attempt is made to apply our understanding of social behavior to education, childbearing, and group behavior. Likely topics include bases of social behavior in early childhood, the role of peers, the development of aggressive behavior, the development and functioning of attitude and value systems, conformity and deviation, and the function and limits of experimental research in the study of social development.]

**362 Close Relationships across the Lifespan**
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. S-U grades optional.
T R 12:20–2. C. Hazan.
This course analyzes the nature and function of close relationships from infancy through adulthood. Special emphasis is given to the interplay between innate tendencies and social experience, and the effects of social cognitive development. The material presented is drawn from a wide variety of theoretical and empirical literatures. Topics include attachment in human infants, childhood relationships with parents and peers, interpersonal attraction, intimacy and commitment, marriage, divorce, and the role of close relationships in physical and mental health.

**364 The Psychology of Television**
Spring. 3 credits. Limited to 100 students. Preference given to juniors and seniors. Prerequisite: a developmental or psychology course; HDFS 115 or Psychology 101 preferred. S-U grades optional. Offered alternate years.
M W F 12:20. J. Condry.
This course offers a historical and topical survey of the research literature regarding the influence of television. Topics include (1) the introduction of television from 1950 to 1960 and its direct effects, (2) the audience for television, (3) the content of television, (4) behavioral mechanisms of influence: imitation, disinhibition, arousal/desensitization, (5) the psychological research of the 1960s and 1970s; cognitive mechanisms of influence; mainstreaming and resonance; formal features, comprehension, and perceived reality; current issues in research from 1980 on; the role of advertisements; government policies and advertisements; and television over the life span.

**372 Typical and Atypical Intellectual Development**
Spring. 3 credits. Prerequisites: HDFS 115, a course in statistics, and a course in biology.
T R 10:10–11:30. S. Ceci.
This course provides an intensive historical examination of both normal and abnormal intelligence, focusing on the antecedents of contemporary views of the heritability of intelligence, brain-behavior linkages, expertise, generality, and cognitive modifiability. It concludes with an examination of current theories, with an emphasis on the instructor's own bioecological theory.

**[397 Experimental Child Psychology**
Fall. 4 credits. Prerequisites: one course in statistics and permission of instructor. Intended primarily for students interested in entering graduate programs involving further research training. Not offered 1989–90.
T R 2:30–4; lab, hours to be arranged.
L. C. Lee.
A study of experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.]

**398 Junior Honors Seminar**
Fall. 2 credits. Permission of the coordinator of the honors program required for registration. Enrollment limited to students in the honors program.
Hours to be arranged. R. Savin-Williams.
Reports and discussion of research and selected thesis topics by faculty and honors students.

**400–401–402–403 Special Studies for Undergraduates**
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: HDFS 115, 150, 216, 218 or an equivalent number of courses in pyschology or sociology. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HDFS not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study, the student's faculty adviser, and the coordinator of undergraduate education (NG21 Martha Van Rensselaer Hall) and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study (guidelines for each are available in NG14 Martha Van Rensselaer Hall):

**400 Directed Readings**
Prerequisites: In addition to those listed above, a statistics or methods course and at least one course directly linked to the area of study.
For study that predominantly involves library research and independent study.

**401 Empirical Research**
Prerequisites: In addition to those listed above, a statistics or methods course and at least one course directly linked to the area of study.
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

**402 Supervised Fieldwork**
Prerequisites: In addition to those listed above, an observation or participation course.
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**403 Teaching Apprenticeship**
Prerequisites: In addition to those listed above, must have taken the course or equivalent and received a grade of B+ or higher.
For study that includes assisting faculty with instruction.

**[414 Policies and Programs for Adolescents**
Spring. 3 credits. Prerequisite: HDFS 216, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90.
T R 12:20–2:15. S. Hamilton.
Plans and practices intended to foster adolescent development are examined in the light of needs identified by theory and research. The key question is how societal and governmental institutions support or hinder the transition of adolescents to

adulthood. Current issues, especially secondary school reform and youth employment, provide focal points for examining actual and proposed policies and programs. The course also addresses the nature of social policy and its relation to social science.]

**431 Learning in Children**
Fall. 3 credits. Prerequisite: HDFS 115 or equivalent. Limited to 20 students.
T 10:10–12:05. Field experience to be individually arranged. M. Potts.
Examines diverse theories and models of learning and their differing implications for real-world situations that require learning or relearning. Considers the interrelations of learning and development and of learning and intelligence. Through fieldwork, application is made to the assessment of learning processes in the cognitive domain and to implementation of the variables which affect learning.

**432 Cognitive Development and Education**
Spring. 3 credits. Prerequisite: HDFS 115 or equivalent. Limited to 20 students.
T 10:10 12:05; field experience to be individually assigned. M. Potts.
This course defines basic cognitive processes that underlie education (for example, linguistic processes that underlie language comprehension and production; numerical processes that underlie mathematics; perceptual processes that underlie reading) and reviews research on the development and learning of these processes in children. A laboratory component focuses on assessment and facilitation of cognitive competencies as they bear on one educational subject.

**[434 The Growth of the Mind: A View from Piaget's Theory**
Spring. 4 credits. Open to undergraduate and graduate students. Prerequisites: A course in human experimental psychology, statistics, and HDFS 115 or equivalent; or permission of the instructor. S-U grades optional. Not offered 1989–90; 1990–91.
Lecs, M W F 1:25. B. Lust.
In this course the fundamental issues of cognition are introduced through the framework of Piaget's comprehensive theory of cognitive development. What is the nature of human intelligence? of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation and how does it exist in the initial state? What are the cognitive characteristics of the initial state? What is the relation of the acquisition of knowledge and understanding to their final representation? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method?

Basic issues of cognition are introduced and discussed throughout: for example, the roles of innateness and learning, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those psychological issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism.

Although the course will focus on Piaget's theory and experimental results, current research in cognitive development will be introduced and contrasted.]

**[436 Language Development (also Psychology 436 and Linguistics 436)**
Spring. 4 credits. Open to undergraduate and graduate students. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. Offered alternate years. Not offered 1989–90.
T R 11:40–12:55. B. Lust.
This course is a survey of basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.]

**438 Thinking and Reasoning**
Fall. 3 Credits. Prerequisite: HDFS 115.
W 2:30–5. B. Koslowski.
The course will examine the areas of logical thinking (in formal as well as real-world contexts), the process of making logical and "natural" inferences, causal reasoning, and scientific reasoning. Two general issues will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

**440 Internship in Cornell Nursery School**
Fall or spring. 10–12 credits. Prerequisites: HDFS 115 and 242. Recommended: HDFS 346 and 348. Permission of instructor required.
M–F 8–1 or 10:30–4:30. Staff.
Opportunity to integrate theory with practice and to develop understanding of preschool children and their families. Placement as assistant teacher in the morning or afternoon program and participation in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and director.

**[456 Families and Social Policy**
Fall. 3–4 credits. In Washington, D.C. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. Not offered 1989–90.
Hours to be arranged. P. Moen.
An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.]

**464 Developmental Theory and Research on Homosexuality**
Fall. 4 credits. Permission of instructor required.
T R 3–4:25. R. Savin-Williams.
The course will address a sensitive and controversial subject in a scientific fashion. The theoretical and empirical literatures that focus on the development and maintenance of a homosexual identity, homosexual behavior, and cultural responses to homosexuality will be covered. Although the issue, homosexuality, is specific, it reflects the larger issues of sexual identity, personality/social development, and environmental and biological influences on human development. The time span considered is not limited to a specific developmental sequence; it reflects a life-course perspective. A major review paper on a topic selected by the student is required.

**481 Introduction to Ecological Psychology**
Fall. 3 credits. Limited to graduate and upper-division undergraduate students. Prerequisite: permission of instructor. Letter grades only.
T R 3–4:25. P. Schoggen.
A broad survey of the theory, concepts, methods, and empirical research in ecological psychology, the study of molar human behavior in relation to the naturally occurring molar environment of everyday life. The first part of the course examines the problem of observing, recording, and analyzing the continuous stream of individual behavior under natural conditions, with special concern for child behavior and development. The rest of the course is devoted to the study of behavior settings, the immediate environmental contexts of molar human behavior. We will be particularly concerned with the usefulness of behavior settings in empirical studies of person-environment interaction at all stages of the life course from infancy through old age. A course description with typical readings is available from the instructor.

**488 Development in Context (also Psychology 488)**
Spring. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: one course in statistics (which may be taken simultaneously) and two courses in social sciences, or one in human biology and one in social sciences.
T R 2:30–4:25. U. Bronfenbrenner.
The course examines highlights of what is known about human development in the actual settings in which human beings live and grow. The material presented reveals how development in its various aspects—cognitive, emotional, and social—occurs through the progressive interplay between the maturing capacities and characteristics of an active, exploring, thinking human organism and the changing situational, cultural, and historical contexts in which the person lives. Particular emphasis is given to the role of family, peer group, school, workplace, community, and social structure and belief systems of the larger society. Course work is carried out primarily through the analysis of selected studies that shed light on critical issues in development. The main focus is not on the specific findings but on key processes and principles of development to which the findings point. Students are offered guidance and experience in analyzing and evaluating research reports, with particular emphasis on the nature and intellectual excitement of the scientific process and on the implications of scientific knowledge for public policy and practice. The course is organized in terms of successive stages in the life course. At each stage the material presented will emphasize change and continuity in the two-way developmental processes taking place between a biologically maturing person and the progressively more complex environments into which the person moves through life.

**498 Senior Honors Seminar**
Fall and spring. 1 credit. Required for, and limited to, seniors in the HDFS honors program.
Hours to be arranged. R. Savin-Williams.
This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

**499 Senior Honors Thesis**
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional.
Department faculty.

## Topics Courses

Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required.
Hours to be arranged. Department faculty.
This series of courses provides an opportunity for advanced undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

**415 Topics in Adolescent Development**
**435 Topics in Cognitive Development**
**445 Topics in Early-Childhood Education and Development**
**455 Topics in Family Studies**
**465 Topics in Social and Personality Development**
**475 Topics in Atypical Development**
**485 Topics in the Ecology of Human Development**

## The Graduate Program

HDFS graduate courses are only open to undergraduates with instructor's permission.

### General Courses

**[617 Adolescence**
Spring. 3 credits. Not offered 1989–90.
Hours to be arranged. Staff.
Critical examination of some seminal theoretical writings on adolescent development, along with recent work relevant to intellectual development, ego development, and social development during early and late adolescence. Empirical research on specific questions chosen by students is considered in the light of these approaches.]

**631 Cognitive Development**
Spring. 3 credits. Letter grades only. Offered alternate years.
Hours to be arranged. Staff.
Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.

**640 Infancy**
Spring. 3 credits.
R 9–11:30. S. Robertson.
Critical review of major issues of contemporary concern in the field of infant behavior and development, based on readings of selected research papers and review articles. The overall intent is to develop an analytic understanding of where the field stands at present with respect to various topical issues and to identify directions for future research.

**641 Early-Childhood Education**
Fall. 3 credits.
M 12:20–2:50. M. Potts.
Survey of major issues in the theoretical and research literature of early-childhood education.

**650 Contemporary Family Theory and Research**
Fall. 3 credits.
T 9:30–12. Staff.
The uses of sociological theories and research in the study of the family are studied with particular reference to the relationship between the family and society and between the family and its individual members.

**660 Personality and Socialization**
Fall. 3 credits.
Hours to be arranged. J. Condry.
Major issues in personality development and socialization, with special emphasis on theoretical models and empirical issues.

**670 Abnormal Development**
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology.
Hours to be arranged. M. Lenzenweger.
Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, neuroses, and personality disorders. Focus is on developmental aspects of abnormal behavior.

### Topical Seminars

Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

**618 Seminar in Adolescence**
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

**633 Seminar on Language Development**
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

**635 Seminar in Cognitive Development**
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

**645 Seminar on Infancy**
Topics covered in depth include the role of emotions in early development, infant stimulation and early experience, and the assessment of infant developmental competencies.

**646 Seminar in Early-Childhood Education**
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

**655 Seminar in Family Studies**
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

**665 Seminar in Personality and Social Development**
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

**675 Seminar in Developmental Psychopathology**
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

**685 Seminar in Human Development and Family Studies**
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

**690 Seminar on Ecology of Human Development**
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

### Individualized Special Instruction

**700–706 Special Studies for Graduate Students**
Fall or spring. Credits and hours to be arranged. S-U grades at discretion of instructor.
Department faculty.
Independent advanced work by graduate students recommended by their Special Committee chair with approval of the instructor.

**700 Directed Readings**
For study that predominantly involves library research and independent study.

**701 Empirical Research**
For study that predominantly involves collection and analysis of research data.

**702 Practicum**
For study that predominantly involves field experience in community settings.

**703 Teaching Assistantship**
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

**704 Research Assistantship**
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

**705 Extension Assistantship**
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

**706 Supervised Teaching**
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

**899 Master's Thesis and Research**
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

**999 Doctoral Thesis and Research**
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.
Department graduate faculty.

## HUMAN SERVICE STUDIES COURSES

J. Ford, chair; M. Minot, graduate faculty representative; C. Reed, undergraduate advising coordinator; J. Allen, R. J. Babcock, D. Barr, R. Battistella, R. Bounous, D. Brown, R. Buchanan, C. Crawford, J. Greene, A. Hahn, I. Lazar, C. McClintock, B. J. Mueller, L. A. Noble, A. Parrot, C. Shapiro, L. Street, D. Tobias, W. Trochim, B. L. Yerka, J. Ziegler

**101 Human Services in Contemporary Society**
Fall. 3 credits. Limited to freshmen and sophomores or permission of instructor.
M W 12:20. Secs to be arranged.
A. Parrot.
A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, and health and mental health services. Barriers to service delivery are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Issues that impact on service delivery will also be discussed, including civil rights, structure of the family, employment, and equal opportunity. Students will apply this knowledge and a theoretical framework to evaluate human service agencies in Tompkins County.

**203 Groups and Organizations**
Fall. 3 credits.
M W F 10:10. L. Street.
A basic course in the social psychology of small groups and human service organizations. Study of group processes includes self-perception and interpersonal perception of roles, norms, communication, power, and leadership. Students apply what has been learned about small groups to the study of issues in human service organizations (for example, goals, evaluation, structure, technology, relationships between organizations and clients, environment, and change).

**225 Education as a Human Service**
Fall. 3 credits.
M W F 11:15. M. Minot.
This course is concerned with the role of the educator as a professional provider of preventive and remedial intervention through knowledge that results in intentional changes in cognitive, affective, or psychomotor skills of individuals. Educators, in collaboration with other human service professionals, facilitate human growth and development. The course includes an overview of educational programs that use human ecology content in selected human services delivery systems and settings. Emphasis is placed upon the competencies and responsibilities of professionals assuming the educative role.

**246 Ecological Determinants of Behavior**
Fall. 3 credits. Prerequisites: introductory sociology and psychology and one course in human development.
M W F 2:30. J. Mueller.
Provides an interdisciplinary knowledge base for human service professionals. Examines social behavior in the human environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups) and at the macro level (social planning for vulnerable groups in our society).

**280 Racism in American Society (also ASRC 280)**
Fall. 3 credits.
W 7:30–10 p.m. D. Barr, J. Turner.
The purpose of this course is to explore the historical, political, and sociological dimensions of racism in American society. A major goal will be to understand the presence and persistence of racial inequality and the relationship of human services to the problems of racism.

**292 Research Methods**
Fall. 3 credits.
W 7:30–10 p.m. C. McClintock.
Students will learn the logic and methods of social science research and develop skill in reading and evaluating research reports. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies to test hypotheses, measuring variables, and interpreting findings.

**300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

**315 Human Sexuality**
Spring. 3 credits. Limited to 400 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: one course in biology. S-U grades optional.
W 7:30–10 p.m.; sec to be arranged.
A. Parrot.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. There will be a social policy orientation focusing on the evolution of sexual norms, customs, and legislation within changing sociopolitical systems. Biological developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and theory in human sexuality will be explored in an interdisciplinary approach drawing on human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.

**325 Health-care Services and the Consumer**
Fall. 3 credits. Limited to 30 students. S-U grades optional. Offered alternate years.
Hours to be arranged. A. Parrot.
Developments in the health field that affect the availability and kinds of health services. Emphasis is placed on interrelationships between institutions and agencies and the part each can play in prevention, diagnosis, and treatment of disease and disability. Focus will include historical and current trends, quality health care, consumer issues, ethical issues, politics and policies, and the problems of health care.

**[330 Ecology and Epidemiology of Health**
Fall. 3 credits. Prerequisite: a statistics or research design course. Recommended: biology course. S-U grades optional. Offered alternate years. Next offered 1990–91.
Hours to be arranged. A. Parrot.
Ecological and epidemiological approaches to the problems of achieving human health within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.]

**340 The Politics of Public Budgeting**
Spring. 3 credits.
T R 10:10–11:25. R. Buchanan.
The course examines the theory and practice that have developed to plan and control raising and spending public funds. The study of public budgeting includes the examination of techniques for controlling spending and methods for raising revenues. Because these fiscal decisions are made in a political environment, the course will take a multidisciplinary approach, synthesizing both the political and economic aspects of budgeting. Students will assume the roles of the different actors in the budgetary process to learn both the institutional dynamics of the process and the political constraints involved.

**360 Introduction to Program Planning and Development**
Fall and spring. 3 credits.
M W F 9:05. M. Minot.
The course provides an introduction to program planning and development in the delivery of human services. Models of program planning, development, and delivery will be analyzed in relation to practice. The processes of conceptualizing a program and the context of planning and development (political, organizational, economic, and social) will be examined. Basic tools and techniques available to planners will be identified and selected skills developed. Issues related to ethics, power/authority, confidentiality, and accountability will be included. Professional roles and competencies needed will be highlighted throughout the course. Students will apply the planning and development process to individual projects.

**370 Social Welfare as a Social Institution**
Fall. 3 credits.
M W F 9:05. J. Allen.
A philosophical and historical introduction to social welfare services. The course reviews the social contexts from which programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and how policies are translated into social welfare programs. Basic issues in welfare are discussed in the context of present program designs, public concerns, and the interrelationships and support of services in the community.

**400–401–403 Special Studies for Undergraduates**
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For independent study by an individual student in advanced work in a field of HSS not otherwise provided in the department or elsewhere at the university, or for study on an experimental basis with a group of students in advanced work not otherwise provided in the department or at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

**400 Directed Readings**
For study that predominantly involves library research and independent readings.

**401 Empirical Research**
For study that predominantly involves data collection and analysis or laboratory or studio projects.

**403 Teaching Apprenticeship**
Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

**414 Professional Internship in Human Service Studies**
Fall, spring, or summer. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: FIS 100 or permission of instructor. Pre-course enrollment is required.
TR 3–4:30. Placement hours to be arranged. R. Bounous.
Students intern for a minimum of 16 hours a week in a human service organization and attend a weekly seminar with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

**417 The Politics of Power in the Human Services**
Spring. 3 credits. Offered alternate years.
W 7:30–10 p.m. A. Hahn.
The framework of the course will take an analytical world view with some understanding of a capitalist political economy and the historically colonial relationship between the American ruling class and peoples of color, the poor, and the powerless. In addition, the course will analyze the effects of these structural and historical facts on people's lives today. The relationship between a classed, racist, and sexist society and the human services will also be included by exploring the nature of empowerment. The course will focus systematically on both micro and macro levels.

**[460 Human Service Planning Methods**
Spring. 3 credits. Prerequisite: HSS 292. Not offered 1989–90.
M W F 11:15. L. Street.
The course is designed to bridge theory-oriented social planning courses and practicums. It is intended to introduce undergraduates to basic tools and techniques that social planners use. Five modules are included that explain and provide experience in how social planners collect, analyze, and synthesize information and data in planning and policy development in the human services and that take into account the political and social contexts of the process.]

**465 Community Decision Making**
Fall. 3 credits. S-U grades optional.
T R 12:20–2:15. A. Hahn.
Identification and discussion of factors that influence the outcome of community issues. Topics include political participation, decision-making processes, the interests and resources of key decision makers, and community change. Concurrent participation in community activities is desirable but not required.

**471–472 Social Work Practice I and II**
Introduction to concepts and methods used in a generalist, task-centered model of social work practice. Examination of the values and ethics of professional practice. Students learn skills appropriate for working with individuals, groups, families, and communities. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are encouraged to provide their own transportation, but car pools will be arranged for those who cannot. The department reimburses transportation costs when funds are available, but students may have to pay their own expenses. A lab fee for field-related expenses will be charged to every student in the course. Each student must have a current driver's license.

**471 Social Work Practice I**
Fall. 9 credits. Limited to 25 social work students. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C+ or better in HSS 246 and 370, and permission of instructor before registration.
Lecs, M W 10:10–12:05; fieldwork, T R for 8 hours each day. C. Shapiro, R. Bounous.

**472 Social Work Practice II**
Spring. 9 credits. Limited to 25 social work students. Prerequisites: grade of B– or better in HSS 471 and satisfactory performance in fieldwork.
Lecs, M W 10:10–12:05; fieldwork, T R for 8 hours each day. J. Mueller, R. Bounous.

**473 Section 01 Senior Seminar in Social Work**
Spring. 3 credits. Prerequisites: HSS 471–472. (HSS 472 may be taken concurrently).
M W 1:25–2:40. J. Mueller.
The course integrates and expands on learning from courses in human behavior, planning and policy analysis, and social work methods (individual and family counseling, group work, community organization) and examines recurring themes in professional practice.

**473 Section 02 Senior Seminar**
Fall and spring. 3 credits. Prerequisite: field work or permission of instructor. Limited to 18 junior and senior HSS majors.
Hours to be arranged. L. Street.
The course will focus on a particular problem, such as poverty, crime, illiteracy, teen pregnancy, and so forth. Solutions to the problem will be sought by applying an understanding of the areas of human service environments, programs, and processes. Specifically, those solutions will be sought via student analysis and definition of the problem, assessments of both current or existing and desired or ideal human services needed to address the problem, and identification of the desired outcomes of such services or of resolution of the problem. Through this process, students will also learn effective ways to create social changes. Work requirements include several individual short papers and a group project.

**475 Social Policy**
Spring. 3 credits. Prerequisite: HSS 370 or Government 111 or Sociology 141. S-U grades optional. Students should have field or work experience in a human-service program before or while taking this course.
M W 11:15–12:20. J. Allen.
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

**476 Housing and Feeding the Homeless (also Hotel Administration 490)**
Fall and spring. 4 credits. Limited to 20 students.
T R 8:40–9:55. J. Ford, J. Eyster, A. Hales
Through lectures, class discussion, and a field placement practicum, students will explore the economic, social, and political issues of our country's growing problem of homelessness and the existing and proposed housing and feeding policies and delivery systems that are attempting to deal with homelessness. Students will study the history of homelessness, the description of the subgroups of the homeless population, and strategies to prevent and alleviate the problem. The fieldwork involved in this course will require approximately six days spread over the semester at a project location. The estimated cost for food and travel associated with the fieldwork is $50 per student.

### Topical Seminars and Practicums

Seminars and practicums, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practicums offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

**600 Professional Ethics and Public Policy**
Fall. 3 credits. Limited to 16 students.
T. Hours to be arranged. J. Ziegler.
This seminar will explore current issues of ethics and public policy against a background of theories of ethical behavior. Questions of how public officials and managers of public and non-profit agencies and private enterprises act will be examined. How do standards of ethical behavior in the professions associated with the human services get established? Readings will be drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential. This course will be exploratory in nature. If it succeeds, it will be presented to the Department of Human Services and the College of Human Ecology as a regular offering.

**613 Seminar in Health and Mental Health Services**
Spring. 3 credits. S-U grades only.
Hours to be arranged. I. Lazar.
Topics include the effects of new knowledge and problems on the organization and delivery of health and mental health services, developments in health and mental health policies and legislation, and the planning of community mental health services. Current challenges to the delivery of health services, including alcohol and drug problems, AIDS, stress-related disabilities, and depression, will be examined.

**669 Seminar in Program Planning and Development**
Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.

**699 Seminar in Program Evaluation and Evaluative Research**
Spring.
W 12:20–1:10. J. Greene.
The seminar is topically organized according to student and faculty projects. Focuses on professional issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.

## Continuing Education for Professionals

These courses are not a part of the department's regular graduate offerings but are designed to provide continuing education for professionals through the extramural division.

**507–508 Professional Improvement I and II**
Fall, spring, or summer. 3–6 credits. Enrollment is determined by various factors, including nature of content, funding, resources, facilities, and instructor. S-U grades optional. Intended for extramural (evening) and off-campus instruction. May be repeated with the permission of the instructor.
A series of special-problem seminars, classes, and activities designed for in-service and continuing education of practitioners in helping professions, such as home economics teachers, social workers, public health planners, and adult educators. Specific content of each course varies with group being served but includes work and class time appropriate to number of credits.

## The Graduate Program

Human service studies graduate courses are open to undergraduates only with the instructor's permission.

The courses listed below will be taught regularly (annually or in alternate years).

**600 Special Problems for Graduate Students**
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional.
Department faculty.

**622 Health and Human Services Management**
Fall. 3 credits.
T R 12:20–2:15. D. Brown.
Designed as an integrating seminar for students interested in health and human services administration and consulting, the course focuses on the management process and attempts to develop students' problem-solving and decision-making skills through the analysis of cases. The case method is particularly suited to strengthen diagnostic, analytical, and conceptual processes as well as managerial skills by facilitating synthesis, integration, and the application of theory to actual situations. A number of major themes are explored, such as matrix organization, governance and corporate structure, professional relationships, organization culture, leadership and change, motivation, group processes, conflict management, and negotiation.

**627 Legal Aspects of Health-Services Delivery**
Spring. 3 credits.
M W 10:10–11:30. J. Ogden.
This course introduces principles of the law that are specifically applicable to health-services delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

**628 Medical-Service Issues in Health Administration (also Biology and Society 428)**
Spring. 3 credits.
M W 2:15–3:30. V. Utermohlen.
A survey of the issues that affect interactions between the health-care consumer and the medical team, including disease processes (how disease occurs and progresses), the health-care team and illness, third-party payment and illness, and resource allocation.

**629 Strategic Planning and Marketing in Health Care**
Spring. 3 credits.
T R 12:20–2:15. D. Brown.
The course is designed for students interested in the strategic planning process who may be pursuing careers in health-care management, health planning, and management consulting. It attempts to integrate and apply students' knowledge, skills, and analytical abilities in the planning and implementation of health services at the institutional level. The strategic planning process is viewed as an essential part of corporate management, a dynamic endeavor that enables organizations to cope with change and meet community health-care needs in an increasingly competitive environment. Useful concepts and methods for assessing internal and external opportunities are stressed. Cases, visiting discussion leaders, and student reports help to focus and synthesize the course sessions and materials. The cases include analyses of organization and strategies for planning, environmental assessment, marketing approaches, political strategy formulation, diversification and corporate restructuring, and hospital systems.

**[630 Comparative Health-Care Systems: Canada, the United States, and Third World Countries**
Fall. 3 credits. Open to graduate students and seniors. Not offered 1989–90; next offered 1990–91.
An overview of health services is given within the larger context of the social and economic development policies of Canada, the United States, and third world countries. Sociocultural, economic, and managerial factors are stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth. The relevance of high-technology solutions in developing countries is examined.]

**631 Primary Health-Care Services: Policy and Planning**
Spring. 3 credits. S-U grades optional.
W 7–10 p.m. R. Battistella.
Part one of the course concentrates on techniques for estimating supply requirements for personnel and facilities. In part two the consumer-behavior literature is reviewed with respect to the interpretation of disease and the exercise of choice in the initiation of first-contact medical care. The organization of primary health-care services is described in part three. Some of the topics include hospital outpatient services, private group practice, and health maintenance organizations. The remainder of the course provides a critique of community power structure theory and popular models for managing social change.

**632 Labor Relations in the Health Industry**
Spring. 1 credit.
W 4–6:30 (course meets for 5 sessions only). W. Abelow.
This course provides an overview of major topics and current issues concerning unionization in the health industry. It emphasizes a practical, direct approach to dealing with union organizing and elections, collective bargaining, strikes, and labor contract administration in the health industry. The history of unionization in the field and an analysis of applicable laws are covered. Particular emphasis is placed on the role of government and other regulatory agencies in the negotiation process. Students work with current actual cases and materials. Students have the option of taking a final examination or submitting a short research paper.

**633 HMO Development and Management**
Spring. 1 credit.
W 3:30–5:30 (course meets for 4 sessions only). F. Yanni.
The major goal of this course is to provide students with the conceptual framework for understanding the role of health maintenance organizations (HMOs) in today's health economy and to provide an introduction to the planning, development, and operation of HMOs.

**634 Health Care Organization—Providers and Reimbursement**
Fall. 3 credits. Limited to 30 students. Prerequisite: graduate standing or permission of the instructor.
T R 12:20–1:45. R. Buchanan.
The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelationships of health services, and major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze the different sources of payments and how reimbursement policies affect the type and location of care provided. Innovations by the public and private sectors in the delivery and reimbursement of health care will also be presented.

**635 Field Studies in Health Administration and Planning**
Fall or spring. 1–4 credits.
Hours to be arranged. D. Brown.
Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the school's faculty.

**636 Financial Management of Health and Human Service Organizations**
Spring. 3 credits. Prerequisite: a financial accounting course or permission of instructor.
T R 12:20–2:15. R. Buchanan.
The objectives of the course are to provide students with a basic understanding of the financial environment surrounding health and human service administrators and to acquaint students with the financial tools necessary to manage health and human service organizations. The course presents an overview of the financial markets and the methods and techniques used in the financial management of health and human service organizations. It will focus mainly on health-care organizations, but the financial practices and approaches presented in the readings and class discussions will also be appropriate to other human service agencies. In addition to discussing acute-care hospitals, the course will present an understanding of the financial management of long-term-care facilities, HMOs, home health care, hospice programs, and other human-service programs.

**[652 Preparing Professionals in the Human Services**
Spring. 3 credits. S-U grades optional. Offered alternate years; next offered 1990–91.
T R 10:10–11:25. M. Minot.
Students analyze the assumptions and concepts that underlie preprofessional and continuing professional education for volunteers, paraprofessionals, and professionals in the human services (for example, adult and continuing education, health, home economics, and social work education). A variety of preservice and in-service programs will be analyzed in terms of goals, means of implementation, and evaluation. Factors that influence programs are examined, including educational setting, licensure, accreditation, legislation, evaluation of performance. Students have opportunities to participate in educational programs in human service professions and community education. Students may develop or modify a model for providing professional education at the preservice or in-service levels.]

**[655 Leadership in Human Services**
Spring. 3 credits. Limited to 20 students. S-U grades optional.
W 7:30–10 p.m. R. Babcock. Not offered 1989–90.
The course surveys some classic and contemporary leadership theories and their associated theories of personality and motivation. Human service organizations are examined in terms of their unique leadership needs and responses to various leadership styles. Through lectures, case analyses, visiting speakers, and student presentations, the relationships between leadership theories and the special features of human service organizations are explored. Translating leadership theory into practice is emphasized. Special leadership topics, such as gender and race, volunteerism, ethics, and working with boards of directors, will be considered, according to class interest.]

**660 Social Policy and Program Planning in Human Services**
Spring. 3 credits. S-U grades optional.
M W 11:15–12:20. J. Allen.
A review of the public policy process in education, health, and social welfare services as it pertains to program development. The course includes the history, definitions, and boundaries of the policy process; the relationships of the policy process to political economy, social structure, intergovernmental relations, and cultural values and beliefs; theories of planning and program development in human services; the role of evaluation in program planning and implementation, with special emphasis on monitoring and feedback of effects into the policy and planning process; selected current issues in policy and planning processes, such as regulatory and legislative constraints; the respective roles of clients or consumers and professional planners and providers; and problems and prospects in the coordination among the various human services.

**661 Designing and Implementing Health and Human Service Programs**
Spring. 3 credits. S-U grades optional.
M 4–7. I. Lazar.
The translation of legislation into programs will be described, and the major sources of support for health and human service agencies and projects will be examined. Students will learn to identify potential sources of program support and to develop applications and campaigns for such support. Grant-proposal writing, response to contract requests from governmental agencies, applications to foundations, and techniques of fund-raising will be described and practiced. Students will be expected to write several grant proposals under conditions and time constraints simulating the actual processes. As part of the simulation there will be no grades of incomplete or late papers accepted in this course.

**664 The Intergovernmental System and Human Service Program Planning**
Spring. 3 credits. Open to seniors who have had a course in American government. S-U grades optional.
T R 2:30–3:45. J. Ziegler.
An in-depth review of intergovernmental systems in America and their relevance to the formulation of human service policy and programs. Issues of decision making, fiscal arrangements, and public and private sector interactions are explored as they are affected by intergovernmental relationships. The course provides students with an analytic framework for understanding those and other issues that review the relationships within and between various governmental levels.

**665 Human Service Politics in the Local Arena**
Spring. 3 credits. Offered alternate years.
T R 10:10–11:25. A. Hahn.
This seminar investigates policy making in the local political arena, with special reference to human service programs and issues. (Graduate students who need an introduction to the local political arena should consider taking HSS 465 prior to this course.) Topics include community power; the behavior of local elected officials, administrative personnel, business leaders, state and federal governments, and other participants in local decision making; and citizen participation, with special reference to social movements and social movement organizations. Implications for both practice and research will be emphasized.

**670 Management in Public and Nonprofit Organizations**
Fall. 3 credits.
T 6:30–9 p.m. C. Crawford.
This course presents an overview of the distinctive characteristics of organizations in public and private nonprofit sectors and their implications for managing human service organizations. Through a mixture of theoretical and case-study literature students will become familiar with the major conceptual and managerial issues that confront the administrator in health and human service agencies in the public and nonprofit sector.

**671 Decision Tools for Administrators and Planners**
Spring. 3 credits.
W 3–5:30. C. Crawford.
This is a decision course that will familiarize students with a variety of tools that can be used to conceptualize problems, decision alternatives, criteria, and futures and to essentially improve the decision-making process. Students will acquire a basic understanding of how people cope with decisional conflicts and the sources of error in decision processes. They will also be introduced to techniques that can be applied in making decisions.

**672 Management Information Systems in Health and Human Services**
Spring. 3 credits.
T R 8:30–9:55. C. McClintock.
This course reviews how information systems can be developed and made useful for administrators and other professional staff in human services. Readings and assignments reflect a balance between technical and organizational or human aspects of information systems. Major topics include the organizational and managerial context for information systems in the human services, approaches to systems analysis and database development, data analysis for decision making, and presenting information for understanding programs and policies. Students will do computer assignments and case studies of management information systems issues in human service and other organizational settings.

**674 Organizational Behavior in Human Services**
Fall. 3 credits. Limited to 20 students. S-U optional.
W 7:30–10 p.m. R. Babcock.
The course surveys organizational behavior in human service organizations with emphasis on the micro dimensions. Similarities and differences among human service and other organizations are stressed. Individual behavior at the human service workplace is viewed in relation to topics such as personality, motivation, group dynamics, communication, leadership, power, and conflict. A seminar format is followed, including lectures, group discussions, student presentations, exercises, and case studies.

**685 Health and Welfare Policy**
Fall. 3 credits.
T R 10:10–11:25. R. Battistella.
Health and welfare issues are seen as reflecting alternate solutions to the broader institutional problems of allocation (economics), control (politics), and normative behavior (morality). A basic tenet is that health and welfare policy is deeply rooted in social values and the availability of economic resources. Health policy is interpreted from a multidisciplinary perspective in which change emanates from structural dynamics accompanying socioeconomic development.

**688 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems**
Spring. 3 credits.
T R 10:10–11:25. R. Battistella.
Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Relevant experience from other highly developed countries is presented. Visiting speakers from the government and the private sector are featured, and field trips provide additional insights into the many challenges and opportunities in long-term care policy and management.

**690 Measurement for Program Evaluation and Research**
Fall. 3 credits.
T R 10:10–11:25. W. Trochim.
The course reviews measurement theory and its application to the evaluation of human service programs. Topics include validity; reliability; scaling methods; basic principles of instrument design; and methods of data collection, including interviewing strategies, testing, self-reports, observation and content analysis, and data coding. Attention is given to issues such as ethical and managerial concerns that arise in applied settings.

**691 Program Evaluation and Research Design**
Spring. 3 credits.
T R 2:30–3:45. W . Trochim.
This course reviews research design and its application to the evaluation of human service programs. Major topics include experimental, quasi-experimental, cross-sectional, and exploratory research designs; basic sampling theory; and use of qualitative and quantitative methods. Attention is given to issues that arise in the application of research designs to the evaluation of programs, including problems of randomization, causal inference, replication, and utilization of results. Skills covered include stating and testing hypotheses, critical analysis of research reports, use of computers in research, and development of a research proposal.

**692–693 Program Evaluation in Theory and Practice**
692, fall; 693, spring. 4 credits each semester. Prerequisites for HSS 692: 690 and 691 or 696, or permission of instructor. Prerequisite for HSS 693: 692. Students must register for both semesters. Offered alternate years.
Hours to be arranged. J. Greene.
This course constitutes a one- or two-semester practicum in which the class designs and conducts a program evaluation in the human services. Students are involved in all phases of the evaluation from design through the production and dissemination of a final report. Emphasis is on research methods in the social sciences. Application of knowledge developed in prerequisite courses is stressed (for example, planning and managing an evaluation, ethics, methods of data collection, data processing, and strategies for analysis and feedback of results).

**[695 Strategies for Policy and Program Evaluation**
Fall. 3 credits. Prerequisites: HSS 690 and 691 or 696, or equivalent. Offered alternate years; next offered 1990–91.
T R 2:30–3:45. J. Greene.
This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches is used to judge the appropriateness of a given strategy for a particular context.]

**696 Qualitative Methods for Program Evaluation**
Spring. 3 credits. Prerequisites: HSS 690 and 691 or equivalent.
T R 1:25–2:40. W. Trochim.
This course presents a qualitative approach to applied research and the evaluation of human service programs. Topics include the epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately and effectively and how qualitative and quantitative approaches might be mixed effectively.

**704–705 Internship in Human Service Studies**
Fall, spring, or summer. 1–15 credits. S-U grades optional.
Hours to be arranged. Graduate faculty.
Internship placement in human services is determined by availability and students' academic and professional goals. Opportunities are available in public and private, human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

**790 Advanced Seminar in Program Evaluation**
Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor.
T R 9–10:15. C. McClintock.
This course is intended for students with at least three courses in evaluation (HSS 690 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research, with emphasis on the links between program evaluation and program planning and administration. Attention is given to two or more service areas (education, health, social welfare) and to applications across those areas.

**899 Master's Thesis and Research**
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty.

**999 Doctoral Thesis and Research**
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Department graduate faculty.

## TEXTILES AND APPAREL COURSES

S. K. Obendorf, chair and undergraduate advising coordinator; P. Schwartz, graduate faculty representative; G. Atkin, C. C. Chu, G. DeWeese, S. Hester, F. Kozen, A. T. Lemley, A. Netravali, S. Niezelski, A. Racine, N. Saltford, L. Wagenet, S. S. Watkins, B. Ziegert

**040 Apparel Studio**
Fall. 1 credit. Limited to 12 students; open to TXA majors or students transferring into TXA. Minimum cost of materials, $40; lab fee, $5.
Lec, F 8–9:55. A. Racine.
An introduction to the concepts of shaping, reinforcing, joining, and detailing textile materials in a variety of apparel forms. A remedial course to help students reach the level of proficiency in construction skills necessary for further study in apparel design.

**125 Art and Visual Thinking**
Fall. 3 credits.
Lecs, T R 3–4:25. S. Niezelski.
An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations and films, lectures emphasize relationships between visual forms and technology and social, political, and cultural interpretations that distinguish works of art from other man-made objects. Museum and gallery visits arranged when feasible.

**135 Introduction to Textiles**
Fall. 3 credits. Each lab limited to 15 students. Prerequisite or corequisite: Chemistry 103 or 207. Maximum cost of supplies and textbook, $40; lab fee, $10.
Lecs, T R 1:25–2:15; lab, T 2:30–4:25, or R 2:30–4:25. A. Netravali.
An introduction to the basic properties of textile materials, with consideration of their technology, consumer uses, and economic importance. Behavior of textile materials is observed in a variety of environmental conditions that influence aesthetics, comfort, and performance. This course is designed to provide a basis for further study in textiles, but it also contains sufficiently broad coverage of the subject to be used as an elective course.

**144 Introduction to Apparel Design**
Summer only. 3 credits. Limited to 20 students. Prerequisite: permission of the instructor. Cost of supplies and materials, $50.
A. Racine.
A studio course that focuses on designing apparel through the flat-pattern method. Students use original sketches as a basis for their designs and develop full-scale patterns for individual and group projects that are brought to various stages of completion. Emphasis is placed on creative expression and a thorough understanding of principles and techniques needed to produce apparel.

**145 Apparel Design I**
Spring. 4 credits. Limited to 15 students; priority given to TXA majors or students transferring into TXA. Prerequisite: TXA 040 or basic sewing skills. Recommended: an art or drawing course. Apparel design majors should take course during the first year. Minimum cost of materials, $100; lab fee, $10.
Lecs and labs, T R 1:25–4:25. A. Racine.
Intensive study of principles and processes of flat-pattern design and fitting techniques, with emphasis on development of creative expression in fashion apparel.

**146 Clothing: The Portable Environment**
Fall. 3 credits. Average cost of materials, $30; lab fee, $10.
Lec, T R 10:10–11:40. S. Watkins.
An introduction to the physical function of clothing for individuals of varying ages, for sports and recreation, for the physically handicapped, for a variety of occupations and climates, and for hazardous environments such as under water or outer space.

**238 Textiles for Interiors and Exteriors**
Fall. 3 credits. S-U grades optional.
M W F 9:05. F. Kozen.
This course reviews developments and trends in textiles for the home and for contract interiors. Consideration is given to end-use requirements, to performance and test method standards and specifications, and to the environments in which these textiles are used. Field trips are arranged when feasible.

**[241 Assessment of Product Quality**
Spring. 3 credits. Each section limited to 15 students. Not offered 1989–90.
Lec, M 2:30; sec, W 10:10–12:05 or R 10:10–12:05. A. Racine.
Lectures and discussions will focus on analyzing the quality of sewn products with a variety of end-uses such as apparel, accessories, and home furnishings. Students will review the overall process involved in manufacturing mass-produced items, develop an awareness of product construction, and become familiar with standards used in industry to determine quality.]

**242 Apparel Industry: Field Experience**
Spring-term break. 1 credit. S-U grades only. Approximate cost, $350–$400. $150 deposit required before spring semester begins; remainder required by February 15. Offered alternate years.
Staff.
A five-day field trip to a major apparel center such as New York City. Cost includes accommodation and museum visits. Tours cover fiber, fabric, and design firms; manufacturers; retailers; and promotion and media establishments of the multifaceted apparel and textile industry.

**245 Dress: A Reflection of American Women's Roles**
Fall and summer. 3 credits. Enrollment limited to 40 students. S-U grades optional.
M W 12:20–2:15. A. Racine.
Historical survey of changing patterns of American women's dress from the colonial period to the present day and of cultural, economic, and political forces that affected changes and women's development. Slides and film clips from the Cornell University Costume Collection will be used for lectures and discussion. Students will investigate various topics in fashion, etiquette, and the roles of women.

**264 Apparel Design II**
Fall. 4 credits. Each section limited to 10 students. Prerequisite: TXA 145. Recommended: two art or drawing courses. Apparel design majors should take TXA 264 and 367 in the same academic year, preferably during the sophomore year. Minimum cost of materials, $100; lab fee, $10.
M W 1:25–4:25. B. Ziegert.
This studio course examines two interrelated methods of apparel design. Through exercises, principles and processes of draping, fitting, and advanced flat pattern making are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

**300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged.
Hours to be arranged. Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

**331 The Textile and Apparel Industries**
Fall. 4 credits. Prerequisites: Economics 101 and 102 or CEH 110 and 111 and an upper-division course in either apparel or textiles, excluding field experiences. Course fee, $12.
Lecs, T R 8:30–9:55; rec, W 3:35 or W 7:30–8:20 p.m. S. Hester.
A critical review of the textile and apparel industries, including structure and marketing practices, and government policies that affect industry decisions and operations in such areas as energy, safety, and the environment. The role of labor unions is examined as well as the effects of international trade of textile and apparel products.

**336 Fundamentals of Color and Dyeing**
Fall. 3 credits. Prerequisite: College Natural Science Requirements. Lab fee, $15.
Lecs, M W F 10:10–11; lab, M 1:25–4:25. C. C. Chu.
Color is an extremely important and useful factor in everybody's daily life, e.g., the clothes we wear, the food we eat, the house we live in. This course will emphasize theories and scientific principles of color, providing a framework for the use of colors in design, marketing, or research. How colorants are used on fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to non-textile majors. Guest lecturers from industry will provide the practical aspects of color in business.

**337 Formation and Structure of Textile Fabrics**
Spring. 3 credits. Prerequisite: TXA 135. Recommended: college algebra.
Lecs, M W F 9:05. P. Schwartz.
This course covers (1) how fabrics are made (2) how the method of manufacture influences fabrics properties, and (3) how the method of manufacture limits potential applications of fabrics. The technical aspects of textile fabrics are covered in detail. Available production technologies are reviewed. Properties of woven, knitted, and nonconventional fabrics, methods of producing structural designs, and means of designing fabrics to specifications are covered.

**367 Apparel Design III**
Spring. 3 credits. Prerequisite: TXA 264. Recommended: 3 art or drawing courses. Apparel design majors should take TXA 264 and 367 in the same academic year, preferably during the sophomore year. Minimum cost of materials, $100; lab fee, $10.
M W 1:25–3:20. A. Racine.
Advanced apparel students prepared to challenge and refine their design skills will be presented with a variety of complex studio

problems in apparel design. The Cornell Costume Collection is used for illustration and inspiration.

**375 Visual Studies: Color and Surface Design**
Spring. 3 credits. Minimum cost of materials, $75; lab fee, $10.
T R 1:25–4:25. S. Niezelski.
This studio experience is augumented by slide presentations that demonstrate the use of decorative and repeat patterns as an applied textiles art form; lecture materials reference both the history and current trends in surface design and color. Projects explore design problem-solving skills, systems of color classification, and principles of two-dimensional form; portfolio presentation skills are emphasized.

**400–401–402–403 Special Independent Studies for Undergraduates**
Fall or spring. Credits to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

**400 Directed Readings**
For study that predominantly involves library research and independent reading.

**401 Empirical Research**
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

**402 Supervised Fieldwork**
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**403 Teaching Apprenticeships**
Fall or spring. 2–4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades only.
Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

**425 Computer-Aided Apparel Design**
Fall. 3 credits. Prerequisites: TXA 367 and 3 art or drawing courses. Minimum cost of materials, $50. Lab fee, $10.
Lecs, TR 2:30–4:25; lab, F 12:20–2:15. A. Racine.
An advanced studio course that uses microcomputers and the AutoCAD software program for solving a variety of problems in apparel design. The computer is used in all stages of the design process from conception to presentation.

**[431 The Textile and Apparel Industries—Field Experiences**
Spring-term break. 1 credit. Prerequisite: TXA 331. S-U grades only. Offered alternate years. Students are responsible for trip expenses, approximately $400. Not offered 1989–90.
S. Hester.
A one-week field experience in the textile regions of the South. Students have the opportunity to see various textile processes, including fiber production, knitting, weaving, dyeing and finishing, and designing. In addition, seminars with executives of each participating firm relate theory to current practice.]

**432 Product Quality Assessment**
Spring. 3 credits. Prerequisites: TXA 337 and Statistics. Lab fee, $15.
Lecs, M W 1:25–2:15; lab, W 2:30–4:25. A. Netravali.
This course covers the testing and evaluation of textile fibers, yarns, fabrics, and garments, with emphases on the meaning and use of standards, the philosophy of testing, quality control, and statistical evaluation of test data. Common day-to-day tests done in textile and apparel industry will be reviewed and their significance discussed. Laboratory sections will be used to introduce students to various test methods and to generate data for analysis and evaluation.

**439 Biomedical Materials and Devices for Human Body Repair**
Spring. S-U grades optional. Prerequisites: College Natural Science Requirement (Chem. 103–104, or Biol. 101–103).
Lecs,T 3:35. C. C. Chu.
Survey of materials and devices for repair of injured, diseases, or aged human tissues/organs. It includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, vision/hearing/voice, and drug control/release, and other external devices.

**446 Apparel Design: Intermediate Functional Clothing Design**
Spring. 3 credits. Prerequisites: TXA 146 and TXA 264 or permission of instructor. Not available to students who have taken DEA 445. 1 field trip, approximate cost $125; minimum cost of materials, $50; lab fee, $10.
Lecs,T R 10:10–11:40. S. Watkins.
Advanced physical theory concerned with the function of clothing. Special current topics in the field will be studied. Students will be engaged in individual, semester-long research projects that result in the design and development of an apparel item. A field trip to an industry site is planned.

**461 Issues in Management and Marketing**
Spring. 3 credits. Prerequisite: TXA 331 or permission of instructor. Course fee, $12.
Lecs, T R 1:25–2:55. S. Hester.
The course will focus on management and marketing issues of concern to the textile and apparel sector. Management topics will include labor and productivity issues, governmental interaction, adoption of technology, and the problem of foreign competition. Topics in distribution and marketing will address the importance of industry-consumer interaction, changes in the domestic and international marketplace, and the role of trade and consumer associations.

**465 Apparel Design: Product Development and Presentation**
Fall. 3 credits. Prerequisites: minimum of three drawing or art courses and TXA 367 or permission of instructor. Minimum cost, $100; lab fee, $10.
T R 1:25–4:25. B. Ziegert.
Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Lines of garments are developed to various stages from sketches to finished samples.

**600 Special Problems for Graduate Students**
Fall or spring. Credit to be arranged. S-U grades optional.
Hours to be arranged. Department faculty.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

**620 Physical Properties of Fiber-Forming Polymers and Fibers**
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years.
Lecs, M W 2:30–3:45. A. Netravali.
Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states. Dynamics of network response. Fiber structure, relationship between chemical structure and physical properties of man-made and natural fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods.

**621 Characterization of Fibrous Materials**
Spring. 3 credits. Prerequisite: TXA 620 or permission of instructor. S-U grades optional. Offered alternate years.
M W F 12:20. P. Schwartz.
A study of the principles of the major analytical characterization methods and the application of these methods to the study of fiber properties and structure. Topics include microscopy, x-ray diffraction, spectroscopy, magnetic resonance, and mass spectrometry. The student completing this course should be able to select methods and measurements that would best characterize a particular structural property.

**631 Textiles and Apparel: International Production and Trade**
Spring. 3 credits. Prerequisite: TXA 331, Econ 361, or permission of instructor. Offered alternate years. Course fee, $12.
T R 8:30–9:55. S. Hester.
The course will focus on worldwide patterns of production and trade in the textile and apparel industries. Reasons for international trade will be examined, as well as the international environment that underlies trade in those commodities. Other topics include the international organizations and agreements relevant to textiles and apparel and the resulting protective trade policies on the part of developed and developing nations.

**635 Special Topics in Textiles**
Spring. 1–3 credits. Prerequisite: permission of instructor.
M W F 10:10. C. C. Chu.
An in-depth study of one or more selected topics in polymers, fibers, or textiles. The course content will vary; consult instructor for more details.

**[636 Fiber Chemistry**
Fall. 3 credits. Offered alternate years. Not offered 1989–90. Prerequisite: permission of instructor.
Lecs, M W F 11:15. C. C. Chu.
An in-depth coverage of the important natural and synthetic fibers currently being used in industry, agriculture, medicine, apparel, and engineering. They include cellulose, silk, wool, polyesters, polyamides, polypropylenes, and acrylics. In each fiber, the synthesis of polymer, fiber formation, and structure, chemical and physical properties, and applications will be discussed.]

**637 Graduate Seminar in Textiles and Apparel**
Fall and spring. No credit.
R 12:20–1:10. K. Obendorf, fall; C. C. Chu, spring.
New developments, research, and topics of major concern to the field of textiles and apparel are discussed by faculty members, students, and speakers from industry, government, and academia.

**[639 Mechanics of Fibrous Structures**
Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1989–90.
M W F 10:10. P. Schwartz.
A study of the mechanics of textile structures: creep phenomena and the dynamic properties of fibers and yarns; idealized yarn and fabric models and their relationship to research data; special topics in the deformation of yarns and fabrics in tensile, shear, and compression stress; fabric bending and buckling; and the mechanical behavior of nonwoven textile materials.]

**899 Master's Thesis and Research**
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Field graduate faculty.

**999 Doctoral Thesis and Research**
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Field graduate faculty.

## FACULTY ROSTER

Allen, Josephine A., Ph.D., U. of Michigan. Assoc. Prof., Human Service Studies
Anderson, Carol L., Ph.D., Iowa State U. Assoc. Prof., Human Development and Family Studies
Avery, Robert B., Ph.D., U. of Wisconsin. Assoc. Prof., Consumer Economics and Housing

# NEW YORK STATE SCHOOL OF INDUSTRIAL AND LABOR RELATIONS

## ADMINISTRATION

David B. Lipsky, dean

Robert Smith, associate dean, academic affairs

Ronald L. Seeber, associate dean, extension and public affairs

Jonathon Levy, assistant dean, administration

James E. McPherson, assistant dean, Office of Student Services

Shirley Harper, librarian

Ronald G. Ehrenberg, director, research

Theodore Lindsley, director, school relations

Frances Benson, director, publications

Tom Herson, director of budget

Lawrence K. Williams, graduate faculty representative

John F. Burton, Jr., editor, *Industrial and Labor Relations Review*

## DEGREE PROGRAM

| | *Degree* |
|---|---|
| Industrial and Labor Relations | B.S. |

## THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university, and it tries to maintain the small-college atmosphere that would be expected of an institution that has about 630 undergraduates and approximately 100 graduate students.

The school is located in a unified complex of classroom buildings, library, and administrative and faculty offices clustered around two courtyards. Daily classroom activities and other school events provide opportunities for students and faculty to interact. ILR students are members of the larger Cornell community and participate fully in its programs.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 20 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in the field, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

## DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

### Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

### Economic and Social Statistics

Economic and Social Statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

### International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as the newly industrializing countries in Asia and the Third World.

### Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

### Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of Organizational Behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

### Personnel and Human Resource Studies

This department offers specialization in personnel management or human resource studies. Personnel management focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of personnel management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

## RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Science, and Doctor of Philosophy from Cornell.

### Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

### Counseling and Advising

New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

### Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to open access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement. For details, prospective students should contact ILR Admissions.

## STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

### Study In Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

### Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

## REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

### Required Courses

(55 credits)

The curriculum prescribes the courses and subjects listed in the table below, to be taken in the terms indicated during the freshman, sophomore, and junior years. In the senior year, all courses will be electives.

| *Course or Subject* | *Credits* | *Term* |
|---|---|---|
| **Freshman Year** | | |
| Freshman Seminars* | 6 | Fall and spring |
| Econ 101–102, Micro-Macroeconomics* | 6 | Fall and spring |
| Psych 101, Introduction to Psychology* | 3 | Fall |
| ILRCB 100, United States Labor History in the Nineteenth Century | 3 | Fall |
| ILROB 120, Macro Organizational Behavior and Analysis | 3 | Fall |
| ILRST 210, Statistics I | 4 | Spring |
| Any *two* of the following: | 6 | Spring |
| ILRCB 101, United States Labor History in the Twentieth Century | | |
| ILRLE 140, Development of Economic Institutions | | |
| ILROB 121, Micro Organizational Behavior and Analysis | | |
| Physical education | 0 | Fall and spring |
| **Sophomore Year** | | |
| ILRCB 201, Labor Relations Law and Legislation | 3 | Fall |
| ILRLE 240, Economics of Wages and Employment | 3 | Fall |
| ILRST 211, Statistics II | 3 | Fall |
| ILRPR 260, Personnel Management | 3 | Fall or spring |
| ILRCB 200, Collective Bargaining | 3 | Spring |
| Ag Econ 221, Financial Accounting | 3 | Spring |
| ILRCB 101 or ILRLE 140 *or* ILROB 121 | 3 | Spring |
| **Junior Year** | | |
| ILRLE 340, Economic Security | 3 | Fall or spring |

*College of Arts and Sciences

### Elective Courses

(65 credits)

From the courses offered by the school, students must select a minimum of 27 credits of ILR elective courses. No more than 9 of these credits may be satisfied by I&LR 499, Directed Studies, or I&LR 497–498, Internships, or I&LR 495, Honors Program.

Undergraduates are required to select one course in the humanities and one intensive writing course (each for a minimum of three credits) from a list of designated courses to be completed during the sophomore, junior, or senior years.

The remaining 33 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 33 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) will be billed for the additional tuition at the current cost per credit.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

## SCHEDULING AND ATTENDANCE

### Schedule Changes

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests *must be directed to the Office of Student Services* to avoid possible loss of academic credit.

### Class Attendance

It is each student's responsibility to attend all scheduled classes unless approved excuses have been given by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1) participation in authorized university activities such as athletic events, dramatic productions, or debates;

2) medical problems supported by a record of clinic or infirmary treatment;

3) serious illness or death in the immediate family;

4) other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services *before the date of expected absence*. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

## ACADEMIC STANDING AND GRADES

### Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;

2) using or obtaining unauthorized assistance in any academic work;

3) fabricating data in laboratory or field work;

4) giving fraudulent assistance to others;

5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

### Dean's List

A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;

2) a minimum course load for the term of 12 letter-graded credits;

3) completion of all courses registered for at the beginning of the term;

4) satisfaction of all good-standing requirements.

### Academic Standing

Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C– (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;

2) no failing grades in any course, including physical education;

3) a cumulative average of C– (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

### Involuntary Separation from the School for Academic Reasons

A student may be denied permission to reregister at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;

2) to maintain an average of 1.7 in any term after a previous record of warning;

3) to achieve good standing after being on warning any two previous semesters;

4) two or more courses in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

### S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives *only*, not in directed studies;

2) students are limited to registering in two S-U courses a term;

3) S-U registration is limited to 4 credits for each course;

4) students registering for S-U grades must be in good standing;

5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C– and a grade of S for any grade of C– or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. *There are no exceptions* to this restriction, and appeals will not be accepted.

### Grades of Incomplete

A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work may be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

## SPECIAL ACADEMIC PROGRAMS

In order to meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

### Dual Registration in the Johnson Graduate School of Management

Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum

requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 319 Malott Hall, and a counselor at the Office of Student Services.

## Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

## Internships

The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

## Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 3 credits in each term) to research, write, and then defend the thesis.

## Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has agreements with universities in Germany, Israel, England, and the Scandinavian countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, in the Center for International Studies, 130 Uris Hall.

Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

# COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

J. Burton, chair; G. Brooks, T. Crivens, D. Cullen, C. Daniel, I. DeVault, M. Gold, C. Gramm, J. Gross, H. Katz, G. Korman, R. Lieberwitz, S. Kuruvilla, D. Lipsky, P. Ross, N. Salvatore, R. Seeber, J. Windmuller

**100 Introduction to U.S. Labor History: Nineteenth Century**
Fall. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

**101 Introduction to U.S. Labor History: The Twentieth Century**
Spring. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

**200 Collective Bargaining**
Fall or spring. 3 credits.
D. Cullen, C. Gramm, H. Katz, D. Lipsky.
A comprehensive study of collective bargaining; the negotiation and scope of contracts; the day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; and the problem of dealing with industrial conflict.

**201 Labor Relations Law and Legislation**
Fall, spring, or summer. 3 credits.
T. Crivens, M. Gold, J. Gross, R. Lieberwitz.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and bargaining takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method and to legal and constitutional problems of governmental regulation of industrial and labor relations.

**301 Labor Union Administration**
Fall. 3 credits. Prerequisites: ILRCB 100 and 201.
G. Brooks, R. Seeber
Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations: the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different aspects of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these will involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention will be given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

**303 Research Seminar in the Social History of American Workers**
Fall or spring. 4 credits. Limited to upperclass students who have demonstrated their ability to undertake independent work and who have received permission of the instructor.
G. Korman.
An examination of a different subject each year.

**304 Seminar in the History, Administration, and Theories of Industrial Relations in the United States**
Fall or spring. 4 credits. Prerequisite: permission of instructor.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
Designed to explore the social, economic and political background of industrial relations in the history of the United States. Examines a different subject each year.

**305 Labor in Industrializing America: 1865–1920**
Fall. 3 credits. Prerequisites: ILRCB 100 and 101.
N. Salvatore.
Examines the experience of working people in the years between the Civil War and World War I. It will explore both the workers themselves—their organization, diverse cultures, ethnic and racial traditions, and political activities—and the dramatic changes in industry that restructured American life during this period.

**381 Jewish Workers in Europe and America, 1835–1948**
Fall or spring. 4 credits. Open to sophomores, juniors, and seniors.
G. Korman.
This course in comparative history examines the complex experiences of the Yiddish-speaking immigrant workers and their families. A special subject of interest is the extraordinary history of the Jewish working classes between 1924 and 1948.

**382 American Business and Workers of the World Since 1840**
Fall or spring. 4 credits.
G. Korman.
This social history of economic affairs and institutions examines the subjects of work and labor from the perspective of American business. In particular, the course focuses upon corporate capitalists in their capacities as profit seekers, employers of segmented workers, managers of production and distribution, and citizens of the republic.

**384 Women and Unions**
Fall. 4 credits.
I. DeVault.
This seminar will explore women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.

**400 Union Organizing**
Spring, weeks 1–7. 2 credits.
2 meetings each week. D. Cullen, R. Donovan.
This course explores various aspects of unions' attempts to organize workers: why some workers join unions and others do not; the techniques used by both unions and employers during organizing campaigns; and the present law of organizing and proposed amendments to that law. Includes an examination.

**403 The Law of Workers' Compensation**
Fall, weeks 1–7. 2 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
A survey of legal aspects of workers' compensation, the program that provides cash benefits, medical care, and rehabilitation services to workers disabled by work-related injuries and diseases.

**404 Contract Administration**
Fall, weeks 1–7. 2 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501.
R. Seeber.
This course bridges the gap between ILRCB 200 (500), Collective Bargaining, and ILRCB 602, Arbitration. It focuses on various aspects of dispute settlement process prior to final resolution. The intent of the course is to expand the knowledge of students rather than to develop personal skills. It includes such topics as (1) the historical development of contractual grievance process, (2) the merits of various alternative processes that have been adopted by unions and managements in the United States, (3) the impact of external law on the behavior of the parties in the adjustment process, (4) a comparison of the U. S. system with systems in other industrialized economies, (5) current issues and problems in the systems, (6) nonunion grievance processes, and (7) ongoing experimental alternatives to the standard systems.

**406 History of the Black Worker in the United States**
Fall. 3 credits. Prerequisite: ILRCB 100.
J. Gross.
Intended to introduce the student to the history of the black worker in the United States through a review and analysis of the existing literature of black labor history and through source documents from the National Archives. Discussions will center around the black worker in agriculture, industry, and government; black worker migrations; black workers and organized labor; and black workers, discrimination, and the law.

**407 Contemporary Trade Union Movement**
Fall. 3 credits. Prerequisites: ILRCB 100 or 502, upperclass standing.
N. Salvatore.
An examination of contemporary trade union issues in the context of labor's history since World War II. Among the issues to be discussed are centralization of union power, union democracy, political action, and strategies of collective bargaining. A series of speakers from the union movement will address the class. Midterm, final, and term paper are required.

**484 Employment Discrimination and the Law**
Fall. 4 credits. Prerequisite: ILRCB 201 or 501 or equivalent.
T. Crivens, M. Gold.
An examination of legal problems involving employment discrimination based on race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions, and other personnel policies, practices, and procedures are discussed. The requirements of affirmative action under Executive Order 11246, as amended, are analyzed. Special attention is given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

**485 The Law of Occupational Safety and Health**
Fall, weeks 7–14. 2 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
Primary concern is legal developments concerning the Occupational Safety and Health Act of 1970. Limited attention to related legal issues such as arbitration of safety and health issues.

**488 Liberty and Justice for All**
Spring. 3 credits. Limited to 16 students.
M. Gold.
An examination of contemporary issues from the perspectives of philosophy, law, and the social sciences. Topics will be selected from among the following: affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

**495 Honors Program**
Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an ILR faculty member who agrees to act as thesis supervisor; and (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships.

Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

**497–498 Internship**
Fall or spring. 497, 3 credits; 498, 6 credits.
Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the Committee on Academic Standards and Scholarship. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

**499 Directed Studies**
Fall or spring. 3 credits.
For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Office of Student Services *at the time of course registration* to arrange for formal submission of their projects for approval by the Academic Standards and Scholarship Committee.

**500 Collective Bargaining**
Fall or spring. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently.
D. Cullen. C. Gramm, H. Katz, D. Lipsky.
A comprehensive study of collective bargaining, with special emphasis on philosophy, structures, process of negotiations, and administration of agreements. Attention is also given to problems of handling and settling industrial controversy, the various substantive issues, and important developments and trends in collective bargaining.

**501 Labor Relations Law and Legislation**
Fall, spring, or summer. 3 credits.
T. Crivens, M. Gold, J. Gross, R. Lieberwitz.
A survey and analysis of the labor relations law that examines the extent to which the law protects and regulates concerted action by employees in the labor market. The legal framework within which the collective bargaining takes place is considered and analyzed. Problems of the administration and enforcement of the collective agreement are considered, as are problems of protecting the individual member-employee rights with the union.

**502 History of Industrial Relations in the United States since 1865**
Spring. 3 credits.
C. Daniel, I. DeVault, G. Korman, N. Salvatore.
This introductory survey course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

**600 Advanced Seminar in Labor Arbitration**
Spring. 3 credits. Limited to juniors, seniors. and graduate students. Prerequisites: ILRCB 602 or equivalent and permission of instructor.
J. Gross.
An advanced seminar in labor arbitration emphasizing the practical aspects of current labor arbitration techniques and problems. Subjects considered range from laboratory exercises in the presentation of an arbitration case, the preparation of prehearing and posthearing briefs, and the writing of an arbitration opinion and award, to the investigation and evaluation of the experience of labor arbitrators, with selected case problems arising in state and federal employment and public education as well as in the private sector.

**601 The Bargaining Process: Theory and Practice**
Fall. 3 credits. Prerequisite: ILRCB 200/500.
D. Lipsky.
Focus is on theories of the bargaining process, including economic, behavioral, game-theoretic, political, and social-psychological approaches to the bargaining problem. Will consider union wage policy, particularly the formulation of union goals in bargaining. Union and management preparation for negotiations, bargaining strategies and tactics, and bargaining power are some of the facets of the bargaining process that will be discussed. Attempts at empirical verification of various bargaining theories will also be considered. Theoretical and analytical principles will be developed in assigned readings and class discussions. The application and practical relevance of these principles will be explored through mock negotiations and other exercises.

**602 Arbitration**
Fall or spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 200; graduate students, ILRCB 500; permission of instructor.
J. Gross.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

**603 Governmental Adjustment of Labor Disputes**
Fall or spring. 3 or 4 credits. Prerequisites: undergraduates, ILRCB 200; graduate students, ILRCB 500.
D. Cullen.
An examination of the various governmental techniques for dealing with labor disputes in both the private and public sectors, including mediation, fact-finding arbitration (both voluntary and compulsory), the use of injunctions, and seizure. The course also examines the application of these techniques under the Railway Labor Act, Taft-Hartley Act, and various state acts.

**604 Readings in the Literature of American Radicalism and Dissent**
Fall or spring. 3 credits. Limited to seniors and graduate students.
N. Salvatore.
Each term, concentration is on a different historical aspect of American radicalism and dissent.

**605 Readings in the History of Industrial Relations in the United States**
Fall. 3 credits. Limited to seniors and graduate students.
C. Daniel, G. Korman, N. Salvatore.
A seminar covering, intensively, original printed sources and scholarly accounts for different periods in American history.

**606 Theories of Industrial Relations Systems**
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, ILRCB 100, 101, 200; graduate students, ILRCB 500.
H. Katz.
This course will trace the evolution of theory and research on industrial relations. Topics include: theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship with unionization, models of strikes, empirical assessments of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

**607 Arbitration and Public Policy**
Spring. 3 credits. Limited to 10 ILR students and 10 law students. Prerequisites: ILRCB 201 and permission of instructor.
J. Gross.
Labor arbitration in the public and private sectors. Students will write research memoranda, briefs, and arbitral opinions on various substantive and procedural topics. Forty to fifty pages of written work will be expected. There will also be opportunity to participate in simulated arbitration proceedings.

**608 Special Topics in Collective Bargaining Labor Law, and Legislation**
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 201; graduate students, ILRCB 502.
Staff.
The areas of study are determined each semester by the instructor offering the seminar.

**609 Law of Workers' Compensation**
Fall. 3 or 4 credits. Prerequisite: ILRCB 201/501 or permission of instructor.
J. Burton.
A survey of legal aspects of workers' compensation, the program that provides cash benefits, medical care, and rehabilitation services to workers disabled by work-related injuries and diseases. Includes a brief introduction to the disability benefits provided by the Social Security program and to negligence suits by injured workers.

**650 Service Work and Workers in Historical Perspective**
Fall. 3 credits.
I. DeVault.
This course takes a historical perspective on the development of a service economy in the United States. Readings will include general and theoretical works, but the main focus will be recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students will explore primary sources for research on the subject and write research papers.

**651 Industrial Relations in Transition**
Spring. 3 credits. Limited to seniors and graduate students.
H. Katz.
Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Will review recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Will also review the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material will focus on industrial relations practice in the private sector in the United States, although some attention will be paid to developments in Western Europe, the United Kingdom, and Japan.

**655 Employment Law**
Spring. 3 credits. Prerequisites: undergraduates, ILRCB 201; graduate students, ILRCB 501.
M. Gold, C. Gramm, or J. Burton.
This course will examine a number of major federal and state laws designed to protect workers in their employment relationships. The historical and theoretical rationales; the major statutory, judicial, and administrative developments; and evidence of the effectiveness of each law will be examined. Where pertinent, consideration will also be given to current controversies surrounding the laws. The material covered will be selected from the following: the Fair Labor Standards Act, unemployment insurance, workers' compensation, the Occupational Safety and Health Act, the Employee Retirement Income Security Act, the doctrine of employment at will, Social Security, workers' right-to-know, plant closings, and protection of workers' privacy.

**680 Problems in Union Democracy**
Fall or spring. 3 credits.
M. Gold, P. Ross.
Unions are considered as an example of private government, and union democracy is examined by standards and customary practices in both public and private governments. Included are such elements as elections; self-government by majority; rights of minorities; the judicial process, including impartial review; local-national relationships; constituency and representation; the legislative process; and executive power and functions. The regulation of private government by the state will be considered.

**681 Selected Topics in Labor and Employment Law**
Fall or spring. 3 credits. Prerequisite: ILRCB 201/501 or equivalent.
M. Gold, R. Lieberwitz.
A survey of the law of employment discrimination, internal union democracy, public sector labor relations, and individual rights in the workplace such as privacy, free speech, and due process. Topics covered may vary with the instructor.

**682 Seminar in Labor Relations Law and Legislation**
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor.
R. Lieberwitz.
Legal problems in public employment and other areas of labor relations affecting the public interest.

**683 Research Seminar in the History of Industrial Relations**
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502.
G. Brooks, C. Daniel, I. DeVault, G. Korman, N. Salvatore.
The areas of study are determined each semester by the instructor offering the seminar.

**685 Collective Bargaining in Public Education**
Spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor.
Staff.
The seminar consists of a study of the legal, financial, administrative, and educational problems raised by collective bargaining in the public schools. Major attention will be directed at existing statutes covering the employment arrangement for public school employees, the content and the administration of collective agreements, the ideological postures of teacher organizations, and the resolution of negotiating impasses. Individual and group research projects will be required.

**686 Collective Bargaining in the Public Sector**
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501.
J. Burton, H. Katz.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

**687 Current Issues in Collective Bargaining**
Fall or spring. 3 or 4 credits. Limited to 25 students. Prerequisites: ILRCB 200/500, and permission of instructor.
D. Cullen, D. Lipsky.
An intensive study of the most significant current issues and problems facing employers and unions in their relations with each other, with particular emphasis on the substantive matters in contract negotiations and administration of the provisions of collective bargaining agreements. A major research paper is usually required.

**688 The Political Economy of Collective Bargaining**
Fall. 3 credits. Prerequisites: undergraduates, ILRCB 200 and ILRLE 240; graduate students, ILRCB 500 and ILRLE 540, or permission of instructor.
Staff.
Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. Examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Topics include neoclassical and structural-institutionalist analyses of union power; the effect of unions on compensation, productivity, prices, and income inequality; union growth and strikes; pattern setting and bargaining structures; multinational and conglomerate corporate structures and collective bargaining; the decline of union bargaining power; unions and inflation; and concession bargaining. Approximately half the course is spent on case studies of collective bargaining in various industries (auto, steel, construction, etc.) in the private sector. A term paper is required. Topics are covered in a nonstatistical fashion.

**689 Constitutional Aspects of Labor Law**
Spring. 3 credits.
R. Lieberwitz.
In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study will focus on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

**703 Theory and Research in Collective Bargaining**
Spring. 3 credits. Open to graduate students who have had ILRCB 500 and ILROB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510.
C. Gramm, D. Lipsky.
This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

**705 The Economics of Collective Bargaining**
Spring. 3 credits. Prerequisites: undergraduates, ILRCB 500; graduate students, ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor.
H. Katz, D. Lipsky.
Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productibility, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

**784 Employment Discrimination and the Law**
Fall. 4 credits. Prerequisite: ILRCB 501 or equivalent.
T. Crivens, M. Gold.
An examination of legal problems involving employment discrimination based on race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions and other personnel policies, and practices and procedures are discussed. The requirements of affirmative action under Executive Order 11246, as amended, are analyzed. Special attention is given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

**798 Internship**
Fall or spring. 1–3 credits.
Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 798 must be approved by the faculty member who will supervise the project.

**799 Directed Studies**
Fall or spring. Credit to be arranged.
For individual research conducted under the direction of a member of the faculty.

**980 Workshop in Collective Bargaining, Labor Law, and Labor History**
Fall and spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates in the department. S-U grades only.
Staff.
This workshop is designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

## ECONOMIC AND SOCIAL STATISTICS

I. Blumen, chair; S. Beran-Ghosh, A. Hadi, P. McCarthy, P. Velleman, M. Wells.

**210 Statistical Reasoning I**
Fall or spring. 4 credits. Not open to engineering or graduate students. Attendance at the first discussion section of the term is essential.
An introduction to the basic concepts of statistics: measures of location and dispersion, estimation and confidence intervals, hypothesis tests, regression and correlation. Students are taught to use a computer at the beginning of the term and use it for weekly assignments.

**211 Statistical Reasoning II**
Fall or spring. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. Attendance at the first discussion section of the term is essential.
A continuation of ILRST 210. Application of statistical techniques to the social sciences. Topics include statistical inference, review of simple regression, multiple regression and correlation, applications of regression, elements of time series analysis, and the design of sample surveys. A computer is used throughout the course. (Students who have taken an introductory course in statistics without a computer will be expected to obtain brief instruction during the first few weeks of the semester.)

**310 Design of Sample Surveys**
Fall. 3 credits. Prerequisite: two terms of statistics.
M. Wells.
Application of statistical methods to the sampling of human populations. A thorough treatment of the concepts and problems of sample design with respect to cost, procedures of estimation, and measurement of sampling error. Analysis of nonsampling errors and their effects on survey results (for example, interviewer bias and response error). Illustrative materials are drawn from such fields as market research and attitude and opinion research.

**312 Applied Regression Methods**
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent.
A. Hadi.
The course starts with a review of those parts of matrix algebra that provide the vocabulary and skill necessary to construct and manipulate linear regression models. The standard least-squares theory is then developed, and regression analysis techniques are applied to problems arising in economics, industry, government, and the social sciences. Computer packages are used as an aid to obtain problem solutions. Additional topics are deviation from assumptions, multicollinearity, variable selection methods, and analysis of variance.

**313 Graphical Methods for Data Analysis**
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent.
P. Velleman.
Classical and recently developed graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the near future: graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.

**410 Techniques of Multivariate Analysis**
Fall. 3 credits. Prerequisite: two statistics courses or permission of instructor.
I. Blumen.
The techniques of multivariate statistical analysis, the associated assumptions, the rationale for choices among techniques, and illustrative applications. Some matrix algebra and related mathematics are introduced. Includes some regression; correlation; principle components; multivariate tests on means, variances, and covariances; relations between sets of variates; and discriminatory analysis.

**411 Statistical Analysis of Qualitative Data**
Spring. 3 credits. Prerequisite: two statistics courses or permission of instructor.
I. Blumen.
An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates, rank-order methods, and other nonparametric statistical techniques, including those related to chi-squared.

**499 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**510 Statistical Methods for the Social Sciences I**
Fall or spring. 4 credits.
A nonmathematical course for graduate students in the social sciences without previous training in statistical method. Emphasis is on discussion of technical aspects of statistical analysis and on initiative in selecting and applying statistical methods to research problems. The subjects ordinarily covered include analysis of frequency distributions, regression and correlation analysis, and selected topics from the area of statistical inference. Students are taught to use a computer at the beginning of the term and use it for weekly assignments.

**511 Statistical Methods for the Social Sciences II**
Fall or spring. 3 credits. Prerequisite: ILRST 510 or an equivalent introductory statistics course.
This is a second course in statistics for graduate students that emphasizes applications in the social sciences. Topics include review of simple linear regression, multiple regression (theory, model building, model violations), and analysis of variance. Statistical computing packages are used extensively. (Students who have taken an introductory course in statistics without a computer course will be expected to obtain brief instruction during the first few weeks of the semester.)

**610 Seminar in Modern Data Analysis**
Spring. 3 credits. Prerequisite: two statistics courses or permission of instructor.
P. Velleman.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, robust methods, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices (ILRST 312 may be taken concurrently), and some experience using a computer.

**711 Sensitivity Analysis in Linear Regression**
Fall. 3 credits. Prerequisite: ILRST 312 or equivalent.
A. Hadi.
This course is an attempt to narrow the gap between the theory and practical application of the linear regression model. Classical and recently developed statistical procedures are discussed. Students will be expected to do extensive analysis of real-life data sets using computer-packaged programs. Topics include role of variables in a regression equation, regression diagnostics (outliers, leverage points, influential observations), generalized linear models, errors-in-variables, and multicollinearity.

**712 Theory of Sampling**
Fall. 3 credits. Prerequisite: calculus and at least one semester of mathematical statistics.
P. J. McCarthy.
A companion course to ILRST 310, Design of Sample Surveys, stressing the development of the fundamentals of sampling theory. Attention is paid to recent progress in the field. Occasional illustrative material is given to indicate the application of the theory.

**713 Empirical Processes with Statistical Applications**
Fall. 3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor.
M. Wells.
The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models will be considered. The large sample properties of the proposed procedures will be discussed in detail using recent extensions of functional central limit theorems for martingales.

**799 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

## INTERNATIONAL AND COMPARATIVE LABOR RELATIONS

G. Fields, chair; J. Bishop, G. Boyer, G. Korman, J. Windmuller

**330 Comparative Industrial Relations Systems: Western Europe**
Fall. 3 credits (1 additional credit may be arranged with the instructor). Open to juniors and seniors.
J. Windmuller.
An introduction to contemporary industrial relations in several Western industrialized countries, including Great Britain, France, West Germany, and Sweden. The emphasis will be on trade unions, employers and their associations, collective bargaining, the role of government, and current policy issues.

**331 Comparative Industrial Relations Systems: Non-Western Countries**
Spring. 3 credits (1 additional credit may be arranged with the instructor). Open to juniors and seniors.
J. Windmuller.
A study of the industrial relations systems of less-developed countries and industrialized non-Western countries, including Japan, the Soviet Union, Yugoslavia, India, and several others. Emphasis is on government labor policies, trade unions, and collective bargaining. Also included is a review of international organizations concerned with labor problems.

**332 Labor in Developing Economies**
Fall. 3 credits. Prerequisite: ILRLE 240, Economics 311, or permission of instructor.
G. Fields.
The economic problems of labor in less-developed nations. Among the subjects included are determinants of income and wage structures in less-developed countries; labor demand and unemployment; labor supply and migration; human resource policy; and development strategy and employment growth.

**334 Industrial Relations in Non-Western Countries**
Spring. 2 credits. 7 weeks.
J. Windmuller.
A review of the development and current state of industrial relations systems in Eastern Europe and selected countries in Africa, Asia, and Latin America. The review will concentrate on government labor policies, employment relations, and the role of trade unions.

**337 Special Topics in International and Comparative Labor Relations**
Fall. Second seven weeks. 2 credits.
D. Soskice.
The course will analyze the evidence and debates concerning the connection between industrial relations systems and economic performance of Western European countries. Topics include the influence of industrial relations and labor market institutions on unemployment and economic growth. The course also will assess the success of recent efforts across countries to modify industrial relations and labor market institutions and processes.

**381 Jewish Workers in Europe and America, 1835–1948**
Fall or spring. 4 credits. Open to sophomores, juniors, and seniors.
G. Korman.
For description, see the section Collective Bargaining, Labor Law, and Labor History.

**430 European Labor History**
Fall. 3 credits.
J. Windmuller.
The development of trade unions in Great Britain, France, and Germany between 1850 and 1950. Patterns of union organization, political party trade union links, the growth of industrial relations systems, and the evolution of public policies toward labor are emphasized.

**448 Topics in Twentieth Century Economic History: The Economics of Depression and the Rise of the Managed Economy**
Fall. 4 credits. Prerequisites: ILRLE 240 or Economics 312.
G. Boyer.
For description, see the section on Labor Economics.

**499 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**530 Comparative Industrial Relations Systems: Western Europe**
Fall. 3 credits. For graduate students.
J. Windmuller.
Students in this course attend the lectures in ILRIR 330 (see description for ILRIR 330). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 330 and related topics.

**531 Comparative Industrial Relations Systems: Non-Western Countries**
Spring. 3 credits. For graduate students. Not offered 1988–89.
J. Windmuller.
Students in this course will attend the lectures in ILRIR 331 (see description for ILRIR 331). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 331 and related topics.

**532 Labor in Developing Economies**
Spring. 3 credits. For graduate students.
G. Fields.
Students in this course attend the lectures in ILRIR 332 (see description for ILRIR 332). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 332 and additional topics.

**534 Industrial Relations in Non-Western Countries**
Spring. 2 credits. 7 weeks.
J. Windmuller.
Students in this course attend the lectures in ILRIR 334 (see description for ILRIR 334). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRIR 334 and additional topics.

**630 Seminar in International and Comparative Labor Problems**
Spring. 3 credits.
J. Windmuller.
This seminar will be concerned with international aspects of labor organizations and industrial relations. Specific topics will include an examination of international labor movements, the role of the International Labor Organization, the international affairs interests of unions in the United States and other countries, and the labor relations policies of multinational corporations.

**698 International Human Resource Policies and Institutions**
Fall. 3 credits.
J. Bishop.
For description, see the section on Personnel and Human Resource Studies.

**799 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

## LABOR ECONOMICS

R. Hutchens, chair; J. Abowd, R. Aronson, G. Boyer, J. Burton, G. Clark, R. Ehrenberg, G. Fields, W. Galenson, G. Jakubson, O. Mitchell, R. Smith

**140 Development of Economic Institutions**
Spring. 3 credits. Prerequisite for non-ILR students: permission of instructor.
G. Boyer.
Provides students with an understanding of the historical roots of the economic system currently dominant in Western Europe and the United States. The course will focus on (a) the process of European economic growth prior to 1914, (b) the effect of industrialization on labor in Great Britain, and (c) the historical evolution of economic thought from Adam Smith to J. M. Keynes.

**240 Economics of Wages and Employment**
Fall, spring, or summer. 3 credits. Prerequisites: Economics 101–102 or equivalent.
Staff.
This course analyzes the characteristics and problems of the labor market by applying to them the theory and elementary tools of economics. Behavior on both the demand (employer) and supply (employee) sides of the market is analyzed to gain a deeper understanding of the effects of various government programs targeted at the labor market. Topics covered include education and training, fringe benefits and the structure of compensation, labor-force participation and its relationship to household production, issues regarding occupational choice, an analysis of migration, labor-market discrimination, and the effects of unions.

**332 Labor in Developing Economies**
Spring. 3 credits.
G. Fields.
For description, see the section International and Comparative Labor Relations.

**340 Economic Security**
Fall or spring. 3 credits.
J. Burton, R. Hutchens, G. Jakubson.
The economic and social effects of income security measures. Analysis of programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. An examination is made of proposals for amending or modifying economic security measures.

**343 Problems in Labor Economics**
Fall or spring. 3 or 4 credits.
Staff.
Devoted to new policy issues and to recent literature in the field. The specific content and emphasis varies in response to the interests of the faculty member teaching the course. A course will be offered in 1989–90 on social experiments and economic policy.

**[344 Comparative Economic Systems: Soviet Russia**
Fall. 4 credits. Not offered 1989–90.
A comparative analysis of the principles, structure, and performance of the economy of Soviet Russia. Special attention is devoted to industry and labor.]

**345 Corporate Finance and Labor Markets**
Spring. 4 credits.
J. Abowd.
The course covers the following topics (with emphasis on labor market applications and implications): (1) the concept of net present value, the valuation of real corporate assets, and the relations between risk and return; (2) capital budgeting decisions and the cost of capital; (3) investment financing decisions and the role of financial markets; (4) capital structure, the Modigliani-Miller propositions, and the relation between debt and equity financing; (5) valuation of corporate debt, options, and other financial assets; and (6) financial planning mergers, and portfolio management.

**348 The Economics of Unemployment**
Fall. 4 credits. Prerequisite: ILRLE 240/540 or permission of instructor.
R. Smith.
This course introduces students to several issues fundamental to an understanding of unemployment: the social costs; definitional questions and measurement problems; the patterns of unemployment; and the various types of unemployment, their causes, and the policies that can or have been pursued to alleviate unemployment. The course is designed for undergraduate and graduate students who have taken a survey course in labor economics or its equivalent.

**441 Income Distribution**
Fall. 4 credits. Open to upperclass and graduate students.
R. Hutchens.
Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

**442 Economics of Employee Benefits**
Spring. 4 credits.
O. Mitchell.
An analysis and appraisal of private health, welfare, and pension plans. Consideration of the origin and development of employer, union, and joint programs and a critical examination of the financing, administration, and general effectiveness of the plans.

**446 Labor Market Discrimination**
Fall or spring. 4 credits.
O. Mitchell.
Examines differences in labor market rewards by gender, race, age, and other worker characteristics from both a theoretical and an empirical perspective. Economic modeling and statistical methodology (including computer analysis) are stressed. Students need some background in microeconomics and data analysis.

**447 Economic Policy toward the Aging**
Fall. 4 credits.
O. Mitchell.
Explores labor market and social policy concerning older workers and retirees. Topics to be covered include labor market trends of the elderly, labor market institutions affecting older people (e. g., mandatory retirement, unemployment, pensions), and government policies, Social Security, health insurance, and retirement income regulation. Cross-national perspectives will be addressed as well.

**448 Topics in Twentieth Century Economic History: The Economics of Depression and the Rise of the Managed Economy**
Fall. 4 credits. Prerequisites: ILRLE 240 or Economics 312.
G. Boyer.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the rise of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

**495 Honors Program**
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**497–498 Internship**
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**499 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**532 Labor in Developing Economics**
Spring. 3 credits.
G. Fields.
For description, see the section International and Comparative Labor Relations.

**540 Labor Economics**
Fall or summer. 3 credits. Prerequisites: Economics 101–102 or equivalent. Required of graduate students majoring or minoring in labor economics and M.I.L.R. candidates.
Staff.
This course analyzes the characteristics and problems of the labor market by applying to them the theory and elementary tools of economics. Behavior on both the demand (employer) and supply (employee) sides of the market is analyzed to gain a deeper understanding of the effects of various government programs targeted at the labor market. Topics covered include education and training, fringe benefits and the structure of compensation, labor-force participation and its relationship to household production, issues regarding occupational choice, an analysis of migration, labor-market discrimination, and the effects of unions.

**541 Social Security and Protective Labor Legislation**
Spring. 3 credits. Prerequisite: ILRLE 540. Normally required of graduate students majoring or minoring in labor economics and required of M.I.L.R. candidates.
J. Burton, R. Hutchens, G. Jakubson.
The economic and social effects of income security measures. Analysis of programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. An examination is made of proposals for amending or modifying economic security measures.

**642 Work and Welfare: Interactions between Cash-Transfer Programs and the Labor Market**
Fall. 4 credits. Prerequisite: some familiarity with microeconomics.
R. Hutchens.
Emphasizes policy issues in analyzing the relationship between the labor market and cash-transfer programs such as social security, public assistance, and unemployment and wages in determining the level and distribution of cash transfers. Investigates the connection between cash transfers and labor supply. Topics include determinants of cash-transfer demand and supply, the negative income tax experiments, and program incentives for withdrawal from the labor force (for example, incentives for early retirement implicit in old-age insurance). A paper on a specific program is required.

**643 Problems in Labor Economics**
Fall or spring. 3 or 4 credits.
Staff.
Devoted to new policy issues and to recent literature in the field. The specific content and emphasis varies in response to the interests of the faculty member teaching the course. Courses offered in 1989–90 include economic policy toward the elderly, economics of collective bargaining, twentieth-century economic history, income maintenance policy, economics of discrimination, and models for limited dependent variables and panel data.

**644 The Economics of Occupational Safety and Health**
Spring. 4 credits.
R. Smith.
The course analyzes the problem of occupational injuries and illnesses in the United States. The first section concentrates on legal requirements, judicial interpretations, and legal implications of the Occupational Safety and Health Act, then shifts to such questions as the need for, and appropriate goals of, the act; the stringency of safety standards considered in a benefit-cost framework; the difficulties in enforcing the act; and estimates of the impact of the act.

**647 Evaluation of Social Programs**
Fall. 4 credits.
R. Ehrenberg.
An introduction to the methodologies used by economists to evaluate the impacts of social-action programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case studies are considered to illustrate the uses of these techniques, to acquaint the student with major current government programs and legislation, and to estimate these programs' economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

**648 Economic Analysis of the University**
Spring. 4 credits.
R. Ehrenberg.
This course seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings will be supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

**741 Analysis of Longitudinal Data in the Social Sciences**
Spring. 4 credits.
G. Jakubson.
Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. The focus will be on both estimation and specification testing of these models. The course will consider how these statistical models are linked to underlying theories in the social sciences. Course coverage will include panel data methods (including fixed vs. random effects models for both linear and non-linear systems) and, if time permits, duration analysis.

**742 Economics of Employee Benefits**
Spring. 3 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 442 (see description for 442). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in 442 and additional topics.

**744 Seminar in Labor Economics**
Fall. 3 credits. ILRLE 744 and 745 constitute the Ph.D.-level sequence in labor economics.
R. Ehrenberg.
Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

**745 Seminar in Labor Economics**
Spring. 3 credits.
R. Hutchens G. Jakubson.
Reading and discussion of selected topics in labor economics in the fields of theory, institutions, and policy.

**746 Labor Market Discrimination**
Fall or spring. 4 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 446 (see description for ILRLE 446). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRLE 446 and additional topics.

**747 Economic Policy toward the Aging**
Fall. 4 credits.
O. Mitchell.
Students in this course attend the lectures in ILRLE 447 (see description for 447). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in 447 and additional topics.

**798 Internship**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**799 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**940 Workshop in Labor Economics**
Fall or spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.
Focus is on the formulation, design, and execution of dissertations. Preliminary plans and portions of completed work are presented for discussion.

## ORGANIZATIONAL BEHAVIOR

T. Hammer, chair; S. Bacharach, S. Barley, L. Gruenfeld, J. Sniezek, R. Stern, P. Tolbert, H. Trice, L. Williams

**120 Introduction to Macro Organizational Behavior and Analysis**
Fall. 3 credits.
Staff.
The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The nature of industrial organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, and bureaucracy.

**121 Introduction to Micro Organizational Behavior and Analysis**
Spring or summer. 3 credits.
Staff.
Deals with the relationship between the individual and the organization and such basic psychological processes as need satisfaction, perception, attitude formation, and decision making. The individual is described and examined as a formal and informal group member. Within this area, particular emphasis is placed on leadership, problem solving, and conflict resolution.

**222 Studies in Organizational Behavior: Regulating the Corporation**
Fall or summer. 3 credits.
R. Stern.
The course will examine public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, change, and political influence. The role of interest groups such as consumer or citizens organizations is also considered. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, and rate-setting regulations.

**320 The Psychology of Industrial Engineering**
Fall. 4 credits.
T. Hammer.
A study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. The course examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; conflict.

**322 Comparative Theories of Organizational Behavior and Social Character**
Fall. 3 credits.
L. Gruenfeld.
A comparative social-psychological approach is used to examine theories of work, authority, conflict, and change in employment organization.

**323 Introduction to the Study of Attitudes**
Fall. 4 credits. Open to juniors and seniors.
Staff.
Designed to acquaint the student with what is known about (1) origins of human attitudes, (2) the determinants of attitude change, and (3) the measurement of attitude differences. Studies employing clinical, experimental, and survey techniques are discussed. Each student designs, executes, and analyzes his or her own research study.

**324 Work Organizations, Troubled Employees, and Employee Assistance Programs**
Spring. 3 credits. Limited to 40 students. Prerequisite: one or more courses in sociology and psychology.
H. Trice.
Focus is on the relationship between organizational life and psychiatric-criminal behaviors. Covers (1) the nature and etiology of psychiatric disorders such as alcoholism, other drug and substance abuse, and the major neuroses; (2) corporate and white-collar criminal behavior; (3) the role of occupational and organizational risk factors in etiology; (4) various types of organizations that represent societal responses to troubled employees—mental hospitals, prisons, jails, halfway houses, shelter workshops, and self-help groups such as Alcoholics Anonymous. Puts differential emphasis on programs within work organizations that attempt to deal with troubled employees, job-based alcoholism, and employee assistance programs. Field format divides class into small groups for application in local relevant organizations. The development, strategies, and management of employee assistance programs will receive special attention.

**325 Organizations and Social Inequality**
Spring. 4 credits.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. Marxist conceptions of class and Weberian conceptions of job authority will be examined to see what additional power they add to the explanation of social inequality, particularly in regard to income attainment. As the central unit of analysis in the course will be organizations, a historical section will be included that deals with the evolution of current control and compensation structures in large-scale organizations.

**326 Sociology of Occupations**
Fall or spring. 3 credits. Limited to 45 students. Prerequisite: one or more courses in sociology.
H. Trice.
Focuses on (1) the societal characteristics of occupations: division of labor, social stratification, mandate and license, occupational ideologies, stories, and tradition; (2) nature and expression of professionalization of occupations; (3) organizational characteristics of occupations: accommodation to formal organizations, occupational associations, and occupational mix; (4) social psychological characteristics of occupations: temperamental and intellectual role demands, occupational attraction, identity, and commitment, and occupational self-images; (5) relationship between occupational structure and organizational structure. Field format divides class into small groups for application among local occupational groups.

**327 Psychology of Industrial Conflict**
Fall. 4 credits.
Staff.
An application of frustration theory to the analysis of conflict and stress in organizations and society. Comparisons are made between industrial relations, race relations, international relations, and other settings. Readings include behavioral research findings from a variety of studies in industry. Relevant contributions from experimental, social, and clinical psychology are also considered.

**328 Cooperation, Competition, and Conflict Resolution**
Spring. 4 credits. Prerequisite: two courses in social psychology or equivalent.
An examination of theory and empirical evidence relating to the resolution of interpersonal, intergroup, and international conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The following topics are studied: the availability and use of threat; the credibility, intensity, and costs of threat; fractioning and escalating conflict. Personality and situational factors that regulate conflict intensification are stressed.

**329 Organizational Cultures**
Fall or spring. 3 credits. Limited to 45 students. Prerequisite: one or more courses in sociology.
H. Trice.
This course reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention will be given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course will examine types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior will also receive attention, especially the part played by occupational subcultures in formal organizations. Emphasis will be placed on empirical examples from both the organizational behavior literature and the professor's field research. Field format divides class into small groups for application in local relevant organizations.

**370 The Study of Work Motivation**
Fall. 4 credits. Open to juniors and seniors with permission of instructor.
Staff.
Designed to acquaint the student with the basic concepts and theories of human motivation with implications for organizational change and job design. Focus is on theories of worker motivation and on research approaches and results as these apply to individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental, social, and clinical psychology. Each student will design, execute, and analyze a research study of his or her own.

**371 Individual Differences and Organizational Behavior**
Fall or summer. 4 credits. Recommended: some acquaintance with the substance and methods of behavioral or social science
L. Gruenfeld.
This course examines personality from a comparative psychodynamic point of view. Social behavior, authority relationships, and work motivation are used to illustrate how various theories could be applied to understand behavior and experience in organizations.

**372 Sociological Models of Organizations**
Spring. 3 credits. Prerequisites: ILROB 120 and 121 or equivalent.
P. Tolbert.
Introduces students to the basic issues involved in the sociological analysis of organizations. Traces organizational theory from Max Weber to the most recent research. Among the themes to be discussed are internal structure of organizations, communication in organizations, decentralization, organizational change, organizational technology, and organizational environment.

**373 Organizational Behavior Simulations**
Fall. 3 credits. Prerequisites: ILROB 120 and 121 or equivalent.
R. Stern.
Basic principles of organizational behavior are studied through readings and participation in four simulation games. The first game, The Organizational Game: Design, Change, and Development, by Miles and Randolph, simulates traditional organization, while the second, The Fuzzy Game, by Paton and Lockett, simulates a cooperative. A third game models executive decision making and a fourth, work organization. Organizational design, decision making, and conflict are the central topics of discussion. The contrasting bases of power in the organizations permits the study of the assumptions underlying organization structure and process.

**374 Technology and the Worker**
Fall. 3 credits.
S. Barley.
Examines theory and research pertaining to the social implications of technology and technological change for the work worlds of blue-collar, white-collar, and professional workers. At issue are alternate conceptions of technology as a social phenomenon, approaches to the study of technology in the workplace, the reactions of individuals and groups to technological change, the construction of a technology's social meaning, and the management of technological change. A broad range of technologies will be considered, but particular emphasis will be given to automation, electronic data processing, and sophisticated microelectronic technologies, including CAD-CAM systems, telecommunication networks, medical imaging technologies, artificial intelligence, and personal computers.

**420 Group Processes**
Fall. 4 credits.
L. Gruenfeld.
Several conceptual and methodological approaches are applied to the observation of personality in groups. Students observe, analyze, and quantify behavior in ongoing groups. Emphasis is on systematic observation of interpersonal behavior in open field groups rather than contrived experimental groups.

**423 Evaluation of Social Action Programs**
Fall or spring. 3 credits.
H. Trice.
A consideration of the principles and strategies involved in evaluation research, experimental research designs, process evaluation, and adaptations of cost benefits and cost efficiency to determine the extent to which intervention programs in fields such as training and therapy accomplish their goals. The adaptation of these strategies to large social contexts such as child guidance clinics, mental health clinics, and programs in the poverty areas, such as Head Start, is considered. Includes fieldwork and emphasizes assessment of program implementation.

**424 Study of Public Sector Bureaucracy**
Spring. 3 credits. Prerequisite: permission of instructor.
S. Bacharach.
Field research in public sector organization such as a school bureaucracy or a social welfare bureaucracy. Students conduct a major study into which they integrate themes from organizational theory. Theoretical issues such as decentralization, participation, and communication are discussed in the seminar.

**425 Sociology of Industrial Conflict**
Spring. 4 credits.
R. Stern.
The focus is on the variety of theoretical and empirical evidence available concerning social, economic, and political causes of industrial conflict. The manifestations of conflict, such as strikes, labor turnover, absenteeism, and sabotage, and the influence of the environments in which they occur are emphasized.

**426 Theories of Industrial Society**
Fall. 4 credits. Prerequisites: ILROB 120 and permission of instructor.
S. Bacharach.
Concentrates primarily on the works of Weber and Marx and will consist of readings in the original texts.

**427 The Professions: Organization and Control**
Fall. 4 credits.
P. Tolbert.
Focus is on the sources of power and control exercised by professional groups in contemporary society. A number of issues will be examined in this context including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

**471 Organizational Analysis of Trade Unions**
Fall. 3 credits. Prerequisites: ILROB 120 and 121 and one additional course in organizational behavior.
R. Stern, T. Hammer.
The course is designed to use organizational theory and research in the examination of trade unions. Studying trade unions as organizations includes discussion of the role of unions in contemporary society and the meaning of unions to individual members. Unions will be the unit of analysis in considering unions as agents of social change, unions in interorganizational relationships, and union political activity. Union members will be the focus in considering why people join unions, commitment to unions, dual allegiance problems, and leadership. The course will also address the issue of how effective unions are as a mechanism of worker participation in management decision making. Course material focuses on current research on unions and on strategies for further research.

**472 Applied Organizational Behavior**
Fall. 3 credits. Prerequisites: ILROB 120 and 121.
S. Bacharach.
Introduces students to intermediate theory of organizational behavior. It will specifically concentrate on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

**475 Organizational and Political Behavior in School Districts**
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
S. Bacharach.
This course is intended to provide students with research experience through the study of the administrative and governance processes in school districts. The students will be required to work with school district and union personnel while investigating the following areas: (a) structure and process of decision making in urban and rural school districts, (b) organizational conflict as reflected in school board meetings, (c) the variations in, and effect of, leadership style, as evidenced by different superintendents' advisory techniques, (d) the collective bargaining process as reflected in both contracts and actual negotiations, (e) the effect of the Taylor Law on the structure and process of decision making in school districts, and (f) the effects of administrative law on conflict in school districts. Students will be responsible for the collection of data and the presentation of a final report of their project.

**476 Unions and Public Policy in School Districts**
Spring. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
S. Bacharach.
A continuation of ILROB 475, but 475 is not a prerequisite. This course is strictly a research field seminar. Students will be required to work with school districts and union personnel while investigating the following areas: (a) labor contracts with school districts, (b) relations between teachers' unions, school boards, and superintendents, (c) teachers' unions' involvement with school district policies.

**478 Applied Topics in Organizational Behavior**
Fall. 4 credits. Prerequisites: two courses in organizational behavior beyond the 100 level.
L. Williams.
Reading and classroom discussion will be devoted to each of three topics. The topics are industrial gerontology, with a particular focus on retirement; technology and the office; and gender and personality as organizational variables. Readings will be primarily from journal articles. Students will have a research task for each topic.

**495 Honors Program**
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**497–498 Internship**
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**499 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**520 Micro Organizational Behavior and Analysis**
Fall or summer. 3 credits.
Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

**521 Macro Organizational Behavior and Analysis**
Spring. 3 credits.
Staff.
Formal organizations are studied from the perspectives of classical organization theory, human relations theory, and comparative and cross-cultural analysis. Contemporary theories and quantitative approaches to organizational structure are also considered in some detail. Intended to be preliminary to more intensive work in organizational behavior.

**620 Theories of Organizational Change, Innovation, and Evaluation**
Spring. 4 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
H. Trice.
This seminar examines the dynamics of individual, structural, and environmental factors operating in organizational change in general, and in the implementation and use of innovations within formal organizations in particular. The role of evaluative research in assessing the effectiveness of the implementation of innovations and in determining organizational effectiveness are analyzed. Several case studies of organizational change in government, unions, and private industry are examined. The emphasis is on conceptual frameworks for analyzing organizational change and mounting evaluative research on innovations. Readings are interdisciplinary and include sociology, psychology, and political science.

**621 Organizational Diagnosis Intervention and Development**
Spring. 4 credits. Prerequisites: undergraduates, ILROB 120 and 121; graduate students, ILROB 520 and 521 or equivalent; and permission of instructor.
L. Gruenfeld.
This applied course considers theories and techniques for the identification and improvement of organizational problems at the behavioral (micro) level. Methods for the implementing of change are evaluated in the light of several normative and descriptive theories of individual and group development and effectiveness. The course emphasizes both quantitative and qualitative data processing procedures.

**622 Organizations and Environments**
Spring. 3 credits.
P. Tolbert.
This course will survey the literature on organization-environment relations including work on organizational dependence and power, management of uncertainty, and other aspects of interorganizational cooperation and conflict. The objective of the course is to provide students with a general theoretical understanding of the way in which organizations can shape their environment and in which the environment constrains and shapes organizations.

**624 Groups in Work Organizations**
Fall. 4 credits. Enrollment limited. Prerequisites: Senior standing, and ILROB 371 or ILROB 629 or equivalent, or permission of instructor.
L. Gruenfeld.
This is an applied social psychology course that emphasizes the building, maintenance, and renewal of purposive groups. The course deals with models and variables that interact with group cohesion and performance. Structural, environmental, task, motivational, and interpersonal variables are considered. This course work includes observation and analysis of decision making and negotiating behavior in a group.

**625 Labor and Monopoly Capital: The Growth of Large United States Firms in the Past Century**
Spring, 7 weeks only. 2 credits.
Staff.
A critical review of two recent books with very different explanations for the rise of large, hierarchically differentiated corporations in the United States: Harry Braverman, *Labor and Monopoly Capital*, and Alfred D. Chandler, *The Divisible Hand*. These books are supplemented by articles on patterns of industrialization and internal structural transformation of large firms in the United States economy.

**626 Science and Innovation in Industry**
Fall. 3 credits. Prerequisites: ILROB 120, 121/520, 521 or permission of instructor.
S. Barley.
This course seeks to impart an understanding of how industrial R&D is organized, as well as an appreciation for the practical problems that arise when firms employ a significant number of scientists, engineers, and other technical workers. It is designed for students who have a general research interest in industrial R&D or who anticipate working for firms in which R&D plays an important role. The course will bring relevant theoretical perspectives to bear on pragmatic issues surrounding technical innovation and the employment of scientists and engineers. Representative topics include: the organization of scientific and technical communities, the industrialization of research, the nature of scientific and technical work, new patterns of industrial relations, organizational strategies for fostering innovation, and the careers of scientists and engineers.

**627 Leadership in Organizations**
Spring. 3 credits. Prerequisites: two organizational behavior courses at the 300 level or advanced courses in sociology or psychology.
L. Gruenfeld.
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational factors, intergroup processes, interpersonal perception as well as motivation to lead and to follow will be discussed. The implications for leadership training, organization development, and action research are explored.

**628 Cross-Cultural Studies in Organizational Behavior**
Spring. 3 credits. Limited. Permission of instructor before registering in course.
L. Gruenfeld.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism and attitudes toward authority as well as work motivation will be examined. Upon completion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student will prepare and present a paper on a topic of his/her own choice usually related to his/her country of origin (China, Japan, German, USA, etc.).

**629 Personality in Organization**
Fall. 4 credits. Open to undergraduates with permission of instructor.
L. Gruenfeld.
This advanced course considers psychodynamic theories of organizational diagnosis at the individual and group levels. Topics include leadership, power, authority, work motivation, intervention, and change. The topics are discussed and applied in small study groups. The professor's role is as a consultant and resource person. Class members study and research their own behavior and present their qualitative and quantitative findings to the class. Students are expected to have background and interest in both research methods and theory.

**670 Employee Assistance Programs: Social Movement and Emerging Occupation**
Spring. 4 credits. Limited to seniors and graduate students with permission of instructor.
H. Trice.
The seminar analyzes the general nature of social movements and considers how the EAP movement fits into that perspective. Will examine the distinctive core tasks performed by EAP workers. These join with the unique ideology of compassion derived from the social movement to form the ingredients for an emerging occupation. Other specific features of this emerging occupation that will be examined are: the types of employee behavioral problems encountered in working populations, role of supervisors, union stewards, and peers in EAP referrals, the role of EAP workers in working with job performance problems, use of constructive confrontation in supervisory/steward training. Will analyze clinical issues involved in EAP work and the interface between the workplace and the treatment place. Similarly, both internal and external marketing of EAPs will be examined, followed by a review of the relationship between these programs and contractual agreements, "just cause" in alcohol, drug, and mental health arbitration cases, including drug testing.

**671 Organizations as Social Networks**
Spring. 3 credits. Prerequisites: one or more courses in organizational behavior, sociology, psychology, anthropology, or political science. A course in statistics or research methods would be helpful.
S. Barley.
Increasing attention has been devoted to the idea that social structures can be fruitfully investigated as social networks. In particular, organizational and inter-organizational structures may be analyzed as patterned relationships among individuals, groups, and even other organizations. Such networks appear to be strong predictors of a variety of social dynamics including attitude similarity, the diffusion of innovation, turnover, and the allocation of organizational resources. A variety of methods for collecting and analyzing network data including: graph theory, sociometry, clique detection, centrality analysis, blockmodeling, and the quadratic assignment procedures will be used. Recent published research will involve work with actual data sets and relevant computer programs.

**673 Cross-Cultural Explorations of Individual Differences**
Fall. 3 credits.
A data-bank analysis of the relationship between socioeconomic status, socialization values, ethnicity, and various indices of individual differences, such as interpersonal trust, propensity to take risks, self-concept, cognitive style, and job preferences.

**674 Social Regulation and Control of Institutions**
Spring, 7 weeks only. 2 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology.
R. Stern.
Interorganizational relations are examined in terms of network control agents and target objects. The dynamics of control relationships based on political bargaining, the distribution of power, economic rewards and costs, and historical circumstances are examined in the context of their evolution through organizational adaptation to the environment. Subject matter includes theories of organizational change and application of a control perspective to the institutions of American business, government regulations, athletics, and education.

**675 Cooperative Strategies for Improving Organizational Performance**
Spring. 4 credits.
M. Gaffney.
The course will concentrate on presentation and analysis of a series of case studies involving projects using cooperative strategies to improve organizational performance. Emphasis will be given to cases in which union and management have been working together to enhance productivity and the quality of working life. Cases will be examined against a background of the research literature on improving organizational performance. Students will be responsible for a term paper.

**676 Systems of Labor Participation in Management**
Fall. 4 credits. Limited to 25 students. Prerequisites: senior standing and permission of instructor.
T. Hammer.
Examines the theory and practice of worker participation in systems ranging from informal shop-level participation to self-management. Special emphasis is placed on socio-technical systems of job design and work restructuring that give workers control over the labor process. Attention is also given to legislated programs of participation (codetermination) and to participation in employee-owned firms.

**677 Seminar in Field Research I**
Fall. 4 credits. Enrollment limited. Prerequisite: permission of instructor.
H. Trice.
Recent research efforts are examined and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial development of research interviews and observation data, and their conversion to quantitative instruments. Participants share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

**678 Seminar in Field Research II**
Spring. 4 credits. Prerequisites: ILROB 677 and permission of instructor.
H. Trice.
Continuation of recent research efforts is examined, and the dynamic nature of the research process is emphasized. The realities of field research are explored, including problems of gaining and sustaining rapport, the initial development of research interviews and observation data and their conversion to quantitative instruments. Participants share in the exploration of appropriate theories and concepts, and the possibility of actual field participation in an ongoing research project is explored.

**720 Issues of Measurement in Research on Organizations**
Fall. 4 credits.
T. Hammer.
Concerns the study of tests and measures used to assess central variables in organizational behavior and related fields. Students will learn where to find measures suitable for their research purposes and will examine the theories that define the constructs being measured; the empirical information available about different measures; construction, reliability, and validity; and the ways in which the instruments have been used in research and practice.

**721 Advanced Micro Organizational Behavior**
Spring. 3 credits. Prerequisites: ILROB 520 and 521.
Staff.
Examines the historical development of psychological theories of organizations and contemporary issues in micro organizational research. The course will emphasize reading and analysis of primary source material.

**722 Advanced Macro Organizational Behavior**
Fall. 3 credits. Prerequisites: ILROB 520 and 521.
Staff.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course will emphasize reading and analysis of primary source material.

**723 Behavioral Research Theory, Strategy, and Methods I**
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
L. Williams.
Materials studied in ILROB 723 and 724 include (1) theoretical, conceptual, and ethical questions; (2) survey research and attitude-scaling procedures; (3) laboratory research methods; (4) participant observation and interview methods; (5) use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

**724 Behavioral Research Theory, Strategy, and Methods II**
Spring. 3 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
Staff.
Course will cover (a) data analysis and interpretation through the study of psychometric theory, (b) traditional problems encountered in the assessment of human and organizational characteristics, (c) the use of different methods of data analysis, and (d) an examination of the limitations imposed on data analysis and interpretation by traditional measures. Examples of topics covered in the course: the use of Chi-square, t-tests, ANOVA, simple and multiple correlation and regression, reliability and validity analyses, causal models, factor analysis, scale construction.

**725 Analysis of Published Research in Organizational Behavior**
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and one year of statistics.
R. Stern.
An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

**726 Selected Topics in Organizational Behavior**
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and permission of instructor.
S. Barley.
An advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves will change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis will be placed on exploring the relevance of tradition in related disciplines (anthropology, linguistics, philosophy, sociology, etc.) that may enrich our understanding of organizational life.

**727 Work and Industrial Conflict**
Spring, weeks 7–14. 2 credits.
R. Stern.
A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, then the social, political, economic causes of industrial conflict. Forms of conflict to be studied include strikes, turnover, absenteeism, and sabotage. Some discussion of the implications of various types of worker management of firms for industrial conflict will be included.

**728 Theories of Motivation and Leadership**
Spring. 2 or 4 credits. Prerequisites: ILROB 520 and 521.
Two independent but sequence-connected minicourses.

(1) Theories of Work Motivation. 7 weeks. 2 credits.
T. Hammer.
Course will provide an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students will examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used in practice in work organizations.

(2) Theories of Leadership and Power. 7 weeks. 2 credits.
L. Gruenfeld.
Several current microtheories of leadership-power and related research are examined. The disciplinary perspective employed is social psychology and the level of analysis emphasized is action and experience of individuals in groups.

**729 Organizational Change and Intervention**
Fall. 3 credits. Graduate students only; no exceptions.
L. Williams.
This seminar is concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention will be paid to the role of internal and external change agents. Several applied research programs such as the Center for Creative Leadership, Tavistock, and SRC will also be examined.

**770 The Cultures of Work Organizations**
Fall. 3 credits. Open only to graduate students.
H. Trice.
The course considers both administrative and occupational cultures in the workplace. It takes an anthropology perspective, focusing on ideologies as the main ingredient of cultures but emphasizing the role of cultural forms, e.g., myths, stories, sagas, language, rites and ceremonials, and physical settings of meaning. It pays special attention to the place of subcultures and countercultures in the makeup of administrative culture and to occupations as a major source of subcultures. The role of the environment in which organizations are embedded, and its influence on workplace cultures, is also included. Forms of cultural leadership and approaches to reading and changing cultures are also considered.

**771 Decision Making in Organizations**
Spring. 3 credits.
J. Sniezek.
Surveys current and classic articles on individual and group judgment and decison making. Examines their applications in current theory and research in organizational behavior. Topics covered will include policy capturing, risk perception, confidence in judgment, preference and choice, experience and expertise, judgment-behavior relationships, the Sniezek and Henry model of group judgment, interdependent decision making, judgmental forecasting, and resource allocation decisions. Special attention will be given to the role of judgment and decision theory to problems of work motivation. Each student will be required to give a class presentation based on their paper.

**798 Internship**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**799 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**920 Organizational Behavior Workshop**
Fall. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only.
Staff.
This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

## PERSONNEL AND HUMAN RESOURCE STUDIES

R. Risley, chair; J. Bishop. J. Boudreau, R. Bretz, V. Briggs, L. Dyer, W. Frank, B. Gerhart, G. Milkovich, S. Rynes, E. VonBorstel, W. Wasmuth.

**260 Personnel Management**
Fall, spring, and summer. 3 credits. Open only to ILR students. Non–ILR students may take ILRPR 461.
Staff.
An introductory overview of the management of human resources from an institutional perspective. Topics include human resource decisions dealing with staffing, employee development, work-system rewards, and employee relations. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the effective utilization of human resources by an enterprise.

**266 Personal Computer Basics**
Fall or spring. 2 credits. Limited to 20 students.
Staff.
This 7-week course provides basic skills in the use of IBM personal computers (PCs). It covers basic hardware, terminology, fundamentals of the Disk Operating System, LOTUS 1–2–3, and DBASE III Plus. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. This course is a prerequisite to several advanced Human Resource Management electives (e.g., ILRPR 694, Personal Computer Applications to Human Resource Management; ILRPR 666, Cost Benefit Analysis for Human Resource Management; and ILRPR 690, Personnel Information Systems).

**360 Human Resource Economics and Public Policy**
Fall or spring. 3 credits. Open to sophomores, juniors, and seniors.
V. Briggs, J. Bishop.
A review of contemporary labor-market trends and theories pertaining to public efforts to develop the employment potential of the nation's human resources. Each of the major segments of the nation's educational training enterprise—elementary and secondary education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—is examined in depth. Special policy issues pertaining to youth, rural workers, welfare reform, job creation, worker relocation, economic development, targeted tax credits, industrial policy, and "enterprise zone" proposals will be examined. Comparisons are made with European initiatives.

**361 Effective Supervision**
Fall or summer. 3 credits. Limited to juniors and seniors. Prerequisite: ILRPR 260 or equivalent.
W. Wasmuth.
This course covers twenty-five major topics that make a critical difference in the life of a newly appointed or experienced supervisor. Theoretical and real-life case examples are provided from office, factory, union, nonunion, large, and small organizations and cover technical, psychological, social, and political issues at the supervisory level.

**365 New York State Human Resource and Employee Relations Issues and Policies**
Fall or spring. 3 credits. Open to I&LR students participating in an Albany internship.
J. Slocum.
This seminar will consider functions, current issues, and policy development in New York State human resource development and employee relations. The role of the state in protective labor law administration; human resource programs; its function as a neutral party in labor disputes in the public and private sector; and legislation affecting employee-employer relations and economic development will be reviewed. Students will be assigned individual research topics that will be discussed in the seminar and developed into a term paper.

**366 Women at Work**
Fall or spring. 3 or 4 credits. Prerequisite: ILRPR 260 or equivalent.
Staff.
Various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

**460 Human Resource Management for Small Business**
Fall. 4 credits.
R. Risley.
This course will be taught using a series of case studies developed from small firms. After an initial introductory section exploring the human resource management issues most critical to the growth and development of small businesses, the balance of the course will focus on selected human resource management issues raised by the various case studies. Students will analyze the problems of each case and prepare a report setting forth their recommendations for resolving the human resource problems and achieving the desired business objectives. Every second Wednesday the class will meet for a two-hour session to present and discuss the student reports concerning each case. Owners and managers of the small business firms studied will be present to discuss each case with the students.

**461 Human Resource Management in Organization**
Fall and spring. 4 credits. Open to juniors and seniors out-of-college ONLY.
R. Bretz, W. Frank.
An introductory level survey course that is designed to introduce the student to the methods and processes of human resource management in work organizations. It is primarily intended to acquaint non-industrial relations majors with the personnel management function so that they may better understand the rationale behind human resource decisions. Factors external to the organization are discussed in regard to their impact on human resource decision making. The course includes the integration of topics such as analyzing and designing jobs; the causes and consequences of employee satisfaction, attendance, and turnover; motivating and evaluating employee performance; recruiting and selecting employees; compensating the work force; and dealing with organized labor unions. Throughout the course, emphasis is placed on the importance of the supervisor or manager in the implementation of personnel policy.

**469 Immigration and the American Labor Force**
Spring. 3 credits.
V. Briggs.
Assesses the role that immigration continues to play as a source of human resource development in the United States. The primary focus is on developments since the Immigration Act of 1965, the Refugee Act of 1980, and the Immigration Reform and Control Act of 1986. In addition to legal immigration, border commuters, the topics of illegal immigration, refugees, asylees, and nonimmigrant workers are also examined. Comparisons are also made with immigration systems of other nations. Public policy aspects are explored in depth.

**495 Honors Program**
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**497–498 Internship**
Fall or spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**499 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**560 Personnel Management**
Fall or spring. 3 credits. Open only to graduate students.
Staff.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to such aspects of personnel work as job analysis, motivation, human resource planning, recruitment and selection, training, management development, organization development, compensation, and employee and labor relations. Emphasis is on the application of theory and research to the solution of personnel problems.

**653 Personnel and Human Resource Management: Policy and Practices**
Fall. 4 credits. Limited to 30 students, seniors and graduate students only. Prerequisites: ILRPR 260/560, electives in personnel and human resource management, and permission of instructor.
R. Risley.
This seminar will be concerned with issues of current importance to leading practitioners and explore the policies and practices developed to meet organizational goals. Changing concepts of the P/HR function within organizations and new policies and programs to meet changing needs will receive special attention. Outstanding leaders from the practitioner area will serve as guest seminar leaders during the term. Students will be required to do background reading for each topic as well as read the advanced material prepared by the guest leader. Students should be prepared to be active participants in the seminar discussions.

**658 Training and Development: Theory and Practice (also Education 685, Communication 685, and International Agriculture 685)**
Spring and summer. 4 credits.
F 9:05–12:05. N. Awa, W. Frank, D. Deshler.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

**659 Internal Staffing: Managing Careers in Organizations**
Spring or summer. 4 credits. Limited to 30 students. Prerequisites: ILRST 210/510 and ILRPR 260/560 or equivalent and permission of instructor.
S. Rynes.
Analysis of the movements of people within organizations and the management of career development processes. Selected topics include job search and choice processes, career planning methods and techniques, career and life stages, mentorships, employment security programs, midlife career changes, career and family integration, criteria for internal promotions, succession planning, and the role of performance evaluation and assessment centers in placement decisions.

**660 Seminar in Personnel or Human Resource Studies**
Fall or spring. 3 credits.
Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

**661 Applied Personnel and Organizational Development Practice**
Spring. 3 credits. Prerequisites: undergraduates, ILRPR 260; graduate students, ILRPR 560 or equivalent.
Staff.
Deals with personnel development technique and organizational development intervention methodology. Students examine and practice group methods, feedback and processing technique, active listening, one-to-one counseling, behavior modeling, role playing, the case method, team building, survey-guided intervention, and other relevant methods, techniques, and issues. This course combines pertinent literature with the opportunity for hands-on practice in a workshop setting. Students have responsibility for developing and delivering scholarly papers that explore a specific method, technique, and/or critical issue. In addition, a final project requires a comprehensive proposal that describes an organizational development intervention.

**662 Managing an Organization through Simulation Training**
Spring or summer. 3 credits. Limited to a total of 40 ILR and hotel administration students, seniors and graduate students only. Prerequisite: ILRPR 260/560 or equivalent and permission of instructor.
W. Wasmuth.
Techniques of simulation are applied to a hotel banquet facility to enable students working in a small group (task force) to accomplish the following objectives: (1) plan and develop strategies to solve a variety of realistic problems in a supportive low-risk simulated setting; (2) provide direct feedback to the participants as to the effects of their decisions on ten organizational performance indicators, including morale, turnover, productivity, customer satisfaction, and profit/loss; (3) understand the interrelationships of the indicators and of various parts of an organization through an open systems approach; (4) develop an awareness of how group interaction affects the quality and timeliness of team decision making; (5) demonstrate communication skills in organizing and reporting significant results of team accomplishments. Also, each student will prepare an individual research project that focuses on some aspect of the simulation experience.

**663 Performance Appraisal and Productivity Improvement**
Fall. 3 credits. Limited to 30. Prerequisites: ILRPR 260/560 and one course in statistics.
R. Bretz.
This course covers the measurement and evaluation of both individual and organizational performance. It is based on the concept that organizational effectiveness and performance are largely a function of the effectiveness and performance of individuals within the organization. Improving organizational effectiveness and productivity involves improving the effectiveness and performance of individuals and work groups that make up the organization. The course begins by exploring the concept of organizational effectiveness, proceeds with a treatment of the measurement of work performance at the

individual and group levels, and concludes with an emphasis on planning, measuring, and controlling organizational performance through the integration of performance from the organization to the individual levels. Different methods of appraising performance are considered and evaluated in terms of their impact on the individual, the appraiser, and the organization.

**664 Seminar in Organizational Communication**
Spring. 3 credits. Prerequisite: permission of instructor.
W. Frank.
Seminar centers on selected issues and relevant research involved in the study of communication with formal organizations. Organizational structure and design, patterns of information flow, and individual and group determinants of communication effectiveness will be important concerns.

**665 Case Studies in Personnel Administration**
Spring. 4 credits. Enrollment limited. Prerequisite: ILRPR 260/560 plus two other courses in personnel and human resource studies and permission of instructor.
Staff.
An analysis of personnel management activities and their impact on organizational objectives and administration. Cases, incidents, and field data derived from a variety of institutional settings provide a framework for examining and explaining the various roles played by personnel managers. Students with a special interest in personnel are encouraged to use this course as a "capstone" to their studies.

**666 Cost-Benefit Analysis for Human Resource Management**
Spring. 4 credits. Prerequisites: ILRPR 260/560 or equivalent, ILRPR 266, one course in statistics, one elective in personnel and human resource studies, and permission of instructor.
J. Boudreau.
This seminar explores how to account for the contribution of personnel and human resource management programs and decisions to achieving organizational goals. It emphasizes a systematic decision-making system that organizes the discipline of personnel and human resource management and can assist in planning and evaluating programs. Topics include the role of financial-accounting statements in managing personnel and human resources, cost-benefit analysis for programs, managing human resources as a profit center, and identifying personnel and human resource management constituents to address their goals.

**667 Employee Relations**
Fall. 4 credits. Prerequisites: ILRPR 260/560 or equivalent and permission of instructor.
L. Dyer.
Explores the policies, programs, and practices used by employers to promote the just and humane treatment of employees, especially managerial, professional, and other employees not covered by collective bargaining contracts. Includes such policies as the protection of employee rights and the nature of processes used to allocate organizational opportunities and rewards; such programs as employee assistance plans and due process procedures; and elements of such practices as employee communication and supervision. Treats these as a "package" to be considered in totality and developed strategically. Considers variations in employee relations strategies, the motives of employers in establishing such strategies, and the effects of these strategies on relevant individual and organizational outcomes.

**668 Staffing: Employee Selection and Utilization**
Fall or spring. 4 credits. Prerequisites: ILRST 510/511 and ILRPR 260/560 or equivalent, plus ILRPR 266; working knowledge of factor analysis, item analysis, regression analysis, and ANOVA; and permission of instructor.
J. Boudreau, S. Rynes.
An analysis of the staffing process as applied to employing organizations. Topics include employment planning, recruitment, selection processes and techniques, legal issues in selection, and the relationship between staffing and other organizational practices.

**669 Administration of Compensation**
Fall or spring. 4 credits. Limited to 30 students. Prerequisites: ILRPR 260/560 or equivalent, ILRPR 266 and basic statistics or permission of instructor.
B. Gerhart, G. Milkovich, R. Risley, S. Rynes.
Major emphasis is on the decisions and issues involved in the design and administration of pay systems. Topics include behavioral and economic theories and research related to compensation, administration, and factors influencing decisions about pay levels, hierarchies, forms, and administration of pay. Also focuses on the effects of various pay systems on employee behaviors and firm performance.

**690 Personnel Information Systems**
Spring. 4 credits. Limited to 20 students. Prerequisites: ILRPR 260/560 or the equivalent; ILRPR 266; advanced electives in personnel; at least one course in statistics; and permission of instructor.
B. Gerhart.
Explores the development, implementation, and management of computerized personnel information systems and their use in human resource management. Intermingles two types of activities. One (the more theoretical) involves the study of the essential components of such systems and the steps involved in designing and running them. The other (the more applied) involves the actual use of systems on both the PC (e.g., dBASE III PLUS) and the mainframe (e.g., SAS). Considerable in- and out-of-class time is spent working through a series of exercises that require (1) the identification of data needs, (2) the retrieval of appropriate data from one of two databases, (3) data analysis, and (4) data presentation. The objective is for students to develop the skills needed to become intelligent users of database management systems in personnel work.

**691 Human Resource Planning**
Spring. 4 credits. Limited to 35 students. Prerequisites: ILRPR 560 or equivalent, one course in statistics, and permission of instructor.
L. Dyer, G. Milkovich.
The process of human resource planning as practiced by public and private employers. Included are topics such as forecasting human resource needs, programming, techniques to meet forecasted needs, and methods of controlling an organization's supply of human resources. The seminar is organized around a computer simulation game in which students make policy and program decisions for a fictional organization. Decisions are evaluated on the basis of their contributions to the organization's human resource and profit objectives.

**692 Training the Displaced and Disadvantaged**
Fall or spring. 3 credits. Prerequisite: permission of instructor.
J. Bishop.
Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines the scope of the problem, its causes, and why specific programs have worked and others have not. Topics covered will include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, vocational training, literacy instruction, EEO, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

**693 Design and Administration of Training Programs**
Spring. 3 credits. Prerequisites: ILRPR 560 or equivalent and permission of instructor.
W. Frank.
An analysis and exploration of the training and retraining function as applied in business, government, and industrial organizations. Consideration is given to learning theory as well as to the concept framework and practical approaches with which learning activities are developed at the workplace at all levels.

**694 Personal Computer Applications in Human Resource Management and Labor Relations**
Spring. 4 credits. Limited to 22 students. Prerequisites: ILRPR 260/560 or equivalent; ILRPR 266; at least one upper-level PHRS elective; basic statistics; and permission of instructor.
J. Boudreau, B. Gerhart.
Personal computers are gaining increasing use in organization decision making. This is true in human resource management and labor relations as well as in other areas. This course is designed to present students with current personal computer software packages and to explore how they can be used to improve human resource decision making. The course involves hands-on personal computer cases designed to present human resource situations that can be analyzed using PC applications. In addition, students will have opportunities to design their own applications and present them to the class.

**695 Education, Technology, and Productivity**
Fall. 3 credits.
J. Bishop.
The seminar investigates the nexus between the education and training occurring in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. We will investigate (1) how technological progress is changing the nature of work and what this implies for reform of education and training, (2) why United States productivity has not increased in the past fourteen years, (3) how education and training contribute to the growth and competitiveness, (4) why educational achievement has declined, and (5) how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

**696 Personnel Administration and Government Regulations**
Fall. 4 credits. Prerequisite: ILRPR 260 or equivalent.
R. Risley.
A survey and analysis of government legislation and regulations affecting human resource management in nongovernment organizations, examining the framework within which management must operate. Government agencies' methods of enforcement of such regulations and the firms' responsibilities for failure to comply with these legal requirements are considered. Emphasis will be on human resource policy development and administration to meet legal requirements. Topics include FLSA, OSHA, ERISA, Employee Rights, Employment at Will, EAP and Title VII.

**698 International Human Resource Policies and Institutions**
Fall. 3 credits.
J. Bishop.
A comparative study of human resource policies and institutions in Western Europe, North America, Japan, and the Soviet Union (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, higher education, employer training, and government regulation of employment contracts. Data on the consequences of policies is presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, Japan, and the Pacific Rim nations. Another focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

**699 Contemporary European Labor Markets**
Spring. 3 or 4 credits (1 additional credit available for those who elect to prepare a special report).
J. Bishop.
Aggregate unemployment rates in Europe have risen from 3–4 percent in the 1960s to 11 percent in the late 1980s. The course is an examination of the causes and consequences of this transformation of European labor markets. In the process of addressing these questions, we review the recent history of these economies, their labor market institutions, and government labor market policies in a comparative framework. Some European nations—Sweden, Norway, Switzerland, and Austria—have kept their unemployment rates low and the reasons for their success will be explored. The question of why economies that performed so well in the 1960s are performing so poorly now can only be addressed in the context of an overall theory of unemployment. The course examines the debate that currently rages over the causes of European unemployment and between the advocates of Keynesian, new classical (rational expectations and real business cycle theorists), and new Keynsian (efficiency wage, implicit contracts, and overlapping contracts) theories of aggregate unemployment.

**760 Seminar in Personnel or Human Resource Studies**
Fall or spring. 3 credits. Prerequisites: ILRPR 560, ILRST 510/511, and ILRPR 669 and permission of instructor.
Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

**761 Human Resource Economics and Public Policy**
Spring. 3 credits.
V. Briggs, J. Bishop.
A review of contemporary labor-market trends and theories as they relate to public policy efforts to develop the employment potential of the nation's human resources. Each of the major segments of the nation's educational training enterprise—elementary and secondary education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—are examined in depth. Special policy issues pertaining to youth, rural workers, welfare reform, job creation, industrial policy, wage subsidies, and worker relocation will be examined. The role of research to policy formulation and methods of evaluation of social programs will be reviewed. Comparison will also be made with related European initiatives.

**769 Topics in Compensation Theory and Research**
Fall. 4 credits. Prerequisite: ILRPR 669.
G. Milkovich.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the relevance of theory and research to compensation decision making. Topics include strategic perspectives, variable compensation including gainsharing, bonus, spot awards, etc., risk and leverage in pay, egalitarian and meritorious structures, and the relationship between pay, employee behaviors, and organization.

**798 Internship**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**799 Directed Studies**
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

**960 Workshop in Personnel and Human Resource Studies**
Fall or spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates. S-U grades only.
Staff.
The workshop is designed to provide a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of personnel and human resource studies. All M.S. and Ph.D. candidates in the Department of Personnel and Human Resource Studies are urged to enroll; candidates in other departments are cordially invited to do so. Each participant will have an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

## INTERDEPARTMENTAL COURSES

**150 Employment Policy and Practice**
Fall or spring. 3 credits.
O. Mitchell.
The object of this course is to introduce non–I&LR students to labor market policy and practice. Throughout the semester we emphasize topical issues and problems, including effective compensation policy, the value of education and training, causes and consequences of women's work and poverty, racial differences in labor market status, the political economy of income support programs, the current and future status of labor unions, the impact of baby boomers on pay and promotion, the proper role of regulation in the labor market, the productivity gap, and how trade and migration affect wages and jobs. Other topics will be added depending on student interest.

**451 Science, Technology, and the American Economy**
Fall or spring. 4 credits.
V. Briggs.
Examines the influences of the growth of science and the spread of technology on the development of the American economy. Although attention will be given to evolutionary influences, the primary focus will be upon the post-World War II experiences as a result of the introduction of automation, robotics, and computer technology. The vantage point will be the linkage of these developments with employment, unemployment, income, and productivity considerations. Public policy issues such as research and development policy, the role of national defense priorities, the development of the biotechnology industry, the agricultural revolution, savings and investment rates, retraining and education needs, etc., will be explored. The related experiences of other industrial nations will also be discussed.

**452 Writing in Industrial and Labor Relations**
Fall or spring. 3 credits. Limited to 20 students.
J. Farley.
This course will require close reading of four books in the field of industrial and labor relations and careful writing about them. Students will also have an opportunity to practice writing about the world of work for different audiences with an eye to publication.

# ILR EXTENSION

## Metropolitan

The following courses are open only to participants in the Extension Division in New York City. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. ILR Credit and Certificate Program courses at the Labor College are offered for four credits. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

**260 Personnel Management**
Fall or spring. 3 credits.
Focuses on management of personnel in organizations. Deals with manpower planning, recruiting, selection, wage and salary administration, training, performance appraisal, organizational development, and the administration of personnel department activities. Special attention is paid to government manpower policy and its implication for personnel management.

**301 Labor Union Administration**
Fall or spring. 3 credits.
A review of the operations of American unions, including a general theoretical framework but with major emphasis on practical operating experience. The course will consider the formal government of unions; organizational or institutional purposes and objectives and how these are achieved; underlying structure and relationship among members, locals, and national organizations; the performance of the primary function of organizing; negotiating; contract administration; and the effect of the Landrum-Griffin Act.

**326 Sociology of Occupations**
Fall or spring. 3 credits.
Focuses on (1) the changing character of American occupations within the context of social change; (2) occupational status—differences in income, prestige, and power and the resultant general phenomenon of social stratification; (3) vertical and horizontal occupational mobility; (4) recruitment and socialization into occupational roles; (5) the process of professionalization; and (6) comparison of personnel occupations with the career and organizational patterns of other occupations. A major sociological theme is the relationship between occupational structure and workplace structure.

**346 Economics of Collective Bargaining**
Fall or spring. 3 credits.
Economic aspects of the negotiation, terms, and effects of union-management agreements at the individual firm, industry regional, and national levels. Topics examined include forces influencing contract demands and terms, employer adaptation to higher wages and benefits; interindustry differences in competitiveness, firm size, and markets; regional location of industry, international competition; government regulations; labor supply; inflation, recession, and unemployment.

**350 History of Industrial Relations in the United States**
Fall or spring. 3 credits.
This review of the history of industrial relations in the United States emphasizes developments in the twentieth century. The course concentrates on the American worker, both union and nonunion; labor movements; and the environmental forces that have shaped industrial relations in the United States. Readings are selected from scholarly accounts and original sources.

**351 Collective Bargaining**
Fall or spring. 3 credits.
A comprehensive study of collective bargaining; the negotiation and scope of contracts; the day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; and the problem of dealing with industrial conflict.

**352 Labor Relations Law and Legislation**
Fall or spring. 3 credits.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and bargaining takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method and to legal and constitutional problems of governmental regulation of industrial and labor relations.

**353 Statistics (Statistical Reasoning)**
Fall or spring. 3 credits.
An introduction to the basic concepts of statistics: description of frequency distribution (averages, dispersion, and simple correlation) and introduction to statistical inference. Prerequisite to certain specialized courses on applications of statistics offered in various departments.

**400 Union Organizing**
This course explores various aspects of unions' attempts to organize workers; why some workers join unions and others do not; the techniques used by both unions and employers during organizing campaigns; and the present law of organizing and proposed amendments to the law.

**440 Health, Welfare, and Pension Plans**
Fall or spring. 3 credits.
An analysis and appraisal of private health, welfare, and pension plans. A consideration of the origin and development of employer, union, and joint programs and a critical examination of the financing, administration, and general effectiveness of the plans.

**602 Arbitration**
Fall or spring. 3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

**681 Labor Relations Law**
Fall or spring. 3 credits.
An advanced course in labor law, covering such topics as emergency labor disputes, legal problems of labor relations in public employment, labor and the antitrust laws, civil rights legislation, rights of individual employees and union members, and legal problems of union administration.

**684 Employment Discrimination and the Law**
Fall or spring. 3 credits.
An examination of legal problems involving employment discrimination based upon race, color, religion, sex, national origin, or age. The impact of developing principles of law on preemployment inquiries and testing, seniority and promotions, and other personnel policies, practices, and procedures will be discussed. The prerequisites of affirmative action under Executive Order No 11246, as amended, will be analyzed. Special attention will be given to the role of state law in resolving employment discrimination claims and the procedural framework for raising and adjudicating such claims before administrative agencies and the courts.

**686 Collective Bargaining in the Public Sector**
Fall or spring. 3 credits.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The course will emphasize public policy issues related to sovereignty, unit determination, representation procedures, and the strikes against government.

## Upstate

The following courses are open only to participants in the Extension Division's statewide credit programs in labor studies and management studies. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs.

**241 Arbitration**
3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

**242 Public Sector Collective Bargaining**
Fall or spring. 3 credits.
This course is designed as an introduction to collective bargaining in the public sector. The course examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolutions techniques frequently found in this sector. Special emphasis will be given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

**243 Growth of American Business and Management History**
Fall or spring. 3 credits.
The growth and cycles of American business enterprise produced significant changes in education, government, work, the family, the ethnic composition of the population, and the landscape. As business and industry expanded, new methods evolved for managing these enterprises. This course will examine the development of managerial practices, the relationship of management to the work force, and the social ramifications of capitalist expansion.

**245 Public Sector Labor Law**
3 credits.
A survey and analysis of the New York State Public Employees Fair Employment Act is made as well as a comparison with other state laws covering public employees. The course will examine the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly how it has been interpreted by the courts of New York State in its application. Major emphasis will be employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

**247 Labor and the American Economy**
3 credits.
Will help the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis will be placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

**251 Principles and Practices of Management**
Fall or spring. 3 credits.
Presents the theory and processes of management with an emphasis on supervision. Management functions of planning, organizing, staffing, and evaluating are included. Concepts and theories are presented, and case studies are analyzed. Motivating people, exercising leadership, and effectively developing employees are emphasized.

**252 Contract Bargaining**
Fall or spring. 3 credits.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students will learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course will consider the impact of contract bargaining outcomes on workers, unions, employers, and the public.

**253 Contract Administration**
Fall or spring. 3 credits.
Focuses on the role of the steward in administering the union contract in the workplace. Students will evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students will analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

**254 Labor Law**
Fall or spring. 3 credits.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students will concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion will include new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

**255 Labor History**
Fall or spring. 3 credits.
Reviews American labor history from the prespective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included will be a discussion of the development of trade union institutions and leaders and the evolution of union political activities and collective bargaining. Special attention will be paid to the involvement of women and minority workers with unions.

**256 Dispute Resolution**
Fall or spring. 3 credits.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures will be discussed. We will also look at exclusive labor-management mechanisms to settle industry disputes.

**257 Personnel Administration**
Fall or spring. 3 credits.
Designed to provide an overview of personnel practices in the modern organization. It will focus on manpower planning, employment, training and development, motivation and compensation, and performance appraisal and communication for students who are currently supervisors or personnel practitioners or for those aspiring to those positions.

**258 Organizational Behavior**
Fall or spring. 3 credits.
Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

**259 Union Administration**
Fall or spring. 3 credits.
Focus is on the principles and practices of effective union administration. Students will study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials will be discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

**346 Economics of Collective Bargaining**
3 credits.
Economic aspects of the negotiation, terms, and effects of union-management agreements at the individual firm, industry regional, and national levels. Topics examined include forces influencing contract demands and terms, employer adaptation to higher wages and benefits; interindustry differences in competitiveness, firm size, and markets; regional location of industry; international competition; government regulations; labor supply; inflation, recession, and unemployment.

**350 History of Industrial Relations in the United States**
3 credits.
This review of the history of industrial relations in the United States emphasizes developments in the twentieth century. The course concentrates on the worker, both union and non-union; labor movements; and the environmental forces that have shaped industrial relations in the United States. Readings are selected from scholarly accounts and original sources.

**352 Labor Relations Law and Legislation**
3 credits.
A survey of the law governing labor relations. The legal framework in which the collective bargaining relationship is established and in which bargaining takes place is analyzed. Problems of the administration and enforcement of collective agreements are considered, as are problems of protecting individual employee rights in the collective labor relations context. Also serves as an introduction to the legal system and method, and the legal and constitutional problems of governmental regulation of industrial and labor relations.

**357 Labor Education I**
Fall or spring. 3 credits.
An examination will be made of labor education and its origin, development, scope, form, functions, curricula, goals, issues, and roles in universities, unions, and other organizations. Attention will be devoted to various practical aspects associated with the administration of programs and to labor education as an occupation. The course will involve students in field activities in connection with current Extension Division programs.

**358 Labor Education II**
Fall or spring. 3 credits.
The course will be divided into two parts: Part I is planned to develop an understanding of the theories of program organization and administration, including budgeting, which is necessary if labor education is to be transferred to the local union level. Part II joins theory and practice in the effort to (1) provide

rank and file union leaders with the opportunity to develop and use research skills, (2) garner subject matter expertise, (3) formulate course outlines from which to teach, and (4) select appropriate teaching methods and prepare materials for classroom use. Practice teaching is a necessary component of such an advanced course, again providing experiences that combine theory and practice.

**359 Directed Studies in Labor Education**
Fall or spring. 3 credits.
Designed to grant credit for fieldwork under the direction of members of the faculty. Third semester of an intensive training program in labor education for mature students with demonstrated ability to undertake independent work who have been carefully screened and selected for participation in this course. Combines 180 hours of fieldwork in a union education or related program with 3-hour seminars in the classroom. Classroom meetings are devoted to (1) in-depth analysis of union experiences in relation to labor education, theory, method, and techniques, and (2) individual consultations.

**360 Labor Education III**
2 credits.
This is a course designed to give labor educators advanced teaching techniques and specific methodology for expanding their training. Instruction will be combined with practical teaching experience in three, three-hour laboratories. Students will learn to polish their presentation style by studying voice projection, rhetorical techniques, timing and pacing of class units, controlling individual disruptors to the progress of the class, and, finally, summarizing the work accomplished.

**361 Contemporary Labor Problems**
3 credits.
A survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

**363 Wages and Salary System Design**
3 credits.
An examination of compensation practices and special issues affecting wage and salary systems. Topics to be discussed include: determining pay level and structure, employee equity, incentive plans, and performance evaluation. Will also examine benefits and legislation that are relevant to compensation practices and theories.

**364 Labor, Government, and Politics**
3 credits.
A survey of the ways the American political system affects labor and how organized labor affects the system through voting, political parties, and interest groups.

## FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago. Assoc. Prof., Labor Economics
Bacharach, Samuel, Ph.D., U. of Wisconsin. Prof., Organizational Behavior
Barley, Stephen R., Ph.D., Mass. Inst. of Technology. Asst. Prof., Organizational Behavior
Beran-Ghosh, Sucharita, Ph.D., U. of Toronto. Asst. Prof., Economics and Social Statistics
Bishop, John H., Ph.D., U. of Michigan. Assoc. Prof., Personnel and Human Resource Studies
Blumen, Isadore, Ph.D., U. of North Carolina. Prof. Economic and Social Statistics
Boudreau, John W., Ph.D., Purdue U. Assoc. Prof., Personnel and Human Resource Studies
Boyer, George R., Ph.D., U. of Wisconsin. Assoc. Prof., Labor Economics
Bretz, Robert D. Jr., Ph.D., U. of Kansas. Asst. Prof., Personnel and Human Resource Studies

Windmuller, John P., Ph.D., Cornell U. Prof. Emeritus, Collective Bargaining, Labor Law, and Labor History/ International and Comparative Labor Relations

# LAW SCHOOL

## ADMINISTRATION

Russell K. Osgood, dean of the law faculty and professor of law

Jane L. Hammond, law librarian and professor of law

Charles W. Wolfram, associate dean for academic affairs and Charles Frank Reavis Sr. Professor of Law

Anne Lukingbeal, associate dean for student affairs

Albert C. Neimeth, associate dean and director of alumni affairs and placement

Frances M. Bullis, assistant dean for development and public affairs

Richard D. Geiger, assistant dean for admissions

## LAW SCHOOL

The primary function of the Law School is to prepare attorneys for both public and private practice who are equipped to render skillful professional service and who are thoroughly conscious of the important role played by the law as a means of social control. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily, a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. A number of students will be admitted to a program of study leading to the degree of Doctor of Law "with specialization in international legal affairs."

There are combined graduate degree programs with the Johnson Graduate School of Management, the College of Arts and Sciences, the Department of City and Regional Planning, the School of Industrial and Labor Relations, and the graduate divisions in economics, history, and philosophy, as well as a special opportunity for highly qualified undergraduates in the College of Arts and Sciences to register in the Law School during their senior year.

The graduate program of the Cornell Law School is a small one, to which only a few students are admitted each year. The LL.M. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without being degree candidates.

For further information, refer to the Law School catalog, obtainable from the assistant dean for admissions, Myron Taylor Hall.

## FIRST-YEAR COURSES

**500 Civil Procedure**

**502 Constitutional Law**

**504 Contracts**

**506 Criminal Justice**

**507 Legal Process**

**508 Practice Training I**

**509 Practice Training II**

**512 Property**

**515 Torts**

## UPPERCLASS COURSES

**602 Administrative Law**

**604 Alternative Dispute Resolution**

**607 American Indian Law**

**609 Antitrust Law**

**610 Arbitration (also ILR 602)**

**614 Civil Rights Legislation**

**616 Commercial Law**

**617 Communicative Torts**

**618 Comparative Law**

**619 Comparative Public Law of the United States and the United Kingdom**

**620 Conflict of Laws**

**621 Consumer Law**

**622 Corporations**

**624 Criminal Procedure: The Investigatory Process**

**626 Debtor-Creditor Law**

**628 Development of Legal Institutions**

**636 Environmental Law**

**640 Evidence**

**642 Family Law**

**643 Federal Courts**

**644 Federal Income Taxation**

**646 Federal Taxation of Wealth Transfer**

**647 Freedom of Expression**

**648 Injunctions**

**650 International Law**

**651 International Business Transactions**

**652 International Taxation**

**654 Introduction to Accounting and Finance**

**658 Labor Law**

**665 The Law of Mergers and Acquisitions (also NBA 572)**

**666 Law, Society, and Morality (also Philosophy 342)**

**668 Lawyers and Clients**

**670 Lawyers and Society**

**672 Modern Japanese Law**

**677 Products Liability**

**680 Real Estate Transfer and Finance**

**682 Securities Regulation**

**683 Social Security Law**

**684 Soviet Law**

**688 Taxation of Corporations and Shareholders**

**690 Taxation of Partnership Income**

**692 Trial Advocacy**

**694 Trusts and Estates**

## PROBLEM COURSES AND SEMINARS

**700 American Legal Theory**

**701 Antitrust and Health Care**

**702 Anthropology of Law (also Anthropology 627)**

**704 Children's Rights**

**705 Chinese Law Seminar**

**706 Computer Applications in Law Practice**

**708 Constitutional Law and Political Theory**

**709 Constitutional Theory**

**710 Contemporary Legal Theory (also Philosophy 444)**

**716 Empirical Studies of the Legal System**

**718 Employment Discrimination**

**720 Estate Planning**

**723 The European Community—Integration Through Law**

**725 Family Law Clinic**

**728 History of the Canon Law: Marriage**

**730 History of Law in Massachusetts**

**732 International Law and the Global Environment**

**734 International Protection of Intellectual Property Rights**

**738 Land, Law, and Community: Dilemmas of Race and Class**

**742 Law and Medicine**

**744 Lawyers and the Legal Profession**

**748 Law, Science, and Technology**

**752 Legal Aid I**

**753 Legal Aid II**

**763 Organized Crime Control**

**764 Problems in Modern Property Law**

**766 The Religion Clauses of the First Amendment**

**767 RICO**

**770 Securities Regulation, Corporate Finance, and the Public Corporation**

**774 Seminar on Modern Contract Theory**

**778 Theory of Civil Liberties**

# JOHNSON GRADUATE SCHOOL OF MANAGEMENT

## ADMINISTRATION

Alan G. Merten, dean

Thomas R. Dyckman, associate dean for academic affairs

Dick R. Wittink, director, doctoral program

James W. Schmotter, associate dean

Ann L. Calkins, assistant dean for external relations

Mariea Noblitt, director of admissions

Paul Brenner, director of corporate relations

Nancy A. Culligan, business manager and director of personnel

Laurie Foltman, director of career services

Daniel Mansoor, director of development and capital campaign manager

Linda Myers, managing editor, *Cornell Enterprise*, and publications coordinator

Rhea J. Nickerson, assistant to the dean

Donald Schnedeker, librarian

Harriet Peters, director of advising and student activities

Linda Pike, managing editor, *Administrative Science Quarterly*

John P. McKeown, director of finance and business operations and director of executive education

Ann C. Weibel, director of financial aid, and registrar

L. Joseph Thomas, director of the Executive Development Program

Eugene Ziegler, director of computing services

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Ten percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 90 percent following work experience.

Combined degree programs allow highly qualified Cornell students to register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available in the Cornell University Announcement, Johnson Graduate School of Management, obtainable from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Malott Hall.

## UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
Prerequisite: Introductory Accounting or equivalent, or permission of instructor.

This course provides a disciplined look at the entrepreneur and small business management. It deals with the formation and the acquisition of enterprises from the viewpoint of individuals who desire to become the principal owners. Reviews include legal and tax aspects, valuation techniques, organization forms, and venture-capital sources, as well as planning techniques necessary to launch a successful venture.

## NCC COMMON CORE COURSES

**NCC 500 Financial Accounting**
**NCC 501 Quantitative Methods for Management**
**NCC 502 Microeconomics for Management**
**NCC 503 Marketing Management**
**NCC 504 Behavioral and Organizational Science**
**NCC 505 Macroeconomics and International Trade**
**NCC 506 Managerial Finance**
**NCC 507 Management Information Systems**
**NCC 508 Production and Operations Management**

## NBA MANAGEMENT ELECTIVE COURSES

### Accounting

**NBA 500 Intermediate Accounting**
**NBA 501 Advanced Accounting**
**NBA 502 Managerial Cost Accounting**
**NBA 504 Taxation Affecting Business and Personal Decision Making**
**NBA 505 Auditing**
**NBA 506 Financial Information and Evaluation**
**NBA 507 Federal Income Tax**
**NBA 508 Accounting for Mergers and Consolidations**

### Behavioral and Organizational Science

**NBA 660 Strategy Implementation: Process and Politics**
**NBA 661 Organizational Theory**
**NBA 662 Power and Interpersonal Influence**
**NBA 663 Behavioral Decision Theory**
**NBA 664 Decision Aiding**
**NBA 665 Managing Innovation and Technological Change**
**NBA 666 Negotiation**
**NBA 667 Managing Groups**
**NBA 668 Organizational Politics**
**NBA 669 Organizational Design**
**NBA 670 Strategy Formulation**

### Economics

**NBA 520 Pricing and Strategy**
**NBA 521 Regulation, Deregulation, and Antitrust: Government Regulation of Business**
**NBA 522 Managerial Economics**
**NBA 523 Business and Economic Forecasting**
**NBA 524 Competitive Industry Analysis**
**NBA 525 Executive Compensation**

### Finance

**NBA 540 Financial Policy Decisions**
**NBA 541 Economic Evaluation of Capital Investment Projects**
**NBA 542 Investment Management and Security Analysis**
**NBA 543 Financial Markets and Institutions**
**NBA 544 Bank Management**
**NBA 545 Finance Theory**
**NBA 546 Options, Bonds, and Commodities**
**NBA 547 Investment Banking**
**NBA 548 Trading**
**NBA 549 Strategic Decision Making**
**NBA 550 Financial Instruments and Contracts**

### General Management

**NBA 560 Business Law**
**NBA 561 Advanced Business Law**
**NBA 562 An Introduction to Estate Planning**
**NBA 563 Strategic Business Policy Issues**
**NBA 564 Entrepreneurship and Enterprise**
**NBA 565 Law of Business Associations**
**NBA 567 Management Writing**
**NBA 568 Oral Communication**
**NBA 569 Effective Management Consulting**
**NBA 570 Negotiations for Managers**
**NBA 571 Business and American Society**
**NBA 572 Law of Mergers and Acquisitions**
**NBA 574 Health-Services Organization and Financing**

**NBA 575 Health and Welfare Policy Analysis**
**NBA 576 Alternative Health and Social Service Delivery Systems**
**NBA 577 The External Environment of Business**
**NBA 578 Ethics**
**NBA 579 Business Strategy and Policy**

### International Management

**NBA 580 Industrial Policy: Lessons for the United States from Japan and Europe**
**NBA 581 The International Context of American Business**
**NBA 582 International Trade and Finance**
**NBA 583 International Environment of Business**
**NBA 584 Management of the Multinational Corporation**
**NBA 585 Comparative International Management**
**NBA 586 Business in Europe and Latin America**
**NBA 589 Business in Japan**

### Management Information Systems

**NBA 600 Data-Base Management**
**NBA 601 Information Systems in Manufacturing**
**NBA 603 Systems Analysis**
**NBA 607 Supplemental Studies in MIS**

### Marketing

**NBA 620 Marketing Research**
**NBA 621 Advertising Management**
**NBA 622 Marketing Strategy**
**NBA 623 Models and Methods for New Products**
**NBA 624 Marketing Decision Analysis**
**NBA 625 International Marketing**
**NBA 626 Consumer Behavior**
**NBA 627 Market Communications**
**NBA 628 Market Planning**
**NBA 629 Industrial Marketing**
**NBA 630 Marketing Research Project**
**NBA 631 Marketing Science**
**NBA 632 Marketing Analysis and Planning**

### Operations Management

**NBA 640 Production Management**
**NBA 641 Business Logistics Management**
**[NBA 642 Applied Econometrics Not offered 1988–89.]**
**NBA 643 Management Science**
**NBA 644 Projects in Operations Management**

## NMI AND NRE RESEARCH AND ADVANCED STUDIES

**NMI 500-502 Directed Readings and Research**
**NRE 502 Doctoral Seminar in Marketing**
**NRE 503 Doctoral Seminar in Economics**
**NRE 504 Doctoral Seminar in Accounting**
**NRE 506 Doctoral Seminar in Banking and Financial Markets**
**NRE 507 Doctoral Seminar in Corporate-Finance Theory**
**NRE 508 Doctoral Seminar in Operations Management**
**NRE 509 Doctoral Seminar in Organizational Behavior**
**NRE 513 Doctoral Seminar in Finance**
**NRE 514 Doctoral Seminar in Decision Aiding**
**NRE 515 Doctoral Seminar in Behavorial and Experimental Economics**

Schmotter, James W., Ph.D., Northwestern U. Lec., Business History
Phillips, William E., Executive-in-Residence

# DIVISION OF NUTRITIONAL SCIENCES

## ADMINISTRATION

Cutberto Garza, director

Carole Bisogni, associate director for academic affairs

Betty Lewis, graduate faculty representative, Field of Nutrition

T. Colin Campbell and William Arion, division honors chairs

## THE DIVISION

Nutritional science deals with the intricate relationship of food, nutrition, and health. At Cornell, the focal point for this broad field of study, which ranges from nutrient chemistry to world hunger, is the Division of Nutritional Sciences.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences and brings together specialists from many disciplines in the biological and social sciences. Their work covers undergraduate and graduate teaching, nutrition research, and public education, including cooperative extension services.

The faculty in the division are working toward two closely related goals: increasing our knowledge of nutrition and health, and applying what we know to people's everyday problems. This approach carries over to undergraduate education. Students who major in nutritional sciences learn how to interpret basic research from the laboratory and from the social sciences. They also come to understand the practical implications of their studies. Many students have the chance to test out their ideas by conducting a research project or working in the community.

## FACILITIES

Most of the faculty members of the division work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, those buildings contain animal-care and research facilities, specialized laboratories, a human metabolic research unit, and interactive terminals for the university's computer system.

Savage Hall also has a graduate reading room, and in Martha Van Rensselaer Hall the division has set up the Learning Resources Center, which many undergraduates use for individual study and small group discussions. The Learning Resources Center contains class materials, audiovisual aids, and supplementary books and periodicals for independent study and special projects in nutrition.

## THE MAJOR

The B.S. degree program with a major in nutritional sciences (NS) offers five major options, but all of them give students a thorough foundation in the basic sciences, the field of nutrition, and communication skills. Graduates are qualified for a variety of entry-level positions in laboratory research, consumer affairs, nutrition education, and clinical and public-health services. All students are well prepared to pursue dietetic training or advanced study in fields such as nutrition, food science, biomedical sciences, and public policy.

Most undergraduates who major in nutritional sciences enroll in the College of Human Ecology. Students in the College of Agriculture and Life Sciences can also pursue a nutritional sciences option through the General Studies Program, and students in the College of Arts and Sciences can take a nutrition concentration as an independent option in the Division of Biological Sciences. Nutrition courses can be used to meet graduation requirements in all three colleges.

## ACADEMIC ADVISING

Every student majoring in nutritional sciences is assigned a faculty adviser from the division. An effort is made to match interests, and students may change advisers at any time if their goals and interests change. Regular student-adviser conferences are required at least twice a year. The adviser not only helps students select courses but can often suggest opportunities for individual study or experience outside the classroom.

The specific course requirements for graduation and for each major option are listed in the Human Ecology *Student Guide*, available on request. Questions about undergraduate study should be addressed to Carole Bisogni, associate director for academic affairs, 334 Martha Van Rensselaer Hall.

## THE CORE CURRICULUM

In their freshman and sophomore years, all undergraduates majoring in nutritional sciences follow a core curriculum that builds the foundation for any aspect of advanced study in nutrition. The core curriculum includes courses in food and nutrition, laboratory skills, humanities and communications, introductory social sciences, and basic sciences. There is some choice of science courses, but all nutrition students need a good background in general and organic chemistry, biochemistry, microbiology, physiology, and mathematics.

Transfer students need to pay particular attention to the core curriculum and may need to take an extra semester to fulfill all of the basic requirements, especially in the sciences. The course NS 300, Special Studies for Undergraduates, which allows students to take "pieces" of courses, helps transfer students integrate their previous training into the requirements for the nutritional sciences major without duplicating course work.

By their junior year, students start taking the more specialized courses required for the nutritional sciences option they choose: experimental and consumer food studies, nutrition, nutritional biochemistry, clinical nutrition, or community nutrition. The core curriculum ensures that they can move into any option or change options.

## OPTIONS

### Option I: Experimental and Consumer Food Studies

Students electing this option concentrate on basic and applied science courses, including physicochemical aspects of food, experimental food methods, and nutrition. From this option, students are prepared to pursue graduate study in food and/or nutritional sciences. With their knowledge of how the composition and treatment of food affect food quality, safety, acceptability, and nutritive value, graduates find jobs in dietetics, food service, development and evaluation of food products, food and nutrition education, consumer service, and public policy. To support those career options, additional course work is recommended in areas such as dietetics, food service administration, communications, economics, government, public policy, marketing, and management.

### Option II: Nutrition

This option is designed for students with an interest in the scientific basis of nutrition and who may also wish to undertake an interdisciplinary program with other areas such as food sciences, communications, health, human development, or policy. The program includes lectures and laboratory experience in biochemistry, physiology, and microbiology to provide a sound scientific basis for graduate study in either nutrition or food sciences. The option allows the student to plan an individual concentration of courses in a selected area to supplement the fundamental training in nutrition and to meet specific career goals.

### Option III: Nutritional Biochemistry

This basic science-oriented curriculum prepares students for advanced study in the nutritional and biomedical sciences. Students who wish to explore more broadly the scientific basis of food and nutrition may wish to concentrate in this area. Courses and laboratory work in chemistry, biochemistry, and physiology help develop a deeper understanding of nutrient action at the cellular and subcellular levels.

### Option IV: Clinical Nutrition

This option builds on the basic science core to give a solid foundation in the biological aspects of human nutrition in health and disease. Designed for students interested in pursuing advanced study in human nutrition or medicine, the program stresses courses and laboratory work in the natural and biological sciences, with an emphasis on application to human problems.

### Option V: Community Nutrition

This option gives students the skills to help people translate nutritional knowledge into action. It provides a strong background in basic and nutritional sciences but also includes supporting courses in the social sciences and communications. Students are prepared to pursue graduate study in community nutrition, public health nutrition, and related fields. Practical experience through supervised field study is strongly recommended and is an asset to finding entry-level positions in community nutrition, including nutrition education.

## CAREER PLANNING

Major requirements represent the minimum course work for each option. With an adviser's help, students can add courses and special experiences that will meet their career interests.

There is some choice among the basic sciences regardless of the options selected. All students who have adequate preparation in high school mathematics and chemistry are encouraged to take Chemistry 207-208.

Students considering advanced study at a graduate or medical school should select science alternatives that prepare them for admission. Many graduate schools require a year of college mathematics, biology, organic chemistry, and in some cases, physics, for entrance.

Students interested in dietetics in applied nutrition should consider planning their course work to meet the requirements for membership and registration in The American Dietetic Association (ADA). Advisers in the division will help students plan their course work to meet the ADA's academic requirements and will counsel them on applying for internships. Additional information on the dietetics program at Cornell can be obtained from Rose Marie Holmes, N206B Martha Van Rensselaer Hall, and Joan M. L. Koch, 373 Martha Van Rensselaer Hall.

## FIELD STUDY PROGRAM

Structured field experience in a community agency or health-care facility can be taken for credit in several ways: through an independent study course, as a class project, or as a summer study project.

## INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of Carole Bisogni or consider applying to the honors program.

## HONORS PROGRAM

The honors program, leading to a B.S. degree with honors in nutritional sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major option in nutritional sciences, students in the honors program take courses on designing and evaluating research, complete an original piece of research, and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. Animals may be used in some research studies.

For more information, students should contact T. Colin Campbell, N204 Martha Van Rensselaer Hall or William Arion, 227 Savage Hall, honors chairs.

## EXERCISE SCIENCE CONCENTRATION

Students interested in physical fitness and nutrition may pursue a concentration in exercise science through a special program with the School of Health, Physical Education, and Recreation at Ithaca College. This program includes elective courses in fitness measurements, exercise physiology, and the biomechanics of human movement. For further information, contact Carole Bisogni, associate director for academic affairs, 334 Martha Van Rensselaer Hall.

## COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological science, medicine, agriculture, food science, human services, and other fields.

Introductory courses in nutrition (NS 115) and food (NS 146) are open to all students, as are some special-interest courses (NS 222, Maternal and Child Nutrition; NS 325, Sociocultural Aspects of Food and Nutrition; and NS 457, National and International Food Economics).

Nonmajors who have taken college courses in chemistry, biological sciences, and nutritional sciences may elect advanced food and nutrition courses with the permission of the instructor.

## GRADUATE PROGRAMS

Graduate study is administered by the Field of Nutrition, a group of more than forty faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may major in animal nutrition, human nutrition, international nutrition, nutritional biochemistry, foods, or general nutrition. A professional Master of Nutritional Science (M.N.S.) degree in clinical nutrition combines academic study and research on campus with clinical training at affiliated institutions in upstate New York and New York City. Field experience is also a component of concentrations in community nutrition, public-health nutrition, and nutrition education.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choice and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy, and students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, interested persons may write for the brochure *Graduate Study in Nutrition*, available from the Graduate Faculty Representative, Field of Nutrition, Cornell University, Savage Hall, Ithaca, New York 14853-6301.

## COURSES

**115 Ecology of Human Nutrition and Food**

Fall. 3 credits. Prerequisites: fall, high school biology (juniors and seniors with advanced biological science background should check with the instructor); spring, a one-semester college biology course. S-U grades optional.

Fall: M W F 1:25; spring: M W F 11:15. Four discs scheduled in place of some lecs. Evening prelims, times to be arranged. D. Levitsky and staff.

An introduction to the field of human nutrition and food. Human nutritional needs are considered from the perspective of the "new" nutrition, including problems encountered in providing food to meet nutritional needs; relationships among physiological needs, sociocultural systems, food, and the significance of those relationships to health promotion and disease prevention. Discussion of current issues such as weight control, vegetarianism, athletes' diets, heart disease, and cancer prevention.

**146 Introductory Foods**
Fall and spring. 3 credits. Each section limited to 16 students. Prerequisite: NS 115 or concurrent registration. Permission of instructor during course registration required (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall).

Lec, M 12:20; labs, T R 10:10–12:05 or 2:30–4:25. Evening prelims: times to be arranged. J. M. L. Koch.

Criteria for evaluating the practice of the science of food and nutrition. Laboratory includes an introduction to the physiochemical properties of food and the relationship of those properties to preparation techniques and palatability characteristics of food. Meal preparation, focusing on human nutritional needs and the management of money and time, is included.

**222 Maternal and Child Nutrition**
Spring. 3 credits. Prerequisites: NS 115 and a college biology course. S-U grades optional.

M W F 1:25. Evening prelims, times to be announced. V. Utermohlen.

Involves the study of nutritional requirements in pregnancy, lactation, infancy, and childhood growth through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

**246 Introduction to Physicochemical Aspects of Food**
Fall or spring. 4 credits. Each section limited to 18 students. Prerequisites: a college course in organic chemistry or biochemistry, NS 146, and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). S-U grades optional.

Lecs, T R 9:05; labs: fall M W 2–4:25 or T R 10:10–12:25; spring M W 2–4:25 or T R 2–4:25. Fall, B. Lewis; spring, B. Lewis and R. Parker.

A study of (a) the colligative properties of solutions; (b) colloidal systems—sols, gels, foams, and emulsions; (c) physical and chemical properties of the major groups of foods, the effect of basic methods of food preparation and preservation on these properties, and their relation to food quality—especially color, flavor, and texture. Laboratories introduce the experimental study of food and illustrate the function of ingredients and effect of treatment on food quality.

**300 Special Studies for Undergraduates**
Fall or spring. Prerequisites: permission of instructor. S-U grades optional.

Special arrangements to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

**301 Nutritional Aspects of Raw and Processed Foods (also Food Science 301)**
Spring. 3 credits. Prerequisites: organic chemistry and Food 100 or NS 115. S-U grades optional.

M W F 9:05. D. Miller.

An evaluation of factors that affect the nutritional quality of foods and diets. Nutritional quality is defined. Methods and approaches for assessing nutritional quality are presented. Factors that may alter the nutritional quality of foods and food supplies (e.g., agricultural practices, processing, storage, cooking, fortification, government regulations, and new technologies) are discussed.

**315 Obesity and the Regulation of Body Weight (also Psychology 315)**
Spring. 3 credits. Prerequisites: NS 115, Psych 101.

T R 1:30–3. D. Levitsky.

This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, genetics of obesity, role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

**325 Sociocultural Aspects of Food and Nutrition**
Fall. 3 credits. Limited to juniors and seniors. Prerequisites: NS 115 and a college course in anthropology or sociology.

M W F 2:30. D. Sanjur.

The course offers a cross-cultural perspective for understanding the environmental and sociocultural parameters affecting the development of food consumption patterns. Emphasis is on theories on formation of food habits, dietary methodologies, ethnicity and food habits, and educational programs in nutrition, in national and international contexts.

**331 Physiological and Biochemical Bases of Human Nutrition**
Spring. 3 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent and NS 115 or permission of the instructor. S-U grades optional.

M W F 10:10. M. H. Stipanuk.

The biochemical and physiological bases for human nutritional requirements, including digestion and absorption, energy metabolism, food intake regulation, lipids, carbohydrates, protein and amino acids, minerals, vitamins, and relationship of nutrition to major chronic diseases.

**332 Laboratory Methods in Nutritional Sciences**
Spring. 3 credits. Each section limited to 18 students. Prerequisites: NS 331 or concurrent registration and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall).

Lec, M 12:20; labs, M W 1:25–4 or T R 8:15–10:45 or T R 1:25–4. M. Kazarinoff.

Introduction to principles and procedures of experimental design, analytical techniques, and data analysis in human nutrition. Emphasis on methods of analysis of nutrients and metabolites in food, tissues, and body fluids. Application of these methods in assessing physiological and biochemical responses to alterations of nutrient intake in animal and human studies.

**347 Human Growth and Development: Biological and Social Psychological Considerations (also Human Development and Family Studies 347)**
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent; Human Development and Family Studies 115 or Psychology 101 and NS 115 or equivalent. Offered alternate years. Not offered 1990–91.

M W F 1:25. J. Haas, S. Robertson.

A review of major patterns of physical growth from the fetal period through adolescence, with consideration of biological and socioenvironmental determinants of growth, as well as physical and psychological consequences of variations in growth patterns. An examination of normal patterns of growth is followed by an analysis of major sources of variations (normal and atypical).

**349 Geriatric Nutrition**
Fall. 3 credits. Prerequisites: NS 115.

M W F 10:10. D. Roe.

Aims of the course are to acquaint students with effects of aging on nutritional needs; to teach them methods of nutritional assessment that are appropriate for use with the elderly; and to give them information on nutritional interventions that have been shown to have positive effects on the nutritional and health status of older individuals.

**361 Biochemistry and Human Behavior (also Psychology 361)**
Fall. 3 credits. Prerequisites: Biological Sciences 101–102, Chemistry 103–104, Psychology 123, or permission of instructor. A fundamental knowledge of human biology and chemistry is essential. S-U grades optional.

M W F 11:15. D. Levitsky.

A survey of the scientific literature on the role of brain and body biochemical changes as determinants of human behavior. The topics covered include action and effects of psychopharmacologic agents, biochemical determinants of mental retardation, biochemical theories of psychosis, and effects of nutrition on behavior.

**378 Management Principles in Foodservice Operation**
Spring. 4 credits. Prerequisites: NS 246 and Agricultural Economics 220 or equivalent, or permission of instructor. S-U grades optional.

T R 10:10–12:05. R. Holmes.

Application of management principles to foodservice operations involved in the production, distribution, and service of quality food in quantity. Topics include menu planning, foodservice layout and design, production and service controls, purchasing, food-cost control, personnel management, sanitation, safety, and computers.

**398 Honors in Nutritional Sciences**
Fall. 1 credit. Limited to students admitted to the division honors program. S-U grades only.

T 2:30–4. T. C. Campbell.

Research design. Analysis of research papers on selected topics.

**400–401–402–403 Special Studies for Undergraduates**
Fall or spring. Credits to be arranged. S-U grades optional.
Division faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of nutritional sciences not otherwise provided through course work in the division or elsewhere at the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director of academic affairs. The form, available from the Counseling Office, is filed at course registration or within the change-of-registration period. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

**400 Directed Readings**
For study that predominantly involves library research and independent reading.

**401 Empirical Research**
For study that predominantly involves data collection and analysis or laboratory or studio projects.

**402 Supervised Fieldwork**
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**403 Teaching Apprenticeship**
For study that includes assisting faculty with instruction.

**[415 Field-based Learning in Nutrition**
Fall, spring, or summer. 2–6 credits. S-U grades optional. Prerequisites: junior, senior, or graduate standing; 9 hours of coursework in NS; participation in prefield activities and a training workshop; and permission of instructor. Obtain application/questionnaire outside of 335 Martha Van Rensselaer Hall. Not offered 1989–90.
Hours in placement arranged individually; biweekly seminar to be announced.
Undergraduate and graduate students are placed, according to their interests and backgrounds, in organizations and agencies that provide nutrition and food services. Placements are individually designed to enable students to develop critical-thinking skills related to nutrition and food issues. A biweekly seminar provides a basis for the sharing of experiences among students, with a focus on the attainment of communication skills appropriate to the field of nutrition. Students may be required to provide their own transportation to placements.]

**441 Nutrition and Disease**
Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional.
M W F 10:10 and F 8. V. Utermohlen.
Study of the physiologic and metabolic anomalies in chronic and acute illnesses and the principles of nutritional therapy and prevention. The topics covered include diabetes mellitus, starvation, obesity, nutritional assessment, nutritional pharmacology, severe injury, infection, cancer, gastrointestinal diseases, liver disorders, renal diseases, cardiovascular diseases, and pediatrics. Original research papers, books, review papers, and publications of professional organizations are used throughout the course.

**442 Diet Formulation and Analysis**
Fall. 2 credits. Limited enrollment. Prerequisites: NS 146, concurrent registration in NS 441 (or equivalent background in either course), and permission of instructor during course registration. (Permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall.) S-U grades optional.
Lec, M 9:05; lab 1 T 2:30–4:20, lab 2 R 11:15–1:10. A. Kendall Casella.
Development of skills in formulation and analysis of therapeutic dietary regimes. Various sources of information on food composition, diet planning, and enteral and parenteral nutrition supplements are used.

**445 Community Nutrition and Health**
Spring. 3 credits. Prerequisites: NS 331 or concurrent enrollment in 331. Recommended: NS 325. S-U grades optional. The field-project component of this course may involve off-campus activity; students are responsible for their own transportation or bus fare.
M F 11:15; disc, W 2:30–4:30. C. Olson.
Study of human nutrition and health problems from a community perspective; programs and policies related to nutrition at local, state, and federal levels; and approaches and techniques of effective application and dissemination of nutrition knowledge in communities.

**446 Physiochemical Aspects of Food**
Fall. 3 credits. Prerequisites: NS 246 and a college course in biochemistry, which may be taken concurrently. S-U grades optional.
M W F 9:05. G. Armbruster.
The relation of food quality to (a) rheological properties of food systems, (b) oxidation and reduction reactions, and (c) enzymatic and nonenzymatic browning. Covers physical and chemical factors accounting for the color, flavor, and texture of natural and processed foods.

**447 Physiochemical Aspects of Food—Laboratory**
Fall. 1 credit. Limited to 16 students. Prerequisite: NS 446 or concurrent registration. S-U grades optional.
T 1:25–4:25. G. Armbruster.
Laboratory experiments designed to illustrate the effect of varying ingredients and treatment on the quality of food products. Objective testing methods are used to determine food quality characteristics.

**448 Physiochemical Aspects of Food—Laboratory**
Fall. 1 credit. Limited to 16 students. Prerequisite: NS 446 or concurrent registration. S-U grades optional.
R 1:25–4:25. G. Armbruster.
Laboratory experiments designed to illustrate (a) the physiochemical behavior of colloidal systems, (b) chemical reactions of some food components, and (c) effects of temperature, pH, moisture, inorganic salts, and enzymes on physiochemical changes in natural foods, food components, and food mixtures.

**456 Experimental Foods Methods**
Spring. 3 credits. Limited to 16 students. Prerequisites: NS 446 and 448. Recommended: a course in statistics.
Labs, T R 1:25–4:25. G. Armbruster.
Application of the scientific method in the design and performance of experimental food problems and the interpretation and evaluation of results. Evaluation of the use of instruments and chemical and sensory methods in the measurement of food properties. Independent problems.

**457 National and International Food Economics**
Spring. 3 credits. Prerequisites: Econ 101 or CEH 110 and junior standing, or permission of instructor. S-U grades optional.
M W F 9:05. E. Thorbecke.
Examination of individual components essential for an understanding of the United States and world food economies. Analysis of the world food economy. Review and analysis of (a) the major economic factors determining the demand for food, the composition of food consumption, and nutritional intake; and (b) the major economic factors affecting food production and supply. Examination and evaluation of the effectiveness of various food policies and programs in altering food consumption patterns. Principles of nutritional planning in developing countries within the context of the process of economic and social development.

**488 Advanced Management in Foodservice Systems**
Spring. 3 credits. Limited to 30 students. Prerequisites: NS 378, Microbiology 290 and 291, a course in learning theory, and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 335 Martha Van Rensselaer Hall). S-U grades optional. Possible field trip. Uniform required.
Lec, M 2–4:10; lab, T W or R 1:30–6.
J. Koch.
Some laboratories will be arranged through Cornell Dining. Other experiences may be possible in community foodservice operations. Students will gain experience in care and use of institutional equipment, recipe development, job analysis, volume food production, applied sanitation, and in-service training, as well as other management skills required to operate a foodservice program.

**498 Honors in Nutritional Sciences**
Spring. 1 credit. Limited to students admitted to the division honors program. Students may register in NS 499 concurrently.
T 2:30–4. W. Arion, coordinator.
Informal presentation and discussion of current topics in food and nutrition in which all members participate. Written reports on topics discussed may be requested. Delineation of honors research problems in consultation with faculty adviser.

**499 Honors Problem**
Fall and spring. Credits to be arranged. Open only to students in the division honors program.
Disc, T 11:15, plus additional hours to be arranged. Division faculty; W. Arion, coordinator.
An independent literature, laboratory, or field investigation. Students should plan to spread the work over two semesters.

**600 Special Problems for Graduate Students**
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor in charge. S-U grades optional.
Hours to be arranged. Division faculty.
Emphasis on independent advanced work. Experience in research laboratories in the division may be arranged.

**601–604 Advanced Nutrition Series**
A series of nutrition courses offered jointly by the Division of Nutritional Sciences and the Departments of Animal Science and Poultry Science. Prerequisites: courses in nutrition, physiology, and biochemistry, including intermediary metabolism, or permission of instructor.

**[601 Proteins and Amino Acids (also Animal Science 601)**
Fall. 2 credits. Prerequisites: physiology, biochemistry, and nutrition, or permission of instructors. Letter grade only. Offered even-numbered years. Next offered 1990–91.
Hours to be arranged. R. E. Austic.
A course in amino acid and protein nutrition with emphasis on the dynamic aspects of protein digestion and amino acid absorption, protein and amino acid metabolism, nutrient interrelationships, assessment of protein quality, and amino acid availability and amino acid requirements in humans.]

**602 Lipids**
Fall. 2 credits.
T R 11:15. A. Bensadoun.
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is on critical analysis of current topics of lipid methodology, lipid absorption, lipoprotein secretion, structure, and catabolism; mechanisms of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

**604 The Vitamins**
Fall. 2 credits.
T R 10:10. G. F. Combs, Jr.
Lectures on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

**[607 Nitrogen Metabolism (also Biological Sciences 650)**
Spring. 2 credits. Prerequisites: Chemistry 358 or 360 and Biological Sciences 330 or 331, or permission of instructor. Offered alternate years. Not offered 1989–90; next offered 1990–91.
T R 9:05. Staff.
The course will cover most aspects of nitrogen metabolism. The first section will consider nitrogen fixation and assimilation in bacteria and the metabolism and biological importance of purines, pyrimidines, porphyrins, alkaloids, and amines. This will be followed by discussion of the pathways of amino acid biosynthesis and degradation. The final section will include discussion of protein turnover and degradation, nitrogen excretion, and interorgan relationships in higher organisms. Emphasis throughout the course will be on hormonal, developmental, and molecular biological aspects of metabolic regulation and evolutionary differences.]

**611 Molecular Toxicology (also Toxicology 611)**
Spring. 2 credits. Prerequisite: full-year 400-level course in biochemistry or equivalent. S-U grades optional. Offered alternate years. Not offered 1990–91.
Hours to be arranged. C. Wilkinson and others.
A study of fundamental biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating *in vivo* and *in vitro* metabolism.

**612 Methods of Assessing Physical Growth in Children**
Spring. 3 credits. Limited to graduate students and students who have permission of the instructor. A previous course in statistics required. S-U grades optional.
Lec, T 1:25; labs, R 1:25–4:25; disc, T 2:15–3:05. J. Haas.
A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field or community studies and cover anthropometry, body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.

**[614 Topics in Maternal and Child Nutrition**
Fall. 3 credits. Prerequisites: NS 331, and 222 or 347, Biological Sciences 311, and permission of instructor. Not offered 1989–90.
T R 9:05–10:30. K. Rasmussen.
Advanced course on the role of nutrition during pregnancy and lactation. Feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized.]

**616 Readings in Food**
Fall. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
W 7:30–9:25 p.m. N. Mondy.
Critical review of selected topics in the current literature. Emphasis on experimental data and basic scientific principles underlying modern theory and practice relative to food quality. Training in oral and written presentations of scientific information.

**617 Teaching Seminar**
Fall or spring, first half of semester. 1 credit. Limited to division graduate students and students who have permission of the instructor. S-U grades only.
W 4:30–6. C. Bisogni, D. Taylor-Way.
A series of workshops focusing on development of teaching skills for guiding classroom learning in lecture, discussion, and laboratory settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment. Videotape simulations provide opportunity for practice and analysis of teaching behaviors.

**618 Teaching Experience**
Fall or spring. No credit. Limited to division graduate students and students who have permission of instructor.
Hours to be arranged. Division faculty; C. Bisogni, coordinator.
Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

**619 Field of Nutrition Seminar (also Animal Science 619)**
Fall or spring. No credit. S-U grades only.
M 4:30. Faculty and guest lecturers.
Lectures on current research in nutrition.

**620 Food Carbohydrates (also Food Science 620)**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or equivalent. Letter grades only. Offered alternate years; not offered 1990–91.
T R 10:10. J. Brady, B. Lewis, R. Shallenberger.
A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and conjugated carbohydrates). Emphasis is on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

**626 Special Topics in Food**
Spring. 2 credits.
Hours to be arranged. G. Armbruster, B. Lewis.
Current research related to food is reviewed in the context of basic principles and their application to the quality of food.

**627 Special Topics in Food**
Spring. 2 credits. Prerequisite: organic chemistry. Recommended: biochemistry. S-U grades optional. May be repeated for credit with permission of instructor.
W 7:30–9:30 p.m. N. Mondy.
Current research related to international food production and processing and toxicants in the food chain.

**630–633 Advanced Nutrition Laboratory**
Fall or spring. 1–5 credits. Limited to 12 students.
630: T 2:30–5:30, S 9–12. 631–633: T R 2:30–5:30. Division faculty.
Laboratories on the anthropometric, dietary, clinical, and biochemical assessment of human nutritional status. The individual courses are taught in sequence over the entire semester. Any or all of the modules may be taken for credit.

**630 Anthropometric Assessment**
Spring, weeks 1–3. 1 credit. Prerequisites: NS 331 or equivalent and permission of instructor.
T 2:30–5:30, S 9–12. J. Haas.
Presentation of methods and procedures for anthropometric, radiographic, and energetic assessment of children and adults in clinical, research, and survey settings.

**631 Dietary Assessment**
Fall. 1 credit. 7 weeks only. Prerequisites: statistics and NS 331 or equivalent. Enrollment limited.
R 2:30–5:30. D. Sanjur.
Study of methods and techniques for assessing dietary intakes at the individual and household levels.

**632 Clinical Assessment**
Spring. 1 credit. Prerequisites: NS 441, 630, 631, and Biological Sciences 330 or 331; NS 332 or Biological Sciences 430; and permission of instructor.
T R 2:30–5:30. V. Utermohlen and division faculty.
Study of methods and techniques for clinical assessment of nutritional status and diagnosis of nutritional disorders.

**633 Human Metabolic Studies**
Spring. 1 credit. Prerequisite: NS 331. Limited to 20 students. S-U grades optional.
Hours to be arranged; 6 meetings over a 3-week period, 2-1/2 hours each. D. Roe.
Instruction in the principles of human metabolic studies and how these are carried out. Includes how to plan and write a protocol for a study; how to select an appropriate experimental design; how to select subjects; how to design, prepare, and analyze diets; how to make collections of urine and feces; and how to examine data for subject period and treatment effects. Assigned readings, which will be discussed in class, will be from selected recent papers in which techniques of human metabolic studies are described. Learning experiences will include participation in a six-day study.

**634 Vitamins and Coenzymes (also Biological Sciences 634)**
Spring. 2 credits. Prerequisites: organic chemistry 253 or 357–358 and Biological Sciences 330 or 331, or their equivalents in biochemistry. Offered alternate years. Not offered 1990–91.
T R 10:10. M. N. Kazarinoff.
The chemical, biochemical, and nutritional aspects of the vitamins and coenzymes.

**635 Mechanisms of Metabolic Regulation (also Biological Sciences 635)**
Spring. 2 credits. Prerequisites: Chemistry 358 or 360 and either Biological Sciences 330 or 331 or permission of instructor. Offered alternate years, alternating with NS 607/BS 650, Nitrogen Metabolism. Not offered 1990–91.
T R 9:05. T. C. Campbell, R. Schwartz, W. Arion.
Lectures only. The identification and characterization of regulatory steps in metabolism are considered from both theoretical and practical aspects. The intracellular mechanisms of regulation are stressed, with specific examples examined in detail.

**636 Integration and Coordination of Energy Metabolism (also Biological Sciences 637)**
Fall. 3 credits. Prerequisites: Biological Sciences 330 and 331, or equivalent.
M W F 9:05. W. J. Arion.
The elements and dynamics of energy metabolism in higher animals are systematically developed through biochemical characterizations of the metabolic components and structure of major tissues and organs, stressing correlations with physiologic functions.

Mechanisms that control energy metabolism within individual tissues and coordinate these processes in an intact animal are analyzed in the contexts of selected physiologic and pathologic stresses.

**637 Epidemiology of Nutrition**
Fall. 2 credits. Taught in conjunction with Advanced Epidemiology (Vet Med 665). Limited to graduate students. Prerequisites: Statistics and Biometry 602 or 604 or equivalent, NS 331 or equivalent, Vet Med 664 or equivalent.
Hours to be announced. J.-P. Habicht.
Course covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Teaching principles of using nutritional information for decision making, including the levels of evidence about nutrition and health for making decisions. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

**638 Epidemiology of Nutrition Seminar**
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 636.
Hours to be announced. J.-P. Habicht.
Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

**639 Epidemiology Seminar (also Statistics and Biometry 639)**
Fall and spring. 1 credit. Limited to graduate students; others by permission of instructor. S-U grades only.
Hours to be announced. J.-P. Habicht, H. Erb.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**644 Community Nutrition Seminar**
Fall and spring. No credit.
Hours to be announced. A. Gillespie and faculty in Community Nutrition.
This seminar series focuses on research presentations in nutrition education and other areas of community nutrition. Cornell faculty and graduate students and outside invited speakers present research proposals, results from ongoing research, theoretical bases for research, program evaluations, and discuss current issues in community nutrition research. The format varies but always includes discussion by participants.

**645 Seminar on Community Nutrition Issues**
Spring. 2 credits. Limited to graduate students with a major or minor in human nutrition who have had a previous course in community nutrition.
M 1:25–3. A. Gillespie.
Students will be actively involved in discussing and undertaking community nutrition needs assessments, program planning and development, evaluation of impact, and the implications of public policy. Students will prepare a proposal as part of the coursework.

**646 Seminar in Physicochemical Aspects of Food**
Fall or spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional.
T R 9:05; disc to be arranged. Fall, B. Lewis; spring, R. Parker.
An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 246 as a basis for supplementary readings and critical review of research on selected topics.

**650 Clinical and Public Health Nutrition**
Spring. 3 credits. For graduate students with a major or minor in nutrition and undergraduate nutrition majors in their senior year. Prerequisite: NS 331 or equivalent.
M W F 9:05. D. Roe.
Lectures cover social, environmental, and disease variables that influence the nutrition of infants, children, and adults. Students gain experience in nutritional assessment methods. Endemic nutritional problems (such as obesity, dental caries, and anemias) of public health importance of the United States are discussed. Student presentations are made in class. Field experience is offered.

**651 Nutrition and the Chemical Environment (also Toxicology 651)**
Fall. 3 credits. Prerequisite: NS 331 or equivalent. S-U grades optional.
M W F 11:15. D. Roe.
An overview of interactions between drugs and nutrients is presented. Specific lecture topics include food-drug incompatibilities, drug-induced nutritional deficiencies, and nutritional teratology. Students will obtain methods skills in selection of animal models, in nutritional pharmacology, and in research designs appropriate to human studies.

**652 Nutrition Counseling**
Spring. 2 credits. Prerequisites: NS 441 and 442 and permission of instructor. S-U grades only.
W 10:10–12:05. J. Koch.
Principles and procedures of nutritional counseling in clinical practice. Emphasis on subject matter and process skills necessary to develop, implement, and evaluate nutritional care plans for individuals and groups. Includes workshops, simulation techniques, and work with clients in selected settings.

**[659 The Nutrition, Physiology, and Biochemistry of Mineral Elements (also Veterinary Medicine 759 and Biological Science 615)**
Fall. 3 credits. Prerequisites: basic physiology, intermediate biochemistry, and general nutrition. Offered alternate years. Next offered 1990–91.
M W F 10:10. R. Schwartz, D. R. Van Campen, R. H. Wasserman, C. S. Fullmer, C. C. McCormick.
Lectures and discussions on nutritional aspects and physiological, biochemical, and hormonal factors relating to the major macro and micro elements. Included is information on the chemistry of ions and complexes, methods used in research on biologically important minerals, absorption, transport, homeostasis, essentiality, toxicity, and requirements of mineral elements. Lectures and class discussions will emphasize recent developments and experimental approaches.]

**660 Special Topics in Nutrition**
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor.

Hours to be arranged. Division faculty.
Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

**669 Field Seminar**
Spring. 1 credit. Limited to 15 students. Required for graduate students in clinical nutrition. Open to other graduate students in nutrition with permission of instructor. S-U grades only.

R. Holmes, V. Utermohlen.
This 2–3 day seminar provides an overview of policy decision making and implementation of nutrition programs at the state and national levels. Seminars alternate yearly between Washington, D.C. and Albany, NY. Provides opportunities to meet and confer with staff members of the legislature and selected government and private agencies. An orientation meeting and follow-up group discussion and summary report are also part of this seminar.

**670 Clinical Field Studies**
Fall, spring, or summer. 15 credits maximum. Limited to graduate students in clinical nutrition. Prerequisites: NS 441, 442, 630, 631, 632, 633 and 652. S-U grades only.

Full-time study at off-campus clinical sites. R. Holmes, V. Utermohlen.
The delivery of nutritional care in hospitals, outpatient clinics, and community settings.

**680 International Nutrition Problems, Policy and Programs**
Fall. 3 credits. Prerequisite: permission of instructor.

T R 11:15–12:30. J. Haas, J.-P. Habicht.
Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

**[681 Nutritional and Public Health Importance of Human Parasitic Infections**
Fall. 2 credits. Prerequisites: graduate student status or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1989–90; next offered 1990–91.

M 1:25–3:20. L. Stephenson and staff.
Reviews the scientific evidence for relationships between human nutritional status and common human parasitic infections. Concentrates on malnutrition (protein-energy malnutrition, anemia) in developing countries. Parasitic infections emphasized are malaria, hookworm, ascaris, schistosomiasis, and trichuriasis. Format is lecture-demonstration-discussion.]

**682 Isotope Kinetics (also Biological Sciences 752)**
Spring. 2 credits. Prerequisite: calculus. S-U grades optional. Offered alternate years. Not offered 1990–91.

T 7:30–9:30 p.m. D. Zilversmit.
Quantitative analysis of the transport and distribution of nutrients, metabolites, and drugs in multicompartmental systems. The material will be presented as lectures, discussion groups, and problem sets.

**[683 Field Studies in International/ Community Nutrition**
Fall. 1 credit. Graduate student status or permission of instructor required. S-U grades only. Not offered 1989–90.

Hours to be arranged; 12 class hours on 3 Saturdays. L. Stephenson.
Reviews practical considerations in conducting field research in developing countries, including (1) seeking fundings (where, how, when), (2) experimental design issues (choice of population, design, sample sizes, ethics), (3) choice of procedures (laboratory and other), and (4) planning for and carrying out data collection (including specifics of purchasing equipment and supplies; transport of equipment, self and data; health precautions; and data collection and coding). Also includes how to a) construct a C.V., b) write an abstract and prepare a clear 10-minute talk with legible slides (FASEB formation), and c) when, where, and how to publish research results. Extensive handouts. Lecture/ demonstration/discussion.]

**685 Food and Nutrition Policy (also Agricultural Economics 685)**
Fall. 3 credits. Prerequisites: Consumer Economics and Housing 603 or Economics 311 or 313 or Agricultural Economics 415 or equivalent. Knowledge of multiple regression.

M W 1:15–2:25. P. Pinstrup-Andersen.
The course will identify the principal links between human nutrition and government action, with emphasis on developing countries. The process of policy formation, including economic and political factors, will be discussed. Political-economy issues, including the influence of and conflict among interest groups and rent-seeking behavior related to food and nutrition policies and programs, will be analyzed. The role of nutrition information and surveillance in policy design, implementation, and evaluation will be analyzed along with methodologies for empirical analysis of food and nutrition policy. Findings and analytical methodologies from case studies in developing countries will be used as appropriate. The role of improved nutrition in economic development as both an indicator of welfare and a productivity-enhancing factor as well as basic relationships among nutrition, poverty, food, health, and household behavior will be briefly presented at the beginning of the course to provide a context for policy discussions.

**695 Seminar in International Nutrition, Agriculture, and Development Policy (also International Agriculture 695)**
Spring. 1 credit. Prerequisite: Permission of instructor.

Hours to be announced. T. Brun.
Concentrates on major issues in food and nutrition policies as they relate to agriculture. Issues include Africa's nutritional and agricultural decline, lessons from socialist countries, the cash crop-food crop debate, land reform, the Green Revolution, "operation flood" and price policies, and the nutritional impact of agricultural programs. Emphasis is placed on agricultural policies that are leading to growth and equity.

**698 International Nutrition Seminar**
Fall and spring. No credit.

R 12:20–1:10. Fall, P. Pinstrup-Andersen; spring, D. Sanjur.
This seminar series consists of presentations by Cornell faculty and graduate students, and by outside invited speakers. Speakers cover a range of topics which relate to nutritional problems, policy, and programs in the non-industrialized countries. Some presentations consist of discussion of a proposed research protocol. Sometimes a debate or forum is organized to allow a broad-ranging discussion of an issue related to international food and nutrition.

**699 Special Topics in International Nutrition**
Fall and spring. 3 credits maximum each term. Registration by permission of instructor.

M. Latham and faculty in Program in International Nutrition.
This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. Usually one or more students will approach a professor and arrange for tutorial study on an agreed topic. This will usually be achieved by extensive use of literature and discussions of this with the faculty members. In certain semesters it may consist of a small seminar or lecture course on a subject not now adequately convered in an existing course. On occasion it may involve laboratory or field work. Because the topics change, the course may be repeated for credit.

**700 Current Topics in Toxicology (also Toxicology 698)**
Fall or spring. 1–3 credits. S-U grades optional.

Hours to be arranged. Staff.
A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students will participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding topic, instructor, and credit, contact the office of the Graduate Field of Environmental Toxicology, 257 Clark Hall, 255–6047.

**702 Seminar in Toxicology (also Toxicology 702)**
Fall or spring. 1 credit. S-U grades only.
F 12:20. J. Scott.
The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology and ecotoxicology and environmental chemistry. Included are presentations of basic research studies as well as fundamental concepts and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**703 Seminar in Nutritional Science**
Fall or spring. 1 credit. S-U grades only.
T 12:20 or W 12:20. D. Zilversmit.

**899 Master's Thesis and Research**
Fall or spring. Credit to be arranged.
Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Division graduate faculty.

**999 Doctoral Thesis and Research**
Fall or spring. Credit to be arranged.
Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.
Hours to be arranged. Division graduate faculty.

## FACULTY ROSTER

Arion, William J., Ph.D., U. of N. Dakota. Prof.
Armbruster, Gertrude, Ph.D., Washington State U. Assoc. Prof.
Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology
Bisogni, Carole, Ph.D., Cornell U. Assoc. Prof.
Brink, Muriel, M.S., Michigan State U. Assoc. Prof.
Brun, Thierry, Ph.D., U. of California, Berkeley. Visiting Prof.
Campbell, Cathy C., Ph.D., Cornell U. Asst. Prof.
Campbell, T. Colin, Ph.D., Cornell U. Jacob Gould Schurman Professor of Nutritional Biochemistry
Chen, Junshi, M.D., Peking Medical College, China. Adjunct Prof.
Cowell, Catherine, M.S., U. of Connecticut. Adjunct Prof.
Crompton, D. W. T., Ph.D., Sc.D., U. of Cambridge (England). Adjunct Prof.
Garza, Cutberto, M.D., Baylor College; Ph.D., MIT. Director and Prof.
Gillespie, Ardyth, Ph.D., Iowa State U. Asst. Prof.
Haas, Jere D., Ph.D., Pennsylvania State U. Assoc. Prof.
Habicht, Jean-Pierre, Ph.D., Massachusetts Inst. of Technology. James Jamison Professor of Nutritional Epidemiology
Kazarinoff, Michael N., Ph.D., Cornell U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Latham, Michael C., D.T.M.&H., U. of London (England). Prof.
Levitsky, David A., Ph.D., Rutgers U. Assoc. Prof.
Lewis, Bertha A., Ph.D., U. of Minnesota. Assoc. Prof.
Mondy, Nell I., Ph.D., Cornell U. Prof.
Nesheim, Malden C., Ph.D., Cornell U. Prof.
Olson, Christine M., Ph.D., U. of Wisconsin. Assoc. Prof.
Parker, Robert S., Ph.D., Oregon State U. Assoc. Prof.
Pinstrup-Andersen, Per, Ph.D., Oklahoma State U. of Agriculture and Applied Science. Prof.
Rasmussen, Kathleen M., Sc.D., Harvard U. Assoc. Prof.
Rivlin, Richard S., M.D., U. of London (England). Prof.
Roe, Daphne A., M.D., U. of London (England). Prof.
Sanjur, Diva M., Ph.D., Cornell U. Prof.
Schwartz, Ruth A., Ph.D., U. of London (England). Prof.
Stephenson, Lani, Ph.D., Cornell U. Assoc. Prof.
Stipanuk, Martha H., Ph.D., U. of Wisconsin. Assoc. Prof.
Thorbecke, Erik, Ph.D., U. of California. H. E. Babcock Professor of Economics and Food Economics
Utermohlen, Virginia, M.D., Columbia U. Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Watford, Malcolm, Ph.D., U. of Oxford (England). Asst. Prof.
Zilversmit, Donald B., Ph.D., U. of California. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology

### Other Teaching Personnel

Holmes, Rose Marie, R.D., B.S. Iowa State University, Lecturer
Kendall Casella, Anne, R.D., Ph.D., Cornell University, Lecturer
Kock, Joan M.L., R.D., Ph.D. Cornell University. Senior Lecturer

### Joint Appointees

Apgar, B. Jean, Visiting Asst. Prof., U.S. Plant, Soil, and NutritionLaboratory/Nutritional Sciences
Austic, Richard E., Assoc. Prof., Poultry Science/Nutritional Sciences
Bauman, Dale, Prof., Animal Science/ Nutritional Sciences
Combs, Gerald F., Jr., Assoc. Prof., Poultry Science/Nutritional Sciences
Krook, Lennart P., Prof., New York State College of Veterinary Medicine/Nutritional Sciences
McCormick, Charles, Assoc. Prof., Poultry Science/Nutritional Sciences
Miller, Dennis, Assoc. Prof., Food Science/ Nutritional Sciences
Van Campen, Darrell R., Assoc. Prof., U.S. Plant, Soil, and Nutrition Laboratory/ Nutritional Sciences
VanSoest, Peter J., Prof., Animal Science/ Nutritional Sciences
Warner, Richard G., Prof., Animal Science/ Nutritional Sciences
Wasserman, Robert H., Prof., New York State College of Veterinary Medicine/Nutritional Sciences

# OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914, establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1916, and the evolution of a program that deemphasizes drill and formations and places greater stress on the development of leadership and managerial skills. Throughout the years Cornell's program of officer education has provided many outstanding civilian and military leaders well equipped for success as a result of knowledge and skills gained from their involvement in the Officer Education Program while pursuing undergraduate and graduate degrees.

The programs of officer education allow the student to prepare for a commission as an officer in either the United States Army, Navy, Marines, or Air Force. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

## MILITARY SCIENCE

Lieutenant Colonel Robert N. D'Entremont, Quartermaster Corps, United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major Steven A. Barrows, Field Artillery, United States Army

Major Edward R. Murdough, Engineer Corps, United States Army Reserve

Major Robert E. Newman, Field Artillery, United States Army National Guard

Captain James S. Jenkins, Jr., Infantry, United States Army

Captain Timothy M. Kaseman, Aviation, United States Army

### United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential.

These objectives are achieved through a program normally covering four years. A two-year program is available, however, and is discussed in a later section. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one six-week summer camp at an Army installation), and the opportunity to participate in a number of extracurricular activities. The combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, and personal desires and the needs of the Army determine the branch of the Army in which he or she is commissioned upon graduation.

### Requirements for Enrolling

Applicants must be citizens of the United States (Noncitizens may enroll in selected portions of the program.)

An applicant's vision must be correctible to a minimum of 20/20 in one eye and 20/400 in the other eye. Height must be at least sixty inches for men, fifty-eight inches for women, and no more than eighty inches for men and seventy-two inches for women, although exceptions will be considered. The weight requirement varies according to age, height, and sex. Overall sound mental and physical condition is essential, and students are required to undergo periodic physical examinations. Enrollment in the program is subject to the approval of the professor of military science.

Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors.

### Four-Year Program

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing.

Under the Four-Year Program students enroll in the basic courses (Mil S I and II) during the first two years, and the advanced courses (Mil S III and IV) during the next two years. A total of fourteen credits of military subjects is taken. In addition, academic-enrichment courses are required in such fields as written communications, math, logic, computer science, human behavior, military history, and perhaps foreign languages. Specific requirements are determined by the student and his or her adviser after initial enrollment. Throughout the four years, cadets spend an additional two hours each week each semester in practical leadership training for which there is no academic credit. All cadets attend a six-week camp, with pay, between the junior and senior years.

#### Basic Courses (Mil S I and Mil S II)

Students in the first year of the basic courses take one classroom course in military science in the fall and spring semesters, for which they receive academic credit. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students receive physical education credit. Typical freshman participation in Army officer education is 48 1/2 program-related hours.

During the fall of the second year, the student takes a three-credit class in military history, including the evolution of warfare and armed conflict in society. In the spring, the student takes a one-credit course in map reading and spends approximately two hours a week in practical leadership training, land navigation, and military skills.

#### Advanced Courses (Mil S III and Mil S IV)

The advanced courses of the Four-Year Program are open to students who have successfully completed the basic course and are accepted by the professor of military science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of basic summer programs (see the description of the Two-Year Program) or prior military training. Any student entering the advanced courses must have two years of academic work remaining at Cornell or another degree-granting institution. The student must pass such physical and aptitude tests as may be prescribed. In addition, the past performance and desire of each student is evaluated to determine if he or she has the potential for eventual commissioning.

When students are accepted for the advanced course, they execute a written contract with the U.S. government. Under terms of the contract, they agree to complete the advanced course and to accept a commission if tendered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve for control purposes.

Classroom study in the advanced course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a six-week advanced summer camp currently conducted at Fort Bragg, North Carolina.

### Two-Year Program

The Two-Year Program consists of the last two years (the advanced courses) of the regular Four-Year Program. To qualify for the Two-Year Program, a student must successfully complete a basic six-week summer camp or receive placement credit for prior military service.

The Two-Year Program is open to selected students who have two years of academic study remaining at Cornell or another accredited degree-granting institution.

Applications are accepted October to April of the sophomore year. Selectees complete the basic six-week camp before registering in the advanced courses the following fall. They must also meet specified physical requirements and execute the same written contract as those students who enter the advanced courses after completing the regular basic courses.

## Scholarships

Scholarships are awarded on the basis of merit and are available for two, three, or four years. AROTC scholarships are awarded each year to outstanding basic camp participants and students in the freshman and sophomore classes. Cadets who are awarded scholarships continue to receive support until graduation as long as they fulfill the requirements. Scholarship cadets receive a stipend for university tuition, required fees, required textbooks, and classroom materials for the duration of their scholarship. Scholarship cadets and advanced course cadets also receive $100 a month for up to ten months a year.

## Commissioning

All students who successfully complete the advanced course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army Reserve or the Regular Army upon graduation.

### Distinguished Military Graduates

Selected senior cadets with high academic achievement and outstanding military qualities are designated Distinguished Military Graduates after fulfilling all obligations for a baccalaureate degree. All cadets, scholarship and nonscholarship, are eligible to compete for this distinction.

### Service Obligations

A variety of active duty and reserve combinations are available. The manpower requirements of the Army and the qualifications of the cadets determine the option.

An officer beginning active duty first attends the Basic Officer Course (normally eight to twelve weeks) of the assigned branch. Upon completion of this course the officer is assigned to a unit and location that is determined by the desires of the individual and the requirements of the Army. Those officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

Nonscholarship cadets accepting a Regular Army commission serve a minimum of three years on active duty followed by up to five years in reserve status.

Scholarship cadets, whether commissioned in the Regular Army or the Reserve, generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

### Choice of Branch

Cadets in the second year of the advanced course (normally the senior year) may specify the branch of the Army—such as Infantry, Corps of Engineers, Armor, Signal Corps, Artillery, Air Defense, Ordnance, Chemical, Adjutant General, Quartermaster, Finance, Medical Service, Military Intelligence, Military Police—in which they prefer to serve. They are notified in the spring, before commissioning, of the branch to which they are assigned. The likelihood of appointment in a chosen branch depends upon the student's academic and officer education performance, degree area, and the needs of the Army at that time.

## Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of needs of the service. Admission to graduate school is the student's responsibility.

## Benefits

Each cadet in the advanced courses (Mil S III and Mil S IV) receives $100 a month for up to ten months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $600 and an allowance for travel to and from camp. Each semester approximately $180 is provided to cover textbooks, supplies, and fees for scholarship recipients.

A cadet in the Two-Year Program receives the same payments as cadets in the advanced course and, in addition, receives approximately $700 and a travel allowance for basic summer camp attendance before entering the advanced course.

## Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course. Students in the Four-Year Program are required to take courses as noted below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior year and the military history course (Mil S 211).

### Freshman Year (Mil S I)

**Mil S 101 United States Organization for Defense**
Fall. 1 credit. Required.
Staff.
Students examine the U.S. defense apparatus in terms of organization, mission, personnel, and relationships among military forces and between the military forces and various branches and departments of the government. The United States Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction.

**Mil S 102 Leadership Theory**
Spring. 1 credit. Required.
Staff.
This course allows students to develop a basic understanding and appreciation of the theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership on motivation and organization effectiveness. The student is introduced to the concepts of integrity, ethics, and professionalism.

### Sophomore Year (Mil S II)

**Mil S 321 Armed Conflict and Society**
Fall. 3 credits. Required.
3 classes each week. Presentation by Army, Air Force, Marine Corps, and Navy instructors with guest lecturers, primarily from government and history departments. A study of modern warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

**Mil S 222 Mapping: Land Navigation**
Spring. 1 credit. Required.
Staff.
This course provides practical knowledge of the various forms of topographic representation. Students interpret and use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences from physical, social, and climatic factors. Portions of the course offer practical experience in land navigation and orienteering.

### Junior Year (Mil S III)

**Mil S 331 Theory and Dynamics of the Military Team**
Fall. 2 credits. Required.
Staff.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to leadership responsibilities of the commander as the team coordinator. Additionally, students have an opportunity to develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

**Mil S 332 Leadership in Small-Unit Operations**
Spring. 2 credits. Required.
Staff.
This course provides an understanding of the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing the leader's decisions; the processes of planning, coordinating, and directing the operations of military units to include troop-leading procedures; and development of operation plans and orders.

### Senior Year (Mil S IV)

**Mil S 441 Contemporary Military Environment I**
Fall. 2 credits. Required.
Staff.
An overview of the functions, responsibilities, and interrelationships between the small-unit leader, the commander, and the staff, using a combat arms battalion as a typical organizational structure. Detailed discussions focus on actions of the small-unit leader, communication skills, the military justice and legal system, the threat environment, and the logistical support of the army in the field.

**Mil S 442 Contemporary Military Environment II**
Spring. 2 credits. Required.
Staff.
A continuation of Mil S 424. Students examine the leadership environment of the Army officer. Conferences and seminars examine the techniques of effective military leadership with special attention given to professionalism and ethical considerations in the armed forces during peacetime and armed conflict.

## Practical Leadership Training

### All Army Officer-Education Students

In the leadership laboratory, all of these objectives are accomplished by emphasizing practical exercises and firsthand experience. Types of practical laboratory activities include an introduction to rifle marksmanship, mountaineering, physical training, land navigation and orienteering, signal communications, tactics, and orientations and training exercises at military installations.

As with many laboratory periods, no credit is given, and participation is required for successful completion of the AROTC program. Students will receive physical education credit for the laboratory. Students register as follows:

**Mil S I Leadership Laboratory I**
*Fall* *Spring*
Mil S 151 Mil S 152
Mil S I cadets select either rappelling-drill and physical training, or ranger training. In the spring, class choices are winter survival–land navigation or ranger training. These interesting and challenging activities do not provide academic credit but may be used for physical education credit if adequate hours have been accrued.

**Mil S II Leadership Laboratory II**
*Fall* *Spring*
Mil S 251 Mil S 252
Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include familiarization in rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, tactics and field exercises, and discussions.

**Mil S III Leadership Laboratory III**
*Fall* *Spring*
Mil S 351 Mil S 352
Cadets meet for two hours a week to prepare for a six-week summer camp that follows the junior year. Emphasis is on the development of individual skills in leadership techniques and practical skills. Cadets rotate among leadership positions to develop an ability to apply decision-making processes to a myriad of situations. They also acquire technical expertise and proficiency in signal communications, physical fitness, drill and ceremonies, rappelling, orienteering, tactics, water survival, and other military skills. This also includes two to three hours a week devoted to physical fitness.

**Mil S IV Leadership Laboratory IV**
*Fall* *Spring*
Mil S 451 Mil S 452
Senior cadets plan and operate the leadership laboratory programs for Mil S I–III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. This also includes two to three hours a week devoted to physical fitness.

# NAVAL SCIENCE

Captain Edward W. Colbert, Jr., United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Commander Dennis R. Kukulski, United States Navy

Major James M. Higgins, United States Marine Corps

Lieutenant Walter A. Powell, United States Navy

Lieutenant Steven LaPorte, United States Navy

Lieutenant John M. Fleming, United States Navy

The objective of the Naval Officer Education Program is to prepare selected students for service as commissioned officers in the United States Navy or United States Marine Corps by supplementing their undergraduate education with instruction in essential concepts of naval science and fostering development in the qualities of leadership, integrity, and dedication to their country and the naval services. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs on a case-by-case basis.

The objective is achieved through a broad program, normally covering four years, that combines specific courses in naval science and specified academic subjects to supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

**Non–naval officer education students.** Though the Navy–Marine Corps program has been designed to prepare future officers, Naval science courses are open to all students at Cornell University as space limitations allow.

## Requirements for Enrollment

An applicant for Naval ROTC at Cornell must be a citizen of the United States. Applicants must have reached their seventeenth birthday by June 30 of the entering year and be less than twenty-five years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students should visit the Naval ROTC Unit in Barton Hall.

## Programs

There are two types of Naval programs: the Scholarship Program and the College Program. They differ primarily in benefits to the student and type of commission earned.

## Scholarship Program

The Naval Officer Education Program provides approximately seventy-eight hundred scholarships in over sixty-five universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided students during college preceding the award of the baccalaureate degree.

### Benefits

The program provides uniforms, full tuition, most instructional fees, textbooks, nonconsumable supplies, and $100 a month for a maximum of forty months.

Successful completion of the Scholarship Program leads to a regular commission in the Navy or Marine Corps. At Cornell University over 90 percent of NROTC students have a scholarship. Students entering NROTC without a scholarship are entitled to compete for one-, two-, or three-year scholarships controlled by the Chief of Naval Education and Training.

### Entering the Scholarship Program

There are three ways to enter the Scholarship Program:

*First,* by applying for the national competition each year. This entails filling out and sending an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

*Second,* by enrolling in the College Program at Cornell and being recommended by the professor of naval science for a scholarship after at least one semester in the program.

*Third,* by entering through the Two-Year Scholarship Program.

## College Programs

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve and three years of active duty.

Each of these programs provides textbooks for naval professional courses, uniforms, and a subsistence allowance of $100 a month from the beginning of the junior year.

The regular College Program is three to four years long. Academic requirements for students in this program are somewhat less than those for scholarship students, as noted in the curriculum section of this booklet.

The Two-Year College Program begins the summer before the junior year, when students attend a required program with pay at the Naval Science Institute in Newport, Rhode Island.

## Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, the unit sail-training vessel *Vindicator,* or with a naval activity anywhere in the world for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years. While attending summer training sessions, midshipmen are paid approximately $500 a month.

## Active Duty Requirements

As required by Section 2107, Title 10, United States Code, selected applicants must enlist in the United States Naval Reserve for eight years in pay grade E-1 (seamen recruit) before being appointed midshipman, USNR, and receiving compensation. Students who are disenrolled from the NROTC Scholarship Program for reasons beyond their control will, upon disenrollment, be discharged from their enlisted status. It should be understood that two years' active enlisted service may be required of those students who default on the terms of their NROTC contract after the beginning of their sophomore year.

Officers commissioned in the Regular Navy or Marine Corps serve on active duty for a minimum of four years. Those commissioned in the Naval or Marine Corps Reserve serve a minimum of three years on active duty. Specialized training following commissioning adds additional active duty requirements in some cases.

### Choice of Assignment

Graduates have an opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign the newly commissioned officer the duty of his or her choice.

Among the types of assignments are duty in nuclear propulsion for surface ships and submarines, naval aviation, and large and small surface ships. Other specialties are available on a limited basis.

## Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps.

Marine-option midshipmen will follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen will be taught Marine courses by a Marine officer instructor. For the first class summer-cruise (after the junior year), known as the USMC Officer Candidate School, Marine-option students will travel to Quantico, Virginia, where they will undergo six weeks of intensive training. Upon commissioning the following year as second lieutenants, they will be assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are Infantry, Aviation, Artillery, Tracked Vehicles, Engineers, Communications, Electronics, Supply, Administration, and Computer Science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, in this country or overseas.

The Marine Corps has a postgraduate educational system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

## Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of other required courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

## Naval Professional Laboratories

**Nav S 141–142, 241–242, 341–342, or 441–442**

All students in the program participate in one ninety-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoon. This period is planned and implemented for the most part by the midshipmen officers in the battalion organization and consists of both drill and professional information briefings. Students gain experience in actual leadership situations and at the same time learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

## Naval Science Courses

All Navy and Marine midshipmen take one naval science course together each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students are required to take the History of Amphibious Warfare and the Evolution of War courses in either their junior or senior year, depending on when the courses are offered.

### Freshman Year (Navy and Marines)

**Nav S 101 Fundamentals of Naval Science**

Fall. No credit.
Two-hour class each week (lecture-recitation). Navy staff.
A study of fundamental aspects of naval science, including its conceptional contributions to sea power, factors involved in the physical development of naval forces, resources that must be managed, and prospects for the future.

**Nav S 102 Naval Ship Systems (also Mechanical and Aerospace Engineering 101)**

Spring. 3 credits. Three lecture-recitation classes each week.
Prof. M. Louge, Navy staff.
An introduction to primary ship-systems and their interrelationship. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are considered.

**Nav S 157 Principles of Sailing**

Fall and spring. Physical education credit.
One class each week. Navy staff.
Instruction in basic sailing skills and safety principles. Students sail small and large boats on Cayuga Lake, weather permitting. Focus is U.S. Navy Class B inshore skipper certification.

### Sophomore Year (Navy and Marines)

**Nav S 201 Naval Ships Systems II (Weapons)**

Fall. 3 credits.
Lecture-recitations, M W F. Navy staff.
The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of sensing and detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, tracking, stability, and weapons control and delivery. The latter part of the course covers the formal derivation of the fire-control problem and specific U.S. naval weapons.

**Nav S 202 Sea Power and Maritime Affairs**

Spring. 3 credits.
Three seminars each week. Navy staff.
Discussions examine the history of the Navy as a force in diplomacy. Relationships between Congress and the military for determining the national defense policy are also explored. The last section of the course concentrates on the balance between the superpower navies today. An integrated examination of current events and issues gives a historical perspective throughout the course.

### Junior Year (Navy)

**Nav S 301 Principles of Navigation (also Agricultural Engineering 305)**

Fall 4 credits.
Four classes each week (lecture-recitation-project work).
The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, tides and currents, and soundings. It also includes celestial navigation, time, spherical trigonometry, motion of the stars and sun, star identification, position fixing, use of the nautical almanac, electronic navigation systems, and air navigation.

**Nav S 302 Naval Operations**

Spring. 3 credits.
Three lectures each week. Navy staff.
The course covers the application of command and control principles and the integration of sensors and weapons systems in the conduct of naval operations. Visual and electronic communications methods, data-systems employment, tactical disposition of forces, and fleet logistics support are studied. Topics in shiphandling are also discussed.

### Senior Year (Navy)

**Nav S 401 Organizational Behavior and Small Group Processes (also Hotel Administration 414)**

Fall. 3 credits.
Current research is examined to provide a conceptual framework for understanding group processes within organizations. In addition, students participate in experiential laboratories aimed at enhancing their effectiveness as members or leaders of groups. Topics include stages of group development, leadership, decision making, motivation, individual versus group needs, organizational communication, power, and organizational change.

**Nav S 402 Naval Administration Topics**
Spring. Two credits.
A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is directed at the midshipman for his own understanding of naval administration and for use in the role of the division officer in counseling his subordinates. Through the use of lectures, situation problems, and role playing, the student will learn about the various aspects of Navy management and administration.

### Junior or Senior Year (Marine Options)

**Nav S 310 Evolution of War**
Fall. 3 credits.
3 classes each week. Presentations by Marine Corps staff.
A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

**Nav S 410 History of Amphibious Warfare**
Spring. 3 credits.
Three lectures-recitations each week. Marine Corps staff.
The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis will be on amphibious operations conducted in the central Pacific during World War II. Additionally, the future potential of amphibious operations will be discussed.

## Other Required Courses

### Navy Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University and complete courses in the following subjects (specified courses to be approved by the professor of naval science):

American military affairs or national security policy (one year)

English (one year)

calculus (one year)

calculus-based physics (one year)

computer science (one term)

modern foreign language (one term)—this requirement may be waived by the professor of naval science under some circumstances.

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences to meet the technological requirements of the modern Navy.

### Navy Option College Program

Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students to be eligible and competitive for a Professor of Naval Science (PNS) Scholarship.

### Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the United States Marine Corps or United States Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students meet with the Marine officer instructors for naval professional laboratories and take two naval science courses. In addition, two semesters of any courses (a minimum of three hours each) in the following subject areas are required, the intent being to broaden the base of knowledge of the individual. The specific course chosen must be approved by a Marine Officer Instructor (MOI).

communication skills (oral or written)

computer science

economics

government

history

modern languages

operations research

organizational behavior

psychology

sociology

## University Courses

A wide range of courses satisfy Naval ROTC science and engineering electives or social sciences and humanities requirements. Students should consult their naval science instructor or adviser concerning appropriate course selections. A partial list of those Cornell University courses that meet academic requirements of the program follows.

*Calculus*
Math 111, and 112 or 122 Calculus
Math 191, 192, or 193 Calculus for Engineers

*Physics*
Phys 112 or 116, and Phys 213 or 217
Phys 207–208 Fundamentals of Physics

*Computer Science*
Engr 100 Introduction to Computer Programming
Com S 100 Introduction to Computer Programming
Com S 102 Introduction to Microcomputer Applications
Ag En 102 Introduction to Microcomputer Applications
Ag Ed 447 Instructional Applications of the Microcomputer

*American Military Affairs or National Security Policy*
Econ 306 Economics of Defense Spending
Econ 307 Introduction to Peace Science
Govt 349 Political Role of the Military
Govt 390 Principles of Strategy
Govt 391 United States National Security Policy
Hist 313–314 History of American Foreign Policy
Hist 341 Recent American History, 1945 to the Present

*English*
Fulfilled by completing freshman writing seminar course requirements.

## Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities in which to participate. Each summer, as an optional part of their summer training, midshipmen sail aboard the unit sail-training vessel *Vindicator* to distant ports of call. Back at Cayuga Lake, a highly respected sail-training program offers instruction, both in small sailboats and in large-boat sailing on board *Vindicator*, to all who want to participate. The unit offers a comprehensive sports program in which most midshipmen participate. The naval unit has won the Independent Division All Sports Trophy for fifteen of the last twenty-one years. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps ball, the All-Service military ball, and traditional naval mess nights.

# DEPARTMENT OF AEROSPACE STUDIES

Colonel Kent E. Wolcott, United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Major Paul D. Decker, United States Air Force

Captain James Marchio, United States Air Force

Captain Timothy E. Edem, United States Air Force

Captain Peter Sefcik, United States Air Force

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to provide the student with a background of aerospace knowledge and to further develop qualities of leadership, integrity, and self-discipline. The objectives are achieved through Four-Year and Two-Year programs. These programs include specific courses in aerospace studies and practical laboratories.

Entering students are assigned to one of four categories: flying (pilot-navigator), missile, engineering-science, and nontechnical. These assignments are based on the student's preferences, qualifications, and academic field of study and the needs of the Air Force.

## Requirements for Enrollment

The Air Force officer education program is open to any undergraduate or graduate student enrolled in any major field of study. The student's academic course of study is often a prime factor in determining the kind of career pursued in the Air Force. (See Air Force Careers, below.)

Applicants must be U.S. citizens. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission.

Applicants who are interested in flying (as pilot or navigator) or missile duty should make that request known at the time they enter the program.

All applicants receive physical examinations at no cost and, to be accepted, must meet the physical requirements listed below.

Though the program is designed to prepare future Air Force officers, Department of Aerospace Studies courses are open to all students at Cornell.

## Physical Requirements

Every applicant must be free from any limiting physical infirmity and must have normal hearing, blood pressure, and heartbeat. Weight must be normal for height and age.

Following are the additional specific requirements for nonflying categories.

*Vision:* bilateral distant vision without corrective lenses, at least 20/400.

*Height:* for men, at least sixty, but not more than eighty, inches; for women, at least fifty-eight, but not more than seventy-two, inches.

*Allergy:* no history of asthma since twelfth birthday.

*Dental health:* good.

Those students who are interested in qualifying for flying categories (pilot or navigator) must meet more stringent requirements than outlined above. Students are given physicals at Air Force expense to determine if they qualify.

## Four-Year Program

The Four-Year Program is open to all freshmen. Sophomores may enter the program but require departmental approval. Students in a five-year degree program may enroll in their freshman or sophomore year.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the professor of aerospace studies.

The Four-Year Program consists of the General Military Course (GMC) and the Professional Officer Course (POC). For scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

### General Military Course

Students in the General Military Course take one credit of classroom work offered by the Department of Aerospace Studies each semester. During the freshman year the student examines the organization and mission of the United States Air Force and the role of U.S. military forces in the contemporary world. In the sophomore year the student studies the history and development of military aviation and American air power. In both years officership, professionalism, and human rights within the United States Air Force are emphasized.

Students also spend 1-1/2 hours a week in a leadership laboratory, which includes classroom instruction in responsibilities and the environment of the junior officer and instruction and practice in basic drill and ceremonies. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

### Professional Officer Course

The Professional Officer Course (POC) is a two-year advanced course of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet the academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if tendered, a commission in the Air Force Reserve on graduation.

Classroom study in the POC requires three hours a week each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year cadets study the elements of national security and the place of the military in American society. Leadership laboratory requires a minimum of 1-1/2 hours a week in the junior and senior years. In the leadership laboratory the cadet is exposed to advanced leadership experiences and applies principles of management learned in the classroom.

## Two-Year Program

The Two-Year Program consists of the last two years (Professional Officer Course) of the regular Four-Year Program plus a six-week summer training course preceding enrollment. (Details of the Professional Officer Course are given above.)

The Two-Year Program is open to male and female students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools under crosstown or consortium agreement. Applications are accepted from October through April of the year preceding the applicant's planned entry into the program. Selectees are then required to successfully complete a six-week summer training program at government expense.

## Scholarships

Air Force ROTC offers four-year scholarships on a competitive basis to high school seniors and graduates who will major in selected scientific and technical areas such as engineering, mathematics, meteorology, and computer science. Four-year scholarships are awarded on a limited basis to individuals who will major in nontechnical areas. Scholarship information can be obtained from a high school counselor, from Air Force ROTC officers at a campus offering Air Force ROTC, from a local Air Force recruiter, or from AFROTC/RROO, Maxwell AFB, AL 36112–6663. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. *Students should apply early.*

Scholarships for 3-1/2, 3, 2-1/2, and 2 years are also available to college students. There are also two- and three-year scholarships for qualified men and women who are pursuing selected medical and nursing degrees. Applications for these scholarships should be made to the professor of aerospace studies during the freshman or sophomore years of college. Appropriate application information is furnished by the professor of aerospace studies at the Air Force ROTC detachment. Selections are based on scores achieved on the Air Force Officer Qualifying Test, the overall grade point average, and the rating from an interview board composed of Air Force ROTC staff officers. All scholarships pay, at a minimum, $7,500 toward tuition and provide a $100 monthly nontaxable allowance during the school year.

## Fees

An initial uniform deposit of $30 is required on entry into AFROTC. There are two subsequent $30 uniform payments due, one on entry into the POC and the final one before commissioning, at which point the cadet owns the uniform.

## Benefits

All cadets in the advanced program (POC) receive a $100-a-month, nontaxable subsistence allowance for the academic year. During the four- or six-week summer field training (see below), each cadet receives the pay allowance authorized by current directives, plus an allowance for travel to and from the field site. Most textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in field trips made to Air Force bases throughout the country. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

## Field Training

There are two types of field training: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants. Students in these programs normally attend field training between their sophomore and junior years. Field training is hosted each summer by several active Air Force installations.

Field training is designed to stimulate the development of military leadership and skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; a social-actions program; and supplemental training. Special emphasis is placed on career orientation and interaction with other young officers in fields of interest to the student. The six-week training program is unique because it has an additional sixty hours of academic course work similar to that taken during the freshman and sophomore years.

Pilot candidates attend a three-week light aircraft orientation program between their junior and senior years. Objectives of the program are to train and motivate qualified cadets toward a rated career and to screen those cadets who have the potential to become Air Force pilots.

In addition to field training, Army airborne training (parachute jumping instruction) is available between the junior and senior years as an extracurricular activity.

## Advanced Training Program

This program allows selected cadets to visit active duty Air Force bases for a two- or three-week period during the summer following their junior year. As "third lieutenants," cadets receive specialized career orientation and an opportunity to experience leadership, human relations, and management challenges encountered by Air Force junior officers. Cadets have an opportunity to become familiar with the Air Force way of life.

## Commissioning Obligations

All students who successfully complete the AFROTC advanced program (POC) and who are awarded a baccalaureate degree are commissioned as second lieutenants in the Air Force.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilot trainees are required to serve on active duty for eight years after completing flying training and receiving their aeronautical rating. Navigator trainees serve five years after completing training. Some newly commissioned officers are allowed to postpone active service to earn advanced degrees.

## Air Force Careers

Air Force policy has been to assign new officers to a career field appropriate to their educational background. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, aeronautics, astronautics, design and development, the biological sciences, computer design and maintenance, meteorology, or various other engineering and scientific fields. Those graduating in the nontechnical category can anticipate assignments in manpower management, administration, logistics, police and investigation, intelligence, personnel, transportation, information, and numerous other career fields. They will use their educational backgrounds in positions of responsibility and be given the opportunity to develop further their managerial and administrative skills.

Any undergraduate major is suitable for those who are qualified and interested in becoming pilots or navigators. After completion of flying training they are assigned primary duties flying various kinds of aircraft.

Officers who elect missile duty will train and be assigned to one of the operational missile bases as a crew member. This type of assignment provides an opportunity for a young officer to obtain command experience.

## Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years.

### Freshman Year

**Air S 161 United States Military Forces**
Fall. 1 credit.
One class each week.
A study of current U.S. military forces with emphasis on the analysis of the doctrine and mission of the United States Air Force. Army and Navy operations, as contributions to the total national defense, are reviewed. Current factors affecting today's professional military officers are considered.

**Air S 162 Aerospace Operations**
Spring. 1 credit.
One class each week plus a field trip to a local military installation.
The aerospace forces of the United States are studied with emphasis on the organization and resources of the United States Air Force. The elements of strategic offensive, defensive general-purpose, and aerospace support forces throughout the world are also studied.

### Sophomore Year

**Air S 211 Development of Military Aviation**
Fall. 1 credit.
One class each week.
Factors leading to the development of aviation and the concepts and doctrine for the employment of air power are studied. Topics to be reviewed and analyzed include the history of manned flight, the effects of World War I on the uses of aviation, the development of pre–World War II aircraft, and the political struggles for an independent U.S. air arm. The role of air power in World War II, including strategic bombing, tactical air power, and the role of air superiority in warfare, is examined.

**Air S 212 American Air Power since 1947**
Spring. 1 credit.
One class each week.
The employment of the Air Force since World War II in military and nonmilitary operations to support national objectives is discussed. Effects of technology on defense policy and strategy are reviewed. The part played by the air forces in activities such as the Berlin airlift and national and international relief missions is discussed. The role of air power in the Korean conflict, the Cuban crisis, and the Vietnam War is examined from the viewpoint of technology and tactical doctrine.

### Junior Year

**Air S 331 Leadership and Communicative Skills**
Fall. 3 credits.
Three classes each week.
The course is divided into three major parts. Part one provides an introduction to the principles and techniques used in the development of effective communication skills through the use of the interpersonal communication model. Part two explores the impact that both individual and group behavior have on organizational goals, with special emphasis on management theories that have evolved to explain human motivation. Part three deals with leadership as a function of the management principle of directing. Attention is given to the impact that various leadership styles have on human motivation and organizational effectiveness. Current leadership research and theory and the responsibilities of command are considered. Case-study exercises and oral and written assignments are required.

**Air S 332 Management**
Spring. 3 credits.
Three classes each week.
Introductory course that deals with the basic principles of management, including planning, organizing, staffing, and controlling. Students will prepare business plans that incorporate the various principles of management to include the study of quantitative methods and computer-generated financial reports used to enhance the management decision-making process. Also considered is the role of management in the development of a corporate code of ethics in relationship to marketing strategies and tactics. Case studies, problem sets, business plans, and oral presentations are required.

### Senior Year

**Air S 461 National Security Forces in Contemporary American Society I**
Fall. 3 credits.
Two classes each week.
This course examines American national security policies in the post–World War II period by seeking to understand the people, politics, and processes involved in their formulation and implementation. A series of historical case studies are used to illustrate both the functioning of this system and the problems associated with it.

**Air S 462 National Security Forces in Contemporary American Society II**
Spring. 3 credits.
Two classes each week.
The functions and roles of the military officer in a democratic society are studied through an examination of topics such as the concept of military professionalism and the military's role in politics. Other issues including the challenges and problems posed by the all-volunteer force, the ethical dilemmas confronted by the military officer, and the new roles played by the military in the war against drugs and terrorism likewise are explored. The course concludes with a brief look at the essential features of the military justice system.

### Leadership Laboratory Courses

All Air Force cadets spend at least 1-1/2 hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period (such as the fall Veterans Day parade and the spring Military Awards Ceremony). All cadets are also expected to participate in an evening dining-in and to meet minimum physical fitness and weight standards each semester.

**Air S 141–142 Initial Military Experiences**
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. Field trip to a local military installation.

**Air S 241–242 Intermediate Military Experiences**
Develops skills in giving commands for drill and ceremonies. Introduction to the Air Force base environment in which the Air Force officer functions. Includes a look at career areas available based on academic majors. Students experience and participate in leadership situations through military drills and ceremonies. Field trip to a local military installation.

**Air S 341–342 Junior Officer Leadership**
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on comprehending the importance of applying effective human relations in dealing with superiors, peers, and subordinates. Relationship between Air Force specialty codes and academic majors. The importance of basic health habits to leadership.

**Air S 441 Advanced Leadership Experiences**
Command leadership in operating a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

**Air S 442 Precommissioning Laboratory**
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

# DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

## ADMINISTRATION

Alan E. Gantert, director

John R. West, assistant director

## COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at physical education course registration. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, since the curriculum is frequently reviewed and changed.

**Alexander Technique**
Fall and spring.
Two classes a week, Helen Newman Hall.
Exercise routines that increase sensory awareness.

**Basic Archery**
Fall and spring.
Two classes a week, Helen Newman Hall.
Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at twenty, thirty, and forty yards.

**Intermediate Archery**
Fall and spring.
For those who have playing experience.

**Badminton**
Fall and spring.
Two classes a week.
Fundamental shots, scoring, and general play.

**Basketball**
Fall and spring.
Two classes a week.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

**Bowling**
Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
For the beginning and intermediate bowler. Shoe rental is included in the fee.

**Boxing**
Fall and spring.
Two classes a week, Teagle Hall.
Fundamentals of training methods.

**Equitation**
Fall and spring. Fee charged.
One class a week, Cornell Equestrian Center. Class days and hours are arranged at registration.
Instruction varies according to riding ability and experience

**Flexibility and Toning**
Fall and spring.
Two classes a week, Helen Newman Hall.
Overall stretching exercises.

**Fitness and Conditioning I**
Fall and spring.
Two classes a week.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

**Fitness and Conditioning II**
Fall and spring.
Two classes a week, Teagle Hall.
Flexibility exercises and strength-building concepts with various equipment and cardiovascular endurance tests. Body-fat testing and submaximal treadmill test included.

**Fitness–Exercise–Nutrition**
Fall and spring.
Two classes a week, Helen Newman Hall.
Ways in which exercises may be used in weight control, the role of nutrition and diet in weight control, and the design of an individual exercise and running program.

**Fitness for Women**
Fall and spring.
Two classes a week, Teagle Hall.
Fitness program that is geared toward women's own interests and abilities. Nutrition, time management, relaxation techniques, and stress management are included.

**Judo**
Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Conditions and increases suppleness. Develops skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**Lacrosse**
Fall.
Two classes a week, Schoellkopf Field.
Instruction and practice in basic skills (cradling, passing, catching, goal shooting, checking) and team play.

**Nautilus**
Fall and spring. Enrollment limited to capacity of facilities. Fee charged.
Two classes a week, Schoellkopf Hall.
Advanced weight lifting on specifically designed apparatus. There are ten stations in the room.

**Power Lifting**
Fall and spring.
Teagle Hall.
Introduces the student to the proper use of free weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance

**Racket Games**
Fall and spring.
Two classes a week, Teagle Hall.
Racquetball, squash, badminton, and deck tennis. Playing fundamentals, scoring, and rules are stressed. Interclass competition

**Racquetball**
Fall and spring. Fee charged.
Two classes a week, Grumman Squash Courts.
Instruction at all levels. Equipment is furnished

**Racquetball II**
For those who have playing experience and want interclass competition.
One class per week.

**Relaxation and Stress Management**
Fall and spring.
Two classes a week, Helen Newman Hall.
Introduction to basic relaxation techniques for the reduction of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

**Soccer**
Spring.
Two classes a week, Schoellkopf Field.
Introduction to the game. Includes basic individual skills (passing, trapping, volleying) and team play and strategy

**Squash**
Fall and spring. Fee charged.
Two classes a week, Grumman Squash Courts.
Classes for all levels of play. Equipment is furnished.

**Triathlon**
Fall.
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

**Weight Training**
Fall and spring.
Two classes a week, Teagle Hall.
Classes include instruction in correct lifting techniques involving all muscle groups. Recreational classes are established for experienced lifters; structured classes are for novices. Universal weights are used

## Aquatic Courses

**Beginning Swimming**
Fall, spring, and summer.
Two classes a week, Helen Newman Hall and Teagle Hall.
Instruction and practice in basic skills leading to passing the basic swimming proficiency test.

**Advanced Beginning Swimming**
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
This course is ideal for all who have taken one term of Beginning Swimming, regardless of whether the swimming test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, sidestroke, breaststroke, diving, treading water, and underwater swimming. The primary objective of the advanced beginning swim course is to strengthen the student's confidence and competence.

**Intermediate Swimming**
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
Practice and perfection of basic skills and five basic strokes.

**Advanced Swimming**
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
Practice and perfection of the eleven basic strokes

**Advanced Lifesaving**
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
American Red Cross senior lifesaving course. Practice and execution of survival and lifesaving skills. Certification is awarded on satisfactory completion of the course.

**American Red Cross Water Safety Instructor Certification**
Fall and spring. Prerequisite: American Red Cross advanced lifesaving certification.
Three or five classes a week, Helen Newman Hall and Teagle Hall. Students must not miss first class.
American Red Cross water safety instructor certification is awarded on satisfactory completion of the course

**Water Safety Instructor Refresher Course**
Spring.
Five classes a week, Teagle Hall.
Selected sessions of the basic water safety instructor certification course.

**Water Aerobics**
Fall and spring.
Two classes a week, Teagle Hall and Helen Newman Hall.
Offers the participant all the components of a standard aerobics class with music, rhythmical routines, resistance activities, cardiovascular conditioning, stretching, and flexibility but in an aquatic environment.

**Scuba Diving**
Fall, spring, and summer. Fee charged.
Teagle Hall.
Program includes skill training in a pool and open-water training in Cayuga Lake. P. A. D. I. certification awarded upon successful completion.

**Advanced Open-Water Scuba Diving**
Fall and spring. Fee charged.
Advanced-level open-water training in Cayuga Lake. For those who have completed the basic course.

**Rescue Diver**
Fall and spring. Fee charged.
Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba Diving.

**Dive Master**
Fall and spring. Fee charged.
Hours to be arranged. Teagle Hall.
Advanced-level scuba course open only to those who have completed the rescue diver course.

**Bahamas Scuba Diving**
Fall and spring. Fee charged.
This course is offered during intersession periods. One week of sailing and diving in the Bahamas. See the information sheet at the registration table.

**Beginning Synchronized Swimming**
Fall.
Two-hour class one evening a week, Helen Newman Hall.
Sculling stunts, including the tub, marlin, log roll, front and back tuck somersaults, and front and back pikes.

**Advanced Synchronized Swimming**
Spring.
Two-hour class one evening a week, Helen Newman Hall.
Preparing, practicing for, and presenting an aquatic show.

**Aquatic Conditioning**
Fall and spring. Prerequisite: good swimming ability.
Two classes a week, Teagle Hall.
Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period.

**Board Sailing (Wind Surfing)**
Fall, spring, and summer. Fee charged.
Ten instructional lessons plus free practice times. The equipment is furnished.
A Mistral Board Sailing Academy certificate is awarded on successful completion of the course

**Water Skiing**
Fall and summer. Fee charged.
Three classes a week.
Introductory course for beginning water skiers. Conducted on the east shore of Cayuga Lake. Students must provide their own transportation to and from the lake.

## Dance

**Aerobic Dance**
Fall and spring. Fee charged.
Two classes a week.
A simple dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

**Ballroom Dancing**
Fall and spring. Fee charged. Students and their partners must sign up at course registration.
Includes instruction in the waltz, Charleston, rumba, and tango.

**Dance**
Fall and spring.
Two or three classes a week, Helen Newman Hall.
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to some advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

**African Dance**

**Ballet I, II, III**

**Jazz Dance II**

**Modern Dance I, II, III, IV**

## Fencing

**Fencing I**
Fall and spring. Fee charged.
Two classes a week, Helen Newman Hall.
Includes warm-up exercises and all basic offensive and defensive moves. Equipment is furnished.

**Fencing II**
Fall and spring. Fee charged. Prerequisite: Fencing I or the equivalent.
Two classes a week, Helen Newman Hall.
Interclass competition is stressed. Equipment is furnished.

## First Aid

**Standard First Aid**
Fall and spring. Textbook fee charged.
One or two classes a week, Schoellkopf Hall.
American Red Cross standard first-aid course. Certification is awarded on satisfactory completion of the course.

**Advanced First Aid**
Fall and spring. Fee charged.
American Red Cross certification is awarded on satisfactory completion of the course.

**Cardiopulmonary Resuscitation (CPR)**
Fall and spring. No credit. Fee charged.
One class a week for four weeks, Schoellkopf Hall.
American Red Cross CPR certification is issued on satisfactory completion of the course.

**Emergency Medical Training Course**
Fall and spring. Fee charged.
Will cover two terms, for 100 hours of training.
Designed for those involved in high-level emergency medical skills. New York State EMT certification will be awarded to those who successfully complete course.

## Golf

**Instruction in Golf**
Fall and spring. Fee charged.
Two classes a week, Moakley golf course.
Instruction by PGA professionals is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

**Recreational Golf**
Fall and spring. Limited to students who are experienced golfers. Fee charged.
Moakley golf course.
Students must provide their own clubs. Twelve rounds of nine holes each must be played to complete the Program.

## Gymnastics

**Beginning Gymnastics**
Fall and spring.
Two classes a week, Teagle Hall.
Basic instruction in tumbling, dance for gymnastics, and use of all pieces of apparatus.

**Intermediate Gymnastics**
Fall and spring.
Two classes a week, Teagle Hall.
Beginning gymnastics or the equivalent is a prerequisite.

## Jogging

**Jogging**
Fall, spring, and summer.
Two classes a week, Barton Hall and track.
A program to meet the needs of each participant. Increases capacity from jogging a few hundred yards to three miles at the end of twelve weeks.

**Jogging Tours**
Fall and spring.
Three classes a week for seven weeks, Barton Hall.
Each class consists of a three-to-five-mile jogging tour of a local area.

## Martial Arts

**Basic Karate**
Fall and spring. Fee charged.
Two evening classes a week, Teagle Hall.
A beginning course taught by professional staff.

**Advanced Karate**
Fall and spring. Fee charged.
Two evening classes a week, Teagle Hall.
Open to those who have taken Basic Karate or the equivalent.

**Kung Fu**
Fall and spring.
Two classes a week, Teagle Hall.
Exploration of conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

**Martial Arts and Aerobic Exercises**
Fall and spring.
Three classes a week, Teagle Hall.
Blend of ten basic martial-art techniques in a framework of rhythmic exercises.

**Self-Defense for Women**
Fall and spring. Fee charged.
Hours to be arranged, Teagle Hall.
Basic methods of physical protection for women.

**Tae Kwon Do**
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Basic kicking, punching, and blocking are emphasized.

**T'ai Chi Chuan I and II**
Fall and spring.
Three classes a week, Teagle Hall.
Introduction to T'ai Chi, a system of graceful, slow-movement exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

## Outdoor Program

See the brochure *Cornell University Outdoor Program* at registration for more information about courses.

**Backpacking in the Finger Lakes Region**
Fall, spring, and summer.
Classes lead to a full weekend on the trail.

**Bicycling**
Fall and spring.
Afternoon or weekend rides. No overnights.

**Bicycle Touring and Camping**
Fall and spring.
Rides lead to overnight weekend tours.

**Canoe Expeditioning**
Fall, spring, and summer.
Outings finish with an Adirondacks expedition.

**Canoeing, Flat-Water**
Fall and spring.
Afternoon or weekend outings to local lakes. No overnights.

**Canoeing, White-Water**
Fall and spring.
Includes three days of white-water trips.

**Caving**
Fall and spring.
Explore caves in central New York State.

**Cross-Country Skiing I and II**
Spring.
Six 3 1/2-hour classes. Meets once each week immediately following spring registration.
Van transportation provided for groups of twelve students and two instructors. Ski rental optional.

**Cross-Country Skiing–Day Touring**
Spring.
Four full-day weekend outings.
Emphasis on backwoods touring. Ski rental optional.

**Adirondack Ski Expedition**
Winter break.
Ten-day winter camping and skiing trip.

**Hiking in the Finger Lakes Region**
Fall and spring.
Includes four weekend days of hiking.

**Technical Ice-climbing**
Spring.
Includes four weekend days of climbing.

**White-Water Kayaking**
Fall and spring.
Includes three days of white-water trips plus pool sessions.

**Natural History**
Fall and spring.
For those interested in the local ecology.

**Outdoor Leadership**
For those interested in becoming Outdoor Program instructors.

**Rock-climbing Skills**
Fall and spring. No experience required.
Meets one afternoon a week for eight weeks.

**Shawangunks Rock-climbing Expedition**
Fall and spring.
Includes a four-day climbing camp.

**Wilderness Skills**
Fall and spring.
Introductory course. Includes a wilderness expedition during fall break or spring break.

**Wyoming Wilderness Expedition**
Summer.
Full-time course for the entire month of June to train outdoor instructors.

## Riflery

**Riflery**
Fall and spring. Fee charged.
Two classes a week, Barton Hall.
Instruction and practice in the techniques of target riflery from various shooting positions.

**Trap and Skeet Shooting**
Fall and spring. Fee charged.
Two-hour class one afternoon a week, Teagle Hall.
Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

**Hunter Safety**
Fall and spring.
Hours to be arranged, Barton Hall.
Instruction in hunter safety leads to New York State certification for bow and gun.

**Basic Pistol**
Fall and spring.
Barton Hall range.
Instruction in the use of the pistol in the three modes of fifty-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis placed on safety and responsibility while firing.

## Sailing

**Principles of Sailing**
Fall, spring, and summer. Fee charged.
One class a week, Cayuga Lake.
Instruction in basic sailing skills and safety principles. Students sail small and large boats on Cayuga Lake, weather permitting.

**Intermediate Sailing**
Fall. Fee charged.
One class a week, Cayuga Lake.
Instruction in more-advanced techniques for those already familiar with the basic principles of sailing.

## Skating

**Introduction to Skating**
Fall and spring. For beginning to intermediate skaters. Fee charged.
Three classes a week for half a term, Lynah Rink.
Students provide their own hockey skates or rent them at Lynah Rink.

**Beginning and Low-Intermediate Figure Skating**
Fall and spring. Fee charged.
Three classes a week for half a term, Lynah Rink.
Instruction and practice in basic figure skating techniques: forward and backward, cross-overs, turns, and spirals. Students provide their own figure skates or rent them at Lynah Rink.

**Intermediate and Advanced Figure Skating**
Fall and spring. Limited to experienced skaters. Fee charged.
Three classes a week for half a term, Lynah Rink
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

**High-Intermediate and Advanced Figure Skating**
Fall and spring. Fee charged.
Three classes a week, Lynah Rink.
Advanced figure skating techniques. Students provide their own figure skates or rent them at Lynah Rink.

**Introduction to Ice Hockey**
Fall and spring. Fee charged.
Two classes a week, Lynah Rink.
Stick handling, passing, and shooting are stressed. Students provide their own skates and sticks; all other equipment is furnished.

**Intermediate Hockey**
Fall and spring. Fee charged. Prerequisite: beginning hockey or participation in organized hockey.
Two classes a week, Lynah Rink.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants. All other necessary equipment will be supplied.

## Skiing

**Skiing Conditioning**
Fall.
Two classes a week, Helen Newman Hall.
Exercises designed to increase flexibility, strength, and endurance in preparation for the ski season.

**Downhill Skiing**
Spring. Fee charged.
One class a week, Greek Peak.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing - *See* Outdoor Program.

## Tennis

**Indoor Tennis**
Spring. Fee charged.
Two classes a week, Kite Hill tennis bubble.
Classes for all levels of play. Emphasizes strategy for intermediate and advanced groups. Space limitation requires doubles play.

**Beginning Outdoor Tennis**
Fall.
Three classes a week for half a term. Helen Newman courts.
Instruction and practice in basic strokes (forehand, backhand, serve).

**Intermediate Outdoor Tennis**
Fall.
Three classes a week for half a term. Kite Hill courts.
Use of fundamental strokes, lobs, and drop shots; doubles strategy.

**Advanced Outdoor Tennis**
Fall. Limited to experienced players.
Three classes a week for half a term. Kite Hill courts.
Emphasizes strategy.

## Volleyball

**Introduction to Volleyball**
Fall and spring.
Two classes a week, Barton Hall.
Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes will scrimmage.

**Intermediate Volleyball**
Fall and spring.
Two classes a week, Helen Newman Hall and Teagle Hall.
Passing and blocking strategy; scrimmages in class.

**Advanced Volleyball**
Fall and spring.
Two classes a week, Helen Newman Hall.
Offensive and defensive team strategy is emphasized in class scrimmages.

## Yoga

**Yoga I**
Fall, spring, and summer. Fee charged.
Two classes a week, Teagle Hall.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

**Yoga II**
Fall and spring. Fee charged.
Two classes a week, Teagle Hall.
Designed for those who have completed Yoga I or its equivalent.

## Independent Study

**Independent Study**
Fall and spring.
Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Special permission to enter this program must be granted by the program director.

# SUMMER SESSION, EXTRAMURAL STUDY, AND RELATED PROGRAMS

## ADMINISTRATION

Charles W. Jermy, Jr., acting dean

Jennifer T. Cook, summer session catalog production manager

Alicia Dowd, division media manager

Judith K. Eger, director, Programs in Professional Education and Special Programs

Mary K. Gloster, administrative course coordinator

Margaret L. Haine, director, Cornell University Summer College

Ralph Janis, director, Cornell's Adult University

Judy M. VanDermark, director, Cornell University Conference Services

Valerie A. Sellers, director of administration

Diane E. Sheridan, director of finance

Colleen M. Emerick-Daniluk, registrar, summer session and extramural study

## THE DIVISION

Cornell University's Division of Summer Session, Extramural Study, and Related Programs provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. The division office is located in B12 Ives Hall, Ithaca, New York 14853-3901 (telephone: 607/255-4987).

## SUMMER SESSION

The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best. Participants may choose from a wide spectrum of courses scheduled during three-, six-, and eight-week sessions. In addition, dozens of special programs are presented in varying formats, including on-site fieldwork and overseas study. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily and are usually kept small to foster a close association between students and teachers. For information, consult the Summer Session Office, B12 Ives Hall, or call 607/255-4987.

High school juniors and seniors may attend regular university courses and explore career options through Cornell University Summer College. For information, write Cornell University Summer College, B12 Ives Hall, or call 607/255-6203.

## EXTRAMURAL STUDY

The extensive credit-course offerings of the university are available to area residents on a part-time basis. Those interested may apply for admission to practically any course in the university and will be admitted if they receive the instructor's written approval. The division also offers an Official Visitor's Program that allows persons to attend classes in many divisions of the university on a space-available basis at a reduced charge. Visitors are required to obtain written permission of the instructor. In this program no credit is given and no record is kept of attendance or performance. Between the fall and spring terms the division offers winter session credit courses primarily for undergraduates but open to anyone. For information, contact the Extramural Office in B12 Ives Hall or call 607/255-4987.

## PROGRAMS IN PROFESSIONAL EDUCATION

Because of Cornell's leadership in both theoretical and applied research, the university offers unique opportunities for professional growth to persons in science, technology, government, business, and industry. The division's Programs in Professional Education are intensive updates taught by Cornell faculty members whose research involves areas of importance to the corporate sector and the professions. Programs in Professional Education can also respond to the needs and interests of corporations and professional societies by developing programs both on and off campus that are suited to their particular educational purposes. For information, telephone 607/255-7259.

## CORNELL'S ADULT UNIVERSITY

Cornell's Adult University (CAU) offers one-week noncredit courses on campus during the summer and weekend seminars at off-campus locations during the fall and spring. Originally conceived as a program for alumni, CAU has greatly broadened its mission in the area of adult education. All courses and seminars are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional, formal education and informal, noncredit study. For information, consult Cornell's Adult University, 626B Thurston Avenue, or call 607/255-6260.

## CONFERENCE SERVICES

Excellent facilities, a beautiful campus, and a conference office concerned with each group's special needs make Cornell an ideal setting for conferences and meetings. Professional groups from all over the country come to Cornell to take advantage of this special learning environment. The staff is available to answer questions, advise on creative program ideas, assist in planning, make special arrangements, secure accommodations, and handle other administrative details. For information about conferences at Cornell, consult Cornell University Conference Services, Box 3, Robert Purcell Union, or call 607/255-6290.

## CONTINUING EDUCATION INFORMATION SERVICE

The extramural study registrar provides free information, counseling, and referral to women and men who have been out of school for several years and want to resume their education. Anyone who wants to take courses, begin an undergraduate or graduate degree program, or complete an unfinished degree is welcome to meet with the registrar. Information is available on all schools and departments of the university; opportunities for part-time and full-time study; special courses, workshops, and seminars; and community resources for older students. A small library includes information on educational opportunities at local institutions of higher learning, financial aid, work-study programs, and admission procedures. For information, contact Continuing Education Information Service, B12 Ives Hall, or call 607/255-4987.

## SUMMER COURSES

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session Office, B12 Ives Hall, or call 607/255-4987. The summer session catalog is published in February. A preliminary course roster is also available on CUINFO beginning in November.

## Africana Studies

**100 Black Leaders and Movements in South Africa**

**209 African Dance Improvisation**

**264 Modern Southern African and American Literature**

**484 Politics, Conflict, and Change in South Africa**

## Agricultural Economics

## History

**101–102 Introduction to American History**

**151–152 Introduction to Western Civilization**

**243 China and the West before Imperialism**

**269 History of Science**

**314 History of American Foreign Policy, 1912 to the Present**

**341 Recent American History, 1945 to the Present**

**342 Hiroshima and Nagasaki**

**363 Russian History since 1800**

## History of Art

**102 The Eiffel Tower, *The Thinker*, and the *Mona Lisa*: What Makes Them Art?**

**202 Survey of European Art: Renaissance to Modern**

**246 Introduction to Art History: Renaissance and Baroque Art**

**261 Introduction to Art History: Modern Art**

## Hotel Administration

**161 Keyboarding on the Macintosh**

**486 Historical Development of the Right to Travel and Its Impact on American Society**

## Human Development and Family Studies

**115 Human Development: Infancy and Childhood**

**150 Families in Modern Society**

**216 Human Development: Adolescence and Youth**

**445 Topics in Early Childhood Education and Development: Education of the Emotionally Disturbed Child**

## Human Service Studies

**380 Community Mental Health**

## Industrial and Labor Relations

**Collective Bargaining**

**100 History of Industrial Relations in the United States**

**200/500 Collective Bargaining**

**201/501 Labor Relations Law and Legislation**

**Economic and Social Statistics**

**210–211 Statistical Reasoning**

**510–511 Introductory Statistics for the Social Sciences**

**Labor Economics**

**240 Economics of Wages and Employment**

**540 Labor Economics**

**Organizational Behavior**

**120 Introduction to Macroorganizational Behavior and Analysis**

**121 Introduction to Microorganizational Behavior and Analysis**

**371 Individual Differences and Organizational Behavior**

**Personnel and Human Resource Studies**

**266 Personal Computer Basics**

## Management

**570 Negotiation for Managers**

## Marine Science

Consult the Shoals Marine Laboratory office for a complete list of summer offerings in marine science.

## Mathematics

**101 History of Mathematics**

**105 Finite Mathematics**

**109 Precalculus Mathematics**

**111–112 Calculus**

**123 Analytic Geometry and Calculus**

**192 Calculus for Engineers**

**213 Calculus**

**231 Linear Algebra**

**294 Engineering Mathematics with Microcomputers**

**336 Applicable Algebra**

**421–422 Applicable Mathematics**

**486 Applied Logic**

## Mechanical and Aerospace Engineering

**454 Introduction to Solar Energy**

## Medieval Studies

**102 Knights and Ladies**

## Microbiology

**290–291 General Microbiology**

## Modern Languages and Linguistics

**Chinese**

**160 Introductory Intensive Chinese (Mandarin)**

**201–202 Intermediate Chinese**

**Dutch**

**131–132 Dutch Elementary Reading Course**

**English**

**101–102 English as a Second Language**

**211 English as a Second Language**

**215 English for Later Bilinguals**

**French**

**123 Continuing French**

**203–204 Intermediate Composition and Conversation**

**320 French Civilization with an Emphasis on Paris**

**German**

**121–122 Elementary German**

**123 Continuing German**

**631–632 Elementary Reading Course**

**Italian**

**123 Continuing Italian**

**Japanese**

**160 Introductory Intensive Japanese**

**203–204 Intermediate Japanese**

**403 Teaching of Japanese as a Foreign Language**

**Linguistics**

**101 Theory and Practice of Linguistics**

**Nepali**

**160 Intensive Nepali**

**Russian**

**123 Continuing Russian**

**203 Intermediate Composition and Conversation**

**Spanish**

**110 Spanish Basic Conversation Course**

**123 Continuing Spanish**

**203 Intermediate Composition and Conversation**

## Music

**101 The Art of Music**

**105 Introduction to Music Theory**

**115 Popular Musics Today**

**287 Mozart**

## Natural Resources

**215 Environmental Disruption and Regulation**

**219 Introduction to Natural History of the Finger Lakes Region**

**230 Food, Famine, and Population: Resource Policy and Management**

## Near Eastern Studies

**103 Elementary Hebrew**

**227 Introduction to the Prophets**

**241 The Holocaust: The Destruction of European Jewry 1934–45**

**294 Modern History of the Middle East**

**364 Introduction to Field Archaeology in Israel**

## Nutritional Sciences

**415 Field-based Learning in Nutrition**

## Operations Research and Industrial Engineering

**260 Introductory Engineering Probability**

**270 Basic Engineering Probability and Statistics**

**622 Operations Research I**

## Philosophy

**101 Introduction to Philosophy**

**103 Reasoning and Writing**

**145 Contemporary Moral Issues**

**212 Modern Philosophy**

**231 Introduction to Formal Logic**

**245 Ethics and Medicine**

## Physical Education

Consult the Physical Education Office for a complete list of summer offerings for credit and recreation.

## Physics

**101–102 General Physics**

**112 Physics I: Mechanics and Heat**

**213 Physics II: Electricity and Magnetism**

**214 Physics III: Optics, Waves, and Particles**

**400 Informal Advanced Laboratory**

**500 Informal Graduate Laboratory**

**510 Advanced Experimental Physics**

**520 Projects in Experimental Physics**

## Psychology

**101 Introduction to Psychology: The Frontiers of Psychological Inquiry**

**123 Introduction to Biopsychology**

**124 Introduction to Psychology: Brain and Behavior**

**128 Introduction to Psychology: Personality and Social Behavior**

**192 Introduction to the Senses**

**199 Sports Psychology**

**205 Perception**

**265 Psychology and Law**

**280 Introduction to Social Psychology**

**281 Interpersonal Relations and Small Groups**

**322 Hormones and Behavior**

**325 Introductory Psychopathology**

**350 Statistics and Research Design**

**380 Community Mental Health**

**469 Psychotherapy: Its Nature and Influence**

**490 History and Systems of Psychology**

## Rural Sociology

**437 Aging: Issues in the 1980s**

## Sociology

**101 Introduction to Sociology**

**121 Sociology of Deviance**

**211 Introduction to Social Research**

**243 Family**

**252 Public Opinion**

**264 Race and Ethnicity**

**281 Interpersonal Relations and Small Groups**

**347 Aging: Issues in the 1980s**

## Spanish Literature

**379 Introduction to Hispanic Cinema**

## Textiles and Apparel

**144 Introduction to Apparel Design**

**245 Dress: A Reflection of American Women's Roles**

## Theatre Arts

**108 Writing about Film**

**200 Introduction to Dance I**

**209 African Dance Improvisation**

**284 Voice and Pronunciation Skills**

**287 Summer Acting Workshop**

**327 Modern Drama**

**354 Stagecraft: Scenery and Lighting**

**362 Lighting Design and Technology**

**377 Fundamentals of 16-mm Filmmaking**

## Theoretical and Applied Mechanics

**202 Mechanics of Solids**

**203 Dynamics**

## Writing

**137 Writing Workshop**

# NEW YORK STATE COLLEGE OF VETERINARY MEDICINE

## ADMINISTRATION

Robert D. Phemister, dean

S. Gordon Campbell, associate dean for academic affairs

Neil L. Norcross, secretary of the college

John A. Lambert, assistant dean for administration

John C. Semmler, assistant dean for public affairs

Marcia J. Sawyer, director of student affairs and admissions

Gloria R. Crissey, registrar, director of financial aid

## DEPARTMENT CHAIRS

Anatomy: A. deLahunta

Avian and Aquatic Animal Medicine: B. Calnek

Clinical Sciences: D. Smith

Microbiology, Immunology, and Parasitology: R. Avery

Pathology: B. Pauli

Pharmacology: G. Sharp

Physiology: D. Robertshaw

## THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is contained in the *Announcement of the New York State College of Veterinary Medicine*, which may be obtained by writing to the college.

*Note:* 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

## ANATOMY

**500 Gross Anatomy: Small Animal Fall.**
**501 Gross Anatomy: Large Animal Spring.**
**502 Microscopic Anatomy First year.**
**504 Neuroanatomy and Clinical Neurology First year.**
**505 Applied Anatomy Fall.**
**506 Applied Anatomy Spring.**
**507 Animal Development Fall.**
**508 Anatomy of the Fish and Bird Spring.**
**600 Special Projects in Anatomy Fall and spring.**
**601 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.**
**602 Advanced Clinical Neurology Fall.**

## AVIAN AND AQUATIC ANIMAL MEDICINE

**[255 Poultry Hygiene and Disease Spring.]**
**555 Avian Diseases Fall.**
**614 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.**
**630 Diseases of Aquarium Fish Spring.**
**[631 Fish Health Management Spring.]**
**663 Veterinary Medicine in Developing Nations Spring.**
**[671 Diseases of Aquatic Animals Spring.]**
**672 Aquavet I: Introduction to Aquatic Veterinary Medicine Mid-May to mid-June.**
**673 Aquavet II: Health Management in Confined Populations of Invertebrates and Fish Summer.**
**770 Advanced Work in Avian Diseases Fall and spring.**
**772 Advanced Work in Aquatic Animal Diseases Fall and spring.**
**773 Advanced Work in Avian Immunology Fall and spring.**

## CLINICAL SCIENCES

**520 Preventive Medicine in Animal Health Management Spring.**
**545 Clinical Epidemiology Fall.**
**547 Practice Management Fall and spring.**
**548 Anesthesiology Fall.**
**561 Theriogenology I Spring.**
**562 Theriogenology II Fall.**
**563 Large Animal Medicine and Surgery Fall.**
**564 Large Animal Medicine and Surgery Spring.**
**566 Radiographic Techniques Fall.**
**567 Clinical Nutrition Fall.**
**568 Foundations of Clinical Science I Fall.**
**569 Foundations of Clinical Science II Spring.**
**570 Theriogenology Service Spring.**
**572 Senior Seminar Fall and spring.**
**574 Large Animal Surgery Service Fall and spring.**
**575 Ambulatory Service Fall and spring.**
**578 Clinical Anesthesia Fall and spring.**
**579 General Medicine and Surgery Spring.**
**580 Radiology Service Fall and spring.**
**581 Animal Nutrition Fall.**
**582 Large Animal Surgical Exercises Spring.**
**583 Small Animal Medicine and Surgery Fall.**
**584 Small Animal Medicine and Surgery Spring.**
**586 Small Animal Surgical Exercises Spring.**
**589 Small Animal Medicine Service Fall and spring.**
**591 Small Animal Surgery Service Fall and spring.**
**593 Ophthalmology Service Fall and spring.**
**594 Large Animal Medicine Service Fall and spring.**
**596 Opportunities in Veterinary Medicine Fall, spring, and summer.**
**598 Dermatology Service Fall and spring.**
**616 Research Opportunities in Veterinary Medicine Fall, spring, and summer.**
**664 Introductory Epidemiology Spring.**
**665 Advanced Epidemiology Fall.**
**675 Special Problems in Large Animal Medicine Fall and spring.**
**676 Special Problems in Large Animal Surgery Fall and spring.**
**677 Special Problems in Large Animal Obstetrics Fall and spring.**
**678 Bovine Embryo Transfer Spring.**
**[679 Dairy Herd Management and Health Fall.]**
**680 Poisonous Plants Fall.**
**[681 Horse Health Management Spring.]**
**683 Elementary Biostatistics Spring.**
**684 Horse Lameness Spring.**
**685 Introduction to Practice Management January.**
**686 Goats: Management and Diseases Spring.**
**688 Special Problems in Small Animal Medicine Fall and spring.**
**[689 Special Problems in Small Animal Surgery Fall and spring.]**

690 Veterinary Dermatology Spring.
691 Advanced Large Animal Internal Medicine Problems Spring.
692 Computers in Veterinary Medicine Spring.
694 Diseases of Common Exotic Pets Spring.
695 Advanced Equine Surgical Techniques Spring.
696 Basic and Therapeutic Horseshoeing Spring.
697 Advanced Techniques in Food Animal Surgery Spring.
766 Graduate Research Fall, spring, and summer.
768 Master's-Level Thesis Research Fall and spring.
769 Doctoral-Level Thesis Research Fall and spring.
782 Special Topics in Comparative Ophthalmology Fall.
799 Independent Studies in Epidemiology Fall and spring.

## DIAGNOSTIC LABORATORY

531 Regulatory Medicine Spring.
611 Mastitis Spring.
700 Special Projects in Diagnostic Endocrinology Fall and spring.
701 Special Projects in Infectious Diseases Fall and spring.
702 Special Topics in Infectious Diseases Fall and spring.
703 Doctoral Level Thesis Research Fall and spring.
704 Master's Level Thesis Research Fall and spring.

## MICROBIOLOGY, IMMUNOLOGY, AND PARASITOLOGY

315 Basic Immunology Lectures (also Biological Sciences 305) Fall.
316 Basic Immunology Laboratory (also Biological Sciences 307) Fall.
317 Pathogenic Microbiology (also Biological Sciences 308) Spring.
331 Medical Parasitology Fall.
510 Veterinary Parasitology Fall.
515 Veterinary Immunology Spring.
516 Infectious Diseases I: Bacteriology and Mycology Fall.
517 Infectious Diseases II: Virology and Viral Diseases Fall.
518 Infectious Diseases III: Infectious and Zoonotic Diseases Spring.
605 Special Projects in Microbiology Fall and spring.
606 Small Animal Infectious Diseases Spring.
[607 Virus Diseases of Cattle Fall.]
[609 A Health Program for Sheep Spring.]
615 Research Opportunities in Veterinary Medicine Fall, spring, and summer.
651 Clinical Parasitology of Avian Species Spring.
706 Immunology Seminar Series Fall and spring.
707 Advanced Work in Bacteriology, Virology, Immunology Fall and spring.
708 Selected Topics in Animal Virology Spring.
709 Laboratory Methods of Diagnosis Fall and spring.
710 Microbiology Seminars Fall and spring.
[713 Special Projects in Immunology: Topic to be announced Spring.]
[714 Special Projects in Immunology: Topic to be announced Spring.]
[715 Special Projects in Immunology: Topic to be announced Spring.]
716 Special Topics in Immunology: Topic to be determined Spring.
717 Special Topics in Immunology: Topic to be determined Spring.
718 Special Topics in Immunology: Topic to be determined Spring.
737 Advanced Work in Parasitology Fall and spring.
[767 Immunoparasitology Spring.]
783 Seminars in Parasitology Fall and spring.

## PATHOLOGY

535 Veterinary Pathology I Fall.
536 Veterinary Pathology II Spring.
539 Introduction to Laboratory Animal Medicine Spring.
540 Pathology Service Fall and spring.
549 Laboratory Animal Clinical Rotation Spring.
571 Clinical Pathology Spring.
613 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.
635 Special Problems in Pathology Fall and spring.
[636 Wildlife Pathology Fall.]
[637 Postmortem Pathology Fall and spring.]
638 The Bottom Line Fall and spring.
639 Autotutorial in Laboratory Animal Medicine and Science Fall and spring.
[640 Principles of Toxicological Pathology Fall.]
641 Clinical Immunology Spring.
642 Public Policy and Laboratory Animal Science Spring.
643 The Use of Animal Models to Explore Physiologic and Pathologic Mechanisms in Animals and Man Fall.
[701 Pathobiology of Disease: Cell Growth, Differentiation, and Neoplastic Transformation Spring.]
[702 Pathobiology of Disease: Tumor Cell Biology Spring.]
[703 Pathobiology of Disease: Extracellular Matrix Spring.]
704 Pathobiology of Disease: Advanced Immunopathology Fall.
705 Pathobiology of Disease: Toxicologic Pathology Fall.
706 Pathobiology of Disease: Advanced Reproductive Pathology Fall.
707 Pathobiology of Disease: The Inflammatory Process Spring.
708 Pathobiology of Disease: Genetic Basis of Disease Spring.
709 Pathobiology of Disease: Advanced Clinical Pathology Spring.
[710 Pathobiology of Disease: Advanced Neuropathobiology Fall.]
[711 Pathobiology of Disease: Metabolic Bone Disorders Fall.]
[712 Pathobiology of Disease: Laboratory Animal Pathology Fall.]
736 Pathology of Nutritional Diseases Spring.
739 Advanced Work in Pathology Fall and spring.
749 Laboratory Animal Clinical Rotation Fall and spring.
788 Seminar in Surgical Pathology Fall and spring.
789 Seminar in Necropsy Pathology Fall and spring.
790 Special Topics in Pathology Fall.
793 Lectures in General Pathology Fall.
794 Lectures in Special Pathology Spring.
796 Medical Primatology Fall.

## PHARMACOLOGY

528 Pharmacology I Fall.
529 Pharmacology II Spring.
610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610) Fall.
620 Advanced Clinical Pharmacology Spring.
[621 Toxicology (also Toxicology 621) Spring.]
622 Special Projects in Pharmacology Fall, spring, and summer.
629 Research Opportunities in Veterinary Medicine Fall, January, spring, and summer.
660 Safety Evaluations in Public Health Spring.
[700 Calcium and Other Second Messengers in Cell Activation Fall.]
701 Receptors and Ion Channels Spring.
703 Receptor Binding: Theory and Techniques (also Biological Sciences 790, Sec. 02) Spring.
704 CNS Neuropharmacology: Mechanisms-Synaptic Transmission Fall.
705 Mechanisms of Receptor-G Protein-Coupled Signal Transduction Spring.

### Special Projects and Research

[711 The Role of Calcium in Stimulus-Secretion Coupling Fall, spring, and summer.]
[712 The Receptor for Immunoglobulin E on Tumor Mast Cells Fall, spring, and summer.]
713 Mechanisms of Growth-Factor Action Fall, spring, and summer.
714 Central Nervous System Neurotransmitters Fall, spring, and summer.
716 Neurobiology of Seizure Disorders Fall, spring, and summer.
717 Single-Channel Recording Fall, spring, and summer.
718 Structure-Function of the Nicotinic Acetylcholine Receptor Fall, spring, and summer.
719 Computer Modeling of Drug-Receptor Interactions Fall, spring, and summer.

**720 Modulation of Nicotinic Acetylcholine Receptor Function by Substance P Fall, spring, and summer.**

**721 Molecular Mechanisms of Pharmacological Blockade of Voltage-Dependent Calcium Channels Fall, spring, and summer.**

**723 The Role of Calcium in the Control of Electrolyte Transport Fall and spring.**

**724 The Control of Hormone Secretion Fall and spring.**

### Special Topics

**741 Neuromodulation Fall, spring, and summer.**

**742 Receptor Mechanisms Fall, spring, and summer.**

**743 Neuropeptides Fall, spring, and summer.**

**744 Voltage-dependent Calcium Channels Fall, spring, and summer.**

**745 Neuropharmacology Fall, spring, and summer**

**746 Electrophysiological Techniques Fall, spring, and summer.**

**747 Amino Acid Neurotransmitters Fall, spring, and summer.**

**[748 Stimulus-Secretion Coupling Fall, spring, and summer.]**

**[749 Second Messengers in Cell Activation Fall, spring, and summer.]**

**[750 Cell Calcium Fall, spring, and summer.]**

**[751 Receptors in the Immune System Fall, spring, and summer.]**

**[752 Mediators of Inflammation Fall, spring, and summer.]**

**753 Clinical Pharmacology Fall.**

**754 G Proteins in Signal Transduction Fall, spring, and summer.**

**755 Calcium in the Control of Hormone Secretion Fall.**

**756 Mechanisms of Calcium Handling Fall and spring.**

**757 Intestinal Electrolyte Transport Fall and spring.**

**759 Receptor Binding Techniques Fall, spring, and summer.**

**760 Advanced Topics in Pharmacology Fall, spring, and summer**

**770 Graduate Research in Pharmacology Fall, spring, and summer.**

## PHYSIOLOGY

**Biological Basis of Sex Differences (Biological Sciences 214) Fall.**

**Histology: The Biology of the Tissues (Biological Sciences 313) Fall.**

**Cellular Physiology (Biological Sciences 316) Spring.**

**346 Introductory Animal Physiology, Lectures (also Biological Sciences 311) Fall.**

**348 Introductory Animal Physiology, Laboratory (also Biological Sciences 319) Fall.**

**Seminar in Anatomy and Physiology (Biological Sciences 410) Fall and spring.**

**Mammalian Physiology (Biological Sciences 458) Spring.**

**Undergraduate Research in Biology (Biological Sciences 499) Fall and spring.**

**525 Molecular and Cellular Physiology Fall.**

**526 Systems Physiology I Fall.**

**527 Systems Physiology II Spring.**

**528 Veterinary Ethics Fall and spring.**

**612 Research Opportunities in Veterinary Medicine Fall, spring, and summer.**

**Lipids (Biological Sciences 619 and Nutritional Sciences 602) Fall.**

**625 Problems in Dog and Cat Behavior Spring.**

**626 Problems in Equine Behavior Spring.**

**627 Acid-Base Relations (Biological Sciences 715) Fall, spring, and summer.**

**628 Graduate Research in Animal Physiology (also Biological Sciences 719) Fall and spring.**

**Plasma Lipoproteins (Biological Sciences 712) Spring.**

**[Physiology of Pregnancy (Biological Sciences 714) Spring.]**

**Seminar on Insect Physiology (Biological Sciences 716, also Entomology 685) Spring.**

**Structure and Function of Joints with Emphasis on Arthritis (Biological Sciences 717) Fall.**

**[Evolution of Color Vision (Biological Sciences 718) Spring.]**

**720 Special Problems in Physiology Fall and spring.**

**726 Systems Physiology I Fall.**

**727 Systems Physiology II Spring.**

**[752 Biological Membranes and Nutrient Transfer (also Biological Sciences 618) Spring.]**

**Animal Biotechnology (Biological Sciences 753) Fall.**

**758 Molecular Mechanisms of Hormone Action (also Biological Sciences 658) Spring.**

**759 Nutrition and Physiology of Mineral Elements (also Biological Sciences 615 and 659) Fall.**

**Fundamentals of Endocrinology, Lecture (Animal Science 427) Fall.**

**Fundamentals of Endocrinology, Laboratory (Animal Science 428) Fall.**

## FACULTY ROSTER

Antczak, Douglas F., Ph.D., U. of Cambridge (England) Assoc. Prof., Microbiology, Immunology, and Parasitology

Appel, Max J., Ph.D, Cornell U. Prof. Microbiology, Immunology, and Parasitology

Appleton, Judith A., Ph.D., U. of Georgia. Asst. Prof., Microbiology, Immunology, and Parasitology

Avery, Roger J., Ph.D., U. of Newcastle-upon-Tyne (England) Prof., Microbiology, Immunology, and Parasitology

Babish, John, Ph.D., Cornell U. Assoc. Prof., Pharmacology

Ball, Barry A., Ph.D., Cornell U. Asst. Prof., Clinical Sciences

Beck, Kathy A., D.V.M., Washington State U. Asst. Prof., Clinical Sciences

Bell, Robin G., Ph.D., Australian National U. Assoc. Prof., Microbiology, Immunology, and Parasitology

Bergman, Emmett N., Ph.D., U. of Minnesota. Prof., Physiology/(Section of Physiology)

Blue, Julia T., Ph.D., U. of Pennsylvania. Assoc. Prof., Clinical Sciences

Bowman, Dwight D., Ph.D., Tulane U. Asst. Prof., Microbiology, Immunology, and Parasitology

Bowser, Paul R., Ph.D., Auburn U. Assoc Prof., Avian and Aquatic Animal Medicine

Calnek, Bruce W., D.V.M., Cornell U. Prof., Avian and Aquatic Animal Medicine

Campbell, S. Gordon, Ph.D., Cornell U. Prof., Microbiology, Immunology, and Parasitology

Carmichael, Leland E., Ph.D., Cornell U. John M. Olin Professor of Virology, Microbiology, Immunology, and Parasitology

Casey, James W., Ph.D., U. of Chicago. Assoc. Prof., Microbiology, Immunology, and Parasitology

Center, Sharon A., D.V.M., U. of California at Davis. Assoc. Prof., Clinical Sciences

Cerione, Richard A., Ph.D., Rutgers U. Asst. Prof., Pharmacology

Cooper, Barry J., Ph.D., U. of Sydney (Australia). Assoc. Prof., Pathology

Corradino, Robert A., Ph.D., Cornell U. Assoc. Prof. Physiology/(Section of Physiology)

Cummings, John F., Ph.D., Cornell U. Prof., Anatomy

deLahunta, Alexander, Ph.D., Cornell U. Prof., Anatomy

Dobson, Alan, Ph.D., U. of Aberdeen (Scotland). Prof., Physiology/(Section of Physiology)

Dubovi, Edward J., Ph.D, U. of Pittsburgh. Assoc. Prof., Diagnostic Laboratory

Ducharme, Normand G., D.V.M., U. of Montreal (Canada). Assoc. Prof., Clinical Sciences

Erb, Hollis N., Ph.D., U. of Guelph (Canada). Assoc. Prof., Clinical Sciences

Farnum, Cornelia, Ph.D., U. of Wisconsin. Asst. Prof., Anatomy

Fewtrell, Clare, D.Phil., U. of Oxford (England). Assoc. Prof., Pharmacology

Flanders, James A., D.V.M., U. of California at Davis. Asst. Prof., Clinical Sciences

Fortune, Joanne E., Ph.D, Cornell U. Assoc. Prof., Physiology

Fox, Francis H., D.V.M., Cornell U. Prof., Clinical Sciences

French, Tracy W., D.V.M., Purdue U. Asst. Prof., Pathology

Fubini, Susan L., D.V.M., U. of Georgia. Asst. Prof., Clinical Sciences

Gilbert, Robert O., M. Med. Vet., U. of Pretoria (South Africa). Asst. Prof., Clinical Sciences
Gilmour, Robert F., Jr., Ph.D., SUNY—Upstate Medical Center. Assoc. Prof., Physiology
Gleed, Robin D., D.V.A., U. of Liverpool (England). Assoc. Prof., Clinical Sciences
Gould, Willard J. III, D.V.M., Cornell U. Asst. Prof., Clinical Sciences
Grohn, Yrjo T., Ph.D., College of Veterinary Medicine, Helsinki (Finland). Asst. Prof., Clinical Sciences
Guard, Charles L. III, Ph.D., Case Western Reserve U. Assoc. Prof., Clinical Sciences
Hackett, Richard P., Jr., D.V.M., Ohio State U. Assoc. Prof., Clinical Sciences
Hansel, William, Ph.D., Cornell U. Prof., Physiology/(Section of Physiology)

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, age, or handicap. The university is committed to the maintenance of affirmative-action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell's Title IX coordinator (coordinator of women's services) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801 (telephone: 607 255-3976).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801. Other questions or requests for special assistance may also be directed to that office.
